PREFACE

THE NEW INTERNATIONAL YEAR BOOK in its 29th volume covering the year 1930 appears at a time when a larger and more intelligent reading public is demanding, as never before, concise and authoritative information on world events and activities. In scope and treatment, the NEW INTERNATIONAL YEAR BOOK vindicates its title. The development of the international mind and of general interest in world affairs has reached a point that the founders of the YEAR BOOK in the last century hardly could have foreseen. A world picture must be presented of business depression in EUROPE, of revolutions in SOUTH AMERICA, of political unrest in INDIA, and of governmental chaos in CHINA. These are no longer isolated events, but are interconnected with world conditions. Political and economic circumstances are world-wide in their bearings and relations, while trends of philosophic and scientific thought are localized no longer in communities or nations. World agencies such as the LEAGUE OF NATIONS and the WORLD COURT are the concern of all, proposals for a UNITED STATES OF EUROPE meet with universal discussion and criticism. A FINANCIAL REVIEW must consider world activities and tendencies in a period of universal economic depression, when trade movements are so interrelated that the producer of RUBBER in the Far East cannot disregard the manufacture of AUTOMOBILES in the United States.

But from generalities and world trends, it is necessary to pass to particular lands and governments, and the NEW INTERNATIONAL YEAR BOOK is placed before its readers just as soon as the nations of the world have prepared their balance sheets and compiled their definite statistics and records. Such countries as GREAT BRITAIN with its Labor Government and economic and Imperial problems must be considered no less than ITALY under the influence of its unique and dominating personality. The problems of GERMANY seeking to meet the REPARATIONS burden of the World War continued to hold attention, while FRANCE, still endeavoring to maintain its hegemony of Europe, notwithstanding frequent changes of ministry and uncertain national political conditions due to the even balance of representation in the halls of Government, presented the usual engrossing picture. RUSSIA reported the progress of its Five Year Plan in its vast and world-compelling experiment in COMMUNISM. INDIA, with its mystical crusader Mahatma Gandhi, during 1930 became at least articulate and its voice was heard at the Round Table Conferences in London, where the rights and aspirations of its people were expressed with force, if not always with unanimity.

In the UNITED STATES, economic depression, as described under BANKS AND BANKING and BUSINESS REVIEW, concerned and affected all. UNEMPLOYMENT shared national attention with CRIME and PROHIBITION, with political conditions uncertain and far from defined either in nation or party.

Passing from politics to literature, the YEAR BOOK, as usual, presents its authoritative summaries again in the international field, as in addition to ENGLISH AND AMERICAN LITERATURE, FRENCH, GERMAN, ITALIAN, SCANDINAVIAN, SPANISH, and SPANISH-AMERICAN literatures are summarized in their various distinctive spheres, while under PHILOLOGY, MODERN, and PHILOLOGY, CLASSICAL, the efforts of other workers in literature and criticism are recorded. The THEATRE and MOTION PICTURES are discussed critically and comprehensively as is MUSIC. Fine arts are

PREFACE

treated under ART EXHIBITIONS, ART MUSEUMS, ART SALES, PAINTING, SCULPTURE, and ARCHITECTURE, while in PHILOSOPHY, PSYCHOLOGY, and PSYCHICAL RESEARCH developments are related. In pure science the reader of the YEAR BOOK has learned to consult the reviews of ANTHROPOLOGY, BOTANY, CHEMISTRY, GEOLOGY, MINERALOGY, and ZOÖLOGY. This year a new contributor presents the PROGRESS OF MEDICINE and the PROGRESS OF SURGERY in attractive and comprehensive form, alluding to the more notable developments.

EDUCATION always presents food for discussion and that article, as well as UNIVERSITIES AND COLLEGES, deals with the general aspects of the situation, while under the separate institutions their developments and status are treated. Likewise, the religious denominations are far from maintaining a static position, and interested authorities from the various churches have prepared authoritative information, not merely statistical, but affording a sympathetic understanding of their work during the year. In applied science, engineering, and transportation, the YEAR BOOK presents its usual record. AGRICULTURE at home and abroad aroused the widest interest and attention, with the Farm Loan Act in the United States and new or proposed tariffs in other countries.

BIOGRAPHY is by no means the least of the YEAR BOOK's concerns, and the notices of prominent persons who have died during the year adequately supplement and bring up-to-date any encyclopedia. A general feature that has been developed is the inclusion of appropriate bibliographical notes with many of the articles, a departure that has been found especially useful by our readers.

In conclusion, the Editor desires to express his thanks to the many friends, official and otherwise, who have aided him and his associates. The United States and other governments continue to show their valuable interest in placing at the disposal of the YEAR BOOK accurate and carefully compiled information. Officials of educational institutions and other organizations have shown their usual care and friendliness in forwarding their summaries for the year, while the large industrial organizations have assisted with their valuable educational and other resources. In conclusion, the record of the year 1930 is submitted with the confident belief that it will prove no less interesting than that of its predecessors.

EDITOR
HERBERT TREADWELL WADE
LIST OF CONTRIBUTORS

- AGRICULTURE; AGRICULTURAL EXPERIMENT STATIONS; COTTON; TOBACCO**
HENRY M. STEECE, B.S. (AGR.), A.M.,
SPECIALIST IN AGRONOMY, OFFICE OF EXPERIMENT STATIONS, UNITED STATES DEPARTMENT OF AGRICULTURE.
- AGRICULTURAL EXTENSION WORK**
REUBEN BRIGHAM, B.S. (AGR.),
SENIOR AGRICULTURIST, IN CHARGE OF VISUAL INSTRUCTION AND EDITORIAL WORK, OFFICE OF COÖPERATIVE EXTENSION WORK, EXTENSION SERVICE, UNITED STATES DEPARTMENT OF AGRICULTURE.
- ANTHROPOLOGY (WITH ETHNOLOGY)**
LESLIE SPIER, PH.D.,
VISITING PROFESSOR OF ANTHROPOLOGY, UNIVERSITY OF CHICAGO.
- ARCHÆOLOGY**
OLIVER SAMUEL TONKS, PH.D.,
PROFESSOR OF ART, VASSAR COLLEGE.
- ARCHITECTURE**
TALBOT F. HAMLIN,
MEMBER OF AMERICAN INSTITUTE OF ARCHITECTS.
- ASTRONOMY; METEOROLOGY; EARTHQUAKES; FLOODS; SEISMOLOGY**
EDGAR W. WOOLARD, PH.D.,
DEPARTMENT OF MATHEMATICS, GEORGE WASHINGTON UNIVERSITY.
- AUTOMOBILES**
HENRY R. COBLEIGH, M.E.,
MEMBER OF STAFF, NATIONAL AUTOMOBILE CHAMBER OF COMMERCE.
- BIOGRAPHY**
SARAH REDWINE, A.M.,
MARY CLAPP
- BOTANY**
CHARLES L. POLLARD, A.M.
- CHEMISTRY; EXPOSITIONS; CELEBRATIONS**
MARCUS BENJAMIN, PH.D., Sc.D., LL.D.,
EDITOR FOR THE UNITED STATES NATIONAL MUSEUM.
- CIVIL ENGINEERING**
JAMES K. FINCH, C.E.,
PROFESSOR OF CIVIL ENGINEERING, COLUMBIA UNIVERSITY.
- CROP PRODUCTION; UNITED STATES DEPARTMENT OF AGRICULTURE**
JOHN I. SCHULTE, B. Agr.,
OFFICE OF EXPERIMENT STATIONS, UNITED STATES DEPARTMENT OF AGRICULTURE.
- DAIRYING; LIVESTOCK; WOOL**
GEORGE HAINES, B.S., M.S., PH.D.,
SENIOR ANIMAL HUSBANDMAN, OFFICE OF EXPERIMENT STATIONS, UNITED STATES DEPARTMENT OF AGRICULTURE.
- DRAMA AND THEATRE**
BURNS MANTLE,
DRAMATIC EDITOR, *Daily News*, NEW YORK;
EDITOR, *Best Plays and Year Book of the Drama in America* SINCE 1919.
- ECONOMIC ENTOMOLOGY; VETERINARY MEDICINE**
WILLIAM A. HOOKER, B.Sc., LL.M., D.V.M.,
OFFICE OF EXPERIMENT STATIONS, UNITED STATES DEPARTMENT OF AGRICULTURE.
- ECONOMIC, SOCIAL, AND POLITICAL SCIENCE SUBJECTS**
LOUIS M. HACKER, A.M.
- EDUCATION; UNIVERSITIES**
MILO B. HILLEGAS, PH.D., LL.D.,
PROFESSOR OF EDUCATION, COLUMBIA UNIVERSITY.
- FERTILIZERS AND SOILS**
ROBERT W. TRULLINGER, C.E.,
ASSISTANT IN EXPERIMENT STATION ADMINISTRATION, SENIOR AGRICULTURAL ENGINEER, OFFICE OF EXPERIMENT STATIONS, UNITED STATES DEPARTMENT OF AGRICULTURE.
- FINANCIAL REVIEW; BANKS AND BANKING; BUSINESS REVIEW; PUBLIC FINANCE; TAXATION**
H. PARKER WILLIS, PH.D.,
EDITOR, *The Journal of Commerce*, NEW YORK;
PROFESSOR OF BANKING, COLUMBIA UNIVERSITY.
- FOOD AND NUTRITION; VITAMINS**
SYBIL L. SMITH, A.M.,
SENIOR CHEMIST, OFFICE OF EXPERIMENT STATIONS, EDITOR, FOODS AND NUTRITION, *Experiment Station Record*, UNITED STATES DEPARTMENT OF AGRICULTURE.
- FORESTRY AND HORTICULTURE**
JOSEPH W. WELLINGTON, M.S.,
HORTICULTURIST, OFFICE OF EXPERIMENT STATIONS, UNITED STATES DEPARTMENT OF AGRICULTURE.
- FRENCH LITERATURE**
ALBERT SCHINZ, PH.D.,
PROFESSOR OF ROMANIC LANGUAGES AND LITERATURES, UNIVERSITY OF PENNSYLVANIA.
- GEOLOGY**
WILLIAM M. AGAR, M.S., PH.D.,
PROFESSOR OF GEOLOGY, COLUMBIA UNIVERSITY.
- GERMAN LITERATURE**
AMELIA VON ENDE.
- INSURANCE**
WILLIAM S. CRAWFORD,
INSURANCE EDITOR, *The Journal of Commerce*, NEW YORK.
- ITALIAN LITERATURE**
O. A. BONTEMPO, PH.C.,
ROMANCE LANGUAGE DEPARTMENTS, COLUMBIA UNIVERSITY AND NEW YORK UNIVERSITY; DIRECTOR, ITALICA ASSOCIATION OF AMERICA; EDITORIAL STAFF, *Romanic Review*.
- INTERNATIONAL ARBITRATION; INTERNATIONAL LAW; LEAGUE OF NATIONS; WORLD COURT; PEACE; ETC.**
CLINTON ROGERS WOODRUFF, LL.D.,
HONORARY SECRETARY OF THE NATIONAL MUNICIPAL LEAGUE AND MEMBER OF THE MOHONK CONFERENCE; FORMERLY PRESIDENT OF THE BOARD OF PERSONAL REGISTRATION, PHILADELPHIA.

LABOR LEGISLATION

JOHN B. ANDREWS, PH.D.,
SECRETARY OF THE AMERICAN ASSOCIATION FOR
LABOR LEGISLATION AND EDITOR, *American
Labor Legislation Review*.

LITERATURE, ENGLISH AND AMERICAN

WILLIAM BENFIELD PRESSEY, A.M.,
PROFESSOR OF ENGLISH, DARTMOUTH COLLEGE.

MEDICINE AND SURGERY

H. WALTON COCHRAN, M.D.,
JUNIOR FELLOW IN SURGERY, PRESBYTERIAN HOS-
PITAL, NEW YORK CITY; ASSISTANT IN SURGERY,
COLLEGE OF PHYSICIANS AND SURGEONS, COLUM-
BIA UNIVERSITY.

METALLURGY

EDWARD HODGES ROBIE,
ASSOCIATE EDITOR, *Engineering and Mining
Journal*.

MILITARY PROGRESS

JOHN J. BRADLEY,
BRIGADIER GENERAL, UNITED STATES ARMY,
RETIRED.

MINERALOGY

HERBERT P. WHITLOCK, C.E.,
CURATOR, DEPARTMENT OF MINERALOGY, AMERI-
CAN MUSEUM OF NATURAL HISTORY, NEW YORK
CITY.

MOTION PICTURES

RICHARD WATTS, JR.
EDITORIAL DEPARTMENT, *New York Herald
Tribune*.

MUSIC

FRANCIS DAVENPORT PERKINS,
ASSISTANT MUSIC CRITIC, *New York Herald
Tribune*.

NAVAL PROGRESS

LEWIS SAYRE VAN DUZER,
CAPTAIN, UNITED STATES NAVY, RETIRED; WRITER
ON NAVAL AND NAUTICAL SUBJECTS.

PAINTING AND SCULPTURE

JEAN LEONARD,
FORMER ASSISTANT, EDITORIAL DIVISION, METRO-
POLITAN MUSEUM OF ART,

PHILOLOGY (CLASSICAL)

CHARLES KNAPP, PH.D.,
PROFESSOR OF GREEK AND LATIN, BARNARD COL-
LEGE, COLUMBIA UNIVERSITY; MANAGING EDITOR,
The Classical Weekly.

PHILOLOGY (MODERN)

JOHN LAWRENCE GERIG, A.M., PH.D.,
LITT.D.,
AD. HON. (UNIVERSITY OF ROME); PROFESSOR OF
CELTIC DEPARTMENT OF ROMANCE LANGUAGES,
COLUMBIA UNIVERSITY; HON. MEMBER, ITALIAN
ACADEMY OF SCIENCES AND LETTERS; HON. DI-
RECTOR, DEPARTMENT OF SPANISH STUDIES,
UNIVERSITY OF PORTO RICO; CORRESPONDING
MEMBER, HISPANIC SOCIETY OF AMERICA; AMER-
ICAN MEMBER, INTERNATIONAL COMMITTEE OF
EXPERTS IN LINGUISTIC BIBLIOGRAPHY; AMERI-
CAN MEMBER, INTERNATIONAL COMMISSION OF
LITERARY HISTORY; EDITOR-IN-CHIEF, *Romanic
Review*.

PHILOSOPHY

V. JERAULD MCGILL, PH.D.,
LECTURER AT COLUMBIA UNIVERSITY AND HUNTER
COLLEGE.

PHOTOGRAPHY

GLENN E. MATTHEWS, M.SC., F.R.P.S.,
TECHNICAL EDITOR, KODAK PARK RESEARCH LAB-
ORATORIES, ROCHESTER, N. Y.

PHYSICS

HENRY D. HUBBARD,
SECRETARY, UNITED STATES BUREAU OF STAND-
ARDS.

POLITICAL HISTORY AND GAZETTEER

RONALD S. KAIN,
EDITOR FOR FOREIGN POLITICS, GEOGRAPHY, AND
STATISTICS.

POWER ENGINEERING; POWER PLANTS; ETC.

ALFRED D. BLAKE, M.E.,
MANAGING EDITOR OF *Power*.

PHYSICAL RESEARCH

THEODORE BESTERMAN,
LIBRARIAN AND EDITOR OF THE SOCIETY FOR PSY-
CHICAL RESEARCH, LONDON.

PSYCHOLOGY

ALBERT T. POFFENBERGER, PH.D., SC.D.,
PROFESSOR OF PSYCHOLOGY, COLUMBIA UNIVER-
SITY.

RAILWAYS

WILLIAM E. HOOPER,
FORMER FINANCIAL EDITOR, *Railway Age*.

RELIGIOUS BODIES AND SOCIETIES

MARY CLAPP,
OFFICE EDITOR.

ROMAN CATHOLIC CHURCH

THOMAS F. MEEHAN,
EDITORIAL STAFF, *America*.

SANITARY ENGINEERING AND MUNI- CIPAL SUBJECTS

MOSES NELSON BAKER, PH.D., C.E.,
ASSOCIATE EDITOR, *Engineering News-Record*.

SCANDINAVIAN LITERATURE

HARRY V. E. PALMBLAD, PH.D.,
PROFESSOR OF GERMAN AND FRENCH, PHILLIPS
UNIVERSITY.

SPANISH LITERATURE; SPANISH- AMERICAN LITERATURES

JOHN D. FITZ-GERALD, PH.D., LITT.D.,
PROFESSOR OF ROMANCE PHILOLOGY AND HEAD
OF THE DEPARTMENT OF SPANISH, UNIVERSITY OF
ARIZONA; MEMBER OF THE HISPANIC SOCIETY OF
AMERICA; CORRESPONDING MEMBER OF THE
SPANISH ROYAL ACADEMY, AND OF THE ROYAL
ACADEMY OF HISTORY OF MADRID; HONORARY
MEMBER OF THE NATIONAL ACADEMY OF ARTS
AND LETTERS OF CUBA; COMENDADOR CON PLACA
DE LA REAL ORDENDE ISABEL LA CATOLICA.

UNITED STATES AND STATE ARTICLES

PHILIP COAN,
EDITORIAL STAFF, *The Brooklyn Daily Eagle*;
FORMER EDITOR, *The New York Sun*.

ZOOLOGY

AARON L. TREADWELL, PH.D.,
DEPARTMENT OF ZOOLOGY, VASSAR COLLEGE.

KEY TO PRONUNCIATION

| | | | |
|-----------|---|---|--|
| æ | as in ale, fate. Also see ē , below. | ð | as in the Spanish Almodovar, pulgada, where it is nearly like <i>th</i> in English then, this. |
| ā | " " senate, chaotic. | g | " " go, get. |
| ā | " " glare, care, and as <i>e</i> in there. See ē , below. | q | " " the German Landtag, and <i>ch</i> in Feuerbach, buch; where it is a guttural sound made with the back part of the tongue raised toward the soft palate, as in the sound made in clearing the throat. |
| ā | " " am, at. | h | " <i>j</i> in the Spanish Jijona, <i>g</i> in the Spanish gila; where it is a fricative somewhat resembling the sound of <i>h</i> in English hue or <i>y</i> in yet, but stronger. |
| ā | " " arm, father. | hw | " <i>wh</i> in which. |
| ā | " " ant, and final <i>a</i> in America, armada, etc. In rapid speech this vowel readily becomes more or less obscured and like the neutral vowel or a short <i>u</i> (<i>ū</i>). | x | " <i>ch</i> in the German ich, Albrecht, and <i>g</i> in the German Arensburg, Mecklenburg; where it is a fricative sound made between the tongue and the hard palate toward which the tongue is raised. It resembles the sound of <i>h</i> in hue, or <i>y</i> in yet; or the sound made by beginning to pronounce a <i>k</i> , but not completing the stoppage of the breath. The character <i>x</i> is also used to indicate the rough aspirates or fricatives of some of the Oriental languages, as of <i>kh</i> in the word Khan. |
| α | " " final, regal, where it is of a neutral or obscure quality. | ŋ | " " in sinker, longer. |
| ā | " " all, fall. | ng | " " sing, long. |
| ā | " " eve. | n | " " the French bon, Bourbon, and <i>m</i> in the French Étampes; where it is equivalent to a nasalizing of the preceding vowel. This effect is approximately produced by attempting to pronounce "onion" without touching the tip of the tongue to the roof of the mouth. The corresponding nasal of Portuguese is also indicated by <i>n</i> , as in the case of São Antão. |
| ā | " " elate, evade. | sh | " " shine, shut. |
| ē | " " end, pet. The characters ē , ā , and ā are used for ā , ae in German, as in Baedeker, Gräfe, Händel, to the values of which they are the nearest English vowel sounds. The sound of Swedish ā is also sometimes indicated by ē , sometimes by ā or ā . | th | " " thrust, thin. |
| ē | " " fern, her, and as <i>i</i> in sir. Also for ō , oe , in German, as in Göthe, Goethe, Ortel, Oertel, and for eu and oeu in French, as in Neufchâtel, Crèveceur; to which it is the nearest English vowel sound. | th | " " then, this. |
| e | " " agency, judgment, where it is of a neutral or obscure quality. | zh | " <i>z</i> in azure, and <i>s</i> in pleasure. |
| i | " " ice, quiet. | An apostrophe ['] is sometimes used to denote a glide or neutral connecting vowel, as in tā'b'l (table), káz'm (chasm). Otherwise than as noted above, the letters used in the respellings for pronunciation are to receive their ordinary English sounds. When the pronunciation is sufficiently shown by indicating the accented syllables, this is done without respelling; as in the case of very common English words, and words which are so spelled as to insure their correct pronunciation if they are correctly accented. Pronunciation is discussed in the NEW INTERNATIONAL ENCYCLOPEDIA . | |
| i | " " quiescent. | | |
| i | " " ill, fit. | | |
| ō | " " old, sober. | | |
| ō | " " obey, sobriety. | | |
| ō | " " orb, nor. | | |
| ō | " " odd, forest, not. | | |
| o | " " atom, carol, where it has a neutral or obscure quality. | | |
| oi | " " oil, boil, and for eu in German, as in Feuerbach. | | |
| oo | " " food, fool, and as <i>u</i> in rude, rule. | | |
| ou | " " house, mouse. | | |
| ū | " " use, mule. | | |
| ū | " " unite. | | |
| ū | " " cut, but. | | |
| ū | " " full, put, or as oo in foot, book. Also for ū in German, as in München, Müller, and <i>u</i> in French, as in Buchez, Budé; to which it is the nearest English vowel sound. | | |
| ū | " " urn, burn. | | |
| y | " " yet, yield. | | |
| h | " " the Spanish Habana, Córdoba, where it is like a <i>v</i> made with the lips alone, instead of with the teeth and lips. | | |
| ch | " chair, cheese. | | |

THE NEW INTERNATIONAL YEAR BOOK

AAKJÆR, òk'jær, JEPPE. A Danish author, died in Copenhagen Apr. 22, 1930. He was born near Horsens, Jutland, Sept. 10, 1866. He was a "writer of the soil," portraying in his novels, poems, and plays the life of the peasants of Denmark. Among his works are: *Vadmelsfolk* (1912); *Vredens Børn* (1913); *Jens Langknis* (1915); *Konkenschus* (1925); and *Langs Karupaaens Bred* (1929).

ABNORMAL PSYCHOLOGY. See **PSYCHOLOGY**.

ABORTION IN LIVESTOCK. See **VETERINARY MEDICINE**.

ABYSSINIA. See **ETHIOPIA**.

ACADEMIES OF SOUTH AMERICA. See **SPANISH AMERICAN LITERATURES**.

ACADEMY, FRENCH (ACADÉMIE FRANÇAISE). The oldest of the five academies which make up the Institute of France and officially considered the highest; founded in 1635, reorganized in 1816. The membership is limited to 40. The list of the Immortals at the beginning of 1930, in order of their election, was as follows: Paul Bourget; Gabriel Hanotaux; Henri Lavedan; René Bazin; Maurice Donnay; Raymond Poincaré; Eugène Brieux; René Doumic; Marcel Prévost; Henri de Régnier; le maréchal Louis Lyautey; Pierre de La Gorce; Henri Bergson; le maréchal Joseph Joffre; Louis Barthou; Mgr. Alfred Baudrillart; Jules Cambon; Henri Bordeaux; Joseph Bédier; André Chevrillon; Pierre de Nolhac; Georges Goyau; Henri Brémond; Georges de Porto-Riche (q.v., died Sept. 5, 1930); Edouard Estaunié; Henri Robert; Camille Jullian; Georges Lecomte; Émile Picard; Albert Besnard; Louis Bertrand; Auguste de Caumont, duc de La Force; Paul Valéry; Abel Hermant; Émile Mâle; Louis Madelin; Maurice Paléologue; and le maréchal Henri Pétain.

At the meeting of the academy on May 22, 1930, the chairs formerly occupied by the late Georges Clémenceau and the late Count François de Curel were filled by the elections of André Chaumeix and Charles Le Goffic. M. Chaumeix, one of the most eminent of French journalists, has served as editor of the *Gazette des Beaux-Arts*, as political and literary editor, and then as editor-in-chief, of the *Journal des Débats*, and as director of the *Revue de Paris* and of the *Figaro*. M. Le Goffic, the Breton novelist and poet, has gained renown for his historical romances and for his critical and sociological works. He was thrice chosen laureate by the academy, which also crowned two of his works: *Le Crucifié de Kéralès* in 1892 and *Sur la Côte* in 1897. At the annual

meeting on Nov. 15, 1930, announcement was made of the completion of the grammar upon which the academy has been engaged for almost three centuries, in carrying out its special function to improve and conserve the French language.

ACADEMY, ROYAL SPANISH. See **SPANISH LITERATURE**.

ACADEMY OF ARTS AND LETTERS, AMERICAN. A society founded in 1904 by members of the National Institute of Arts and Letters, its charter of incorporation being approved by Act of Congress Apr. 17, 1916. It corresponds to the French Academy, its membership being limited to 50 chairs, and vacancies caused by death are filled by election by the members from the National Institute on the basis of lifetime achievement in literature, painting, sculpture, architecture, and music.

The membership of the academy as of Dec. 1, 1930, consisted of the following in the order of their election: Daniel Chester French, Robert Underwood Johnson, Henry van Dyke, Edwin Howland Blashfield, George Whitefield Chadwick, George de Forest Brush, Bliss Perry, Abbott Lawrence Lowell, Nicholas Murray Butler, Owen Wister, Herbert Adams, Augustus Thomas, Timothy Cole, Cass Gilbert, Robert Grant, Frederick MacMonnies, William Gillette, Paul Elmer More, Gari Melchers, Elihu Root, Brand Whitlock, Hamlin Garland, Paul Shorey, Charles Adams Platt, Archer Milton Huntington, Childé Hassam, David Jayne Hill, Lorado Tait, Newton Booth Tarkington, Charles Dana Gibson, John Charles Van Dyke, Royal Cortissoz, Henry Hadley, Charles Downer Hazen, George Pierce Baker, Edwin Anderson Alderman, Edward Channing, Wilbur L. Cross, Herman A. MacNeil, John Russell Pope, Edwin Arlington Robinson, James Earle Fraser, John Huston Finley, William Mitchell Kendall, Edwin Markham, Robert Frost, Irving Babbitt, James Truslow Adams, Edith Wharton, and George Grey Barnard.

On Nov. 13-14, 1930, the Academy opened its second building, containing a large auditorium and an art gallery, at 632 West 156th Street, and entertained, in honor of the occasion, distinguished delegates representing the Academies of 10 countries. The ceremonies were opened by the annual meeting on November 13. In connection with this session the following medals were awarded: The gold medal of the Academy for distinction in sculpture, to Anna Hyatt Huntington; the Howells medal for the best American fiction published during the last five years, to Willa Cather; the

Academy's medal for good diction on the stage, to George Arliss; and the gold medal of the Academy for good diction on the radio, to Alwyn Bach. The new members elected were: Robert Frost, Irving Babbitt, James Truslow Adams, Edith Wharton, and George Grey Barnard. The English poets, Sir William Watson and John Masefield, were elected corresponding members.

The annual meeting was followed in the afternoon of November 13 by formal dedication of the auditorium of the new building and dedication of the bronze doors to both buildings designed by Herbert Adams, a member of the Academy, and presented by an anonymous friend. On this occasion the keys to the new building were turned over to the president by the architect, Cass Gilbert, himself an Academician, and an ode was read by Robert Underwood Johnson, secretary of the Academy. There was also opened in the art galleries of the two buildings an exhibition of the works of the living artists members of the National Institute of Arts and Letters (which includes the members of the Academy), to be continued until May 15, 1931.

At the morning session on November 14 the Academy associated itself with the celebration of the 2000th anniversary of the birth of Vergil, the principal address entitled "Vergil's Two Thousand Years" being given by Dr. John H. Finley, on the Evangeline Wilbour Blashfield Foundation. In the afternoon the medals, which were awarded at the annual meeting were publicly presented to the recipients, and in the evening the Academy presented its fourth concert of all-American music in the new auditorium. Dr. Henry Hadley conducted the Manhattan Symphony Orchestra and was assisted by the Mendelssohn Glee Club.

The officers of the Academy in 1930 were: President, Nicholas Murray Butler; secretary, Robert Underwood Johnson; directors, Herbert Adams, Royal Cortissoz, Wilbur L. Cross, Hamlin Garland, Robert Grant, Cass Gilbert, Archer Milton Huntington. The offices of chancellor and treasurer were not filled. Headquarters are at 633 West 155th Street, New York City.

ACADEMY OF SCIENCES. See NATURAL ACADEMY OF SCIENCES.

ACCIDENTS. See RAILWAY ACCIDENTS; WORKMEN'S COMPENSATION.

ADAMOWSKI, JOSEPH. A Polish-American cellist, died in Cambridge, Mass., May 8, 1930. He was born in Warsaw, Poland, July 4, 1862, and studied at the Warsaw Conservatory under Kontski and Goebelt and at the Moscow Conservatory under Fitzenhagen and Tchaikovsky. He made his debut in Warsaw in 1883, and after teaching for several years at the Cracow Conservatory traveled in 1888 as a concert soloist in Russia and Germany. In 1889 he came to the United States, joining the Boston Symphony Orchestra with which he was associated until 1907. He also founded the Adamowski Quartet and the Adamowski Trio. In 1903 he became professor of cello and director of ensemble and quartet classes at the New England Conservatory of Music. He was founder and director of the Boston Symphony Orchestra's pension institution and a trustee of the Paderewski Prize Fund, which had been established by the Polish pianist to encourage American musical effort. He also edited *Schirmer's Library of Musical Classics*.

ADAMS, EPHRAIM DOUGLASS. An American educator and historian, died in Palo Alto, Calif.,

Sept. 1, 1930. He was born in Decorah, Iowa, Dec. 18, 1865, and was graduated from the University of Michigan in 1887. On receiving the Ph.D. degree from his Alma Mater in 1890 he became assistant professor of history and sociology at the University of Kansas. In 1894 he was appointed associate professor, and in 1889 professor of European history. He was made associate professor of history at Leland Stanford Jr. University in 1902 and, four years later, professor. He was also director of the Hoover War Library. In 1917 the LL.D. degree was conferred on him by Grinnell College, and in 1918 the Litt.D. degree by Tufts College. He was an authority on American-British relationships, his published works including: *The Control of the Purse in the United States Government* (1894); *The Influence of Grenville on Pitt's Foreign Policy* (1904); *British Interests and Activities in Texas* (Albert Shaw Lectures, Johns Hopkins University, 1910); *The Power of Ideals in American History* (Dodge Lectures on Citizenship, Yale University, 1913); *Great Britain, America, and Democracy* (1919); and *Great Britain and the American Civil War* (2 vols., 1925).

ADCOCK, (ARTHUR) ST. JOHN. A British novelist and journalist, died in Richmond, Surrey, June 9, 1930. He was born in London, Jan. 17, 1864. Although educated for the law he abandoned it in 1893 to devote himself to literature. He contributed numerous essays, poems, and short stories to various periodicals and published several books on London life, including: *East End Idylls* (1897); *From a London Garden* (1903); *London Etchings* (1904); *London from the Top of a Bus* (1906); *Famous Houses and Literary Shrines in London* (1912); *Modern Grub Street and Other Essays* (1913); *The Bookseller's London* (1913); *City Songs* (1926); and *The Glory That Was Grub Street* (1928). He was also the author of three long satirical poems: *Tod MacMammon Sees His Soul* (1920); *Exit Homo* (1921); and *The Divine Tragedy* (1922), which reflected the post-war pessimism. He served as acting editor of the *Bookman* in 1908, and in 1923 succeeded to the editorship. He was a fellow of the Royal Society of Literature.

ADDISON'S DISEASE. See MEDICINE, PROGRESS OF.

ADELBERT COLLEGE. See WESTERN RESERVE UNIVERSITY.

ADELPHI COLLEGE. A nonsectarian college of arts and sciences for women in Garden City, N. Y., incorporated in 1896. Adelphi was located in Brooklyn, N.Y., until the autumn of 1920 when it was transferred to its new home in Garden City, where it has a campus of about 70 acres and three buildings which can accommodate 1000 students. The enrollment for the autumn term of 1930 was 582 students. The faculty numbered 58. A department of speech was added during the year. The endowment was \$889,686, while the income for 1929-30 was \$254,167. The library contained 28,348 volumes. President, Frank Dickinson Blodgett, LL.D.

ADEN, ʾāden or ʾāden. An important, fortified coaling-station and transshipment point, situated on a volcanic peninsula on the southwestern coast of Arabia about 1000 miles east of the Strait of Bab-el-Mandeb; belonging to Great Britain since 1839. The area of the peninsula is 75 square miles and that of Aden protectorate, including the hinterland, the peninsula of Little Aden, and the island of Perim, 9000 square miles. Population of

Aden and Perim in 1921, 54,923, largely Moham-medan.

The principal commercial centre of the Arabian peninsula, Aden's imports of merchandise in 1928-29 totaled 76,488,000 rupees (\$27,895,000), compared with 81,182,000 rupees (\$29,478,000) in 1927-28. Merchandise exports in 1928-29 were 61,882,000 rupees (\$22,568,000), compared with 63,776,000 rupees (\$23,157,000) in the previous year. Imports and exports of treasure in 1928-29 were 6,318,000 and 6,201,000 rupees, respectively. The chief commodities of trade were cotton piece goods, grain, hides and skins, tobacco, coal, gums, and provisions. Salt and cigarettes are manu-factured locally. In 1928-29, 1635 merchant ves-sels of 5,788,548 net tons entered the port of Aden. Attached to Aden are the Kuria Muria Is-lands, ceded by the Sultan of Muscat for use as a landing for the Red Sea cable. On Aug. 15, 1929, control of the military government was trans-ferred from the Viceroy of India to the Resident and Commander-in-chief at Aden. Internal ad-ministration remained in the hands of the Gov-ernment of India. Resident and Commander-in-chief in 1930, Lieut.-Col. Sir Stewart Symes.

ADULT EDUCATION, AMERICAN ASSOCIA-TION FOR. An organization formed in 1926 to serve as a source of information concerning adult edu-cation activities and particularly to act as a clearing house through which the experience and findings of every adult educational enterprise may be made available to others. The association also seeks to advise those who are already en-gaged in adult education, to aid those who are planning to initiate such work, to publish and secure the publication of material useful to those in the field, and to assist in studies of problems fundamental to adult education. Its view is that adult education should count in its enrollment those men and women, young and old, who are no longer in contact with formalized education, whose primary interest lies in a vocation but who possess a secondary interest in their own edu-cational improvement as a sustained and contin-uing process.

The association continued its coöperation dur-ing the year with the People's Institute toward the working out of teaching methods and subject mat-ter for adult education in experimental classes in various sections of Greater New York. An investi-gation of the ability of adults to learn was made by Edward L. Thorndike and his associates at Teachers College, Columbia University, under the auspices of the association and was published in 1928 under the title, *Adult Learning. Education Tunes In*, published by the association in 1930, was a report of a six months' survey of the field of educational broadcasting, one of the results of which was the organization of the National Ad-visory Council on Radio in Education, with head-quarters in New York City. Other studies, made at the instance of the association, included the reading habits and interests of adults, prison edu-cational programmes, correspondence-school methods, the little-theatre movement in relation to adult education, and the continuing education of collegiate alumni.

The national conference of the association was held in Chicago May 12-15, 1930. The officers elected were: President, Newton D. Baker; vice presidents, Dorothy Canfield Fisher, Everett Dean Martin, C. F. D. Belden, Leon J. Richard-son, Walter Dill Scott; chairman, James E. Rus-sell; treasurer, J. H. Puelicher; secretary, Mar-

garet E. Burton; director, Morse A. Cartwright. The officers and 14 other members constitute the executive board of the association. Headquarters are at 60 East Forty-second Street, New York City.

ADVANCEMENT OF SCIENCE, AMERICAN ASSOCIATION FOR THE. This organization was founded in 1848 to advance science, to give a stronger and more general impulse and more systematic direction to scientific research, and to procure for the labors of scientific men in-creased facilities and a wider usefulness. In 1930 its membership included more than 19,000 in-dividuals interested in the advancement of science and the progress of knowledge and education. There were also 122 autonomous and independ-ent associated scientific societies, of which 91 were officially affiliated with the association, 25 being local academies of science. The asso-ciation has 15 sections representing the main current subdivisions of science: Mathematics, physics, chemistry, astronomy, geology and geo-graphy, zoölogical sciences, botanical sciences, anthropology, psychology, social and economic sciences, historical and philological sciences, en-gineering, medical sciences, agriculture, and edu-cation. Its activities are of three kinds: Those related to the holding of the annual and other meetings; those related to publications; and those related to the advancement of knowledge by research.

The eighty-seventh annual meeting of the as-sociation was held in Cleveland, Ohio, Dec. 29, 1930, to Jan. 3, 1931, with an attendance of more than 5000 scientists from all parts of the United States and Canada. There also were 40 scientific organizations meeting with the association. At its 300 sections about 1800 papers and addresses were given by 2000 speakers. The science exhibi-tion also was well developed, with exhibits by com-mercial firms, individuals, and scientific organ-izations. Dr. Robert A. Millikan, director of the Norman Bridge Physical Laboratory of the Cali-fornia Institute of Technology, delivered the retiring presidential address on "Atomic Dis-integration and Atomic Synthesis," expressing the belief that the creation of the universe is a continuing process. At a joint symposium ses-sion of the American Society of Naturalists, the Botanical Society of America, and the American Society of Zoölogists on "The Future of Man in the Light of His Past," Dr. A. V. Kidder of the Carnegie Institution of Washington presented the view of the archæologist; Prof. William F. Ogburn of the University of Chicago, that of the sociologist; and Prof. E. M. East of Harvard University, that of the geneticist. Dr. C. E. K. Mees of the Eastman Kodak Company spoke on "The Science of Photography," exhibiting the first photograph of the curvature of the earth taken on super-sensitive plates from an airplane; Dr. M. M. Slipher, director of the Lowell Ob-servatory, Flagstaff, Ariz., on "Searching Out Pluto, Lowell's Trans-Neptunian Planet"; and Dr. Paul R. Heyl of the U. S. Bureau of Stand-ards, on "Weighing the Earth," in which he described the process by which the weight of the earth had been found to be about six thousand million million million tons.

The annual association prize of \$1000 for the paper describing a noteworthy contribution to science presented at the annual meeting was awarded to M. A. Tuve, L. R. Hafstad, and O. Dahl, of the Carnegie Institution for their paper on

high-voltage tubes. The succeeding annual meeting was to be held in New Orleans, La., Dec. 28, 1931, to Jan. 2, 1932.

The official organ of the association is a weekly journal, *Science*. In addition, the association issues the *Scientific Monthly*, an illustrated magazine of timely articles of general interest by eminent men of science; prepares an elaborate programme for each annual meeting; and publishes at four-year intervals a volume of *Summarized Proceedings*, including a directory of members. The permanent endowment of the association, the income from which is employed to advance scientific research, amounted on Sept. 30, 1930, to \$162,226; grants are made annually to individuals or scientific organizations to promote research. Two regional divisions are under the auspices of the association: The Pacific division, including the Pacific States, Alaska, the Philippines, and the Hawaiian Islands; and the South-western division, including Arizona, New Mexico, Colorado, western Texas, and northern Mexico. These divisions are autonomous, holding annual and other meetings and engaging in special projects in their respective fields.

The president of the association for 1930 was Thomas Hunt Morgan, director of the Kerekhoff Laboratories of the Biological Sciences, California Institute of Technology. The president-elect for 1931 was Franz Boas, professor of anthropology at Columbia University. The other officers who were to serve until 1932 were: Permanent secretary, Charles F. Roos of Cornell University; general secretary, Burton E. Livingston of the University of Chicago; and treasurer, John L. Wirt of the Carnegie Institution of Washington. Headquarters are in the Smithsonian Institution Building, Washington, D. C.

ADVENT CHRISTIANS. See ADVENTISTS.

ADVENTISTS. The Advent Movement had its origin in America with William Miller, who believed not only in the coming of Christ in person, power, and glory, but that such an advent was at hand and that the date might be fixed with some definiteness. The movement, however, began in England and on the Continent, under the leadership of the Rev. Hugh McNeile and the Rev. Edward Irving, in England, and the Rev. Joseph Wolfe, DD., LL.D., in Prussia. A Prophetic Conference was held in Albury Park in 1836, at the residence of Henry Drummond, Esq., afterwards a member of the British Parliament, with "eight days of serious study of the prophecies," at which the Rev. Hugh McNeile presided. The first general gathering in America of those interested took place in Boston in October, 1840, the movement at that time being wholly within the existing churches, but in April, 1845, a conference was held in Albany, N. Y., at which the adherents of the Adventist doctrine were organized and a declaration of principles adopted, embodying the views of Mr. Miller. For the next ten years this organization included practically all the Adventists, but gradually separate bodies developed, beginning with the Advent Christian Church, in 1855, and including the Seventh-Day Adventists, organized in 1860; Life and Advent Union, in 1864; The Church of God (Adventists), in 1866; and The Churches of God and Christ Jesus, in 1888.

ADVENT CHRISTIAN CHURCH. This church, which is congregational in church government, holds simply to the general imminence of Christ's return but takes the position that the day cannot

be determined. Statistics reported for 1929, covering 44 conferences, showed 527 churches, 494 ordained ministers, 109 licensed ministers, 29,381 church members, 333 Sunday schools, 20,139 Sunday-school members, 131 Senior Young People's Societies of Loyal Workers, with 2831 members, and 33 Junior Young People's Societies with 480 members. The denomination maintains three publication societies and three educational institutions: Aurora College in Aurora, Ill.; the New England School of Theology in Boston; and the Advent Christian Seminary in Bridgeport, Ala. Periodicals published include *The World's Crisis* (Boston), *Messiah's Advocate* (Oakland, Calif.), and *Present Truth Messenger* (Live Oak, Fla.). Among the philanthropic institutions of the denomination are the American Advent Christian Home and Orphanage in Dowling Park, Fla., and the Vernon Home for ministers and missionaries in South Vernon, Mass.

The biennial general conference of the Advent Christian Church was held in Aurora, Ill., June 12-17, 1930. The general director's survey and the report of the commission appointed to make a study of denominational conditions indicated progress and advancement of an encouraging nature. A change in administrative policy for the next biennium resulted in the transfer of the executive duties from a central office to four regional offices operating under the direction of four regional boards of councillors. The duties and prerogatives of the general directors were transferred to the conference president, and the office of general director was dispensed with temporarily. The following clergymen were elected officers: Irving F. Barnes, D.D., president; C. O. Farnham, D.D., T. P. Stephens, Burr A. L. Bixler, Lee E. Baker, vice presidents; C. H. Hewitt, secretary; J. William Denton, treasurer.

SEVENTH-DAY ADVENTISTS. This denomination which is the largest of the Adventist group, embraces 12 union conferences in the United States and Canada. It believes that the seventh day of the week, from sunset on Friday to sunset on Saturday, is the Sabbath established by God's law and that immersion is the only proper form of baptism. The local church is congregational in government, although under the general supervision of the conference. The statistical report of the denomination for 1929 indicated 2249 churches in the North American division, 905 ordained ministers, and 117,771 church members; Sabbath schools numbered 2754 and the membership, 121,757. The foreign divisions, including the African, Australasian, Central European, Far Eastern, Inter-American, Northern European, South American, Southern Asia, Southern European, and Union of Socialist Soviet Republics divisions, consisted of 4308 churches, 1082 ordained ministers, 181,784 church members, and 6767 Sabbath schools, with an enrollment of 237,087. Throughout the world there was an increase in membership of 14,262 over 1928. The movement maintains in the United States and Canada 109 educational institutions, which in 1929 had an enrollment of 16,788 students. There are also 95 educational institutions maintained in foreign countries, with an enrollment of 8482 students. The denomination has 18 publishing houses in North America and 40 in other countries. During 1929 denominational literature was issued in 141 languages, and evangelistic work was conducted in 139 countries, total contributions from all sources for this work amounting

to \$3,837,788 for the North American division and to \$3,983,403 for the other divisions. Periodicals of the movement include *The Advent Review and Sabbath Herald* (Washington), *Signs of the Times* (Mountain View, Calif.), and *The Watchman* (Nashville, Tenn.). The headquarters of the general conference of Seventh-Day Adventists are at Takoma Park, Washington, D. C.

AERONAUTIC ROCKET EXPERIMENTS.

During the year Dr. Robert H. Goddard, Professor of Physics at Clark University, Worcester, Mass., carried on a series of promising experiments on methods of propulsion of rockets, with which he hoped to attain and explore altitudes above the reach of balloons and airplanes. Dr. Goddard first began his work in this field in 1912 while at Princeton University, and from 1914, when he went to Clark University, he was active in researches and experiments, with grants from the Smithsonian Institution and the Carnegie Institution of Washington.

The Goddard rocket which had an important trial flight on July 17, 1929, was essentially the same as the similar pyrotechnic device, being propelled by the recoil from the discharge of gases, and it was believed that the rocket would work as well outside the earth's atmosphere as in it. In place of gunpowder or similar explosives, Professor Goddard developed a liquid propellant, and as this burns the rocket continually becomes lighter until the fuel is exhausted, when a parachute would come into action and bring the device safely to earth. Should the device work according to the hopes of the inventor, it was thought it might be possible to study the spectrum of the sun without the screen effect of the ozone layer 50 to 75 miles above the earth, which cuts out a large part of the solar radiation, while knowledge would doubtless be gained of the Kennelly-Heaviside layer, the ionized stratum in the atmosphere making possible long distance radio. Furthermore, it might be possible to bring down samples of the atmosphere from high altitudes for analysis, and prove that at certain heights the rarefied atmosphere consists mainly of hydrogen and helium, instead of oxygen and nitrogen. The experiments of Professor Goddard, first planned for Camp Devens, Mass., later were arranged for Roswell, New Mexico, where favorable climate and country and clear atmosphere have seemed more advantageous for the projection of rockets into the air.

AERONAUTICS. Aeronautics in 1930 continued to be marked by active progress and advances with increased use of aircraft for commercial transportation. As in other fields, commercial conditions prevailing the world over acted to restrict development and on the commercial side the aircraft industry suffered a slump that was as inevitable as it was expected. In the United States during 1930 there was a decrease in the production of airplanes, and diminished exports, but there was increased flying and passenger traffic, which was beginning to become more stabilized, though it had not become generally profitable. There were the usual number of serious and distressing accidents during the year, but with the increased flying, greater relative safety was indicated, and in all of the commercial nations of the world greater attention was being paid to the qualification of pilots and the safe operation of airplanes. As summarized below, there were many and important notable flights, although it must be confessed that public interest

was considerably less, and this held true for long distance, trans-Atlantic and transcontinental flights, duration, and other records.

Flying by women made notable advances, and competition and long distance flights resulted in an increased number of new records, several of which were of extreme importance. Blind or instrumental flying developed during the year with improved instruments providing increased safety.

NATIONAL BALLOON RACE. The National Balloon Race started at Bellaire Field, Houston, Texas, on July 4, and was won by Roland J. Blair, pilot of the entry made by the Goodyear Zepelin Corporation. Blair, with his aide, F. A. Trotter, covered a distance of 768 miles, landing 2.5 miles northwest of Greensburg, Kentucky. Second place was won by the entry of the Detroit Balloon Club, piloted by E. J. Hill, with A. G. Schlosser, aide, with 688 miles, landing 3¾ miles southwest of Russellville, Kentucky. Third place was won by the entry of the United Van Service, Inc., George Hineman, Pilot, and Milford Vanik, aide, with 685 miles, landing 1.6 miles west of Kirkmansville, Kentucky. Fourth and fifth places were taken by balloons of the U. S. Navy, while sixth and seventh places went to the balloons of the U. S. Army. The shortest flight of any of the 14 contestants was 250 miles made by the balloon of the Cleveland Chamber of Commerce, which landed near Cuthland, Texas.

GORDON BENNETT BALLOON RACE. The 1930 Gordon Bennett Balloon Race was held from the Cleveland Airport at Cleveland, Ohio, starting on September 1. For the fifth consecutive year, first place was taken by the United States with a balloon piloted by Ward T. Van Orman and Alan MacCracken, aide, which achieved a distance of 548 miles, landing in Norfolk Co., Mass., near North Canton. Second place went to E. Demuyter and L. Coeckelberg of Belgium with 448 miles, landing on the eastern slope of Mt. Greylock, Berkshire Co., Mass. Third place was won by Edward J. Hill and Arthur J. Schlosser of the United States with 417 miles, landing at Ten Eyck Powel Farm, Albany County, N. Y.

According to the official results with distance scaled by the U. S. Geological Survey, the official standing of the contestants and the balloons, pilots, aides, landing places, and distances in miles were as follows:

First, United States, Ward T. Van Orman, Alan MacCracken, 1 mile north Canton, Mass., 542 miles.

Second, Belgium, E. Demuyter, L. Coeckelberg, eastern slope of Mt. Greylock, Berkshire Co., Mass., 448 miles.

Third, United States, Edward J. Hill, Arthur J. Schlosser, Ten Eyck Powel Farm, Albany Co., N. Y., 417 miles.

Fourth, United States, R. J. Blair, F. A. Trotter, 1½ miles south Copenhagen, N. Y., 348 miles.

Fifth, Germany, Dr. Hugo Kraulen, Carl Gotze, 1 mile south New Lisbon, N. Y., 343 miles.

Sixth, France, Albert Boitard, Jean Herbe, 3 miles north Smithville, Ontario, 185 miles.

BRITISH AIRSHIPS. The two British airships, the *R-100* and the *R-101*, the construction and test of which have been described in earlier **YEAR BOOKS**, went into service during the year and while the former made a successful transatlantic flight, the *R-101* was destroyed in one of the most serious and deplorable tragedies in the history of aeronautics. The *R-100*, it will be recalled, was built at Howden, Yorkshire, by the Airship Guarantee Company, a private firm, and was completed toward the end of 1929, making several

flights in November and December of that year. It is about 70 feet shorter than the *Graf Zeppelin* and a third larger in diameter.

On July 28, 1930, this airship with a crew of 40, under the command of Squadron Leader R. S. Booth, left Cardington, England, and after a non-stop flight of 3400 miles in 78 hours, 52 minutes, was moored successfully at St. Hubert airport at Montreal at 5:33 o'clock, after a voyage of 3228 miles. This was the ninth attempt to cross the Atlantic by rigid airships and all were successful and without loss of life. The airworthiness of the ship was put to test during the voyage by two periods of bad weather, including a violent thunder storm accompanied by tempestuous winds while proceeding up the St. Lawrence valley. Although the fabric of one of the stabilizer fins was damaged, causing some eight hours delay during repairs, the craft was at no time in serious danger.

It was planned to make an extensive trip through Canada after the damage was repaired, in order to call attention to the importance of imperial air navigation, but this was seriously restricted, and on August 10 the *R-100* made a short flight over eastern Canada visiting Toronto.

On Thursday, August 14, the *R-100* left Montreal on her return trip and arrived at Cardington on Saturday morning, making the return voyage in 57 hours, with one of the six engines unserviceable. The trip took 57 hours, or two hours more than the fastest airship flight from America to England of the *Graf Zeppelin*, and it was considered a typical journey under ordinary conditions.

DESTRUCTION OF THE "R-101." During the first half year the airship *R-101*, which had been built by the British Government for service between England and India, underwent further modification and improvement, including the lengthening of the ship by the insertion of an extra bay providing an additional gas bag and increasing capacity by about 500,000 cubic feet, and air lift by about 15 tons. As thus improved, she was the largest airship in the world, as well as the longest, with a greater length than the German airship, *Graf Zeppelin*.

Everything was made ready for the experimental flight to India by way of Ismailia, which was begun on the evening of Saturday, October 4. The ship carried a complement of 54 passengers and crew, including Lord Thomson, Secretary of State for Air; Sir Sefton Brancker, Director of Civil Aviation; Wing-Commander R. B. B. Colmore, Director of Airship Development; Lieut.-Col. V. C. Richmond, Assistant Director of Airship Development (Technical); Maj. G. H. Scott, Assistant Director of Airship Development (Flying); Maj. P. Bishop, Chief Inspector, Aeronautical Inspection Department, Air Ministry; Squadron Leader F. M. Rope, attached to Directorate of Airship Development, and Flight-Lieut. H. C. Irwin, Captain of the Airship.

On the morning of Sunday, October 5, the airship struck the ground near Beauvais, northern France, and was completely destroyed by fire, all but eight of the crew and passengers perishing and one of the survivors dying shortly after rescue. It was quite certain that the ship was flying low, but aside from that the cause of the accident was not definitely ascertained, even in the course of the official investigation, which began in November. This tragic catastrophe not only made a

great impression in Great Britain, but throughout the Dominions, as the development of airship transportation was heralded as an important step toward greater unity of the Empire and the extension of commercial relations. Expressions of sorrow were world-wide, and all interested in aeronautics were stunned by the misfortune.

UNITED STATES AIRSHIPS. During the year considerable progress was made on the U. S. N. *ZRS-4*, described in the YEAR BOOK for 1929, and under construction by the Goodyear-Zeppelin Corporation at its large hangar at Akron, Ohio. The skeleton frame of this 6,500,000 cubic feet craft was nearing completion and considerable interest was being manifested in the development of the work, particularly in view of the various vicissitudes undergone by lighter-than-air craft during the year. The *Los Angeles* continued in active service during the year, and after making a number of flights, received an official survey which indicated that the craft was in good condition and serviceable for from two to four years. The two non-rigid airships of 200,000 cubic feet volume of the U. S. Navy also operated from the airship base at Lakehurst, N. J., for training and experimental work. During the year a larger non-rigid airship, with a capacity of 320,000 cubic feet, was ordered for experimental work with fuel gas.

"GRAF ZEPPELIN." During the year the *Graf Zeppelin* described in detail in earlier YEAR BOOKS, was constantly in flight, and in April made trips to Seville, Spain, and Cardington, England, landing at that airport on April 26. Captain Eckener of the *Graf Zeppelin* was in conference with the British Air Ministry during the year in regard to the exchange of information and experience. Later in the year Captain Eckener testified at the inquiry held in regard to the accident of the *R-101*. The most notable trip of the *Graf Zeppelin* was begun on May 18 when, with a crew of 42, 22 passengers, and considerable mail, a trip from Friedrichshafen to South America was begun. The first leg of this flight was to Seville, Spain, and on May 20 the *Graf Zeppelin* flew to Pernambuco, Brazil, reaching there on May 22, after a flight of 62 hours. It was the first lighter-than-air craft to cross the Equator and fly over southern waters. After touring Brazil the *Graf Zeppelin* stopped at Rio de Janeiro, and on May 28 started north and landed in the United States at Lakehurst on May 31. On June 2 the airship, with renewed fuel and added supplies, started on its return trip, stopping at Seville on June 5 and reaching Friedrichshafen on June 6.

Among the flights in Europe made by the *Graf Zeppelin* during the year was one from Friedrichshafen to Moscow, which was reached on September 10, where Dr. Eckener and his companions received an enthusiastic welcome. It was stated that the Aero-Arctic Commission in Leningrad was considering the use of the *Graf Zeppelin* in a flight in 1931 from Wardze, Norway, to Fairbanks, Alaska, across Greenland and Grant Land, returning along the Siberian Coast to Wrangel Island, Fridtjof Nansen Land, and Wardze. It was also stated that a number of Soviet scientists were to take part in the flight for the purpose of gathering geographical and meteorological information for the development of Northern Siberia.

The year was one of considerable activity for the *Graf Zeppelin* and before it went out of commission in November, it had made a total of 155

flights, covering a distance of 144,275 miles and carrying 6278 passengers and 2,200,000 pieces of mail and freight weighing approximately 12,166 lbs. As soon as the ship was placed in the hangar and the gas removed, a thorough inspection was begun of all the parts, so that a study of the normal life and depreciation of an airship could be undertaken. It was found that the sale of passenger tickets for the various flights made by the *Graf Zeppelin* covered the cost of fuel, salaries, insurance and depreciation, so that the economic value of the Zeppelin apparently was established. A special gold medal was awarded by the National Geographic Society to Dr. Eckener in Washington on March 27.

During the year there was constructed a new and larger hangar for the building of the newest Zeppelin, the *LZ-128*. The plans for this ship were well advanced during the year, but after the destruction of the British *R-101*, Dr. Hugo Eckener, the technical director of the German Zeppelin industry, stated that the construction of a new airship would be delayed, pending the consideration of using helium gas, the exportation of which it was believed the American Government, which enjoyed a monopoly in this field, would permit. Helium gas, it will be recalled, is non-inflammable, but, having a slightly less lifting power than hydrogen, requires a greater capacity to secure the same lifting effect.

NOTABLE AIRPLANE FLIGHTS. Among the many notable performances of the year the following may be summarized:

A trans-Atlantic mail flight from St. Louis, Senegal, on the west coast of Africa, to Natal, Brazil, was made by Jean Mermoz, who, after 20 hours and 15 minutes in the air, completed the 1990-mile crossing on May 13, and on the following day delivered 308 pounds of mail at Buenos Aires. He was successful in reducing the time for French mail from Paris to Brazil from 7 to 3½ days. The return trip with 600 pounds of mail was delayed on account of unsatisfactory weather conditions and Mermoz was forced down.

Notable and picturesque among the flights of the year was that made by Miss Amy Johnson flying from Croyden, England, to Australia, the first woman to make this 12,000-mile journey alone. Leaving Croyden airport on May 5, she landed at Port Darwin, May 24, and would have bettered the record of Hinkler of 16½ days were it not for delays and accidents in India and Java. Miss Johnson's trip was marked by storms and various other difficulties involved in flying over wild and inhospitable country, and was acclaimed throughout the British Empire. She was enthusiastically received on her return to England, and on June 2 was made a Commander of the Order of the British Empire.

One more trans-Atlantic trip was scored when the Australian aviator, Maj. Charles Kingsford-Smith, with E. M. Van Dyke, relief pilot; Capt. J. P. Saul, navigator, and J. W. Stannave, wireless operator, flew in the rebuilt Fokker F-7 monoplane *Southern Cross* from Port Marnock, Ireland, on the evening of June 23 with New York as their objective. Major Kingsford-Smith, while in contact by radio with various steamships and radio stations on the first part of his flight, lost his course on June 25 for a while and, with fuel supplies running low, landed at Harbor Grace, Newfoundland, whence on June 26 he flew to New York and landed at Roosevelt field. This trip was of further interest because it was made in the

Southern Cross, originally used by Sir Hubert Wilkins in Arctic exploration and flown across the Pacific from California to Australia, and from Australia to England. For this trip it was equipped with three Wright 5-5 engines. Major Kingsford-Smith then flew across the American continent, making stops at Chicago and Salt Lake City, reaching Oakland, California, on July 4, thus completing the second navigation of the world.

Later in the year Kingsford-Smith, flying from England on October 10 in a light airplane, an Avro Avian sports machine equipped with a 120-horse power Gipsy engine, named *Southern Cross Jr.*, landed at Darwin, Northern Australia, at 1.55 A.M. Sunday, October 19. On the following day Commander Smith flew from Port Darwin to Cloncurry, a distance of 907 miles. In this connection it is interesting to state that 4½ days were taken from the previous record, and that in a light airplane Commander Kingsford-Smith made the journey in two days less than it took him in the previous year to go the same route in his three-engined Fokker.

Another notable trans-Atlantic flight was that of Capt. Wolfgang von Gronau in a two-engined Dornier Wal flying boat that had been operated by the aviator Courtney and was celebrated for its employment by Amundsen and Ellsworth in their Polar flight. Captain von Gronau, with a crew of three, in what was originally intended as a training flight, left the Isle of Sylt in the North Sea August 18, and flew first to the Faroe Islands and then to Reykjavik, Iceland; thence they proceeded to Igivut, Greenland, to Cartwright, Labrador, to Queensport, Nova Scotia, to Halifax, Nova Scotia, and then to New York, arriving August 26.

An event of the year was the first direct non-stop flight from Paris to New York made by Coste and Bellonte in their Breguet plane *Question Mark* equipped with Hissco engines. This flight, which began on Sept. 1, 1930, took 37 hours, 18 minutes for the 4100 miles and was made in a plane several years old in which Coste had made several non-stop flights of greater distance than from Paris to New York.

After the *Columbia* had made its round trip non-stop flight from New York to Bermuda, mentioned below, Capt. Errol Boyd, a Canadian, and Lieut. Harry P. Connor, formerly of the U. S. Navy, took off on October 10 with this airship from Harbor Grace, Newfoundland, flying to the Scilly Islands off the southwest coast of England. The trip was made in 47 hours and 41 minutes, and while a forced landing at Tresco in the Scilly Islands was made somewhat short of the mainland, on account of a shortage of fuel, yet the flight was in every way well executed. The airplane, *Columbia*, designed and built by B. L. Bellanca in 1926, had a notable record. It not only won two trophies in the 1926 National Air Races, but in April, 1927 achieved a world's non-fueling endurance record, and in June with Clarence Chamberlin as pilot, and Charles A. Levine, made a trans-Atlantic flight, landing in Germany. In all of these trips a Wright Whirlwind engine of 225 horse power was employed, and the designer, Charles L. Lawrence, shared the credit with the designer of the plane.

On February 15 Lieutenant White and Lieutenant McMullen on their route from New York to Buenos Aires, a distance of 6870 miles, flew from Miami, Florida, to the Panama Canal,

This was the first time the trip had been made by a heavier-than-air machine. The entire flight, from New York to Buenos Aires, 6870 miles, was made in 52 actual flying hours, or five days for the trip, which was a record for the entire distance, and also for the intermediate distances between the South American cities. From Colon the flight was continued to Lima, Peru, with a brief stop at Talara, Peru. From Lima the next stage was to Arica, thence to Santiago, and from Santiago to Buenos Aires in 7 hours and 40 minutes.

An interesting flight was that of Captain Yancey in the J6-9 Stinson-Detroit airplane, *The Pilot*, fitted with pontoons, from New York to Bermuda. Starting on April 1 with a pilot and radio operator, he flew until 6.00 o'clock when he landed on the water about 60 miles from Bermuda. The following morning he took off from the calm sea at 5.45 and reached Bermuda at 9.00 o'clock. The trip from New York to Bermuda was of unusual interest, in addition to the meteorological conditions involved due to change of temperature in passing over the Gulf Stream, in view of using this island as a way station on a trans-Atlantic commercial route. A further test of flight between New York and Bermuda was made on June 29 when Roger Q. Williams, Errol Boyd, and Lieut. H. P. Connor in the Bellanca monoplane, *Columbia*, referred to above, flew from Roosevelt field, New York, and returned the same day circling over Hamilton, Bermuda, and covering 1560 miles in 17 hours and 1 minute.

One of the most picturesque and important flights of the year, was begun on December 17, when 14 Italian seaplanes, commanded by General Balbo, Italian Air Minister, left Orbetello, Italy, for Cartagena, Spain, on a long distance flight of some 6000 miles to Brazil. By December 25th the squadron had reached Bulama, Portuguese Guinea, West Africa, but in taking off for the trans-Atlantic passage two of the planes met with disaster and five aviators were killed. Two of the replacement units included in the original group were forced down in mid-ocean and one of these later was repaired so as to complete the trip.

Col. Charles A. Lindbergh, the American aviator, continued his activity during the year and on April 20, accompanied by Mrs. Lindbergh, he flew from Glendale, Calif., to Roosevelt Field, Long Island, in 14 hours and 45 minutes, making one stop for fuel at Wichita, Kan. Colonel Lindbergh flew a low-winged Lockheed Sirius plane with a Wasp engine, and his time was a record which, as will appear, was broken shortly afterwards by Captain Hawks. Another notable flight by Colonel Lindbergh was from New York to the Canal Zone on the inauguration of the seven-day air mail service from Miami to Buenos Aires. He left Roosevelt Field near New York City on April 24 for Florida, and on April 26 flew from Miami to Havana in 2 hours 3 minutes. The following day he flew from Havana to Cristobal, Canal Zone, stopping at Puerto Cabezas, Nicaragua, to take on fuel. He made the 1033 miles to Cristobal in 9 hours, 58 minutes. The mail was carried to Buenos Aires by another pilot, but on the return trip Colonel Lindbergh flew from the Canal Zone on May 1, reaching New York on May 3.

On June 18 a transcontinental record between Jacksonville, Florida, and San Diego, California, a distance of 2112 miles was made by Edward F.

Schlee and William A. Brock, in a Lockheed-Vega monoplane. The time required was 13 hours and 55 minutes. On a return trip 16 hours and 50 minutes were required from the Pacific coast to Tallulah, La., where a landing for more fuel was required. The round trip involved a total elapsed time of 31 hours and 58 minutes.

On May 27 Lieut.-Col. Roscoe Turner made an east to west transcontinental record crossing the United States in 18 hours and 42 minutes, stopping to refuel at Wichita, Kan. Previously on May 13 he had flown from Los Angeles to New York in 15 hours, 32 minutes. The westerly transcontinental record was again broken on August 6 when Capt. Frank Hawks, in a Travel Air low-wing plane with J-6 engines flew from Curtiss Field, N. Y., to Los Angeles in 14 hours and 50 minutes, or 3 hours and 52 minutes less than the time of Roscoe Turner in May. Hawks' actual flying time was 13 hours and 35 minutes, but he made five stops for gasoline. However, his flight averaging 200 miles per hour was hailed as showing the possibility of rapid commercial and passenger service across the American continent. On August 13 Captain Hawks flew from Los Angeles to New York in 12 hours 25 minutes making stops at Albuquerque, Wichita, and Indianapolis.

During the autumn of 1930 Captain Hawks, flying in a J6-9 special Travel Air low-wing "Texaco 13," made a number of notable flights and speed records. On October 1 he flew from Detroit to New York in two hours and 41 minutes, and on October 7 from Boston to the Curtiss Valley Stream Airport at New York, 190 miles, in 53 minutes. On October 8 Captain Hawks flew from the Camden Airport to the Curtiss Airport at Valley Stream in 20 minutes, bringing to New York City pictures of the World Series baseball game. On October 21 he flew from New York to Washington, 225 miles, in 71 minutes, and made the return trip in 63 minutes. On November 6 he flew from New York to Havana, 1400 miles, stopping for fuel at Jacksonville, Florida, and Miami, Florida. As he stopped 23 minutes at the first place and 20 at the latter, his flight involved 8 hours and 38 minutes of actual flying time, or a total of 9 hours and 21 minutes. Three days later he made the return trip to New York in 8 hours and 44 minutes, stopping at Miami and Charlotte, N. C., the actual flying time being 8 hours and 3 minutes.

AIRPLANE DESIGN AND CONSTRUCTION. The tendency toward the construction of large airplanes continued in Europe, and aroused considerable interest, the Dornier Wals *Do-X*, the Junkers, and the Handley Page, Ltd. 40-seater, being notable examples of the work of the year. In the United States while as large craft had not been built there was considerable increase in size of new ships for the various passenger and mail routes, a typical airplane illustrated.

A notable plane of the year was the Dornier *Do-X*, which was designed for a trans-Atlantic flight, and for passenger transport. This craft, which had a wing spread of 157 feet, enjoyed the reputation of being the largest heavier-than-air craft in the world in 1930, and was powered with 12 Curtiss Conqueror water-cooled engines, which took the place of 12 air-cooled Siemens Jupiter engines originally planned, increasing the horse power from 6300 to over 7000. The tests of the *Do-X*, which were carried on in November and December, were marked by extreme caution, as it

BRITISH AIRSHIP R-100 AT MOORING MAST

DORNIER DO-X SEAPLANE
Built for Trans-Atlantic Flight

EUROPEAN AIRCRAFT OF 1930

Photographs by courtesy of Aviation, N. Y.

was desired to develop safety in the highest possible degree, and while a trans-Atlantic trip was contemplated it was not to be undertaken until all conditions were favorable.

On November 5 a trial flight was made at Altenrhein, Lake Constance, Switzerland, with the craft manned by a crew of 16. After a trip of 5 hours and 40 minutes, the huge seaplane made a landing at Amsterdam on the Zuyder Zee. This initial trip was in every way successful, with a speed averaging from 98 miles per hour to 102 miles per hour, with a gross weight of 46 tons. On November 10 the *Do-X* flew from Holland to Calshot, England, carrying a crew of 15 and 21 passengers, with a total weight of 50½ tons, of which fuel counted for about 11. Three hours and 51 minutes were required for the trip down the coast and across the Channel to Calshot.

The *Do-X* attracted great attention while in England, and on one of its flights the Prince of Wales, who was a passenger, navigated the ship from the control board. The *Do-X* left England on November 14 and proceeded to Bordeaux, France, being delayed by unfavorable weather. It was here decided to relinquish, at least temporarily, any idea for trans-Atlantic flight, as it was desired to have the airplane in proper condition. The ship then proceeded to Santander, Spain, and thence to Lisbon, Portugal, where on November 29 in a fire produced by a short circuit, a wing was seriously burned. This necessitated extensive repairs so that up to the end of the year no protracted flight was attempted.

In connection with airplane design in 1930, a condition similar to that in the automotive field prevailed, with developments concerned more with economics than with fundamental innovations or inventions. Aerodynamic refinement, decreased structural weight, and elimination of wasted energy all figured in the new craft, and the proper design of fuselage and landing gear figured to a marked degree. The Guggenheim Safe Aircraft competition of the previous year in the United States developed a number of interesting features which were studied, while new research was carried on on a conservative, but systematic basis.

In its review of the year, *Aviation* (New York) noted a continuous trend toward the monoplane, both in Europe and America. There was no tendency toward the change of the number of engines or their arrangement manifested over the previous year, but elaborate tests were being carried on at Langley Field, with the new tunnel elsewhere described, in order to study various arrangements of the power plant and its design.

During the year there were published a number of studies of the Packard Diesel engine, which had aroused a great deal of interest for several years, and also of the Junkers Diesel engine. The high-speed Diesel engine research continued at Langley Field and elsewhere, and it is safe to say that important advances were recorded. The Pratt & Whitney Wasp engine, operating with fuel injection into the cylinders in connection with electric ignition, worked satisfactorily, and additional developments were looked for in this new device which might make possible the use of the lighter fuel oils.

Another important field of investigation during the year was supercharging not merely for altitude performances, but for increasing sea level power output. The U. S. Bureau of Standards provided with an altitude chamber paid considerable attention to this problem during the

year for the air services of the Army and Navy. This same institution carried on an extensive research into fuel for carburetor engines, as did the laboratories of the United States Air Service at Wright Field. The investigations developed considerable information regarding the characteristics of aircraft fuels and the conditions under which they are employed. Advances were recorded in the improvement of airplane engines, looking for greater power and lower weight for a given piston displacement. An improved internal type of propeller reduction gear was developed for the Pratt & Whitney engines, though it was stated that American commercial aviation seemed to be behind European practice in this respect.

Important results were being obtained with large water-cooled engines in England and Continental Europe, of which the Rolls-Royce model, the Hispano-Suiza 600-horse power model, and the 1000-horse power Isotta-Fraschini were notable examples.

RECORDS FOR THE YEAR. During 1930 a number of new records for airplanes for speed duration, altitude, and lifting power were made and accepted by the Federation Aeronautique Internationale, the body entrusted with the approval of records of the world.

For airplanes flying in closed circuit, U. Maddalena and F. Ceconi of Italy, in a Savoia-Marchetti S-64 plane, with a Fiat A-22 T engine, flying from Montecelio on May 30-June 2, 1930, made a duration record of 67 hours and 13 minutes, and a distance record of 8188.80 kilometers (5088.27 miles).

The world and American airplane altitude record went to the United States where Lieut. Apollo Soucek, U.S.N., in a Wright "Apache" landplane, with a Pratt & Whitney 450-horse power engine, at Anacostia, D. C., June 4, 1930, ascended to a height of 13,157 meters (43,166 ft.).

The world airplane speed record for 1000 kilometers went to Czechoslovakia, whose representative, Adjutant Chef Vojtech Svozil, in an Aero A-42 plane, with an 800-horse power Asso engine, on the Praha course on Sept. 25, 1930, accomplished 274.094 kilometers (170,313 miles) per hour.

During the year Spain gained the airplane speed record for 2000 kilometers when Carlos de Haya Gonzalez and Cipriano Rodriques Diaz, with a 600-horse power Hispano Suiza engine, at Seville, Oct. 11, 1930, made 220.428 kilometers (136.967 miles) per hour. These men in this same flight secured for Spain the speed record for 5000 kilometers, also, with 208.152 kilometers (130.19 miles) per hour.

For airplanes with pay load of 500 kilograms (1102.31 lbs.), the French aviators, Dieudonne Costes and Paul Codos, in a Breguet 19 plane, with a Hispano-Suiza 600-horse power engine, at Istres, on Jan. 17-18, 1930, made a world's duration record of 23 hours, 22 minutes and 49 seconds. This same flight also resulted in a world's distance record of 4,361,980 kilometers (2710.40 miles).

In this same class, however, the United States secured a speed record for 100 kilometers when Leland F. Schoenhair, in a Lockheed Vega "Executive" monoplane NC-308 H, with a Pratt & Whitney 450-horse power supercharged engine at Jacksonville, Fla., on Feb. 18, 1930, made a speed record of 298.510 kilometers (185.49 miles) per hour. In this flight they also made a speed record

for 500 kilometers (171.228 miles), but on Oct. 12, 1930, it was broken by Capt. Joseph Kalla of Czechoslovakia, who, in the airplane Letiv S-516, with an 800-horse power Asso motor on the Praha course, made 276.375 kilometers (171.731 miles) per hour. He also secured the world's speed record for 1000 kilometers on the same flight with 275.269 kilometers (171.043 miles) per hour. The speed record for 2000 kilometers was broken by Carlos de Haya Gonzalez and Cipriano Rodriguez Diaz, in the flight of Oct. 11, 1930, mentioned above, when a speed of 220.428 kilometers (136.967 miles) per hour was made, supplanting the record of Costes and Codos made on the flight of Jan. 17-18, 1930.

With a pay load of 1000 kilograms (2204.62 lbs.), Costes and Codos in the Breguet plane already referred to, at Istres, on Feb. 15-16, 1930, returning to the point of departure, made a duration record of 18 hours and 1 minute, and also a closed circuit distance record of 3309.900 kilometers (2056.672 miles).

The United States gained two speed records for an airplane with a pay load of 1000 kilograms; namely, 283.250 kilometers (176 miles) per hour for 100 kilometers, and 270.800 kilometers (168.27 miles) per hour, when Leland F. Schoenhair, in the plane mentioned above, flew at Jacksonville, Fla., on Feb. 20, 1930. A speed record for 1000 kilometers made on this flight by Schoenhair, was broken by Adjutant Chef Vojtech Svozil of Czechoslovakia on Sept. 25, 1930, in the flight already mentioned, when he made 252.380 kilometers (156.821 miles) per hour.

The United States also gained the speed record for 100 kilometers with a pay load of 2000 kilograms (4400.24 lbs.) when W. J. Fleming, flying in a Bach monoplane with one Pratt & Whitney "Wasp," 2 Wright J-6 engines, on Mar. 26, 1930, at Los Angeles, Calif., made a speed record of 229.591 kilometers (142.66 miles) per hour. This was in turn supplanted by a record of 264.628 kilometers (164.432 miles) per hour made by Leroy Manning and Carl Wenzel in a Ford Transport plane, with three Pratt & Whitney "Wasp" engines of 420 horse power, at Dearborn, Mich., on Sept. 29, 1930.

For an airplane with a pay load of 5000 kilograms (11,023 lbs.), Wilhelm Zimmerman in a Junkers J-38 plane with 2 Junkers L-55 engines of 600 horse power each, and two Junkers L-8 of 400 horse power each, at Dessau-Leipzig on Apr. 10, 1930, made a duration record of 3 hours, 2 minutes, and a distance record of 501.590 kilometers (311.6724 miles). On this flight he also achieved a speed record for 100 kilometers; namely, 184.404 kilometers (114.62 miles) per hour, and on April 30 for 500 kilometers a speed record of 172.950 kilometers (107.466 miles) per hour.

A notable flight was made on Feb. 22, 1930, by Cav. Domenico Antonini Caproni in a "Ca-90" biplane with 6 Isotta-Fraschini Asso motors of 1000 horse power each, at Cascina Malpensa. In the course of this trip he secured the world's record for airplanes, with pay load of 750 kilograms (1653.47 lbs.), for duration of 1 hour and 31 minutes and for altitude of 3231 meters (10,597 feet). Also this flight secured the duration and altitude records for 10,000 kilograms (22,046 lbs.), and the record for the greatest pay load carried to 2000 meters (6577.7 feet).

The United States gained the duration record for airplanes refueling in flight and returning to

the point of departure, Sky Harbor, Ill., on June 11 to July 4, 1930, when John and Kenneth Hunter in the *City of Chicago*, a Stinson Detroit plane with a Wright 300-horse power "Whirlwind" engine, were in the air 553 hours, 41 minutes, and 30 seconds.

The duration record, with refuel in flight, was broken by Dale Jackson and Forest O'Brien in the airplane, *Greater St. Louis*, a duplicate of the *St. Louis Robin*, which had figured in their record attempts of the previous year. Flying just above the Lambert, St. Louis, field, they stayed in the air 647 hours, 28 minutes and 30 seconds, landing on August 17, their descent due to a cracked crank case. Two hundred and twenty-three contacts were made with the refueling plane, and 7630 gallons of gasoline, and 410 gallons of lubricating oil were passed to the *Greater St. Louis*. Estimates of 41,500 miles for the entire flight were made.

In the women's category for airplane records, Mademoiselle Lena Bernstein of France in a Farman monoplane, type 192, Salmson 230-horse power motor, flying from Le Bourget, May 2, 1930, achieved a duration record of 35 hours and 46 minutes. In the United States Miss Elinor Smith in a Bellanca monoplane, with Wright J-6 300-horse power engine, flying at Roosevelt Field, N. Y., Mar. 10, 1930, achieved a height of 8357 meters (27,417 feet).

Several records were made with light airplanes during the year, both in the first category for two seaters weighing empty less than 400 kilograms (881 lbs.); in the second category for two seaters weighing empty less than 200 kilograms (400 lbs.); in the third category for single seaters weighing empty 200-300 kilograms, inclusive (440-771 lbs.); and in the fourth category for single seaters weighing empty less than 200 kilograms (440 lbs.).

In the first category a duration record of 29 hours and 4 minutes, and a closed circuit distance record of 2746.200 kilometers (1706.405 miles) were made by the Italians Renato Donati and M. Capannini in a Fiat A. S.-1, with a Fiat A-50 engine, flying from Montecelio, Rome, January 19-20, 1930.

An altitude record in this category was made by the Germans, Woldemar Voight and K. H. Gaule, of the Akademische Fliegergruppe Darmstadt, in a D-18, Armstrong Siddeley plane, with a Genet Major 100-horse power engine, at Darmstadt, Apr. 21, 1930, attaining a height of 7521 meters (24,672 feet). A similar plane flown at Darmstadt on Apr. 23, 1930, by Rudolph Neininger and Kurt Stark, achieved a record of speed for 100 kilometers of 214.848 kilometers (133.49 miles) per hour.

In the second category for light airplanes, Madame Margaret Fusbahn and Monsieur Fusbahn of Germany, in a Klemm L-25 monoplane, with a Salmson 40-horse power engine, made a height record of 4614 meters (15,137 feet) at Bollinger-Wartemberg on Apr. 11, 1930.

In the third category for light airplanes, a duration record of 37 hours and 55 minutes was made by the French aviator, Madame Maryse Bastie, on Sept. 2-4, 1930, at Le Bourget, flying in a Klemm monoplane with a Salmson 40-horse power engine. In this category a closed distance record of 2714.400 kilometers (1686.646 miles) was made by the French pilot, Lailhe, in an Albert monoplane with a Salmson 40-horse power engine flying at Le Bourget, Sept. 4-5, 1930.

The altitude record in this category went to the German aviator, Woldemar Voight of the Akademische Fliegergruppe, Darmstadt, flying in a D-18 Armstrong Siddeley plane with a Genet Major 100-horse power engine at Darmstadt, May 30, 1930, the height attained being 8142 meters (26,712 feet).

In the fourth category, records for both duration and distance went to the French aviator, G. Fauvel, in a Peyret-Mauboussin A.B.C. plane, with a Scorpion 34-horse power engine at Le Bourget, Sept. 12, 1930. The duration record was 12 hours and 3 minutes, and the distance (closed circuit) was recorded at 1258.800 kilometers (782.156 miles).

The United States took the speed record in this category for 100 kilometers when Clarence O. Prest, in a Prest Baby Pursuit plane with a Szekely 40-horse power engine in San Bernardino Co., Calif., May 28, 1930, made a speed record of 162.21 kilometers (100.79 miles) per hour.

In the class for seaplanes returning to the point of departure without refueling, the French aviator, Mermoz, in a "Latecoere" 28, Hispano-Suiza, 600-horse power engine at Marignane on Apr. 11-12, 1930, flew a distance of 4308.340 kilometers (2677 miles). While in this plane with two companions, he made an airline distance record of 3173.2 kilometers (1971.731 miles), flying from St. Louis, Senegal, to Natal, Brazil, on May 12-13, 1930.

A speed record for 2000 kilometers for seaplanes was made on June 23, 1930, at St. Laurent de la Salanque, when Lieutenant de Vaisseau of Paris and M. Hebert, in a "Latecoere" 28 plane with a Hispano-Suiza 600-horse power engine, achieved a speed of 185.931 kilometers (115.396 miles) per hour.

Flying with a pay load of 500 kilograms (1102.31 lbs.), Lieut. de Vaisseau of Paris and M. Hebert in the plane mentioned above in the same flight made a duration record of 31 hours and 1 minute, and on July 17 a distance record of 4202.496 kilometers (2611.305 miles). On June 23, 1930, they made a speed record for 2000 kilometers of 185.931 kilometers (117.396 miles) per hour.

The altitude record, with a pay load of 500 kilograms for a seaplane went to the United States when Boris Sergievsky, in a Sikorsky S-38 plane with two Pratt & Whitney "Hornets," 575-horse power engines, flying from Bridgeport, Conn., on July 21 reached an altitude of 8208 meters (26,929 feet). This record also held for the pay load of 1000 kilograms (2204.62 lbs.).

With a pay load of 1000 kilograms, Lieut. de Vaisseau and M. Hebert, in their flight on June 22, 1930, made a world's duration record of 20 hours and 2 minutes, and a distance record of 2854.244 kilometers (1773.603 miles).

The altitude record went to the United States for the flight of Boris Sergievsky on July 21, 1930, already mentioned, when he made an altitude of 8208 meters (26,929 feet). Sergievsky also achieved a world's record with this plane with a pay load of 1000 kilograms (2204.62 lbs.) for 100 kilometers on Mar. 13, 1930, at North Beach, Queens, N. Y., when he made a speed of 266.71 kilometers (165.73 miles) per hour.

The speed record for 100 kilometers—namely, 190.004 kilometers (118,085 miles) per hour, and for 2000 kilometers—185,931 kilometers (117,396 miles) per hour, went to Lieutenant de Vaisseau of Paris and M. Hebert, in a "Latecoere"

28 plane with a Hispano-Suiza 600-horse power engine at St. Laurent de la Salanque on June 23, 1930.

With a pay load of 2000 kilograms, Boris Sergievsky piloted a Sikorsky S-38 plane, with two Pratt & Whitney "Hornet" engines of 575 horse power each, to a height of 6074 meters (19,928 feet), at Stratford, Conn., August 11, 1930, making a world and American record. The last named aviator on Mar. 13, 1930, at North Beach, Queens, N. Y., in the same category had made a world speed record for 100 kilometers of 231.38 kilometers (143.77 miles) per hour. The speed record for 500 kilometers in this category went to the French aviator, Prevot, flying in a "Latecoere" 28 monoplane with a Hispano-Suiza, 650-horse power engine, at St. Laurent de la Salanque, Mar. 5, 1930—namely, 202.092 kilometers (125.573 miles) per hour.

New world records, all of which went to Germany, were made in the first category for light seaplanes, two seaters weighing empty less than 600 kilograms (1322 lbs.). Alfred Grundke and Gottlieb Pfeiffer, flying in a Junkers J. 50-W plane, with an Armstrong Siddeley Genet 85-horse power engine, at Dessau on June 6, 1930, made a duration record of 8 hours and 27 minutes; a closed circuit distance record of 900.180 kilometers (559.344 miles), and a speed record for 100 kilometers of 164.309 kilometers (102.096 miles) per hour. The altitude record was made at the same place on June 4, 1930, by Wilhelm Zimmerman and Schinzinger in a similar plane and was 4614 meters (15,137.765 feet).

In the third category of light seaplanes, two seaters weighing empty less than 350 kilograms (771 lbs.), Germany also achieved records through the flight of pilot Alfred Grundke in the plane already referred to, at Dessau on June 13, 1930. The duration record was 16 hours and 29 minutes; the closed circuit distance record 2100.420 kilometers (1330.97 miles), and the speed record for 100 kilometers 165.44 kilometers (102.80 miles).

For the fourth category, or single seater light seaplanes weighing empty less than 250 kilograms (551 lbs.), Wilhelm Zimmerman, in a Junkers J. 50-W plane, with an Armstrong Siddeley Genet 85-horse power engine at Dessau on June 4, 1930, rose to a height of 5652 meters (18,543.269 feet), thus gaining a world record.

THE NATIONAL AIR TOUR. The Sixth National Air Tour left Ford Airport, Detroit, on the morning of September 11, returning on September 27, after flying on schedule over 4800 miles. The trip involved 30 legs, or separate flights, taking the fliers to 14 States and 3 Provinces of Canada. Lethbridge, Alberta, was the furthest north reached on the tour, and Colorado Springs the point furthest west. Eighteen planes competed for the Edsel B. Ford trophy, and there were approximately a dozen official and other ships accompanying the contestants.

The National Air Tour was planned as a flying experimental laboratory in which all of the planes passed over the same route, and their speed and other performances were recorded. It is interesting to record that in 1930 all the planes entered, which represented various types, completed the scheduled flight, while of the accompanying planes all but two were able to fly the course arranged. One of these with a small engine was unable to combat the severe headwinds in the early days of the flight, and the other was

wrecked, making a night landing at an unlighted airport not on the route of the tour.

In the 1930 competition a new basis of scoring was developed, which was considered an improvement over that employed in previous years. The formula developed consisted of the useful record as computed by the U. S. Department of Commerce, divided by the rated horse power, also according to the Department of Commerce specifications. To this quota was added 160 divided by the takeoff and landing time of the ship, plus 10, and this gave a factor which, multiplied by the actual leg speed, gave the number of points for the leg.

It will be apparent that the speed of the airplane was a most important factor, and as a result the various aircraft were flown at high speeds, giving a fair though severe test of the various engines. Furthermore, piloting and navigating ability figured as never before, and as a result the performances of the various entrants were on a high plane.

The winning plane was the Ford Standard Model 7-AT, all metal Ford cabin monoplane, with one 420-horse power Pratt & Whitney Wasp, and two 300-horse power Wright Whirlwind engines, flown by Harry L. Russell, the total points scored being 58,575.6, with an average speed of 131.9 miles per hour. Second place in the competition went to the Waco plane with a single Wright engine flown by John Livingston, which made a score of 55,628.2 points with an average speed of 148.3 miles per hour, and third place to the Waco plane with a single Wright engine flown by Art Davis, which gained a total of 55,226.0 points and had an average speed of 148.4 miles.

As showing the range of the competition, it may be said that the lowest number of points, 27,899.6, was achieved by a plane, the average speed of which was 94.8 miles per hour.

NATIONAL AIR RACES. The National Air Races for 1930 were held at the Curtiss-Reynolds Airport, Chicago, from August 23 to September 1. Among the events, interest was attached to the non-stop derby from Los Angeles, California, to Chicago, 1760 miles, in which five planes competed and in which the difference in time between the first and the last was but 49 minutes, 37 seconds. First place was won by the Lockheed cabin plane with Pratt & Whitney Wasp engine, Wiley Post pilot, the distance being accomplished in 9:09.04. The second place was taken by a similar plane, piloted by Arthur Goebel, with the time 9:21.21.4. The first prize in this competition was \$7500, and second, \$4500.

There was also a Women's Class "A" Pacific Derby, where Gladys O'Donnell in a Waco plane flew from Long Beach, Calif., to Chicago in 15:13.16, winning \$3500 from a field of six entrants, one of whom was forced down at Emporia, Kan. The Women's Class "B" Dixie Derby from Washington, D. C., to Chicago was won by Phoebe F. Omie in a Monocoupe plane in 11:42-21, taking first prize of \$2000. There were five competitors, all of whom finished.

In the Men's Class "B" Atlantic Derby, Hartford, Conn., to Chicago, there were four contestants, J. Wesley Smith winning first prize of \$1250, with the time of flight 8:24.37.1.

In the Men's Class "A" Pacific Derby, Seattle, Wash., to Chicago, John Blum in a Lockheed plane flew the distance in 18:24.31.1, winning a first prize of \$3500. In the Closed Event for attack planes of the U. S. Marine Corps, Lieutenant San-

derson, flying in a Boeing plane, made a speed of 142.36 miles over 10 laps of a 5-mile course. The Men's Free For All contest for the Thompson trophy, with a prize of \$5000, was flown over 20 laps of a 5-mile course and was won by Chas. Holman flying a Laird plane, entered by the B. F. Goodrich Company, equipped with a Pratt & Whitney engine. The time was 29:43.0, and the speed achieved was 201.91 miles per hour.

In addition to the events noted, a number of other contests were held, such as acrobatic exhibitions, speed and efficiency races, also gliding competitions, landing competitions, balloon bursting contests, and parachute descents.

During August an international Round-Europe contest for light airplanes was held and was again won by Herr Morzik, who was successful also in the previous year. The contest involved a 5000-mile circuit where, in addition to speed and trustworthiness, comfort and economy were considered. Herr Morzik flew in a B. F. W. plane and achieved 427 points out of a possible 500.

AIR TRANSPORT. During the year 1930 there was an important gain in the commercial air transport in the United States, with an increase over the previous year in miles flown and passengers carried, as well as in the total number of commercial routes. Much of the air transport on a commercial basis was carried on at a loss by the operators during the year, and there was considerable uncertainty as to rates, which for passenger traffic finally became fixed at about 6 to 8 cents a mile, which compared favorably with railway fare on the better trains. During the year transcontinental passenger service was reduced to a 36-hour schedule on the central route operated by the Transcontinental and Western Air, Inc., and this was to be decreased to approximately 24 hours with night flying planned for the year 1931.

The Watres Bill passed by Congress during 1930 made provision for mail subvention with direct financial aid to the major air-transport systems, and it was thought possible that aerial express traffic could be developed as a result of lowered rates and increased business. The Watres Bill resulted in the addition of some 9000 miles of mail routes, and an increase of 35,000 miles a day flown with mail, and a definite schedule of compensation was provided, which was considered satisfactory to the operators.

During the year there was a considerable increase in short distance air lines or air ferries operated as at Seattle to Bremerton, Wash., across 12 miles of water, and the 6-mile air ferry across San Francisco Bay. The New York-Philadelphia-Washington airways started operation with an every hour, on-the-hour, schedule and was successful.

The total mileage of established airways at the close of 1930, according to *Aviation*, was 47,184 as against 36,330 in 1929, and 16,667 in 1928. The total miles scheduled daily increased to 123,771 in 1930 from 87,684 in 1929, and 39,060 in 1928. For the first six months of 1930 mail loads increased over the same period for 1929 by about 10 per cent, and express loads by more than 16 per cent. The total mileage flown in 1930 was estimated at about 43,000,000 as compared to 25,000,000 in 1929, and 10,000,000 in 1928.

An estimate of passengers carried by American transport lines during 1930 was more than 400,000, and the total passenger miles flown approxi-

AMERICAN AIRCRAFT OF 1930

MAIN

mated 100,000,000, comparing approximately with 150,000 passengers carried in 1929 and 48,000,000 passenger miles flown.

There were produced in the U. S. 2684 commercial and military airplanes valued at \$21,468,763 in 1930, according to the Aeronautical Chamber of Commerce of America. In the commercial field, 1937 airplanes were built and 2324 were sold. In the military field, 747 planes were manufactured and 801 were delivered to the Government. The number of military planes produced actually represented an increase of 70 over the 677 manufactured in 1929. The commercial field showed a decided curtailment of production if the 1937 planes manufactured in 1930 were compared with 5357 made in 1929.

In the Soviet Union during 1930 civil aviation made considerable progress, and plans were prepared for airway lines to be in operation in 1931 covering some 26,000 kilometers. It was planned, in this connection, to open an air route from Moscow to Welland, in the extreme northeast of Kamchatka—a distance of 13,000 kilometers, or nearly twice the length of the British line to India, as well as a trans-Asian line 8000 kilometers in length between Moscow and Vladivostok, by way of Irkutsk and Khabarovsk. The Russian government had already operated a line between Moscow and Irkutsk, 4700 kilometers in length.

Three Soviet single-motored two-passenger open airplanes made what was known as the "Great Eastern Flight" through Turkey, Persia, and Afghanistan, and returned to Moscow in September, spending 15 days on the trip, six of which were in three eastern capitals. A distance of 10,500 kilometers along the route Moscow-Sebastopol-Angora-Tiflis-Teheran-Termez-Kabul-Tashkent-Orenburg-Moscow was covered in actual flying time of 61 hours and 30 minutes.

WIND TUNNEL. During the year progress was made on the largest wind tunnel in the world, and a covered body of water nearly half a mile in length served as a seaplane testing basin at the Langley Memorial Aeronautic Laboratory, Langley Field, Virginia. These facilities at the end of the year had neared completion, and would afford increased opportunity for scientific investigation destined to improve the aerodynamic efficiency of airplanes. The wind tunnel, in particular, was desirable in order to obtain data so that designers could make machines where the flow of air around them was smooth and free from eddies. Among the problems that had been solved in wind tunnels was the design of a cowl or hood for standard air-cooled engines, which resulted in an increase of speed of approximately 20 miles per hour for the ordinary commercial airplane.

GLIDING. Gliding and soaring in 1930 took on an increased importance in the United States, and the first national soaring meet staged by the National Glider Association in Elmira, New York, September 21 to October 5, attracted considerable attention. Among the achievements at this event was an altitude of 2928 feet above the starting point, attained by Wolf Hirth using a German soarer, and a height of 2409 feet made by Warren Eaton in an American secondary glider. Hirth was able to fly 33 miles across country and Albert Hastings made a duration flight of 7 hours, 43 minutes and 11 seconds, though Hawley Bowlus and Jack Barstow at Point Loma, Calif., made an unofficial duration

record of 15 hours, and 13 minutes in a sail plane. The Department of Commerce during the year established Federal rules and regulated the operation and licensing of gliders. Mention might be made of Lieut. R. S. Barnaby's successful descent to earth on a glider launched from the airship Los Angeles.

HELICOPTERS. Experiments continued during the year with various types of helicopters or autogyros, both in the form of small models and full-sized craft. Notable among the work in this field were the Curtiss-Bleeker helicopter, which was under test, and the "Cierva autogiro," which was actively flown in a number of types during the year. As in other fields of experimentation, there was found to be considerable discrepancy between the performances of models and full-sized machines when constructed. Lifting ratios greater than 100 lbs. per horse power were frequently achieved in models, where only a fraction of a horse power was applied and very little weight was lifted. The ratio, however, was found not to hold for a man-sized craft, as structural bracing of the requisite strength and weight required for real machines was a very difficult matter. Furthermore, the rotating wings of models could be turned much faster than those of big machines, because ability to rise depended more on circumferential speed at the wing tip than on revolutions per minute. Hence a small propeller made more revolutions than a large one, a condition readily realized in small models, but not in big machines requiring heavy and clumsy gearing to reduce the speed of high-speed-gasoline aircraft motors to about 130 revolutions per minute, with consequent loss of power.

In the Curtiss-Bleeker helicopter, propellers were used on each rotating wing driven at high speed by direct gearing to the motor and, in turn, driving the rotating wings. The rotating surfaces, it has been found by experiments lasting over a number of years, must be large and their linear speed must compare with airplane speed, yet this speed, in turn, is limited by a fast increase in power. The rotating surface consequently must be large.

The "autogiro" described in previous YEAR Books and illustrated on the accompanying plate, is unlike the helicopter in that its rotating wings, which exert vertical lift, are driven indirectly by the backwash from an ordinary airplane propeller. It has an airplane fuselage. The helicopter has no airplane fuselage or propeller, and its rotating wings are powered directly.

During the year the D'Ascanio helicopter, the design of Corridino D'Ascanio, in Italy, was tested and made a series of successful flights. In this machine, two 2-bladed rotors formed a lifting surface, being free to rotate in a vertical plane, and relying on centrifugal force to maintain an approximately horizontal position. The two rotors turn in opposite directions, making about 75 revolutions per minute. Each blade is fitted with a small, trailing stabilizer, controlled from the cockpit, and can itself be rotated about its longitudinal axis through the same set of controls. A 90-horse power Fiat air-cooled engine drives the rotors, and fuselage of nickel-steel tinny tubing, mounted on 3 wheels, is used.

The machine was stated to have made a vertical climb from a 50-foot circle to a height of 20 feet, remaining motionless over a fixed point for one minute and 31 seconds, and a flight in a closed circuit not less than 3000 feet in length,

returning to the point of takeoff. This helicopter had also risen to an altitude of 59 feet, and had flown in a straight line 1836 feet within the boundary of the field. It had also made a duration flight of 8 minutes and 45 seconds.

"The National Conference on Uniform Aeronautic Regulatory Laws was held in Washington, December 16 and 17, under the auspices of the Aeronautics Branch of the Department of Commerce. The programme covered five fundamental subjects: (1) Uniform basic regulatory State air law; (2) adoption of Federal air-traffic rules by the States for purposes of local enforcement; (3) methods of local enforcement; (4) State enabling acts for airport acquisition and control; and (5) importance of uniform airport field rules."

ÆSTHETICS. See **PHILOSOPHY**.

AFGHANISTAN, af-gān-'i-stān'. An independent kingdom of central Asia, serving as a buffer state between India and Soviet Russia. The estimates of the area vary from 245,000 to 270,000 square miles, while the population is roughly estimated at 8,000,000 to 10,000,000. King in 1930, Muhammed Nadir Khan, who was called to the throne Oct. 16, 1929. Capital, Kabul, with a population of about 100,000.

Other important towns are Kandahār (60,000), Herāt (121,000), and Mazar-i-Sharif (46,200). The Afghan is the dominant race and the chief tribes are the Durrani and the Ghilzais, numbering about 2,200,000. The prevailing languages are Persian and Pushto and the dominant religion is Islam.

Although Afghanistan's natural resources are unsurveyed, fairly rich copper and lead deposits are reported in the northern part and precious stones, particularly lapis lazuli, are found. Manufacturing, chiefly of the cottage industry type, supplies the local demand for cloth, soap, boots, and other articles. Carpets and rugs are made for export. Trade is mainly with India, the exports consisting chiefly of fresh and dried fruits, carcass skins, rugs, wool, grain and pulse, animal casings, and small quantities of hides and skins. Cotton piece goods, sugar, metals, and motor cars are the principal imports. The two leading trade routes to India are from Kabul to Peshawar by way of the Khyber Pass and from Kandahār, centre of a rich fruit growing region, to the railway terminal at Chaman, India. There are no railways in Afghanistan. Rough motor roads connect Kabul with the principal cities.

In normal years Afghanistan's trade with India averages about \$15,000,000 annually. Due to disturbed conditions in 1929, however, the volume of foreign trade was reduced to one-fourth that of 1928. In 1930 much machinery and factory equipment ordered by King Amanullah during his tour of Europe in 1927 and 1928 was still lying unpaid for at Karachi, India.

Constitutional government in the country, which was interrupted during the civil strife of 1929, was reestablished with the crowning of Muhammed Nadir Khan. (See 1929 YEAR BOOK.) There are legislative and state assemblies and a Cabinet presided over by the King. The country is divided into five major and four minor provinces, each administered by a governor. In 1930 the Afghan consul general at Delhi announced that annual revenues approximated \$23,400,000.

HISTORY. The authority of King Nadir Khan was gradually extended throughout the country

during 1930, despite some opposition among the tribesmen. A programme of development announced by the new King early in the year included the construction of roads, the fostering of improved means of transport, promotion of industry, agriculture, and fruit growing, exploration of the country's mineral resources, and the establishment of friendly relations with foreign countries. The road programme included the completion of the highway from Kabul to Peshawar, which was half-constructed when the revolt against King Amanullah in 1928 interrupted the work. With regard to internal reforms, the King made it clear that he would not repeat the mistake of King Amanullah, who lost his throne through attempting to modernize the country overnight.

British fears that the appointment late in 1929 of King Nadir Khan's brother as Minister to Soviet Russia indicated a pro-Soviet leaning on the part of the new monarch were stilled when early in 1930 Shah Wali Ali Kahn, another of the King's brothers, was appointed Minister to Great Britain. The Afghan monarch used his influence to discourage the tribes on the northwest frontier of India from joining the Mohmand, Afridi, and other mountain clans in their raids into the Indian plains during the year. Revolting tribesmen, who sought to capture Kabul during July, were defeated after a two-day battle not far from the city.

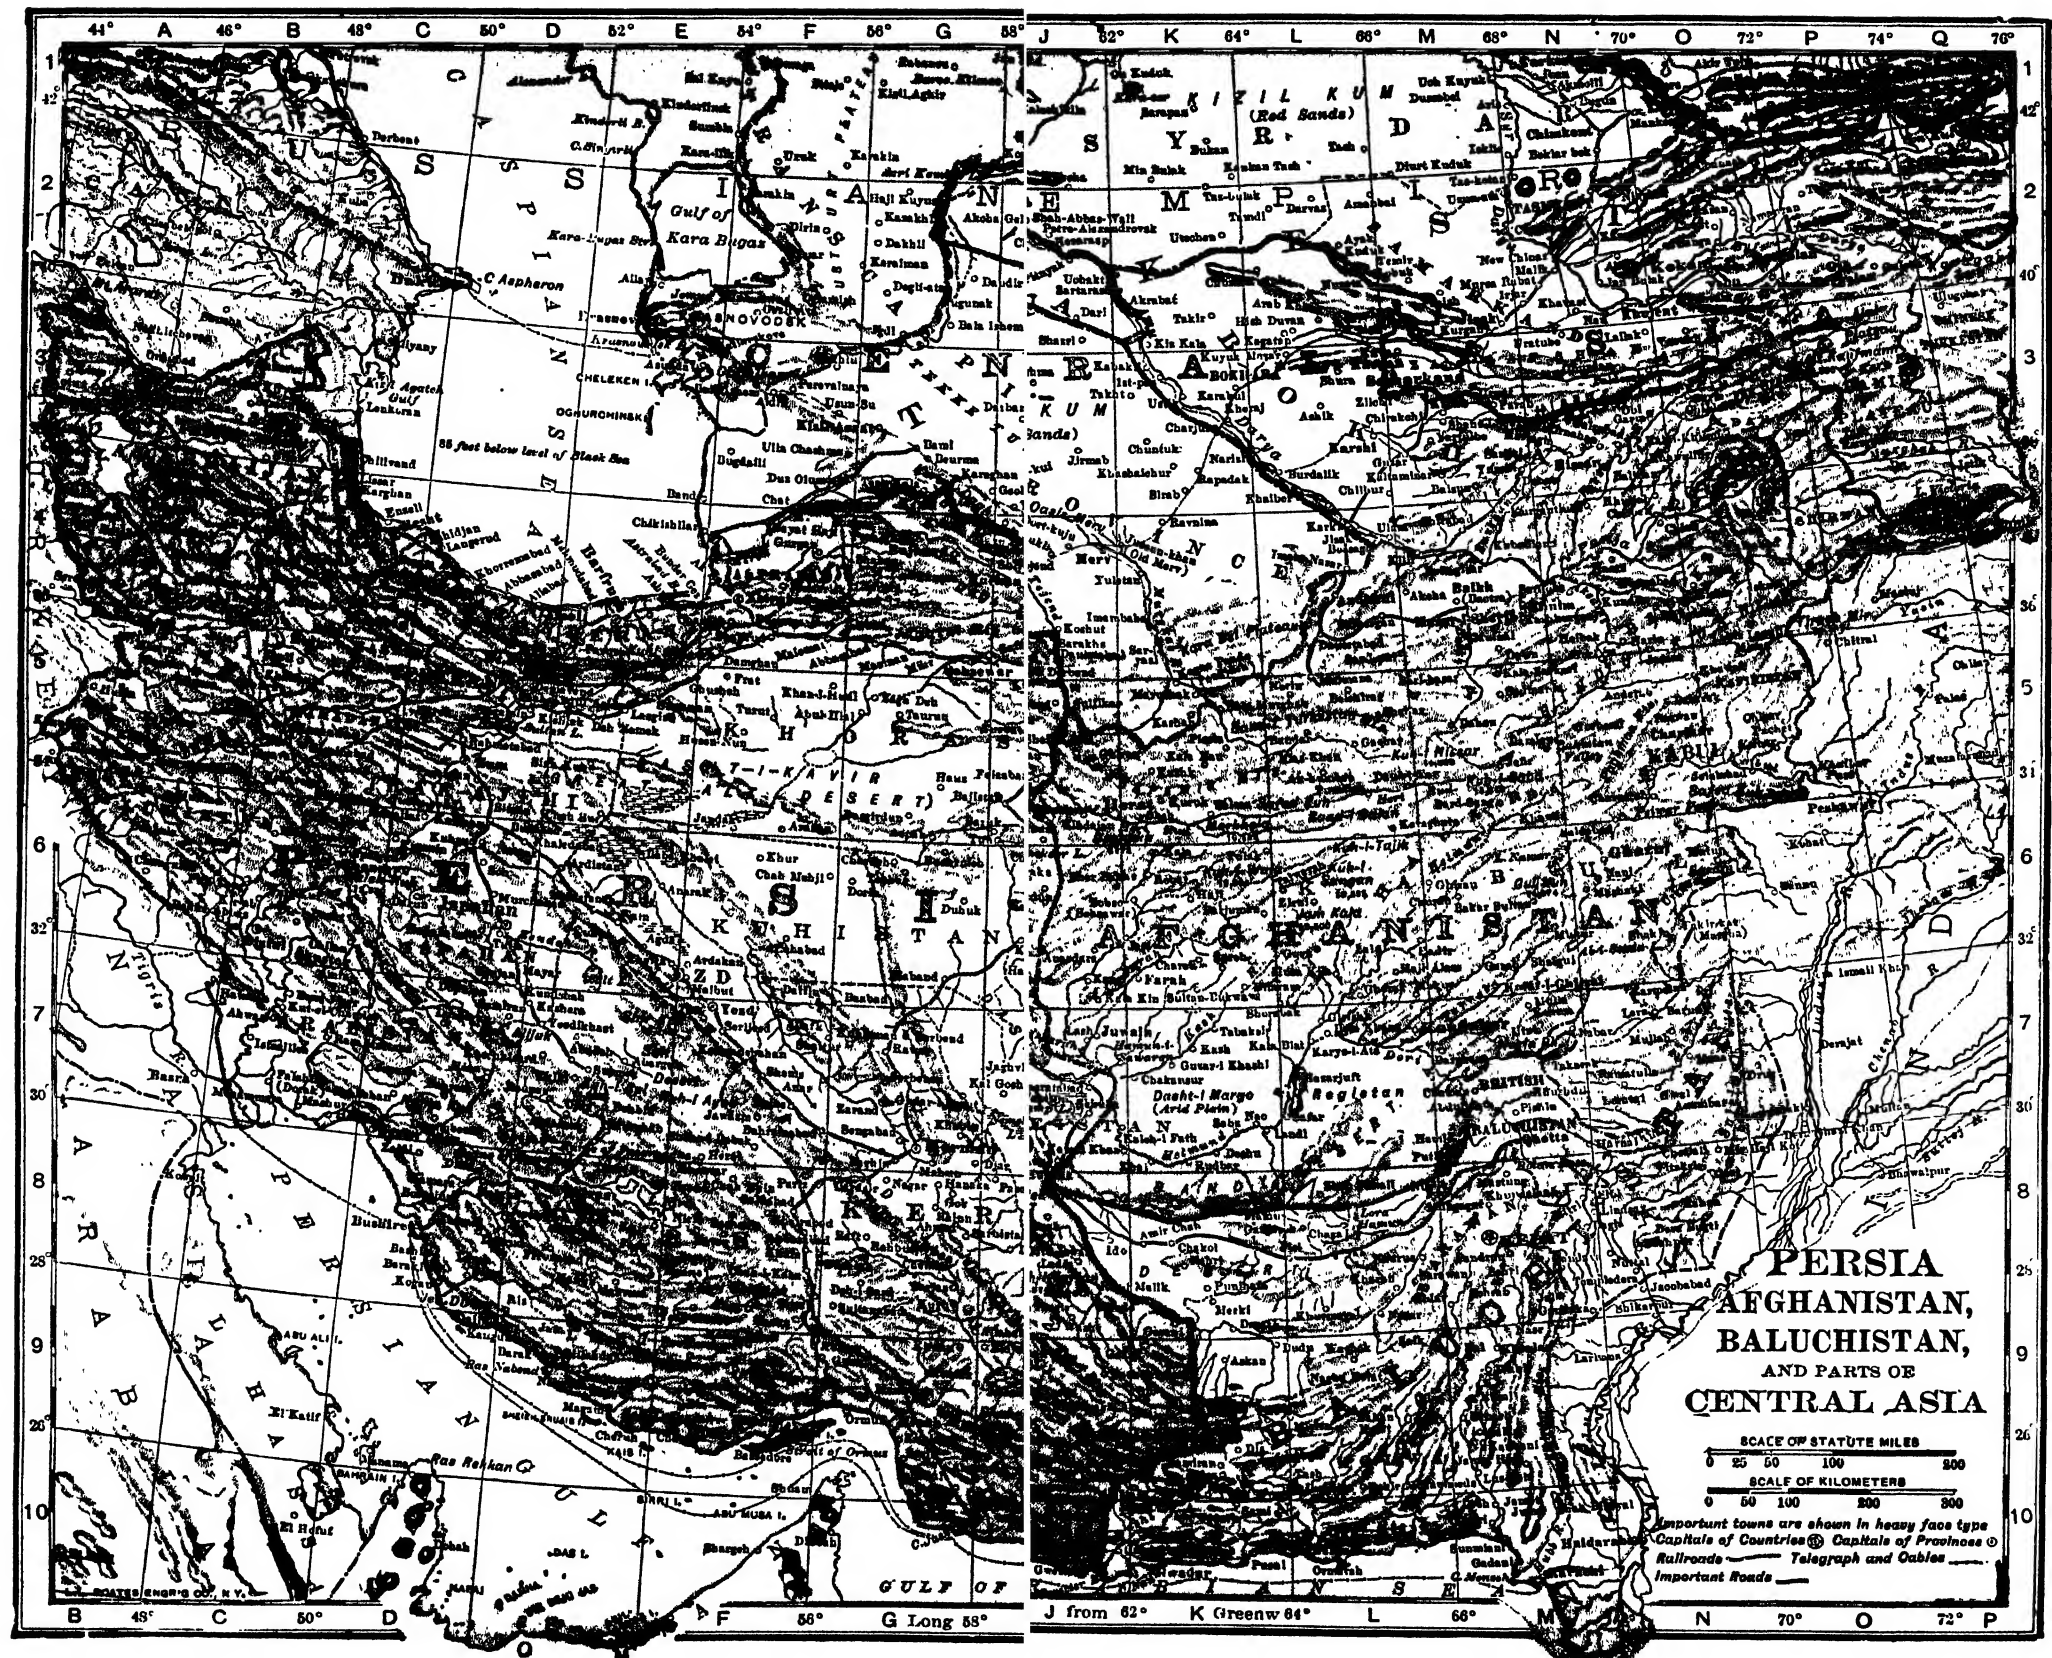

Two reports early in the year tended to confirm rumors that ex-King Amanullah was nursing the ambition to regain his throne. Indian authorities arrested two of his representatives, one of them a half-brother, in the Northwest Frontier Province of India on a charge of conspiring "to disturb the peace of Afghanistan." Shortly afterward, Amanullah traveled from Italy to Ankara to visit President Mustapha Kemal Pasha. It was recalled that a Turkish military mission was sent to aid Amanullah in his unsuccessful campaign to regain his throne following his forced abdication in 1929. The deposed King spent the summer at a villa on the Bosphorus, returning to Rome in October. See **INDIA** under *History*. AFRIDI RAIDS. See **INDIA** under *History*.

AGNES SCOTT COLLEGE. An institution for the higher education of women in the borough of Decatur, Atlanta, Ga.; founded in 1889. The enrollment for the autumn of 1930 was 449. The faculty numbered 51 members, and the officers of administration, 14. The endowment amounted to \$1,250,000, while the gross income for the year was \$344,570. There were 21,250 volumes in the library. During 1930 a campaign to raise \$1,500,000 was completed, of which \$1,000,000 was to be used for new buildings and improvements and \$500,000 for endowment. The General Education Board of New York and the Presser Foundation of Philadelphia were among the chief contributors to this fund. President, James Ross McCain, Ph.D., LL.D.

AGRARIAN CONFERENCES. See JUGOSLAVIA under *History*; AGRICULTURE under *World Agriculture*.

AGRICULTURAL EXPERIMENT STATIONS. Agricultural research at the experiment stations in the United States, its territories, and insular possessions continued to flourish under the stimulus of increased financial support from Federal, State, and other sources. Of the available funds totaling about \$17,000,000, the Federal Government supplied \$4,335,000 which comprised \$90,000 for each State and \$15,000 for Hawaii. A total of \$247,000 was appropriated for stations maintained by the U. S. Department of Agriculture, in Alaska, Hawaii, Porto Rico, Guam, and Virgin Islands. The stations' income was increased to a still greater extent from State and local sources with the result that they were coöperating effectively with each other and the U. S. Department of Agriculture in a research programme covering practically every phase of agriculture and rural life.

The expansion of the system was indicated further by the growing number of research projects which totaled over 7000. The Adams fund supported 438 projects and the Purnell fund 1336. The *Experiment Station Record* reviewed during the year nearly 1000 publications reporting station work. Changes occurred in the directorships of the California, Mississippi, and Porto Rico (Federal) Stations. The regular personnel amounted to more than 3100 workers.

The New Jersey State Experiment Station celebrated its semi-centennial October 8 with appropriate exercises. Organized in 1880, several years before the Hatch act, it still operates without direct Federal aid, although associated closely with the New Jersey College Station under a common directorship since 1895.

The Hawaii Experiment Station increased its efficiency and economy of administration in the first year under the joint control of the University of Hawaii and the U. S. Department of Agriculture, provided for by an Act of Congress of May 16, 1928, extending benefits of the Hatch and supplementary acts to Hawaii. The work of the Alaska Stations was partly reorganized and the investigations were being centred at the Matanuska Station.

The enlarged incomes were evident in the improved facilities for research. New buildings erected in 1930 included the Atwater Laboratory at the Connecticut Storrs Station to house research in animal diseases and genetics; an agricultural and biology building at the New Mexico Station; structures for horticultural manufactures and for research in meats and meat products at the Massachusetts Station, and laboratories at the Porto Rico Insular Station. Giannini Hall at the University of California, built primarily to house the Giannini Foundation for Agricultural Economics, was completed and ready for occupancy by divisions of the College of Agriculture.

In Virginia, \$500,000 was appropriated for buildings and equipment at Virginia Polytechnic Institute, of which \$150,000 was for a dairy products building and \$30,000 for an agricultural engineering laboratory.

Additions to facilities, resources, and responsibilities of the College of Agriculture and allied divisions at Cornell University and the New York State Station at Geneva made available during 1930 were greater than ever before. Construction

started on a building for agricultural economics and related lines to cost \$650,000, and \$995,000 was made available for a new home economics building. Other items included \$160,000 for barns and facilities for animal husbandry and additional land, \$415,000 for equipment of the plant science building, and substantial allotments for research and other activities. The State Station was granted \$285,000 for a horticultural laboratory building and other funds aggregating \$330,650. A legislative act, signed March 21, admitted all of the staff and other employees of the State colleges and stations to privileges of the State retirement act.

The demands of important local problems and special crops were factors responsible for the establishment of substations near Windsor, Conn., Blairsville, Georgia, and Kearneysville, West Virginia, for various phases of research with vegetables, fruit, and forest trees; at Glade Spring, Va., for pasture problems, at Homestead and Quincy, Florida, for agriculture and crops peculiar to their sections; and in the new irrigation district near Isabela, Porto Rico. The Texas legislature provided funds for four additional substations, one to be at Winter Haven, in the winter garden region. Coöperating with State stations and other agencies, the U. S. Department of Agriculture was locating soil erosion experiment stations in the principal erosion regions in the United States.

NECROLOGY. Station workers dying during 1930 included Patrick B. Kennedy, agrostologist of the California station; Frank T. Meacham, in charge of the North Carolina Piedmont Substation since its establishment; Irving J. Jensen, superintendent of the Montana Judith Basin Substation, and Herbert J. Pack, entomologist of the Utah Station. George F. Freeman, director of the Porto Rico Federal Station, and from 1923-1930 head of the Service Technique d'Agriculture of Haiti, died September 17. Among British agriculturists, Sir Francis Watts, K.C.M.G., first principal of the Imperial College of Tropical Agriculture in Trinidad, and long connected with agricultural research in the West Indies, died September 24. James Wilson Robertson, eminent for his services to Canadian agriculture and education, first president of MacDonald College, died March 19. Gabrielle L. C. Howard, second Imperial Botanist to the Government of India, also died during the year.

BRITISH EMPIRE. Agricultural research in the British Empire continued to be promoted by the Empire Marketing Board, the Empire Cotton Growing Corporation, the governments of the many political divisions, universities, agricultural colleges, and by organized research stations as those at Rothamsted, East Malling, Cheshunt, and Long Ashton, and the John Innes Horticultural Institution. The British golf unions opened at Bingley, Yorkshire, the St. Ives Research Station for investigation of greens-keeping problems.

The Dominion Experimental Farms in Canada and the provincial agricultural colleges maintained their usual high standards of research. The National Research Laboratory, which embraces a division of economic biology and agriculture was to be housed in a building at Ottawa, to be completed in 1931 at a cost of about \$3,000,000.

The Australian Commonwealth Council for Scientific and Industrial Research was erecting at the University of Sydney a laboratory building

costing £20,000, for investigation of problems of animal health, especially sheep.

The Egyptian Ministry of Agriculture decided to establish at Cairo an agricultural museum, costing about \$1,000,000, and invited the director of the Budapest Agricultural Museum to undertake the organization.

The Central Agricultural Experiment Station at Santiago de las Vegas, Cuba, was rebuilt and its personnel enlarged.

ITALY. A decree, prescribing that no new experiment stations shall be set up in Italy or subsidized by the government for a ten-year period, provided for the organization of the existing stations known as Royal Agricultural Experiment Stations and those of societies (*consortia*), both being under the control of the Ministry of Agriculture. The measure provides for an expenditure of 8,000,000 lire, during the next two fiscal years, for organizing the government stations, and for annual grants, the amounts to be determined later by the Ministries of Agriculture and Finance. This decree followed one passed in September, 1929, regarding the transformation of the Ministry of National Economy into a Ministry of Agriculture and Forests, which also was to handle coordinated land reclamation matters. Italy has a number of experiment stations which deal with most branches of science related to agriculture.

RUSSIA. The All-Union Academy of Agricultural Sciences named after Lenin assumed the reorganization of research and experimental work in agriculture in the U. S. S. R. The Academy, headed by Prof. N. I. Vavilov, in 1930 was engaged in preparing programmes for fifty research institutes. Most of these were to be established in provincial cities throughout the U. S. S. R., in view of the diversity of agricultural conditions and the need for bringing new territories under cultivation. Thus grain institutes were planned for Viatka to extend grain farming into the North, in Saratov to develop more stable agriculture, in Omsk (Siberia) and Kharkov (Ukraine). Cattle breeding institutes were to be established in Siberia, Kazakhstan, the Ukraine, and Uzbekistan. Institutes specializing in certain crops were to be opened in suitable localities, as a cotton institute in Uzbekistan, a maize institute in Dniepropetrovsk, and a sugar-beet institute in Kiev. Special institutes were to be opened in Moscow, Leningrad, Kharkov and Saratov for training scientific workers in agriculture. Besides research activities and the solution of important practical agricultural problems, the Academy was to have charge of the organization of congresses and conferences and the representation of the U. S. S. R. at future international congresses.

Consult also *Report on the Agricultural Experiment Stations, 1929*, by W. H. Beal and H. M. Steece; (U. S. Department of Agriculture), *Report of the Acting Chief of the Office of Experiment Stations, 1930*, by Walter H. Evans (U. S. Department of Agriculture).

AGRICULTURAL EXTENSION WORK.

Substantial progress was made by the cooperative extension organization in teaching rural people the value of better practices in farming and home making, despite the fact that the serious emergency situation facing agriculture made it necessary for county extension agents to devote much of their time and efforts to relief measures. The educational work in agriculture and home economics was carried on in 48 States and the Terri-

tories of Hawaii and Alaska through a nationwide organization which was established under the provisions of the Smith-Lever Act of May 8, 1914, and further strengthened by the Capper-Ketcham Act of May 22, 1928. The system operated on a cooperative basis, funds for the purpose being provided from Federal, State, and county sources. County agricultural agents, home demonstration agents, and boys' and girls' 4-H club agents, working under the cooperative supervision of the U. S. Department of Agriculture and of State extension directors and supervisors located at the State agricultural colleges, carried direct to farmers, farm women, and farm youth the best methods of farming and home making made available through experimentation in research institutions. The knowledge and use of these methods were taught through practical educational media, such as farm and home demonstrations, extension meetings, tours, campaigns, publications, news releases, lectures, radio talks, exhibits, and conferences with farm men and women. The primary object of cooperative extension work was to make the country a better place in which to live, both by making farming more profitable and permanent and by aiding rural people to improve their home conditions.

Unusually adverse conditions caused by the world-wide economic depression, unfavorable markets, and overproduction of some of the major farm commodities, particularly wheat and cotton, made the year very difficult for the farmer. The situation was further complicated by a severe drought which extended over a wide area from the Atlantic Coast of Maryland and Virginia to Oklahoma and Texas. The production of corn, hay, and feed crops was seriously depleted and pastures and ranges were greatly damaged by the drought.

In carrying on activities to relieve the distress of farmers in the drought area, the cooperative extension organization again demonstrated its ability to cope with emergency situations. The resources of information and knowledge at its command in the U. S. Department of Agriculture and other departments of the Federal Government, in the State agricultural colleges, and in the State experiment stations were quickly mobilized, adapted to the local conditions, and taken to the farmer in a practical manner by the county extension agents. Because of the scant feed supplies available, farmers were assisted in planning emergency rations for their livestock; they were taught how to cull their herds and flocks; they were given assistance in locating needed supplies of feed and forage; they were urged to plant forage crops for fall and early spring pasture; and were helped in obtaining financial backing.

County agricultural agents in the drought areas were also designated as officials to decide which individuals were entitled to receive the reduced freight rates granted by the railroads on the movement of hay and feed into the drought areas or of livestock shipped out of these areas. The agents approved applications for lower rates on the movement of approximately 60,000 carloads of hay, feed, and livestock at a saving to the drought sufferers of several millions of dollars. The home demonstration agents taught farm women how to can vegetables and meat; they provided them with information concerning the most economical and wholesome foods to purchase to prevent nutritional diseases caused by poorly balanced diets, and encouraged them to grow fall gardens of rapidly maturing vegetables, such as

turnips and peas, to replace the summer gardens destroyed by the drought.

Coöperative marketing and farm economics, which have been given prominence in extension teaching in recent years, received still further impetus in 1930 as a result of the agricultural depression and overproduction. County extension agents aided farmers in a better understanding of the programme of the Federal Farm Board to establish national commodity coöperative-marketing agencies through which local, State, and regional coöperatives might function more effectively. Farmers were advised about the objects and operations of the coöperative associations and the requirements for membership. The efforts of the Federal Farm Board to adjust the production of commodities to meet the existing demand and to eliminate or reduce surpluses were also vigorously supported by the coöperative extension service. Facts concerning the production and existing supply of wheat and cotton and the probable demand for these crops were supplied to farmers in the wheat and cotton States and enabled them to plan their farm operations with a more intelligent understanding of the economic conditions. Methods of lowering costs of production and of bettering the quality of these crops were also emphasized.

Regional outlook conferences of extension workers and subject-matter specialists were held at Salt Lake City, Utah, Ames, Iowa, Washington, D. C., and Atlanta, Ga. The probable future situation of various farm commodities was discussed at these meetings and attention was given to methods of applying the information to the problems of the individual farmer. At county and State economic conferences following the regional meetings, farmers were advised about crop acreages, conditions, and probable production; economic changes in progress; trends in production and consumption; and prospects for the future. Extension programmes were prepared based on the facts supplied and farmers were aided in adjusting their farming operations to the conditions likely to confront them.

Major farm production activities and home-making interests continued to receive the attention of extension workers and farm people. More emphasis was placed on the improvement and conservation of the soil as a means of economical crop production. The control of plant diseases, noxious weeds, and insects was featured and in vegetable-growing sections the introduction of disease-resistant and disease-free seed was encouraged. One of the substantial accomplishments during the year was the greater control of wheat smut. Forest-tree planting proved to be popular during the year and agents helped farmers in such phases of forestry improvement as cutting, timber estimating, fire prevention, and the establishment of windbreaks and shelter belts. Other important activities conducted by county agricultural agents during the year included the control of livestock diseases and pests, better breeding of livestock, dairy feeding and management, culling, use of modern farm machinery and equipment, construction of improved farm buildings, and the installation of sewage, water, heating, and lighting systems.

Wholesome and inspiring results in the improvement of home life on the farm were obtained through the efforts of home demonstration agents to aid farm women in raising their standards of living. Among the more popular phases of extension work with farm women were the

proper selection and preparation of food to meet the requirements for health and growth. Substantial increase was also made in the number of women learning better practices of sewing, millinery, home management, house furnishing, landscape improvement, and marketing. Home demonstration agents showed farm women how to increase the family income by growing vegetables, fruits, and flowers for sale and by developing such home industries as weaving, basketry, and the preservation of fruits, preserves, and jellies for the market. Greater interest was shown in the care and training of children, home nursing, and the use of sanitary measures about the home. The development of cultural, social, and recreational activities was more pronounced during 1930.

In adapting the fundamental principles of extension teaching to the needs of farm youth, 4-H clubs were organized and conducted to aid boys and girls between the ages of 10 and 20 to become more efficient farmers and better home makers. Each succeeding year the importance of enlisting farm boys and girls as agencies for bringing about the introduction of improved practices has steadily increased. The 4-H clubs represented in variety of interest practically every farm and home activity. Through the use of improved seed and better cultural methods, the club boys increased the yields of their crops; they learned how to cull poultry, how to manage and feed their dairy and beef cattle, pigs, and sheep; and in many other ways they demonstrated to their personal satisfaction and to the satisfaction of others that greater profits may be obtained by practicing the best production methods.

The club girls improved their rooms, made their own clothing, planted shrubbery about the house, canned fruits and vegetables, grew home gardens, and planned balanced meals under the direction of their county extension agents and adult local leaders. The club members attended short courses, exhibited their products at fairs and expositions, started savings accounts with the money earned through club activities, and conducted public demonstrations to show others some of the helpful methods of farming and home making they had learned.

Coöperative extension work was begun in the Territory of Alaska in coöperation with the Alaska Agricultural College and School of Mines on July 1, 1930, when \$10,000 appropriated by Congress became available. Charles E. Bunnell was appointed director of extension work in Alaska and two assistant directors, one for agriculture and the other for home economics, were appointed.

Funds provided for coöperative extension work during the fiscal year ending June 30, 1931, from all sources total approximately \$26,123,000, an increase of about \$1,865,000 over the previous year. Approximately \$995,000 of this increase were in Federal funds, and \$870,000 in State and county funds. Additional Federal funds amounting to \$1,000,000 were made available by the Second Deficiency Act of July 3, 1930. This appropriation was for additional coöperative agricultural extension work, including the employment of specialists in economics and marketing, to be allotted and paid by the Secretary of Agriculture to the several States and the Territory of Hawaii in such amounts as he may deem necessary to accomplish such purposes.

Of the total funds available for extension purposes, \$10,247,000, or 39.2 per cent, were contributed by the Federal Government, \$7,243,000,

or 27.7 per cent, were from State appropriations to the agricultural colleges and other State agencies, and \$8,633,000, or 33.1 per cent, came from county appropriations for extension work. About 95.8 per cent of all funds allotted for cooperative extension work during the year came from public sources.

From Dec. 1, 1929, to Nov. 30, 1930, the number of extension workers was increased by 301 persons. Of these, 73 were new county agricultural agents, 27 were assistant county agricultural agents, and 2 were negro agricultural agents. County home demonstration agents increased by 74 and assistant county home demonstration agents by 2. The number of subject-matter specialists was increased by 122, a number of these being extension economists.

Of the 6100 persons engaged in extension work in the United States at the end of the year, 2721 were in county agricultural agent work, 1394 in county home demonstration work, 343 in work with 4-H clubs, and 332 in negro extension work. There were 50 extension directors, 30 assistant directors, and 1230 subject-matter specialists.

Statistics of extension accomplishment for 1930 were not available at the end of the year. However, a brief synopsis of the statistical results of 1929 is presented, which will give some understanding of the volume of work carried on. In 1929, agents reported more than 5,170,000 instances in which farm men, women, and boys and girls accepted and put into use the improved practices taught. This was an increase of 510,000 over the preceding year. Extension workers supervised 930,000 adult demonstrations as compared with 851,500 in 1928. County agricultural agents made 1,546,700 personal visits to 793,700 farms; wrote and sent to the press 423,600 news articles; held more than 800,000 field meetings; distributed 6,345,500 publications; and gave advice to farmers who made 3,403,000 calls at the agents' offices. Home demonstration agents made 377,900 visits to help farm women and also received 540,400 visits from farm women who called at the office for information. Reports show that 756,100 farm boys and girls were enrolled in 4-H club work, or about 92,000 more than in 1928. These club members represented 52,180 groups, known as 4-H clubs. Of the number enrolled, 507,500, or 67 per cent, satisfactorily completed their farm and home club activities. These boys and girls carried on 995,300 demonstrations in improved practices. In helping farming people to better their methods of farming and home making, the agents were assisted by 273,518 unpaid local leaders, of whom more than 200,000 worked with adults and about 70,000 with club members. All of these local leaders obtained their knowledge of extension work through the training given by the extension agents.

A total of 2000 farmers' institutes were conducted in 11 States in 1929. Instruction at these institutes was given by 729 lecturers at 9029 sessions attended by 1,266,500 persons.

The demand for silent educational motion pictures on farm and home subjects produced by the U. S. Department of Agriculture for the use of extension workers continued to exceed the supply of films available in spite of the fact that the competition afforded by the introduction of sound films has resulted in a definite drop in demand for silent commercial films. Twenty-two new films were produced. The Department made 3368 film shipments during the year. It was estimated that the films were viewed by more than 7,000,000

persons. Exhibits prepared by the U. S. Department of Agriculture were shown at 78 fairs and expositions in the United States. Large groups of exhibits were also prepared for display at the International Fur Trade Exhibition and Congress at Leipzig, Germany, and at the Fourth World's Poultry Congress at London, England.

GREAT BRITAIN. The National Association of Young Farmers' Clubs, which was organized in January, 1929, under the auspices of the National Council of Social Service, reported that about 20 new clubs were formed in 1929, making a total of approximately 100 clubs with a membership of 2000 boys and girls. The objectives of these clubs are to instill in the minds of young people under 21 years of age a desire to learn about natural things; to provide training in stock raising and in other branches of agriculture; and to teach the principles of public speaking and of the management of affairs. The clubs are managed as far as possible by the members, who elect a chairman, a secretary, and a treasurer from their number. The club leader is an adult and directs the work with the aid of an advisory committee composed of men and women acquainted with the branches of agriculture in which the club members are concerned. The business side of stock raising is emphasized and the economic results of the members' work are shown by an annual sale of stock or produce. Club work was started in Northern Ireland during 1930 and an organization secretary was appointed who began work early in January. In March, 1930, there were 6 clubs in Northern Ireland. The Farmers' Union, the Ministry of Agriculture, the Ulster Agricultural Organization Society, and the Royal Ulster Agricultural Society cooperated in the movement.

AUSTRALIA. In Queensland the Department of Public Instruction organized the boys' and girls' club movement in 1925 with the formation of pig clubs. They became known as home project clubs and are intended for boys and girls in school, especially in the rural districts, and for those who wish to fit themselves for an agricultural calling after leaving school, as the majority do at the age of 14. Theoretical instruction in the various projects was given by the teachers, while the practical work was done by the members on the home farm. Specialists visited the club members at their homes and gave expert advice in crop raising and stock breeding. The teachers explained the language of the experts and helped the members with record keeping, the conduct of experimental work, and the application of labor-saving devices, while the parents furnished means for carrying out the projects and gave advice based on practical experience. Through the home project clubs, the boys and girls were taught how to raise pigs, calves, and poultry; how to grow flowers, vegetables, maize, peanuts, and fruits; how to pack and judge their products; and how to sew, preserve their fruits and vegetables, and cook well-balanced meals. Country women in Australia were brought into closer contact, sympathy, and understanding with one another through associations which have been organized in New South Wales, Queensland, Western Australia, South Australia, and Victoria. In 1929, 300 branches were in existence. The associations were very successful in inducing farm women to take a more active part.

INDIA. In 1929 the Madras Agricultural Department used a traveling motor exhibition as a

means of instructing peasants. The vans were taken from village to village and stops of from one to four days were made, depending upon the size of the place. The exhibits carried in the vans covered every phase of the work of the agricultural department. Each exhibit was placed in a small show case with a glass front fitted into its own section and could be changed as desired, according to the locality visited and the nature of the exhibition. The caravan or van in which the assistants traveled went ahead and selected a suitable site, made necessary arrangements, and advertised the coming of the exhibition van. Plowing and other demonstrations were conducted and lantern slides were projected to illustrate lectures given before farmers of the community in the evening.

SWEDEN. During 1929 the Ministry of Agriculture took preliminary steps to assume full responsibility for club work inaugurated by the International Education Board for the purpose of making it a permanent part of the educational training of rural young people. The administration and guidance of the work were placed in the hands of the Board of the Jordbrukare Ungdomens Forbund, the association of farm youth, after being augmented by a representative of the Ministry of Agriculture and a representative of the agricultural societies. In 1929 the government made a preliminary grant to club work of 100,000 kroner or about \$26,954, to be paid in five annual installments beginning in 1930. Since boys' and girls' club demonstrations were begun by the International Education Board in one county in 1925, the work has spread to 12 counties. The number of members has also increased from 118 in 1925 to 3098 in 1929.

DENMARK. Training for women was provided through a national organization called "The Danish Housewives' Societies." Most of the subjects which concern the home of practical economic, social, or ethical importance were covered, such as home management, knowledge of commodities and how to purchase them, methods of handling various articles of food, food substitutes, physiology of nutrition, nutritive value of dairy products, use of electricity, household chemistry, sewing, modernizing the kitchen, care of children, personal hygiene, community education, and similar subjects. A total of 8573 young people were engaged in club work in 1928-29 under the leadership of 81 men and 20 women.

SOVIET UNION (RUSSIA). To meet the constantly increasing need for agricultural instruction and assistance in the Soviet villages, extension workers known as agronomes have been appointed as fast as possible in all parts of the Union. The federal commissariat or department of agriculture requires by law that the extension work of every volost (district corresponding roughly to a county, but composed of villages with more or less homogeneous conditions) shall be in charge of an agronomer, or county agent. He is assisted by local and district agronomes, instructors, and specialists in the various branches of agriculture peculiar to each district. Districts having a large number of farms are divided in sub-districts, each in charge of a local agronomer, who works with the district agronomer as leader. There are also regional and provincial experts. In 1928, there were in the Soviet Union 3334 volost agronomes, 2264 assistants and specialists, and 1898 regional or provincial experts. The volost agronomer, or county agent, supervises

all the work of agricultural instruction in his district. He and his assistants give agricultural instruction in the schools to young peasants. He is in charge of the district experiment station and carries on extension activities with the adult peasants. Since 1922 the government has also co-operated with peasant farmers in conducting demonstration farms. It first was necessary to promise remittance of taxes to secure peasant volunteers, but after a few years the attitude of the peasants changed, and now they allow their farms to be used for the conduct of demonstrations which are visited from time to time by the agronomer and peasants to watch the progress of the work and note results.

Agricultural extension work was also carried on in Argentina, Austria, Belgium, Brazil, British Guiana, Canada, China, Cyprus, Czechoslovakia, Ecuador, Estonia, Finland, France, Germany, Guatemala, Hungary, Italy, Jamaica, Mexico, Netherlands, New Zealand, Norway, Paraguay, Poland, Scotland, Spain, Switzerland, and Uruguay.

AGRICULTURAL RESEARCH. See AGRICULTURAL EXPERIMENT STATIONS.

AGRICULTURE. The problems of agriculture loomed large among the affairs of the United States in 1930. Foremost of these were the worst drought ever recorded and a slump in agricultural prices and incomes which reflected the combined influence of continued overproduction in some important farm products and of the world-wide business depression. The effects of the drought and depression were felt in practically every home in the United States, and Federal and State agencies united in efforts to ameliorate conditions and hasten the return of prosperity. Farmers had their usual problems, of taxation, credit, labor, production costs, and marketing—these seemed relatively small when compared to the depression and drought—yet in many cases they were intensified thereby, serving to increase the burden.

THE 1930 DROUGHT. A drought, considered the worst in the history of the United States, prevailed during much of the crop-growing season in 1930 and greatly reduced farm production. In duration, in extent of area covered, in deficiency of precipitation, and in severity, the 1930 drought exceeded the droughts of 1881, 1894, 1901, 1911, 1916, and 1924. About 30 States, including all those in the great central area extending from Virginia to Montana and from Pennsylvania to Texas, were hard hit.

Practically all nonirrigated crops growing late in the season were affected by drought, particularly the feed crops; hay and pastureage suffered greatly. Wheat, oats, or barley, taking the country as a whole, yielded rather more than average, and irrigated crops, as sugar beets, and some fruits largely grown outside the drought area, also produced well. In many localities farm-

ers had little to sell and were obliged to practice strict economy in their livestock feeding. Wells failed, water for stock was scarce, and in some parts of the country, thousands of farm families were to suffer privation. Moreover, the cut in farm production coincided with a sharp decline in the demand for farm commodities and the farm-commodity price level. This consequence of the world-wide economic depression, bore heavily upon farmers both within and outside the drought areas.

President Hoover, on August 14, called a conference of governors of drought-stricken States, and as a result of its conclusions, he appointed a national committee representing the various Federal agencies concerned, under the chairmanship of the Secretary of Agriculture. The governors in turn appointed state committees representative of the farmers, bankers, business men, and the Red Cross, and subsidiary committees were established in most of the acutely affected counties. Railway rates were reduced on feed and livestock in and out of the drought areas, and over 50,000 cars of such products were transported under the reduced rates. The Red Cross established a preliminary fund of \$5,000,000 for distress relief purposes and established agencies for its administration in each county. The Federal Farm Loan Board extended its credit facilities, and the Federal Farm Board gave financial assistance to all affected coöperatives. To aid in providing employment in the drought-stricken States, the Federal-aid road authorizations for the fiscal year 1932 were made available for contracts for construction. The drought relief bill approved Dec. 20, 1930, authorized the appropriation of \$45,000,000 for the Secretary of Agriculture to make loans to farmers in drought or storm-stricken areas for the purchase of seed of suitable crops, fertilizer, feed for work-stock, and fuel and oil for tractors used in crop production.

AGRICULTURAL DEPRESSION. The year began without the prospect of increased agricultural surpluses and there was a reasonable expectation that prices of agricultural products in general would be higher than in the previous season and that agricultural income would continue to improve, but all such expectations had to be abandoned with the break in the business situation and the subsequent marked decline in prices. The prices of agricultural products fell not because of an increase in supply, but because consumers were either unable to buy as much as usual or were unwilling to buy for future needs, except at lower prices. The effect of this reversal in the business situation on agriculture was seen most clearly in the prices of cotton, butter, and meat animals in which the price decline clearly resulted from a decline in the demand, since there were no great changes in supplies.

The decline in general price levels in other countries was brought about in the same manner as in the United States. Business depressions reduced the demand for raw materials for manufacture, such as cotton and wool; unemployment reduced the power of consumers to purchase food-stuffs and clothing—these conditions affected the international market for agricultural products. Many countries endeavored to strengthen the domestic markets for their own products by increased tariff duties and other restrictions upon imports. Countries that export agricultural prod-

ucts were forced to sell at low prices, which naturally curtailed their power to buy industrial products.

Production adjustments and a more rapid development of a national land utilization policy were two of the remedies for the current agricultural depression, which Secretary of Agriculture Arthur M. Hyde, advocated in his annual report to the President. He also emphasized the necessity of organizing agriculture into effective coöperative groups for collective action, of changing the existing tax system to lighten the farmers' tax burden, and of improving rural credit conditions. In urging acreage adjustments, the Secretary declared that the answer to overproduction was less production. By this time, he held, it was evident that the supply and demand conditions cannot be set aside by legislation, that the dumping of surpluses abroad is not feasible, that the indefinite storing of surpluses tends to prevent, rather than to cause, a rise of prices, that tariff duties are not effective on commodities produced largely for export, and that subsidies would increase rather than restrain production.

Urging the voluntary curtailment of production, the Secretary said that the problem of readjustment varies with regions and with individual farms. This fact justifies a flexible adjustment policy, but not a refusal to make adjustments. He declared that it does not follow, because some farmers can produce at a lower cost than others, that the low cost farmers should do nothing to prevent overproduction. Moreover, wise acreage adjustments, he added, can help to decrease the unit cost as well as the volume of production. This effect is produced by the elimination of the higher cost acres, and the concentration of the remaining cost acres, on the productive land.

THE AGRICULTURAL SITUATION. The year 1930, as viewed by the U. S. Department of Agriculture, was one of rather bewildering developments. The great drought resulted in the smallest crops of corn, hay, and pasture in many years, and a major industrial depression curtailed the market for cotton, meat, milk, and many other products. A precipitous, world-wide decline in prices of general commodities put further pressure especially upon raw materials, including farm products. An accumulated supply added to the distressed market condition of wheat. Agricultural production as a whole declined in 1930—total crop production was about 5 per cent less and with a December value about 28 per cent less than in 1929, and the total slaughter of meat under Federal inspection in the first 10 months (10,750,000,000 lbs.) was about 4 per cent less than in 1929 and returned about 8 per cent less money.

Returns from the production of 1930 were expected to be lower than for any season since 1921, being estimated at about \$9,950,000,000, or 16 per cent below the \$11,851,000,000 for 1929. The reduction in farm expenditures, from 1929, was small compared with the reduction in gross income. From 1924 to 1929 inclusive, the aggregate income was fairly stable, but in 1930, all sections suffered because of the world-wide industrial depression, and in the drought-stricken area, the gross income was estimated at about 25 per cent less than in 1929. The decided change from moderate improvement in 1929 to severe depression in 1930 was attributed largely to price

movements since the summer of 1929. The index of prices received by farmers in August, 1929, averaged 143 per cent of prewar prices, declined to 108 in August, 1930, and to 106 per cent in October, 1930. The disparity between the price level at which the farmer sells and that at which he must buy appeared to be the widest since 1921.

Farm taxes continued to rise during the year. With lower land values and the usual increases in taxes, the rate probably was about \$1.50 per \$100 of the full value of farm real estate, compared with \$1.46 in 1929, and \$1.22 in 1924. Direct taxes paid by farmers, now amount to more than \$900,000,000 annually, of which about 84 per cent is paid through the general property tax, according to a Department of Agriculture study reported in 1930. The farmer's acute tax problem results from a rapidly increased public expenditure met by a taxation system that bears heaviest on real estate and tangible personal property. A diminution in the farmer's equity in his real estate, through increase in mortgage indebtedness and decline in real estate values, had made the burden heavier in recent years. Remedies proposed included more effective control of expenditures, and revision of the prevailing system of taxation, to derive more revenue from sources other than general property. The American Farm Bureau Federation and other organizations emphasized the need for economy and urged careful study as a basis for revision of the State systems of taxation.

The values of farm real estate continued downward. Averaged for the entire United States, the acre value for all farm lands with improvements decreased about 1 per cent during the year ended Mar. 31, 1930, about the same as in the previous year. Declines of these two years were the smallest reported since the break following the peak of land values reached in 1920. Forced transfers of farm realty, approximated 20.8 farms per 1000, compared with 19.5 per 1000 in the year before, whereas the rate of voluntary sales and trades was 23.7 farms per 1000, similar to the previous year. The total farm-mortgage debt of the United States, which in 1930 represented about 22 per cent of the value of all farms, compared with only 10 per cent in 1910, continued practically unchanged during the two years since 1928, when the estimate was \$9,468,526,000, compared with \$7,857,700,000 in 1920, and \$3,599,000,000 in 1910. Evidently since 1928, the long upward trend in amount of farm-mortgage loans had ceased.

The borrowing-power of the farmers was greatly reduced in 1930. Lowered prices of farm commodities interfered with the liquidation of loans, and reduced the supply of new credit in country banks. The decline of farm-land values affected the credit status of farmers and forced many to reduce their mortgages. In drought-affected areas credit facilities were strained, while the demand for credit increased.

Farm credit remained costly in many parts of the country in spite of improvements brought about by the Federal Reserve Act of 1913, the Farm Loan Act of 1916, and the Agricultural Credits Act of 1923. In the little more than seven years of their existence, the 12 Federal Intermediate Credit Banks discounted farmers' notes totaling \$335,195,351, and renewed loans aggregating \$165,039,974, a total of \$500,835,325, up to Aug. 31, 1930. The banks also had loaned more than

90 coöperative marketing associations \$548,376,256, including renewals of original commitments. Under the Agricultural Marketing Act of 1929, the Federal Farm Board provided funds for loans to coöperative associations for marketing, for the acquisition of plant and equipment, and for other purposes supplementing credit furnished by other agencies. Agriculture was served much better with credit facilities than it was 10 or 15 years previously.

Tariff protection, as Secretary of Agriculture Hyde pointed out in his report, was of increasing importance to agriculture in the United States because agriculture was depending less on foreign markets and more on home markets, because competition in farm products in world markets had increased enormously, and because of the tariff's value in helping balance production against market demand. The advantages of the tariff were also indicated by President Hoover who stated in his message to Congress, December 2, "The price levels of our major agricultural commodities are, in fact, higher than those in other principal producing countries, due to the combined result of the tariff and the operations of the Farm Board."

The Tariff Act of 1930, effective June 18, an answer to the growing sentiment that a protective tariff must become more and more an integral part of the national agricultural policy, provided for a substantial increase in the rates of duty on many farm products, and also for the continuance on the free list of many articles used by farmers.

The total volume of exports of agricultural commodities during the year ended June 30, 1930, was reported to be the smallest since 1910. The decline from a value of \$1,847,000,000 in 1928-29 to \$1,495,000,000, or 19 per cent less, in 1929-30 was held largely due to lower prices and increased competition from larger world crops. Smaller shipments of cotton at reduced prices were reported as the dominant factor in causing the decline in values, but other groups also decreased substantially in value. Exports of meat and tobacco, however, rose in both volume and value. Reduced prices of many products, especially sugar and coffee, and, in some cases, a curtailed demand were the principal causes in the decline in values of agricultural imports from \$1,943,000,000 in the year ended June 30, 1929, to \$1,696,000,000 in 1929-30.

The movements of population in the United States from the farms to the cities, and vice versa, decreased somewhat in recent years although still very large. Surveys by the Department of Agriculture show the movement to towns and cities to comprise 1,876,000 persons in 1929, a general decline since 1926, whereas 1,257,000 went to the farms from the cities. Considering the ebb and flow of population and the birth and death rates, the net loss of farm population for 1929 was estimated to be 269,000 persons. Births on farms were 23 per 1000 and deaths 10 per 1000. Conclusions from a survey by the American Research Foundation were that "The drift of population from the farm to the city need cause the United States no concern over agriculture's future, since fewer farmers are now actually doing more work and providing greater crops." The farm population of the United States as of Jan. 1, 1930, was estimated at 27,222,000, compared with 30,200,000 on Jan. 1, 1922, and with a total of 30,076,960 on Jan. 1, 1910.

CROP PRODUCTION IN 1930. The area of all crops harvested in 1930 was estimated at 366,507,000 acres, or 0.5 per cent more than the acreage harvested in 1929. Yields on the harvested acreage averaged 5.4 per cent below those secured in 1929, and 8.9 per cent below average yields in the preceding decade, being particularly low in an area extending from Maryland southwest into Texas where the drought began early. Yields were also low in Montana and in nearly the whole area north of the Ohio and Missouri rivers except in Wisconsin, Minnesota, and eastern North Dakota. Yields were best in New England, in a few southeastern States, in most of Nebraska and Colorado and in most of the area west of the Rocky Mountains. In proportion to the population, the harvest showed nearly the usual production of food crops, about average production of cotton, tobacco, flaxseed, and broomcorn, and a greatly reduced production of feed for livestock.

The value of the 1930 crops was estimated to be \$6,274,824,000, only about 72.3 per cent of the \$8,675,420,000 valuation of the 1929 crops. The decline in value of the crops was caused chiefly by the widespread decline in prices, but was accentuated by the decrease in production that resulted from the drought. This decline in prices affected nearly all crops and all parts of the country, especially crops produced for export and sold on a world-wide market.

Wheat production amounted to 850,965,000 bushels from 59,153,000 acres, compared with 809,176,000 bushels from 61,464,000 acres in 1929, or 5.2 per cent more on 3.8 per cent less acreage. Based on the farm price reported December 1, 60.8 cents per bushel, the total value of the 1929 crop was \$517,407,000 against 104.2 cents and \$843,030,000 in 1929. The harvested acreages were, for winter wheat 38,608,000, durum wheat 4,643,000, other spring wheat 15,902,000 acres; and the total production of winter wheat 604,337,000 bushels, durum 55,665,000 bushels, and other spring wheat 190,963,000 bushels. The relative amount of winter wheat reflected continued gradual expansion of wheat acreage in the Great Plains area, relatively low production of durum on reduced acreage, and production slightly below average for the other spring wheats.

The world wheat crop in countries outside the U. S. S. R. (Russia) and China, was estimated at 3,784,000,000 bushels compared with 3,495,000,000 in 1929. The Canadian crop amounted to 395,854,000 bushels, more than 91 million above the previous year. The U. S. S. R. (Russia) was estimated to have produced 1,157,400,000 bushels of wheat. The 1930 production as reported by 41 countries totaled 3,649,656,000 bushels, an increase of 9 per cent over 1929. See **WHEAT**.

The corn crop in 1930 was the smallest since 1901, low yields being due greatly to drought which was exceptionally severe in the southern third of the Corn Belt and of moderate extent over the remainder. Production for all purposes was estimated at 2,081,048,000 bushels, 20.3 per cent below the 1929 crop and 22.9 per cent below the average production of the five years 1924-1928. The acreage totaled 100,829,000, 3 per cent more than in 1929, and the acre yield averaged 20.6 bushels against 26.7 bushels in the previous year. The production of corn for grain was estimated to be 1,743,795,000 bushels, for silage 28,956,000 tons, and for hogging, grazing, and forage 11,362,000 acres. Corn production in 17 countries which in 1929 raised nearly 79 per cent of the

estimated world total, exclusive of U. S. S. R. (Russia), amounted to 2,778,793,000 bushels, 18.7 per cent less than in 1929. Nine European countries reported a total of 528,165,000 bushels, more than 20 per cent below the 1929 harvest. See **CORN**.

The oats crop of 1930 was estimated to be 1,402,026,000 bushels compared with 1,228,369,000 bushels in 1929, and 2.3 per cent above the average of the five years 1924-1928. The area harvested for grain totaled 41,598,000 acres, 4 per cent over the previous year, and the yield per acre averaged 33.7 bushels, 3 bushels more than in 1929. In most States the crop was too far along to be injured seriously by the drought. The 30 countries which in 1929 raised more than 91 per cent of the world total, exclusive of U. S. S. R. (Russia) and China, produced 3,380,835,000 bushels, 2.2 per cent less than in 1929. The total crop in 23 European countries amounted to 1,487,845,000 bushels, more than 21 per cent below that of the year before. See **OATS**.

The estimated total production of barley, 325,893,000 bushels, raised on 12,437,000 acres averaging 26.2 bushels per acre, was the largest on record except that of 1928 and was 35.6 per cent above the average of the five years 1924-1928. Like oats, barley was largely harvested before the drought became severe. The 1930 production of barley in 35 countries which in 1929 produced more than 82 per cent of the estimated world total, exclusive of U. S. S. R. (Russia) and China, was 1,354,003,000 bushels, almost 5 per cent less than in 1929. The crop in 10 European countries totaled 669,712,000 bushels, nearly 12 per cent below that of the previous year. See **BARLEY**.

Rye production in 1930 was estimated to be 50,234,000 bushels raised on 3,722,000 acres, an increase of 8,323,000 bushels and 391,000 acres over 1929, a year of low production for this crop, and 1.2 per cent below average production in the last decade. Rye was below average in quality, due in large measure to very hot July weather. The 1930 rye crop in 23 European countries totaled 919,245,000 bushels, compared with 944,804,000 bushels in 1929. Drought was disastrous to buckwheat, 658,000 acres, the smallest acreage harvested in 30 years, producing 8,975,000 bushels, compared with 729,000 acres and 11,474,000 bushels in 1929. The total rice crop of 41,367,000 bushels, harvested from an 11 per cent larger acreage, was about 900,000 bushels more than last year, the increase being fully accounted for by the 1,000,000 bushels increase in production of Japanese varieties in California. See **RYE**.

Substitution of flax for wheat in spring wheat States was largely responsible for the 29 per cent increase over 1929 in the seed flax acreage, yet the large 1930 crop of 23,682,000 bushels at \$1.40 per bushel did not return growers as much as the 17,049,000 bushels at \$2.84 in 1929. Kafir, milo, feterita and other grain sorghums produced an estimated equivalent of 86,622,000 bushels, 14.1 per cent less than in 1929. An increase of 4.5 per cent in acreage was offset by low acre yields due to drought in Oklahoma, Texas, and New Mexico. Production of sorghum (sorgo) sirup amounted to 24,132,000 gallons; sugar-cane sirup, 19,087,000 gallons; and maple sugar and sirup, equivalent to 34,404,000 pounds of sugar. The sugar made from the sugar beet crop of 1930 was estimated at 1,185,000 tons versus 1,018,000 tons in 1929, while from the increased acreage of sugar cane came 208,000 tons of sugar, 8000 more than in the previous year.

The 1930 hay crop was estimated at a total of 94,767,000 tons, of which tame hay made up 82,656,000 tons and native or wild grasses the remainder, as compared with a total of 113,658,000 tons in 1929. Reduced acreage due to loss of new seedlings, winter injury, and plowing up of meadows because of the large carryover of hay, and low acre yields resulting from thin stands and drought caused the short hay crop. The production of alfalfa hay, 28,587,000 tons, was only 4 per cent below that of 1929. The alfalfa acreage was located largely outside of the 1930 drought area and was affected only slightly compared with other hay crops. Increased yields of alfalfa and timothy seed were reported, while the production of seed of red, alsike and Japan clover was only slightly over one-half as large as in 1929.

The potato crop was estimated at 361,090,000 bushels, but slightly larger than in 1929, whereas yields per acre averaged slightly less and the farm valuation of the crop dropped to \$326,457,000 in 1930 from nearly \$470,000,000 in 1929.

Canada reported a production of 75,437,000 bushels. The world's potato crop was only moderate in size, an average production being made in Europe, where the potato crop is of significance mainly in its effect on the world price of breadstuffs. Estimates of 17 countries, which have produced in recent years about 75 to 80 per cent of the European crop outside of the U. S. S. R. (Russia), were a total of 3,775,000,000 bushels as compared with 4 billion bushels last year. The U. S. S. R. (Russia) reported an area of 13,171,000 acres compared with 14,688,000 acres from which 1,758,168,000 bushels were harvested in 1929, with indications that the 1930 crop would be of average size. See POTATOES.

Production of tobacco in 1930 amounted to 1,510,308,000 pounds, about 1 per cent less than in 1929, although from an acreage 3.5 per cent larger. Increased production came from flue-cured tobacco, estimated to comprise 790,950,000 pounds of the total, and from cigar tobacco, all types 176,814,000 pounds, whereas fire cured types of Virginia, Kentucky, and Tennessee, severely affected by drought, and totaling 158,559,000 pounds. Burley 305,566,000 pounds and Maryland with 18,190,000 pounds, all produced less than in the previous year. Farm prices reported December 1 averaged 14.4 cents a pound, compared with 18.5 cents in 1929. See TOBACCO.

Cotton production in the United States was estimated Dec. 1, 1930, at 14,243,000 bales, 585,000 fewer than in 1929, and the crop was grown on 45,218,000 acres, 575,000 less than in the previous year. Severe drought in many sections of the Cotton Belt from Alabama west, especially in Arkansas, Oklahoma, and Texas, helped curtail production, although boll weevil damage also was reduced by the hot, dry weather. The South Atlantic States had ample rainfall in most sections and production and acre yields were above average. Exports of cotton during the cotton year ended July 31, 1930, totaled 6,689,796 bales, compared with 8,043,588 in the previous year, with France as the only major consuming country increasing its imports. Producers received an average of 9.5 cents per pound for cotton lint on Dec. 1, 1930, compared to 16.4 cents in 1929. The downward movement of prices partly reflected reduced world consumption of American cotton, which was replaced to a considerable extent by that grown in other countries. See COTTON, and articles on other individual crops.

FEDERAL FARM BOARD. The board, during the 18 months since it was constituted (July 15, 1929) in accordance with the Agricultural Marketing Act of 1929, took significant steps toward achievement of the ultimate goal of the policy of Congress—the placing of agriculture on a basis of economic equality with the other industries. The experience of its first year, one of worldwide business crisis and recession and worldwide agricultural depression, showed the immensity and complexity of the problems, but it also indicated definitely that farmer organization, of all the remedies suggested, offers the surest hope for permanent financial betterment of those engaged in agriculture.

Recognizing the importance of organization, the board centred its efforts on assisting existing cooperative groups to organize national or central cooperative sales agencies for the unified and advantageous marketing of different commodities such as grain, cotton, wool, livestock, and other farm products. The national cooperative agencies organized included the Farmers' National Grain Corporation, National Wool Marketing Corporation, American Cotton Cooperative Association, National Livestock Marketing Association, National Bean Marketing Association, National Pecan Marketing Association, and National Sugar Beet Growers' Association. The board also was working with cooperative groups handling dairy products, tobacco, apples, rice, and fruits and vegetables, looking to the development of a central cooperative sales programme for those commodities. Cooperatives handling apples, beans, citrus fruits, cotton, dairy products, figs, grain, grass seed, honey, livestock, poultry and eggs, grapes and raisins, rice, sour cherries, tobacco, wheat, and wool and mohair, received financial assistance in their operations from the board.

Measures for surplus prevention and control, including stabilization operations, constituted an important phase of the activities of the board and its associated cooperative groups. Working with large cooperative groups, and later through the Farmers' National Grain Corporation and the Grain Stabilization Corporation, the board by its various actions contributed materially to support the prices of wheat in the crop year 1929-30 and to prevent substantial price declines which otherwise would have occurred.

Wheat prices were being held fairly stable, above export parity, while the world market prices declined sharply. However, declines in prices of wheat and other farm products, while retarded, were not permanently prevented. While some criticism was aroused by the action taken, the board believed that, in the circumstances as they developed, it would have been properly subject to severe condemnation had it failed to use its power in attempting, by every reasonable means, to cope with the emergencies that arose. The experience revealed some of the hazards and difficulties involved in stabilization procedures. The situation faced in the early summer of 1930 did not appear to warrant further action of the same sort at the outset of the crop year 1930-31.

Investigation of wheat developments in recent years and of the world wheat outlook by the board, cooperating with the U. S. Department of Agriculture, made clear that world wheat production had been outrunning wheat consumption and that, for five or six years, carry-overs had been piling up, both in the United States and

PRODUCTION BY COUNTRIES IN 1929 AND 1930 OF WHEAT, RYE, OATS, BARLEY, AND MAIZE (CORN) IN BUSHELS *

* The production given countries of the Southern Hemisphere is for the crop years 1929-30 and 1928-29.

in the world at large. It also appeared that the trend of acreage and production in various wheat-producing countries, and of wheat consumption as well, were such as to threaten continued depression of wheat prices. Faced with this situation, the board could see no hope for arresting such a movement, or preventing its serious consequences to American wheat farmers, by co-operative marketing as such, by stabilization measures of the type already employed, or through adopting any of the proposed measures designed to dispose of the surplus abroad at prices below domestic levels. In the board's opinion, "The obvious and economic remedy for the overproduction of wheat, to which our own wheat growers are contributing, is curtailment of production, with a view of reducing and, if possible, eventually eliminating our export surplus so that the tariff might become effective on American prices." The board and Federal and State agricultural services urged limitation or reduction in the acreage planted to wheat and to cotton.

The general position of the board as to stabilizing measures in wheat, applied also to cotton, although circumstances differed in certain respects. The failure of growers to bring about substantial curtailment in the cotton production of 1930 apparently contributed heavily to defeat the purpose of the cotton stabilization measures. A minor stabilization operation, with butter, met with considerable success.

Of the \$500,000,000 authorized by Congress for the board's revolving fund, \$250,000,000 was available, and on June 30, 1930, 206 applications for loans had been received, of which about 150 were either granted or awaiting final disposition. In all, loans requested totaled over \$466,000,000, of which the board committed itself to loan \$165,146,555 to cooperative associations, \$90,000,000 to the Grain Stabilization Corporation, and \$15,000,000 to the Cotton Stabilization Corporation. Of nearly \$192,000,000 disbursed up to June 30, 1930, more than \$43,000,000 had been repaid and became again available for additional loans. The interest rates charged on actual advances up to June 30, 1930, ranged from 1½ to 3¼ per cent, or averaging about 2.9 per cent per annum. An additional \$150,000,000 to carry out the provisions of the Agricultural Marketing Act was provided in a bill approved Dec. 22, 1930. Loans made by the board were supplemental to such credit facilities as were already available to the cooperative associations. When once the producers and their cooperatives within a commodity group unified their marketing operations into a single organization, either regional or national, the board was pursuing a policy of extending loans only to those cooperatives affiliated with the regional or national set-up.

The cooperative relations maintained by the board with Federal and State agricultural research educational agencies, Federal credit and banking institutions, and the general farm organizations, were very effective in developing the programme and in obtaining concrete results. Substantial progress was made toward the most effective utilization and development of existing resources to provide adequate foreign agricultural information. Advisory commodity committees to cooperate with the board in developing suitable programmes for the improvement of industry conditions relating to their particular commodities, were selected by the cooperatives handling dairy products, wool and mohair, wheat,

cotton, coarse grains, livestock, and sugar beets, and sugar cane. In November and December, 1930, the board was taking steps to extend to Porto Rico, the benefits of the Agricultural Marketing Act.

Consult also *First Annual Report of the Federal Farm Board for the year ending June 30, 1930*; *Farmers Build Their Marketing Machinery*, Federal Farm Board Bul. 3 (1930); *Outlook for American Cotton*, Federal Farm Board Bul. 4 (1930).

WORLD AGRICULTURE. England and Wales. Conditions in agriculture were described by farmers as the worst since 1879. Low yields from most of the major crops, unsatisfactory prices due to importation of foodstuffs in large volume, bad weather, increasing numbers of farmers going out of business, more arable land going to grass, and more farm laborers going to swell the ranks of unemployed in the towns—all combined to draw attention to the state of depression in agriculture.

Official returns collected from farms June 4, showed a smaller acreage under grain, a large increase in sugar beets, fewer cattle and swine, and a considerable increase in the number of sheep, which reflected the change from grain land to grass. The changes in production led to a smaller number of agricultural workers, 741,000, compared with 770,300 in 1929. To remedy conditions, the government proposed to establish a marketing board, to encourage small holdings and to set up demonstration farms, leaving the question of import boards for future consideration.

Hungary. Hungary according to a survey by the Department of agriculture, is a corn-growing country and a potential producer of pork and pork products that may compete with the United States, in south central Europe at least. By 1930 lard from the United States had penetrated into Austria, Czechoslovakia, and western Yugoslavia, all of which border on Hungary. Up to 1926, Hungary could not compete with fats and bacon from the United States except on markets where the consumers favored the Hungarian product. But when the political and economic situation in Europe becomes more stable, Hungary will undoubtedly offer American pork and pork products sharp competition in central Europe. On the wheat and flour markets, Hungary was competing with the United States in Austria and Czechoslovakia and other countries of Central Europe.

European Agricultural Conferences. National and international control of grain exports from Bulgaria, Hungary, Poland, Rumania, and Yugoslavia were proposed at a conference held November 10-13, at Belgrade. Recommendations were for the establishment by Mar. 31, 1931, of rational export control boards where they did not already exist and for a central control board for the countries indicated to be established by July 31, 1931. The conference at Belgrade was the sixth gathering since July, 1930, with Rumania and Yugoslavia as the nucleus around which the ideas of regulating European agricultural exports were concentrated. Delegates from as many as nine countries considered proposals for alleviating their more or less common agricultural distress. Recommendations included not only the "preference for preference" idea but also drastic realignment of existing trade agreements, even to the extent of eliminating the most-

avored-nation agreement in commercial treaties.

See *JUGOSLAVIA* under *History*.

Rumania. Efforts were being made by the government to improve the condition of the peasants, who were described as bankrupt and despairing. Low prices for agricultural produce, high interest rates, and heavy taxes combined to make it impossible for the average farmer of two or three hectares to make a living, and this was aggravated further by the dumping of cheap Russian wheat. Of the remedies proposed, King Carol counted most on reduced taxation and cheaper agricultural credit.

U. S. S. R. (Russia). Collectivization of agriculture in Russia was claimed to be fairly successful. Up to March, 1930, 40 per cent of the grain-producing areas had been collectivized. A successful drive for spring sowing was followed by favorable climatic conditions and the acre yields of the crops harvested on the collectivized farms were from 15 to 50 per cent greater than from the small holdings replaced. However, the area sown in the autumn of 1930 showed that the individual peasant or farmer still produced the large bulk of wheat of Russia. See *RUSSIA* under *History*.

China. The autumn harvest promised substantial relief to the famine conditions in most of the northwest region of China, although there were districts, especially in Shensi Province, where severe conditions continued due to failure of summer rains, according to a report to the Department of Agriculture. In Kansu, the favorable harvest promised nearly complete relief from famine. In Shensi, where famine conditions were acute during the past two years, wheat was scarce and prices were double and treble normal prices. The wheat crop, harvested in June, was estimated at only 20 per cent of normal. Autumn crops were reported good in most of the counties in the Wei Valley and the larger area under summer crops partly offset the small wheat acreage. West of Singan and in the foothills, there were areas so severely affected by drought that food production was less than in either of the two years previous. Engineers on road building projects, introduced as a famine relief measure, described severe famine conditions in western Shensi. It was estimated that deaths and emigration had reduced the population of Shensi by 3,000,000 people, which reflected the severity of the famine, reported as worse than that of 1921. Rainfall was unequally distributed in southern Shansi and local droughts have caused much damage, but excellent crops were reported in some regions and as a whole the province probably was much better off than in 1929. Wheat prices in southern Shansi were one-third less than during 1929. On the Great Plain, food supplies probably were the best in years. Reports indicated an excellent rice crop in both central and south China.

Inter-American Conference on Agriculture, Forestry, and Animal Industry. The Inter-American Conference on Agriculture, Forestry, and Animal Industry which met in Washington, D. C., Sept. 8 to 20, 1930, was attended by 54 official delegates and 170 consultative delegates appointed by the American nations to promote systematic research in agriculture, forestry, and animal industry, and to establish agencies for this work. An elaborate programme for agricultural coöperation throughout the western hemisphere was drafted. As the plans formulated become effective, it will be possible to deal with the

problems arising in the three fields on a continent-wide, rather than a country-wide, scale.

To further the desired ends, the countries of the Pan American Union were asked to hold, in the five years elapsing before the second inter-American conference, national conferences to plan surveys of conditions in agriculture, forestry, and animal industry, to consider and apply the regulations of the national conference, and to define the problems that could be solved through inter-American coöperation. The interchange of research workers in the experiment stations of the various countries and a survey of the problems in which the several countries had common interest, were planned.

Recommendations were that the diversion of agricultural coöperation of the Pan American Union be reorganized on broader lines to serve as the centre of coördination of results of research throughout the Americas; that a central Pan-American Experiment Station and an inter-American livestock board be created, and that the governments of the Americas consider the appointment of agricultural attachés at the embassies and legations. The conference also recommended that an inter-American agricultural bank be established; that tariffs be modified to facilitate exchange of insecticides, fungicides, and apparatus for combating plant and animal diseases and pests; that the results of research in each of the member countries be summarized and distributed annually; that statistical services be strengthened and improved; and that an inter-American association for the advancement of science be formed.

International Conference of Agricultural Economists. This conference was held at Cornell University, at Ithaca, N. Y., from Aug. 18-28, 1930, and was attended by more than 300, of whom one-third came from 15 countries other than the United States. Its object was to foster the development of agricultural economics and to further the application of the results of economic investigations of agricultural processes and agricultural organizations in the development of economic and social conditions relating to agriculture and rural life. Several sessions were devoted to the existing agricultural depression, its causes, extent, seriousness, probable duration, and possible remedies. Discussion largely centred around the causes and the effects of agricultural surpluses and monetary conditions. Other questions considered were tariffs, international law, repayment of war loans and reparations, immigration, and the agricultural policies of different countries.

International Institute of Agriculture. The Institute celebrated its 25th anniversary with ceremonies in the Capitol at Rome, Oct. 15, 1930, in the presence of the King of Italy, its founder and patron, and representatives of the 74 states adhering to the Institute.

The world census of agriculture proceeding under the auspices of the Institute was to include number and size of farms, classification of farm land, acreage and yields of principal crops, livestock, population, and related information, and was to be representative of 97 per cent of the surface of the earth, 98 per cent of its population, and about 99 per cent of its agricultural production.

COUNTRY LIFE CONFERENCES. The fourth International Congress for the Improvement of Rural Life held at Liège, Belgium, Aug. 7-10, 1930,

was organized in four sections which dealt with (1) hygiene, comfort, reduction of hand labor, and economy in rural districts, (2) modern improvements in rural districts, (3) improvements in the intellectual, moral, artistic and recreational well-being of the rural districts, and (4) the ruralization of the country. The annual conference of the American Country Life Association for 1930, held at Madison, Wis., Oct. 8-10 in cooperation with the University of Wisconsin and other institutions, agencies, and organizations, had for its theme rural standards of living.

AGRICULTURE, UNITED STATES DEPARTMENT OF. The report of the Secretary of Agriculture for 1930 in reviewing the agricultural situation of the United States and the activities of the Department of Agriculture during the year dealt among a number of topics mainly with the effects of the severe drought prevailing during the summer, the measures taken to give relief to the drought-stricken areas, crop and livestock production and its relation to agricultural conditions, factors in the current agricultural depression, the national forests, farm taxation, land values, and credit conditions, the tariff act of 1930 as it applied to the farmer, expansion of the foreign agricultural service and cooperation with the Federal Farm Board. A review of the Department's achievements in the various lines of research, the service to the agricultural industry as well as to the public in general and the control and regulatory activities during the year was also included.

DROUGHT RELIEF. In the organization effected to give assistance to the drought-stricken areas, the Secretary of Agriculture served as chairman of the Federal Drought Relief Committee and much of the work of this committee was done in the Department of Agriculture under his direction. The Department assumed the responsibility for determining the counties entitled to the freight rate reductions in effect from the later part of August until November 30 and granted farmer-consumers by the railroads on shipments of feed and water into counties suffering severely from the drought and of livestock into sections with available feed supplies. On the basis of the information gathered, the Department issued cer-

tificates recommending the rate reductions on specific shipments to farmer-consumers or dealers. Further assistance was given to alleviate the situation by means for providing employment, facilitating the sale of certain farm products and distributing and conserving supplies of food, feed, and seed. The Federal-aid road authorizations for the fiscal year 1932 were made available under certain limitations in the States suffering from the drought, supplies of hay and feed were located, the planting of emergency crops wherever possible was advised and the preservation of food supplies were suggested and the methods demonstrated.

FACTORS IN THE AGRICULTURAL DEPRESSION. The current depression in the farming industry was ascribed to the continued overproduction of certain important farm products and the worldwide reduction in business and the consequent price decline. Exports of agricultural commodities from the United States for the fiscal year ended June 30, 1930, were the lowest for 15 years. It was pointed out that the slowing down of business and the increased unemployment in the country reduced the purchasing power of consumers so clearly reflected in the lower prices of cotton, butter, and meat animals due to no great changes in supply but to a decline in demand. It was estimated that for the year the lower prices represented a loss of more than \$400,000,000 to the cotton growers and of over \$500,000,000 to the livestock producers.

ROADS. As summarized in the report, the Federal-aid highway system included 193,049 miles of the most important interstate and inter-county roads. During the fiscal year initial Federal-aid improvements were completed on 7317 miles in this system. The total improved mileage in 1930 included 84,013 miles of which about one-third was Portland-cement and bituminous concrete and one-third gravel construction. The total cost of initial improvements and of 2011 miles of secondary improvements completed during the year was \$193,648,149 of which the Federal Government paid \$82,158,757, but the total actual Federal disbursements for the year were only \$75,880,863, which was over \$6,000,000 less than in the preceding year and more than \$20,000,000 less than in 1926. In April, 1930, Congress made an additional appropriation of \$50,000,000 for 1931 to restore the earlier rate of construction and to provide employment through public work. For road construction in the National Forests \$9,982,296, including \$7,966,000 Federal appropriation and \$1,018,202 contributions from private coöperators, was available. The construction of the Mount Vernon Memorial Highway from Washington to Mount Vernon was begun by the Bureau of Public Roads of the Department in September, 1929.

PERSONNEL. At the close of the fiscal year, the Department of Agriculture employed 25,736 persons, of which 20,558 were men and 5178 women. Of these employees, 5255 were stationed in Washington and 20,481 in the field. In number of employees the Department ranked sixth among the government departments. The more important changes on the Department's staff of workers included the designation of Dr. M. A. McCall as principal agronomist in charge of the Office of Cereal Investigations and successor to Dr. C. R. Ball, the appointment of G. A. Duthie as chief of information of the branch of public relations of the Forest Service, the transfer of Dr. L. A.

favoured-nation agreement in commercial treaties.

Reports indicated an excellent rice crop in both central and south China.

Inter-American Conference on Agriculture, Forestry, and Animal Industry. The Inter-American Conference on Agriculture, Forestry, and Animal Industry which met in Washington, D. C., Sept. 8 to 20, 1930, was attended by 54 official delegates and 170 consultative delegates appointed by the American nations to promote systematic research in agriculture, forestry, and animal industry, and to establish agencies for this work. An elaborate programme for agricultural coöperation throughout the western hemisphere was drafted. As the plans formulated become effective, it will be possible to deal with the

problems arising in the three fields on a continent-wide, rather than a country-wide, scale.

To further the desired ends, the countries of the Pan American Union were asked to hold, in the five years elapsing before the second inter-American conference, national conferences to plan surveys of conditions in agriculture, forestry, and animal industry, to consider and apply the regulations of the national conference, and to define the problems that could be solved through inter-American coöperation. The interchange of research workers in the experiment stations of the various countries and a survey of the problems in which the several countries had common interest, were planned.

Recommendations were that the diversion of agricultural coöperation of the Pan American Union be reorganized on broader lines to serve as the centre of coördination of results of research throughout the Americas; that a central Pan-American Experiment Station and an inter-American livestock board be created, and that the governments of the Americas consider the appointment of agricultural attachés at the embassies and legations. The conference also recommended that an inter-American agricultural bank be established; that tariffs be modified to facilitate exchange of insecticides, fungicides, and apparatus for combating plant and animal diseases and pests; that the results of research in each of the member countries be summarized and distributed annually; that statistical services be strengthened and improved; and that an inter-American association for the advancement of science be formed.

International Conference of Agricultural Economists. This conference was held at Cornell University, at Ithaca, N. Y., from Aug. 18-28, 1930, and was attended by more than 300, of whom one-third came from 15 countries other than the United States. Its object was to foster the development of agricultural economics and to further the application of the results of economic investigations of agricultural processes and agricultural organizations in the development of economic and social conditions relating to agriculture and rural life. Several sessions were devoted to the existing agricultural depression, its causes, extent, seriousness, probable duration, and possible remedies. Discussion largely centred around the causes and the effects of agricultural surpluses and monetary conditions. Other questions considered were tariffs, international law, repayment of war loans and reparations, immigration, and the agricultural policies of different countries.

International Institute of Agriculture. The Institute celebrated its 25th anniversary with ceremonies in the Capitol at Rome, Oct. 15, 1930, in the presence of the King of Italy, its founder and patron, and representatives of the 74 states adhering to the Institute.

The world census of agriculture proceeding under the auspices of the Institute was to include number and size of farms, classification of farm land, acreage and yields of principal crops, livestock, population, and related information, and was to be representative of 97 per cent of the surface of the earth, 98 per cent of its population, and about 99 per cent of its agricultural production.

COUNTRY LIFE CONFERENCES. The fourth International Congress for the Improvement of Rural Life held at Liège, Belgium, Aug. 7-10, 1930,

was organized in four sections which dealt with (1) hygiene, comfort, reduction of hand labor, and economy in rural districts, (2) modern improvements in rural districts, (3) improvements in the intellectual, moral, artistic and recreational well-being of the rural districts, and (4) the ruralization of the country. The annual conference of the American Country Life Association for 1930, held at Madison, Wis., Oct. 8-10 in cooperation with the University of Wisconsin and other institutions, agencies, and organizations, had for its theme rural standards of living.

BIBLIOGRAPHY. Books published in 1930 which dealt with problems of current importance in agriculture included; *United States*: W. Gee, *The Place of Agriculture in American Life* (New York, 1930); L. O. Lantis, *Rural Community Life* (New York, 1930); V. P. Lee, *Principles of Agricultural Credit* (New York, 1930); P. A. Strakosch, *Das Agrarproblem im Neuen Europa* (Berlin, 1930); M. Sering, *Die Agrarischen Umwälzungen im Ausserrussischen Osteuropa* (Berlin and Leipzig, 1930).

AGRICULTURE, UNITED STATES DEPARTMENT OF. The report of the Secretary of Agriculture for 1930 in reviewing the agricultural situation of the United States and the activities of the Department of Agriculture during the year dealt among a number of topics mainly with the effects of the severe drought prevailing during the summer, the measures taken to give relief to the drought-stricken areas, crop and livestock production and its relation to agricultural conditions, factors in the current agricultural depression, the national forests, farm taxation, land values, and credit conditions, the tariff act of 1930 as it applied to the farmer, expansion of the foreign agricultural service and cooperation with the Federal Farm Board. A review of the Department's achievements in the various lines of research, the service to the agricultural industry as well as to the public in general and the control and regulatory activities during the year was also included.

DROUGHT RELIEF. In the organization effected to give assistance to the drought-stricken areas, the Secretary of Agriculture served as chairman of the Federal Drought Relief Committee and much of the work of this committee was done in the Department of Agriculture under his direction. The Department assumed the responsibility for determining the counties entitled to the freight rate reductions in effect from the later part of August until November 30 and granted farmer-consumers by the railroads on shipments of feed and water into counties suffering severely from the drought and of livestock into sections with available feed supplies. On the basis of the information gathered, the Department issued cer-

tificates recommending the rate reductions on specific shipments to farmer-consumers or dealers. Further assistance was given to alleviate the situation by means for providing employment, facilitating the sale of certain farm products and distributing and conserving supplies of food, feed, and seed. The Federal-aid road authorizations for the fiscal year 1932 were made available under certain limitations in the States suffering from the drought, supplies of hay and feed were located, the planting of emergency crops wherever possible was advised and the preservation of food supplies were suggested and the methods demonstrated.

FACTORS IN THE AGRICULTURAL DEPRESSION. The current depression in the farming industry was ascribed to the continued overproduction of certain important farm products and the worldwide reduction in business and the consequent price decline. Exports of agricultural commodities from the United States for the fiscal year ended June 30, 1930, were the lowest for 15 years. It was pointed out that the slowing down of business and the increased unemployment in the country reduced the purchasing power of consumers so clearly reflected in the lower prices of cotton, butter, and meat animals due to no great changes in supply but to a decline in demand. It was estimated that for the year the lower prices represented a loss of more than \$400,000,000 to the cotton growers and of over \$500,000,000 to the livestock producers.

ROADS. As summarized in the report, the Federal-aid highway system included 193,049 miles of the most important interstate and inter-county roads. During the fiscal year initial Federal-aid improvements were completed on 7317 miles in this system. The total improved mileage in 1930 included 84,013 miles of which about one-third was Portland-cement and bituminous concrete and one-third gravel construction. The total cost of initial improvements and of 2011 miles of secondary improvements completed during the year was \$193,648,149 of which the Federal Government paid \$82,158,757, but the total actual Federal disbursements for the year were only \$75,880,863, which was over \$6,000,000 less than in the preceding year and more than \$20,000,000 less than in 1926. In April, 1930, Congress made an additional appropriation of \$50,000,000 for 1931 to restore the earlier rate of construction and to provide employment through public work. For road construction in the National Forests \$0,982,296, including \$7,966,000 Federal appropriation and \$1,018,202 contributions from private coöperators, was available. The construction of the Mount Vernon Memorial Highway from Washington to Mount Vernon was begun by the Bureau of Public Roads of the Department in September, 1929.

PERSONNEL. At the close of the fiscal year, the Department of Agriculture employed 25,736 persons, of which 20,558 were men and 5178 women. Of these employees, 5255 were stationed in Washington and 20,481 in the field. In number of employees the Department ranked sixth among the government departments. The more important changes on the Department's staff of workers included the designation of Dr. M. A. McCall as principal agronomist in charge of the Office of Cereal Investigations and successor to Dr. C. R. Ball, the appointment of G. A. Duthie as chief of information of the branch of public relations of the Forest Service, the transfer of Dr. L. A.

Hawkins as chief of the Technological Division of the Plant Quarantine and Control Administration and of Dr. D. F. Fisher to succeed him as leader of the fruit and vegetable handling, transportation and storage work of the Office of Horticultural Crops and Diseases, and the retirement of Dr. Cooper Curtice of the Bureau of Animal Industry who was prominent in the work of cattle tick eradication.

EXPENDITURES. During the fiscal year ended June 30, 1930, the Department of Agriculture expended a total of \$177,961,928 distributed by activities as follows: research \$20,065,363, extension \$10,320,607, eradication or control of crop and animal pests \$17,132,943, service work \$29,070,684, regulatory work \$11,021,607 and road construction \$90,350,724. Over 50 per cent of the expenditures were for road construction.

APPROPRIATIONS. The appropriations for the fiscal year 1930 amounted to \$157,455,030, including \$92,408,727 for payment to the States for the agricultural experiment stations, extension service, forest protection and distribution of forest-planting stock, and road construction. The total income from activities of the Department amounted to \$15,365,029, which was paid into the Treasury.

The new central part of the main administration building was completed and occupied during the year and construction was begun of a portion of the extensible building to the rear of the main building.

AGRONOMY. See BOTANY.

AHMED MIRZA, ah-mēd mēr-zā. Deposed Shah of Persia, died in Paris, Feb. 27, 1930. Born in 1898, the seventh of the Kadjar royal line, he succeeded his father as Shah when the latter was deposed, July 10, 1909. Ruling with the aid of a regency until 1914, he was crowned in that year. Never having exercised much power, he went in 1923 to live in Paris. On his refusal to return to Persia, he was deposed by the Medjliss, the National Assembly, in 1925, and Riza Khan, the Prime Minister, elected hereditary Shah. Ahmed Mirza's efforts to reassert his claims in November, 1925, were unsuccessful.

AIRSHIPS, AIRPLANES. See AERONAUTICS; NAVAL PROGRESS.

AKRON, THE UNIVERSITY OF. A coeducational institution of higher learning in Akron, Ohio; founded in 1870 as Buchtel College and taken over by the city and renamed in 1914. The enrollment for the summer session of 1930 was 586 students and for the autumn day session, 1164 students, distributed as follows: College of liberal arts, 427; home economics school, 19, teachers college, 307; college of engineering and commerce, 411; 1471 students were enrolled in the autumn evening session. There were 92 faculty members. The amount of endowment was \$70,000 and the income for the year, including tax levy from the city, \$450,388. There were approximately 32,000 volumes in the library. President, George Frederick Zook, Ph.D.

ALABAMA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,646,248. The population on Jan. 1, 1920, was 2,348,174, according to the census of that year. The capital is Montgomery.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|-----------|---------------|------------|
| Cotton ... | 1930 | 3,801,000 | 1,495,000 • | \$ |
| | 1929 | 3,589,000 | 1,342,000 • | |
| Corn | 1930 | 2,810,000 | 29,505,000 | 28,325,000 |
| | 1929 | 2,676,000 | 37,464,000 | 36,715,000 |
| Hay | 1930 | 607,000 | 452,000 • | 6,797,000 |
| | 1929 | 608,000 | 467,000 • | 7,531,000 |
| Sweet potatoes | 1930 | 74,000 | 6,290,000 | 5,346,000 |
| | 1929 | 74,000 | 7,622,000 | 6,860,000 |
| Peanuts . | 1930 | 387,000 | 232,200,000 • | 6,502,000 |
| | 1929 | 408,000 | 224,400,000 • | 6,732,000 |
| Potatoes . | 1930 | 36,000 | 2,875,000 | 4,169,000 |
| | 1929 | 28,000 | 2,409,000 | 3,493,000 |
| Oats | 1930 | 109,000 | 1,908,000 | 1,221,000 |
| | 1929 | 119,000 | 2,320,000 | 1,763,000 |

• Bales. • Tons. • Pounds.

Farms in the State numbered 257,328 in 1930, as against 237,631 in 1925 and 256,099 in 1920.

MINERAL PRODUCTION. The coal mines of the State, normally producing the greater part, by value, of its mineral total, were more active in 1929 than in 1928, but the value of their total production fell. There were mined, in 1929, 17,943,923 short tons of coal, as against 17,021,362 in 1928; but the value of coal mined diminished, for 1929, to \$37,309,000, from \$39,601,000 for 1928. Coke was produced to the quantity of 4,753,967 short tons in 1929 and of 4,327,324 short tons in 1928; and to the value of \$12,659,148 in 1929 and of \$13,260,178 in 1928. These totals were entirely from by-product ovens. The iron mines of the State shipped 6,637,299 long tons of iron ore in 1929, thus making a gain over the shipments of 6,159,863 tons for 1928; the ore shipped attained a value of \$12,575,113 for 1929; for 1928, of \$11,599,176. Pig iron was more actively produced in 1929 than in 1928, but not in such quantity as to equal the production of 1927. The blast furnaces shipped 2,697,814 long tons in 1929; in 1928, 2,525,812. The value of the years' shipments was, for 1929, \$43,674,910; for 1928, \$42,194,935. The cement mills shipped 5,228,947 barrels of cement in 1929, as against 6,696,684 in 1928. The value of cement shipped was, for 1929, \$5,911,031; for 1928, \$8,233,872. The value of the year's clay products was \$4,072,802 for 1928; for 1927, \$4,823,670. Stone production of 1,261,190 short tons in 1928, in value \$2,197,831, was above the 1,238,750 short tons, in value \$1,797,375, of 1927. Lime was produced to the quantity of 200,000 short tons (estimated) in 1929, as against 192,364 in 1928; in value, \$1,400,000 (estimated) for 1929 and \$1,407,232 for 1928. The total value of the State's mineral products, with allowance for duplication, was \$69,807,334 for 1928; \$78,640,669 for 1927.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 5257.55. No additional construction in 1930 was reported.

EDUCATION. The movement to reduce illiteracy in advance of the taking of the Federal Census of 1930 was actively carried on in the State. During the period 1929-30, according to State Superintendent of Education A. F. Harman, writing in the *Journal* of the National Education Association, more than 52,000 illiterates were taught in what were called opportunity schools. The State completed in 1930 a programme for the construction of buildings to the total cost of over \$5,000,000, expended in the course of 4 years, for its higher educational institutions. The school popu-

lation of the State in 1930 was estimated to number 875,576. There were enrolled 622,988 pupils in the public schools. Of these, 500,653 were in elementary and 122,335 in high schools. Expenditure for the public schools in 1930 totaled \$22,654,507. The yearly salaries of all teachers averaged \$761; those of elementary teachers alone, \$628 for the entire group, \$754 for white teachers and \$340 for colored; those of high-school teachers, \$1101 for the entire group, \$1165 for the whites, and \$586 for the colored.

POLITICAL AND OTHER EVENTS. The Federal Court of Claims dismissed on March 12 the petition of the State of Alabama to recover taxes assessed by the State on the hydro-electric power produced in the Federal Government's power plant at Muscle Shoals and sold to private purchasers. Thus was checked the State's contention that it was entitled to returns on the exploitation of the Tennessee River, having given up its rights there only on the understanding that the development would be for National purposes. Natural gas was brought into Alabama from the Louisiana fields by a long-distance pipe line and was supplied on contract to a number of the chief cities' gas systems by the Alabama Natural Gas Co. There was an outbreak of inter-racial killings in the summer, chiefly near Emelle, where two whites and four negroes were killed in a disturbance that started on July 4. At Birmingham the city undertook a \$3,000,000 improvement for the drainage of storm water.

The action of the State Democratic organization in excluding Senator J. T. Heflin on account of his opposition to the Smith presidential ticket in 1928 was sustained by the State Supreme Court. The Court on April 17 dismissed a petition on Heflin's behalf to prevent the use of public funds to hold on August 12 the Democratic primary elections, from which Heflin had been shut out as a candidate to succeed himself in the United States Senate. The primary was duly held, and John H. Bankhead of Jasper won the Democratic Senatorial nomination, that for Governor going to Judge B. M. Miller of Camden. The supporters of Heflin, styling themselves Jeffersonian Democrats, held a convention at Montgomery and nominated him for Senator and likewise candidates for the other chief offices, on September 1.

ELECTIONS. J. H. Bankhead, the regular Democratic nominee for Senator, was elected, receiving 150,822 votes (unofficial) as against 97,798 votes for Senator J. T. Heflin, who ran as an independent. Judge B. M. Miller, Democrat, was elected Governor by 149,983 votes, over the independent candidate, Locke, who received 91,502. A Democratic Legislature and delegation of 10 Congressmen were elected.

OFFICERS. Governor, Bibb Graves; Lieutenant-Governor, W. C. Davis; Secretary of State, John M. Brandon; Treasurer, W. B. Allgood; Auditor, Sidney H. Blan; State Superintendent of Education, A. F. Harman; Attorney-General, Charles C. McCall; Commissioner of Agriculture and Industries, Seth P. Storrs.

JUDICIARY. Supreme Court: Chief Justice, John C. Anderson; Associate Justices, William H. Thomas, A. D. Sayre, A. B. Foster, Lucien D. Gardner, Virgil Bouldin, and Joel B. Brown.

ALABAMA, UNIVERSITY OF. A coeducational State institution for higher learning at University, Ala.; founded in 1831. For the autumn term of 1930 the enrollment was 3603, distributed as follows: Arts and science, 1728; engineering,

480; law, 52; medicine, 103; graduate, 95; education, 412; and commerce, 706. The summer school registration was 1993. The faculty for 1930-31 numbered 177. The productive funds of the University amounted to \$2,065,227, and the income for the year was \$1,332,131. The library contained about 75,000 volumes, of which 20,000 were government documents. A new woman's gymnasium was completed during the year at a cost of \$125,000, as was also a student union building costing \$250,000. President, George H. Denny, Ph.D., LL.D.

ALASKA. A Territory of the United States, the most extensive of the noncontiguous territories and possessions under the American flag. It forms a peninsula at the northwestern extremity of the North American Continent. Its total area is 586,400 square miles. The capital is Juneau. The population, according to the Federal Census of 1930, was 59,278; in 1920 the population was 55,036.

REINDEER HUSBANDRY. While agriculture in the usual sense had developed only in a local and largely experimental way the raising of reindeer was reported in 1930 as on a profitable and growing basis. From a stock of 1280 Asiatic reindeer that had been imported into the territory by 1901 the number of these animals in the Alaskan herds had risen above 600,000 as estimated in 1930. The herds were scattered along the western coastal area in locations as far north as Point Barrow. They were largely the possession of natives, chiefly Eskimo, who derived from them both food and furs for clothing. Many of the more desirable ranges had become stocked to their capacity. Secretary of the Interior Wilbur appointed on November 20, to render advice with regard to range boundaries, capacity and rules, a committee consisting of Senator Kendrick of Wyoming, Representative Scott Leavitt of Montana and United States Assistant Attorney-General Charles P. Sisson. Preliminary to this action, a round of the reindeer herding region was made in the summer by an agent of the Department of the Interior, E. W. Sawyer, who reported on his return that grass and moss proper for the subsistence of the reindeer abounded in considerable inland areas, and that some of the Eskimo were already abandoning their ancient homes along the coast to transfer their herds to such inland feeding grounds. It was anticipated that by the furthering of this movement the reindeer industry could be considerably augmented. The existing herds, it was further estimated, could yield for slaughter without diminution of their total number about 300,000 beasts a year; some tens of thousands of carcasses were being shipped yearly to the States, chiefly from the Seward Peninsula, and it was proposed to encourage the building of packing houses in Alaska for the more advantageous handling of the flesh.

FISHERIES. Owing chiefly to a decrease from the exceptional salmon catch of 1928, the fisheries of the territory yielded somewhat less in value of total product for 1929. This total product was \$50,795,819, as against \$54,545,588 for 1928. This total represented the manufactured output; e.g. canned fish, as distinguished from fresh-caught fish. The value of the catch to the fishermen was estimated, for 1929, at \$16,582,000. The salmon catch led in bulk, totaling 442,601,784 pounds, the herring catch totaled 153,105,752 pounds; 37,456,998 pounds of halibut were caught, as against 31,667,000 caught in 1928.

The halibut fishery occupied in 1929, 1253 persons, and its production was valued at \$4,422,605 for that year. An increase of the annual catch of codfish was reported for 1929. The whale fisheries of that year gave employment to 233 persons, and its product totaled \$502,081. The pack of Alaska salmon for 1930 was reckoned from early reports from the divers stations to approximate 5,000,000 cases.

The fishing industry was reported as giving employment in 1929 to 29,283 persons, as against 31,086 employed in 1928. It was conducted in 262 establishments, of which 158 canned fish, 103 cured fish, 23 manufactured by-products and 42 handled fresh or frozen products; some establishments were apparently listed in more than one of the foregoing groups. Products of the salmon industry attained for 1929 the value of \$42,524,845, and formed much the chief part of the aggregate for all fisheries. The herring industry yielded 66,577,749 pounds of products, in value \$2,794,084; whale, clam, and shrimp products followed in order of value.

Sealskins. The totals above given for fisheries did not include the yield of marine furs. Chief among these were the skins of fur seals of the Pribilof Islands. The take from these islands was 40,068 skins. Their fur-seal herds (all ages and classes) were estimated at 971,527 individuals, as of August 10, 1929; the year's natural increase was reckoned at 100,014. There had been deposited in the United States Treasury, since 1918, \$4,477,910 of net revenue from sales of skins of fur seals.

MINERAL PRODUCTION. Considerable increases in the yield both of gold and of copper, the two chief components of the yearly mineral product as reckoned by value, occasioned a rise of \$2,005,000 in its yearly total, to \$16,066,000 for 1929, from \$14,061,000 for 1928. By value the production of gold was \$7,761,000 for 1929 and \$6,845,000 for 1928; of copper, \$7,130,000 for 1929 as against \$5,965,000 for 1928; of silver, \$252,000 for 1929 and \$266,000 for 1928; of lead, \$166,000 for 1929 and \$118,000 for 1928; of coal, \$528,000 for 1929 and \$602,000 for 1928. A remainder of somewhat over \$200,000 for either year was made up of the production of tin, petroleum, platinum, marble, gypsum, and lesser items.

The increase of over \$1,100,000 in the value of the yearly yield of copper was effected entirely by better prices obtained in 1929. As to quantity the output of that year was reported as nearly 911,000 pounds below that of 1928. Almost all the copper produced in either year came from two mines in the Copper River region and a third on Latouche Island in Prince William Sound, all properties of the Kennecott Copper Corporation.

The higher value of the gold production of 1929, on the contrary, reflected an actual increase in activity. This was aided by an abundant rainfall, providing plenty of water for sluicing in the placer workings. Of the year's gold product, 47 per cent, or \$3,644,000 came from lode mines and 53 per cent, or \$4,177,000, from placers. Of the lode output, 95 per cent came from southeastern Alaska, the site of enterprises working immense tonnages of low-grade ores with the advantage of access to deep-water routes. The placer output exceeded that of 1928 by almost \$750,000. Camps of the Yukon basin were the foremost contributors to its total, those of the Seward Peninsula coming second. Dredges furnished 70 per cent of the year's placer production. Those active in 1929

numbered 30, of which 17 operated in the Yukon Valley and 12 in the Seward Peninsula. The dredges handled 8,706,000 cubic yards of gravel from which the gold recovery averaged 33.67 cents a cubic yard. They thus mined \$2,932,000 of gold, or, on the average, nearly \$100,000 apiece for the year. The lead production was incidental to the mining of gold ores in southeastern Alaska, in which lead occurred.

Coal Mining. A diminished production of coal in the territory followed, in 1929, upon the exceptional total of 1928. There were mined in 1929 some 100,566 tons, in value \$528,000, as against 125,289 tons, in value \$662,000, for 1928. There recurred a large annual importation of coal, to the extent of 32,762 tons from the United States and 24,172 from British Columbia and other foreign sources.

The Alaskan branch of the U. S. Geological Survey estimated the production of minerals from mines in Alaska to have a value of \$13,602,000 in 1930 as against \$16,066,000 in 1929, bringing the total value of the mineral output of Alaska since 1880 to approximately \$629,000,000.

The figures for 1930, which are preliminary estimates and subject to a revision, are given in the accompanying tabulation, together with the revised figures for 1929.

VALUE OF MINERAL OUTPUT OF ALASKA IN
1930 AND 1929

| | 1930 | 1929 |
|--|--------------|--------------|
| Gold | \$ 8,394,000 | \$ 7,761,000 |
| Copper | 4,100,000 | 7,130,000 |
| Silver | 158,000 | 252,000 |
| Coal | 609,000 | 528,000 |
| Other minerals* (lead, petroleum, marble, tin, platinum, etc.) | 341,000 | 395,000 |
| Total | \$13,602,000 | \$16,066,000 |

Alaska suffered in 1930 from the industrial conditions prevalent in the United States and elsewhere, and this was reflected in the decreased value of the mineral output. Prices were abnormally low for mineral commodities other than gold, as compared with 1929, so that there was more than \$2,000,000 of decrease due to this single cause. Low prices also had an even greater effect in deterring development of mines where the ores carried principally the base metals, but this was considered a temporary condition and did not indicate a permanent decline for the mining industry of Alaska. In fact, the increased production of gold in 1930, in the face of the serious depression, was considered an encouraging feature, as it afforded assurance of still further growth with an improvement of conditions, and with capital and effort available for productive employment. Not only were the people of Alaska developing in education, but transportation facilities were improving, and mining enterprises were being conducted on a much more efficient and rational basis.

During the year the United States Geological Survey published Bulletin 815-B on the geological and mineral resources of northwestern Alaska, by P. S. Smith and J. B. Mertie, Jr. It is an illustrated detail report of a series of investigations made in northwestern Alaska, including an area of about 35,000 square miles set apart by the President in 1923 as Naval Petroleum Reserve.

COMMUNICATIONS. The Alaska Road Commission, cooperating with the National Park Service

to render park areas in the Territory accessible by automobile, reported in 1930 that 43 miles of the highway, eventually to extend for 70 miles, in the Mount McKinley area, from the park entrance to Mount Eielson, was completed. The intention was to render the extensive and picturesque parks of Alaska accessible to tourists as soon as might be practicable.

There were in 1930 about 70 prepared aviation fields in actual service and about 30 regular commercial planes were using points on the Alaska Railroad as supply bases from which they handled commerce with regions hundreds of miles in every direction. Aviation was encouraged by the government.

EDUCATION. From the Office of Education in the Federal Department of the Interior was transferred in 1930 to the Governor of Alaska the function of training natives with regard to the reindeer industry. The office at the same time retained its authority for the education, support, and medical relief of natives of the aboriginal races. For this work it had a grant of \$580,400 for native education and support in the fiscal year 1930 and of \$171,800 for medical relief. The office of its chief of the Alaska Division was moved to Juneau, from Seattle. Under this agency were maintained in the fiscal year 93 schools with 195 teachers and 3899 enrolled pupils. At Eklutna, Kakanak, and White Mountain were maintained three native industrial schools. Preparations for establishing a fourth, on Shoemaker Bay, near Wrangell, were started. A home for orphans and other needy children of pre-school age was set up in one of the old buildings of Fort Gibbon at Tanana.

The Territory's own contribution to education went to the support of the Territorial schools and to maintaining the Alaska Agricultural College and School of Mines. The funds came out of the biennial appropriation of \$1,074,300 made for educational purposes by the Territorial Legislature in 1929. The schools maintained by the Territory numbered 15 high and 89 elementary schools. They employed 253 teachers and had 5066 enrolled pupils in 1930. Their cost to the Territory for that year was \$594,062, according to the official report.

POLITICAL AND OTHER EVENTS. The Federal policy of gradually transferring to the Territory much of the administrative responsibility for its affairs made some progress. The inter-departmental commission composed of resident representatives of the departments of the Interior, Commerce, and Agriculture, appointed by the President, undertook a study of the transfer of departmental activities to Alaska, with a view to reporting thereon. One of the subjects of Federal administrative planning was the development of lumbering for pulpwood in the National forests of Alaska. It was estimated that these could yield, without depletion, 1,000,000,000 board feet of pulpwood a year. For lack of a definite arrangement for their exploitation they continued to lie idle in 1930. An international highway from Seattle to Fairbanks was urged as needful to the development of the Territory.

ALBANI, ol'ba-ni, EMMA (MARIE LOUISE EMMA CECILE LAJEUNESE). A Canadian dramatic soprano, died in London Apr. 3, 1930. She was born in Chambly, near Montreal, Canada, Nov. 1, 1852, and made her first public appearance in Albany, N. Y., at the age of 12. After studying in Paris under Duprez and Benoist, and in

Milan under Lamperti, she made her debut in Messina in 1870 in *La Sonnambula*. Her immediate success led to engagements at the Pagola in Florence, at Covent Garden in London, and at the Italian Opera in Paris. She also appeared in Berlin, St. Petersburg (now Leningrad), and cities of the United States, Canada, Australia, and South Africa, gaining renown as "The Canadian Nightingale" in such operas as the *Flying Dutchman*, *Faust*, *Lucia di Lammermoor*, *Hamlet*, *Mignon*, *Rigoletto*, *La Traviata*, *Tannhäuser*, *Lohengrin*, *Die Meistersinger*, and *Tristan and Isolde*. In 1878 she was married to Ernest Gye, impresario of the Royal Italian Opera at Covent Garden. During her later career she became equally famous as an oratorio singer, retiring from the concert stage in 1912. In 1925 she was created a Dame of the British Empire. She also was awarded the Orders of Merit of Denmark and Germany, two Jubilee medals, and the Victoria badge, and was appointed court singer to the Emperor of Germany. She published her memoirs in 1911 under the title, *Forty Years of Song*. Her stage name, Albani, was derived from that of an old Italian family.

ALBANIA, al-bā'nīā. A Balkan kingdom on the east coast of the Adriatic, situated between Yugoslavia on the north and Greece on the south. Capital, Tirana, with 30,800 inhabitants in 1930; reigning King in 1930, Zog I, proclaimed by the National Assembly Sept. 1, 1928.

The area is approximately 11,632 square miles and the population (census of 1927), 833,018, of whom 563,729 were Mohammedan, 181,051 Greek Catholic, and 88,739 Roman Catholic. A 1930 census showed 1,003,000 inhabitants. The Ghegs in the North and the Tosks in the South are the principal race groups. The other towns are Coriza (population 22,700 in 1930) and Scutari (29,000). Durazzo (5100) and Valona (6300) are the leading ports. In 1929, there were 33,531 pupils in the schools, besides 900 students studying in foreign countries.

Albania is almost exclusively an agricultural country, the chief products and exports being cheese, fruits, olives, grains, eggs, skins, wool, tobacco, livestock, and timber. Cotton and wool textiles and cigarettes are manufactured for domestic consumption. The forest and mineral resources are considerable, but largely undeveloped due to lack of transportation facilities. Imports in 1929 were estimated at 38,500,000 gold francs (\$7,430,500) and exports at 14,500,000 gold francs (\$2,798,500), representing an increase of 10 per cent in imports and a decrease of 3 per cent in exports, as compared with 1928. The principal imports were cotton and cotton goods, wheat and corn, sugar, benzine and kerosene, and iron manufactures. The bulk of the trade is with Italy.

For the fiscal year ended Mar. 31, 1930, the estimated receipts were 31,678,200 gold francs (\$6,113,890) and expenditures were 31,997,925 gold francs (\$6,175,000). In 1928-29 receipts and expenditures balanced at approximately 28,200,000 gold francs (\$5,461,900). The foreign debt consists mainly of a loan of 50,000,000 gold francs obtained from Italy in 1925 to be used exclusively for public works. The loan is guaranteed by the Albanian Customs and receipts from Government monopolies. The unit of currency is the gold franc, with a par value of \$0.193. There are 1038 miles of motor and cart roads. A railway from Durazzo to Tirana was under construction

in 1930, and the chief towns are linked by four Italian-operated air routes.

Under the Constitution of 1928, the King administers the government, assisted by a council of ministers appointed by him and a parliament of one chamber, the members of which are elected indirectly for four years. Prime Minister and Minister of Interior in 1930, Kosta Kotta. A defensive alliance between Italy and Albania was signed at Tirana Nov. 22, 1927.

HISTORY. The coalition Cabinet headed by Premier Kosta Kotta, appointed by King Zog Jan. 18, 1929, resigned on Mar. 5, 1930, due to dissatisfaction with the agreement concluded with Italy whereby the National Bank of Italy was to assume supervision of Albania's coinage system. A new Cabinet, formed the following day, was headed by Pandeli J. Evangheli, president of the Chamber, with Djfer Vila, the **Albanian Minister** to Yugoslavia, as Foreign Minister. The arrangement for Italian control of Albania's coinage served to illustrate the manner in which Italy's hegemony in the Balkan kingdom was being consolidated. Plans for the colonization of 40,000 Italians near Coriza (Koritzza) and for the establishment in Albania of the base for Italian Near Eastern air services were reported during the year. Italian influence was further emphasized by the elaborate reception accorded the new Italian Minister to Albania, the Marchesse of Sorania, upon his arrival in Durazzo August 7. There were rumors that King Zog contemplated marriage with an Italian princess.

Pointing out that Albania laws prohibit the importation of foreign labor and the purchase of land by foreigners, a correspondent of the *London Times Weekly* of Sept. 11, 1930, declared that Italian colonization of Albania was a myth. Agrarian laws passed during 1930 reduced the property of each landlord to 40 hectares (about 99 acres); of the remainder, one-third was to be expropriated by the Government at 20 gold francs per hectare for redistribution to peasants and two-thirds were to remain in possession of the landlord, provided he shared the expenses of development, cultivation, and irrigation with the tenant. Provision was also made for the formation of an Agricultural Bank, with a capital of 5,000,000 gold francs, guaranteed by additional taxes on alcohol, patents, rents, and other sources. Another law provided for the establishment of an Albanian militia of 10 battalions, which all males must join on reaching the age of 17. A violent earthquake in the Valona region on Nov. 21, 1930, killed 30 persons and destroyed numerous houses. A new American legation building at Tirana was formally opened on Nov. 27, 1930.

For a recent authoritative history, consult J. Swire, *Albania, the Rise of a Kingdom* (London, 1929). See **ITALY**, **FRANCE**, **JUGOSLAVIA**, and the other Balkan states under *History*.

ALBERTA, al-bŭr-tă. The westernmost of Canada's Prairie Provinces, bounded by Saskatchewan on the east, British Columbia on the west, and the United States on the south. Area, 255,285 square miles; population at the census of 1926, 607,584; estimated June 1, 1930, at 660,000. Chief towns, with their populations in 1926, are Calgary, 65,513; Edmonton (the capital), 65,163; Lethbridge, 10,893; and Medicine Hat, 9536. In 1928, births numbered 15,508; deaths, 5655; marriages, 5776. Enrollment in provincial and private schools in 1928 was 159,086.

Agriculture is the chief occupation of the

Province, although valuable deposits of coal, natural gas, and petroleum are being exploited. The estimated gross agricultural revenue in 1928 was \$264,028,000. In 1929 the return from 12,432,595 acres under field crops was \$166,481,000 (\$220,786,000 from 11,727,830 acres in 1928). The total area cultivated in 1929 was 16,334,422 acres. Production of the chief crops (1929) was: Wheat, 90,534,000 bushels; oats, 41,963,000 bushels; barley, 12,514,000 bushels; rye, 2,372,000 bushels; mixed grains, 358,000 bushels; flaxseed, 63,000 bushels; potatoes, 1,022,000 cwt.; hay and clover, 384,000 tons. Dairy production in 1929 reached \$20,750,000. Fur production in 1928-29 was valued at \$2,473,191. In mineral production, Alberta in 1929 ranked fourth among the Canadian Provinces, with a total value of \$34,652,128. Coal production (1928) was 7,336,330 tons, valued at \$23,532,414; natural gas, \$3,754,466; petroleum, \$1,764,172.

Executive power rests nominally with a lieutenant-governor appointed by the Dominion government, but actually the Executive Council or Cabinet of the Legislature is in control. Of the 60 members of the Legislature in 1929, 43 were United Farmers, 7 Liberals, 6 Laborites, and 4 Conservatives. Alberta is represented in the Dominion Parliament at Ottawa by 6 members in the Senate and 16 in the House of Commons. For the fiscal year 1929-30, ordinary provincial revenues totaled \$15,111,083 and ordinary expenditures \$14,528,913, according to preliminary figures. The gross bonded indebtedness Mar. 31, 1929, was \$90,532,443, of which \$33,315,531 represented self-sustaining assets. Highway and bridge construction and maintenance appropriations for the year 1930-31 totaled \$5,250,000. Lieutenant-Governor in 1930, Dr. W. Egbert; Prime Minister, John E. Brownlee. In the Dominion general election of July 28, 1930, the Province returned 9 United Farmers, 4 Conservatives, and 3 Liberals to the House of Commons at Ottawa. See **CANADA**.

ALCOHOL, **INDUSTRIAL**. See **CHEMISTRY**, **INDUSTRIAL**.

ALCOHOLISM. See **PROHIBITION**.

ALDEN, ISABELLA MACDONALD. An American author (who wrote under the pseudonym of "Pansy"), died in Palo Alto, Calif., Aug. 5, 1930. She was born in Rochester, N. Y., Nov. 3, 1841, and in 1866 was married to the Rev. Gustavus R. Alden. In addition to much fiction for older readers, she was the author of about 75 juvenile books, including the *Chautauqua*, *Ester Reid*, and *Life of Christ* series. She edited the juvenile periodical *Pansy* from 1873 to 1896, and for many years was a contributor to the *Herald* and *Presbyter* and the *Christian Endeavor World*. Her works were translated into many foreign languages.

ALEXANDER, GEORGE. An American clergyman, died in New York City, Dec. 12, 1930. He was born in West Chariton, N. Y., Oct. 12, 1843, and was graduated from Union College in 1866 and from the Princeton Theological Seminary in 1870. On ordination to the Presbyterian ministry, he served successively as pastor of the East Avenue Church, Schenectady, N. Y. (1870-83), University Place Church, New York City (1884-1918), and at the First Presbyterian Church, New York City (1919-30), when the University Place Church and the Madison Square Church were joined to it. While in Schenectady he also acted as professor of rhetoric and logic at Union College from 1877 to 1883, and later served as

president of that institution from 1907 to 1909. He was president of the New York College of Dentistry (1897-1925), of the Presbyterian Board of Foreign Missions (1903-24), and of the Council of Reformed Churches in America Holding the Presbyterian System (1915-16). At the time of his death he was president of the council of New York University, which office he had held since 1909. Union College honored him with the D.D. degree in 1884 and the LL.D. degree in 1916, and made him honorary chancellor in 1923.

ALFALFA. The 1930 crop of alfalfa hay in the United States was estimated by the U. S. Department of Agriculture at 28,587,000 tons as compared with the 1929 production of 29,745,000 tons. The crop of alfalfa seed was estimated at 920,200 bushels, or 127,500 bushels more than was secured in 1929 and the area harvested at 316,200 acres, an increase of 10,800 acres above the acreage of the preceding year. Increased production of seed was reported from Kansas, Montana, Idaho, Wyoming, Arizona, and California due to favorable dry weather when the crop was maturing. All other important States produced less than in 1929. In quality the crop was better than the preceding one and stood 1.4 per cent above the 5-year average of 89 per cent. The average yield per acre in 1930 was 3.10 bushels and in 1929, 2.64 bushels. The highest average yield, 5.4 bushels per acre, was recorded for Idaho followed by Arizona with 4.8 bushels and California and Oklahoma each with 4 bushels.

The imports of alfalfa seed for the fiscal year ended June 30, 1930, amounted to only 337,000 pounds as compared with 1,146,400 pounds for the preceding fiscal year. The 1930 imports consisted of 302,100 pounds from Argentina, 32,600 pounds from France and 2300 pounds from Canada. Sixty seedsmen handling 85 per cent of the alfalfa seed in the west central and northern producing district enrolled voluntarily in the alfalfa seed-verification service of the U. S. Department of Agriculture and were known as verified-origin seed dealers. Each dealer selling such seed attaches to the bag a certificate of verification issued by the Department. Explorers of the Department of Agriculture introduced during the year from Turkestan and other parts of Asia and from the principal alfalfa-growing districts of northern Africa numerous lots of alfalfa seed, including many samples of seed of wild alfalfa growing in the mountains, for the purpose of securing material that might prove immune or sufficiently resistant to bacterial wilt, a disease which during past years has become serious in the Middle Western States, especially in humid climates and on irrigated lands.

Alfalfa, a deep-rooted crop, although suffering less from the drought than many of the shallower-rooted hay crops, did not make a normal growth and in certain sections the yields of hay were reduced materially by the dry season. A survey made by the Department of Agriculture to locate, available hay at advantageous points from which farmers in drought areas might obtain supplies resulted in the location of an alfalfa hay surplus mainly in Kansas, Nebraska, New Mexico, and Arizona, the leading surplus alfalfa States of the Mississippi Valley and the southwest. More than two-thirds of the alfalfa acreage of the United States occurs in the 17 Western States. On the Kansas City hay market during the year ended June 30, 1930, the price range was from \$8 to \$37 per ton. For the month of January

the average price per ton of U. S. No. 1 Extra Leafy was \$30, U. S. No. 1, \$24; U. S. No. 2 Leafy, \$21.50; U. S. No. 2, \$19.50; and U. S. No. 3, \$15.50. During this month the special grades, "Extra Leafy," sold from \$3 to \$7 and "Leafy" from \$2 to \$3 per ton above the straight numerical grades.

ALGERIA. A colony of France in northern Africa, comprising the two great divisions of Northern Algeria and Southern Algeria. Northern Algeria has an area of 80,117 square miles and a population (census of 1926) of 5,521,271; Southern Algeria, an area of 767,435 square miles and a population of 542,225. Of the total area of 847,552 square miles, all but about 222,206 square miles are desert. The European population was 833,359, including 549,146 French, 108,495 naturalized French, 135,032 Spaniards, and 28,594 Italians. The native population is almost entirely Moslem. The chief towns, with their populations in 1926, were Algiers, the capital, 226,218; Oran, 150,301; Constantine, 93,733; and Bona, 51,895. The total estimated population in 1929 was 6,255,000.

In 1928, there were 1234 primary and infant schools, both public and private, with 115,445 pupils, besides 563 elementary Moslem schools, with 48,102 pupils, and 17 secondary schools, with 8745 students. The university at Algiers had 1854 students.

PRODUCTION. Algeria is primarily an agricultural country, although fertile farm land is mainly restricted to the coastal valleys and plains. Much of the area is desert, or grazing and forest land. Wheat, barley, oats, corn, potatoes, grapes, olives, tobacco, cotton, and dates are the chief crops. Others include flax, silk, and various vegetables and fruits. State forests in 1928 covered 5,548,147 acres, much of it brushwood. Fisheries are important, engaging 1066 boats and 4266 persons in 1928, when the production totaled 19,525,733 kilos. Mineral output in metric tons (1929) was: Iron ore, 2,051,000; iron pyrites, 16,866,000; zinc ore, 33,197,000; lead ore, 16,241,000; coal, 15,680,000; phosphates, 748,000. Copper, petroleum, mercury, and antimony are mined also.

COMMERCE. Imports increased 16 per cent in value in 1929, while exports declined by 5 per cent. Imports totaled 5,850,000,000 francs (about \$229,318,000) and exports 4,036,600,000 francs (about \$158,234,000), as compared with imports of 5,049,900,000 francs (about \$197,956,000) and exports of 4,233,800,000 francs (about \$165,964,000) in 1928. Cotton fabrics, machinery, automobiles, petroleum products, sugar, chemicals, and metal manufactures were leading imports, while exports were chiefly wine, wheat, barley, fruits, olive oil, minerals, and animal products. About 77 per cent of the imports in 1929 came from France and 72 per cent of the exports were destined for the mother country.

FINANCE. In the ordinary budget for 1930, revenues were estimated at 988,078,027 francs and expenditures at 987,784,355 francs, as compared with an estimated revenue in 1929 of 831,033,165 francs and an estimated expenditure of 830,559,759 francs. The extraordinary budget for 1930 balanced at 455,171,901 francs and the separate Post Office budget was estimated to balance at 135,981,962 francs. The military and naval expenditures are excluded from the estimates. Including these, total expenditures exceed revenues by about 75,000,000 francs annually. On Jan. 1,

1930, the public debt was 926,000,000 French francs (about \$36,299,000). Expenditures for public works in 1929 totaled \$12,000,000, as against \$6,000,000 in 1928.

COMMUNICATIONS. There were 3074 miles of railway line open for traffic on Jan. 1, 1929. Railway receipts for the previous year totaled 325,508,960 francs. In 1927, there were 21 national highways, totaling 3323 miles, and 9215 miles of departmental roads. An air mail line connects Algiers with Marseilles. Vessels entering the ports in 1928 numbered 4585 of 7,758,459 tons.

GOVERNMENT. The central executive authority of the local government is the Governor-General who directs all the services with the exception of the non-Mussulman departments of public instruction, justice, worship, and the treasury, which are each under a separate ministry. The Governor-General, with the Minister of the Interior, prepares the budget which is voted by the so-called financial delegations and by the Superior Council. The colony sends to the home Parliament one Senator and two Deputies from each of the three departments. The Parliament at Paris has the sole right to legislate for Algeria. Governor-General in 1930, Pierre L. Bordes, appointed in November, 1927.

HISTORY. The centennial of the French conquest and colonization of Algeria was celebrated in May, 1930. President Doumergue of France paid an official visit to Algiers in connection with the celebration. Strong feeling against France's tariff policy was manifested, particularly by Algerian wine growers, during the President's visit. French goods enter Algeria duty free but duties are imposed on wine and other colonial products entering France. See FRANCE under *History*.

ALLEGHENY COLLEGE. A coeducational institution of higher learning in Meadville, Pa., nonsectarian in policy but under the patronage of the Methodist Episcopal Church; founded in 1815. The enrollment for the autumn of 1930 was 603, and for the summer session 1150. The faculty numbered 42 members. The productive funds of the college amounted to \$1,400,000, and the income for the year 1929-30 was \$443,116. The Reis Library contained 78,500 volumes. Acting President, C. F. Ross, Litt.D.

ALLEN, MAJ.-GEN. HENRY TUREMAN, U. S. A., Ret. An American soldier, died in Buena Vista Spring, Pa., Aug. 30, 1930. He was born in Sharpsburg, Ky., Apr. 13, 1859. On graduation from the U. S. Military Academy in 1882, he was commissioned in the Second Cavalry. He was engaged in exploration in Alaska during 1885-86 and was an instructor at the Military Academy during 1888-90. After serving as a military attaché in Russia (1890-95) and Germany (1897-98), he took part in the campaign in Cuba and the Philippines during the Spanish-American War. In 1901 he was Governor of the Island of Leyte. He also organized and was the first chief of the Philippine Constabulary. In 1916 he was with the Mexican expedition, and the following year organized a cavalry brigade at Fort Riley, Kan. When the United States entered the World War he was promoted to major-general in the National army, being assigned to the command of the Ninetieth Division with which he went to France and serving in the Toul section and the St. Mihiel and Meuse-Argonne offensives. In 1919 General Allen was assigned to command of the

American forces of occupation in Germany. Later, he became chairman of the national executive committee to raise funds to feed the undernourished children of Germany. He was appointed major-general of the regular army in 1921 and was retired in 1923. He received the Distinguished Service Medal and decorations from France, Belgium, Montenegro, Panama, and Italy. Lincoln Memorial University (1915) and Georgetown University (1922) bestowed on him the degree of LL.D. He wrote: *Reconnaissance of Copper, Tanana, and Kuyukuk Rivers* (1886); *The Military System of Sweden* (1895); *My Rhineland Journal* (1923); and *The Rhineland Occupation* (1926).

ALLIANCE FRANÇAISE, FÉDÉRATION DE L'. An association of clubs and groups formed for the purpose of encouraging and furthering the study and cultivation of the French language, literature, art, and history in the United States and Canada. It was established in 1902 and in 1930 comprised more than 250 local branches, including French Alliances, affiliated societies, and French clubs in universities, colleges, and schools. Eight new groups were added to the federation during 1930. Each year the Alliance Française brings from France one or more lecturers who are prepared to speak before all the affiliated societies and clubs wishing to hear them. It also organizes lecture tours for distinguished French travelers and for French lecturers who live in America, assists in organizing courses in the French language and literature in coöperation with the leading universities, and encourages its groups to engage in dramatic performances and debates in French.

During the season 1929-30 there were three official lecturers from Europe: Marcel Bouteron; Gaston Rageot; and Henri de Ziegler. M. Bouteron was the librarian of the Institut de France and a well known authority on Balzac; M. Rageot was president of the Société des Gens de Lettres; and M. De Ziegler was professor of literature at the University of Geneva, Switzerland, and a writer of note. The federation's Assemblée Générale, attended by representatives of the various groups, was held at the Hotel Plaza, New York City, Apr. 26, 1930. The official periodicals of the organization are *L'Echo de la Fédération* and *Bulletin Officiel*. The officers in 1930 were: President, Frank D. Pavey; general vice president, William Nelson Cromwell; president of the executive committee, Albert Blum; treasurer, James N. B. Hill; and general secretary, Félix Weil. Headquarters are at 32 Nassau Street, New York City.

ALSACE-LORRAINE, al'zäs'lör'än'. The provinces taken from France by Germany after the Franco-Prussian War of 1870-71 and restored to France after the Armistice of Nov. 11, 1918; constituting at present the three French departments of Bas-Rhin, Haut-Rhin, and Moselle. Total area, 5605 square miles; total population in 1926, 1,795,100. The area and population are distributed among the three departments as follows: Bas-Rhin (formerly Lower Alsace), 1848 square miles and 670,985 inhabitants; Haut-Rhin (formerly Upper Alsace), 1354 square miles and 490,654 inhabitants; Moselle (formerly Lorraine), 2403 square miles and 633,461 inhabitants. Alsace-Lorraine contains the only petroleum fields of commercial importance in France, but supplies only about 10 per cent of the total domestic consumption. Iron ore and potash are mined in comparatively large quantities. See FRANCE.

ALTHING. MILLENNIAL CELEBRATION. See ICELAND under *History* and *CELEBRATIONS*.

ALUMINUM. The aluminum industry during 1930 not only maintained its position satisfactorily, notwithstanding world-wide industrial conditions, but new and important uses for the metal were recorded, as well as expansion of previous applications. The Aluminum Company of America was estimated to have produced somewhat more than half of the total world's production, while the Aluminum Cartel, which included British, French, German, and Swiss interests and controlled plants in other countries, was responsible for somewhat less than half. According to the U. S. Bureau of Mines in 1929, 225,000,000 lbs. of primary aluminum valued at \$51,864,000 were produced in the United States, which was the greatest amount ever recorded. Into this production there entered 365,777 long tons of bauxite valued at \$2,265,038 produced in the United States, and 380,812 long tons valued at \$1,753,840 imported for consumption. In this year there were exported 135,551 long tons of bauxite valued at \$3,926,283, including bauxite concentrates. In 1930 the imports of bauxite totaled 415,058 long tons, valued at \$2,008,372, with exports of 415,038 tons valued at \$2,008,372.

In 1930 a significant development was the reduction in the domestic producers' sale price for 98 to 99 per cent aluminum from 24.3 cents in the first five months of the year to 23.3 cents in June, this figure ruling for the remainder of the year. The Tariff Act of 1930 reduced the rate on crude aluminum from 5 cents to 4 cents a pound. On October 16 the European Cartel reduced its prices correspondingly.

The continued use of aluminum in strong alloys for railway purposes, overhead cranes, connecting rods for locomotives, and tank cars for transportation of chemicals, was a feature of the year, while an interesting development was the use in Portland cement of aluminum powder, to which lime and a small quantity of soda was added to produce a building material for fire-proof construction. The resulting product was a strong and light porous concrete with unusual insulating properties.

In Europe the aluminum industry had benefited for several years through the high prices for copper, and while there was some reaction with the fall in price of that metal, its use, particularly in electrical machinery, continued. During the year 1930 there was imported into the United States aluminum in the form of metal, scrap and alloy—24,498,544 pounds valued at \$4,437,134 as against 48,415,921 pounds valued at \$8,973,233 in 1929. Wares and utensils imported in 1930 were valued at \$54,408 as against \$71,046 in 1929, and other manufactures at \$519,284, as against \$872,908. Total imports were valued in 1930 at \$7,033,904 as against \$11,679,751 in 1929. The exports of aluminum in the form of ingots and scrap for 1930—were 607,608 pounds valued at \$84,278, as against 613,366 pounds valued at \$117,345 in 1929. Plates, sheets, bars, strips, and rods exported in 1930 were 16,721,903 lbs. valued at \$3,831,304; in 1929, 16,418,751 lbs. valued at \$4,032,194. Tables, kitchen, and hospital utensils were exported in 1930 to the value of \$560,389; in 1929, \$708,467. Other manufactures exported, in 1930, \$2,047,056, in 1929, 2,374,703. Total exports, 1930, \$10,898,750; 1929, \$11,897,368.

AMERICA. See *ANTHROPOLOGY*.

AMERICAN ASSOCIATIONS AND SOCIETIES. For various scientific and other organizations whose official titles begin with the word American, see under the important descriptive word of the title.

AMERICAN CHEMICAL SOCIETY. See *CHEMISTRY, INDUSTRIAL*.

AMERICAN FEDERATION OF LABOR. See *LABOR, AMERICAN FEDERATION OF*; *UNEMPLOYMENT*.

AMERICAN LEGION. An organization of World War veterans chartered by Congress in 1919. Its purpose is "to uphold and defend the Constitution of the United States; to maintain law and order; to foster and perpetuate a 100 per cent Americanism; to preserve the memories and incidents of association in the Great War; to inculcate a sense of individual obligation to the community, State, and nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom, and democracy; to consecrate and sanctify the comradeship of the members by devotion to mutual helpfulness."

The Legion's twelfth national convention was held in Boston, Mass., Oct. 6-9, 1930. There was an accredited delegate attendance of 1250, representing every State, the District of Columbia, five territorial and seven foreign Legion departments. In the annual parade, which took eight hours to pass the reviewing stand, more than 70,000 persons marched. The principal address was delivered by President Hoover, in which he called upon the members to fulfill their duties of citizenship with respect for law and order and the preservation of peace and good will toward other nations. The distinguished speakers and guests at the convention included: Ex-President Coolidge; Gen. John J. Pershing; Gen. Frank T. Hines, Administrator of Veterans' Affairs; Rear Admiral William S. Benson, U. S. N., Ret.; Maj.-Gen. Sir William Hickie of Ireland; Gen. Henri Gouraud of France; William Green, president of the American Federation of Labor; Leut.-Col. L. R. LaFleche, president of the Canadian Legion; Fred W. Abbott, retiring president of Fidac, the inter-allied veterans' organization; and Col. John Brown, president of the British Legion.

The principal accomplishments of the Legion during 1930, according to the report submitted to the convention by O. L. Bodenhamer, the retiring national commander, were the obtaining by the national rehabilitation committee of cash recoveries for World War veterans during the fiscal year ending June 30, 1930, amounting to \$5,013,761 in disability compensation, insurance, retirement pay, adjusted compensation, and other types of claims handled before Veterans' Bureau agencies and the successful sponsoring of the enactment of a measure in Congress to provide \$15,950,000 for the building of hospitals. Other activities included a successful American Legion junior baseball programme in which upwards of 400,000 boys throughout the United States participated; enactment of a resolution by Congress providing for the appointment of a commission to study the Legion's universal service proposal; advancement of the Legion's child welfare programme; community service and Americanism projects carried on by thousands of Legion posts, emphasizing particularly Boy Scout work, pro-

motion of education, study of the Constitution of the United States, establishment of playgrounds, and many other activities; and amendments obtained to the World War Veterans' Act, including nearly all the major requests of the eleventh national convention.

The official publication of the national organization is the *American Legion Monthly*. The membership of the Legion in September, 1930, was 878,304, the largest in the history of the organization. The American Legion Auxiliary, composed of mothers, wives, daughters, and sisters of Legion members, had a membership of 368,049. The officers elected for the year 1930-31 were: Ralph T. O'Neil of Topeka, Kans., national commander; Dr. Neal D. Williams, Excelsior Springs, Mo., Dr. James A. Duff, Martinsburg, W. Va., Harry B. Henderson, Jr., Cheyenne, Wyo., Burt S. Hyland, Rutland, Vt., and Roland B. Howell, Thibodaux, La., national vice commanders; and the Rev. Joseph N. Barnett, Oshkosh, Wis., national chaplain. The following national officers were continued in office: James F. Barton, Fort Dodge, Iowa, national adjutant; Bowman Elder, Indianapolis, Ind., national treasurer; Scott W. Lucas, Havana, Ill., national judge advocate; and Eben Putnam, Wellesley Farms, Mass., national historian. National headquarters are in the World War Memorial Building, Indianapolis, Ind.

AMERICAN REVOLUTION, ANNIVERSARY CELEBRATIONS. See CELEBRATIONS.

AMHERST COLLEGE. An institution for the higher education of men in Amherst, Mass.; founded in 1821. For the autumn term of 1930 approximately 694 students were enrolled. The active faculty, exclusive of administrative officers, emeritus professors, and those on leave, numbered 71. The productive assets of the college amounted to \$7,841,266, and the income for the year was \$733,079. The library contained 167,000 volumes. President, Arthur Stanley Pease, Ph.D.

AMIRA, KARL VON. A German law historian and author, died in Munich, June 28, 1930. He was born in Aschaffenburg, Mar. 8, 1848, and studied law at the University of Munich. In 1875 he became professor of Germanic jurisprudence at the University of Freiburg, and in 1893 accepted the same chair at the University of Munich. His outstanding works on ancient and modern German law are: *Das altnorweg Vollstreckungsverfahren* (1874); *Über Zweck und Mittel der german Rechtsgeschichte* (1876); and *Nordgerman Obligationenrecht* (1882-95).

ANDERSON, THE RT. REV. CHARLES PALMERSTON. Presiding Bishop of the Protestant Episcopal Church and Bishop of the Diocese of Chicago, died in Chicago, Ill., Jan. 30, 1930. He was born in Kemptville, Ont., Canada, Sept. 8, 1864, and was educated at Trinity College School in Port Hope, Ont., and at Trinity College in Toronto. After his ordination as deacon in 1887 and as priest in 1888, he was in charge, for three years, of a mission for lumbermen in Beachburg, Ont. In 1891 he was called as rector of Grace Church, Oak Park, Ill., where his ability as an

organizer was demonstrated. He was consecrated Bishop Coadjutor of the Diocese of Chicago in 1900 and succeeded to the bishopric upon the death of the Rt. Rev. William Edward McLaren in 1905. He served as chairman of the Commission on the World Conference on Faith and Order, which culminated in 1927 in the Lausanne Conference. In November, 1929, he was elected Presiding Bishop to fill the unexpired term of the Rt. Rev. John Gardner Murray. He received the D.D. degree from Trinity College, Toronto, in 1900 and the S.T.D. degree from Western Theological Seminary in Chicago in 1905. He was the author of *Letters to Laymen* (1913); *The Religion of Our Lord* (1923); *Religion and Morality* (1924); and *The Kingdom of God* (1926).

ANDORRA, ãn-dõr'rá. A tiny state in the Pyrenees, under the joint suzerainty of the French President and the Spanish Bishop of Urgel. Area, 191 square miles; population, 5231; capital, Andorra-la-Vieja (population, 600). The Andorrans, who speak Catalan, are governed by an elected council of 24 members, acting through a First Syndic. The two civil judges are appointed by France and the Bishop of Urgel, respectively.

ANDRÉE änd'rä, SALOMON AUGUST. A Swedish scientist and explorer whose remains, together with those of his companions, Nils Strindberg and Knut Fränkel, were found on White Island near Fridtjof Nansen (formerly Franz Josef) Land Aug. 6, 1930, by a party of Norwegian explorers, headed by Dr. Gunnar Horn, 33 years after their attempt to reach the North Pole by balloon. Andrée was born in Grenna, Sweden, Oct. 18, 1854, and studied at the technical college in Stockholm. He was a member of the Swedish meteorological expedition in 1882-83, and between 1892 and 1895 made several balloon journeys. He finally decided to reach the North Pole in the balloon *Ornen*, partly directed by sails and guide-ropes. The party started from Dane's Island, northwestern Spitzbergen, on July 11, 1897. According to the diary which was discovered in their last camp, they were forced down on July 14 at 83° N. and 30° E., after the gondola of the balloon had been partly destroyed by fire. On July 22 they commenced a sledge journey across the ice in a north-eastward direction, but were obliged to abandon that plan on August 4 somewhere about 82° 17' N. and 29° 43' E. on account of westward drifting ice floes. They then turned south so as to make their way back to Spitzbergen, but when they reached shallower sea off North East Land on September 12 the ice drift unfortunately altered its course. After deciding to spend the winter on an ice floe, they erected a shelter, but on October 2 the ice floe split and most of their equipment and supplies were lost. They finally succeeded in reaching White Island where, after a valiant struggle, they evidently died from exhaustion and cold.

ANDRÉE EXPEDITION. See POLAR RESEARCH.

ANGINA. See MEDICINE, PROGRESS OF.

ANGOLA, an-go'la, or PORTUGUESE WEST AFRICA. A Portuguese colony on the west coast of Africa, situated between the Belgian Congo and Southwest Africa. Area, 486,071 square miles; population (1926), 2,481,956 natives and about 40,000 Europeans. Capital, New Lisbon (Nova Lisboa); formerly known as Huambo; other important towns, São Paulo de Loanda, Kabinda, Ambriz, Novo Redondo, Benguella, Lobita, Mossamedes, and Port Alexander.

The interior plateau lands are fertile and well watered. Lobito, considered the best natural port on the west coast of Africa, has replaced Benguela as the shipping point for southern Angola. Harbor improvements were under way in 1930.

In the same year there were 68 elementary schools for Europeans and 28 industrial and 20 agricultural schools for natives, with a total enrollment of about 5000. The principal products are coffee, rubber, wax, sugar, vegetable oils, coconuts, ivory, oxen, and fish. Mineral products include malachite, copper, iron, petroleum, and salt, and gold also has been found. In 1928 the imports were valued at 269,822,799 escudos and the exports at 272,372,699 escudos (average exchange rate of escudo in 1928, \$0.0446). The chief imports of the province are textiles and the chief exports are coffee, maize, diamonds, sugar, wax, and dried fish. The bulk of both the export and import trades is with the mother country. Budget receipts in 1928-29 were 163,612,680 angolares; expenditures, 181,457,931 angolares (1 angolar equaled about \$0.0625). In 1930, 1436 miles of railway were open to traffic. The Benguela Railway from Lobito Bay reached the Kantanga mining district in the Belgian Congo in August, 1930, opening up a rich mining and agricultural area. There were also 18,000 miles of roads and 5790 miles of telegraph lines. The government is in the hands of a high commissioner vested with large powers, and with headquarters at Loanda. High Commissioner in 1930, Filomeno Camara.

A statement charging that there existed in Angola "a visible development by the Portuguese government of a system of forced labor for private profit," was issued in London Sept. 4, 1930, by two Englishmen, Henry W. Nevinnson and W. A. Cadbury, both of whom exposed inhuman conditions of labor in Angola 20 years earlier. See PORTUGAL under *History*.

ANIMAL DISEASES. See VETERINARY MEDICINE.

ANIMAL PSYCHOLOGY. See PSYCHOLOGY.

ANNAM, ăn-năm'. An Asiatic protectorate of France, forming a part of French Indo-China (see FRENCH INDO-CHINA). Annam's present status was established by the treaty of Feb. 23, 1886. Area, about 39,758 square miles; population in 1929, 5,399,674, including 3220 Europeans (exclusive of military forces). Capital, Hué, with a population of 41,275 in 1927; largest town, Binh-Dinh, with a population of 528,137. The principal port is Tourane. The products include rice, cotton, corn, and other cereals, the mulberry, the areca nut, cinnamon, tobacco, sugar, betel, manioc, and bamboo. The forest products include coffee, dye, medicinal plants, caoutchouc, and cardamoms. Raw silk also is produced. Of the minerals, copper, zinc, coal, hematite, iron, gold, and salt are worked to some extent. In 1927 exports were valued at 88,325,930 francs and imports at 84,049,402 francs. In 1929 there were 905 preparatory, elementary, and secondary schools with a total of 54,483 pupils. The nominal head of the government is the King, but actual power is vested in the French Resident Superior. King in 1930, Bao-Dai, who succeeded to the throne Nov. 6, 1925. During his minority, the government is in the hands of the Regency Council. A Chamber of representatives of the people was established in 1926.

ANNIVERSARIES. See CELEBRATIONS.

ANTARCTIC EXPLORATIONS. See POLAR RESEARCH.

ANTHROPOLOGY. The year 1930 was relatively infertile in developments. Publication of results was brisk, especially in the United States, but the material was disappointingly insignificant. Chaotic political conditions in South America precluded investigations in that field, and continued economic depression curtailed activities of European anthropologists. It is also noteworthy that relatively little has come out of the African and Oceanic fields.

The most important single contribution was the discovery of new remains of Peking man (*Sinanthropus*) together with the publication of an adequate preliminary account of this fossil human type. Approximately as ancient as the Ape-man of Java (*Pithecanthropus*), it affords better insight into the earlier stages of man's evolution, because of its far greater completeness.

The appearance of the *Encyclopædia of the Social Sciences* (New York) may be taken as a formal expression of the attempt at reintegration of the social sciences which had grown since the World War. The only appreciable effects of this have been the influence of sociology and psychiatry on law, of psychology on sociological theory, and of anthropology on sociology. On the whole, sociology, having more ramifying contacts, has consciously absorbed most. Anthropology seems to have been little affected by the other disciplines and it is doubtful that this encyclopædia will result in any change. The anthropological articles contain little novelty. A long article on anthropology (v. 2, 73) by its foremost living exponent, F. Boas, provides a wholly adequate survey of the field for the non-anthropologist. While, on the whole presenting the current views of the American school, which derives from Boas, it contains a new formulation on religion. A distinction is made between "two widely distributed concepts of power, the one anthropomorphic and clearly conceptualized, the other vague and defined with difficulty. . . . Anthropomorphism is the expression of a lack of differentiation between the self and its sense experience. Fundamentally distinct from anthropomorphism is the conceptualization of power as an attribute of objects. . . . Both types of reaction to the outer world occur continually side by side and independently. They flow together in so far as the quality of power is ascribed to the anthropomorphized concepts."

It is of fundamental importance to anthropology to know whether similar elements of culture found among peoples in different regions were independently developed or derived from a common source. In the one case there is a type of psychic uniformity implied quite different from the other. The problem has given rise to a mass of dialectic based largely on a prejudicial favoring of one explanation. The sober discussion of *Modifications in Indian Culture through Inventions and Loans* (Göteborg) by E. Nordenskiöld traverses first known cases of introduced elements before proceeding to the more inferential. It may be noted that Nordenskiöld gives little credence to the view that elements of South Sea cultures are to be found in South America.

Social Anthropology (New York) by C. Wissler and *Culture and Progress* (New York) by W. D. Wallis include the whole range of anthropological topics, but offer nothing fundamentally new. A work published in Calcutta, *Cultural Anthropol-*

ogy, by N. K. Bose is of peculiar interest as showing the influence of modern American anthropologists rather than British.

A new journal *Oceania* (Sydney) made its appearance. Under the editorship of A. R. Radcliffe-Brown it will serve not only for the presentation of data from Australia and adjacent Oceania, but is avowedly an organ of the school of functionalism which he sponsors. Another new journal, *Wiener Beiträge zur Kulturgeschichte und Linguistik*, also appeared under the editorship of W. Koppers.

The first meeting of the American Association of Physical Anthropologists was held during the year (April) at the University of Virginia.

PHYSICAL ANTHROPOLOGY. The placing of man's evolution among the primates was still the subject of controversy between H. F. Osborn and W. K. Gregory. Despite clamorous newspaper accounts that Osborn had "repudiated Darwinism," the facts are otherwise. He maintained, in disagreement with Gregory and the majority of investigators, that man had never "passed into the highly specialized aoreal adaptations attained by the Miocene apes" and was further inclined to see the separation of man and the anthropoid apes in the Eocene period, rather than the Miocene. Against his contention that man had never passed through a brachiating stage (in which movement was through the trees by suspension by the arms), Gregory showed that man is demonstrably nearer to the brachiating gorilla and chimpanzee than to the primitive Eocene quadrupeds (*Science*, June 27, 645).

Recent finds were therefore highly significant for decision between the rival theories, although until their position is adjudged by competent authorities we cannot say what the decision will be. Of these, Peking man (*Sinanthropus*) is by far the most significant, both by reason of the quantity of his remains and their clear dating to the Lower Pleistocene. The first discovery of homoid remains at Chou Kou Tien (near Peking) was in 1926 and 1928. In December, 1929, W. C. Pei discovered the greater part of a well preserved adult cranium in the cave deposits. The announcement in July of the discovery of another skull brings the total to date to parts of four skulls with the teeth of at least six other individuals. This provides far richer material for study than *Pithecanthropus* or *Eoanthropus*, the first of which at least is of the same antiquity as Peking man (*Nature*, Aug. 9, 210; Sept. 27, 491). "The skull of *Sinanthropus* would seem to be of approximately similar length to that of *Pithecanthropus* and like the latter form is provided with massive brow ridges, a feature to be correlated with a powerful jaw mechanism. However, *Sinanthropus* characteristically differs from the Java type in the following important features: relatively well developed frontal eminences, well localized parietal eminences and greater height of skull vault, all these characters pointing to a relatively greater brain capacity in *Sinanthropus*" (Mac Curdy, *Proc. Amer. Phil. Soc.*, 69, 183). No artifacts have yet been encountered with these remains.

All *Skeletal Remains of Early Man* save the most recent were surveyed by A. Hrdlicka (*Smithson. Misc. Coll.*, 83). It may be noted that he is unwilling to accept *Eoanthropus* (Pitdown man) and Rhodesian man as early because of their geological uncertainty. It is suggested that the Peking remains (*Sinanthropus*) are Neander-

thaloid. The discussion of *Recent Discoveries of Fossil Man* (*Nature*, June 21, 935) by A. Keith calls attention to new finds of Neanderthal man near Rome, Weimer, and the Crimea. The general distribution of this type he cites as "from Weimar in the north to Malta in the south, from Jersey in the west to the Crimea and Palestine in the east. There were local breeds or races. In point of time, some of the remains go back to an early phase in the last interglacial period; others are attributed to the first phase of the last glaciation."

Findings of new fossil ape forms are also significant for closing gaps in our knowledge of man's family tree. Fragments of a skull and jaw found by W. Freudenberg near Heidelberg in Pleistocene deposits appear to belong to a new form of large ape (*Hemianthropus osborni*) distinct from any now known. It is characterized by a brain larger than that of *Pithecanthropus* and a somewhat gorilline face. Somewhat aside is a baboon-like ape found at Senez (southern France) and described by C. Depéret. The fossil *Australopithecus* of south Africa hailed by some as a precursor of man and by others set aside as a chimpanzee "is not a chimpanzee, but a new and separate type of anthropoid ape" in the opinion of A. S. Romer (*Science*, Mar. 7; Apr. 4; May 9).

An objection to the current interest in segregating various "racial strains" in a population was entered by F. Wood Jones (*Man*, April) on the ground that a segregated group may show homogeneity only because of an inevitable correlation between certain measurements of body parts. The caution is excellent, but, knowing the perverseness of physical anthropologists, it is doubtful that it will make any change in the direction of their investigations.

Attempts at establishing physiological and mental differences between races have, on the whole, proved abortive, yet some distinctions have been made. Recently F. Clements showed that the incidence of color-blindness among Indians was 1.0 per cent, among negroes 3.7 per cent, in contrast to approximately 8 per cent established for whites (*Science*, v. 72, 203).

The publication of *Craniology of the North Pacific Coast* (Leyden) by B. Oettking terminates the descriptive work of the Jesup Expedition of thirty years ago under F. Boas.

PREHISTORY. *Recent Progress in the Field of Old World Prehistory* (G. G. Mac Curdy, *Proc. Amer. Phil. Soc.*, 69, 175) takes the form, in part, of pushing back the earliest recognizable culture (Chellean) from the third Interglacial period, where conservative opinion placed it, into the first Interglacial. This extends man's cultural antiquity by perhaps half a million years, assuming twice that length of time for the Pleistocene period as a whole. Studies of *Paleolithic Man and the Nile-Faiyum Divide* (Chicago) by Sanford and Arkell now show that four river terraces of Upper Egypt hold as many Paleolithic cultures: Chellean, Acheulean, Early Mousterian, and Mousterian. "These have been traced over some hundreds of miles on both sides of the Nile and in adjoining deserts between Assuan and Assiut. . . . Desert conditions were apparently established in Upper Egypt as early as Sebilian [Upper Paleolithic] times, and at a later date as one proceeds northward, north of the latitude of the Faiyum, they may not have become absolute until post-Neolithic times."

Excavations in progress in the Mughareh el

Wad cavern (Palestine) have already revealed "a more complete series of cultural levels than any other site thus far discovered in Palestine." The several layers contain successively remains of Mousterian period, Aurignacian, Capsian "showing probable relation of [north] African culture," Mesolithic (revealing hafting for microlithic tools, hitherto unknown prior to the Neolithic), and mixed remains from Bronze age to Arabic. An investigation of *The Palaeolithic of Southern Kurdistan* (Bull. Amer. School Prehist. Research, no. 6) by D. A. E. Garrod revealed a cavern containing implements of Upper Aurignacian culture, specifically like those of Grimaldi. The common sequence in Europe is Magdalenian following Aurignacian, but here, as at Grimaldi itself, the place of Magdalenian is taken by another culture, Tardenoisian. A second cavern contained Mousterian remains like those of Palestinian caves.

The discussion of *New Stone Age Pottery from Hsi-Yin Tsun, Shansi, China* (Mem. Amer. Anth. Assn., 37) by Ssu Yung Liang is significant, not only because it is the first attempt to analyze statistically the remains of any stratified site in the Far East, but for a projected chronology of similar sites in Asia. The earliest is Lang-son (Tonkin) of perhaps 3000-2500 B.C.; Hsi-yin is roughly contemporaneous (circa 2000 B.C.) with Mongolian-Manchurian finds, Todoroki (Japan), and Anau I-II (Turkestan); Ihusaki and Tsukomo (Japan) equate with Luang Prabang (north Indo-China) and Anau III. Two basic types of Neolithic pottery are known in the Far East: string-impressed ware in north China, Manchuria, and Mongolia; plain ware, centring in southeast Asia.

A general statement on the distribution of *Stone Age Sites in Japan* (Formes, Paris, v. 4, 9) by J. Nakaya reveals that while more than 10,000 prehistoric sites are known in the country, none are of paleolithic age. Neolithic stations lie principally in the east and north, Bronze age sites in the west. The latter, affected by China, reached their climax in the first-second century A.D.; the former disappeared in the north in the sixth-seventh century A.D.

One of the two or three apparently authentic finds of early man in America, possibly of Pleistocene age, was the recently discovered Gypsum Cave, south Nevada. M. R. Harrington found artifacts with and below layers of dung and hair of the extinct ground-sloth. Since this sloth (*Nothotherium*) is usually considered one of the typical animals of the Pleistocene, the evidence for man's presence in America during the Ice Age seems indubitable (*Science*, June 6, 1935). At the same time, paleontologists are beginning to question whether such animals were not persistent into the geologically Recent period.

OLD WORLD ETHNOGRAPHY. Both publication and activity in this field was at low ebb during the year. Two general surveys of Africa in English appeared. W. D. Hamblin's *Ethnology of Africa* (Chicago) has the limitations of a museum handbook. C. G. Seligman's *Races of Africa* (London) shows better balance, although not of fundamental importance. Seligman views the Negrillos of central Africa as an ancient, "infantile" race, and holds that, although the other pygmy group, the Bushmen of southwest Africa, moved southward from the same general sector, the two groups are not directly related. Stress is laid on continued "Hamitic" or "Caucasian" infiltration from the north into Negro Africa proper. R. S. Rattray

added to his account of the Ashanti on the Gold Coast, *Akan-Ashanti Folk-Tales* (Oxford).

G. Caton-Thompson's report on the Zimbabwe ruins (Rhodesia) makes it certain that these mysterious structures are at most a thousand years old. Excavations near the Acropolis revealed medieval Portuguese, Arab, and Chinese articles at its very foundations (*Jour. African Soc.* 29, 132). The discovery of an iron-smelting furnace in Mumbwa Cave (southern Rhodesia) by Gatti and Cipriani (*Nature*, Aug. 30, 1935) offers the first evidence for the antiquity of iron-smelting in Africa. A foot below the furnace was found a Mousterian culture level; about and above were implements of "middle and late stone age" types. R. Dart believes the furnace as old as the "later phase" of the Paleolithic, but the evidence, while indicating great age, is inconclusive.

The intricate *Social Organization of Australian Tribes* (Oceania, 1, 34) was clarified by W. R. Radcliffe-Brown. At the basis of the whole lies the horde, a small localized land-holding group, membership in which is determined wholly by descent and that patrilineal. Such groups are practically exogamous. Almost everywhere they are organized for marriage in two, four, or eight sections; all variants of one scheme. Genealogical relationship regulates the behavior of an individual to every person with whom he has any social dealings whatever. These relationships are extended to other hordes and tribes and are stigmatized by kinship terms, hence it is impossible for a man to have dealings with any one not a kinsman. The kinship system, as it regulates the whole of social life, regulates marriage. The strong bond of the local group to its territory also provides the basis for the totemism that prevails over most of that continent.

Paralleling her study of adolescence in Samoa, M. Mead wrote on the relation of children to adults in *Growing up in New Guinea* (New York). The essential point seems to be that in Manus, Admiralty Islands, where she investigated, as against utter irresponsibility in childhood, the constraint of adult life is brought about by the necessities of a money-motivated existence.

An extended study of *Die Polynesischen Tabusitten* (Leipzig) was published by R. Lehmann. *Ethnographical Studies in Celebes* (The Hague) by W. Kaudern now includes a volume on games and dances.

NEW WORLD ETHNOGRAPHY. The year witnessed that all too rare phenomenon, the systematic survey of local areas, in two regions: southern California-Arizona and the southern plateau of British Columbia-Oregon. All of the extant Yuman tribes of the first region have now been studied; this year adding the Yuma, Kamia, Maricopa, and southeastern Yavapai. The northern area, the southern plateau, as yet shows only the beginning of systematic study, but the appearance of reports on the Salish tribes of the Canadian boundary, the Wishram of the Columbia, and the Klamath of southern Oregon, together with investigations now under way, promises within a few years a well-rounded survey of the area. Activity in the study of native languages over the whole continent continued unabated.

The southern plateau (northwest United States between the Cascades and the Rockies) was blocked in by the publication of the late J. Teit's *Salishan Tribes of the Western Plateaus* (45th Ann. Rept. Bur. Amer. Ethnol.). His fullest information is on the Cœur d'Alène of Idaho, with

supplementary accounts of the Okanagon and Flat-head groups west and east. All these were relatively simple cultures. Southward of this area, Spier and Sapir's *Wishram Ethnography* (Univ. Wash. Publ. Anth., 3, no. 3) pictures this culture of the middle Columbia River as a blend of typical coastal traits with those of the interior tribes, but with the weight favoring the former. Typical Northwest Coast culture seems to have spread much more down the Washington coast and far up the Columbia than to points geographically nearer but located inland. Of particular interest among the Wishram were the germs of a legalistic development; chiefs sitting as judges, fines assessed for torts, constructive adultery, and the like. The prehistoric culture of these people was presented in *Archæology of the Dalles-Deschutes Region* by Strong, Schenck, and Steward (Univ. Calif. Publ. Amer. Arch. Ethn., 29, 1). This earlier culture shows much the same blend of coastal and interior traits as were found among the historic peoples.

A general view of this interior culture was presented by L. Spier as background for *Klamath Ethnography* (same ser., v. 30). The Plateau culture was seen as extending to the border of northeast California. Typical Northwest Coast forms of social stratification, chiefly hegemony, bride purchase, and shamanistic practices were traced into California and eastward to the north Plains.

In agreement with Boas, who holds that the great development of the totem pole art of British Columbia, but not the origin, is recent, M. Barbeau shows that the *Totem Poles of the Gitskan*, a Tshimshian tribe of the Skeena River (Bull. Nat. Mus. Canada, 61) made their appearance in the last century. Carved house poles and portals were, however, earlier. It is suggested that the totem poles proper originated among the north Tsimshian of Nass River. On the little known Nootkan tribes of west Vancouver Island, V. A. Koppert's *Contributions to Clayoquot Ethnology* (Catholic Univ. Amer., Anthro. Ser., 1) appeared, dealing largely with material culture. F. Boas published further on the *Religion of the Kwakiutl* (New York) of the same region.

The inevitable question of the origin of the Eskimo was raised by A. Hrdlicka in his *Anthropological Survey of Alaska* (46th Ann. Rept. Bur. Amer. Ethn.). He favors an origin in the region of Bering Strait, since there the physical type of the Eskimo is the most generalized, approaching most closely the types of the Alaskan Indians and Siberian natives, whereas the specialized Eskimo type of the east Arctic is thought a later specialization. Earlier writers have interpreted the same observations in the contrary manner. Confusion will doubtless prevail for some time in the field of Arctic archaeology because of the difficulty of discovering remains. It is increasingly clear, however, that Eskimo culture once differed from the historic form, perhaps more in detail and weighting than in totality. Comparing the several known ancient forms, H. B. Collins holds that the newly-discovered artistic culture of Bering Sea is older than the Thule culture, the widespread ancient form of the east Arctic (Smithson. Misc. Coll., 81, no. 14).

While the aim of the ethnologist is to scrutinize the growth of native practices, these have usually been institutionalized so far in the past that it is impossible to achieve this except by inference.

Very rarely the growth is so recent, yet under aboriginal conditions, that it is possible. A. H. Gayton, tracing the spread of *The Ghost Dance of 1870 in South-Central California*, found that a receptive social and ceremonial background made for the rapid dissemination and adaptation of the new cult (Univ. Calif. Publ. Amer. Arch. Ethn., 28, no. 3). The same author stresses the political interaction of *Yokuts-Mono Chiefs and Shamans* (same ser., 24, no. 8) in the same region. Chiefs, whose positions were hereditary, had a paternal and judicial interest in the people. The mechanism of control lay, in the absence of formulated law, not only in customary leadership but through the coöperation of shamans. Fear of sorcery acting as a deterrent to crime kept the balance of peace in everyday life. Intrigues between chiefs and their shamans to mulct wealthy men, who failed to furnish their fair share of the expense of celebrations, had its socially desirable side in the compulsion to participate.

The culture of *The Valley Nisinan* of central California affiliates with other lower Sacramento tribes, rather than with the linguistically identical Maidu on the eastern highlands. It now seems clear that the great interior valley of California had two special forms of culture: the lower Sacramento and the Middle San Joaquin (A. L. Kroeber, same ser., 24, no. 4). A monograph on *Mattole, An Athabaskan Language* (Chicago) of north California, now nearly extinct, was prepared by F. K. Li. Little is known from stratigraphy of cultural changes in that State. A résumé of *Chumash Prehistory* by R. L. Olson shows that on the south coast there was some slight and gradual change in culture. No certain evidence of trans-Pacific influence was found (Univ. Calif. Publ. Amer. Arch. Ethn., 25, no. 1).

In connection with a description of *The Social Organization of the Tewa, New Mexico* (Mem. Amer. Anth. Assn., 36), E. C. Parsons offers a brief general discussion of all the Pueblos, which goes beyond her summary of 1924. Matrilineal clanship, house-ownership, and ceremonial proprietorship, vigorous in the western Pueblos, is inert or absent at the opposite end of the Pueblo range. In the east a tendency to dual organization takes the place of the multiple groups of the west. The eastern curing societies have been borrowed from the west. Most impressive is the evidence for the widely-known masked dances having arisen from an amalgamation of purely native rain-making and burlesque dancers with Catholic saint festivals. The amalgamation was made both in the eastern and western Pueblos, but the dances of the latter, developing, spread secondarily into the eastern sector.

A genetic connection between the Tanoan and Zuni languages (New Mexico) was posited by J. P. Harrington. Having previously suggested such a connection between Tanoan and Kiowa (Okla.), three of the four small, isolated tongues of the Southwest are now absorbed in larger linguistic families.

Interest in the archaeology of southwestern United States continued unabated, with many parties in the field. The primary interest has been for some years in securing chronological evidence. A. E. Douglass now offers an absolute chronology based on an examination of beams secured from the ruins. The rings of trees, seen in cross-section, show characteristic periods of drought and wet years. By piecing together segments of ring series from the ancient beams,

Douglass established a sequence going back to A.D. 700. The year each beam was cut being established, the date of the pueblo containing became known. A preliminary report (*Natl. Geog. Mag.*, 50, 737) dates many ruins of the northwestern sector. The great ruins of this region were occupied largely from the tenth to the fourteenth centuries A.D. The earliest noted, Pueblo Bonito, dates from A.D. 919-1130. The later half of the thirteenth century was found to be a period of extreme and continued drought.

Despite the use of this novel means of ascertaining chronological relations, the relationships of the many ruins must continue to be based on the types of pottery found in them. On the western frontier of the area, *An Archaeological Survey of Verde Valley* (Globe, Ariz.), under H. S. Gladwin, showed typical Pueblo pottery of northeast Arizona abutting on Yuman pottery to the west and Gila polychrome to the south. Southeastward of this in *Pueblo Sites in Southeastern Arizona*, Sauer and Brand found the meeting place of Gila types with Mimbres (of southwest New Mexico) and with the Chihuahuas pottery from the southeast (*Univ. Calif. Publ. Geog.*, 3, no. 7). A third attempt at correlations in southern Arizona was that of F. M. Hawley (*Amer. Anth.*, 32, 522) on the middle Gila River. The two local areas segregated, north and south of that river, had somewhat different developments. Red-on-buff pottery of the southern area was contemporaneous with the black-on-white and early glaze periods of the Little Colorado drainage in northern Arizona, late Gila polychrome with the later glazed types. The northern half of the area reflects markedly the Little Colorado development.

The first recorded instances of the practice of polyandry in North America were noted by A. Lesser among the Pawnee, with suggestions of the same among adjacent Comanche and Wichita (*Man*, June, 78). This is however not true polyandry, but the custom of according a man access to his brother's wife.

Mexico and Central America were not especially productive fields during the year. C. O. Sauer reported an archaeological zone in northwestern Mexico (Sonora-Nayarit) to belong to the central Mexican culture complex of the great Toltec period, and having no connections with the presumably contemporaneous Pueblo culture to the north (*Science*, Oct. 17, 403). R. Redfield brought out his full study of changing conditions in *Tepoztlan, a Mexican Village* (Chicago) of the central area, briefly noted several years ago.

A sense of proportion in the Central American field has begun to be restored. Investigators were wholly concerned with conjectural interpretations of the monumental ruins to the exclusion of what might be learned from Mayan survivors. Recent studies showed that significant fragments of the ancient civilization might still be found among living Indians; as by J. E. Thompson in the *Ethnology of the Mayas of British Honduras* (Chicago). The attention given the elaborate ruins of Middle America has also largely obscured the necessity for investigating the earlier simpler cultural remains. By *Excavations at Zacatenco* (*Anth. Papers Amer. Mus. Nat. Hist.*, 32, pt. 1) near Mexico City, G. C. Vaillant shows that this archaic culture exists in three superposed forms. The middle horizon is equated with the first of the four horizons discriminated by Kroeber in 1925.

There has never been doubt that native weaving

distributed from Arizona to northern Chile was derived from a single source, but the question of what was the earliest weaving technique diffused over this area and its regional modifications has never been met. On the basis of extensive collections from Peru, where the art reached its apogee, O'Neale and Kroeber have defined the successive developments in the *Textile Periods of Ancient Peru* (*Univ. Calif. Publ. Amer. Arch. Ethn.*, 28, no. 2). The textile art had already a highly skilled and elaborate form in the earliest datable remains, some 2000 years old. New processes were devised, but none persisted without change in the several local centres. Textile designs also changed, but had a tendency to follow variations of pottery designs. These known textile remains from Peru, however, do not directly answer the question as to the anciently diffused form.

An essentially sane treatment of the question of populational connections between the South Seas and America by W. Lehman (*Orientalistische Literaturzeitung*, 33, 322), after resuming the many discussions of this possibility, offers an answer in the negative. *Additional Studies of the Arts of the Guiana Indians*, especially of southern British Guiana, by W. E. Roth (*Bull. Bur. Amer. Ethnol.*, 91), show a surprising technological development in an otherwise simple culture. E. Nordenskiöld reports the discovery of the ancient Peruvian system of weights. He also issued a general survey of *L'Archeologie du Bassin de L'Amazone* (Paris).

EXPEDITIONS, PERSONALIA. The *Anthropos* group of Vienna reports the return of P. Schebesta from the Congo Pygmies. R. Thurnwald (Leipzig) has in progress ethnological investigations in Africa. The Museums für Völkerkunde in Leipzig and Hamburg sent C. Nimuendajú to Rio Tocantins (east central Brazil), while L. Frobenius returned from the Zambesi River. The Staatliches Forschungsinstitut für Völkerkunde (Leipzig) supported Wilhelm in Angola and Bushman territory and Struck and Bernatzik in Portuguese Guinea. Expeditions to northeastern Angola, under Baumann and Meinhard, and to China, under Lessing, were dispatched by the Staatliches Museum für Völkerkunde (Berlin). The Koloniaal Instituut (Amsterdam) reports the acquisition of funerary articles from Bali (E. Indies). P. Rivet (Paris) visited Mexico, Guatemala, and Salvador. M. Griaule (Institut d'Ethnologie, Paris) has undertaken to cross Africa from Dakar to Djibouti for collecting purposes.

W. Thalbitzer (Copenhagen) visited south Greenland for folklore and linguistic studies. P. Nörlund continued excavations in the Godthaab district of Greenland and T. Mathiasen in the Sukkertoppen district. The Naturhistoriske Riksmusset (Stockholm) had S. Hedin continuing investigations in China and Mongolia. G. Bolinder in Sierra Leone and Liberia, S. Bergman in the Kuril Islands, and G. Moberg completed his expedition across the Sahara to Dakar via Timbuctu. The Göteborg Museum (Sweden) acquired collections in its special field, South America, from Peru, Bolivia, Central America, and upper Amazonas.

In Poland C. Ehrenkreutz was appointed professor of ethnology at the University of Vilna.

The University of Cambridge had J. B. Charlesworth continue his ethnologic investigations of the Wasukuma of Tanganyika, with M. M. Hunter studying the attitude toward women among the Xosa of South Africa. An expedition left for archaeological work between Lakes Baringo and

Rudolf in east Africa. The University Museum (Oxford) also showed interest in Africa with H. Balfour on the west coast. R. G. Dingwall excavated an early neolithic cave site on the Gower Peninsula (England). C. D. Forde was appointed to the chair of geography and anthropology at the University College of Wales. Under the Australian National Research Council and the University of Sydney, A. P. Elkin commenced a study of the natives of southern Australia; G. Laves worked on languages of western Australia, where R. Piddington studied the Karadjeri. U. McConnel investigated the natives about Port Douglas, northern Queensland, and C. W. M. Hart those of Melville and Bathurst Islands, northern Australia.

In Mexico, the Dirección de Monumentos Prehispánicos dispatched R. J. C. Novelo to investigate the pyramid "El Tajín" (Vera Cruz): E. Noguera to the ruins of southern Yucatan, to a new archaeological zone "La Cebadilla," south of Tampico, and to Michoacán; E. J. Palacios to make a study of the stelae of Uxmal (Yucatan). C. Basauri made anthropometric and ethnographic studies of the Otomi in the region of Actopan, Hidalgo. The Bishop Museum (Honolulu) maintained several field parties. In Cook Islands P. H. Buck surveyed Rarotonga, Atiu, Mangaia, Manahiki, and Tongareva. Emory, Stimson, and Schapiro conducted researches in the Tuamotus, and Bennett, MacAllister, and Walker the archaeology of the Hawaiian group. For the National Museum of Canada, J. C. B. Grant made anthropometric studies of the Cree and breeds near Lesser Slave Lake; I. A. Lopatin made ethnological studies of the Kitimat of Douglas Channel, B. C., and J. T. MacPherson of the Indians about L. Abitibi (Ontario-Quebec). W. J. Wintemberg continued archaeological investigations in east Canada (Gulf of St. Lawrence, New Brunswick, and southwest Ontario). R. Lehmann-Nitsche retired from the Museo de la Plata (Argentina), where he was succeeded by M. A. Vignati.

The Peabody Museum (Harvard) had expeditions investigating prehistoric sites in Czechoslovakia and Mesopotamia (Nuzi). Ethnological collecting was done by O. Lattimore in Mongolia, Manchuria, and south Siberia, by A. Loveridge in Tanganyika, G. Schwab in French Cameroon. Archaeological expeditions centred in Panama and the Southwest. The latter were near the confluence of the Colorado and Green Rivers (under H. B. Roberts) and south of the Mimbres (C. B. Cosgrove). Anthropometric studies of criminals and of Indian-white-Negro crosses among the Cherokee and of Spanish-Negro crosses in Cuba were under way. L. D. Redway and H. O. Hencken were added to the staff.

For the U. S. National Museum, N. M. Judd made aerial photographs to establish the ancient canal system of the Salt-Gila Valleys (Arizona), while A. Hrdlicka excavated sites on the Kuskokwim River and H. B. Collins on St. Lawrence Island (Alaska); excavations were also made on Arawak sites in the Dominican Republic. For the Bureau of American Ethnology (Washington) archaeological investigations were made by M. W. Stirling on the west coast of Florida and in Texas, and by F. H. H. Roberts in western New Mexico. Ethnological work took J. N. B. Hewitt to the Iroquois of Grand River (Ontario), J. R. Swanton to investigate linguistic remnants in Louisiana (particularly Koasati), while T. Michelson continued linguistic studies of the Algonkian tribes. F. LaFleche retired from the

Bureau. The Carnegie Institution of Washington conducted researches on the relation of the Archaic culture of Middle America to typical Maya civilization under O. G. Ricketson, and pushed its programme for the study of the present Maya population.

The joint expedition of the Field Museum (Chicago) with Oxford University was continued at Kish (Mesopotamia). W. D. Hambly made collections in Angola and Nigeria. P. S. Martin began excavation in the Lowry ruin (southwest Colorado). For the American Museum (New York), R. L. Olson made an archaeological reconnaissance of coastal Peru and Ecuador, and C. L. Bernheimer and E. H. Morris one of northeast Arizona. M. C. Kahn made a trip to Dutch Guiana to study the Bush Negroes and G. C. Valliant excavated in early cultures at Ticoman in the Valley of Mexico. The Museum of the American Indian (New York) supported S. K. Lothrop in Chile, H. S. Dickey on the Orinoco in Venezuela, and F. A. Mitchell-Hedges in Honduras. R. A. Bartlett visited the east coast of Greenland and several individuals the tribes of south Canada. The University of Pennsylvania Museum conducted excavations in prehistoric levels at Ur (Iraq) and in Prince William's Sound (Alaska), West Virginia, and New Mexico. Ethnological and archaeological investigations were made by D. S. Davidson in southwest Australia and Tasmania.

At Columbia University, F. Boas and J. Averkieva studied the religious and economic life of the Kwakiutl (British Columbia) and G. Reichard the social life of the Navaho (New Mexico). Several Plains tribes were visited: Caddoans (A. Lesser and G. Weltfish), Omaha (R. Fortune), Dakota (E. C. Deloria), Nez Percé (A. Phinney). At the University of Pennsylvania, F. G. Speck made ethnological studies among Indian remnants in southern New England; A. I. Hallowell among Cree and Saulteaux of northern Canada; V. M. Petrucci among the Delaware (Okla.). The last named and V. J. Fewkes left this university. The University of Chicago sponsored linguistic research among the Grebo (Liberia) by G. Herzog, ethnologic work among Tarahumare (Mexico) by W. C. Bennett and Maricopa (Ariz.) by L. Spier. Redfield and Andrade made studies in Yucatan. The archaeological survey of Illinois, under F. C. Cole, was in progress. Other linguistic researches were on American tribes: Isleta (N. M.) and Yokuts (Calif.) by S. Newman, Upper Chinook (Wash.) by W. Dyk, and Chiricahua (Ariz.) by H. Hoijer. Studies in the field of linguistic psychology were made under the direction of E. Sapir. C. Gower was appointed at the University of Wisconsin. The University of California had several parties in the local field: C. Dubois and D. Demetracopoulou among the Wintu, I. Kelly among northwestern Paiute, G. Nomland among Mattole. R. Beals went to the Cahita group of Sonora-Sinaloa (Mexico). The University of Washington had E. Gunther among the Puget Sound groups, V. Ray, V. Walters, and L. Spier among Sanpoil and Okanagon (Wash.). R. Gilmore made a trip to the Arikara (North Dakota) for the University of Michigan Museum.

Hamburg was the host of the 24th International Congress of Americanists in September.

NECROLOGY. The death in England of Edward Clodd (q.v.) on March 16 marked the passing of one whose influence on popular acceptance of the principles of man's evolution in English-speaking countries was tremendous. His best known

work was his first, "The Childhood of the World" (1873). In America, Jesse Walter Fewkes (q.v.) died May 31, aged 78. For years leader of the Bureau of American Ethnology, his principal labors were with Southwestern archaeology and ethnology. Maurice G. Smith of the University of Oklahoma died October 22. The deaths of F. W. K. Miller on April 18 and A. von Lecoq on April 21 were announced in Berlin.

ANTIGUA. See LEEWARD ISLANDS.

ANTIOCH COLLEGE. A nonsectarian, co-educational institution in Yellow Springs, Ohio; founded by Horace Mann in 1853. The number of students enrolled for the autumn term of 1930 was 631, of whom 413 were men and 218 were women. The faculty had 87 members. The productive funds of the institution amounted to \$261,797, and the operating income for the year was \$455,526. The library contained approximately 33,000 volumes. The newly constructed buildings, including a science building costing approximately \$377,000, a gymnasium costing \$80,000, and a central heating and power plant costing \$145,000, were occupied during 1930. Approximately 540,000 was made available to establish research foundations in physics, chemistry, biology, and medicine. Antioch College is conducted on the belief that academic training alone does not fit the student for life, and is so organized that the student divides his time between liberal and professional studies at college and practical work in the professional, industrial, and commercial institutions of the central and eastern States. An extramural faculty supervises location of students in about 175 firms and institutions in 12 States during these working periods, which alternate with study periods in five-week intervals. President, Arthur E. Morgan, D.Sc.

ANTI-SALOON LEAGUE OF AMERICA.

A federation of churches and temperance organizations in the United States, united against the beverage liquor traffic. It was established in 1895 by a coalition of the Anti-Saloon Leagues of four States and the District of Columbia. At the end of 1930 it embraced 48 State or territorial leagues and had affiliation with 40 other national temperance organizations, as well as with the World League against Alcoholism (q.v.).

During the year the work of the league was conducted by over 1500 representatives. This work included a widespread educational campaign on the evils of the use of alcohol and the duty of observance of the law, carried on through the press, pamphlets, the pulpit, and the lecture platform. The legislative work of the league included support of the measures urged by President Hoover for the better enforcement of national constitutional prohibition. These included H. R. 8574, for the transfer from the Treasury Department to the Attorney General of certain functions in the enforcement of the National Prohibition Act, which passed both houses and became effective on July 1, 1930; H. R. 9985, defining minor offenses under the enforcement act and bringing them within the jurisdiction of United States commissioners, and H. R. 10341, amending the United States Criminal Code to define petty offenses, which was passed on Dec. 3, 1930.

The league issued statistics, based on official reports, demonstrating that consumption of intoxicants had dropped to a small fraction of its former total and giving the consequent economic,

social, moral, and physical benefits of prohibition to the people of the nation. The principal feature of its 1930 activities was the nation-wide organization of local groups of outstanding business men for the encouragement of enforcement authorities and the support and expression of popular opinion on prohibition. In addition to many thousands of leaflets and documents distributed, the league published *The American Issue* in Westerville, Ohio, with a monthly circulation of about 1,000,000 copies and with State editions in 24 States.

The officers of the league in 1930 were: President, Bishop Thomas Nicholson, Detroit, Mich.; secretary, S. E. Nicholson, 370 Seventh Avenue, New York City; honorary treasurer, Foster Copeland, Columbus, Ohio; treasurer, H. B. Sowers, Westerville, Ohio; general superintendent, F. Scott McBride, Washington, D. C.; director of the department of education, Ernest H. Cherrington, Washington, D. C.; attorney, Edward B. Dunford, Washington, D. C. National headquarters are in Washington, D. C. See PROHIBITION.

APPELL, PAUL EMILE. A French educator and former rector of the University of Paris, died in Paris Oct. 24, 1930. He was born in Strassburg Sept. 27, 1855, and attended the Strassburg and Nancy lycées, the Collège Saint-Arbogast in Strassburg, and the École Normale Supérieure. On receiving the D.Sc. degree from the latter institution in 1876 he became lecturer in mathematics at the University of Dijon. Five years later he was called to the École Normale Supérieure as professor of applied mechanics and head of the lecturing staff. In 1903 he became dean of the faculty of science, but resigned this post in 1920 to become rector of the University of Paris. During the World War he was active in relief work in Paris. He was a member of the Académie des Sciences of the Institut de France; past president of the Société Mathématique de France; and a member of the Conseil Supérieur de l'Instruction Publique, in which capacity he exercised a wide influence over the whole field of higher education in France. His works include: *Mémoires de mathématiques* (Traité de mécanique rationnelle; Statique, dynamique du point; Dynamique des systèmes; Mécanique analytique; and Équilibre et mouvement des milieux continus); *Figures d'équilibre d'une masse fluide en rotation uniforme*; *Théorie des fonctions algébriques et de leurs intégrales* (with E. Goursat); *Principes de la théorie des fonctions elliptiques et applications* (with E. Lacour); *Leçons de mécanique élémentaire* (with J. Chappuis); and *Education et enseignement*.

APPLES. See HORTICULTURE; ENTOMOLOGY, ECONOMIC.

AQUEDUCTS. Substantial progress was made toward the solution of the great aqueduct works for New York and for Los Angeles, noted in the 1929 YEAR BOOK, but actual construction had not begun. The Wanauke supply for North Jersey (supplying ten cities—parts of Elizabeth and Bayonne having been added to the original area) was put in service during the year, the aqueduct, so long a matter of dispute, having been completed. Work on the Boston supply from the Swift and Ware Rivers had gone forward, the master appointed by the Supreme Court to hear

testimony in the case having approved the diversion. Connecticut, however, was still dissatisfied and proposed to carry her objections to the Supreme Court.

NEW YORK. The Delaware River project, which will exceed the Catskill aqueduct in size, had been under detailed study, while the master appointed by the Supreme Court had been hearing testimony. It will be remembered that a tentative agreement between the States of New York, New Jersey, and Pennsylvania, was made official only by the legislative action in New York—New Jersey refused to accept the plan and took the case to the Supreme Court with Pennsylvania coming in as an interested spectator. Arguments on the case closed on Nov. 21, 1930. It was difficult to see how permission could be refused for this much-needed diversion from the Delaware, particularly considering the guarantees which New York City was willing to offer in the matter of maintaining minimum flows. In the meantime the city engineers, to guard against a possible water shortage, were understood to be considering the use of the old Croton Aqueduct built in 1842, which was abandoned about 1920.

LOS ANGELES. A special commission appointed to study the various proposals for this great work, reported, after reviewing some 56 different projects, that further studies were essential before a final decision could be made between four of these routes which appeared to be meritorious. All the gravity routes were eliminated in this study on the ground that grade tunnels would be very deep and probably very difficult to construct in the mixed volcanic ground that was certain to be encountered, that such works would be liable to damage due to the fact that any aqueduct coming into Los Angeles had to cross the great San Andreas and other faults, and that their cost would be prohibitive.

The detailed studies of the four pumping routes recommended included geological investigations, the questions of accessibility to transportation, right-of-way costs, construction costs, reliability of the supply, and the possibility of eliminating pumping lifts at a later date by tunnel construction. On November 10 it was announced that the decision had been reached to build on the so-called "Parker route." Under this plan a dam was to be built on the Colorado at Parker and some 640 sec. ft. of water (ultimately 1500) would be pumped a total of 1523 ft. The aqueduct will be 265½ miles long and it was said that this route involved shorter tunnels, at less depth and in more stable ground, than any other line.

While it became evident some ten years previously that the Owens Valley supply would ultimately become inadequate for the needs of Los Angeles, a decision on the new aqueduct was held up pending the final selection of the site for the Boulder Canyon or Hoover Dam project by the U. S. Reclamation Service. Preliminary surveys for the Los Angeles-Colorado aqueduct were made some five years before, but these delays necessitated a warning to the citizens of Los Angeles requesting that all efforts be made to conserve existing supplies pending the completion of the new works. A similar warning also was issued in San Francisco where the long needed Hetch Hetchy supply was still incomplete. See **WATER WORKS AND WATER PURIFICATION.**

ARABIA. A peninsula in southwestern Asia situated between the Red Sea and the Persian Gulf. The area is estimated at from 1,000,000 to

1,200,000 square miles, the higher figure including the Syrian Desert and the Sinaitic Peninsula. A mountain barrier, parallel to the Red Sea, runs the length of the western part of the peninsula from which the terrain slopes uniformly to the Persian Gulf, with the exception of the Oman district in the extreme southeastern section of Arabia, where a mountainous area with 10,000 foot peaks is found. Barren and sparsely watered, the peninsula nevertheless has numerous large oases. Estimates of the population range from 4,000,000 to 7,500,000, the inhabitants representing every stage of transition from the purely nomadic Bedouin tribes, occupying a large part of the interior, to the well-developed civic life of the large towns. Freed of Turkish control by the World War, the Arabs were at liberty to work out their own political destiny. After six years of internecine warfare, the Ibn Saud dynasty of Nejd emerged as the ruling power, controlling all the peninsula except several small states along the southern and eastern coastal fringe. During this period, the divisions of the country became defined as follows:

(1) **HEJAZ**, or **HEJAZ**. The Kingdom of the Hejaz, founded by King Hussein Ibn Ali in 1916 as the outgrowth of the World War, was conquered at the end of 1925 by Abdul Aziz Ibn Saud, Wahabi leader and Sultan of Nejd. Ibn Saud, on Jan. 8, 1926, was proclaimed King of Hejaz and Nejd. Hejaz occupies the western coast of Arabia between Trans-Jordan on the north and Asir on the south, the latter boundary touching the coast at about 20° north latitude. The estimated area is about 150,000 square miles, although the land frontiers have never been definitely defined, and the population, largely composed of nomads, is placed at from 800,000 to 1,000,000. The chief cities, with their estimated populations, are Mecca (85,000), the holy city of Islam; Medina (30,000), site of Mohammed's tomb; and Jeddah (25,000), the seaport for Mecca. Mecca is visited annually by about 100,000 Moslem pilgrims from abroad, who represent the chief source of revenue for the government. The standard gold currency is the pound sterling, which is equivalent to 10 rials in native currency.

Agriculture is confined to the mountain oases and valleys, which produce fruits, dates, and some cereals. Hides, wool, gum, and clarified butter are the leading Bedouin products. Some Arab horses are exported. The southern section of the railway from Amman, Trans-Jordan, to Medina, has been out of commission since 1925. The constitution of Aug. 31, 1926, vests supreme executive and legislative power in the King.

(2) **NEJD**. The Kingdom (formerly Sultanate) of Nejd occupies the highland of Central Arabia, with an indefinite area and a population estimated at 3,000,000. Riyadh, the capital, and Hufuf have populations of about 30,000 each. Dates, wheat, barley, fruits, hides, wool, horses, and camels are the chief products, few of which are exported.

(3) **ASIR**. A province on the west coast between the Hejaz and Yemen, formerly ruled by the Idrisi dynasty but since 1926 a protectorate of the Kingdom of Hejaz and Nejd. Estimated population, 1,000,000; capitals, Abha and Sabya.

(4) **YEMEN**. The Imamate of Yemen is an independent Arab state occupying the Red Sea coast between Asir and the British protectorate of Aden. The area is about 75,000 square miles and the population between 2,000,000 and 3,000,-

900. Sana', the capital, has about 25,000 inhabitants. Barley, wheat, millet, coffee, and hides are the principal products and exports. Ruling Imam in 1930, Yahya Mohammed Hamid ed-Din.

(5) **THE HADRAMAUT.** A region of fertile valleys to the east of Aden Protectorate, the greater part of which is ruled by the Sulta of Makalla. The territory is under loose British protection and control.

(6) **OMAN.** An independent state occupying the coastal fringe of southeastern Arabia; under the protection of Great Britain. Area, about 82,000 square miles; population, estimated at 500,000, chiefly Arabs but with a considerable Negro element along the coast. Muscat, the capital, has about 10,000 inhabitants, most of whom are Negroes or Baluchis. Exports, consisting of dates, dried limes, pomegranates, and dried fish, are exchanged principally with India. In 1927-28 imports were valued at £370,659 and exports at £148,285. Revenues totaled approximately 700,000 rupees (\$262,000) annually. The reigning Sultan in 1930 was Seyyid Taimur bin Feisal, who succeeded to the throne Oct. 5, 1913.

(7) **KUWAIT.** An Arab territory fringing the northwestern coast of the Persian Gulf, with an estimated population of 50,000. The Sheik, Ahmed ibn Jabir al Subah, is subsidized by the British government. Capital, Kuwait.

HISTORY. The dramatic end of a century-old feud between rival Arab dynasties was signalized by the meeting of King Abdul Aziz Ibn Saud of the Hejaz and of Nejd and King Feisal Ibn Hussein of Iraq on board the British warship *Lupin* in the Persian Gulf on February 24. The meeting was arranged by Sir Francis Humphreys, British High Commissioner to Iraq. A protocol of 19 clauses, providing for the settlement of disputes which for some years had disturbed relations of the two kingdoms, was signed. Among the main provisions of the treaty were the mutual recognition of the independence of Iraq and Nejd and exchange of ambassadors, the outlawing of tribal raiders, the extradition of fugitives from justice, establishment of a permanent frontier commission similar to that appointed under the tripartite treaty between Iraq, Turkey, and Great Britain, and settlement by arbitration of disputes over the interpretation of the treaty.

Ibn Saud also agreed favorably to consider Iraqi claims for reparation for border raids and accepted the Iraqi point of view in regard to the maintenance of police posts in the Southern Desert. The Wahabi king was also understood to have agreed to pardon rebels from the Nejd who had sought refuge in Iraq.

A British effort to compose the differences between the two families in 1924 failed and in the ensuing warfare the Wahabi leader defeated King Hussein of the Hejaz, and annexed that territory. He next launched destructive raids upon Iraq and Trans-Jordan, which were ruled by the second and third sons of the deposed King of the Hejaz. Through British intervention treaties were concluded defining the borders between the Nejd and the two adjoining Arab states, but the raids continued. It developed that the later raids were carried out by a group of turbulent Nejdite sheiks headed by Feisal ed-Dowish in defiance of Ibn Saud. The latter sent a number of punitive expeditions against the rebellious tribesmen and late in December, 1929, himself led a large force which decisively defeated them in Shaibauja. Feisal ed-Dowish, with a number of

defeated sheiks, escaped over the border into Koweit and Iraq. Feisal was reported to have been captured by the British forces in Iraq and turned over to Ibn Saud at the time of the conference in the Persian Gulf. He was taken to Riyadh for trial before a religious court. Despite these vigorous measures on the part of the Wahabi King, some desert tribes nominally subject to his authority continued at intervals their immemorial raids against other tribes in Iraq and Trans-Jordan.

Meanwhile the Government of the Hejaz and of Nejd showed increasing evidences of stability. Rapid progress was made in the establishment of permanent diplomatic relations with the leading states of the Near East and of Europe. The British agency and consulate was advanced to the rank of a legation, and in February, 1930, Sir Andrew Ryan was appointed the first British Minister to Jeddah, the capital. The French, Italian, Russian, Turkish, and Persian governments likewise took steps to raise their consular representatives in Jeddah to the rank of chargé d'affaires.

The fifth anniversary of the accession of King Ibn Saud to the throne of the Hejaz was celebrated at Mecca, January 8 to 11. The King was conducting his campaign against Feisal ed-Dowish, but his son, Prince Feisal, released all minor offenders from prison. He also fêted the Arab notables and the Europeans in Jeddah. Ending five years of exile in Cyprus, former King Hussein was allowed by the British to join his son, Amir Abdullah of Trans-Jordan.

British efforts to negotiate a settlement of difficulties with the Imam Yahya of Yemen had been fruitless, it was revealed on Dec. 23, 1929, during a debate in the House of Lords. The Imam failed to reply to an invitation to open negotiations. The number of Moslems making the annual pilgrimage to Mecca in 1930 was placed at 150,000, or 40,000 more than in 1929. A quarrel between King Ibn Saud and Egypt over the facilities and privileges accorded Egyptian pilgrims was settled by agreement in 1930. See Jews, under *Zionism*; PALESTINE; IRAQ; and TRANS-JORDAN.

ARBITRATION, COMMERCIAL. See INTERNATIONAL LAW.

ARBITRATION, INTERNATIONAL. The powers at London in the Naval Conference sought to find a solution for their difficulties in the principles of compulsory arbitration. France, Italy, and Great Britain signed the optional clause providing for the compulsory arbitration of legal disputes by the World Court. The most important international disputes, however, are "non-legal," and the Council of the League of Nations had no authority to impose a definite settlement of non-legal disputes. It could merely make a recommendation. A dispute may therefore drag on indefinitely until, anti-war pacts notwithstanding, it might finally flame up into actual war.

The League Assembly attempted in 1928 to remedy this weakness in international peace machinery by drawing up a General Act of Arbitration that provided (1) for the definite adjudication of legal disputes by the World Court; (2) for the conciliation of non-legal disputes by regional commissions. In case conciliation fails, final decision of dispute is to be vested in an arbitral tribunal. The General Act thus

provides for the arbitration of both legal and non-legal disputes.

The acceptance of the General Act by the Mediterranean powers provides a precise system for settling definitely all disputes in the Mediterranean. If a state, having accepted the Act, refuses to arbitrate or to live up to an arbitral award, it automatically becomes an aggressor. Article XIII of the Covenant states that "in the event of any failure" to carry out an arbitral award, "the Council shall propose what steps should be taken to give effect thereto." Presumably the Council would recommend the imposition of an economic boycott, or even military measures in accordance with Article XVI.

According to the Foreign Policy Association, opinions differed as to whether members of the League are obligated to accept a recommendation of the Council to impose an economic boycott against an aggressor state. In 1921 the Assembly passed a resolution to the effect that each member of the League judged for itself whether or not the Covenant had been violated or whether it was under an obligation to impose an economic boycott. There are some jurists who state that this resolution violates the Covenant. Moreover, in 1925 the Locarno powers informed Germany that in their opinion each member of the League was bound to cooperate in support of Article XVI "to an extent which is compatible with its military situation and takes its geographical position into account."

Various British spokesmen have declared that Great Britain will never become involved in war with the United States. This has been a notice to League members that the British government will not participate in a League blockade to which the United States is opposed. The acceptance by the United States of the principle of consultation means the general strengthening of the world's peace machinery. From the concrete standpoint, it means that the United States and other powers will consult together in the hope of finding a peaceful solution of dangerous international disputes.

If, in spite of this, as Raymond L. Buell points out, war breaks out, the consulting powers have a basis for determining which of two states is the aggressor. In case agreement is reached on this point, League members may proceed to apply an economic blockade against the aggressor. The United States would not be obligated to aid in the enforcement of such a blockade; but it would be expected not to insist upon the right of its nationals to trade with the aggressor. In case the United States disagrees as to the aggressor, it is probable either that no economic blockade would be applied, or that such a blockade would be applied without distinction to both parties. The latter alternative embodies a principle similar to that of the Porter resolution introduced into Congress in the winter of 1929-30 authorizing the President to impose an arms embargo upon all belligerents.

ARBITRATION OF THE "I'M ALONE" CASE. On Mar. 22, 1929, the U. S. Coast Guard vessel *Dewar* sank the schooner *I'm Alone*, of alleged British nationality and registered in Canada, off the coast of the United States. The case was made the subject of diplomatic correspondence between the United States and Canada and in a note of Apr. 17, 1929, addressed by the Secretary of State to the Minister of the Dominion of Canada; it was stated that if the Canadian Government, after a

careful examination of that note, still found itself unable to concur in the findings of facts and the conclusions of law set forth therein, the Government of the United States would agree to submit the matter to arbitration as provided for in the Convention between the United States and Great Britain of Jan. 23, 1924. In a note of Apr. 24, 1929, the Canadian Minister informed the Secretary of State that his Government accepted the proposal of the United States.

The United States designated the Honorable Willis Van Devanter, Associate Justice of the Supreme Court of the United States, as the American member on the Commission provided for in the Convention, and the Honorable George Wharton Pepper, former United States Senator from Pennsylvania, as agent to represent the Government of the United States before the Commission. The time and place of hearings was to be settled by agreement between the commissioners. The Canadian Government appointed Eugene Laffeur, K.C., of Montreal, as the Canadian member of the Commission, and John E. Read, Esquire, as Canadian agent, and W. N. Tilley, K.C., of Toronto, and Aime Geoffrion, K.C., of Montreal, as counsel. Mr. Laffeur subsequently died, and Right Honorable Lyman Poore Duff, P.C., Puisne Judge of the Supreme Court of Canada, was nominated by His Majesty, on the recommendation of the Government of Canada. Mr. Justice Duff was the Senior Puisne Judge of the Supreme Court of Canada and had served for 11 years as a member of the Judicial Committee of the Privy Council.

ARBITRATION TREATIES. According to the records of the U. S. State Department six treaties of arbitration generally known as the Root Treaties negotiated in 1908 and 1909 were in force and in effect. They were with Brazil, Ecuador, Haiti, Liberia (signed in 1926), Peru, and Uruguay. During 1928, 1929, and 1930, twenty-three (23) treaties were negotiated with these countries: Albania, Austria, Belgium, Bulgaria, Czechoslovakia, Denmark, Estonia, Ethiopia, Finland, France, Germany, Hungary, Iceland, Latvia, Lithuania, Luxemburg, Netherlands, Norway, Poland, Portugal, Rumania, Sweden, Yugoslavia. Four other treaties had been signed and were in process of ratification at the end of the year, namely with China, Egypt, Greece, and Italy.

Nineteen Bryan or conciliation treaties negotiated in 1913 and 1914 were in force: Bolivia, Brazil, Chile, China, Denmark and Iceland, Ecuador, France, Great Britain, Italy, Netherlands, Norway, Paraguay, Peru, Portugal, Russia, Spain, Sweden, Uruguay, Venezuela. Sixteen other conciliation treaties were signed in 1928, 1929, and 1930: Albania, Austria, Belgium, Bulgaria, Czechoslovakia, Estonia, Ethiopia, Finland, Germany, Hungary, Latvia, Lithuania, Luxemburg, Poland, Rumania, Yugoslavia. Two others had been signed with Egypt and Greece and were in process of ratification.

MIXED CLAIMS COMMISSION. On January 8, the White House at Washington announced the appointment of Roland W. Boyden of Boston as umpire of the Mixed Claims Commission, United States and Germany, to succeed the Hon. Edwin B. Parker, who died in 1929. The agreement of Aug. 10, 1922, between the United States and Germany provided that the two governments should select an umpire for the Mixed Claims Commission and the Department of State consequently inquired of the German Embassy whether

the selection of Mr. Boyden as successor to Judge Parker would meet, with the approval of its government. The German Ambassador, in informing the Department that he had brought the matter to the attention of his government, stated that the German Government would "welcome the nomination of that eminent jurist." Later Mr. Boyden was appointed by President Hoover to the Hague Arbitration Court.

GENERAL AND SPECIAL CLAIMS COMMISSION (UNITED STATES AND MEXICO). Dr. Horacio Alfaro of Panama was appointed Presiding Commissioner of both the General and the Special Claims Commissions, and the first named tribunal commenced its session in Mexico City in August. Up to the end of 1930 no date had been fixed for the resumption of hearings by the Special Claims Commission. The General Claims Commission was composed of Dr. Horacio F. Alfaro, Presiding Commissioner; Fred K. Nielsen, Commissioner appointed by the United States; and Señor Licenciado Genaro Fernandez MacGregor, Commissioner appointed by the United Mexican States. The Special Claims Commission was composed of Dr. Horacio F. Alfaro, Presiding Commissioner, Ernest B. Perry, Commissioner appointed by the United States; and Señor F. Gonzalez Roa, Commissioner appointed by the United Mexican States. James A. Langston, was the attorney and secretary of the Agency.

WAR CLAIMS SETTLEMENT. Hon. James W. Remick, of Concord, N. H., was appointed by the President and his nomination confirmed by the Senate, as War Claims Arbitrer, under the Settlement of War Claims Act of 1928, to succeed the late Judge Edwin B. Parker. Judge Remick took office Jan. 13, 1930. The Arbitrer finally disposed of all ship claims pending before him in June, 1930, and certified tentative awards therein to the Secretary of the Treasury for payment. The awards were tentative only in the sense of the statute in providing that awards shall be prorated, if need be, in order that the aggregate of all the awards (in ship claims, patent claims, and the radio-station claim) shall not exceed \$100,000,000 to German nationals. The first tentative awards in patent claims were entered by the Arbitrer on December 4. The remaining patent claims and the radio-station claim were being prepared by counsel for submission to the Arbitrer.

The following from the Report of the Secretary of the Treasury of the United States for the fiscal year ended June 30, 1930, pages, 70-71, may be of interest in this connection:

Under the settlement of war claims act of 1928, it is the duty of the war claims arbitrer, within certain limitations, to hear the claims of the German, Austrian, and Hungarian nationals and to determine the fair compensation to be paid by the United States for ships seized by it, a radio station sold to the United States, and patents sold or used by the United States.

On June 5, 1930, the arbitrer entered tentative awards for 94 merchant ships belonging to German nationals, together with certain property contained therein, in the aggregate amount of \$74,243,000, including simple interest thereon at 5 per cent per annum from July 2, 1921, to Dec. 31, 1928, and certified them to the Secretary of the Treasury for payment under dates of June 13 and 16, 1930. The Treasury immediately prepared regulations covering such payments and issued them, together with a form for making application for payment, to the claimants under date of June 23, 1930. The Secretary of the Treasury determined on the same date that, of the \$25,000,000 reserved from the appropriation of \$50,000,000 made in May, 1928, for payments on account of the tentative awards of the arbitrer, the sum of \$20,000,000 should be paid on account of the tentative awards entered by the arbitrer on account of ships and property contained therein. Each claimant, therefore, received 26.985152525 per cent of his tentative award. Substan-

tially all of the payments on this account were made on July 18, 1930. The arbitrer has not certified to the Secretary of the Treasury any awards on account of the claims other than the tentative awards covering ships and property contained therein.

As to the last sentence, this situation is changed by the awards entered Dec. 4, 1930, in certain patent claims:

Under the amendment of the settlement of war claims act referred to above, which authorized the appropriation of additional funds at any time to pay the awards of the arbitrer, but which are not to be available until such awards are certified to the Treasury for payment, there was appropriated in the second deficiency appropriation act of June 3, 1930, such additional amounts as may be necessary to pay the aggregate of the awards of the arbitrer, to be immediately available after the date on which such awards are certified for payment and within the limit of \$100,000,000 authorized for the claims of German nationals against the United States and the limit of \$1,000,000 for the claims of the Austrian and Hungarian nationals against the United States. The Treasury is therefore in a position to make immediately such additional payments on account of the final awards of the arbitrer as will equal 50 per cent of the total amount of the awards entered in favor of German nationals and to make payment in full of the awards entered in favor of the Austrian and Hungarian nationals as authorized by the settlement of war claims act, and thus save interest at the rate of 5 per cent per annum. The remaining 50 per cent of the appropriation made available for the awards of the arbitrer in favor of German nationals will be used, as authorized by the settlement of war claims act, to make payment of the awards of the Mixed Claims Commission in favor of American nationals. The balance due on account of the awards in favor of German nationals will be paid, as and when funds are available for that purpose, in accordance with the priorities established by the settlement of war claims act.

ARBITRATION, LABOR. See LABOR ARBITRATION AND CONCILIATION.

ARCHAEOLOGICAL INSTITUTE OF AMERICA. A society for the promotion of archaeological investigation and research, founded in Boston in 1879 and incorporated by Act of Congress in 1906. In 1930 it had 56 affiliated societies, or chapters, with a membership of 3460. It maintains a lecture system by which it sends to each society three to five prominent speakers who give illustrated lectures during the winter season. The Charles Eliot Norton Lecturer for 1930-31 was Dr. Robert S. Conway of Manchester, England, who spoke on Vergilian subjects. Through the work of its schools and of a number of important committees the institute for about half a century has made notable contributions toward the uncovering of the records of the past. These include the American School of Classical Studies at Athens, the School of Classical Studies of the American Academy in Rome, the American Schools of Oriental Research in Jerusalem and Bagdad, the School of American Research in Santa Fé, N. Mex., the American School of Prehistoric Research at Peabody Museum, Yale University, and the Committee on Mediaeval and Renaissance Studies.

The thirty-second general meeting of the institute was held at the State University of Iowa in Iowa City, Dec. 29-31, 1930. Among the important papers read on this occasion were: "The Escargotiers of Eastern Algeria," by George L. Collie of Beloit College; "The Reaper Design on Gnostic Amulets," by Campbell Bonner of the University of Michigan; "The Significance of the Deeper Excavations at Chetro Keti," by Edgar L. Hewett of the School of American Research; "The Venetic Goddess Rehtia," by Robert S. Conway of the University of Manchester; "The Twenty-sixth Lydian Inscription," by

George W. Elderkin of Princeton University; "The Excavations in the North Cemetery at Corinth in 1930," by T. Leslie Shear of Princeton University; "The 1930 Excavation at Tell Beit Mirsim," by Ovid R. Sellers of the Presbyterian Theological Seminary, Chicago; and "Recent Excavations in the Forum of Trajan," by Frank G. Moore of Columbia University.

The official organ of the society is the *American Journal of Archaeology*, a scientific quarterly, while *Art and Archaeology*, a non-technical monthly, is published by the institute's Washington society. In 1930, in connection with its study of the Mythology of All Races, the institute published *Eddic Mythology* by Canon John A. MacCulloch, which is vol. ii of a set of 13 volumes. The officers in 1930 were: President, Ralph Van Deman Magoffin of New York University; vice-presidents, G. H. Chase of Harvard University, H. R. Fairclough of Stanford University, H. N. Fowler of the Library of Congress, Frederick W. Hodge of the Museum of the American Indian, Charles Hallam Keep of New York City, G. J. Laing of the University of Chicago, D. M. Robinson of the Johns Hopkins University, Mrs. William T. Semple of Cincinnati, T. Leslie Shear of Princeton University, Percy S. Straus of New York City, Paul A. F. Walter of Santa Fé, Mrs. J. J. Whitehead, Jr., of Promfret, Conn.; general secretary, Albert Billheimer of New York University; treasurer, Arthur Daly of New York City; and recorder, Horace W. Wright of Lehigh University. See ARCHÆOLOGY.

ARCHÆOLOGY. The year was rich in archaeological activities and the results obtained in many cases were of the utmost importance in the reconstruction of our picture of the ancient past.

At Chilla (Morocco) the French turned up part of a dedication to L. Aurelius Verus, an adopted brother of Marcus Aurelius. They also recovered part of a fine female figure preserved from the waist downward. No coins or bronze objects of a precise date were found to assist in locating the finds exactly. At Cyrene the Italians discovered a perfect marble stele which carries the will of Ptolemy Euergetes in which he bequeaths his kingdom to Rome provided he dies without a legal heir. Ptolemy, it will be remembered, was succeeded by an illegitimate son, Apion, upon whose death ten years later the kingdom actually passed to the Romans. Northwest of the Owenat oasis in the Libyan desert the British found a remarkable circle of stones standing three feet in height and twenty-seven across arranged in a manner similar to the stones of the Stonehenge. The discovery was made in a desert 150 miles from the nearest water.

South of Assuan in the Valley of the Lion, in Egypt, were found some 16 cemeteries and 250 graves. One of the cemeteries dates from the eighteenth dynasty while another is Græco-Roman. For the most part the finds belong to the civilization represented at Meroe. Much prehistoric material in an intact state was recovered. The tombs of the Meroitic culture were of the middle of the third millennium.

One of the most important of the finds made this year in Egypt was that of the huge tomb of Ra-Ouer, the high-priest of Nekheb. It lies near the sphinx at Cairo. The tomb is in plan 400 by 100 feet and is two stories in height. In all there are 80 rooms and 30 labyrinths. Mute evidence of what had happened to the burial in antiquity

was the finding of a severed hand in a coffin in one chamber, and the handleless body of a person on the floor nearby. Apparently by a strange accident a heavy stone fell upon the robber just as he inserted his hand into the coffin to tear a necklace from the throat of the mummy and severed his hand allowing him to perish nearby. The necklace itself, composed of 40,000 gold beads and bits of lapis lazuli was found on the floor close to the coffin. The name of the dead was Kaim Nefret. In the tomb was recovered a most interesting coffin on which among other decorations was represented a chess board and men. This find is valuable since both Persia and China have laid claim to the discovery or rather invention of the game.

For the first time the lotus flower was found in its original form before grafting processes. Important inscriptions on the walls refer to Cheops and his pyramid. But the most interesting find perhaps was that of a stele bearing an inscription which records that when Pharaoh was one time walking through the precincts of the Holy City he inadvertently touched the person of his companion the high priest with the staff which he carried in his hand. So sacrilegious was this that the king at once humbled himself there with an apology, and to inform posterity of the incident had the episode recorded on this stele. The inscription thus throws much light on the importance and sacredness of the high priest in Egyptian religion. This fact also explains in part why Ra-Ouer's tomb exceeded in size those of some of the royalty.

The tomb of the father of the high priest was found undisturbed. In it was discovered the mummy of a woman who was in all probability the mother of the priest, Nefret. The father's name was Akht-Hotep and he is designated as foster parent of the Pharaoh and is called chief physician to the king, the king's treasurer, guardian of the king's granaries, guardian of the pyramid of Kufu, and high priest of the temple of Kufu. An elaborate system of false passages seems to have saved the burial from molestation in antiquity. Near to the pyramid was also found the temple tomb of Ra-Ouer in which reposed 11 life-sized statues of his double carved in the wall.

The Expedition of the University of Pennsylvania this year was occupied in clearing the great mastaba at Meidum. It is among the largest in Egypt. Examination revealed that originally it was constructed in three steps, each stage being enclosed with brick while the core was of rubble. At a later date the enclosing wall was raised and the vacant space filled in with rubble thus producing the true mastaba shape. On the eastern face was found a new offering niche which indicated that the tomb chamber was to be found at the northern end. While the name of the owner is unknown he seems to have been some one of some degree of sanctity since in the later eighteenth dynasty the outside wall was practically honeycombed with intruded burials. One of these proved to be a gayly painted coffin of a Cypriote who had lived at Meidum in the time of Thothmes III. A find of peculiar interest was that of a deep pit a short distance from the mastaba at the bottom of which were 12 burial chambers radiating from the wall of the pit. These were found to be crammed with coffins stacked to the ceiling. On the face of the mastaba was discovered a stairway entrance which led down to the bottom of the core of the structure. At the

inner face of the wall was a pit of over 6 feet in depth and across this a tunnel which, 15 feet from the opening, was closed by a wall of brick. Beyond this wall the passage ran on 12 feet and then stopped. Its obvious purpose was to mislead any one attempting to rob the tomb. Of special interest as showing the care with which the bodies were buried was the finding of the begemmed body of Sat-Her-em-Hat under which was discovered a pad of neatly folded linen $4\frac{1}{2}$ feet in width and 70 feet long. The burial was about 2000 B.C.

About 20 kilometers (12.43 miles) south of Luxor, near El-Gherèra the Italian Mission began work on the site of El Gebelen. This was the site of the city of Hathor where earlier excavations had revealed a great cemetery dating from the fourth dynasty to Christian times. Here many pre-dynastic grave were uncovered. The necropolis dates about 5000 B.C. In all about 200 burials were found. The form of the grave is circular or oval and the bodies lie with the hands placed over the eyes, wrapped in linen or skins. Only one or two vases were found with the individual burials.

In the Meremba settlement on the Nile the expedition of the Vienna Academy discovered anthropological material revealing that a people lived here about 5000 B.C. engaged in husbandry and hunting. Their food was the pig and the hippopotamus. They seem to have been most lightly clad and to have painted their faces around the eyes. Apparently to satisfy the appetite dead corn was scattered on the body at the time of burial.

Work was resumed this year at Tel el Amarna by the joint expedition of the British Museum and the Egyptian Exploration Fund. Perhaps the most interesting find was that of a jug which contained over a score of gold nuggets and large gold rings as well as many silver bars. Not the least interesting of the contents of the jug was a silver statuette of a god. The head was of gold. A large house of a Roman from Messene was also uncovered. In the house were a workroom and several storerooms. In one of these rooms was found a beautiful bronze knife and a pair of scales also of bronze.

On the Sinai Peninsula the joint expedition of Harvard University and the Catholic University of America found some interesting inscriptions in an unusual Sinitic script. These inscriptions appeared at the entrance to the turquoise mines located near the temple of Hathor. These inscriptions report the successful defense of a number of baskets of turquoises which robbers attempted to steal. The time was about 4000 B.C. The population of the place must have been mixed, since besides Hathor a Semitic goddess named Baalat was also worshipped. Ruins of extensive copper smelters were also uncovered in the oasis of Bir Nasbr about 15 miles from the temple of Hathor. The importance of the place is established by the fact that great heaps of slag lay spread out over 10 acres of ground.

At the site of Jericho in Palestine the Marsten expedition has uncovered the parapet walk on the Canaanite rampart of the town. Here a raised platform for the archers was revealed. There were found to be several superposed towns on the site. On the west side of the town has been laid bare a wall of the early bronze age. About 165 feet of wall 21 feet in height have been cleared. This wall was part of a city which dates long before the time of Joshua. At Petra has been found some fourth century black-glazed Attic ware and

in the same stratum some Hellenistic lamps, etc. Objects showing Ptolemaic, Parthian, and South Arabian influences were also recovered.

At Ras Shamra (Syria) the French carried on their second campaign. The excavations were carried on in the Royal Cemetery. Where the strata had been left undisturbed they discovered substructures of a complicated plan. They are of the second millennium. Many objects connecting with Egypt were found in the chambers. These included carved stela, large stone phalluses, engraved cylinders, etc. In two chambers were discovered some large jars like those found at Hagia Triada in Crete. In one place which appears to have been the Scribes' school was uncovered a quantity of inscribed tablets suggesting that here was a library. Some of them carried a new writing in what appears to be the earliest alphabetic form. Purely alphabetic, it has 28 letters like the Arabic as against the 22 of the Canaanite. The tablets seem to be lists, exercises, letters and rituals. The most important tablet shows a kind of epic poem to Taphon. Many other gods are mentioned. The find belongs to the end of the second millennium B.C. The most curious of the tablets is a bilingual lexicon which seems to be in Sumerian although in place of Babylonian forms which usually appear to explain the Sumerian is an unknown tongue. In May a great sanctuary was uncovered. It contained two great courts which were surrounded by very thick walls. In the middle of one of the courts was discovered an altar. Also in these courts were found parts of some very fine statues of gods in granite. Along with these were recovered fragments of Egyptian bas reliefs dating in the late 18th and early 19th dynasties.

At Tel Beit Mursim, 13 miles south of Hebron have been found the remains of ten cities built one on top of the other. Each layer was defined by a stratum of ashes in which many cult objects such as scarabs were found. From the finds here, light has been thrown on the dates of Abraham, the destruction of Sodom and Gomorrah, the exodus and the Israelite conquest of Canaan. The earliest city dates in the time of Abraham (2000 B.C.). It is believed that the signs of frequent burnings point to the unrest of the Hyksos period. In the later bronze age (1000-1200 B.C.) dates the city destroyed by Othniel. In the time of the Israelite and the Canaanite conquests there is evidence of disastrous warfare. The last city on the site was destroyed by Nebuchadnezzar.

At Jerusalem the American School of Prehistoric Research and the British School of Archaeology found some 5000 burials from the Aurignacian epoch of the old stone age.

At Kish in Mesopotamia proofs were found that the city was flooded about 3000 B.C. At Ur remains of a wall 20 feet high and 80 feet wide which once enclosed the city were traced for a distance of $2\frac{1}{2}$ miles. The base consists of a rampart of unbaked bricks on top of which was a wall of baked brick. It was erected about 2500 B.C. by Ur-Unger. The back of the wall was for the most part covered by the terrace upon which the town was built. At this time the city was practically surrounded by water with the Euphrates on the west and canals on the north and east. A canal seems to have passed through the town and to have terminated at its north end in a harbor protected by moles. Four temples have been discovered. Two are by Nebuchadnezzar and Nabonidus and two (earlier) bear the name of Rim-Sin of Larsa. This would be

about 2000 B.C. Of the two latter temples one was dedicated to the water god En-ke the other to Ningishgida. They were built 1990 and 1985 B.C.

The Germans were at work on the site of Erech where a small Innin sanctuary was found. Much information was obtained as to the relations of the cities of Ur and Erech.

On the island of Cos excavations brought to light a Hellenistic theatre and temple. No trace of a stage was found. Near the village of Cardemena on the same island another larger theatre and a smaller temple were unearthed.

At Knossus the outer part of the great palace was cleared showing a length of the wall with its great blocks of stone. Two more refuse pits filled with the finest fragments of the middle Minoan period have been uncovered. These remains were found over houses dating from the earlier age in which were found brightly painted floors and stairs.

In the sea near Chersonese divers discovered what were thought to be the ruins of old Chersonese mentioned by Strabo. The city was found enclosed in a semicircle of wall with towers some 18 feet in diameter. One larger tower is probably that of the western gate. A paved market place and many streets also were located.

On the site of ancient Bouthrotum the Italians found some important public buildings and a third-century theatre which was rebuilt in Roman times. Some excellent Greek and Roman sculptures were found in the theatre.

Professor Shear's campaign at Corinth resulted in the discovery of 235 graves in the north cemetery. The objects range from the Neolithic to Roman times. At a depth of 10-18 feet was found a large amount of neolithic fragments; next came the early Helladic (3000-2000), the middle Helladic (2000-1600) some 7 feet below the surface, late Helladic, geometric and the succeeding classic styles. In a child's grave about 500 B.C. was found a bronze cauldron in which was a perfect Corinthian helmet.

On the site of the Heraeum at Pera Chora near Corinth the British School found the ruins of the temple 2 feet above sea level. The building originally was 28 by 60 feet.

It is interesting to note that the British School working at Ithaka found an almost complete Corinthian plate and a late terra cotta ex voto bearing the words "A prayer to Odysseus." In this connection it is also interesting that the Greeks excavating on the same island had found what they thought were the famous springs mentioned in the *Odyssey* as in the island of Ithaka.

In Italy work was continuously carried on at the site of Herculaneum. Much of the work was being done with pneumatic drills. In places the town was buried at a depth of 65 feet. Here the houses were found to be of a different type from those at Pompeii, for the peristyle is located in the front of the house. The finds were most instructive. A number of wooden doors, stairways, beams, door jambs and lintels were found completely preserved, although of course in a very carbonized state. A twin bedroom about 8 feet square and without windows was found, and another twin bedroom with two small windows. The beds themselves remind one of a harrow. At Lake Nemi a curious palisade was discovered on the west bank of the lake. At Ostia a cemetery belonging to the third century of the empire was opened between Rome and the sea. It seems to

have been an artificial island. It was called Libanus Almae Veneris. The place was a cemetery of sailors, fishermen and tradesmen. The tombs were arranged in groups of five. All were of brick carrying on the outside a tablet with a simple inscription on a marble slab. One door found in place showed the entrance closed by a solid piece of wood lined with lead. Its hinges consisted of iron pivots. At Pompeii an interesting find was a three-legged table support which carries the name "Casca." It is known that the famous Casca had a house at Pompeii and it is wondered if this may have been his property. At Rome north of the Capitoline was found a very unusual type of house which was at least seven stories high. It belongs in the second century A.D.

In England at St. Albans (Verulamium) was uncovered one of the finest mosaic floors in England. It dates around 100 A.D. Examination of the site has shown that the city was protected by a fosse 80 feet wide and 25 feet deep beside a bank 45 feet wide and 135 feet high. The city gate was 100 feet broad with round towers one either side of a quadruple opening—the two central ones for carts. See PHILOLOGY, MODERN.

ARCHITECTS, THE AMERICAN INSTITUTE OF. The national organization of the American architectural profession, founded in 1857. Its objects are to organize and unite in fellowship the architects of the United States; to combine their efforts so as to promote the æsthetic, scientific, and practical efficiency of the profession and to make it of ever-increasing service to society; and to spread an understanding of art and service among the people. Its activities include devising methods for improving and extending architectural education, not only in the universities but in the lower schools; securing proper laws for the registration of architects in the various States; developing a service for architects which will give them for their actual problems data relative to building materials and methods obtainable from no other source; maintaining a public information service to tell the prospective builder the financial, as well as the æsthetic service, of the architect.

The institute is governed by officers and a board of directors elected by, and responsible to, the delegates from the 66 chapters, assembled at the annual convention. The directors and executive committee hold quarterly meetings in various parts of the country, and the regional directors keep in active touch with the work of local chapters throughout the year. The membership in 1930 numbered more than 3000 of the 10,000 practicing architects in the United States.

The sixty-third annual convention, held May 21-23, 1930, in Washington, was devoted to a symposium on contemporary architecture. The object was stated as the reaching of a common ground between modernists and traditionalists. Various speakers expressed belief in a present-day development of architectural forms, leading to a style in architecture expressive of contemporary materials and function and reflecting modern life and modern ideals. Standardization was described as false modernism, and the hope was expressed that architectural experimentation would continue, based upon a sound foundation of knowledge of architecture in the past.

Successful culmination of several years of effort on the part of institute members to accomplish the passage of the Capper-Cramton and the

Shipstead bills was announced by the president in his opening address. The former bill provided for the purchase of extensive park lands, including land along the Potomac River, thus preserving the Potomac Gorge and the Great Falls as a part of the development of the natural beauties in the capital region. The Shipstead Bill provided for the control by the Fine Arts Commission of the development of private property adjacent to Federal land.

The committee on education reported that the past-president of the Association of Collegiate Schools of Architecture, Goldwin Goldsmith, and his successor, Dean Everett V. Meeks, in cooperation with the committee, had enlisted the interest and help of the Carnegie Corporation to finance a preliminary survey of teaching policies and results in schools of architecture. In the report of the committee in historic monuments and natural resources the increasing need for attention to the preservation of old buildings of historic interest was emphasized. The committee on city and regional planning reported stimulation of public interest in city planning through radio talks and newspaper articles, and announced that the film portraying the development of the plan of Washington, purchased by the institute, had been widely shown under the auspices of the chapters and other organizations.

The fine arts medal of the institute was awarded to Adolph Alexander Weinman for distinguished achievement in sculpture, particularly in its relation to architectural design, while the craftsmanship medal was awarded to John Kirchmayer for distinguished achievement in wood carving. The following honorary members were elected: A. F. Brinckerhoff, S. S. Goldwater, and John D. Rockefeller, Jr., of New York City; Charles J. Connick of Newtonville, Mass.; and William A. R. Goodwin of Williamsburg, Va. Nestor Egydio de Figueiredo of Rio de Janeiro and André Arfvidson of Paris were made honorary corresponding members. The officers elected for 1930-31 were: President, Robert D. Kohn of New York City; first vice-president, Ernest J. Russell of St. Louis, Mo.; second vice-president, Horace W. Peaslee of Washington; secretary, Frank C. Baldwin of Washington; treasurer, Edwin Bergstrom of Los Angeles, Calif.

The Octagon endowment fund capital of the institute in 1930 amounted to approximately \$78,000, the income being devoted to the maintenance of the Octagon House in Washington. The organization's property and funds totaled \$440,993, of which \$53,711 belonged to the Waid Education Fund, the income being used to defray expenses of lecturers sent to various States and to preparatory schools. The institute publishes *The Octagon, a Journal of the American Institute of Architects*; *Handbook on Architectural Practice*; *Structural Service Handbook*; *The Significance of the Fine Arts*; *Standard Contract Forms*, which are in widespread use throughout the United States; and documents on the ethics of the profession. Headquarters are in the Octagon, Washington.

ARCHITECTURE. The most marked feature of the year was the continued development, at a continually accelerating speed, of the "modernist" movement all over the world, and, except in the United States, the growing number of buildings whose style was entirely international. Even in the United States, outside of the field of high buildings, where mere bulk suggests other treat-

ments, and of houses where traditionalism was still strong, this international style was winning more and more converts. This style so common in all the countries is based primarily on the metal framed window in long ranks, the use of concrete and stucco, and the avoidance of cornices, mouldings, columns, and all ornament. It is thus a style as yet exceedingly limited in its scope and vocabulary.

Founded in part on the critical work of Le Corbusier in France, and partly on the free plasticity of form that is characteristic of Mendelssohn's work in Germany, it had been developed into a canon of standardized forms, dogmatically adhered to, that possessed neither the austerity of the French critic nor the imagination of the German designer. It was supported everywhere by certain critics and designers whose enthusiasm was fanatical and unquestioning, and its holier-than-thou evangelical quality, its self-conscious avoidance of ornament, constituted a distinct danger to architectural progress. This was occasionally realized. In *L'Architecte* (Paris) for May, for instance, the editor, J. Porcher, printed a leading editorial on "Standardized Architecture," in which he embodied a warning against this standardization as the death of design, and so of architecture. "Respect for fashion," he wrote—"a taste for the imitation of forms,—the tendency towards commercialization, that is, the leveling and lessening of the inventive faculty, these are the two forces which threaten the development of modern architecture."

THE UNITED STATES. In the United States, the acceptance of this dogmatic functionalism and starkness had been less ready, though even here its supporters were growing. The sketches for the great Chicago World's Fair of 1932 show the effect of it, and its strength increased markedly during the year. Traditionalism was largely dead in the public and commercial field; the question facing America was whether in its place should be accepted the stark, austere, and limited alphabet of forms of the "functionalists," or the free inventiveness of those who feel that there is a place, even in the buildings of a machine age, for ornament, decoration, and a human loveliness.

There was little great public work completed. The University Bridge, Philadelphia, Pa., by Paul Cret, is charming in a quiet, modernistic neo-Grec manner. The Chicago Opera House, Chicago, by Graham, Anderson, Probst and White is an impressive mass seen from the river side, and possesses an unusually complete mechanical equipment, but its architectural detail and character is incoherent and undecided, striving for ostentatious lavishness and novelty, but unable ever to decide whether to be modernist or Louis XIV. The John G. Shedd Aquarium, in Chicago, by the same architects, is a simple Greek Revival building with an ingenious arrangement of the fish tanks.

In Washington, D. C., the further development for the buildings between the Mall and Pennsylvania Avenue continued with speed, though none of the units was completed. Three embassies or legations were added to the city, that of Japan; a quiet building in a modified Georgian style, by Delano and Aldrich; that of the Netherlands, by the Director of Fine Arts of the Dutch government, with high roofs, and a refined Teutonic Renaissance manner; and the great British embassy, by Sir Edwin Lutyens, in a grandiose monumental version of 18th century English classic.

The most interesting public buildings of the year were the New York State Building, in New York City, by the office of the State architect, the Stafford County Court House, St. John, Kansas, by Mann & Co., and the San Francisco Stock Exchange, San Francisco, Calif., by Miller & Pfueger. All are non-archaeological and modern in design; the first and last being differing expressions of an underlying classical dignity, and the other being both more strikingly original and less monumental. The New York State Office Building has simplicity, directness, good proportion, and was an impressive addition to the Civic Centre around the New York County Court House, with which it is in perfect harmony.

Other buildings of public character that deserve mention are the Jones Public Library, Amherst, Mass., by Putnam & Cox, a charming inviting colonial design, the American building in the Venice Exposition, by Delano and Aldrich, also colonial, and the welcome restoration by Norman Isham of the 18th Century City Hall of Newport, R. I. (originally designed by Peter Harrison) as a Chamber of Commerce. The great arena of the County Fair at St. Louis, by Kiewitt & Sohrmann, seating 12,000, is a simple, original, and interesting solution of its problem; its roof, vaulted with a patented system made from small timbers has a lovely outline, and is supported on a delicate steel trussed framework. Two rings of windows around the whole give plenty of light. The combination of materials in the construction is logical and economical, and the interior forms are well proportioned and flow naturally from the construction. Unfortunately the exterior is undistinguished, and far less effective than the impressive interior.

The Union Terminal at Cleveland, Ohio, by Graham, Anderson, Probst, and White, finally completed during the year, has a commonplace interior, not fulfilling the promise of the pleasantly outlined tower. The Central Station at Buffalo, by Fellheimer & Wagner, on the contrary, is fresh, logical, and beautiful; the novelty of its forms is not forced or stylistic, but simple and direct, illustrating the sanest American attitude. The same firm's Union Station at South Bend, Iowa, is distinguished by the same qualities. The Union Station at Atlanta, Ga., by McDonald & Co. is conservative in style, but beneath its dry and academic classic style there lies a simple and direct expression of the problem.

The growing importance of air transportation was reflected in a large number of airport buildings, in which was evident a definite groping for an adequate architectural solution. The novelty of the suitable forms suggests—almost dictates—a pure modernism of style, yet satisfactory solutions in which the inspiration is historical are found, as in the "Spanish" Curtiss-Wright Hangar at Los Angeles, by Gabel & Wyant, the Grand Central Airport at Glendale, Calif., by H. L. Gogerty, and especially in the United Airport, Burbank, Calif., by the Austin Co., remarkable for the good planning evident in the relation between field, roads, parking spaces, and building. The Curtiss Wright Hangars and Restaurant at Valley Stream, Long Island, by Kenneth Franzheim, and the Detroit Municipal Airport Buildings, by the municipal engineer, are simple, direct, modern in spirit, but uninspired. The great Hangar and Station at the Curtiss-Reynolds Airport, Chicago, Ill., by Rebori & Wentworth, resembled some European precedents

in its size and general layout; its observation decks and central landing space were unusually well arranged. The Wayne County Airport building, Wayne County, Mich., by Giffels & Valet, is excellent in itself, but the relation of field, building, and roads is not studied. The most successful airport building of all, is one of the smallest, The Washington Airport, Washington, D. C., by Holden, Stott, & Hutchinson. Here not only are the plan relationships right, but the architectural composition and the style expression combine to give a result simple, unassuming, natural, and beautiful.

The financial stringency of the year seemed to affect large commercial buildings less than any other type—probably because they were financed and started before the condition was felt. The remarkable fact in their design was the well-nigh complete disappearance of traditional style. Outside of belated attempts to use modified Gothic to express verticality, as in the Steward Office Building and Theatre, Lincoln, Neb., by Davis & Wilson, and the Luhrs Tower, Phoenix, Arizona, by Trost and Trost, the reign of non-traditional forms was complete. This does not mean uniformity.

There seemed three general types evolving. The first is that in which rectangularity is the basis of design, as in much work in New York by the firm of Ely Kahn, such as the Bricken Building and the Holland Plaza Building. The second type is that of free, and generally romantic mass composition, represented especially in the work of Holabird & Root of Chicago, such as the lovely upward sweeps of the Rand Tower, in Minneapolis, Minn., and the La Salle-Wacker building, Chicago, by Holabird & Root, and Rebori & Wentworth, associated. The third is that of the simply composed and richly decorated type particularly associated with Voorhees, Gmelin, and Walker, as in their Irving Trust Building, New York, with its vertical planes accented by varying angles, their Genesee Valley Trust Co., Rochester, New York (with Carl C. Ade), and their very beautiful New Jersey Bell Telephone Building in Newark. The Ohio Bell Telephone Building, Akron, Ohio, by Mills, Rhines, Bellman & Nordhoff, is an even more perfect expression of the same qualities, and one of the most successful buildings of the year, and the Richfield Oil Co., Los Angeles, by Morgan & Clements is another example, perhaps even over-rich.

The development of extreme height in building was shown in the Bank of the Manhattan Co. Building, in New York, by H. Craig Severance & Yasuo Matsui, with an effective pyramidal top, and the Chrysler Building, New York, by William Van Alen, at the end of the year the tallest completed building in the world. The former is the more successful because it is the less assuming; its very lack of interest, strangely enough, is in its favor. The basic trouble with the Chrysler building is its lack of unity. The central part of the tower shaft is extremely effective in its opposition of vertical and horizontal lines, but the bottom of the building is utterly without distinction, and the lavish lobby with its funereal entrances is perplexing and ineffective. The tower top, with its receding curved forms and final needle in bright metal is inventive, but entirely without structural significance or any adequate sense of scale. Its soft forms are fundamentally frivolous, and frivolity on such a gargantuan scale is not only itself disagreeable, but it also

1. "FOUR-FORTY SUTTER" BUILDING, SAN FRANCISCO

J. R. Miller & T. L. Pfueger Architects

2. A MODERN DWELLING—SILVER END GARDEN VILLAGE DEVELOPMENT, ENGLAND

Sir John Burnet & Partners, Architects

3. NEW YORK STATE OFFICE BUILDING, NEW YORK CITY

State Architect, Albany, N. Y.

completely dwarfs the successful scale of the tower it crowns.

The Squibb Building, New York, by the firm of Ely J. Kahn, is a beautiful, glowing white mass, its setbacks composed effectively, but the lower portion is entirely unrelated to the upper, and the entrance and show-window treatment looks skimmed and unreal. In the Daily News Building, by John M. Howells and Raymond Hood, there is a similar fault; the superb straightforwardness of the simple upper part—one of the most successful treatments of the tall building yet achieved—is contradicted by an entrance that is weak and sentimental to the last degree, and an over-ornamental lobby like a circus side show. In many ways the two most consistently successful high buildings were in San Francisco, the Shell Building, by George W. Pelham, with unusually successful entrance and shop-front treatment, and the 450 Sutter Building, by Miller and Pfleger, superb in its vertical accent by means of slightly projecting window bays and ornamental spandrels.

Outstanding among the smaller commercial buildings were the Ohio Savings Bank and Trust Company of Toledo, Ohio, by Mills, Rhines, Bellman & Nordhof, with beautiful setbacks and a great arched entrance; 1616 Walnut Street, Philadelphia, by Tilden, Register & Pepper, with great scale in its entrance; and the Bank of Kalamazoo, Kalamazoo, Mich., by Weary & Alford. The most interesting shop buildings of the year were that for the L. P. Hollander Co., New York, with a lovely exterior by Shreve, Lamb and Harmon, in black, silver, and glass, and novel and charming interiors by Jack Peters and Eleanor Le Maire of California; the Sommer and Kaufman Shoe Store, Los Angeles, by Kem Weber, with a delightful, Viennese playfulness; and the Bullock's Wilshire Department Store of Los Angeles, by Parkinson & Parkinson.

There was a great reduction in the amount of hotel and apartment buildings. The Hotel Pierre, New York, by Schultze & Weaver, is monumental and effective in outline, and the frank separation of the high tower and the long low base is pleasant. The rich treatment and great scale of this base are beautiful additions to the streets they grace, and effectively and invitingly express the hotel function. New York also saw the completion of several typical large apartment houses. The Beaux Arts Apartments, by Kenneth Murchinson and Hood, Godley & Foulhoux, use banded horizontals effectively, but the whole is cramped and tight, and the London Terrace Apartments, by Farrar & Watmough, are monotonous despite their mass. No. 1648 East 50th Street, Chicago, by deGolyer & Morgan, is airy, light, but lacking in domestic character—like many modern apartments in Chicago it might just as well be an office building; 1100 North Dearborn Street, Chicago, by McNally & Quinn, is more homelike, though equally light.

The most interesting apartment house of the year was the low-priced Grand Street Apartments, New York, by Springsteen & Goldhammer; the group plan of the block, the light and air achieved, the planning of the individual apartments, and the simplicity and effectiveness of the architectural treatment are all commendable. They are a great inspiration in showing the possibilities of slum clearance and rehabilitation. The rents, however, were still out of the reach of unskilled laborers and many factory

workers. It would be interesting to see another type built with smaller apartments, studied along the line of the European "minimal" housing.

In housing for less congested districts, the faculty housing group at Princeton University, by Aymar Embury II, carries on adequately the simple English style set by the group (by Park & Morgan) already built; and Mayfair Lane, in Buffalo, by E. B. Greene and A. H. Hopkins, is an ingenious arrangement with a raised garden terrace over a sunken drive leading to basement garages, with apartments on each side above.

The number of private houses of the year was greatly reduced due to the financial stringency. Of the more conventional examples, the quiet modernized colonial house of M. W. Weld, at Stanwich, Conn., by R. H. Dana, Jr.; the Salvage house, Glen Head, Long Island, by Roger Bullard; the Pierce house at LaQuinta, Calif., by Gordon Kaufman; the Thomas house, Pasadena, Calif., by Palmer Sabin (that received the A. I. A. gold medal); and the lovely Venetian-type villa of J. B. Robertson, San Antonio, Texas, by W. M. Bowman; all deserve mention for general excellence of design and livability. The W. S. Wasserman house at Whitemarsh, Pa., by Howe & Lescaze, is an attempt to give a purely LeCorbusier abstract modern exterior to a conventional plan; the "Health House" for Dr. Lovell, outside of Los Angeles, by R. J. Neutra, is equally modern and stark, but much more convincing, because the varied levels of the site, and the requirements of the plan suggests more directly a purely unconventional and modern treatment. The Wilputte house, New Rochelle, N. Y., by Julius Gregory, is a beautiful example of an old tradition (Georgian) treated freely and creatively in a purely modern manner; it achieves an unostentatious fresh beauty and fitness not unlike that of some of the best modern German private houses.

The financial slump also affected adversely the amount of educational and institutional building. The most important educational work of the year was the Henry Art Gallery at the University of Washington, in Seattle, Washington, by Bebb & Gould, distinguished by its large wall surfaces of patterned brick and its simple modernized Gothic detail; the new dormitory group of Girard College, Philadelphia, by John T. Windrim, in an interesting variant of the Greek revival style; and Eliel Saarinen's Cranbrook Academy of Art, Cranbrook, Michigan, with its lovely simplicity, variety, and fresh handling of typically American materials and forms. The Oak Lane Country Day School, Philadelphia, by Howe & Lescaze, with its dry and academic use of starkly "modernistic" forms of the LeCorbusier type seems, however interesting, forced and out of place by contrast. The Saarinen building is a building first and foremost; the Howe & Lescaze school gives the impression of being theoretical and doctrinaire. The Franklin Street School, Hempstead, Long Island, by Ernest Sibley, and the Flower Hill School, Port Washington, Long Island, by Wesley S. Bessell, are both examples of the best type of rambling, colonial day schools.

Among the club buildings of the year, the following are worthy of note: The Junior League, New York, by the office of John Russell Pope, scholarly, lavish yet restrained, in a modified Georgian style; the Kippis Bay Boys' Club, New York, by Delano & Aldrich; the Colonial Dames headquarters, New York, by R. H. Dana, Jr., a

lovely warm-toned recreation of colonial atmosphere superbly handled; the Longue Vue Country Club, Pittsburgh, Pa., by Johnson & Cocken, with picturesque high roofs well composed; and the Lake Norconian Club, Los Angeles, by D. Gibbs, a colossal, pretentious scheme well carried out.

In ecclesiastical work the most widely known event was the opening of the Riverside Church, New York (known popularly as the Rockefeller church), by Henry C. Pelton and Allen & Collens. Its enormous size is bewildering rather than impressive; its great tower dwarfs the whole scheme, and is itself broken up into too small units by a complexity of unnecessary buttresses, gables, and pinnacles; the detail is purely archaeological, and however perfect in execution lacks all the verve, personality, and sense of life of the original inspiration—Chartres Cathedral. When books replace creation in architecture, only dead and uninteresting results can follow. The interior with its spreading vault is much more effective than the outside. Yet even in the interior one feels that archaeology has replaced design; that the style has been accepted as a chain, and not as an inspiration.

The Gothic treatment of St. Paul's Episcopal Church, Yonkers, N. Y., by Cram and Ferguson; and that of the Holy Cross Roman Catholic Church, Chestnut Hill, Pa., by Henry D. Dagit & Son, is, on the other hand creative and alive. The first Baptist Church of Ashville, N. C., by Douglas D. Ellington, is a free development of forms from the problem; the exterior is altogether successful, but the modernistic interior is dry and conventional. The year saw the final completion of St. Bartholomew's Church, N. Y., by the building of the dome by Mayers, Murray and Phillip. It is fresh in design, and pleasant in curve and color, but nevertheless not entirely successful; one feels that a more dominant shape was required. It is, however, harmonious and fitting.

GREAT BRITAIN AND THE BRITISH DOMINIONS. The year 1930 was notable for competitions in England. Especially noteworthy were the competitions for Worthing Town Hall, won by Charles Voysey, F.R.I.B.A.; for a public library and museum at Chelmsford, won by R. A. Cordingley, F.R.I.B.A.; for a street front for certain property owned by the City of Carlisle, won by T. G. Richards; and for Luton Town Hall, won by Gass and Hope, F.F.R.I.B.A. The New Buildings of Magdalen College, Oxford, by Sir G. G. Scott are academic, but in exquisite harmony with the old, and formed the outstanding example of public work actually completed.

Many office buildings in London showed the conflict of the influence toward classic simplicity originating in America, with the influence of the French type of modernism. Stratton House, by W. Curtis Green, and the new department store building for Gamage, by the Messrs. Joseph, with Sir Edwin Lutyens as consultant, both show the classical influence. Stratton house is peculiarly American in its Italianesque dignity. India House, by Sir Herbert Baker, R.A., is quietly detailed and pleasantly composed; much of the detail is Indian in inspiration. An Office Building in Grace Church Street, by S. Sylvester Sullivan, F.R.I.B.A., is illustrative of the more radical trend; full of subtleties, it is altogether successful up to the main cornice; above that, like so many London buildings, it is confused. The new Daily Telegraph building, by Elcock and

Sutcliffe, and Sir John Burnet and partners, associated, is in an English variant of the more lavish French modernist style; and Beckstein Hall, by Sir John Burnet & Partners, over an unsatisfactory first floor has a façade of great interest with a curved corner and lovely vertical reeding on piers and spandrels.

Large modern apartment houses were more and more evident in the year's building. The Grosvenor Estate Housing, Millbanke, by Sir Edwin Lutyens, has great blocks of building covered with a monotonous modernist checkerboard pattern. Gordon Court, Wood Lane, by Hendry and Schooling, F.F.R.I.B.A., for the United Women's Houses Association, is simpler, more effective, but in planning woefully inferior in standard to American examples. Among larger apartments for a wealthier class of people Eyre Court, Finchley Road, by T. P. Bennett, F.R.I.B.A., is well planned with a simple, rather bleak brick exterior; and Crophorne Court, Maida Vale, by Sir G. G. Scott is original in plan, and attractive in appearance.

Several theatres of importance were opened during the year. The Cambridge Theatre, Seven Dials, by Wimperis, Simpson, & Guthrie, has a beautifully detailed simple auditorium with a great elliptical ramping vault over it; ceiling and walls are covered with metallic leaf. Victoria Theatre, by W. E. Trent and E. W. Lewis, has a modernistic interior lit by lights concealed behind vertical tiers of fan-shaped ornaments. The Whitehall Theatre, by E. A. Stone and Partners, is also richly modern in tone, but much more distinguished and refined in detail both inside and out.

Two more interesting examples of a purely new and fresh approach to architectural problems were noteworthy. The first was the new shipping building of the Gramophone factory at Hayes, Middlesex, by Wallis, Gilbert and Partners, a distinguished example of cantilevered concrete construction, with long continuous rows of windows between bands of stucco, the whole beautifully proportioned and apparently equally satisfactory from a practical and æsthetic point of view. It is well up to the standard of the best German industrial architecture, and that is the best in the world.

The second example is the completion of Silver End Garden Village, a housing development for the Crittall Company. Many architects designed units for it, but in harmony. The result is variety, vitality, and a kind of charm not often achieved in so modern a style. There seems no forcing of effect, no doctrinaire quality like that which damages the appearance and livability of many continental housing developments. Instead all is natural, simple, direct. Among the architects whose work is represented are Thomas Tait, of Sir John Burnet and Partners, James Milk, C. M. Hennell, C. H. Quennell, and J. and G. E. Clare.

In the Dominions, the Cathedral of St. Mary, Johannesburg, So. Africa, by Sir Herbert Baker and F. L. Fleming, has a beautiful Byzantine interior with barrel vaulted nave and choir, and a dome at the crossing. The buildings in Sydney, Australia, for the University Club, by Kent & Massia, and for the British Medical Association, by Fowell & McConnell, are both beautiful examples of a rather American type of modern high building design. Stanton House, Sydney, by H. E. White, is an even simpler example of a straightforward modern treatment. The completion for the Anzac Memorial in Sydney was won

by C. B. Dellit, with a design of a vast arched square pylon-like building set on a spreading square base.

FRANCE. French architecture still reflected the conflict between two types of modern or modernist design; one rich, basically classic in idea, and the other stark, theoretical, and abstract. Frequently the beauty of the decorative work at which the French are so superbly competent—in metal, glass, and marble—gives the only interest to buildings otherwise uninspired. Typical of the richer type of modernism is the Palais Berlitz, Paris, by LeMaresquier & Laloux, with vertical supports and an interesting upper portion; and the Parisian Institut d'Optique, by G. Hennequin & Son, with a plan brilliantly clever and an exterior disappointingly thin. The new department store building for La Samaritaine, by Jourdain and Sauvage, is rich and has a magnificent marquee of metal and glass. The newer apartment houses evidenced the clash of ideals in their all too usual complexity and lack of interest. Thus one by Henri Sauvage, in gray and white brick, has neither the richness of the one trend nor the simplicity of the other, and another by M. Hennequet, though interesting in its wide expanse of glass is complicated in effect; yet both are beautifully planned from the French point of view. The apartments by Charles Abella at Asnières, for the employees of the State Railway are better because simpler, with interesting projecting bays; the group plan, however, is unduly congested.

The simpler trend—the Le Corbusier influence—was best seen in two villas by Le Corbusier and P. Jeanneret, especially one at Choisy, where the grouped windows and quiet wall surfaces of the style are seen at their best, and in a villa at Vaucresson, by Pol Abraham, delightfully composed, and more free of doctrinaire starkness than most of such work. The Phébel perfume factory at Puteaux by R. Nicolas shows the application of similar forms to industrial use; the result in this case is delicate, well composed, and beautiful.

Two theatres and a bank were notable for their purely French richness and charm. The Dupont Bank in Paris, by J. Marrast, has that dominantly classic underlying feeling that is the foundation of so much French beauty. Its forms are chaste and yet not forbidding, the plan is brilliant, and the banking room attractive. The restoration of the Théâtre Marigny on the Champs Élysée, by de Grimaldi and Ulmer, is a lovely and delicate work preserving the quiet classicism of the older building. The Théâtre Pigalle, by Charles Siclis, Just and Blum, is equally lovely and delicate, though modern in expression; especially interesting is the intricate openwork metal screen between vestibule and promenade. A somewhat similar spirit of fresh, sincere beauty characterizes the mausoleum and entrance of the Cimetière Parisien, at Thiais, by Ch. Halley; and, to a less extent, the lavish and comfortable lecture hall Iéna, in Paris, by Maurice Gross.

The construction of a representation of Angkor-Wat, for the French colonial exposition of 1931 at Vincennes, by Charles and Gabriel Blanche was completed. It is a magnificent piece of work; perhaps rather archaeological than architectural, although it is not an absolute copy. It is beautifully and carefully done throughout, and, as enabling many to see the grandeur of that group hidden so inaccessibly in the Khmer jungle, was well worth doing. Notice should also be made of the

impressive monument to the defense of the Suez Canal by M. Roux-Spitz, architect, and M. Delamare, sculptor.

GERMANY. German building in the year was large in amount and high in quality. In Germany, despite occasional lapses, the development of a sane, fresh, and in general beautiful modern style had progressed further than in any other country save Scandinavia and Finland, and despite the doctrinaire influence of men like Gropius, the creative, beauty-producing function of architectural design had more and more triumphed over the machine theory of architecture. This is particularly noticeable in industrial architecture. The new Werner works in Berlin-Siemensstadt, by H. Hertlein, show this creative element: powerful, typically factory like, they nevertheless have beauty. Similarly effective is the administration building of the Schultheiss-Patzner Brewery in Berlin, by H. Dernburg.

The most interesting public buildings of the year were the Munich Post Office, by Vorholzer & Schmidt, a simple brick design; the even more effective Police Building in Breslau, by the municipal architect; the long Office of Works, Kiel, by Hahn and Schroeder, in the Mendelssohn manner; and the magnificently daring Leipzig Market Hall, by H. Ritter, with two enormous domes in concrete and glass, light, airy, and delicate. The new Cologne-Mülheim bridge by A. Abel is also daringly delicate; it is of the suspension type, and makes the utmost use of the lightness of form and the curved lines such a method of construction allows. In Nürnberg a beautiful stadium and swimming pool was completed by E. Schweizer; it is a clean, neat design, attractively composed, with the grand-stand roof unusually pleasant in its curves. The whole is typical of the German skill in buildings or groups with a social purpose. The Hans Sachs house in Gelsenkirchen, with theatre and concert hall, by A. Fisher shows the same skill.

Three great department store buildings showed how completely the type of design created first by Erich Mendelssohn had dominated that field. The Wertheim store in Breslau, by H. Dernberg, is simple, quiet, and effective; the enormous shop at Mannheim, by F. Nathan, is similar in general style, though the outline is broken up and accented by a large simple tower. The best of these shops is the Schrocken Store in Chemnitz, by E. Mendelssohn himself; the horizontal lines of the style are particularly effective on a curved front such as this.

Church building flourished during the year, and almost without exception, the designs were purely non-historical in type. Brick, and stuccoed concrete were the favorite materials; exteriors are usually simple, and interiors high, simple, with a decorative climax in the chancel. Towers are frequent, especially towers with a rectangular plan. It is interesting to see that despite the novelty of the style, the ecclesiastical character is usually perfectly expressed. Two Catholic churches in Glewitz-Sosnita, by the Prussian Hochbauverwaltung, are noteworthy. St. Wilibrord, in Kellen, by Wahl & Rödel; the simple almost classic St. Sebastian's Church in Munich, by Kurz & Herbert; and a circular concrete church in Essen by O. Bartning are all characteristic. A more daring approach, with more radical results, was evident in the "steel church" in Cologne, by O. Bartning, in which supports are reduced to the minimum, and the whole

church wall becomes stained glass—a sort of steel gothic—and in the Nikolai church at Dortmund, by Pinno and Grund, where concrete is the constructive material, with the same effort to increase glass area; it is even more successful than the steel church, because having an equal delicacy, it nevertheless possesses a feeling of substantial permanence that the other lacks.

The development of German housing progressed along the lines already developed. There was evident, however, a tendency towards theoretic abstraction in design that constitutes a real danger. For instance, the circular development in Leipzig-Lössing, by H. Ritter, however attractive as an abstract idea, in reality is harsh and uncompromising. The developments at Essen, by Pfeiffer & Grossmann, and the apartment house groups in Berlin-Neuköln and Berlin-Lichtenberg by Mebes and Emmerich, are, however, still human, attractive, and livable.

The same quality of unforced modern shapes, coupled with some regard for local traditions and a governing sense of simple homelikeness distinguished the best German private houses of the year. Examples deserving notice are those in Berlin-Grünwald, by H. Reifenberg; at Volklingen, by K. Wachaman; at Honnef, by H. Wirwinghaus; and at Bremen, by O. Blendermann.

ITALY. Architectural taste in Italy was still in chaos. More and more a sort of ostentatious neo-baroque, with certain borrowings of modernist forms, seemed the rule. Several important competitions showed the same influences at work, though in them there was rather a greater sense of classical monumentality. The competition for the building for the *Sindicati Fascisti dell' Industria* at Milan was won by Caneva, Carminati, & Bordini with a well-planned but chaotically detailed scheme. This was entirely restudied for actual construction, however; and the final scheme had great scale power. A most interesting competition for a cathedral at Spezia produced many interesting designs, most of them under the influence of Byzantine, Romanesque, or Baroque influence. Those of Buzzi, Daneri, and Brenno del Giudice, deserve especial mention.

Among actually completed work, the buildings of the Sicilian F. Fichera stood out, especially a Post Office at Catania, a Commercial Institute in the same town, and the attractive modernized classic Villa Inga in Genoa. The most interesting work in Italy was, however, largely German in inspiration, like the Supercinema Verona, at Verona, by M. Dezzoti, an attractive modernist interior, and the San Materno theatre in Ascona, by S. Weidmeyer, a purely modernist conception of German type both outside and in.

SCANDINAVIA AND FINLAND. By far the most important architectural event of the year was the Stockholm Exposition, in buildings designed by Gunnar Asplund. This group formed probably the most complete expression of stark functionalism that has yet been achieved. The forms were simple to the last degree, the temporary character of the buildings being realized and expressed; supports were tiny, window areas enormous, and there was a total lack of ornament, carved or painted. Instead, careful landscaping, banners, and advertising lettering were depended upon to give the human touch. The total effect was interesting and bizarre, but hardly beautiful, save incidentally. The great curved cantilevered top over the bandstand, and the advertising tower at the entrance appeared arbitrary and inharmonious

notes; yet the cleverness displayed in the whole was enormous and obvious. It was an interesting and worthwhile experiment—one that needed to be made—but it cannot be called an architectural masterpiece.

The Chalmers Technical Institute at Gothenburg by Fuhre, Jahnke, Nyquist & Samuelson, an impressive brick neo-baroque building, and some charming housing in wood outside of Gothenburg, by K. Samuelson and E. Sjöström, also deserve notice, as well as a lovely light airy modernist apartment house in Stockholm with many balconies, by S. Wallender.

In Copenhagen, Denmark, the Berlingskehus, a large newspaper building, with offices and printing establishments, by Nokkentved & Jespersen and H. Møller, showed the effects of the international functionalist style; its banded windows and stark treatment are typical of the power the style has. The Chapel and Crematorium at Søndermark, by Thomsen & Schlegel, is much more typical of the quiet neo-classical modernism that is characteristically Scandinavian, and is a group of great loveliness.

The architectural vitality evident in Finland during the year was enormous. Much of the work is Scandinavian—especially Swedish—in character and inspiration, but an even stronger trend towards a quiet, simple and direct classic type of feeling is present. Thus the office building for Karl Fazerin, by G. T. Juslin, the Saastopankki Bank and Hotel, and the Lutopankki Bank, both by P. E. Blaustedt, all in Helsingfors, have a simple dignity, a creative quality, and a humanity that is delightful. The same quality distinguishes the Chapel and Cemetery at Viborg, by T. Thesleff; the Mission Hospitz at Åbo by Alvar Aalto; the Helsingfors apartment houses (all beautifully planned in rather a French manner) by M. Valikangas, B. Liljequist, and Frøsternus & Gripenberg; and the villa near Storbästo, by Il. Linden. The Juvaskyla church, by Elsi Borg, and the Jamsa church by K. Kallio, are in the same spirit, the quiet, delicate, almost "colonial" feeling of the second being particularly lovely. The more doctrinaire type of modernism in Finland appeared in the Pohjas Office building in Helsingfors, by D. Kallio; the Viborg Art School and Museum by U. Ullberg, and the public school at Kotka, by K. Borg.

OTHER COUNTRIES. In Austria, the most important works were a lovely simple hospital building in Grimmerstein, by Iik and Pfann, and housing developments in the accepted type of Viennese modernism at Simmering and Breitensee, by J. Frank. In Budapest, Hungary, the tendency was towards a modernized classic of the Scandinavian type, through more arbitrary in its forms, as in the office building by D. Gjorgyi, and the Cistercian Gymnasium by I. Kotsis; the Hungarian Biological Institute on the Plattensee, by I. Kotsis is more doctrinaire. In Czechoslovakia the reign of stark modernism was almost complete, as in the bleak building for the Praeger Mustermesse, by O. Tyl, and the apartment houses in Prague by J. K. Riba and F. A. Libra. The Phoenix Insurance Co. building, Prague, by F. Ehrman and J. Gocar is more in the Mendelssohn manner, and capably handled, and the little Y.W.C.A. building in Prague, by O. Tyl, is lovely and simple. In Rumania, the great Rumanian Assurance Co. Building at Bucharest, by Horia & Son and Mme. Greangra, is an interesting but rather incoherent hash of French and

ARCHITECTURE OF 1930

German modernist ideas. The most outstanding architectural achievement in Belgium was the Antwerp Exposition, with M. Smolderen as supervising architect; the great monumental modernist gateway by him had scale and power, and the correct festive character. The national buildings were disappointing; that of England, by Sir Edwin Lutyens, academically correct and classic, and that of France, by de Montarnal, in a suave modern style, being the two most interesting structures.

Spanish work was hesitating between Baroque, Art Nouveau, and extreme modernist influences. The Royal Spanish Yacht Club at Santander, by Labaye-Aizpurua, is like a boat, and charmingly simple and modern. The most important work of the year was probably the 15-story Telephone Building in Madrid, by I. de Cardenas, a setback building of the American type in a lavish classic style. In South America, the building for the Tribuna of Montevideo, by Valabrega and Aubriat, was noteworthy for its direct and logical modern expression; it is one of the most successful large structures of its type. The modernist stadium at Montevideo by J. Scasso, with a tall, slim, concrete tower is also an impressive conception.

In Russia, the official attempt to break with all past culture has led to the complete adoption of an architectural style of the starkest, most doctrinaire type, developed along the lines of the Le Corbusier criticism. The work is interesting and occasionally vital despite its harshness. The work of G. Barchin and B. Welikowsk is typical. The completion of the permanent mausoleum of Lenin during the year in Moscow, by Shushev, revealed a sombre, impressive stepped mass, not unlike the former temporary wooden mausoleum, in black and red granite, the whole making a memorial of great emotional power.

ARCTIC EXPLORATION. See ANTHROPOLOGY; POLAR RESEARCH.

ARGENTINA. A federal republic occupying, with Chile, the southern third of South America; consisting of 14 Provinces, 10 territories, and the federal district. Capital, Buenos Aires.

AREA AND POPULATION. With an area of 1,153,110 square miles, Argentina had an estimated population on Jan. 1, 1929, of 11,193,000, compared with 7,885,237 at the census of 1914. With the exception of about 30,000 Indians, the inhabitants are of European antecedents. Immigrants in 1928 numbered 272,501 and emigrants 190,537. In 1929 immigration increased by 6 per cent, with Spaniards, Italians, and Poles, in the order named, contributing the largest quotas. The population of Buenos Aires on Jan. 31, 1930, was estimated at 2,116,284, a gain of 43,595 over the same date in 1929. Other leading cities are Rosario, with 500,000 inhabitants (estimated) in 1930; Córdoba, 221,200 in 1928; La Plata, 165,813 in 1928; Tucumán, 91,216; Santa Fé, 105,000 in 1929; Mendoza, 58,790; Bahia Blanca, 44,143. In 1927 the Federal government established 29 towns and 12 colonies on 1,373,320 acres of public lands.

EDUCATION. Primary education is free, secular, and compulsory. There were (1928) 11,280 primary schools, with 1,381,804 pupils. Public secondary, normal, and special schools in 1929 numbered 324, with 82,993 students, and private secondary, normal, and special schools, numbered 126, with 11,632 students. There are national universities at Buenos Aires, La Plata,

Tucumán, Rosario, and Córdoba and provincial universities at Santa Fé and Cuyo.

PRODUCTION. Agriculture and stock raising are the basic industries, manufacturing being confined principally to the preparation of foodstuffs. Of the total area of 699,278,300 acres, about 250,000,000 acres are cultivable (10,000,000 acres require irrigation), a similar area is suitable for cattle raising, 96,250,000 acres are woodland, and the remainder consists of mountains or arid regions. Only about 12 per cent of the arable land was cultivated in 1930. The area sown to cereals and flaxseed in 1930-31 was placed by the Ministry of Agriculture at 34,504,550 acres, or 1,303,150 acres more than in the previous year. The chief crops were distributed as follows: Wheat, 20,139,650 acres; flax, 7,536,550 acres; oats, 4,084,563 acres; barley, 1,524,607 acres; rye, 1,141,602 acres; and bird seed, 78,578 acres.

The production, in bushels, of the chief crops in 1929-30, with comparative figures for 1928-29 in parentheses, was: Wheat, 143,175,000 (307,360,000); rye, 4,409,000 (7,666,000); barley, 16,813,000 (16,815,000); oats, 68,020,000 (65,172,000); corn, 253,175,000 (231,706,000); linseed, 55,621,000 (82,810,000). Wine production in 1929-30 amounted to 218,229,000 gallons (209,619,000 gallons in 1928-29); cane sugar, 340,000 metric tons (375,000 in 1928-29); potatoes, 878,600 metric tons (estimated). The area devoted to cotton in 1929-30 reached a record figure of 332,165 acres; cotton production in 1928-29 was 98,700 metric tons.

Exports of wheat increased from 2,034,800 tons in 1926 to 6,709,300 tons in 1929. The value of all grain crops in 1928 was \$498,175,000. Tobacco, yerba maté, rice, sugar, potatoes, fresh fruits, and peanuts are other products. Exports of wheat in 1928 were 20 per cent of the world's exports; of maize (corn), over 46 per cent; of linseed, over 70 per cent.

On Jan. 1, 1929, the number of cattle in the country was estimated at 34,410,000, distributed mainly in the central and northern grazing regions. Sheep were estimated at 35,000,000 in 1926. Cattle products account for approximately one-fourth of the value of all exports; in 1928, the farm value of cattle marketed was \$297,000,000. Meat refrigeration is the chief industry. In 1929, there were exported 5,449,000 tons of chilled, and 1,060,000 tons of frozen beef, 4515 tons of pork, and 3,883,000 tons of mutton. Flour milling is second in importance, the average annual output being about 7,000,000 sacks. The dairy, quebracho extract, and textile industries are expanding also, the latter receiving high tariff protection.

A 1929 estimate placed the number of manufacturing plants in the country at 61,000, employing 600,000 persons and 1,000,000 h.p., with an annual gross production of about \$1,225,000,000. Lack of domestic fuel supplies is a distinct handicap to industry. Most of the coal and wood and three-fourths of the petroleum products consumed in the country are imported. Argentinian coal deposits are low-grade and inaccessible, while the extensive forests in the north are too distant for economical exploitation. Petroleum production is increasing. The output in 1929 reached 9,391,385 barrels (5,106,900 in 1927). Of the 1929 production, State wells furnished 5,485,956 barrels and private wells 3,905,430 barrels. Domestic oil is used increasingly as fuel for the railways. Other branches of mining are comparatively unimportant, although some

gold, silver, copper, tin, and salt deposits are worked.

FOREIGN INVESTMENTS. American investments in Argentina at the beginning of 1930 totaled \$658,589,000, as compared with \$40,000,000 in 1914. The British investments in 1929 were estimated by the D'Abernon Mission at from £500,000,000 to £600,000,000 and the annual interest thereon amounted to about £25,000,000. Over 61,000 miles of railway were British owned and managed, in addition to numerous tramways, water works, gas works, and other public utilities. French investments of about \$425,000,000 and other foreign investments brought the total outside capital in Argentina to about \$4,000,000,000.

COMMERCE. The Government Statistical Department reported a total foreign trade in 1929, excluding specie, of 1,815,000,000 gold pesos (1 gold peso equals \$0.9648 at par), or 75,400,000 pesos less than in 1928. Imports were valued at 861,900,000 gold pesos, a gain of 25,200,000 pesos over 1928, while exports fell 100,700,000 gold pesos below 1928 to 953,000,000 pesos. The favorable balance of trade in 1929 was 91,100,000 pesos, as compared with 217,000,000 pesos in the previous year. The continued economic depression was accompanied by further trade declines in 1930. Exports declined to 612,550,000 gold pesos, the lowest since 1917 and 35.8 per cent below the 1929 figure. The heaviest export declines were in grains and flaxseed, which decreased 38.9 per cent in volume and 50.1 per cent in value. The values of meat, hide, and wool shipments declined also, as compared with 1929.

In 1929, the United States sold Argentina merchandise valued at \$210,288,000, or 40 per cent of all American exports to South America. The value of imports from the United States increased 17.5 per cent as compared with 1928. Imports from Germany increased 6.7 per cent, while imports from Great Britain declined 6.9 per cent. Exports to the United States increased 18.3 per cent over 1928. Imports were chiefly iron and steel products, burlaps, lumber, newsprint, and mineral and vegetable oils, while exports consisted mainly of agricultural and animal products.

FINANCE. The budgets for 1929 and 1930 were virtually identical, the estimated revenues for both years totaling 733,660,000 paper pesos (1 paper peso equaled \$0.42 at par) and the estimated expenditures, 732,797,000 pesos.

Import duties furnish about 76 per cent of the revenue and direct taxation about 10 per cent. The national debt on June 30, 1930, was estimated at 2,841,000,000 paper pesos, while the combined consolidated and floating debts of nation, the provinces, and the municipalities were placed at 4,160,000,000 pesos. In April, 1930, the government floated a \$50,000,000 six-month 5 per cent loan in the United States. At that time the gold reserves were equivalent to \$438,757,000 and the note circulation equaled \$560,157,000. Despite the unusually high ratio of gold reserves to note circulation, the decline of the exchange value of the peso continued in 1930, reaching the lowest level since 1925 on June 24, 1930. The Presidential decree of Dec. 16, 1929, suspending the delivery of gold for paper currency by the Caja de Conversion, remained in effect throughout 1930. For other financial developments see below under *History*.

COMMUNICATIONS. Railways in operation Jan. 1, 1929, extended 23,548 miles, of which 4388 miles were state owned and 19,160 miles were

privately owned. Plans for new state railway construction costing nearly 20,000,000 paper pesos (about \$8,400,000) were approved in 1930. For the fiscal year ended June 30, 1930, 19 of the country's 25 railroads reported receipts which were 34,340,000 gold pesos (about \$33,131,000 at par) under receipts for the preceding fiscal year and 27,757,000 gold pesos under the 1927-28 receipts for all railways, which totaled 146,840,000 gold pesos. The decreased receipts were due to the greatly diminished movement of crops during the year. A contract for the construction of four subway lines linking the Buenos Aires business district with the suburbs and costing about \$130,000,000, was awarded to a Spanish company in August, 1930.

There were 1858 miles of motor highways in 1924. Air lines radiate from Buenos Aires to New York, Montevideo, and various Argentine and South American cities. At the beginning of 1930 there were 75,141 miles of telegraph line, and 221,261 telephones in operation, in addition to 12 wireless telegraph stations. Wireless telephone service to the United States and Europe was available. A total of 3325 ocean-going vessels of 11,701,924 net registered tons entered Argentine ports during 1929, as compared with 3323 vessels of 11,716,098 tons in 1928.

GOVERNMENT. The Constitution vests executive power in a President elected for six years, and the legislative power in a national Congress, comprising a Senate of 30 members elected for nine years, and a Chamber of Deputies of 158 members elected for four years by the people at the ratio of one deputy for every 49,000 inhabitants (census of 1914). One-third of the Senate retires every three years and one-half of the Chamber every two years. The cabinet is appointed by and under the direction of the President. The Governors of the various Provinces are vested with extensive powers and in their Constitutional functions are independent of the central executive. In the election of April, 1928, Dr. Hipólito Irigoyen's party, the *Union Cívica Radical*, secured 87 of the 158 seats in the Chamber of Deputies and 7 of the 30 seats in the Senate. President at the beginning of 1930, Dr. Hipólito Irigoyen, elected for the six-year term ending Oct. 12, 1934; Vice President and President of the Senate, Dr. Enrique V. Martínez. See below under *History*.

HISTORY

The deposition of President Hipólito Irigoyen on September 6 by a popular revolt led by army officers and the return to power of the wealthy and conservative classes defeated by Irigoyen in the election of 1916 were the outstanding developments in Argentina during 1930. The new provisional régime, established September 8, was headed by General José Francisco Uriburu, member of a wealthy and distinguished Argentine family and nephew of former President José Evaristo Uriburu. In contrast to the anti-American policy evidenced by the Irigoyen Government, President Uriburu announced on September 10 that his Government was "very desirous of cooperating to the fullest extent with the United States." One of his first acts, after recognition had been accorded his régime September 18 by the United States, was the appointment on September 20 of Dr. Don Manuel E. Malbran as Ambassador to Washington, a post Dr. Malbran resigned early in 1929 as a protest against the discourtesy evidenced by

President Irigoyen in connection with arrangements for President-elect Hoover's visit to Argentina.

GENESIS OF REVOLT. The popular uprising which unseated President Irigoyen with more than four years of his six-year term still unserved had its roots in numerous grievances. Foremost among these was the economic crisis due to the decline in prices of the country's chief exports, which caused widespread want, unemployment, and unrest. The situation was aggravated by a general breakdown of governmental machinery resulting from the President's insistence upon personally supervising every detail of routine administration, and his refusal to fill important Government posts, nominees for which required confirmation by the hostile Senate. Numerous federal judgeships, important diplomatic posts, and various positions in national boards and commissions remained vacant, while contractors' bills, and other Government obligations remained unpaid. At the time of Irigoyen's resignation, 1159 executive orders and decrees had accumulated, awaiting his signature.

Through questionable constitutional interpretations, the President caused the Federal Government to intervene in four Provinces, where locally elected officials were removed and replaced by Irigoyen's personal followers. Rioting and shootings were the common accompaniment of these political struggles. The business elements were alarmed by the President's radical tendencies and angered by his refusal to secure higher tariff protection for the textile, packing, and yerba maté (tea) industries. Labor was equally discontented because of unemployment and hard times. To the chagrin of patriotic and progressive citizens, Argentina under Irigoyen abdicated its political leadership of the South American continent and virtually suspended diplomatic relations with the leading world powers.

The gathering storm was undoubtedly precipitated by news of successful revolts in Bolivia and Peru. Toward the end of August anti-Government demonstrations became increasingly frequent. On August 28, the city awoke to find troops and police heavily concentrated about the President and the Government House to guard against a rumored plot to assassinate Irigoyen. Arrests of several army officers on charges of conspiracy followed on August 29, and on September 2, Minister of War Dellepiane resigned, protesting against the innumerable intrigues in Administration circles. In an effort to tide over the crisis peaceably, leaders of the President's party on September 3 urged him to resign. He declined. The following day several were killed when the police fired on 2000 rioting students, and on September 5 the President, who was ill throughout the crisis, delegated the executive power temporarily to Vice President Martinez. At the same time martial law was declared. The aroused populace was not content with Irigoyen's temporary resignation. While huge street demonstrations demanded the President's permanent withdrawal and the election of a successor not under his control, General Uriburu seized the opportunity to lead a revolt of the army. Supported by the navy and a huge throng of civilians, he captured the Government House after a short struggle, in which 10 or more were killed and some 70 wounded. Acting President Martinez immediately resigned and Irigoyen was arrested in La Plata where friends had taken him to escape

the fury of the mob. In continued ill health, the deposed President was imprisoned in a warship in the harbor of Buenos Aires until November 14, when it was reported that he and General Dellepiane, former Minister of War, were transferred to a land prison to await trial on charges of false statements and violation of public duties.

THE URIBURU GOVERNMENT. The new Government formed by General Uriburu on the day of the revolt was composed largely of wealthy and conservative civilians of the land-owning and business classes. Besides himself as President, it included the following: Vice President, Enrique Santa Marina; Finance, Enrique Perez; Interior, Marias Sanchez Sorondo; Public Instruction, Ernesto Padilla; Foreign Relations, Ernesto Bosch; Agriculture, Horacio Becca Varela; and Public Works, Octavio S. Pico. Martial law was continued and public order was quickly restored, despite an effort at counter-revolution on the part of Irigoyenistas on September 9. Troops ousted Irigoyen appointees from the four Provinces in which the Irigoyen Government had intervened. Censorship of the press was removed.

Despite rumors of counter-revolution, confidence in the new Government was shown in the strong recovery in the exchange value of the peso and in the extension of recognition by the various powers immediately before or after the action of the United States on September 18. Local banks voluntarily subscribed to a 100,000,000 paper peso six-month 5½ per cent Government loan, while Government and corporate securities on the Buenos Aires stock exchange remained firm. A \$50,000,000 loan, at 5 per cent, was negotiated in New York. The Provisional Government on October 1 announced that the proposed revision of the Constitution would be undertaken by a new Congress, elections for which were tentatively fixed for March, 1931. The proposed constitutional reforms, according to the proclamation, would harmonize national and provincial taxation and make possible the automatic functioning of Congress, real autonomy of the Federal States, the independence of the judiciary, and "the perfecting of the electoral régime to cover social necessities as well as those of the nation's productive forces." The press expressed dissatisfaction with the Government's programme, which they interpreted to mean that the election of a constitutional President and other executive officers would not take place until after the revision of the Constitution by Congress.

The Uriburu Government's effort to consolidate its power through the formation of a new national party of conservative tendencies, met with little success. It became evident that general elections if held in the near future would deliver the country back to radical elements unaffiliated with Irigoyen's immediate group. Possibly due to this fact, the Government adopted a policy of intervention in the Provinces resembling that which had made Irigoyen so unpopular. Several provincial newspapers were suspended and others were notified to revise their editorial policies. Dr. Irigoyen and Elpidio Gonzales, former Minister of Interior, were transferred on November 30 from the cruiser *Buenos Aires* to the island of Martin Garcia in the La Plata River. It was announced December 6 that the former President would be brought to trial for the alleged issuance of decrees in violation of the Constitution.

An examination of the finances of the nation revealed a deficit of 300,000,000 paper pesos. In

addition it was found that expenditures for public works amounting to 395,000,000 pesos had been paid with general treasury funds and without recourse to long-term obligations authorized under existing laws. The financial programme of the Provisional Government was outlined as one of rigorous economy, the raising of additional foreign loans for construction, gradual valorization of the peso, creation of a central bank, and a general monetary reorganization.

A memorandum of the Minister of Finance, published Nov. 30, 1930, estimated the Government's total income for 1930 and 1931 at 616,000,000 and 650,000,000 paper pesos, respectively, and the public debt service requirements at 226,000,000 and 239,000,000 paper pesos, respectively. He estimated the adverse balance of trade for 1930 at about 259,000,000 paper pesos and the ordinary expenditures for 1931 at about 375,000,000 paper pesos. In an address to heads of Government bureaus on Dec. 6, 1930, Provisional President Uriburu placed the existing floating debt at approximately 1,200,000,000 paper pesos, of which 750,000,000 paper pesos were contracted during the previous two years. Of the floating debt, more than 1,000,000,000 paper pesos were due to local bankers and to contractors and providers.

The *Union Civica Radical* party received a severe blow as a result of the revolution. The rapidity of the change in public sentiment against it was indicated by the fact that in the Congressional elections of March 2, the party increased its representation in the Chamber of Deputies from 87 to 100. In the capital, however, the Irigoyenistas lost ground to the Independent Socialist and Socialist parties. The campaign was marked by serious riots, 6 persons being killed and 20 injured in election-day disorders. Efforts to reorganize the Radical party under new leadership were made following the announcement that the Provisional Government would call a Congressional election.

OTHER EVENTS. The Argentine press continued its attacks upon the intervention of the United States in the countries of the Caribbean and its policies with regard to immigration and the tariff. The Haitian settlement arrived at by the Forbes Commission was denounced by *La Prensa* on the ground that the commission had failed to touch upon the question of Haitian sovereignty, thus demonstrating that the United States had no intention of abandoning "its intensive activities in the territories it has illegitimately dominated." *La Nacion* on May 3 asserted that "the colossus of America will begin to be respected even if not loved," if it threw off its mask and sincerely proclaimed its imperialism.

Among the many protests against the American tariff bill was one addressed on May 23 to the Pan American Union, the American Embassy, and the American Chamber of Commerce in Buenos Aires by the Argentinian Confederation of Commerce, Industry, and Production. Upward revision of the Argentine tariff, particularly on products from the United States, was discussed during the session of Congress which adjourned April 29. The new American Embassy in Buenos Aires, purchased by the United States government, was formally opened on Dec. 6, 1930.

As usual, labor disputes proved a serious handicap to the commercial and industrial welfare of the nation. Train service was disrupted and packing houses were closed by a dispute between railway owners and employees which commenced

March 13 and was ended by Government intervention March 20. In the meantime exasperated passengers had done much damage to railway property. Port traffic in Buenos Aires was completely tied up during April by a general sympathy strike of stevedores. A new eight-hour day law went into effect on March 12. See **EARTHQUAKES.**

ARIZONA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 435,573. The population on Jan. 1, 1920, was 334,162. The capital is Phoenix.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|---------|----------------------|------------|
| Cotton | 1930 | 212,000 | 160,000 ^a | \$ |
| | 1929 | 226,000 | 153,000 ^a | 17,550,000 |
| Hay | 1930 | 214,000 | 768,000 ^b | 9,948,000 |
| | 1929 | 203,000 | 689,000 ^b | 12,357,000 |
| Wheat | 1930 | 46,000 | 1,288,000 | 1,352,000 |
| | 1929 | 42,000 | 1,134,000 | 1,531,000 |
| Corn | 1930 | 41,000 | 1,353,000 | 1,556,000 |
| | 1929 | 41,000 | 1,148,000 | 1,492,000 |
| Grain sorghums | 1930 | 59,000 | 2,065,000 | 1,446,000 |
| | 1929 | 52,000 | 1,560,000 | 1,482,000 |

^a Bales. ^b Tons.

Farms in the State numbered 13,260 in 1930, as against 10,802 in 1925 and 9975 in 1920. Irrigated lands in the State totaled 577,263 acres in 1929, as against 467,565 in 1919.

MINERAL PRODUCTION. Copper, of which the State continued in 1928 the foremost domestic producer, supplied in that year more than nine-tenths by value of its mineral output. The production of copper rose sharply for 1929, to 830,628,411 pounds, from 732,276,803 pounds for 1928. As the estimated average value of this product for 1929 ran 3.2 cents a pound above that for 1928, the total production of 1929 as measured by value was still more notably above the total for 1928, when the value of copper mined attained \$105,447,860. Of the five metals gold, silver, copper, lead, and zinc, the combined production in 1929 was valued at \$155,567,133, as compared with \$114,300,381 for 1928. For 1928, the total value of mineral production was \$115,999,643; for 1927, \$100,558,556.

The value of gold, silver, copper, lead, and zinc produced by mines in Arizona in 1930 was about \$76,095,000, a decided decrease from \$155,567,133 in 1929, according to estimates made of the U. S. Bureau of Mines. A pronounced decrease was shown in the output of all five metals and the decrease in copper was more than the copper output of Montana in 1930. On account of the decreased metal production and the greatly decreased metal prices of silver, copper, lead, and zinc, the value of each metal was also distinctly less than in 1929. Nearly all the large producers of copper reported a greatly decreased output in 1930 and several companies reported as much as a 50 per cent decrease. Arizona, however, was again by far the largest producer of copper in the United States and it exceeded all other States in the total value of the five metals. There was a large decrease in the output of gold corresponding to the abnormal decrease in the output of copper, but the increase in gold from gold ore in Mohave County was notable. There was also an unusually large decrease in the silver output, which in general follows the trend of copper. The production

of lead and zinc, although relatively unimportant in Arizona, was much less than in a normal year. Large expenditures were made in improvements at the copper smelters, in installing new mine equipment, and in building new mills. The gold output decreased from \$4,182,287 in 1929 to about \$3,514,000 in 1930 due to the marked curtailment in the output of copper ore. The silver output decreased from 7,543,283 ounces in 1929 to about 5,300,000 ounces in 1930, and the value from \$4,020,570 to about \$2,040,000 as the average price of silver decreased from 53.3 cents an ounce in 1929 to 38.5 cents an ounce in 1930. The output of silver in 1930 was the smallest since 1922 but the State again ranked fourth in the production of silver after Utah, Idaho, and Montana. The copper output decreased from 830,628,411 pounds in 1929 to about 564,500,000 pounds in 1930, and the value from \$146,190,600 to about \$70,000,000. As the average price of copper decreased from 17.6 cents a pound in 1929 to 12.4 cents in 1930, mines in Arizona decreased their output decidedly and the production of copper was the smallest since 1922.

FINANCE. State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$6,794,187 (of which \$1,913,267 was for local education); for interest on debt, \$96,275; for permanent improvements, \$1,902,140; total, \$8,792,602 (of which \$2,977,324 was for highways, \$1,382,283 being for maintenance and \$1,595,041 for construction). Revenues were \$9,627,493. Of these, property and special taxes formed 64.0 per cent; departmental earnings and remuneration to the State for officers' services, 4.2; sales of licenses, 18.7 (including taxes of \$1,004,312 on sales of gasoline). The State's funded debt outstanding on June 30, 1928, was \$747,972. Net of sinking-fund assets, it was nil, such assets exceeding funded debt. On property bearing an assessed valuation of \$670,398,447 were levied in the year State taxes of \$6,988,316.

TRANSPORTATION. The total number of miles of railroad line in operation on Jan. 1, 1930, was 2494.21. There were constructed, in 1930, 22.40 miles of additional second track.

EDUCATION. The State Board of Education purchased the site for a school for the feeble-minded, to be built in 1931. The performance of three years of training in normal school or college was required for all to be admitted to teach in grade schools.

POLITICAL AND OTHER EVENTS. The State continued its opposition to the execution of the provisions of the Swing-Johnson Boulder Dam Act. The State Attorney-General filed with the United States Controller-General in July a brief impugning the legality of the disbursement of the \$10,660,000 of the Federal appropriation for starting the construction of the dam. The brief denied the validity of the contracts made by the Secretary of the Interior and the metropolitan water district of Southern California, by which a share of the water to be derived from the project had been assigned, and challenged the sufficiency of the provisions that had been made to amortize the \$165,000,000 to be spent by the Federal Government on the work. The State also sought to bring its case before the United States Supreme Court in the autumn with a view to securing an early decision preventing the prosecution of the work of construction without Arizona's consent.

The State Board of Tax Survey created by a statute of 1929 was enjoined, by a writ sustained by the State Supreme Court, from establishing the valuations that it had fixed for taxables in Maricopa County. These valuations were to have superseded those made by the county assessors in the several counties. The Supreme Court held that the new board had failed to make the scientific survey of values, including mines, railroads, public service corporations and personalty, such as the statute required.

The Coolidge Dam was dedicated on March 4, by ex-President Coolidge, for whom it was named. This structure, situated on the Gila River, 130 miles southeast of Phoenix and 30 miles from Globe, was built by the Federal Government, and was designed to furnish water for about 1,000,000 acres of arid lands, including the Sacaton Indian Reservation. The work of making an aërophotographic map of the prehistoric canal systems of the Salt and Gila River valleys was undertaken by Dr. N. M. Judd of the Smithsonian Institution. According to his estimate the canals had an aggregate length of some 250 miles and indicated the former existence of a fairly populous agricultural community with the means of performing work requiring utmost labor and patience.

Through the Federal Department of Agriculture the growing of cotton was stopped in Arizona in an area infected by the pink bollworm, and compensation for the losses thus imposed on the growers was provided by a Federal act of Feb. 8, 1930.

ELECTIONS. Ex-Governor George W. P. Hunt, Democrat, was reelected, defeating Governor Phillips, Republican, by 47,670 votes to 44,995 (unofficial). L. W. Douglas, Democrat, was elected Congressman; an overwhelmingly Democratic Legislature was chosen. Three constitutional amendments were ratified; they provided for equalization of certain Supreme Court and commissioners' salaries; for limiting votes on special assessments to owners of real property; and for requiring that employees on public works be citizens. Other amendments, including a restricting of the State for Legislative representation, were lost.

OFFICERS. Governor, John C. Phillips; Secretary of State, I. P. Fraizer; Attorney-General, K. Berry Peterson; Treasurer, Charles R. Price; Auditor, Ana Frohmiller; Superintendent of Public Education, C. O. Case.

JUDICIARY. Supreme Court: Chief Justice, Alfred C. Lockwood; Associate Judges, A. G. McAlister, Henry D. Ross.

ARIZONA, UNIVERSITY OF. A coeducational State institution of higher learning in Tucson, Ariz.; founded in 1885. The 1930 autumn enrollment totaled 1875; the registration for the summer session of 1930 was 391. The faculty numbered 186. The endowment fund amounted to \$20,000, and the income for the year was \$1,305,485. The university receives both Federal and State support. The library contained approximately 85,700 volumes. President, Homer LeRoy Shantz, Ph.D., Sc.D.

ARKANSAS. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,864,482. The population on Jan. 1, 1920, was 1,752,204. The capital is Little Rock.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acres | Prod. Bu. | Value |
|-------------------|------|-----------|------------------------|----------------|
| Cotton ... | 1930 | 8,897,000 | 910,000 ^a | \$ 124,415,000 |
| | 1929 | 8,834,000 | 1,490,000 ^a | 8,068,000 |
| Corn | 1930 | 1,788,000 | 8,404,000 | 25,821,000 |
| | 1929 | 1,882,000 | 26,348,000 | 8,096,000 |
| Hay | 1930 | 767,000 | 570,000 ^b | 11,415,000 |
| | 1929 | 745,000 | 752,000 ^b | 5,776,000 |
| Rice | 1930 | 172,000 | 7,912,000 | 7,320,000 |
| | 1929 | 156,000 | 7,956,000 | 2,535,000 |
| Oats | 1930 | 195,000 | 4,875,000 | 2,998,000 |
| | 1929 | 186,000 | 4,836,000 | 3,299,000 |
| Potatoes .. | 1930 | 33,000 | 2,869,000 | 3,791,000 |
| | 1929 | 31,000 | 2,708,000 | |
| Sweet potatoes . | 1930 | 28,000 | 1,904,000 | 1,809,000 |
| | 1929 | 26,000 | 1,716,000 | 1,973,000 |
| Sorghum sirup ... | 1930 | 43,000 | 1,978,000 ^c | 1,681,000 |
| | 1929 | 41,000 | 2,337,000 ^c | 2,220,000 |

^a Bales. ^b Tons. ^c Gallons.

Farms in the State numbered 243,216 in 1930, as against 221,991 in 1925 and 232,004 in 1920. Irrigated lands in the State totaled 151,305 acres in 1929 as against 143,946 in 1919.

MINERAL PRODUCTION. The production of petroleum diminished again in 1929, but again furnished rather more than half of the mineral product, by value, of the State. There were produced, by quantity, 25,076,000 barrels of petroleum in 1929, as against 32,096,000 in 1928; the value of the year's output was estimated at \$22,600,000 for 1929, while for 1928 it was \$27,450,000. From natural gas were extracted, in 1929, 32,300,000 gallons of gasoline; in 1928, 32,677,000. The value of this product was, for 1929, \$2,301,000 (estimated); for 1928, \$2,568,000. Of natural gas itself (figures for 1929 unavailable), the quantity produced was 20,235,000 M cubic feet for 1928 and 30,450,000 M for 1927; the value, \$3,562,000 for 1928 and \$4,281,000 for 1927. As these fuels declined the production of coal tended somewhat to increase. There were mined, in 1929, 1,695,108 net tons of coal, as against 1,600,973 in 1928; in value, \$5,624,000 for 1929 as against \$5,393,000 for 1928. Bauxite, in which the State was the predominant domestic producer, was mined to the quantity of 351,054 long tons in 1929 and of 361,236 in 1928; as to value, \$2,181,158 in 1929 and \$2,193,230 in 1928. Clay products, the only other mineral production in excess of \$1,000,000 a year, attained \$1,580,571 for 1928; for 1927, \$1,285,720. The entire mineral production of the State had, allowance made for duplications, a value of \$45,009,780 for 1928; for 1927, of \$59,449,100.

FINANCE. State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$14,983,475 (of which \$3,670,545 was for local education); for interest on debt, \$4,694,050; for permanent improvements, \$10,887,747; total, \$30,848,112 (of which \$12,851,143 was for highways, \$2,699,147 being for maintenance and \$10,151,996 for construction). Revenues were \$20,001,152. Of these, property and special taxes formed 30.8 per cent; departmental earnings and remuneration to the State for officers' services, 5.6; sales of licenses, 47.1 (including taxes of \$4,089,859 on sales of gasoline). The State's funded debt outstanding on June 30, 1928, was \$80,558,342. Net of sinking-fund assets, it was \$80,557,125. On property bearing an assessed valuation of \$613,494,618 were levied State taxes of \$5,337,403.

TRANSPORTATION. The total number of miles of railroad line in operation on Jan. 1, 1930, was

4809.34. There were built, in 1930, 16.23 miles of first track, 9.82 of second track, and 0.09 of third track.

EDUCATION. It was reported in 1930 that the State equalizing fund was in successful operation and that 400 consolidated schools had been established. With this notable movement of school consolidation went an increase of some 20 per cent in the high-school enrollment. The U. S. Census of 1930 reported that the number of persons 10 years of age and over unable to read and write was 96,818, as compared with 121,837 in 1920. The percentage of illiteracy was 6.8, as compared with 9.4 ten years ago. All classes of the population, including foreign-born whites and Negroes, showed lower percentages of illiteracy in 1930 than in 1920, except the small group of persons classified as "other colored." The number of persons from 5 to 20 years of age attending school in 1930 was 449,117, as compared with 406,727 in 1920. Persons attending school represented 66.3 per cent of the total population within the ages specified in 1930, as compared with 61.2 per cent in 1920.

POLITICAL AND OTHER EVENTS. The State suffered severely during the summer from the general drought that spread over a great part of the country. Early in August it was ranked with Virginia and Kentucky as one of the three States hardest hit. Rains later alleviated the trouble in Arkansas. State measures taken to relieve stricken counties included the distribution of food through State agencies and the acceleration of road work. An attack was made by inhabitants near Lonoke late in August on a road gang which included Negroes brought in from another locality. Residents of the neighborhood thus sought to prevent outsiders from sharing in the pay for work done in the vicinity. A detachment of the National Guard was sent out from Little Rock to check the disorder.

The malt tax imposed by the State yielded in the fiscal year 1929-30, \$39,267. The State commissioner of revenue, David A. Gates, estimated that this total of collections indicated that malt had been consumed in sufficient quantity to make 3,272,260 gallons of beer, and recommended raising the tax on malt extract to a point sufficient to bring in the equivalent of the old tax on \$1 a barrel on beer.

The practice of the State's Democratic organization of excluding Negroes from the primaries was contested in the courts, as it had been in Texas. A group of Negro voters in Little Rock sought a temporary injunction against exclusion from the primaries in 1928; obtaining this, they subsequently voted, but later the State Supreme Court, holding that the Fourteenth and Fifteenth Federal amendments did not apply to votes within party organizations, refused to render the injunction permanent. Appeal was then taken, shortly before the primaries of 1930, to the United States Supreme Court. Party action among the Democrats of the State, with regard to the standing of the members who had bolted the Democratic Presidential nominee in 1928 was largely a matter of county option. In Union County five members of the Central Committee were ousted on the bolting charge. Except where specially dealt with, the bolters of 1928 were free to return to the party fold and to participate in the primaries of 1930, on taking the pledge to support the party's candidates in the general election.

An epidemic of collapse in banking institutions, starting in Tennessee early in November and extending to Kentucky, reached Arkansas on November 17. On that day four banking institutions in the State closed their doors for liquidation or reorganization and 39 others suspended under the State law allowing 5-day suspensions under certain conditions. Combined deposits of about \$27,000,000 were involved. The chief banks of the group were members of a chain connected through a holding company of Little Rock. Among them were the American Exchange Trust Company of Little Rock, the Merchants' and Planters' Trust Company of Pine Bluff, and the Merchants' and Planters' Bank of Helena.

ELECTIONS. United States Senator Joseph T. Robinson, Democrat, was reelected unopposed. Governor Harvey Parnell, Democrat, was reelected by a majority of about 5 to 1 over the Republican candidate, Judge J. O. Livesey. Seven Democrats were sent to the House of Representatives, five being the actual incumbents. One of the two others was Essie Jeane Wingo, widow of Representative Wingo, who had been approved by both parties. The Legislature remained Democratic. Nine constitutional amendments, dealing with taxation and with the State Highway Department, were defeated. The voters carried an initiated act for the obligatory reading of the Bible in the public schools and approved, by a referendum vote, the State income-tax law.

OFFICERS. Governor, Harvey Parnell; Secretary of State, Jim B. Higgins; Treasurer, Ralph Koonce; Auditor, J. O. Humphries; Attorney-General, Hal L. Norwood; Superintendent of Public Instruction, C. M. Hirst.

JUDICIARY. Supreme Court: Chief Justice, Jesse C. Hart; Associate Justices, Frank G. Smith, T. H. Humphreys, William F. Kirby, Thomas M. McHaffey, E. L. McHaney and Turner Butler.

ARKANSAS, UNIVERSITY OF. A coeducational State institution of higher learning in Fayetteville, Ark.; founded in 1871. It comprises the colleges of arts and sciences, education, engineering, agriculture (including experiment station), and schools of law, business administration, and medicine, the last named being in Little Rock. In the autumn of 1930 the enrollment was approximately 2000, and for the summer session it was 1091. The number of faculty members, including administrative officers, was 201. The productive funds amounted to \$132,000, and the income for the year 1930-31 was about \$1,150,000. The library contained approximately 100,000 volumes. President, John Clinton Futrell, LL.D.

ARMAMENTS, LIMITATION OF. See MILITARY PROGRESS, NAVAL PROGRESS, DISARMAMENT and GREAT BRITAIN, FRANCE, and ITALY, under *History*.

ARMENIA. The name applied, since Dec. 2, 1920, to the Socialist Soviet Republic of Armenia. On Jan. 10, 1923, it became one of the three constituent republics of the Transcaucasian Socialist Federated Soviet Republic, a member of the Union of Socialist Soviet Republics. The population of that part of the former Turkish Empire known as Armenia and Kurdistan was given at about 2,470,900.

The Armenian Socialist Soviet Republic comprises the southeast frontier region of Transcaucasia, and is bounded on the west and south by Turkey and Persia, on the east by Azerbaijan,

and on the north by Georgia. The area is 11,945 square miles and the population (1926), 876,557, of whom 86 per cent were Armenians, 2.4 per cent Turko-Tartars, and the remainder Russians and other nationalities. Capital, Erivan, with a population in 1929 of about 75,000. Only 16.6 per cent of the population live in towns. The school enrollment in 1925 was 81,000, in addition to those attending the state university and a number of trade and technical schools. Agriculture is the main industry. In 1925 about 85 per cent of the cultivated land was devoted to grain and about 6 per cent to cotton and other industrial crops. See RUSSIA.

ARNOLD, JOHN OLIVER. A British metallurgist and educator, died in Oxford, Mar. 27, 1930. He was born in Peterborough, Northamptonshire, in 1858. On completing the course at King Edward's School, Birmingham, he entered the engineering department of the Sheffield Steel and Iron Works. In 1889 he was appointed professor of metallurgy at the Sheffield Technical School and remained a member of the staff when the school was absorbed by the university. In 1917 he was appointed dean of the faculty of metallurgy, and retired as professor-emeritus in 1920. He was a pioneer in applying chemical analysis and microscopy to steel manufacture, discovering the influence of vanadium and producing a powerful high-speed steel by substituting molybdenum for tungsten. During the World War he rendered valuable advice to the Admiralty, on steel to be used in naval construction. Elected Fellow of the Royal Society in 1912, he was president of the Sheffield Society of Engineers and Metallurgists from 1914 to 1918. Among his honors were: the Telford Premium of the Institution of Civil Engineers (1887); the Telford Premium and Gold Medal (1895); and the Bessemer Gold Medal of the Iron and Steel Institute (1905). His publications include: *Steel Works Analysis*; *The Influence of Elements on Iron*; *The Molecular Constitution of High-Speed Steels and Their Correlations with Lathe Efficiencies*; *The Influence of Carbon on Iron*; and *Factors of Safety in Marine Engineering*.

ARNOLD, SIR THOMAS WALKER. A British educator and author, died in Kensington, London, June 10, 1930. He was born Apr. 19, 1864, and was educated at the City of London School and Magdalene College, Cambridge. He had been professor of philosophy at the Government College in Lahore, India, and dean of the Oriental Faculty of Punjab University. For ten years he was professor at the Mohammedan Anglo-Oriental College in Aligarh. He was assistant librarian of the India Office from 1904 to 1909, educational adviser to Indian students from 1909 to 1916, and educational adviser to the Secretary of State for India from 1917 to 1920. From 1920 until his death he was professor of Arabic in the School of Oriental Studies at the University of London. He was made a Companion of the Order of the Indian Empire in 1912 and a Knight in 1921. He was also an honorary Fellow of Magdalene College, Cambridge. His works, on which rest his reputation as one of the greatest Islamic scholars, include: *The Preaching of Islam* (1896); *Al Mu'tazilah* (1902); *The Court Painters of the Grand Moguls* (with Laurence Binyon, 1921); *The Caliphate* (1924); *Survivals of Sasanian and*

Manichæan Art in Persian Painting (1924); *Painting in Islam* (1928); and *The Islamic Faith* (1928).

ARTERIAL DISEASES OF THE EXTREMITIES. See SURGERY, PROGRESS OF.

ART EXHIBITIONS. On New Year's Day, 1930, there opened in London at Burlington House one of the most important exhibitions of Italian art ever held, and probably the finest display of old masters of any school ever shown. Paintings, sculpture, drawings, and other works of art were contributed from all Europe. The decision of the Italian government at the last moment to lend the most treasured works from Italian collections did much toward making possible the completeness of the exhibition and gave it a value surpassing the Flemish and Dutch exhibitions of previous years. Italy naturally contributed the largest number of paintings. England was second with her beautiful collection of paintings from the National Gallery as well as many valuable works from private collections. The attendance at Burlington House was unprecedented.

An exhibition of Italian art supplementary to that at Burlington House was held at the British Museum. Other exhibitions in London were Art in the Dark Ages at the Burlington Fine Arts Club and English Conversation Pieces at the house of Sir Philip Sassoon. In Paris a retrospective exhibition of the work of Sisley was held, a rather extensive showing of Pissarro in honor of the artist's centenary, and an exhibition of Delacroix at the Louvre. An exhibition of Flemish art treasures from the fifteenth to the eighteenth centuries was shown in Antwerp and in Amsterdam 600 paintings formed a most interesting representation of Vincent Van Gogh and his times.

Berlin held a large and inclusive exhibition of Matisse and a comprehensive exhibition of Rembrandt, the latter as a prelude to the celebration in the autumn of the centenary of the state collections. Venice held its seventeenth biennial exhibition during the year and Vienna exhibitions of baroque and rococo art. The two chief events in Munich were the exhibition of the Church Art Treasures of Bavaria and the first public showing of Baron Meinrich Thyssen-Bornemisza's private collection from Castle Rohonez which aroused great interest with its wide range of pictures.

Exhibitions in New York were varied as usual. Exhibitions of old masters tended to be fewer as fewer of them appear in the market. The exhibition of a single Van Eyck, the "Madonna of Ypres," was of considerable interest since there was only one other authentic work by this master in the United States. There were some fine examples of prints by Rembrandt shown in February.

European art, especially French, still held the highest place in America. Perhaps the most interesting exhibition was Painting in Paris held at the Museum of Modern Art in January. This was a comprehensive and valuable showing with a high average of individual pictures. An exhibition of Derain and Picasso about the same time was an interesting supplement to the work of these artists in the Modern Museum's show although it offered less fine examples. A retrospective exhibition of Derain, in April, comprising 28 pictures from 1911 to 1930 was the most comprehensive exhibition of his work ever held in America. The exhibition in October of Bonnard, Roussel, and Vuillard was a rather important one. The significant feature was the work of Vuillard which had

hitherto not been adequately represented in either France or America.

Although French painting still received the emphasis of fashion American painting was decidedly on the up-grade. Usually greater in quantity than in quality, it had this year been more forcibly represented and more enthusiastically received than ever before. Perhaps the best American show was the exhibition of Homer, Ryder, and Eakins at the Modern Museum. The exhibition of "Modern Americans" in February was an impressive one and gave a good idea of the strength of the school, especially as a group. Two other interesting exhibitions were "One hundred Representative American Prints" in March, and in April the Modern Museum's showing of painting and sculpture by American artists under 35. Important sculpture, particularly "The Wrestler," by Dudley Vail Talcott, and "Man, 1930," by Gaston Lachaise, dominated the Museum's December exhibition, although the canvases shown were at a high level.

Other notable exhibitions held in New York galleries were: still lifes from the Chester Dale Collection; "La Vierge en France," French sculpture of six centuries, from Pre-Gothic to Renaissance; a rare collection of central Asian art from the third to the eighth centuries; Kmer sculpture from the Quaritch Wales Collection; a memorial exhibition of the work of Jules Pascin; an exceedingly rare collection of Chinese porcelains at the Ralph M. Chait Galleries; the comprehensive group of Eakins's paintings shown by the Babcock Galleries; and the antique show at the Grand Central Palace, the largest and most successful venture of its kind in New York.

One of the most important exhibitions of the year was that of the H. O. Havemeyer Collection at the Metropolitan Museum of Art. The showing of this remarkable collection of paintings, prints, and Far Eastern art, acquired in 1929, was eagerly awaited and the Museum arranged to have it on exhibition during almost the whole of the year so that the public might have an opportunity to see it as a whole before the objects were distributed among the various departments. Another exhibition at the Metropolitan which aroused a good deal of general interest was the memorial exhibition of the work of Arthur B. Davies, showing the development of his art in painting and other media. The exhibition in January of copies of Egyptian tomb paintings showed a phase of Egyptian art which it has hitherto been impossible to appreciate except in Egypt. Other exhibitions at the Museum were; in June Persian Rugs of the so-called Polish Type, in October Mexican art, and in December the annual exhibition of the American Federation of Arts, this year metalwork and cotton.

Contrary to custom, the November National Academy exhibition was open to members only, and no awards were made. The showing of prints was unusually good, and among others, the contributions of John Taylor Arms, Frank W. Benson, and Charles A. Platt were well received. In general, the paintings were unfavorably criticized by the art critics.

A number of notable exhibitions were held during 1930 in various museums throughout the United States. Probably the most important of these was that at the Detroit Museum of paintings by Rembrandt. Seventy pictures lent entirely from American collections made up what was the first large exhibition of Rembrandts in this country.

Although these were naturally only a small part of the artist's work they were well chosen and represented all phases of his genius. The Detroit Museum also held exhibitions of Mohammedan art from the ninth to the seventeenth centuries and of eighteenth century tapestries. The loan exhibition of Eakins at the Pennsylvania Museum, including recent gifts to the museum, was one of the most interesting of museum exhibitions. The Fogg Museum held exhibitions of English eighteenth century paintings and Persian painting. Other exhibitions at museums were: One Hundred Colonial Portraits, a special loan exhibition at the Boston Museum of Fine Arts of portraits of distinguished members of the Massachusetts Bay colony; at the Cleveland Museum prints by Mantegna; Chinese bronzes at the Chicago Art Institute; rare English silver from many collections at Minneapolis; and the Corcoran exhibition at Washington, D. C.

PENNSYLVANIA ACADEMY. With the one-hundred-and-twenty-fifth annual exhibition the Academy of Fine Arts entered upon the second year of its recent-day broad-minded policy and arranged the largest and most inclusive exhibition in its history. Among the 571 paintings and 139 pieces of sculpture by 490 artists every trend of art was represented, and an attempt to make each one of this varied group feel at home might be seen in the intentionally haphazard arrangement. Hugh H. Breckenridge, chairman of the jury of selection, considered this the most educational show ever held by the Academy, representing every aesthetic and educational idea in painting, and said that the jury had tried to include all forms from the most conservative to the most radical. The awards were made as follows: The Temple Gold Medal to Arthur B. Carles of Philadelphia for "Still Life"; the Jennie Sesnan Gold Medal for the best landscape in the exhibition to S. Walter Morris of Philadelphia for "Arorwark"; the Carol Beck Gold Medal for the best portrait to Leon Kroll of New York for "Joie"; the Lippincott Prize for the best figure piece to Abram Poole of New York for "Miss Greta Kemble Cooper"; the Widener Memorial Gold Medal for sculpture to Mitchell Fields of New York for "Torso"; the McClees Prize for group sculpture to Gaetana Cecere of New York for "Boy and Faun"; and the Mary Smith Prize for the best painting by a Philadelphia woman to Grace Gemberling for "Rocks and Flowers." The exhibition included a memorial group of the works of Charles Grally.

CARNEGIE INSTITUTE, PITTSBURGH. The Twenty-ninth International Exhibition of Paintings displayed representative works of 14 European nations. There were 425 paintings in all, 135 of these contributed by American artists and 290 from abroad. The plan which the Institute adopted several years ago of inviting fewer artists and hanging a large number of pictures of each has apparently become permanent. The exhibition was notable for quality and if the emphasis seems to have been on the French school that was only to be expected. The Institute and America were honored this year by having Henri Matisse as one of the jurors. The other members of the jury were Glyn Philpot of London, Karl Sterrer of Vienna, and Bernard Karfoll, Emil Carlsen, and Ross Moffett of America. The first prize of \$1500 was won by Pablo Picasso for a portrait of Madame Picasso. As this picture was not for sale the Albert C. Lehman award of \$2000 for the

best purchasable picture went, together with the second prize of \$1000, to Alexander Brook of New York for his painting "Still Life." The third prize of \$500 was given to Charles Dufresne of France for "Still Life." The first honorable mention with \$300 was given to Henry Lee McFee, American, for still another "Still Life." This same artist won the special prize of \$300 offered by the Garden Club of Allegheny County for the best painting of flowers or a garden. Other honorable mentions were Maurice Sterne of New York, Giuseppe Montanari Como of Italy, and Niles Spencer of New York.

ART MUSEUMS. Although the Metropolitan Museum of Art officially acquired the H. O. Havemeyer Collection in 1929 it was not then shown to the public, and the exhibition of the collection as a unit before it was divided among the various departments during almost the whole of 1930 makes it an event of this year and a very important one. The magnificent group of paintings, principally modern French, forms the most impressive addition in many a day. The department of paintings acquired this year a large and interesting altarpiece by Luca Signorelli. The most notable acquisition to the classical department was a piece of Greek sculpture from the Lansdowne Collection dispersed in London in the spring. It is a fragment of a gravestone with a portion of the pediment and a life-size head of a woman done in the grand fifth century manner. Other additions to the classical collection were a bronze statuette of a satyr of the Hellenistic period, an Etruscan cauldron, and a Hellenistic vase with black glaze. The department of Far Eastern Art made one of the most important additions it has ever made, a rare Chinese stele of the sixth century, one of the finest Oriental treasures in the West. Other acquisitions were additional gifts of paintings, tapestries, and prints to the H. O. Havemeyer Collection, fine woodcuts including two unique primitive German colored single-sheets, and an especially clear "Holy Trinity," by Durer, two stone lion heads, and a large and important collection of Chinese textiles. The department of decorative arts announced a number of interesting accessions: two chairs from the Figdor Collection, one of them the famous Strozzi chair, a head of Lincoln by George Grey Barnard, a stained glass window by John La Farge, an Indian relief of the Amaravati school, three eighteenth century clocks, five sculptures for the medieval collection at The Cloisters, an English carved oak chest front of the fourteenth century, and an Italian Renaissance writing-cabinet.

The Pennsylvania Museum showed itself forehanded in reserving Edmund Foulc's rare and distinguished collection of sixteenth century French and Italian sculpture, furniture, faience, metalwork, tapestries, etc. This collection, valued at well over \$1,000,000, was considered so important that a banking syndicate was formed to advance a fund sufficient to obtain control of it until the museum could purchase it outright. Other ac-

cessions were a Florentine Gothic room of the fifteenth century which completes the architectural background of the south wing of the Museum, 36 paintings by Thomas Eakins given by the artist's widow, and a silver tankard by Edward Winslow.

The Art Institute of Chicago acquired five modern French paintings by Jean Lurcat, Jean Marchand, Charles Dufresne, Georges Braque, and Eduard Georg; a bronze Chinese mirror of the Han dynasty, a group of nine paintings from the Worcester Collection, including works by Veronese, Tintoretto, and Moroni; a painting by Gustave Courbet, "Mère Gregoire"; a portrait of a man by Lucas Cranach; "The Creation of Eve" by Veronese; a rare painted scroll by Maronoba, Japanese work of the seventeenth century; and a Buddhist stone triad of the T'ang dynasty.

The Cleveland Museum of Art made a number of interesting accessions, including six objects from the famous Guelph Treasure, a collection of reliquaries, etc.; two Tiepolo drawings; "The Coronation of the Virgin," a panel by Conrad von Soest; "Passage de Banlieu" by Henri-Julien Rousseau; a Greek mirror case; a group of fourteen Romanesque capitals; three Renaissance watches; the head of a Buddhist disciple of the late T'ang dynasty; and a marble statue of Kwan Yin of the seventh century.

The most interesting accession of the Detroit Museum of Art was a Venetian school piece from the Havemeyer Collection which, after repainting had been removed turned out to be a portrait by Titian of Doge Girolomo Priuri. Other interesting acquisitions were a "Dance of Peasants" by Pieter Breughel, "The Birth of Venus" by François Boucher, sketches by Rubens and Van Dyck, and "Madonna and Child" by Dosso Dossi, and "Jacob and Rachel" by Murillo.

The Boston Museum of Fine Arts acquired a life-size figure of Aphrodite, a replica of a lost Greek work; a Spanish sixteenth century painting of the Madonna and Child; a portrait by John Constable; a portrait by Van Dyck of Isabella, Lady de la Warr; and some rare prints by Dutch masters including Master W with the Key.

The Memorial Art Gallery of Rochester added to its collections a thirteenth century Gothic statue of Saint Mary Magdalen; a fifteenth century Flemish tapestry representing "The Judgment of the Emperor Otho III" which formerly hung at Knole, the estate of the Sackville family in England; and some important Greek vases of the seventh and sixth centuries B.C.

The St. Louis Museum opened a series of five English and French rooms of the seventeenth and eighteenth centuries and acquired an important Gothic sculpture of the Madonna and Child of the fle-de-France school and the three Marys at the Tomb by Annibale Carracci.

The Museum of Modern Art in New York acquired five important sculptures, a relief, two figures and a bronze torso by Maillol and a bronze figure of a woman by Lehmbruck; "The House by the Railroad," by Edward Hopper; and "Railroad Gantry," by Charles Burchfield.

The Cincinnati Museum reopened with loans of the Emery and Hanna Collections. The Fogg Museum received a collection of jewels, textiles, paintings, etc. as a gift from Mrs. Naumburg. The design of Dayton's new museum is based on that of the Villa Caprrola near Viterbo. Part of the Garvan collection of Americana has been

given to Yale University. The Minneapolis Institute of Arts has added "Dancers Resting" by Jules Pascin to its collection of paintings. Accessions of the Toledo Museum include four modern paintings by Narcisse Diaz, Jules Dupre, Felix Ziem, and Georges Inness, and twelve pieces of ancient glass from the third to the eleventh century. The Brooklyn Museum acquired a Greco-Roman torso of Aphrodite, the Houston Museum of Fine Arts a painting by Lorenzo Lotto, and the Freer Gallery in Washington some Chinese mirrors of the T'ang dynasty and several ceremonial bronzes.

EUROPEAN MUSEUMS. The National Gallery in London opened a new room, the gift of Sir Joseph Duveen, which has an unusual arrangement of lighting. Acquisitions of the National Gallery include a self-portrait by Turner and a letter from Ruskin referring to it and two portraits by Romney. The British Museum received as gift a group of prints and drawings of the present day. The Victoria and Albert Museum acquired a sixteenth century portable altarpiece of the Milanese school. It is of iron damascened with gold and set with painted glass panels. The Louvre received as gift the collection of paintings of M. Carlos Beistegui, which includes the Virgin by Jean Malouel, the portrait of Dauphin Charles Orlando by Rubens, a portrait of Don Olívio Odescalchi by Van Dyck, a portrait of the Marquesa de la Solana by Goya, two portraits by David, and two by Ingres. The palace and large art collection of Max Schmidt was given to the city of Budapest as a museum. A painting by Duccio recently lent to the Uffizi is a most interesting addition since the gallery has hitherto had no example of this master. The National Archaeological Museum of Madrid received a valuable collection of antiquities as the gift of a Franciscan monk. The collection contains 281 objects of Egyptian, Greek, Greco-Roman, and early Christian art. The state collections in Berlin celebrated their centenary by the opening of new wings, the north wing of the Deutsches Museum, the centre of the Pergamon Museum, and two rooms containing Near Eastern Architecture.

See ART EXHIBITIONS.

ART SALES. Although the trade in works of art suffered in the general depression, the change was not considerable. There were many optimistic statements about the stability of the art market to the effect that the prices of generally accepted works of art had shown little decrease. On the other hand many people felt that prices of art objects in recent years had been out of proportion to their real value, that fewer and fewer authentic pieces were coming into the market, and that the expected decline in both quality and quantity had definitely begun in 1930. It is certainly true that the supply of masterpieces cannot last forever, especially since a large portion leaves the market permanently each year in going to museums, but as long as private collections continue to change hands a certain number of art treasures will be available. Few spectacular sales were held in America; the dispersal of the famous Figdor Collection in Berlin and Vienna would, however, add interest to any season.

The Figdor sale was undoubtedly the most important one of the year. This large and valuable collection was formed in a spirit now more the exception than the rule, that of personal discrimination and regard for artistic rather than financial value. The result was that rare phenomenon of the modern art market, a group of

works of art whose authenticity is not to be challenged. The auction of the first section of the first part took place in Vienna early in June and included an important group of medieval and Renaissance furniture, tapestries, textiles, and silver ware. The 810 items realized about \$1,300,000. The highest price, \$100,000, was paid for a Tournai tapestry of the fifteenth century, "Dispensing Justice," which went to the Copenhagen Museum. A Brussels tapestry of Ahasuerus and Esther brought \$28,000, and a small Swiss panel showing wild men and animals, \$17,150. The highest price for furniture was \$21,430 paid for a chest from Lindau. The famous Strozzi chair brought \$20,000 and a traveling chest bought for the Pennsylvania Museum, \$8000. A Nuremberg antependium of the fifteenth century showing the Adoration of the Magi was sold for \$14,300 and one showing the Death of the Virgin, \$24,300. The second section of the sale, at which paintings, sculpture, etc., were sold, was held in Berlin in September. The highest price, \$96,250 was brought by the "Prodigal Son" by Jerome Bosch. Other prices were: Statue of Saint Sebastian by Riccio, \$37,000; bridal box with lovers, painted by Domenico Bartolo, \$30,000; "Saint Augustine in his Study" by Giovanni di Paolo, \$25,000; Virgin and Child in landscape by Giovanni di Paolo, \$34,000; and Saint Ursula setting forth for the hunt, \$10,000.

The sale in London of the famous Lansdowne Collection of antique marbles was a rare occasion since it is not often that museums and collectors have an opportunity of choosing from so large a group. The bulk of the collection was formed in the eighteenth century and reflects the taste of that period in the numerous Roman works, but there were a number of exceptionally fine Greek pieces also. A Pentelic marble statue of a wounded Amazon brought the highest price, \$141,750. The second large payment was \$25,250 for the fragment of an attic sepulchral relief, and the third \$24,150 for a Heracles of Pentelic marble from Hadrian's Villa. The total of the sale was \$342,150.

The Vieweg Collection of Brunswick was sold in the spring with a total of \$220,000 and not a very high average of prices. The Dutch paintings of the eighteenth century excited the greatest interest. Some of the prices are as follows: "Haarlem Bleaching Ground," by Ruysdael, \$30,500; Lunette by della Robbia from the church of San Michele Arcangelo in Faenza, \$23,000; Brussels woven hanging of about 1530, \$12,250; "Virgin and Child" by the Brussels Master, \$10,250; "Ice Pleasures," by Hendrik Averkamp, \$7040; "Children with a Cat," by Jan Steen, \$5060.

A five-day auction of prints at Boerner's, many of which were the property of the Soviet government, was one of the most brilliant events of the season and brought a total of 1,300,000 marks. The highest price was 53,000 marks for a drawing by Moreau le Jeune. A rare engraving of a fountain by Master W with the Key was sold for 33,000 marks, "Christ's Entry into Jerusalem," an early woodcut, for 30,000 marks, and a playing card by Master E S for 21,000 marks.

Another sale of prints of old masters in Berlin in the spring brought record prices: "The Life of Mary," 130,000 marks; "Erasmus of Rotterdam," 62,000 marks; "The Sea Monster," 6400 marks; and "Christ on the Mount of Olives," 6000 marks, all these by Dürer.

At Christie's in June important pictures by

old masters, chiefly of the British school, were sold, the property of the Duke of Leeds, Lord Cavan, and others. The 131 lots totaled £52,486. The market for the British school was apparently somewhat affected by business depression. The highest prices were: "Miss Margaret Ingles" by Raeburn, 6800 guineas; two other portraits by Raeburn, 3400 guineas and 850 guineas; "Janet, Lady Anstruther" by Reynolds, 2900 guineas.

In May the medieval art collection of Dr. Leopold Seligmann of Cologne was sold with a total of 350,000 marks. An Egyptian ivory plaque brought 45,000 marks and an antependium of about 1000 A.D. 42,000 marks.

The most notable auction of the year in America was that of the remainder of the Havemeyer Collection, that is, that part not given to the Metropolitan Museum. The paintings, ancient glass, Mohammedan, and Italian decorative arts, and Far Eastern art reached a total of \$374,366. The paintings alone totaled \$241,315. The following are some of the pictures and the prices they brought: David, a portrait of a young girl in white, \$26,000; Cezanne, "L'Enlèvement," \$24,000; Goya, "Lady with a Guitar," \$21,000; El Greco, "Saint Peter," \$15,000; Manet, portrait of Marguerite de Conflans, \$10,500; three pictures by Mary Cassatt, "La Femme au Tournesol," \$8500, "Sa Famille," \$5500, and "Jeune Femme Allaitant son Enfant," \$48,000; Delacroix, "Expulsion of Adam and Eve," \$3500; William Kalf, "Still Life," \$3700; Monet, "Morning Haze," \$2600.

The sale of the Flaydeman Collection in January was significant in showing that there is a continued demand for early American furniture of high quality. The total amount, \$429,840, was second only to that of the Reifsnnyder sale of the previous year. The average of prices was high and the attendance broke all records. The highest price, \$30,000, went for a labeled Seymour tambour secretary, and the second highest, \$29,000, for a carved mahogany Chippendale claw-and-ball tea table.

The sale of Col. James Elverson's collection brought \$132,635. There were fifty paintings, most of them by masters not in the heyday of their fashion. The five Corots brought interesting prices. One of them, "Les Baigneuses des Iles Boromees," \$41,000, was sold for \$900 more in 1926. Three, "Au Bord d'une Riviere," \$14,000, "Morning," \$11,000, and "La Vachere de Ribagnac," \$8000, had increased in value. "Les Trois Commeres au Bord du Lac" went for \$10,000.

The Roerich Collection, which contained a number of interesting paintings, reached a total of \$114,165. The top prices were as follows. "The Virgin and Saint Anne" by El Greco, \$9500; "Ecce Homo" by the Master of the Virgo inter Virgines, \$7000; "Tobias and Sarah" by Jan Steen, \$5500; "Holy Family with Saints" by Herri Met de Bles, \$4500; "Madonna and Child" by Simone Martini, \$4000; "Adoration of the Magi," school of Gerard David, \$4000.

The sale of the Benguiat Collection, which brought \$214,902, established a new record price of \$20,000 for an Italian Renaissance table. Comtesse de la Bérandiere's collection brought \$277,455 for the 467 pieces auctioned in December. The most important sale was the \$80,000 paid for Houdon's marble bust of Comtesse de Labrau.

ASTRONOMY. The mathematical prediction by Leverrier which led to the discovery of the planet Neptune by Galle, on Sept. 23, 1846, is justly regarded as one of the greatest intellectual achievements of man. During the half century after Herschel's discovery of Uranus, the motion of the latter was found to be unmistakably different from that which would have been produced by the gravitational attractions of the sun and the then known planets; and this difference indicated the presence of still another planet beyond Uranus. From the discrepancies between the predicted positions of Uranus in the sky and the actual positions from night to night, Leverrier and Adams, independently of each other, calculated the position of the hitherto unseen planet which by its attraction on Uranus was producing these discrepancies; and after a brief search the planet was found, less than a degree from the calculated position.

Throughout the 84 years since the discovery of Neptune, it has been realized that one or more additional planets, still more remote from the sun, might exist. The influences which such planets would exert on the motion of Uranus would be almost too small to detect with certainty; and the deviations, if there be any, of the actual motion of Neptune from that which would be produced by the attractions of the known bodies of the solar system cannot be determined accurately until observations have been made throughout at least one complete revolution of Neptune around the sun. However, the minute irregularities in the motion of Uranus which still remain unexplained after allowance has been made for the attraction of Neptune, together with some of the characteristics of cometary orbits, have led several investigators to suspect the existence of at least one more planet. The most comprehensive study of this problem was that of the late Percival Lowell, who concluded that the unexplained perturbations of Uranus indicated the presence of a Trans-Neptunian planet situated either in Gemini or else in the diametrically opposite region of the sky. A systematic search for this object was commenced at the Lowell Observatory in 1905; and the long-sought planet, to which the name Pluto has been given, was finally discovered in Gemini, by C. W. Tombaugh, on a photograph taken Jan. 21, 1930.

A Trans-Neptunian planet would inevitably be so faint and slow-moving that its actual detection could be accomplished only by photography. Two plates of the same region of the sky, taken at different times, are compared with an instrument known as the blink comparator; if, among the thousands of stars on the plates, any one has moved between the two exposures, it can easily be picked out with the aid of this instrument. The delay in the discovery of Pluto was due to the fact that the telescopes at first used in the search were of insufficient light-gathering power; in his calculations, Lowell had overestimated the magnitude of the perturbative effects that were being

exerted on Uranus, and had predicted too large a mass and too great a brightness for the disturbing planet. As the search continued without success, it was realized that the planet must be fainter than had been expected, and that more powerful instruments were needed; a new 13-inch high-speed triple objective, with wide field and sharp definition, was presented to the Observatory by Lowell's younger brother, President A. Lawrence Lowell of Harvard University, and within a year after this lens had been put into operation, an object of the fifteenth magnitude was discovered which, after being observed for several weeks, was found to be moving just as was to be expected were it the Trans-Neptunian planet predicted by Lowell. Announcement of the discovery was made on March 13, 1930, the 149th anniversary of the discovery of Uranus, and the 85th anniversary of Lowell's birth.

A large number of observations of the new planet were accumulated before conjunction with the sun took place, but they proved to be insufficient for a reliable determination of the orbit because they covered too small a portion of the complete path of the planet about the sun; the apparent motion of such a distant body is so slow that even very minute inaccuracies in the observations lead to serious errors in the computed orbit. The first computations that were attempted indicated an orbit so peculiar as to give rise to suspicions that the body was merely an unusual comet, or at least not the planet that Lowell had predicted; meanwhile, however, photographs made in past years at other observatories were being searched, and the planet was found on plates taken in 1919, 1921, and 1927. The orbit determined from 136 observations that extended from December, 1919, to June, 1930, left no doubt of the truly Trans-Neptunian planetary character of the body, and has accurately represented the observed motion since reappearance after conjunction.

The orbit, which agrees closely with that predicted by Lowell, has the high eccentricity of 0.25, and is inclined $17^{\circ} 9'$ to the plane of the ecliptic; this large inclination increased the difficulty of finding the planet. The mean distance from the sun is nearly 40 astronomical units, and the period is over 240 years; the planet is due at perihelion about 1989. Near perihelion, the orbit overlaps that of Neptune, so that over a short arc Pluto comes closer to the sun than Neptune does. The mass and the size of Pluto seem to be comparable with the mass and the size of the earth.

COSMOLOGY. According to the Theory of Relativity, space is curved; and hence the universe, though unbounded, is finite, somewhat like the two-dimensional space formed by the surface of a sphere. Einstein's theory of cosmology ascribes the curvature of space wholly to the presence of matter. In the alternative cosmological theory developed by de Sitter, however, it is supposed that even a universe totally devoid of matter would possess a curvature, due to the inherent properties of space and time; and that the additional curvature introduced into the actual universe by the presence of matter is insignificant in comparison with the inherent curvature, because of the relative sparseness with which this matter is distributed. Now, Lemaitre has shown that an Einstein universe would be unstable, and that it would expand indefinitely, and approach continually closer and closer to the condition of an empty

de Sitter universe as the matter became more and more sparsely distributed. The universes of Einstein and de Sitter are the two limiting cases of all possible universes, and it may be supposed that the actual universe is now at some stage of its progress from the former toward the latter; we should therefore expect to find astronomical bodies to be receding from each other in general, but were this the explanation of the observed apparent recessions of the remote spiral nebulae, the initial stage, when these nebulae were all closely congregated together, would have to have been only a few thousands of millions of years ago, whereas there is abundant evidence that the universe is millions of millions of years old.

Although there can be no doubt that the spirals on the whole are receding, it does not seem possible that any large part of the displacements of the lines in nebular spectra can be due to motion in the line of sight such as would be produced by a general expansion of space. In de Sitter's theory, distance in itself produces a displacement of the lines in the spectra of remote objects, but neither this nor any of the other known causes of displacements toward the red seems capable of accounting fully for the observed characteristics of the actual displacements.

Zwicky has suggested, however, that light may be reddened in its journey through space, as well as changed in direction, by the gravitational attraction of the matter near which it passes. To test this suggestion, P. ten Bruggencate has examined the spectra of a number of globular clusters so selected as to be at about equal distances, but such that the amount of intervening matter which their light must pass on the way to the earth varies greatly from one to another; a systematic line displacement to the red was found, which instead of being the same for all the clusters as it should if due to an expansion of space, was nearly proportional to the amount of intervening matter as required by Zwicky's theory.

EXTRAGALACTIC SYSTEMS. With the 100-inch telescope and a new high-speed, short-focus spectrographic objective (designed for use ultimately with the 200-inch telescope), spectra so faint that they formerly could not be photographed, have been obtained by Humason. In the spectrum of a faint nebula in Ursa Major, obtained by exposing the plate on nine different nights for a total of 45 hours, the lines have a displacement that corresponds to a recession of 7200 miles per second; the proportionality of line displacement to distance indicates this nebula to lie 75,000,000 light years away, in good agreement with Hubble's estimate from the brightness. Shapley estimates the most remote of the Coma-Virgo systems to be 170,000,000 light years distant; and he has recently studied a cloud of galaxies in Centaurus which apparently lies at a distance of about 150,000,000 light years.

The external galaxies are distributed largely in groups and great clusters, but when large enough volumes of space are considered this tendency to cluster averages out, and the distribution in space is found to be approximately uniform out to as great a distance as existing telescopes can reach. The faintest extragalactic nebulae identifiable as such on photographs taken with the 100-inch telescope are estimated to lie at an average distance of 300,000,000 light years; within the region of space observable with this

instrument, there are probably about 30,000,000 galaxies, each of which is a great stellar system similar to the Milky Way.

STRUCTURE OF THE GALACTIC SYSTEM. The galaxy is known to have many of the characteristics of a spiral nebula; and since the spectroscope shows the spirals to be in rapid rotation, the recent discovery that the galactic system likewise is rotating constitutes additional evidence for the essential similarity of the galaxy to a typical spiral: The possible rotation of the stellar system has long been a subject of speculation, but until recently such discussions rested on very uncertain foundations. The first direct evidence of a galactic rotation was presented in 1926 by Lindblad, who perceived that some of the puzzling systematic motions of the stars which modern observations had brought to light indicated the galactic system to be composed of a number of component subsystems, approximately concentric with one another and rotating with different speeds about a common axis perpendicular to the galactic plane. The component system having the most rapid rotation, and consequently the smallest random or peculiar motions, is composed of the local cluster, the Milky Way star clouds, and the majority of the rest of the stars. The so-called "high velocity" stars belong to systems with slower rotations and higher random motions; the members of these systems appear to move much faster than the stars in our own system, because of the high rotational speeds (amounting to 300 kilometers per second) of the latter. The globular clusters, which have radial velocities of the order of 300 kilometers per second, compose the most slowly rotating system of all. The motion of the sun about the centre of galactic rotation explains the peculiar preferential motions that were discovered sometime ago by Strömberg: The heavenly bodies seem to be distributed among several groups which are each moving as a whole, like a great swarm, along nearly the same direction in space, while the members of each group fly about within the group in all directions with speeds which are greater the greater the speed of the group; the direction of this asymmetry in celestial motions is nearly in the galactic plane, and at right angles to the centre of the galactic system. The rotation of the galaxy also explains the phenomena of star-streaming.

In 1927, Oort developed a mathematical formulation of Lindblad's theory; and by an analysis of the distribution of observed radial velocities among the stars, he showed these radial motions to be identical with those that would be produced by a galactic rotation. More recently, J. S. Plaskett has shown that the radial velocities of the stars of spectral types B and O provide conclusive evidence of a rotation of the galaxy, and, moreover, that the diffuse interstellar matter which gives rise to the fixed lines in stellar spectra is uniformly distributed throughout at least the region of space occupied by the B and O stars, and partakes of the galactic rotation. Under the centrally directed force which results from the mutual gravitational attractions of the stars, the latter move in nearly circular orbits around a massive centre, about 36,000 light years distant, in galactic longitude 234° ; the period of rotation is probably about 230,000,000 years.

The galactic system as outlined by the globular star clusters differs from the spiral nebulae, however, in that its dimensions are much greater

than those of any spiral yet observed. Now, the globular clusters avoid the Milky Way, and their distribution shows practically no relation to that of the stars in general. The open star clusters, on the other hand, are concentrated near the galactic plane, and are intimately related to the star clouds of the Milky Way; furthermore, in the arms of some of the nearer spirals, nuclei with all the characteristics of the galactic open clusters are found, and some of those in M33 are partly resolvable into stars. There is thus every reason to believe that the space distribution of galactic clusters is similar to that of the stars in general, and that these, rather than the globular clusters, therefore outline the Milky Way system.

Trumpler has recently devised statistical methods for estimating the distances of open clusters, and has found that while the space distribution of these clusters indicates the Milky Way to be a highly resolved spiral, the dimensions thereby implied for the stellar system are far less than those inferred from the globular clusters, the distribution of faint stars, and the phenomena of the galactic rotation: The system of open clusters is only about 3500 light years thick and 35,000 in diameter, with a centre, 1200 light years distant, in galactic longitude 247° ; the sun is 35 light years north of the plane of symmetry of this system. These dimensions are comparable with those of the Andromeda nebula and of M33.

Trumpler therefore concludes that the globular clusters do not form an integral part of the galaxy; rather, as previously suggested by Lundmark, the globular clusters and the Magellanic Clouds, together with the Milky Way system as outlined by the galactic clusters, form an aggregation of separate systems, to which may also belong another large system, partly hidden by obscuring matter, in the region of Sagittarius. A similar conclusion has recently been reached by Shapley from a study of the extragalactic aggregations of nebulae; he considers the galactic system as a whole to be in reality neither an uncommonly large spiral nor a single unified star system, but a discoidal aggregation of individual galaxies which is a counterpart of such supergalaxies as the Coma-Virgo and Centaurus clouds. The local cluster, the Magellanic Clouds, and the great Milky Way star clouds are each typical galaxies, similar to the individual extragalactic nebulae; the star cloud in Sagittarius in this case appears analogous to the Andromeda nebula. The Orion nebula with its involved stars, the Pleiades, and other similar groups, form nebulous knots in the local system; according to Mineur, observed stellar motions may be interpreted as due to a rotation of the local cluster rather than of the whole galactic system.

The local aggregation of galaxies includes the globular clusters, but such nearby spirals as M31 and M33 may or may not belong to this aggregation. The Centaurus cloud seems to resemble the local supergalaxy more nearly than does any other system now known; this remote cloud is a distinctly discoidal aggregation comprising over 2000 separate galaxies, with many of its component members in actual contact with each other; the whole system is about 7,000,000 light years in diameter, and the largest member has about the diameter of the Andromeda nebula.

ASTROPHYSICS. Milne has investigated the internal physical constitution of the stars by a method essentially different from those used by

previous investigators, and has obtained a solution of the problem which appears to be free from the difficulties involved in the conflicting theories of Eddington and Jeans. Milne assumes only that the stars are in mechanical equilibrium, and that the *outer parts* are perfect gases in radiative equilibrium. Nothing is assumed a priori about the condition of the interior, the mean molecular weight, or the internal distribution of the source of energy; it is supposed, however, that no matter what the mass, the opacity, or the energy distribution may be, there is some distribution of density, temperature, and pressure for which the star will be in equilibrium and the surface emission will equal the internal generation of energy.

Milne's investigations lead to the conclusion that the distribution of mass which results from Eddington's theory is unstable. In the stable distributions, the density and the temperature tend to very high values as the centre is approached, and before the centre is reached the gas laws must cease to apply. A star must have a central nucleus of white dwarf type, with a temperature of perhaps 100,000,000,000 degrees and a density probably equal to the maximum of which ionized matter is capable. In this intensely hot and dense nucleus, the transformation of matter into radiation can take place with ease. Luminosity cannot be predicted from mass by the general laws of physics, and the mass-luminosity law is a consequence of the special conditions under which energy is liberated in the stellar interiors.

The origins of many hitherto unidentified lines in celestial spectra have recently been discovered: Some of the bands in stars of type N and in comets have been found to be due to isotopes of carbon. Struve has found five previously unidentified lines in 88 Gamma Pegasi, type B2, to belong to doubly ionized aluminum; several lines are due to doubly ionized phosphorous, an element not previously found in any celestial source because all the lines in the neutral spectrum lie in unobservable regions of the spectrum, and very high temperatures are necessary to bring out the ionized spectra. "Forbidden" lines of metastable iron atoms have been found in the spectra of about twenty stars, including the bright-line spectrum of the famous southern variable Eta Carinae in which numerous strong lines had hitherto remained unidentified. The familiar sodium lines have been found bright, for the first time in a stellar spectrum (except for novae), in H.D.190073.

From a study of the widths and intensities of spectral lines, Struve and Elvey have succeeded in measuring the speed of axial rotation of a number of stars. Many stars of early spectral types were found to be rotating with great rapidity; the equatorial velocities of rotation of Eta Ursae Majoris and the brighter component of Alpha Virginis are about 200 kilometers per second.

The apparent general recession of the fainter B stars has been shown by J. S. Plaskett to be due to the rotation of the galaxy; that of the brighter ones is due mainly to group motions among the bright southern B stars, but partly to the Einstein spectral shift in these massive bodies.

From the tilting of the lines in the spectra, Moore has found the rotation periods of Uranus and Neptune to be about 11 hours and 16 hours, respectively; both rotations are direct.

The polarization of the light from the moon and the planets has been extensively studied by Lyot. Among other results, he finds that the surface of the moon is probably covered with volcanic ash, and that the atmosphere of Mercury cannot be more than $1/50$ as dense as that of the earth; the atmosphere of Venus seems to be filled with minute water droplets, much smaller than those which compose terrestrial clouds.

ASTRONOMICAL PHENOMENA. A central eclipse of the sun occurred on April 28, 1930; over a belt barely half a mile wide, extending from California to Montana, within which the tip of the moon's shadow just grazed the earth, the eclipse was total for about one second, while elsewhere along the central track it was annular. The entire width of the path of totality was less than the error which may, because of the irregular topography of the moon's limb and the uncertainties in the motions of the earth and the moon, be made in calculating the location of an eclipse path; stations were therefore established at three different places by the Lick Observatory, to make certain that observations of the corona would be secured. Observations of the moon made as late as March 12 were used in the final computations; the location of the path was calculated to within 100 feet, and proved to be quite accurate. The total eclipse of October 21 in the South Pacific was also successfully observed by several parties.

Seven comets appeared during 1930, including a return of Tempel II. Striking displays of Leonid meteors were seen during the morning of November 17 by a number of observers, and it seemed probable that a really great shower might occur about 1932 or 1933.

The minor planet Eros approached to within about 16,000,000 miles of the earth on Jan. 30, 1931; and an extensive program of observations for the redetermination of the solar parallax and the mass of the moon was in progress during the closing months of 1930.

ATHLETICS. TRACK AND FIELD. A mid-Olympiad year of unusual activity in track and field events was featured by the 100-yard sprints of Frank Wykoff, of the University of Southern

California, who twice ran the "century" in $9\frac{1}{2}$ seconds without aid of starting blocks. He was officially credited with a new world's record for the event by the National Amateur Athletic Union. Wykoff won all of the premier 100-yard varsity championships in the United States in 1930, but did not compete in national championships. His closest rival was George Simpson of Ohio State University, who ran 100 yards in $9\frac{1}{2}$ seconds in 1929, but with the aid of starting blocks disapproved by the International Amateur Athletic Federation in May, 1930.

Paul Jessup, of the University of Washington, established a world's discus record of 169 feet $8\frac{1}{2}$ inches. An American javelin record of 222 feet $6\frac{1}{4}$ inches was made by Jas. DeMers of the Los Angeles A.C. and Herman Brix, of the same club, set a new American shotput record of 52 feet $5\frac{1}{4}$ inches. Closely rivaling Brix in the shotput was Harlow Rothert, of Stanford University, who became American collegiate champion with a heave of 52 feet $1\frac{1}{4}$ inches. Other outstanding performers of the year were Steven Anderson, of the University of Washington, who equaled the world's record of $14\frac{1}{2}$ seconds for the 120-yard high hurdles; Ralph Hill, of the University of Oregon, credited with a new American mile record of 4 min. $12\frac{1}{2}$ sec.; Russell Chapman, of Bates College, winner of the 880-yard intercollegiate championship in 1 min. $52\frac{1}{2}$ sec.; the Harvard mile relay team (Vincent Hennessey, Francis Cummings, Vernon Munroe, and Eugene Record), which set a new world's indoor record of 3 min. $20\frac{1}{2}$ sec.; Dr. Paul Martin, of Switzerland, winner of the American national 1000-yard title in 2 min. $12\frac{1}{2}$ sec., and Ray Conger, who remained national champion in the mile. Wilson Charles of Haskell Institute, an Oneida Indian, won the decathlon title of the National Amateur Athletic Union at Pittsburgh August 25. Miss Stella Walsh (Stanislawa Walasiewicz) of the New York Central A. A. of Cleveland smashed 11 American and world's records in women's sprint events during the year.

Track and field teams representing the United States and the British Empire met before 45,000 people at Soldiers' Field, Chicago, on August 27, in the most notable international competition of the year. The American team won 9 of the 14 events, making a clean sweep of the six field events and capturing the 400-yard relay, 480-yard shuttle hurdle relay, and the 1-mile medley relay. The Chicago meet was preceded by the Empire Games at Hamilton, Ontario, August 23, which were won by the English team, followed by Canada, and South Africa, in the order named.

A team of American athletes visited Europe during the summer, with marked success, and Princeton and Cornell defeated a combined Oxford-Cambridge squad in England. The National Collegiate Athletic Association and the Amateur Athletic Union, meeting at Washington November 19, unanimously elected Avery Brundage, head of the A. A. U. as president of the American Olympic Association. The A. A. U. during the year received an endowment fund of \$2,000,000 to be used for the advancement of athletics. AUER, ou'ér, LEOPOLD. A Hungarian violinist, died in Dresden-Loschwitz, Germany, July 15, 1930. He was born in Veszprim, Hungary, June 9, 1845, and studied at the Budapest and Vienna Conservatories and in Hanover under Joachim. He made his début in Leipzig in 1866 at one of the Gewandhaus concerts. From the first he was recognized as a virtuoso, his playing being characterized by extraordinary technical skill, depth of conception, and remarkable beauty of tone. From 1863 to 1865 he was concert master in Düsseldorf, and from 1866 to 1868 he held the same position in Hamburg. In 1868, through the influence of Anton Rubinstein, he succeeded Henri Wieniawski as professor of the violin at the Imperial Conservatory in St. Petersburg (now Leningrad) and as violin soloist to the Russian court. He also was conductor of the symphonic concerts given by the Imperial Musical Society in St. Petersburg from 1887 to 1892. Having become a Russian subject in 1883, he was created a hereditary noble in 1895 and a state counselor in 1903, and in 1912 was presented the Grand Cross of the Order of Stanislaus by Czar Nicholas II. After the outbreak of the Russian Revolution he decided to move to the United States, becoming associated with the Institute of Musical Art in New York City and the Curtis School of Music in Philadelphia. In 1926 he was naturalized. He gained his greatest fame as a violin teacher, having undoubtedly trained more artists who subsequently attained world-wide renown than any other teacher. Among these were Mischa Elman, Efrem Zimbalist, Jascha Heifetz, Toscha Seidel, and Max Rosen. His works include: *Violin Playing as I Teach It* (1921); *My Long Life in Music* (1923); and *Violin Masterworks and Their Interpretation* (1925).

AUGSBURG CONFESSION. QUADRICENTENAL ANNIVERSARY OF. See CELEBRATIONS; LUTHERAN CHURCH.

AUSTRALIA, COMMONWEALTH OF. A self-governing dominion of the British Empire, consisting of the six original states (formerly colonies) of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania, together with the Northern Territory and the Federal Territory, and comprising the island continent of Australia with its dependencies. Capital, Canberra.

AREA AND POPULATION. With an area of 2,974,581 miles, Australia had an estimated population on Mar. 31, 1930, of 6,429,207, as compared with 6,356,770 a year earlier. The area of the several states, with the respective populations on March 31 in 1929 and 1930, is shown in the accompanying table compiled from estimates of the Commonwealth Statistician.

AREA AND POPULATION OF AUSTRALIA

| States and Territories | Area in square miles | Population Mar. 31, 1929 | Population Mar. 31, 1930 |
|---------------------------------|----------------------|--------------------------|--------------------------|
| New South Wales .. | 309,432 | 2,457,127 | 2,483,645 |
| Victoria | 87,884 | 1,766,378 | 1,783,649 |
| Queensland | 670,500 | 919,251 | 934,643 |
| South Australia ... | 380,070 | 579,665 | 580,249 |
| Western Australia .. | 975,920 | 408,486 | 417,423 |
| Tasmania | 26,215 | 213,481 | 215,969 |
| Northern Territory .. | 523,620 | 4,024 | 4,584 |
| Federal Capital Territory | 940 | 8,358 | 9,045 |
| Total | 2,974,581 | 6,356,770 | 6,429,207 |

The excess of births over deaths in the calendar year 1929 was 68,624 (74,700 in 1928), while the excess of immigration over emigration was 8963 (27,232 in 1928), making a total estimated increase for the year of 77,587 (101,932 in 1928). The birth rate in 1929 was 20.31 per 1000 of mean population; the death rate was 9.55. Marriages in the same year numbered 47,501 (48,592 in 1928). The above figures do not include full-blooded aborigines, estimated at about 600,000. The population of the capital cities on Jan. 1, 1930, with figures for Jan. 1, 1929, in parentheses, was as follows: Sydney, New South Wales, 1,238,660 (1,127,470); Melbourne, Victoria, 1,018,200 (1,000,000); Brisbane, Queensland, 318,031 (308,580); Adelaide, South Australia, 324,898 (330,217); Perth, Western Australia, 202,888 (196,251); Hobart, Tasmania, 57,500 (56,730). Canberra, the Federal capital, had 6878 inhabitants on June 30, 1929.

EDUCATION. Primary education is compulsory and free throughout the Commonwealth and state aid is extended to the higher state schools, the secondary schools, and the universities. In 1927, there were 10,208 state schools, with 30,992 teachers and 901,326 enrolled pupils. Private schools in the same year numbered 1763, with 9753 teachers and 235,074 pupils. The six state universities (at Sydney, Melbourne, Brisbane, Adelaide, Perth, and Hobart) had 7959 students. For details of education in the respective states and territories, consult the individual articles.

PRODUCTION. Of the total area of Australia in 1927, 116,558,492 acres, or 6.12 per cent, were alienated; 62,566,568 acres, or 3.29 per cent, were in process of alienation; and 970,604,140 acres, or 50.98 per cent, were held under various forms of leases and licenses. The estimated value of all production in 1928-29 was £447,863,000 as compared with £452,869,000 in 1927-28. The value of production by principal industries is shown in the accompanying table. The record production value of £454,106,000 was established in 1924-25.

VALUE OF AUSTRALIAN PRODUCTION, YEARS ENDED JUNE 30

| Item | 1927 Thousand | 1928 Thousand | 1929 Thousand |
|-----------------------------------|------------------|------------------|------------------|
| Agricultural | £ 98,295 | £ 84,328 | £ 89,440 |
| Pastoral | 111,716 | 124,554 | 116,733 |
| Dairy, poultry, bee farming | 46,980 | 50,261 | 50,717 |
| Forestry and fisheries | 12,790 | 12,181 | 11,617 |
| Mining | 24,007 | 22,983 | 19,597 |
| Manufacturing | 153,634 | 158,562 | 159,759 |
| Total | 447,422 | 452,869 | 447,863 |

The total area under all crops in 1928-29 was 21,189,557 acres, of which 14,840,113 acres were devoted to wheat. The area and yield of the principal crops in 1928-29 was reported by the Commonwealth Statistician as follows: Wheat, 14,840,113 acres, 159,679,421 bushels; oats, 1,045,670 acres, 14,108,677 bushels; maize, 315,140 acres, 8,322,718 bushels; hay, 2,738,673 acres, 3,175,238 tons; sugar cane, 209,357 acres, 3,883,725 tons (cane sugar, 537,574 tons). Final estimates for 1929-30 placed the wheat yield at 126,476,863 bushels from 14,930,774 acres and the sugar cane yield at 3,763,009 tons (cane sugar, 527,832 tons) from 312,445 acres. For 1930-31, the wheat crop was estimated at 215,000,000 bushels. At the end of 1929 there were 106,117,278 sheep, the wool clip from which totaled 968,152,935 pounds in the year ended June 30, 1929.

For 1929-30, the wool clip, as in the grease, was estimated at 910,000,000 pounds. Other livestock in the country at the beginning of 1929 included 11,300,757 cattle, 1,942,753 horses, and 910,181 swine. The principal dairy produce in 1928-29 consisted of butter, 289,883,200 pounds; cheese, 30,217,101 pounds; bacon and ham, 74,499,397 pounds.

Mineral production has shown a steady decline from a total of £24,645,914 in 1924 to £19,596,634 in 1928. Preliminary figures for the production of the leading minerals in 1929, with final figures for 1928 in parentheses, were as follows: Gold, £1,807,411 (£1,944,054); silver and lead, £3,168,949 (£2,687,126); copper, £1,052,025 (£639,428); tin, £458,680 (£664,030); coal, £8,674,587 (£10,695,530). In contrast to mineral production, the value added by processes of manufacture steadily increased from a total of £155,424,259 in 1925-26 to £167,623,316 in 1928-29. In the latter year, there were 22,916 factories, with 450,482 employees and a gross value of output of £420,445,288. Chief among the manufacturing industries were those producing foods and drinks, metal works and machinery, clothing and textile fabrics, books, paper and printing, heat, light and power, wood working, stone, clay and glass articles, and vehicles and harness.

With the continued decline in world prices for agricultural produce and raw materials, the value of Australian production fell off markedly in 1929 and 1930; unemployment increased, government revenues were sharply curtailed, and in general the Commonwealth experienced an economic depression of unprecedented magnitude. The unemployed were estimated by trade union officials at 130,000 in April, 1930, and at 180,000 the following August. The largest wage reductions in nine years were authorized by the various industrial tribunals following publication of cost of living figures for the quarter ended Mar. 31, 1930, showing a decrease of 3s. 6d. for the six capital cities. The extent of the depression was indicated by a decline of 53 per cent in the value of building permits issued during the period from January to April, 1930, as compared with the same period in 1929. See also under *Finance* and *History* below. Statistics of production, etc., for the individual states are given in separate articles on each.

COMMERCE. Australian foreign trade, including specie and bullion, declined sharply (by £32,515,515) during the fiscal year ended June 30, 1930, according to preliminary figures of the Dominion Statistician. Imports totaled £131,134,269, as compared with £143,647,881 in 1928-29, and exports, including £2,511,908 of reexports, were valued at £124,848,549, as against a total of £144,850,452 in the preceding year. The excess of imports in 1929-30 was £6,285,720, while in the previous year there was an export surplus of £1,202,571. Declines were registered in all but a few classes of imports, the chief reductions being in metals, metal manufactures, and machinery imports, which fell to £36,346,960 from £42,987,433 in 1928-29; in apparel, textiles, and manufactured fibres, which declined to £32,548,858 from £36,710,916; and in rubber and leather manufactures, £2,070,535 from £2,943,661. Preliminary figures for the 12 months ending with November, 1930, showed exports amounting to £92,000,000 in merchandise and £20,000,000 in gold (£120,000,000 in merchandise and £10,000,000 in gold in 1929). Imports were valued at

£100,000,000 in merchandise, as compared with £147,000,000 in 1929. About 21 per cent of all imports came from the United States.

Exports of animal substances, other than foodstuffs, totaled £43,855,413 in 1929-30 (£71,497,445 in 1928-29); of vegetable foodstuffs, £22,772,585 (£36,600,903); of animal foodstuffs, £14,362,380 (£15,884,314); of oils, fats, and waxes, £1,146,107 (£1,714,432). In contrast with the drastic decline in most export commodities was the increase in exports of gold and silver and of bronze specie from £3,926,520 in 1928-29 to £27,748,549 in 1929-30. Total merchandise exports in 1929-30 were valued at £97,100,000, as compared with £140,923,932 in 1928-29. For the year ended June 30, 1929, Great Britain supplied 38.98 per cent of the total imports (42.6 per cent in 1927-28), the United States, 24.53 per cent (23.36 per cent in 1927-28); Netherlands East Indies, 4.84 per cent (3.74); Canada, 3.33 (2.14); Japan, 3.26 (2.89); and Germany, 3.13 (3.10). The United Kingdom in 1928-29 purchased 38.5 per cent of all exports (37.6 per cent in 1927-28); France, 10.5 (10.7); Japan, 8.1 (9.0); and the United States, 3.9 (6.3).

FINANCE. For the fiscal year ended June 30, 1930, the Commonwealth treasurer on July 9, 1930, reported a deficit of approximately £1,470,164, bringing the accumulated deficit to a total of £6,457,882. This was to be covered temporarily by a loan appropriation of £7,000,000. On the basis of existing taxation the treasurer anticipated a deficit of £14,038,770 for the fiscal year 1930-31. Increased taxation proposed in the budget was expected to result in a slight surplus in 1930-31, as shown in the accompanying tables giving approximate actual receipts and expenditures in 1929-30 and those estimated for 1930-31.

AUSTRALIAN BUDGET OPERATIONS

| Revenue | Actual ^a 1929-30 | Estimate ^b 1930-31 |
|-------------------------------|--------------------------------|----------------------------------|
| Taxation: | | |
| Customs | £30,157,041 | £27,900,000 |
| Excise | 11,617,350 | 11,800,000 |
| Sales | | 5,000,000 |
| Land | 2,840,077 | 2,750,000 |
| Income | 11,120,030 | 10,100,000 |
| Estate duties | 2,122,478 | 1,800,000 |

| Deficit | 1,470,164 | |
| Surplus | | 11,290 |

^a Approximate.

^b Including largely increased taxation.

The principal sources of the additional revenue provided in the 1930-31 budget were as follows:

New customs and excise duties, £5,700,000; sales tax, £5,000,000; additional postal charges, £1,000,000; increased income-tax rates, £850,000. To this total yield of new taxes and charges, aggregating £12,550,000, the government planned to add £1,600,000 representing the accumulated income arising from liquidation of ex-enemy properties, making a total of £14,050,000, thus balancing the budget. Customs revenues for the first quarter of 1930-31 totaled £7,470,000, or £2,455,000 below the estimate. The prospective deficiency for the year was then estimated at £12,500,000.

The total Commonwealth debt stood at £372,639,836 on June 30, 1930, as compared with £337,621,572 on the same date in 1929. The debt on account of the several states on June 30, 1930, totaled £727,639,836 (£726,406,490 on June 30, 1929), making a total debt for the Commonwealth and states of £1,100,597,198, or £170 17s. 6d. (about \$830), per capita. Of the Commonwealth debt, £282,390,532 represented obligations incurred in connection with the World War and £90,566,830 represented expenditures on public works, including the Federal Capital, and for other Federal purposes. See under *History* below.

COMMUNICATIONS. In 1928-29, there were 26,335 miles of Federal and State railway lines open for traffic, representing a capital cost for construction and equipment of £323,770,550. The aggregate gross earnings for the year were £48,816,000 (£48,186,000 in 1927-28) and the operating expenses were £38,517,000 (£38,358,000 in 1927-28), leaving aggregate net earnings for the year of £10,299,000. This, however, was exclusive of interest and capital charges. The Commonwealth Railways showed a deficit equivalent to \$1,713,500 after interest charges, and a surplus of about \$25,000 before. A definite plan for the adoption of a uniform railway gauge throughout the country, in place of three separate gauges in use on state railways in Victoria, New South Wales, and Queensland, was announced by the Federal government Jan. 14, 1930. The government offered to defray one-fifth of the expense, estimated at \$150,000,000. A new railway line between New Brisbane, Queensland, and Koygle, New South Wales, was opened Sept. 27, 1930.

Civil aviation has shown a steady expansion. In the nine months ended Mar. 31, 1930, commercial planes flew 2,271,135 miles (1,351,608 in the same period of 1928-29), and carried 77,022 passengers (44,825) and 152,864 pounds of goods (117,548). Daily air-mail service was inaugurated between Sydney and Melbourne in May, 1930. The number of overseas vessels entering and clearing the ports in 1929 was 3175 of 11,097,164 tons (3674 of 9,503,018 tons in 1928). Telephone service between the United States and Sydney, Australia, was inaugurated Oct. 27, 1930.

GOVERNMENT. The executive power is vested in the King, who acts through a Governor-General, assisted by an executive council of responsible ministers, who must be members of the Federal Parliament, comprising the Senate and House of Representatives. The Senate consists of at least six members from each of the original states, elected for six years, half of whom are renewed every three years; while the House of Representatives consists of approximately twice as many members as there are senators, the representation being apportioned among the several states according to the population shown at the last census. The number in the House in 1930 was 75 and in the Senate, 36. The composition of the

House following the election of Oct. 12, 1929, was: Labor, 46; Nationalist, 14; Country party, 10; Independents, 5. Governor-General at the beginning of 1930, Lord Stonehaven. The Labor Ministry, formed Oct. 22, 1929, was constituted as follows: Prime Minister, Minister for External Affairs, and Industry, J. H. Scullin; Treasurer, E. G. Theodore; Vice-President of the Executive Council and party leader in the Senate, J. J. Daly; Attorney-General, F. Brennan; Postmaster General and Minister for Works and Railways, J. A. Lyons; Trade and Customs, J. E. Fenton; Home Affairs, A. Blakeley; Health and Repatriation, F. Anstey; Defense, A. E. Green; Markets and Transport, P. J. Moloney.

HISTORY

Political developments in Australia in 1930 were mainly economic in origin, springing from the increasingly serious financial difficulties already evidenced in 1929. The Dominion was hard hit by the decline in the world prices for foodstuffs and raw materials. Wool and wheat are the main sources of the country's income, and the price decline resulted in financial stringency, with accompanying industrial and commercial depression, unemployment, and increased labor disputes.

In Australia's case the situation was aggravated by poor crop seasons and the fact that large post-war borrowings abroad and a constantly rising tariff wall had created an artificial standard of living with consequent high production costs. High costs handicapped the export trade in many primary products. The price slump brought the country face to face with two problems—how to export enough to pay for necessary imports and foreign debt charges, and how to meet the high costs of domestic production out of the lower prices prevailing. The country's annual buying power, it was estimated by the Federal Treasurer in March, had been reduced by £50,000,000, while the yearly oversea interest bill amounted to £30,000,000 and merchandise exports had declined to about £100,000,000 annually. In addition to its inability to meet current budget obligations, the Commonwealth had to meet internal maturing securities of approximately \$135,000,000 due in December, 1930; of \$220,000,000 due in 1931; \$350,000,000 due in 1933, and \$250,000,000 due in 1934.

The Labor government's plan of financial rehabilitation was to correct the adverse balance of trade by three methods—discouraging imports by a higher tariff, increasing exports by guaranteeing an artificial price for wheat and providing export bounties on other products, and restricting foreign loans to requirements for financing current oversea obligations. Additional taxation was imposed to offset the expected decline in customs revenues.

EMERGENCY MEASURES. Effective Apr. 4, 1930, the government introduced an emergency tariff measure which was expected to curtail imports by £20,000,000 annually. In the parliamentary debate on the measure the new tariff was characterized as the highest in the world and "the holdest and gravest experiment in economics perhaps in the world's history." About 100 articles, ranging from agricultural machinery to laundry blue, were placed on the prohibited list, to be imported only with the written consent of a Cabinet Minister. A second list, including intoxicants, smokers' accessories, matches, and other articles, was ra-

tioned, the importation being reduced to one-half of what it was in 1929. A third list contained articles rationed to one-half of the previous year's imports and on which the existing duty was increased by 50 per cent. The fourth and last list, covering a great variety of articles from motor chassis to nail brushes, was assessed only the 50 per cent surcharge over the former duty. Criticism of the tariff caused the Cabinet on May 14 to rescind the ban placed on many articles. Instead such articles were rationed to 50 per cent of the normal importations.

To increase Australian exports, the Cabinet secured passage of equally drastic measures during the session of the Federal Parliament which opened March 12. In May, a bill providing an export bounty of 1 shilling 9 pence (approximately \$0.43) per gallon on wine was adopted. Another government measure provided for the establishment of a compulsory wheat pool, provided the consent of the majority of wheat growers was obtained by plebiscite, and payment of a guaranteed price of 3 shillings (about \$0.73) per bushel at country railway stations.

The wheat pool bill had a political aspect similar to the Federal Farm Board act in the United States. It was intended to still the protests of the rural voters at the government's policy of fostering manufacturing industries by high protective tariffs, a policy which raised the prices of agricultural machinery and other farm needs. The agricultural protest had been effectively voiced by the comparatively rapid growth of the Country party as a new and significant factor in Australian politics. To bolster the sagging Australian exchange, the Commonwealth Banking Act was amended to authorize the Commonwealth Bank to take control of gold stocks and to control gold exports. Between July, 1929, and February, 1930, £17,000,000 in gold was shipped to London to strengthen the Australian pound without fresh borrowing.

After three months' trial of the extraordinary measures introduced in April, the government discovered that while imports had been gradually reduced, the tariff regulations had proved an encumbrance to necessary trade. Furthermore, domestic business had been seriously retarded by the stringent taxation and the budget, instead of balancing, showed signs of an increasing deficit. At this stage, Premier Scullin called in Sir Otto Niemeyer of the Bank of England to advise the government. On August 20, the Labor government agreed that if the budget for the year beginning July 1, 1930, failed to yield sufficient revenue after a three months' trial, a special session of Parliament would be called to reduce expenditures further. At the same time a meeting of Federal and State authorities adopted seven recommendations submitted by Sir Otto. The most important of these pledged to several states to balance their budgets in 1930-31 and successive years, obligated the Loan Council to postpone further overseas borrowing until after the repayment of existing overseas short-term debts, and provided that only reproductive public works would be undertaken during the emergency. A standing committee was appointed to watch the operations of the plan for financial rehabilitation, and it was agreed to examine the question of duplication of State and Commonwealth services. The conference extended a loan of £1,000,000 to South Australia, whose financial plight was acute, and arrangements were completed with the Bank

of England for funding some £36,000,000 of overseas liabilities on which the government was unable to meet payments.

At the end of the first quarter of the budget year the continuing deficit caused the Labor government to reduce appropriations for the year by an additional £4,000,000 (about \$20,000,000). These drastic measures promised to restore the nation's financial equilibrium. They were opposed, however, by the New South Wales Labor party and affiliated trade unions, which on August 27 voted to read out of the party any Labor members of the Federal Parliament who supported the Niemeyer programme. Repudiation of Australia's war debts and a moratorium for the Commonwealth's loans from overseas were demanded. Premier Scullin and his government immediately repudiated these policies. But the government's policy of retrenchment received a setback in the State election in New South Wales October 23, in which the Labor party under former Premier J. T. Lang won on a platform of opposition to the Niemeyer retrenchment programme (see NEW SOUTH WALES). Mr. Lang disclaimed any idea of debt repudiation. He offered as a solution of the economic difficulties the stimulation of industry, more rapid exploitation of Australian resources, organization of markets, and price stabilization.

Repercussions of the New South Wales election were seen in the general decline in the value of Australian loans on the London Stock Exchange and in the action of the Australian Federal Labor Cabinet on October 27 in voting to reject the Niemeyer proposals. The Cabinet acted during the absence of Premier Scullin and two of his colleagues, Brennan and Moloney, at the Imperial Conference in London. All three had supported the Niemeyer programme and their presence at the voting would probably have reversed the decision. The rift within the Labor party rapidly widened over the question of conversion of a \$135,000,000 loan maturing December 15. The Federal Labor party caucus voted to compel bondholders to wait a year before being repaid. In response to the pleas of Premier Scullin in London and the declaration of Federal Treasurer Joseph A. Lyons that he would resign if the recommendation of the caucus was accepted, the Labor Cabinet on November 8 voted to defy the party majority and redeem the loan at maturity. New proposals adopted for balancing the budget included the further reduction of expenditures by \$15,900,000 and new taxation totaling \$24,100,000. The deficit on the existing budget basis would total between \$40,000,000 and \$50,000,000 by June 30, 1931, it was estimated by Treasurer Lyons on November 5. Acting Prime Minister Fenton announced on Dec. 16, 1930, that the \$140,000,000 Australian Conversion Loan had been a complete success, subscriptions having been received from about 100,000 citizens. Its success, in the face of the opposition of the Labor party caucus, was considered a triumph for Acting Treasurer Lyons and a blow at extremist elements in the party.

The Australian Loan Council, which acts as borrowing agent for both the Commonwealth and the Federated States, on November 11 refused to allow the State of New South Wales to withdraw from the council. Premier Lang announced that his State would seek to borrow money on its own responsibility, with or without the Loan Council's approval.

Still another repercussion of the Labor government's financial and tariff programme was seen

in the development of a movement in Western Australia for separation from the Commonwealth. See WESTERN AUSTRALIA.

NON-EMERGENCY MEASURES. Apart from the emergency measures called forth by the economic situation, the Labor government introduced into Parliament two bills to amend the Constitution which required eventual submission to the people by referendum. One, which took from the electorate the right to veto a constitutional amendment by referendum and granted Parliament authority to make any constitutional changes it desired, was vetoed by the Senate. The second sought to give the Commonwealth Parliament jurisdiction over industrial disputes in the several States.

Another Government measure cancelled the preference granted to World War veterans on government contract work, except in cases where the veterans were also trade unionists. It provoked wide indignation in both Parliament and the country and was hastily withdrawn by Premier Scullin.

On November 27, the Government announced that a bonus of \$5 would be paid on every ounce of gold produced in the Commonwealth in excess of the 1929 production. Plans were announced November 18 for sending an Australian trade mission to Canada.

OTHER EVENTS. The appointment on Dec. 2, 1930, of Sir Isaac Alfred Isaacs, a native-born Australian and the Chief Justice of Australia, as Governor General of the Commonwealth in succession to Lord Stonehaven, raised the question of Australia's future relationships with the mother country. In accordance with the procedure authorized at the Imperial Conference in September (see GREAT BRITAIN under *History*), the appointment was made on direct application of the Premier Scullin to the King without consulting the British government. The press of London and many Australian journals viewed the new method of appointing the Governor General with some alarm as tending to weaken the imperial connection.

The Federal Treasurer, Ernest G. Theodore, former Premier of Queensland, resigned in July following the publication on July 4 of the report of a Royal Commissioner appointed to inquire into the purchase of the Mungana Mines by the Queensland State government. The commissioner charged that Theodore and three others were "guilty of dishonestly exploiting the State by purchase of the mine." This Mr. Theodore denied. The Treasurer's duties were taken over by Premier Scullin.

Evidence of Communist activities in Melbourne, Sydney, Brisbane, and Fremantle was uncovered by police during raids on Communist political clubs in Melbourne October 23, in which 23 persons, most of them foreigners, were arrested. The raids followed injuries suffered by many police during unemployment demonstrations in Melbourne. See NEW GUINEA; OLD AGE PENSIONS; GREAT BRITAIN under *History*; MATERNITY PROTECTION.

AUSTRIA. A federated republic of central Europe proclaimed Nov. 12, 1918, and consisting of the nine provinces of Vienna (City of), Lower Austria, Upper Austria, Salzburg, Styria, Carinthia, Tirol, Vorarlberg, and Burgenland. Capital, Vienna.

AREA AND POPULATION. At the census of 1923 the area was 32,369 square miles and the population, 6,534,481, as compared with an area of 39,-

017 square miles and a population of 7,529,935 in 1910. The estimated population June 30, 1929, was 6,694,152. In 1923, the City of Vienna had 1,865,780 inhabitants, or 28.55 per cent of the total population. Other chief cities, with their populations in the same year, are: Graz, 152,706; Linz, 102,081; Innsbruck, 56,401; and Salzburg, 37,856. The movement of population in 1928 was: Births, 116,783; deaths, 96,007; marriages, 40,414. Emigrants in 1928 numbered 4589 (5339 in 1927), of whom 1020 went to the United States.

EDUCATION. Education is nominally compulsory for elementary pupils between the ages of 6 and 14. In 1927, there were 5287 public and private elementary schools, with 28,590 teachers and 710,397 pupils, and 151 secondary schools, with 3848 teachers and 47,455 pupils. There are three universities, the enrollment for 1926-27 being as follows: Vienna, 853 teachers and 9907 students; Graz, 285 teachers and 1871 students; and Innsbruck, 212 teachers and 1752 students.

PRODUCTION. Agriculture is the principal occupation of the population, the area under cultivation in 1928 totaling 4,782,244 acres. Foodstuffs production, however, is insufficient for the national needs. The chief crops, with the production in quintals in 1929 and 1928, were: Wheat, 3,152,000 (3,515,493 in 1928); rye, 4,832,000 (5,060,053); barley, 2,564,000 (2,819,860); oats, 4,476,000 (4,621,715); maize, 1,054,000 (1,079,026). Potatoes, turnips, flax, and sugar beets are other important crops, the latter totaling 110,005 metric tons in 1927-28. There are extensive forests, which contribute materially to the national income. The value of livestock in 1929 was estimated at more than 2,000,000,000 schillings (about \$280,000,000).

Lignite production in 1929 was 3,524,792 metric tons (3,262,570 in 1928) and anthracite production, 208,020 metric tons (202,098 in 1928). Iron ore (output 1,928,200 metric tons in 1928), salt (80,817 tons in 1928), copper, zinc, and lead are other mineral products. Pig iron production in 1928 was 457,911 tons; raw steel, 635,657 tons. The chief manufacturing industries are the making of pianos, motor cars, furniture, and textiles. The state tobacco monopoly in 1928 produced 200,723,000 cigars, 4,651,913,000 cigarettes, and 47,639 quintals of smoking tobacco.

Industrial conditions were in general badly depressed in 1930, the industries most affected being textiles, lumber, iron, machinery, and electrical equipment industries. On Oct. 15, 1930, unemployment subsidies were being distributed to 145,000 persons, or 60,000 more than on the same date in 1929.

COMMERCE. Both exports and imports declined in 1929, the exports totaling 3,276,700,000 schillings (3,306,492,000 schillings in 1928) and the imports, 2,192,300,000 schillings (2,241,123,000 schillings in 1928). (The schilling exchanged for about \$0.14 during 1929.) The adverse balance of trade, amounting to 1,084,400,000 schillings, was about normal. Expenditures of approximately 2,000,000 foreign tourists, who visit Austria annually, and other invisible items serve to balance the national income and disbursements. Exports go mainly to Germany, Czechoslovakia, Hungary, Italy, and Yugoslavia, in the order named, while imports are supplied chiefly by Germany, Czechoslovakia, Poland, Hungary, the United States, and Switzerland.

FINANCE. In the budget for 1930, as approved by the Legislative Assembly, current revenues

totaled 1,975,325,000 schillings and current expenditures, 2,128,950,000 schillings, leaving an anticipated deficit of 153,634,000 schillings (1 schilling equalled approximately \$0.14). The report on the Federal budget for 1929 showed a surplus of 167,000,000 schillings in current accounts, and capital expenditures of 147,000,000 schillings, leaving a final surplus of 20,000,000 schillings. Actual receipts were 10 per cent higher and expenditures 4 per cent higher than the budget estimates. The first section, amounting to \$62,000,000, of Austria's \$100,000,000 international loan, was floated in New York, London, Sweden, Switzerland, and other markets in July, 1930 (see below under *History*). The public debt on Jan. 1, 1929, stood at 2,363,692,666 schillings, of which 137,232,556 schillings represented the pre-war debt and 365,895 schillings the debt incurred as a result of the World War. The per capita debt was about 338 schillings (\$47.50).

COMMUNICATIONS. At the beginning of 1929, Austria had 4156 miles of railway line, of which 3618 miles were operated by the state and 538 miles by private companies. About 12 per cent of the mileage was electrified. The state railways for 1929 reported total receipts of 632,000,000 schillings and total expenditures of 634,000,000 schillings, both figures representing substantial increases over 1928. Construction of a 30-mile Alpine highway across the Grossglockner Range from Ferleiten to Heiligenblut was commenced in September, 1930. Highways in 1929 extended 21,257 miles divided as follows: National, or first-class, 2452 miles; provincial, or second-class, 1029 miles; departmental and municipal, or third-class, 17,776 miles. A network of autobus lines in the Alpine districts of the country is operated by the Postal Administration. Air lines connect Vienna with most of the European capitals and large cities.

GOVERNMENT. Under the Constitution adopted Oct. 1, 1920, and amended Dec. 7, 1929, executive power is vested in a president, elected by popular vote for six years, who appoints the Ministry and has power to dissolve Parliament. Legislative power rests with an assembly (Nationalrat), elected by popular vote for four years, and a first chamber (Bundesrat), chosen by the Provincial Diets in proportion to the population of the respective provinces. The composition of the Nationalrat following the election of Apr. 24, 1927, was: Christian Socialists, 73; Social Democrats, 71; Pan-Germans, 12; and Agrarians, 9. In the Bundesrat in 1930 there were 25 Christian Socialists, 20 Social Democrats, 3 Agrarians, and 2 Pan-Germans. President in 1930, Dr. Wilhelm Miklas, elected Dec. 5, 1928. The Ministry as constituted Oct. 16, 1929, was: Federal Chancellor and Minister of Foreign Affairs, Johann Schober; Vice-Chancellor and Minister of Defense, Karl Vaugin (Christian Socialist); Justice, Dr. Franz Slama (Pan-German); Social Welfare, Dr. Theodor Innitzer; Agriculture and Forestry, Florian Födermayr; Finance, Dr. Otto Juch; Commerce and Communications, Dr. Michael Hainisch; Education, Dr. Heinrich Srbik; Interior, Vinzenz Schumy (Agrarian).

HISTORY

Under the leadership of Chancellor Johann Schober, who assumed office in September, 1929, Austria made rapid progress during the first half of 1930 in the solution of her difficult foreign and domestic problems. With the downfall of his Cab-

inet on September 25, progress was again interrupted by fruitless party bickerings, a situation which new elections on November 9 failed to improve. Herr Schober returned from the second Hague Reparation Conference held in January and from the subsequent conference on Eastern reparations at Paris with two noteworthy achievements to his credit—the definite promise that Austria would not be required to make further reparation payments until 1943, and the termination of the control of her foreign borrowing operations by the Reparation Commission. See **REPARATIONS**.

FOREIGN AFFAIRS. The Chancellor seemed equally successful in the conduct of other phases of Austrian foreign affairs. An important treaty of friendship and conciliation was signed with Italy during his visit to Rome the first week in February, and on April 12 he brought to a successful conclusion the long-pending negotiations with Germany for a commercial treaty. A commercial treaty with Hungary was signed June 14, which caused Minister of Commerce Hainisch to resign in protest two days later. Commencing April 12, Herr Schober paid the first public visit since the World War by an Austrian Chancellor to the British and French capitals. He was cordially received, and took advantage of the opportunity to pave the way for the flotation of a \$100,000,000 foreign loan.

The pact with Italy provided for the judicial settlement of disputes between the two nations. Containing no mention of the Austrian minority in the South Tirol, it was construed as giving Austria's acquiescence to the permanent retention of that territory by Italy. Some alleviation of the treatment accorded the South Tirolese by Italy was reported following the signing of the treaty. Chancellor Schober repeatedly proclaimed, during his tour of European capitals, that the treaty was in accord with his policy of cultivating friendly relations with all neighboring States and that Austria, by her geographical position, was forced to remain strictly neutral with regard to the rivalries of other nations. Nevertheless, Yugoslavia regarded the treaty as completing its encirclement by Italy, Hungary considered it a diplomatic coup directed at the Little Entente (q.v.), and a section of German and Austrian opinion opposed it as a further obstacle to Austro-German union.

INTERNAL DEVELOPMENTS. The domestic problems presented by a severe economic depression and by the bitter rivalry between Socialist Vienna and the Catholic and conservative provinces proved less easy of solution. However, Chancellor Schober's administration brought the nation internal harmony and security greater than had been enjoyed since the outbreak of the World War. The question of constitutional reform, which caused the fall of the Streeruwitz Cabinet in September, 1929, had been disposed of in December, 1929, in a way which strengthened the central authority of the government and gave moderate satisfaction to the leaders of the Heimwehr, or private army of the Catholic conservatives, without driving the Socialists into open revolt. Freedom to hold public meetings had been re-established and a law passed which prevented discrimination against a worker on account of his political or trade union views.

There remained the threat to internal order and security offered by the activities of the rival private armies—the Heimwehr and the Socialist

Schützbund, or municipal guard of Vienna. These organizations had been regarded with uneasiness in other capitals, particularly after serious clashes occurred in 1929, as a possible menace to the peace of Europe. Following representations from the League of Nations and warning from Foreign Secretary Henderson of Great Britain and other European statesmen that they would withhold consent to the flotation of an Austrian loan in their respective countries pending the abolition of the private armies, Chancellor Schober in May agreed to disarm them. The Socialists consented, but the Heimwehr, which had secured the Chancellor's election in the belief that he was sympathetic to its aims, refused to disband unless Herr Schober agreed (1) to disarm the Schützbund with the aid of the Heimwehr, (2) to replace Dr. Vinzenz Schumy, the Minister of Interior, with a Heimwehr nominee, and (3) to appoint a new chief of gendarmes and chief of police.

Herr Schober's answer was the introduction of a disarmament bill on May 22, the day following receipt of the Heimwehr ultimatum, and a polite rejection of the demands. The bill provided merely for the transfer of privately owned arms and ammunition from the provincial to the Federal authorities and for increased penalties for violation of the existing arms law. It was passed by Parliament June 13, by a vote of 82 to 76, despite the opposition of the Socialists, who characterized it as a subterfuge to allay foreign suspicions without disarming the Heimwehr. The following day, the Chancellor appeased the Socialists by causing the arrest of Major Waldemar Pabst, chief of staff of the Heimwehr and the notorious organizer of the Kapp *putsch* of 1920 in Germany. Pabst was expelled from the country June 15 as an undesirable alien. His departure left Schober victorious in a crisis which seriously threatened the overthrow of the Cabinet and possibly the outbreak of civil war.

Besides the threat of foreign intervention and his control of the army and gendarmerie, a factor which contributed to the Chancellor's victory was the growing economic depression and the certainty that civil war would make matters worse. Austrian exports, imports, and railway receipts all showed marked declines in the first half of 1930, while unemployment increased substantially. It was in the hope of relieving these conditions that the government on July 15 negotiated a foreign loan for 439,000,000 schillings (about \$61,460,000), at 7 per cent for 27 years, repayable after five years at 103. Issued at 95, the loan actually brought Austria less than 400,000,000 schillings at a cost of about 8.3 per cent. The government agreed to wait at least 12 months before attempting to float the balance of the total authorized loan of 725,000,000 schillings. The proceeds were to be used in part for railway equipment, installment of automatic telephones in Vienna, and other public works.

Another complication faced by the Chancellor in his struggle with the Heimwehr was the election early in May of Karl Vaugoin, Vice Chancellor and Minister of War, as leader of the Christian Socialist party. Vaugoin, a staunch supporter of the Heimwehr, succeeded the Roman Catholic priest and former Chancellor, Ignaz Seipel, who had ostensibly retired from politics. On September 24, the Minister of War precipitated a new Cabinet crisis by presenting his resignation. His action grew out of Dr. Schober's support of Minister of Commerce Schuster, the Heim-

wehr spokesman in the government, in a quarrel between the two Ministers over the appointment of the general manager of the Austrian State Railways. The other Christian Socialist in the Cabinet, Minister of Agriculture Födermayr, resigned also. Deprived of the support of the largest party in Parliament, Chancellor Schober was forced to resign on the following day. The crisis was due primarily to conflict between the extreme Clericals, led by Vaugoin, and the moderate Conservatives supporting the compromise policies of Dr. Schober, a non-party man.

Vaugoin was entrusted with the formation of a new Cabinet, but was unable to secure a parliamentary majority, due to the refusal of the Farmers' party and Pan-German party leaders to enter his Ministry. He therefore governed until the election of November 9 with a minority Cabinet, which included Monsignor Seipel as Foreign Minister and Prince Ernst Rudiger von Starhemberg, leader of the Heimwehr, as Minister of Interior. His failure to present his Cabinet to Parliament was declared unconstitutional by the other parties. The subsequent electoral campaign was marked by a Heimwehr communique of October 2 threatening a Fascist dictatorship if a Socialist majority was returned. Monsignor Seipel's significant reappearance in active politics was regarded as an effort to unite the Christian Socialists and the Heimwehr in crushing the Social Democrats once for all. The Heimwehr, however, rejected his scheme and entered their own candidates. The cancellation by Prince Starhemberg of the ban on Major Pabst (October 8), the revelation by the *Frankfurter Zeitung's* correspondent of a plan for a *putsch* in Vienna November 2 by the Austrian monarchist wing of the Syrian Heimwehr, and the disarming of the Socialist Schützbund throughout the country on November 4 and 5, were other incidents of the campaign. The Socialists were disarmed by the Heimwehr, acting under the direction of Prince Starhemberg. The latter repeatedly indicated his contempt for Parliament and declared that he would not surrender his office, whatever the outcome of the voting.

The election gave the Social Democrats 72 seats in Parliament, a gain of one; the Christian Socialists, 66, a loss of seven; the Schober bloc, composed of the Agrarian and Pan-German parties, 19, a loss of two; and the Heimwehr, eight. The Heimwehr had never entered candidates independently before. As the Christian Socialists' losses were accounted for by the Heimwehr successes, the election did little to break the parliamentary deadlock. The balance of power rested with former Chancellor Schober, who enjoyed the united support of both the Agrarian and Pan-German parties. At the celebration of the anniversary of the Republic in Vienna November 12, President Miklas said that the election was a clear decision of the Austrian people for democracy. A meeting of the Christian Socialist party on November 19 repudiated efforts to amend the Constitution by violent methods, expressed dissatisfaction with the Vaugoin-Starhemberg régime, and demanded the formation of a constitutional government. At the same time, the party invited Herr Schober to join with it in negotiations for the establishment of a ministry with a parliamentary majority.

These negotiations succeeded on December 3, after three weeks of wrangling and following the resignation of Vaugoin as Chancellor on November 29. The new Cabinet was composed as follows:

Chancellor, Dr. Otto Ender; Vice Chancellor and Foreign Affairs, Dr. Schober; Interior, Franz Winkler; Justice, Dr. Hans Schuerff; Finance, Dr. Otto Juch; Agriculture, Andreas Thaler; Trade and Commerce, Edward Heintz; War, Karl Vaugoin; Education, Dr. Emmerich Czermak; Social Welfare, Dr. Joseph Resch. The Schober bloc held three seats in the Cabinet, as against six for the Christian Socialists and one non-party man, Finance Minister Juch. The Christian Socialist-Schober coalition had a majority of only two seats over the total voting power of the Socialists and Heimwehr. The Socialists, however, indicated that they were prepared to cooperate with the Government. See ITALY under *History*.

AUTHORS' LEAGUE OF AMERICA. A national organization of authors, artists, dramatists, and screen writers; founded and incorporated in 1912 for the purpose of procuring adequate copyright legislation, both international and domestic; protecting the rights and property of all those who create copyrightable material; advising all such in the disposal of their productions and obtaining for them prompt remuneration therefor; and disseminating information among them as to their just rights and remedies. The league supplies to its members confidential information relating to publishers, theatrical and motion-picture producers, art buyers, and other persons and companies engaged in the purchase, sale, publication, or production of copyrightable material.

The league is divided into four departments or guilds: The Dramatists' Guild; the Authors' Guild; the Artists' Guild; and the Screen Writers' Guild. Closely affiliated with the league is the Authors' League Fund, an agency formed by the league to meet its obligations with respect to the care of the sick, the aged, and the unfortunate, the endowment in 1930 amounting to about \$80,000. The officers of the league in 1930 were: President, Arthur Richman; vice president, Inez Haynes Irwin; secretary and treasurer, Louise Silcox. Headquarters are at 2 East Twenty-third Street, New York City.

AUTOGIRO. See AERONAUTICS.

AUTOMOBILE RACING. Both the American Automobile Association speedway championship and the 500-mile Indianapolis speedway contest on Memorial Day were won by Billy Arnold of Chicago, who thus displaced Louis Meyer of Los Angeles as official American speed king. Arnold averaged 100.448 miles an hour at Indianapolis, finishing the 500-mile race in 4 hr. 58 min. 39.72 sec. Bill Cantlon of Detroit was second. To win the A. A. A. championship, Arnold accumulated 1027.5 points in eight meetings, to 653 points for Cantlon. The 100-mile dirt track events at Toledo, Ohio, and Syracuse, N. Y., were won by Wilbur Shaw and William Cummings, respectively. Kaye Don set a new American record for the 5-mile route at Daytona Beach, Fla., in March, covering the distance in 1 min. 58.715 sec. or an average of 161.623 miles per hour.

AUTOMOBILES. In the 1929 YEAR BOOK attention was called to the fact that motor vehicle production had slumped every third year since and including 1918, according to which it was suggested that a falling off would be due in 1930. The general business depression throughout the world during the year would probably have insured such a result anyhow, but it happened to synchronize with the now quite generally recognized three-year cycle in the automotive

industry, and the slump occurred. While production for 1930 was about 2,000,000 below 1929 the latter year was about 1,000,000 above what is popularly accepted as a normal year's production, 4,500,000, so 1930 was only about the same amount below normal and cancelled out the effect of the 1929 over-production.

It would seem most fair to compare 1930 with the last previous slump year, 1927, and the two are found to be closely on a par in spite of the absence of general business depression in 1927. The figures of such a comparison are interesting. (These had to be based on eleven-month periods of the two years as the December reports were not available in time to include.) For example: Production of motor vehicles in the United States and Canada in 1930 was only 2.2 per cent below 1927, passenger cars being 4.6 per cent below, and commercial cars 6.7 per cent above. Retail sales in the United States of both classes of vehicles were above those of 1927, passenger cars being 1.1 per cent and commercial cars 24.5 per cent higher. Exports from the United States and Canada in 1930 were down 14.4 per cent for passenger cars and up 40.2 per cent for commercial vehicles as compared with 1927.

While the industry might be said to have been "marking time" during 1930, carefully gauging production to the curtailed demand, the engineering and designing departments at least were extremely busy, endeavoring to put the utmost appeal into the new 1931 models. Probably never before was quite so much attention given to appearance with the result that all lines were strikingly beautiful.

Mechanical improvements were mainly in the nature of refinements, there being really only one outstanding innovation—free-wheeling. This is an arrangement of the drive that, in principle, is similar to the coaster-brake of a bicycle—only forward effort is effective in turning the wheels. In other words, the engine is connected to the wheels only while accelerating or maintaining speed and idles when the momentum of the car will independently carry it forward, as when coasting down hill or on the level. Heretofore, unless the clutch was disengaged, the wheels drove the engine during coasting or deceleration periods. The principal advantages are decreased fuel consumption, reduced engine wear and an agreeable sensation to the passengers that can best be described as gliding. Free-wheeling would not have been accepted before the days of four-wheel brakes for then the load of the engine was considerably depended upon to assist the brakes in slowing down the car. With free-wheeling all retardation is accomplished with the brakes and easily now that four-wheel brakes are in universal use. Nevertheless, the free-wheeling cars are so arranged that they may be operated in the conventional manner when, to save overheating the brakes, as in a long descent, it is desirable to put the car in low or intermediate gear and cause the wheels to drive the engine against its compression as a load and so hold back the speed of the car without prolonged brake application.

Free-wheeling was not an invention of the year, for experimenting along that line had been in progress in both America and Europe for 10 years or more, but 1930 was the first year in which it was applied to models of any considerable production. Pierce-Arrow had an over-running clutch in the transmission in 1919, although the purpose was not free-wheeling but

silent gear shifting. Six makes of cars having the free-wheeling feature were to make their debut at the January Automobile Shows in 1931, the Studebaker, Pierce-Arrow, Lincoln, Hupmobile, Auburn and duPont Special.

Free-wheeling transmissions overcome a long-time defect of speed-changing mechanisms—difficulty in shifting gears easily and quietly when they are in motion at other than slow speeds. With free-wheeling, gears can be shifted at any car speed and from second to third speed, or third back to second without disengaging the clutch. Others were accomplishing easy quiet gear shifting by mechanism that synchronizes the gear speeds before engagement, as in the synchro-mesh transmission introduced by Cadillac and now added to the Buick, Oakland, Graham, Olds, and Pontiac lines. Use of herring-bone or plain skew gears was making second-speed operation as noiseless as direct-drive and is found in Reo, Pierce-Arrow, and Nash transmissions.

Other general trends evidenced in the new models were increased horse power, mainly through increased displacement rather than higher compression ratios, steering stabilizers that combat the shimmying tendency, longer wheel bases, stiffer frames, lower and wider bodies for greater comfort, improved steering gears, almost universal adoption of three-spoke steering wheels, greater use of rubber mountings to quiet noises, metal spring covers and central chassis lubrication systems. These with many smaller but important improvements contribute to more pleasing performance, and more attractive appearance has been achieved with better streamlining (incidentally greatly reducing wind resistance to which considerable study is now being given), more graceful bumpers and fenders, radiator grills, pointed and sloping fronts and more use of bright metal parts. Never before were buyers offered such a variety of choice, nor so much for their money. In completeness and luxury of equipment even the lower price cars had more than the highest priced cars of only a few years back.

Two years previously nearly 60 per cent of the chassis models were sixes; in 1930 that percentage were eights. Buick was the latest to abandon six cylinders and became the General Motors first straight eight. Cadillac, pioneering with 16 cylinders in 1929, added also a 12, and Marmon introduced a 16-cylinder model to supplement its 8-cylinder line.

Newcomers into the field were the American Austin, a bantam car with 75-inch wheelbase, the Mathis, almost as small, and the DeVaux-Hall, a 112-inch wheelbase.

STATISTICS. The preliminary statement of facts and figures of the automobile industry for 1930, issued by the National Automobile Chamber of Commerce late in December, gave the total production of cars and trucks in the United States and Canada during the year as 3,505,000, of which 2,943,200 were passenger cars and 561,800 trucks. Of the passenger cars 2,688,000, or 91 per cent, were closed models, the largest proportion ever reached. The wholesale value of the cars produced was \$1,771,200,000 and of the trucks, \$388,400,000. The average retail price of cars was \$800 and of trucks \$922. The wholesale value of parts and accessories for replacement and service equipment was \$527,800,000. Tire manufacturers shipped a total of 52,700,000 tires. The wholesale value of those sold to car owners was \$429,000,000. This made the grand total value of

the automotive production for the year, including motor vehicles, accessories, service equipment, and replacement parts and tires, \$3,116,400,000.

From State reports the motor vehicle registration during 1930 reached 26,718,000, a gain over 1929 of only 0.8 per cent, which was the smallest yearly increase to date. The smallest previous increase was 5 per cent in 1927. This does not mean that nearly as many cars were destroyed or permanently taken out of use as were sold in the United States last year, because it was known that many, unable to afford the cost of operating them, temporarily laid up their cars and did not register them. This was borne out by the fact that the truck registration, 3,518,000, was a 10.4 per cent increase, while the passenger car registration, 23,200,000, barely held its own, gaining only 0.3 per cent. With the world registration of motor vehicles estimated at 35,518,000, the United States had 75 per cent of the world's automobiles. Farmers owned 5,700,000 of the motor vehicles registered in the United States during 1930.

The United States at the end of the year had 3,024,233 miles of highways, of which 700,000 miles were surfaced; about 40,000 more than a year before. In the construction and maintenance of streets and highways in the United States last year \$2,200,000,000 was spent—\$200,000,000 more than the previous year. The motor vehicle and allied lines gave employment to 4,700,000 persons, or about one out of every 10 engaged in gainful occupations. Gasoline taxes alone produced a revenue of \$515,000,000 in 1930, and the State and Federal governments collected a total of \$1,010,000,000 taxes on motor vehicles. See **ROADS AND PAVEMENTS.**

How important the automobile industry is to other lines of business may be gathered from the following figures: In 1930 the railroads handled 3,080,000 carloads of automotive freight. The automobile industry used 82 per cent of all the rubber produced in the United States, 55 per cent of the plate glass, 15 per cent of the iron and steel, 14 per cent of the copper, 15 per cent of the lumber and hardwood, 24 per cent of the lead and 80 per cent of the gasoline. The gasoline consumption by motor vehicles in 1930 was 310,000,000 barrels. The crude rubber used by the industry was 686,000,000 pounds, and the cotton fabric used in tires 195,770,000 pounds.

The year saw a still further increase in the use of motor transportation for goods and merchandise. The motor trucks as before mentioned numbered 3,518,000; motor truck owners totaled 2,550,000. Altogether there were 95,000 motor buses in use. Some 17,000 consolidated schools were using 47,500 motor buses. The street railways operated 13,300 more and the steam railroads 3087, there being 385 of the former and 67 of the latter. Seventy-five steam railroads used 7000 trucks as part of their shipping service and the Railway Express Agency used 9940 motor trucks.

The extent of the retail motor vehicle business in the United States was impressive: There were 51,514 car and truck dealers, 50,200 public garages, 100,300 service stations and repair shops, 80,000 supply stores and 350,000 gasoline filling stations.

In 1930 foreign sales reached a total of 561,000 motor vehicles, about one-sixth of the total production in the United States. This included United States exports and the output of United States-owned Canadian plants sold outside of the

United States. The per cent decrease in foreign sales under 1929 was 44. The value of motor vehicles, parts and tires exported from the United States and Canada was \$344,700,000. Motor vehicles imported during 1930 numbered 625.

LEGISLATION. Only nine State legislatures were in session during 1930 and there was little new to report in laws relating to motor vehicles. New legislation was of less concern to the industry and motor vehicle users than existing laws that had not yet been repealed or revised to reduce the severity of taxation and regulation that was particularly retarding more extended use of motor trucks and buses. A notable effort toward correcting a situation that was more responsible than anything else for adverse legislation was the truck driver training campaign launched by the Motor Truck Committee of the National Automobile Chamber of Commerce.

Toward the end of the year the railroads repeated the effort made two years previously to bring trucks and buses doing an interstate business under the regulation of the Interstate Commerce Commission. Hearings were held and were to be continued into 1931, but no conclusions were reached before the year ended. Motor vehicle users themselves were divided, some favoring such regulation and others not, but most of those who consider it at all advisable, felt that it should cover common carriers only and be limited to measures to protect the patrons of the service. See *TAXATION under Vehicle and Gasoline Taxes*.

AVIATION. See *AERONAUTICS*.

AVIATION, NAVAL. See *NAVAL PROGRESS*.

AZERBAIJAN, a'zër-bi-jan'. A Socialist Soviet Republic in Transcaucasia, established Apr. 28, 1920. Consisting chiefly of the two former Russian provinces of Baku and Yelisavetpol, it is bounded on the east by the Caspian Sea, on the west by Georgia and Armenia, on the south by Persia, and on the north by Georgia and Daghestan. Area, about 32,686 square miles and the population (in 1926), 2,313,172, of whom 75 per cent were Moslems. Baku, the centre of the petroleum industry, is the capital and has a population of approximately 452,000. In 1925-26, 134,855 pupils attended primary and secondary schools. The most important industry is the oil industry, which in 1927-28 produced 7,560,000 tons as compared with 6,893,000 in 1926-27. The country is mainly devoted to agriculture, the chief products being grain, cotton, grapes, kitchen and garden produce, and some tobacco and silk. Aluminum deposits, estimated to contain 78,000,000 tons of ore, have been discovered in the Zagliksk region. During the first Transcaucasian Soviet Congress of Dec. 13, 1922, Azerbaijan united with the Armenian and Georgian Soviet Republics to form the Transcaucasian Socialist Federated Soviet Republic. A federal constitution accepted at the congress was published on Jan. 16, 1923. See *RUSSIA*.

BADEN, bā'den. A constituent state of the German Republic, with a republican form of government since Nov. 22, 1918. Formerly a grand duchy in the German Empire, it borders on Alsace-Lorraine and Switzerland on the west and south, respectively. Area, 5819 square miles; population in 1925, 2,312,462, as compared with 2,195,580 in 1919. Capital, Karlsruhe, with 145,694 inhabitants in 1925. The largest city is Mannheim, with 247,486 inhabitants in 1925. The majority of the population is Roman Catholic. Education is free, general, and compulsory, the

schools being under the jurisdiction of the state. For higher education, there are universities at Heidelberg and Freiburg. In 1929 the total area under cultivation was 1,940,414 acres. Among the agricultural products, oats, rye, barley, wheat, potatoes, and vegetables are the most important. In 1928 the wine yield from 35,437 acres of vines was 9,255,126 gallons. In the same year the corn crop totaled 417,396 metric tons and the area planted to tobacco was 25,429 acres. The budget for 1929 fixed the ordinary revenue at 277,800,000 gold marks and the ordinary expenditure at 283,405,000. (1 mark equals \$0.2382 at par.)

The constitution dates from Mar. 21, 1919, and vests the executive power in a cabinet comprising the state President, five ministers, and three state councilors without portfolios, all of whom are elected by the Legislature. Legislative power resides in a single chamber body known as the *Landtag*. The *Landtag* elected on Oct. 27, 1920, for the term ending Oct. 27, 1933, had 88 members, including 34 Centrists, 18 Socialists, 6 Fascists, and 5 Communists. The Cabinet consisted of Dr. F. J. Schmidt (Centrist), President; O. Leers (Democrat), Minister of Finance; Josef Wittemann (Centre), Interior; and A. Remmelle (Socialist), Justice and Religion and Education.

BAGNOLD EXPEDITION. See *EXPLORATION*.

BAHA'MAS. A group of British-owned islands off the southeast coast of Florida, 20 in number, of which 20 are inhabited. They also include 661 keys and over 3000 reefs. The islands, which are of coral formation, have an area of 4404 square miles and a population, according to the census of 1921, of 53,031. The estimated population on Jan. 1, 1929, was 60,367. The important islands with their populations in 1921, are as follows: New Providence, containing the capital, Nassau, 12,975; Andros, 6976; Eleuthera, 6048; Long Island, 4659; Abaco, 3993; Exuma, 3730; San Salvador, 4273. In 1928, 14,581 pupils were enrolled in government and 7060 in aided schools. Declared imports greatly exceed the declared exports, the totals in 1928 being £1,829,939 and £421,085, respectively. Spirits and wines constitute the bulk of the imports, being valued at £724,148 in 1928, as compared with £69,709 for iron and steel manufactures, which ranked second in value. The principal exports were sisal, sponge, lumber, tomatoes, shells, and preserved pineapples. For the fiscal year ending Mar. 31, 1929, revenues totaled £517,211 and expenditures, £673,794. The public debt in 1928 amounted to £176,230. In the same year, 1116 vessels of 732,458 tons entered and 1123 vessels of 729,445 tons cleared the ports. The islands are administered by a governor who is assisted by an executive council and a legislative council, each of nine members, and a legislative assembly of 29 members, the franchise being based on a small property qualification. Governor and Commander-in-chief in 1930, Sir Charles William James Orr.

BAKU. See *AZERBAIJAN*.

BALFOUR, bāl'fūr or bāl'fēr, ARTHUR JAMES, FIRST EARL OF. An English statesman, died Mar. 19, 1930, in Surrey. He was born in the parish of Whittinghame, Scotland, July 25, 1848, and was educated at Eton and at Trinity College, Cambridge. From 1874 to 1885, he was a Conservative member for Hertford in the House of Commons, a part of which time (1878-80) he was also private secretary to his uncle, the Marquis of

Salisbury, then Secretary of State for Foreign Affairs. In this capacity he went on the special mission of Lords Salisbury and Beaconsfield to Berlin in 1878. In 1885 he became president of the Local Government Board and, in 1886, Secretary for Scotland. In the eighties Mr. Balfour came into popular notice as a member of the famous "Fourth Party," organized by certain Conservatives as a protest against certain of that party's measures and led by Lord Randolph Churchill. In 1879 he had published *A Defence of Philosophic Doubt*, and in manner and behavior showed himself to be rather a student and devoted to philosophy than a man of action and political affairs. Therefore, his appointment by his uncle to the post of Chief Secretary for Ireland in 1887 was regarded by many with alarm. The *Annual Register* for that year summarized British opinion thus: "Selection of Mr. Arthur Balfour for the vacant post (secretaryship of Ireland) was interpreted as an act of despair on the part of ruined politicians.—The selection of Mr. Arthur Balfour for the thankless office was regarded with some misgiving on account of his youth and sensitive nature." However, Lord Salisbury's confidence was not misplaced. Mr. Balfour was appointed Mar. 5, 1887, and on March 27 he introduced the Criminal Law Amendment (Ireland) Bill in a speech reported as lasting three hours. His promptness in dealing with crime in Ireland and the firm justice with which he handled the ever-delicate Irish situation established his reputation as a statesman of ability. On his return to England in 1891, he became leader of the House of Commons, where he had represented the Eastern Division of Manchester since 1885. He was also First Lord of the Treasury (1891-92 and, again, from 1895 to 1906). Recognized as leader of the Conservative Opposition, he was chosen Prime Minister in 1902.

Although he remained in office until 1905, his premiership was not a personal success, marked as it was by the partial disintegration of the old Unionist party and by internal disputes. It was during this time, however, that the Committee of Imperial Defence was established and the way paved for the Anglo-French Alliance of the World War. After resigning as Premier, Mr. Balfour represented the City of London in Parliament (1906-22) and resumed his leadership of the Opposition. He resigned the leadership in 1910 and, from then until the outbreak of the World War in 1914, he was engaged in lecturing and writing. In 1913-14 he was Gifford Lecturer at Glasgow University. At the beginning of the World War, he offered his services to the British Government, serving as First Lord of the Admiralty (1915-16) and Foreign Secretary (1916-19).

When the United States entered the War in 1917, Mr. Balfour headed the British War Mission sent to that country with the object of organizing coöperation between England and the United States. On May 5, 1917, he spoke before the House of Representatives, the first time that a British subject had addressed an American Congress. The speech was praised as showing complete sympathy with the spirit in which America entered the War. In 1917, also, he pledged the allegiance of Great Britain in the creation of Palestine as a Home for the Jews. (See **Jews and PALESTINE**.) He was one of the British delegates to the Peace Conference of Paris in 1919 and he headed the British delega-

tion to the Washington Conference for the Limitation of Armaments in the winter of 1921-22, becoming one of the leading figures of the conference and giving expression to a liberal and generous British opinion.

In 1922 he was created Knight of the Order of the Garter and was raised to the peerage as the first Earl of Balfour and Viscount Traprain of Whittingehame. The Order of Merit had been conferred on him in 1916 and the chancellorship of Cambridge University in 1919. After the War, he reentered the Cabinet as Lord President of the Council, serving in 1919-22 and again, during 1925-29. Throughout his long and full life, Lord Balfour retained his early interest in philosophy. By nature reflective, he showed in his writing a skeptical bent of mind which manifested itself as an attitude of tolerance in his work as statesman. In addition to his early *Defence of Philosophic Doubt*, he wrote *Essays and Addresses* (1893); *The Foundations of Belief, being Notes Introductory to the Study of Theology* (1895); *Economic Notes on Insular Free Trade* (1903); *Reflections Suggested by the New Theory of Matter* (1904); *Speeches (1880-1905) on Fiscal Reform* (1906); *Criticism and Beauty* (Romanes Lectures, 1909); *Theism and Humanism* (Gifford Lectures, 1915); *Essays, Speculative and Political* (1920); *Theism and Thought* (1923); *Opinions and Arguments* (1927).

BANKERS' ASSOCIATION, AMERICAN. The dominant national organization of banks in the United States, having a membership of about 20,000 banks out of a total 24,000, with assets estimated in excess of 90 per cent of the nation's aggregate banking capital funds of \$9,400,000,000 and total resources of \$72,000,000,000. The association has four major divisions, each devoted to the special interests, technical advancement, and general welfare of the following classes of banks: National, savings, State, and trust company. Within the organization there are also two sections devoted to general banking interests: the American Institute of Banking section and the State secretaries section. The American Institute of Banking section, which is the educational arm of the organization, has an enrollment of 43,000 students from banks in all parts of the country and a general membership of 63,000; the State secretaries section forms a link between the national organization and the State Bankers' Association.

The association has a protective department which prosecutes continually a nation-wide campaign of prevention, protection, and investigation for all member banks in respect to criminal operations. It also conducts a legal department which keeps bankers informed on developments in the field of banking law and, in connection with the association's State and Federal legislative committees and councils, watches the interests of banking institutions and the public in both State and Federal banking legislation.

During 1930 the organization gave special attention to maintaining equitable bank taxation.

Through its economic policy commission, it made an extensive research into the group-banking movement, disclosing the existence of 275 bank groups comprising 2000 banks with \$15,000,000,000 in combined resources, together with much theretofore unknown information in this field. This commission also investigated bank failures and branch banking, recommending that the association favor a limited degree of branch banking where economically desirable. The educational foundation of the association, with an endowment of \$500,000 to be employed in the furtherance of scholarships and research in banking and finance in educational institutions, allocated 200 loan scholarships valued at \$250 each to students in American colleges. In addition, its public education commission conducted lectures on banking in business schools and civic clubs throughout the United States, and the bank management commission developed active studies and methods for more scientific bank management.

The association holds its annual convention in the autumn of each year, while the executive council meets in the spring. The latter group is a representative body, proportioned to the membership in all States, and is qualified to take action upon certain association matters. The administrative committee, composed of 15 members, including the national officers, heads of the various divisions and sections, and certain others, acts as the *ad interim* governing authority between meetings of the convention and of the executive council. The 1930 convention was held in Cleveland September 28 to October 2, the chief topics of discussion being branch and group banking and methods for improving bank management.

The general national officers elected for 1930-31 were: President, Rome C. Stephenson, vice president, St. Joseph County Savings Bank, South Bend, Ind.; first vice president, Harry J. Haas, vice president, First National Bank, Philadelphia; second vice president, Francis H. Sisson, vice president, Guaranty Trust Company, New York City; treasurer, Grant McPherrin, president, Central National Bank and Trust Company, Des Moines, Iowa; and secretary, William G. Fitzwilson. The continuing activities of the association are carried on by a permanent staff, functioning at the national headquarters in New York City under the direction of the executive manager, Fred N. Shepherd.

BANK FOR INTERNATIONAL SETTLEMENTS. See REPARATIONS.

BANKS AND BANKING. The year 1930 represented practically a period of continued revolution in American banking, as regards condition, though less pronounced as to form and method. While some of the changes thus indicated can be noted on the surface of things, the more fundamental must be determined as a result of statistical analysis. The year was essentially a period of "house cleaning" after the first convulsion of the panic of 1929, which occupied the months of November and December in the latter year. The striking alterations of the 12 months may be classified under three heads: (1) Elimination of weak banks through a great acceleration of the failure and merger movement, (2) Shifting of immense quantities of credit from the securities markets to the banks, and (3) Continuation of the development of chain and branch banking along lines already indicated during the preceding year or two. The close of the 12 months

did not indicate that these processes had nearly reached their limit, but the experience of the year was sufficient to make it evident that an entirely new turn had been given to affairs by the collapse of 1929 and that the major factors already enumerated had emerged as controlling influences.

NATIONAL BANKS. Structurally speaking, the year 1930 did not bring about any considerable change in the position of the national banks. Notwithstanding the urgent recommendations made by the Comptroller of the Currency at the opening of the year with respect to the desired introduction of branch banking, Congress had done nothing either on that or any other allied subject, although the House of Representatives Committee on Banking and Currency had during the first six months of the year held hearings with reference to the subject. According to the report of the Comptroller of the Currency published soon after the assembling of Congress, the total number of associations existing at the close of the report year (Oct. 31, 1930) was 7218 or about 288 less than a year earlier. There had also been an important change in resources, the aggregate showing a total of \$28,378,683,000, or a gain of about \$454,373,000, equal to 1.63 per cent. Consolidations, failures and combinations had worked together to impair either the strength or the numbers of the national banks, and to weaken the system accordingly. The total number of receivers appointed during the year was 104, as compared with 79 during 1929.

The hearings before the House Committee already referred to, developed more clearly than ever before, the very large percentage of national banks that were actually controlled by other institutions under some chain or group plan, and revealed the fact that but few bankers were definitely well satisfied with the conditions under which the system is being carried on. It further developed a very marked difference of opinion with reference to the application of the branch plan, inasmuch as there were abundant evidences that decided differences of interest were recognized by city bankers in this connection. Had it not been for uncertainty possibly due to the existence of business depression, it is probable that legislation of distinctly far-reaching character would have been introduced with a view to clearing up the position of the national banking system as an element in the financial structure of the country.

Brief analysis of the condition of national banks is furnished in the table on page 84, in which the chief assets and liabilities of the System are contrasted for a series of dates. From this showing, the continuation of tendencies already observable in 1929 is made evident. For the report year 1930, the average earning of national banks (measured by capital and surplus) was approximately 7.11 per cent and the total net addition to profit was \$246,261,000, or about \$55,000,000 less than the increase for the preceding year.

FEDERAL RESERVE MEMBERS. Federal Reserve Member Banks' condition more and more assumed a position of significance as a banking index during the year. It is reflected in the weekly reports from about 600 institutions, located in 100 of the larger cities, reports from which are thought to constitute something near 50 per cent of the entire commercial assets of the country. The figures furnished at the close of the year with respect to the situation of this select body of

| Due from banks | 1,617 | + 210 | + 301 |
| Due to banks | 3,539 | + 336 | + 389 |
| Borrowings from Federal Reserve system | 89 | — 171 | — 316 |

The figures thus quoted show that during the year there was a very noteworthy increase in the total amount of security loans and investments. Further analysis shows that loans on commercial paper—the “all other” of the statement—had declined about \$895,000,000; loans on securities were also off about \$490,000,000. On the other hand investments had increased by about \$1,179,000,000, the result being a net increase in the amount of securities and loans on securities, taken together, of approximately \$689,000,000.

This situation merely reflected the great shift of credit that had already taken place during the process of cutting down brokers' loans, accommodation being asked from the banks as brokers' loans declined, so that the amount of bank credit issued continued steadily about the same throughout the year, notwithstanding that brokers' loans fell off and that their place was taken by fresh

advances on the part of the banks. In short, the interesting thing about the member bank statement was found in the fact that despite the general shrinkage of speculative credit all around, there had been a steadily outstanding body of bank credit that showed little or no change.

STATE BANKS AND TRUST COMPANIES. There was not much difference during the year in the situation of State banks and trust companies as compared with that of national banks. Loans on the whole fell off slightly, in all by about 4 per cent, while investments increased in a somewhat corresponding degree. The banks were stronger in cash at the end of the year than at the beginning, while their capital and surplus taken together, represented slight advance. Total resources were almost exactly the same, while individual deposits showed a trifling shrinkage. Altogether, the year had evidently served to arrest the growth that had been taking place in the operation of the State bank and trust companies, just as had been the case with the national banks, although in the main the latter showed a more consistent growth than did the State institutions.

Neither in the national nor in the State banks, was there any success in further reducing the great burden of bonds and other securities which had been carried along as investments. As was shown in the statement of member bank conditions, so also in that of State banks, reductions in commercial loans and accommodations to the business community were promptly offset by advance in the amount of the investment portfolio. The inference, drawn at the close of 1929, that inflation had gone about as far as it was likely to go, was thus set at nought, inasmuch as—although the operations of 1930 did not reveal any decided increase in the total amount of credit issued—they did show a shift from more liquid to less liquid forms of holdings. The following table sketches the principal changes that took place among banks other than national:

PRINCIPAL ITEMS OF RESOURCES AND LIABILITIES OF STATE (COMMERCIAL), SAVINGS, PRIVATE BANKS, AND LOAN AND TRUST COMPANIES

FEDERAL RESERVE BANKS. Federal Reserve Banks had already reduced their discount rates to 4½ per cent before the end of 1929, following out the policy of rendering money easier with a view to alleviating the supposed effects of the panic of 1929. The cut in money rates had had no immediate influence and it was believed that the reason was probably that the policy had not been carried far enough. The opening of the year had been characterized by hopeful predictions, many of which asserted that an early recovery might be expected, and most of which assumed the thought that cheap money was probably the most effective and certain method of attaining such recovery. The course of the panic, however, tended

to establish the contrary. There was no recovery in business, but depression maintained itself throughout the year and grew deeper as the year advanced. The cheap money advocates accordingly demanded still further reductions in the rate of discount and eventually received them, the rate being cut first to 4 per cent, then to 3½, then to 3 per cent, to 2½, and finally on December 23 to 2 per cent in New York, while in other reserve cities reductions brought the rate down to 3 to 3½ per cent in all other Reserve institutions. The 2 per cent rate was the lowest in the history of the Reserve System; but it neither stimulated the demand for money, nor did it make rates in general any cheaper; indeed the year as

| Contingent liability on bills purchased for foreign correspondents | \$439,288,000 | \$432,327,000 | \$547,962,000 |

a whole was characterized by an increasing scarcity of loan funds, and by a steadily maintained high rate so far as the general borrower was concerned.

Meantime, the business depression had spread all over the world and in many countries it had been deemed necessary to make foreign payments in gold, thus reducing the balance of that metal in the vaults of central banks. The United States, in the course of the year, after minor ups and downs showed a net balance of about \$300,000,000 gold, but other countries tended to report less and less gold so that maladjustment of specie supply was a constant and serious problem throughout the period. So far as the Federal Reserve banks were concerned, however, the matter did not largely figure, inasmuch as the stock of gold in these banks was at no time in the danger of seriously running down, after the close of the movement which set in at the end of 1928 had once been checked. From time to time, during the year, it was understood that the necessities of various foreign countries had necessitated changes in the buying policy of the reserve banks in the endeavor to maintain their gold reserves as nearly steady as possible and to prevent gold from rushing toward the United States in an unduly large volume. As the year drew to a close, there was a tendency to enlarge the volume of acceptances held and to purchase freely of treasury certificates in the endeavor to render the cheap money policy effective by forcing purchasing power out into the hands of the community.

The gold situation was particularly in need of careful attention during the year 1930 in view of the fact that just before the panic not a few foreign institutions, alarmed at the outlook, had sent for their balances and had withdrawn them, in part at least, from the United States. There was a further development of this same policy during the early months of 1930, but it gradually came to a close. Country after country in all parts of the world felt the depression and in nearly all there was trouble of more or less serious nature. It was not strange that, in such circumstances, bankers who at first were inclined to think their funds safer at home should change their minds and should send the money back to the United States. At the close of the year 1930, in spite of the numerous bank failures of the year, there was a tendency to a renewed flow of capital to the United States from many foreign countries. The volume of endorsed acceptances held by Reserve banks and representing funds held in trust for foreign central and other banks was thus shown to be on the increase. The table on page 85 shows the year-end condition of the System.

BANK CREDIT. Reference already has been made incidentally to the great shift of credit that took place during the year through the substitution of advances by banks for brokers' loans. It is worth while, however, to devote a little more attention to this latter branch of banking business. The loans in question had reached their peak just before the panic of 1929 with a total of about \$3,500,000,000, but had lost more than half of this amount before the end of the year, standing then a little below \$4,000,000,000. Recession during the early part of 1930 was relatively slow, but after the short fictitious boom of the forepart of 1930, withdrawal of funds from the market set in actively and by the close of the year the loan account had fallen below \$1,800,000,000. At

the same time the loans advanced by nonbanking members—the so-called "others" of the bank statements—had been reduced to a nominal figure falling below \$300,000,000.

It was admitted that at the close of the year the brokers' loan account had been reduced to probably less than normal proportions and inasmuch as brokers' loans can be taken as measuring not the amount of bank credit, but the activity of speculative credit—that this reduction represented the retirement from the market of the large majority of sporadic or transitory participants. The following table showing brokers' loans during 1930 as reported by the New York Stock Exchange permits the development during the year to be clearly traced.

BROKERS' LOANS, 1930

| | | Demand | Time | Total |
|-------|----|---------------|-------------|---------------|

BANK FAILURES. Prosperity during the years 1928-29 helped to cut the total number of bank failures quite materially as compared with preceding years. The difficult condition which followed closely upon the collapse of 1929 tended, of course, to drive many banks into a more difficult position and from the very opening of the year, there was a renewed tendency to failure. This tendency continued on a fairly even basis up to the autumn, when it suddenly assumed increased significance, failures during November representing almost as large a total of capital as for all of the year preceding. Heavy failures also took place in December and included the Bank of United States (New York City), the failure of this latter institution being one of the largest for a good many years. In the table on page 87 the gradual development of the bank failure situation is set forth—the general causes being essentially the same as those of former years.

INTERNATIONAL RELATIONS. International relations on the part of American banks underwent few changes during 1930. The Bank of International Settlements which had been provided for at the time of the Paris conference on the Young Plan was duly organized and set in operation, but throughout the year, its dealings continued upon a restricted basis and the relationship between it and the Federal Reserve System was not such as to disturb conditions already established in other years. During the late autumn of 1930 further conferences among central bankers took place in both London and Berlin, bankers on both sides of the Atlantic having become alarmed by reason of the fact that Germany was clearly feeling so much difficulty in the settlement of reparations with corresponding possibilities of trouble in connection with exchange payments between countries participating in the international debt settlements. Nothing was made known concerning the actual results of these conferences up to the close of the year, though it was understood that the general situation had been

brought to the attention of President Hoover and discussed with him. See REPARATIONS; FINANCIAL REVIEW.

BAPTISTS. In 1930 there were in the United States 14 groups comprised in the denomination known as Baptist, which maintains that baptism should be administered to believers only and generally by immersion. The first Baptist Church in America probably was established by Roger Williams in Providence, R. I., in 1639, although this honor is claimed by the First Baptist Church of Newport, R. I., organized the same year or shortly after. As a result of political differences, and particularly on account of the question of slavery prior to the Civil War, the Southern Baptists withdrew from the national organization in 1845, forming the Southern Baptist Convention, which, since that time, has functioned not as a new denomination but as an organization for the purpose of directing missionary and general evangelistic work in the white Baptist churches of the Southern States. The National Baptist Convention, representing the Negro churches, was formed in 1880. Other divisions

were known as Primitive, General, Regular, and United Baptists.

According to the *American Baptist Year Book*, 1931, there were in the United States in 1930 a total of 53,888 churches of the Northern, Southern, and National (Negro) Baptist conventions, with 49,907 ordained ministers and 2070 local associations. Baptisms during the year numbered 311,404, making the total membership 8,915,785. Sunday schools numbered 46,132, with an enrollment of 5,143,056 pupils. Church property was valued at \$569,091,200, and contributions amounted to \$92,392,175, of which \$76,468,934 was for current expenses and \$15,923,241 for beneficence. The churches are congregational in polity, each church being sovereign as to its own discipline and worship. Applicants for the ministry are licensed to preach by the churches in which they hold membership.

NORTHERN BAPTIST CONVENTION. In 1930 the Northern Baptist Convention, composed of 37 conventions in 35 States, reported 431 local associations, 8193 churches, 8786 ordained ministers, 61,237 baptisms during the year, 1,410,325 members, 7595 Sunday schools, and 1,161,363 Sunday-school pupils. The twenty-third annual meeting of the Northern Baptist Convention was held in Cleveland, Ohio, May 28-June 2, 1930, the general theme being "After Nineteen Hundred Years." The keynote address was given by Dr. Clarence A. Barbour, president of Brown University. In addition to addresses in connection with the presentation of annual reports, other speakers were Prof. William Lyon Phelps of Yale University; the Rev. S. M. Lindsay of Brookline, Mass.; the Rev. W. B. Riley of Minneapolis, Minn.; and the Rev. Harry Emerson Fosdick of New York City. The officers elected for 1930 were: President, Albert W. Beaven, D.D., LL.D., president of Colgate-Rochester Divinity School, Rochester, N. Y.; first vice president, Mattison B. Jones, Esq., of Glendale, Calif.; second vice president, J. L. Kraft of Chicago, Ill.; corresponding secretary, Maurice A. Levy, D.D., of Pittsfield, Mass.; recording secretary, Clarence M. Gallup, D.D., of Providence, R. I.; statistical secretary, Charles A. Walker, D.D., of Dover, Del.; and treasurer, Orrin R. Judd of New York City. The next annual meeting was to be held in Kansas City, Mo., June 3-8, 1931.

In 1930 the Northern Baptist Convention maintained 58 educational institutions, including 13 theological seminaries, 2 training schools, 21 colleges, 6 junior colleges, and 15 academies. These institutions in 1929 had 36,980 students, 2591 instructors, 571 buildings, property aggregating \$83,749,300 in value, endowments valued at \$127,320,022, and an annual income for the year of \$18,007,940. The foreign-mission field of the Northern Baptist Convention included Burma, Assam, South India, Bengal-Orissa, South China, East China, West China, Japan, Belgian Congo, and the Philippine Islands, 712 missionaries working at 126 stations. In 1929 churches numbered 2311 with 276,408 members; native workers, 10,296; schools, 2635, with an enrollment of 115,446 pupils; and hospitals and dispensaries, 94, with a total of 22,949 in-patients and 313,248 out-patients.

The field of the Home Mission Societies included, in addition to the United States and its dependencies, Mexico, the West Indies, Central America, the Canal Zone, and South America. Their greatest activity was among the Negroes,

Indians, and new Americans. The denomination also maintained six hospitals, the largest being the New England Baptist Hospital in Boston and the Northwestern Baptist Hospital in St. Paul; 20 homes for the aged; and 15 children's homes. The official periodical of the Northern Baptist Convention is *The Baptist* (Chicago); other denominational papers are the *Watchman-Examiner* (New York City), *Baptist Observer* (Indianapolis), *Baptist Banner* (Parkersburg, W. Va.), and *Baptist Record* (Pella, Iowa). In addition, most of the State conventions issue monthly bulletins. Headquarters of the American Baptist Publication Society are in Philadelphia.

SOUTHERN BAPTIST CONVENTION. In the *Southern Baptist Handbook, 1930*, there were reported 18 State conventions, 24,010 churches, 23,431 ordained ministers, 175,631 baptisms during the year, 3,770,645 members, 20,972 Sunday schools, 2,776,665 Sunday-school pupils, 24,273 Baptist Young People's Unions with a membership of 500,405. Contributions totaled \$39,337,148, and church property was valued at \$213,327,088. The receipts of the boards of the convention in 1930 were as follows: Southern Baptist Foreign Mission Board (Richmond, Va.), \$1,222,287; Southern Baptist Home Mission Board (Atlanta, Ga.), \$439,754; Sunday School Board of the Southern Baptist Convention (Nashville, Tenn.), \$1,954,109; and Old Ministers' Relief and Annuity Board (Dallas, Texas), \$915,980. The denomination maintained 97 schools and colleges, including 5 theological schools, 31 senior colleges, 30 junior colleges, and 31 academies, with a total enrollment of 34,894 students, 1761 instructors, endowment amounting to \$21,725,429, and property valued at \$41,642,122. It also reported 28 hospitals (two fostered by the Southern Baptist Convention and 26 by the State conventions), valued at \$15,122,740 and accommodating 81,921 patients during the year; 18 children's homes with a property value of \$5,740,971 and accommodating 4588 children; and 3 homes for the aged.

The annual sessions of the Southern Baptist Convention were held in New Orleans May 14-18, 1930. Practically no changes were made in the organization of the work of the convention; but decided enlargement in the work of the Men's Brotherhood of the South was reported, one new feature was added to the work of the Old Ministers' Relief and Annuity Board, and the more difficult and perilous situation confronting the schools and colleges of the convention was plainly pointed out. The following officers were elected: William J. McGlothlin, Ph.D., D.D., LL.D., of Greenville, S. C., president; M. E. Dodd, D.D., of Shreveport, La., vice-president; John E. White, D.D., LL.D., of Savannah, Ga., vice-president; M. P. Love of Hattiesburg, Miss., vice-president; Charles W. Daniel, D.D., of Richmond, Va., vice-president; Hight C. Moore, D.D., Litt.D., of Nashville, Tenn., recording secretary; Henry Burnett of Macon, Ga., recording secretary; Austin Crouch, D.D., of Nashville, Tenn., executive secretary.

NATIONAL BAPTIST CONVENTION (NEGRO). In 1930 there was reported for the National Baptist Convention 1280 local associations and 48 State conventions; 21,712 churches; 18,743 ordained ministers; a constituency of 3,528,528 members, of whom 79,502 were baptized during the year; 20,252 Sunday schools, with an enrollment of 1,448,921 pupils, and contributions from all sources amounting to \$5,237,226. At the annual

meeting of the convention held in New York City Sept. 11-16, 1930, the Lott Carey Foreign Mission Convention and the National Baptist Convention entered into a compact for combining their efforts in the foreign mission field. The work of the home mission department also was extended by the establishment of five stations in the Canal Zone under a resident missionary. The Virginia Theological and Missionary Training School in Lynchburg, Va., received indorsement as a national seminary for the training of ministers and missionaries.

OTHER GROUPS. In addition to several unorganized groups of foreign-speaking Baptists in the United States, there were the following organized bodies: German, Swedish, French-speaking Baptists of New England, Finnish Baptist Mission Union, American Magyar (Hungarian), Italian, Danish, Norwegian, Czechoslovak, Polish, Rumanian, Portuguese, and Russian-Ukrainian conferences. Spanish-speaking (Mexican) Baptists were well organized in some sections, North and South; and there were unorganized bodies of Chinese and Japanese Baptists. Statistics for these bodies in 1930 were as follows: Churches, 957; ministers, 841; baptisms, 4360; membership, 90,991; Bible schools, 938; Bible-school enrollment, 80,012; property valuation, \$12,513,600; and contributions, \$2,711,308.

Smaller branches of the denomination, differing in various respects from the main branches of the church, included the following Baptists: General Six-principle, Seventh-day, Free Will, United American Free Will (Colored), Free Will (Bullockites), General, Separate, Regular, United, Duck River, Primitive, Colored Primitive, Two-Seed-in-the-Spirit Predestinarian, Independent Baptist Church of America, and American Baptist Association. The total number of members, according to the Federal Census of Religious Bodies of 1926, was 429,955. See also BAPTISTS, FREE.

The *British Baptist Hand Book* for 1930 prepared the following statistics of the denomination in 1929:

BAPTIST CHURCHES AND MEMBERSHIP: 1929

| | Churches | Ministers | Members |
|-----------------|----------|-----------|------------|
| America | 58,111 | 52,020 | 8,978,834 |
| Europe | 8,207 | 4,884 | 1,639,656 |
| Asia | 3,464 | 1,640 | 361,800 |
| Africa | 1,295 | 393 | 83,041 |
| Australia | 492 | 416 | 35,113 |
| Total | 71,569 | 59,333 | 11,098,444 |

In the Dominion of Canada there were three conventions: that of Ontario and Quebec; that of the Maritime Provinces, including New Brunswick, Nova Scotia, and Prince Edward's Island; and the Western Baptist Union, composed of Manitoba, Saskatchewan, Alberta, and British Columbia. In these conventions in 1930, there were 1258 churches, with 705 ordained ministers; 133,718 members, 4581 having been baptized during the year; and 1125 Sunday schools with an enrollment of 102,242 pupils. Property valuation, exclusive of Ontario and Quebec, aggregated \$6,612,600; and contributions for the year amounted to \$2,847,307, of which \$2,391,918 was devoted to current expenses and \$455,389 to missionary beneficence. In Mexico, there were 80 churches, 75 ordained ministers, and 6283 members, of whom 537 were baptized during the year.

The Baptist World Alliance, which was organized in 1905, meets every five years. A meet-

ing was held in Toronto, Canada, in July, 1928. The relationship of the World Alliance to the Baptist churches is purely advisory; its purpose is the discussion of interests common to the denomination.

BAPTISTS, FREE. A branch of the Baptist denomination, which by 1930 had practically completed its policy of merging with the Northern Baptist Convention. The General Conference of the Free Baptists, the national incorporated organization, however, still preserved its legal existence and powers. This body is of Northern Free Baptists and is not to be confused with other branches, one centring in North Carolina and known as Free Will Baptists and another centring in Texas and Oklahoma and known as both Free Baptists and Free Will Baptists, although the latter body has been and still is in affiliation with the Free Baptists of the North. Estates in which life interests terminated or other entailments were removed were still coming to its treasury. The majority of Free Baptist ministers, churches, and members were included in the enumeration of the Northern Baptist Convention. Alfred Williams Anthony was serving as corresponding secretary and treasurer. See BAPTISTS.

BAR ASSOCIATION, AMERICAN. A national association, organized in 1878 to advance the science of jurisprudence, the administration of justice, harmony in legislation, and the observance of legal precedents throughout the United States, as well as to uphold the legal profession and promote good understanding among its members. The fifty-third annual meeting was held in Chicago, Ill., Aug. 20-23, 1930, and was attended by more than 2700 delegates. Preceding the meeting there were held on August 18-19 sessions of the following sections: Criminal law and criminology; judicial; legal education and admissions to the bar; mineral law; patent, trade-mark, and copyright law; public utility law; and also the fortieth annual conference of the commissioners on uniform State laws.

The reception to the visiting representatives of the British, Scottish, Irish Free State, French, and Canadian bars was the principal feature of the annual meeting. The address of welcome was delivered by Charles Evans Hughes, Chief Justice of the U. S. Supreme Court, and the responses were made by Viscount Dunedin, a Lord of Appeal in Ordinary, on behalf of the British bar; James S. Leadbetter, King's Counsel, on behalf of the Scottish bar; Henry Hanna, Judge of the High Court, on behalf of the bench and bar of the Irish Free State; Henri Decugis, advocate, for the Paris bar; and Horace Harvey, Chief Justice of Alberta, for the Canadian bar. At the luncheon in honor of the foreign guests the address was given by Sir John Simon, chairman of the Indian Statutory Commission, who spoke on "Some Aspects of the Indian Problem." Other important addresses at the annual meeting were: Henry Upson Sims, the retiring president, on "The Relation of Constitutional Limitations to the Reform of the Law"; George W. Wickersham, chairman of the Federal Commission on Law Observance and Enforcement, on "The Programme of the Commission on Law Observance and Enforcement"; Thomas D. Thacher, Solicitor-General of the United States, on "Bankruptcy Investigation"; N. W. Rowell, member of the Toronto bar, on "Canada's Position in the British Commonwealth of Nations"; and the Rt. Hon. Hugh

Pattison MacMillan, a Lord of Appeal in Ordinary, on "Law and Letters."

Among the important actions taken by the association were authorization of the appointment of a committee on the unauthorized practice of law, and approval of the Uniform Child Labor Law, drafted by the commissioners on uniform State laws, which was to be presented especially to the legislatures of the States which were dilatory in welfare legislation of this character. There also was appointed by the executive committee a special committee to formulate a plan for affiliation between the State bar associations and the American Bar Association, so that the latter organization might become "the means of more accurately expressing the sentiment of the lawyers of the country." The association's medal, for conspicuous service in the cause of American jurisprudence, was presented to Elihu Root at the session on August 22.

On Nov. 18, 1930, the association announced the result of the referendum which it had conducted among its members as to repeal of the Eighteenth Amendment; 13,779 were in favor of the repeal, and 6340 were opposed to it. The total membership of the association in 1930 was 29,649. The officers elected for 1930-31 at the Chicago meeting were: Josiah Marvel of Wilmington, Del., president; John H. Voorhees of Sioux Falls, S. D., reelected treasurer; and William P. MacCracken, Jr., of Chicago, reelected secretary. On account of the death of Mr. Marvel (q.v.) Charles A. Boston of New York City was elected to the presidency on November 1. Headquarters of the association are at 1140 North Dearborn Street, Chicago, Ill. See PROHIBITION; INTERNATIONAL LAW.

BARBADOS. A West Indian island colony of Great Britain, lying to the east of the Windward Islands, with an area of 166 square miles and a population at the census of 1921 of 156,312 (estimated Jan. 1, 1929, 167,953), or more than 1000 to the square mile. The capital is Bridgetown, with a population of 13,486. The movement of population in 1928 was: Births, 5672; deaths, 3993. The average attendance at the 129 primary schools in 1928 was 15,197 out of an enrollment of 23,380.

Sugar and cotton are the staple products, 62,658 tons of sugar, 7,229,181 gallons of molasses, and 14,195 pounds of cotton being exported in 1928. Due to the world depression in sugar prices the island suffered a severe economic crisis in 1930 (see GREAT BRITAIN, under *History*). In the calendar year 1929 imports were valued at £2,337,754 and exports at £1,531,040; imports from United States, \$1,388,000; exports to U. S., \$493,000. For the fiscal year 1928-29 revenues totaled £441,732, expenditures, £459,626; and the public debt, £610,000. Trade is principally with the United Kingdom, the United States, and Canada. A total of 3,981,607 tons of shipping entered and cleared the port of Bridgetown during 1928. A governor administers the affairs of the island with the assistance of an executive council, an executive committee, a legislative council of nine members appointed by the King, and an assembly of 24 members elected annually by about 3600 registered electors. Governor in 1930, Sir W. C. F. Robertson.

BARLEY. The barley production in 1930 of 32 countries representing about 85 per cent of the world's yield was estimated as reported by the International Institute of Agriculture, Rome, at

1,336,130,000 bushels, a decrease of 5.2 per cent below the yield of 1,409,697,000 bushels of the preceding year and an increase of 14.4 per cent above the average production for the five years 1924-28. The barley area of these countries was reported at 58,235,000 acres which was 2.6 per cent below the acreage of 1929 and 13.6 per cent above the five-year average. The Soviet Republics and South American countries were not included in these estimates. The yields of the leading barley-growing countries other than the United States were given as follows: Canada 137,963,000 bushels, Germany 122,942,000 bushels, Rumania 103,094,000 bushels, Spain 100,563,000 bushels, and Japan 72,472,000 bushels. The highest average yield per acre, 32.7 bushels, was recorded for Germany. In the crop year 1929-30 of the southern hemisphere, Argentina, the leading barley-growing country of South America, produced 16,132,000 bushels on a sown area of 1,450,000 acres. For the crop of 1930-31 Argentina sowed 1,411,000 acres of barley which was nearly 35 per cent above the average for the preceding five years. According to the latest figures available the Soviet Republics, European and Asiatic, produced 245,013,000 bushels in 1928 as compared with an average of 418,030,000 bushels for the five years 1909-13.

Estimates published by the Department of Agriculture placed the 1930 barley crop of the United States at 325,893,000 bushels as against 302,892,000 bushels in 1929 and the largest on record excepting the crop of 1928. The area harvested in 1930 was 12,437,000 acres, a decrease of 631,000 acres below the acreage of 1929. As barley is an early maturing crop it was not seriously affected by the drought in the Northern and Western States where most of it is grown. The average yield per acre was 26.2 bushels, or 3 bushels above that of 1929 and 1.2 bushels higher than the average for the preceding ten years. The average farm price as of Dec. 1, 1930 was 39.6 cents per bushel, a reduction of 15.8 cents per bushel from the corresponding price in 1929. On this basis the total value of the 1930 crop was \$129,137,000 as compared with \$166,613,000 the year before.

The production of the leading barley-growing States was reported as follows: Minnesota, 55,830,000 bushels; South Dakota, 42,570,000 bushels; North Dakota, 40,075,000 bushels; California, 35,420,000 bushels; Wisconsin, 20,011,000 bushels; and Nebraska, 22,330,000 bushels. The average yield per acre in these states ranged from 35 bushels in California to 17.5 bushels in North Dakota. For the 35 States reporting yields the range was from 43 bushels in Utah to 16.5 bushels in Montana.

During the fiscal year ended June 30, 1930, the United States exported 24,054,000 bushels of barley, including malt valued at \$18,950,000 or about 33 per cent less in quantity than the average exports for the five years 1925-29. As reported by the International Institute of Agriculture 18 countries exported 136,348,000 bushels of barley during the commercial year ended July 31, 1930.

BARNARD COLLEGE. See COLUMBIA ANNIVERSARY.

BARNES, WILLIAM. An American politician, died in Armonk, N. Y., June 25, 1930. He was born in Albany, N. Y., Nov. 17, 1866, and was graduated from Harvard University in 1888. In the following year he became owner and editor of

the *Albany Evening Journal*, which had been established by his grandfather, Thurlow Weed, in 1830 and which was merged with the *Albany Morning Express* which he had bought previously. He took an aggressive interest in Republican politics, his forceful personality soon making him the leading political figure in Albany County and then in the State of New York. Without being the holder of an elective office, or at any time a candidate for such an office, he was a supreme influence of the Republican party in New York, acting as a member of the Republican State Committee from 1892 to 1911 and as chairman of this committee from 1911 to 1914. In 1912, when the Republican party split into progressive and conservative sections, he identified himself with the conservative wing and, as a delegate to the National Convention, opposed the movement to make Theodore Roosevelt Republican candidate for the presidency. He was Republican National Committeeman from New York from 1912 to 1916, but after 1916 his power gradually dwindled. He lost a libel suit which he had brought against former President Roosevelt in 1914.

BARNETT, GEORGE. Major General, U. S. Marine Corps, retired, died in Washington, D. C., Apr. 27, 1930. He was born in Lancaster, Wis., Dec. 9, 1850, and was graduated from the U. S. Naval Academy in 1881. Commissioned second lieutenant in the U. S. Marine Corps in 1883, he was promoted through the grades to the rank of colonel in 1910. From 1914 to 1920, he served as major general commandant of the Marine Corps, during this time organizing the marines for participation in the World War. For his war services, General Barnett was given the Distinguished Service Medal of the United States and made a member of the French Legion of Honor. He was promoted to the permanent rank of major general in 1921 and placed in command of the Department of the Pacific, U. S. Marine Corps, with headquarters in San Francisco, where he served until retirement in 1923.

BARRY, THE RT. REV. MGR. WILLIAM (FRANCIS). A British Roman Catholic theologian and author, died in Oxford, England, Dec. 15, 1930. He was born in London Apr. 21, 1849, and was educated at Oscott College, near Birmingham, and at the English College and Gregorian University in Rome. After ordination to the Roman Catholic priesthood at the Church of St. John Lateran in Rome, he became in 1873 vice-president and professor of philosophy at the Birmingham Theological College, and in 1877 professor of divinity at Oscott College. In 1883 he assumed charge of the small parish of Dorchester, near Oxford, and devoted his time largely to literary and lecture work. He visited the United States on a lecture tour in 1893, and in 1897 delivered the centenary address on Burke in London and Dublin. In 1908 he was appointed rector of St. Peter's, Leamington, and in 1928 canon of Birmingham. He also was created Notary Apostolic by Pope Pius XI in 1923. Besides numerous articles on metaphysical and historical subjects which he contributed to the *Dublin*, *Edinburgh*, and *Nineteenth Century Reviews*, he was the author of such romantic novels as *The New Antigone*, a powerful study of modern views in regard to marriage (1887); *The Place of Dreams* (1894); *The Two Standards* (1898); *Arden Massiter* (1900); *The Wizard's Knot* (1901); and *The Dayspring* (1903), and of the philosophical biographies, *Newman* (1904) and *Renan* (1905). He also wrote: *The Papal Mon-*

archy from St. Gregory the Great to Boniface, 590 to 1303 (1902); *Heralds of Revolt* (1904); *Traditions of Scripture* (1906); *The Papacy and Modern Times* (1911); *Memories and Opinions* (1926); *Roma Sacra* (1927); *The Triumph of Life, or Science and the Soul* (1928); and *The Catholic Revival* (1929).

BARTON, WILLIAM ELEAZAR. An American clergyman and author, died in Brooklyn, N. Y., Dec. 7, 1930. He was born in Sublette, Ill., June 28, 1861, and was graduated from Berea College in 1885 and from Oberlin Theological Seminary in 1890. Ordained to the Congregational ministry, he first filled several pastorates as a circuit rider in Ohio and Tennessee, then served the Shawmut Congregational Church in Boston (1893-99), and afterward the First Church in Oak Park, Ill. (1899-1924). The Chicago Theological Seminary appointed him in 1905 lecturer on applied practical theology, and in 1911 lecturer on ecclesiastical law. In 1928 he became lecturer on biographical leadership and practical theology at Vanderbilt University and also pastor of the Collegeside Church in Nashville, Tenn., which he had founded. He was editor of the pastors' department of *The Advance* from 1904 to 1912, editor-in-chief from 1913 to 1917, and, on the merger of that paper with *The Congregationalist*, corresponding editor from 1918 until his death. He was also an associate editor of the *Bibliotheca Sacra* and a member of the staff of *The Youth's Companion* (1900-17, 1925-30). He held several important offices in the Congregational Church, including vice-president of the Congregational Sunday School and Publishing Society (1899-1905), director of the Congregational Educational Society (1894-1915), and moderator of the National Council of Congregational Churches (1921-23). From 1899 to 1930 he was a delegate to the decennial meetings of the International Council of Congregational Churches of the World, drafting its constitution in 1920, and in 1927 attended the World Conference on Faith and Order in Lausanne, Switzerland. The D.D. degree was conferred on him by Berea College in 1895; the LL.D. degree by Knox College in 1913 and Drury College in 1923; and the Litt.D. degree by Carleton College in 1924.

For many years Dr. Barton devoted much time to research in the biography of Abraham Lincoln and wrote several authoritative works on that subject, including: *The Soul of Abraham Lincoln* (1919); *Abraham Lincoln and His Books* (1920); *The Paternity of Abraham Lincoln* (1920); *Life of Lincoln* (2 vols., 1925); *A Beautiful Blunder—The True Story of Lincoln's Letter to Mrs. Bixby* (1926); *The Great Good Man* (Young's People's Life of Lincoln, 1927); *The Women Lincoln Loved* (1927); *Abraham Lincoln and Walt Whitman* (1928); *The Lineage of Lincoln* (1929); and *Lincoln at Gettysburg* (1930). His other works include: *Life of the Hills of Kentucky* (1889); *A Hero in Homespun* (1897); *The Psalms and Their Story* (1898); *The Old World in the New Century* (1902); *Jesus of Nazareth, His Life and the Scenes of His Ministry* (1904); *The History and the Religion of the Samaritans* (1906); *Bible Classics* (1911); *The Young Folks Bible Library* (editor, 8 vols., 1911); *Day by Day with Jesus* (1913); *The Law of Congregational Usage* (1915); *Congregational Creeds and Covenants* (1917); *The Parables of Safed the Sage* (1917); *The Life of Clara Barton* (1921); and *The Father of His Country* (a biography of Washington for young people, 1928).

BASEBALL. The Philadelphia Athletics again captured the American League pennant with ease in 1930, while a thrilling National League race between the Chicago Cubs, the Brooklyn Robins, the New York Giants, and the St. Louis Cardinals ended with a victory for the Cardinals. In the world's series, Connie Mack's Athletics won their second successive championship. They won the first two games of the series from the Cardinals, dropped the third and fourth, and then captured the fifth, through Jimmy Foxx's homer in the ninth inning, and the sixth.

While retaining his leadership of the American League, with 49 home runs, Babe Ruth of the New York Yankees was forced to relinquish the leadership of both major leagues to Hack Wilson, of the Chicago Cubs, who batted out 56 circuit clouts. Al Simmons of the Athletics was batting champion of the American League, closely followed by Lou Gehrig of the Yankees. The National League batting crown went to Bill Terry of the New York Giants, whose average for the season was .401. The Giants set a new record for team hitting, with an average of .319. Pitching supremacy of the American League was credited to Lefty Grove, of the Philadelphia Athletics, who with 28 games won and 5 lost, had an average for the year of .848 per cent. The Athletics led the American League in team fielding, their average being .975. National League pitching honors were won by A. C. (Dazzy) Vance of the Brooklyn Robins.

From a business standpoint, baseball experienced its most prosperous year in 1930, when previous attendance records were broken in both the major leagues. Paid admissions to National League games aggregated more than 5,500,000, while the attendance at American League games totaled about 5,300,000. The advent of night baseball in the minor leagues was a notable feature of the season, particularly on the Pacific Coast, where it was reported to have tripled the number of paid admissions. The Rochester Red Wings won the International League race and then defeated Louisville, American Association pennant-winner, for the so-called little world's series. The Hollywood Club won the Pacific Coast League pennant.

Three managerial changes occurred in the major leagues at the end of the 1930 season. Rogers Hornsby succeeded Joe McCarthy as manager of the Chicago Cubs; McCarthy replaced Bob Shawkey as manager of the New York Yankees; and John Collins took the place of Heinie Wagner as pilot of the Boston Red Sox. On Dec. 1, 1930, the dispute over the drafting of players between the major and minor leagues caused the majors to announce that they would engage in no player transactions with the three Class AA leagues—the International, Pacific Coast, and American Association—nor with the Class A Western League and the Three-I League, rated in Class B. Negotiations for a settlement of the difficulty broke down on December 12 at a joint session of the American and National Leagues.

The Eastern Intercollegiate League championship was won by the Dartmouth nine. The majority of the teams in this league agreed to dispense with coaching aid on the field during intercollegiate contests. Wisconsin won the Western Conference intercollegiate pennant.

BASKETBALL. Basketball held its position as the most popular indoor sport in colleges and schools during 1930. St. John's College of

Brooklyn, the University of Pittsburgh, and Syracuse University produced the outstanding teams of the season, the former establishing the remarkable record of 23 victories to one defeat. The Pittsburgh Panthers won 23 victories to two defeats, while Syracuse scored 18 victories and two defeats. The Columbia University five won the Eastern Intercollegiate Basketball League championship, breaking the five-year scoring record with a total of 399 points. Their one defeat out of ten starts was inflicted by Yale. The Purdue team won the Western Conference championship with ten straight victories, while the Pacific Coast Conference crown went to the University of Southern California. The University of Alabama won the Southern Conference tournament.

Forty-one teams from 15 States competed in the national Amateur Athletic Union tournament in Kansas City in March, the championship being won by the Henry Clothiers A. A. of Wichita, Kan. The Olympic Club of San Francisco was the runner-up. The Sunoco Oilers' team of Dallas, Tex., retained the championship in the girls' national A. A. U. tournament held in Wichita, Kan. The eighth annual International Y. M. C. A. tournament at Oak Park, Ill., was won by the Rahway, N. J., team, while the Athens, Tex., high school, repeated its victory of 1929 at the 12th annual interscholastic tournament held by the University of Chicago.

BATES COLLEGE. A nonsectarian college for men and women in Lewiston, Me.; founded in 1864. The enrollment for the autumn term of 1930 was 643, of whom 393 were men and 250 women. In the 1930 summer session there was a total of 251 students, of whom 104 were men and 147 women. The faculty and administrative officers numbered 54. The permanent funds amounted to \$1,847,000; total expenditures for the fiscal year were \$292,970; and the budget involved an appropriation of \$303,700. The library contained 58,716 volumes. President, Clifton Daggett Gray, Ph.D., LL.D.

BAVARIA. A constituent state of the German Republic; formerly a kingdom within the German Empire. The new state adopted a republican form of government on Nov. 22, 1918. Area, 29,334 square miles; population, according to the census of 1919, 7,055,466; according to the census of 1925, 7,379,594. Chief cities: Munich, with a population of 680,704 in 1925; Nuremberg, 392,494; Augsburg, 165,522; Ludwigshafen, 101,869. In 1928 there were 64,221 marriages, 153,649 living births, and 94,620 deaths. The religious division of the population of Dec. 1, 1925, was: Roman Catholic, 5,165,013; Protestants, 2,110,086; Jews, 49,163. Education is compulsory between the ages of 6 and 16. The yield of the chief crops in 1928 was as follows: Wheat, 550,723 metric tons; rye, 686,411 tons; oats, 616,281 tons; barley, 717,552 tons; potatoes, 5,071,374 tons. The yield of 48,639 acres of vines was 14,637,964 gallons of wine; of 31,458 acres of hops, 6954 metric tons. The livestock census on Dec. 1, 1928, showed 403,548 horses, 3,824,972 cattle, 394,844 sheep, 2,088,539 swine, and 350,107 goats. In 1928 coal production totaled 2,027,769 metric tons; iron ore, 615,589 tons; pig iron, 306,233 tons; cast iron, 213,981 tons; sulphuric acid, 372,609 tons. Savings banks numbered 367.

For the fiscal year 1929, the ordinary budget provided for a revenue of 790,410,613 marks and an expenditure of 834,410,613 marks, while the extraordinary budget balanced at 90,169,007 marks. The public debt at the end of 1928 totaled 1,311,317,600 paper marks and 330,192,194 Reichsmarks. The floating debt on Mar. 31, 1929, was 72,100,000 Reichsmarks (Reichsmark and mark both exchanged at about \$0.2381 in 1929).

The constitution dates from Aug. 14, 1919. Under it, the supreme power is vested in the people, who are represented by the Diet of one Chamber elected for four years. The membership of the Bavarian *Lantag*, as constituted following the election of May 20, 1928, follows: Bavarian People's party, 46; Social Democrats, 34; National Socialists, 9; German Nationalists, 13; Bavarian Peasants' and Middle-Class Union, 17; German People's party, 4; Communists, 5. Dr. Heinrich Held, Premier and Minister of Foreign Affairs for the preceding six years, resigned with his entire Cabinet on Aug. 20, 1930, when the Bavarian Peasants' and Middle-Class Union deserted the government and voted with the Social Democrats and other opposition parties against a tax on cattle slaughtering. The tax was intended to raise about \$2,000,000 annually toward meeting a deficit of \$5,000,000. The Social Democrats were commissioned to form a new government.

BAYREUTH WAGNER FESTIVAL. See MUSIC.

BEAUX-ARTS INSTITUTE OF DESIGN.

A school of fine arts in New York City, planned after the Ecole des Beaux-Arts in Paris. It was organized in 1916 by the Society of Beaux-Arts Architects for the purpose of furnishing "instruction in the arts, under the Regents of the State of New York, at a minimum cost to students; to bring art students under the criticism of artists who are engaged in active practice; to carry students beyond the academic study of the arts into the province of their application and practice; and to bring about coöperation among the various art schools of the country." Working under the auspices of the institute during the year 1929-30 were 2466 architectural students, 197 students of sculpture, and 109 students of mural painting. Except in the case of the Paris Prize competitions, there are no restrictions as to the nationality or age of entrants.

Prizes in architecture, sculpture, and mural painting are offered to students throughout the United States. During the year 1929-30, the committee on education in the department of architecture conducted 38 competitions for the study of architecture and six for the study of archaeology. The most important of the various prizes and scholarships offered to students through the institute is the Paris Prize amounting to \$3600, given by the Society of Beaux-Arts Architects, which affords two and one-half years' study in architecture at the Ecole des Beaux-Arts in Paris. (All the competitors, including the winner, in the final competition receive \$150 each, provided their work is considered satisfactory.) There is also the Paris Prize in Sculpture, representing a scholarship of \$1200 for one year's study in Paris.

The institute issues a monthly *Bulletin* in which are published the results of all contests, with reproductions of the best designs submitted. Officers elected at the annual meeting in November, 1930, were: Director, Whitney Warren; secretary, Henry R. Sedgwick; director of architec-

tural department, Philip A. Cusachs; director of department of sculpture, Edward McCartan; director of department of mural painting, J. Monroe Hewlett; chairman of the board of trustees, Benjamin W. Morris; vice chairman, William Adams Delano. Headquarters are at 304 East Forty-fourth Street, New York City.

BECHUANALAND PROTECTORATE, bech-wā'nā-land. A British protectorate in South Africa. Area, about 275,000 square miles; population (census of 1921), 152,983, including 1743 Europeans. Cattle rearing and primitive agriculture are the chief occupations. Some gold and silver is mined. In 1927-28 revenue totaled £147,911 and expenditure, £119,984. The colony is administered through the native chiefs by a resident commissioner under the High Commissioner for South Africa. Resident Commissioner in 1930, Lieut.-Col. R. M. Daniel. In 1930, Tsakedi, paramount chief of the Bamangwato Reserve, canceled the concession by which the Chartered Company in 1893 obtained the sole right to prospect for precious stones, minerals, and metals in the reserve.

BELGIUM. A kingdom of western Europe, situated between France and the Netherlands. Capital, Brussels; reigning monarch in 1930, Albert I.

AREA, POPULATION, ETC. The total area, including the districts of Eupen and Malmédy, which were ceded to Belgium after the Treaty of Versailles, is 11,755 square miles. The population, according to the official census of 1920, was 7,465,782; estimated, Jan. 1, 1929, at 7,995,558, which represented a density of 680 per square mile. The chief cities with their populations as of Jan. 1, 1929, are: Brussels (with suburbs), 825,783; Antwerp, 300,115; Liège, 169,566; Ghent, 162,627. In 1928, births totaled 146,981; deaths, 105,915; and marriages, 71,485. Emigrants in the same year numbered 28,303 and immigrants, 41,977.

EDUCATION. At the beginning of 1929 there were 8394 primary schools, with 811,077 pupils; 3817 infant schools, with 247,815 pupils; and 1780 adult elementary schools, with 51,717 pupils. For higher education there were 24 royal atheneums, with 7705 pupils; 11 special atheneums, with 641 pupils; four communal and provincial colleges, with 1853 pupils; and 11 private colleges, with 1500 pupils. Also 137 state schools, with 26,380 pupils; 15 communal and provincial schools, with 4591 pupils; and eight private schools, with 1146 pupils. The enrollment of the four universities for 1928-29 was: Brussels, 2051; Ghent, 1655; Liège, 2458; and Louvain, 3755. There is also a Colonial University at Antwerp.

PRODUCTION. Agriculture, mining, and manufacturing are equally important factors in the national economy, enabling Belgium to support one of the densest populations of Europe. Of the total area of 7,519,668 acres, 4,534,920 acres were under cultivation in 1928 and forests covered 18 per cent of the land surface. Cereal production in 1929, in quintals (1 quintal equals 220.4 pounds), with comparative figures for 1928 in parentheses, was: Wheat, 4,353,000 (4,895,150); rye, 5,046,

000 (5,881,459); barley, 1,348,000 (950,074); oats, 7,079,000 (7,043,373). The area and production of the principal crops in 1928 were: Wheat, 430,282 acres, 9,790,300 cwt. (1 cwt. equals 112 pounds); barley, 78,172 acres, 1,900,148 cwt.; oats, 674,770 acres, 14,086,746 cwt.; rye, 579,085 acres, 11,762,918 cwt.; potatoes, 415,847 acres, 3,634,144 metric tons; beets (sugar), 159,595 acres, 1,827,853 metric tons; beets (fodder), 193,447 acres, 4,468,335 metric tons; tobacco, 7842 acres, 140,816 cwt. On Jan. 1, 1929, livestock included 253,314 horses, 1,750,541 cattle, and 1,139,131 swine.

Mineral production in metric tons for 1929, with comparative figures for 1928 in parentheses, was: Coal, 26,931,460 (27,542,780); briquettes, 2,018,500 (1,961,000); coke, 5,991,100 (5,926,600); pig iron, 4,095,940 (3,905,320); steel, 4,011,180 (3,820,910); wrought iron, 163,200 (173,180); wrought steel, 3,556,440 (3,378,490); crude zinc, 201,380 (209,280).

According to the industrial census of 1926, there were 13,082 industrial concerns of more than 10 employees, with a total of 1,080,331 workpeople and 96,567 salaried officials. Artificial silk, motor cars, glass, iron and steel, lace, linen, and gloves are among the principal industries. In 1927 there were 53 sugar factories, 17 refineries, 36 distilleries, 1844 breweries, 15 margarine factories, 56 vinegar factories, and 19 match factories. Unemployment increased during 1930, but not to an alarming extent. On Oct. 31, 1930, the wholly unemployed numbered 23,693, as against 2500 on Apr. 30, 1929, while 61,623 were only partially employed. The diamond-cutting industry of Brussels was hard hit by the American stock exchange slump of October, 1929, and in April, 1930, agreed to reduce the output of cut stones by half.

COMMERCE. An economic union was established between Belgium and Luxembourg in 1922. In 1929, imports into the two countries totaled 35,510,118,000 paper francs, as against 34,140,691,000 francs in 1928, while exports amounted to 32,234,549,000 paper francs, as against 30,954,440,000 francs in 1928. The unfavorable balance of trade increased to 3,275,569,000 francs in 1929 from 3,186,251,000 francs in the previous year (stabilized value of franc was \$0.0278). Of the imports in 1929, raw materials were valued at 18,486,097,000 francs; manufactures at 9,603,899,000 francs; and foodstuffs and beverages at 7,239,089,000 francs. Exports were divided as follows: Manufactures, 18,892,380,000 francs; raw materials, 10,608,508,000 francs; foodstuffs and beverages, 2,526,905,000 francs. The principal sources of Belgian imports, in the order named, were France, Germany, Great Britain, and Holland. Belgian exports went mainly to the same four countries, but in the following order: Great Britain, Germany, France, Holland.

FINANCE. The combined ordinary and extraordinary budget estimates for 1930 decreased, the aggregated revenue being calculated at 10,096,632,000 francs, as compared with 11,510,089,000 francs in 1929, while the expenditures were estimated at 9,755,412,000 francs, as compared with 10,340,695,000 francs in the previous year. Total tax collections for 1929 amounted to 9,835,955,000 francs, an increase of 575,025,000 francs over 1928.

Budget proposals for 1931 estimated total receipts at 11,685,441,000 francs and total expenditures at 12,305,183,000 francs, the anticipated

deficit being 619,742,000 francs. The deficit, to be taken care of by a loan in 1931, was due to the cost of new installations and improvements in the government transport services, posts, telegraph and telephone systems, and road construction.

The public debt on Sept. 30, 1930, totaled 52,977,132,135 francs, of which 25,214,026,286 francs represented the internal debt and 27,762,505,849 francs the external debt. The Finance Commission of the Chamber of Deputies in March, 1930, approved a bill for the advance repayment, beginning in June, of the remaining \$34,500,000 of the 7½ per cent \$50,000,000 loan floated in the United States in 1920.

COMMUNICATIONS. In 1929, the state-owned but privately operated railways reported 2975 miles of main line in operation. There were in addition 189 miles of private railways. Highways aggregated 6422 miles, of which 5424 miles were state roads, and 976 miles provincial roads. The Belgian Air Service (between Brussels, Ostend, and Antwerp), in 1928, carried 33,888 passengers, 1,067,833 kilos of freight, and 92,618 kilos of mail. The Belgian merchant marine on Jan. 1, 1929, consisted of 154 vessels of 318,222 tons, including 139 steamers of 291,184 tons. Vessels entering the port of Antwerp in 1929 numbered 11,477 of 24,285,393 tons and the vessels clearing, 11,516 of 24,261,326 tons. Belgian inland waterways are navigable over 1040 miles and their traffic exceeds 28,000,000 metric tons annually. Work on the new Albert Canal, which will enable boats to move between Liège and Antwerp in 30 hours, instead of the eight days previously required, was commenced on May 31, 1930.

GOVERNMENT. Belgium is a constitutional, representative, and hereditary monarchy. Executive power is in the King, acting through a responsible ministry; legislative power is in the King and two chambers, namely the Senate and House of Representatives. The former is elected partly by the direct and partly by the indirect vote of the people, the number being proportioned to the population of each province. Those elected indirectly are chosen by the provincial councils. Following the election of May 26, 1929, the composition of the Senate was: Catholics, 71; Socialists, 56; Liberals, 23; miscellaneous, 4. The Chamber of Deputies was composed as follows: Catholics, 77; Socialists, 70; Liberals, 28; Frontists (Flemish autonomist party), 11; Communists, 1. The Ministry, as constituted Dec. 4, 1929, included: Prime Minister, Henri Jaspar (Catholic); Foreign Affairs, Paul Hymans (Liberal); Justice, M. Janson (Liberal); Education, Maurice Vauthier (Liberal); Finance, Baron Houtart (Catholic); Agriculture, Home Affairs, and Hygiene, Henri Baels (Catholic); Industry, Labor, and Social Insurance, M. Heyman (Christian Democrat); Railways, Marine, and Aeronautics, M. Lippens (Liberal); National Defense, Comte de Broqueville (Catholic); Colonies, Henri Jaspar (Acting); Posts and Telegraphs, M. Forthomme; Public Works, M. van Caenegem.

HISTORY

The language question, which for some years had estranged the Flemish-speaking regions of Flanders and north Belgium from the French-speaking Walloons in the South, remained the centre of political discussion in 1930. On February

27, after a month's debate, the Chamber of Deputies passed the Government's bill making the University of Ghent, heretofore bilingual, an entirely Flemish institution. Other sections of the bill, subsequently enacted, provided for unilingual regiments in the army, the administration of Flemish and Walloon territories in the language of the respective majorities, and that high government officials should be bilingual. These measures did not dispose of the language question, however. Violent debates in Parliament centred upon the rights of minorities in primary and secondary schools, and Flemish deputies on several occasions threw the Chamber into an uproar by bitter attacks upon France and French-speaking Belgians. Riots ensued at war anniversary ceremonies in Dixmude and Ostend August 24 when pamphlets were distributed from an airplane accusing Flemish ex-service men of cowardice.

The language question was the basis of a Cabinet crisis on Nov. 11, 1930. The five Liberal members of the Liberal-Catholic Coalition Government resigned when the Brussels Liberal Federation adopted a resolution opposing the action of Maurice Vauthier, Liberal Minister of Education, in forbidding professors in Ghent University to teach in other Belgian colleges. Premier Jaspar then offered the resignation of the entire Cabinet to King Albert, but the latter on November 14 induced him to remain in power.

The trial in Brussels in September of Fernando de Rosa, young Italian anti-Fascist who attempted to assassinate Crown Prince Humbert of Italy in the Belgian capital Oct. 24, 1929, attracted wide attention in Europe. He was convicted and sentenced to five years' imprisonment, much to the disappointment of the Italian press, which considered the sentence too lenient. The defense introduced former Premier Nitti of Italy and other well-known anti-Fascists as witnesses in an effort to prove that Fascism had crushed out liberty in Italy and that de Rosa's action was inspired by this alleged repression. The Belgian Senator Louis de Brouckere, president of the Aviation Commission of the League of Nations, testified that his personal investigations, during an official mission, had convinced him that Italy was preparing for war on both sides of the Albanian border, as well as along the French frontier. See *ITALY and FRANCE*, under *History*.

Other political developments of the year included the almost unanimous ratification of the Young Plan by the Senate on April 8, and the adoption of a bill by the Senate in April ending an 11-year controversy with the Chamber as to the manner of selecting jury members. It was provided that they should be chosen first from a list of voters who could read and write and secondly from a list of citizens having university degrees. Extensive tax reductions, retroactive as of January, 1930, were voted by the Chamber.

An important development of the year was the resumption by the Socialist and Flemish parties, under the leadership of Emil Vandervelde, former Minister of Foreign Affairs, of the campaign for the abolition of the military agreement concluded with France in 1920. The agreement provided for the collaboration of the French and Belgian general staffs in time of peace in organizing a common defense against a possible German attack. M. Vandervelde took the position that the European situation which justified the alliance in

1920 had been altered in important respects by the Locarno agreement of 1925. A thick fog which settled in the valley of the Meuse, above Liège, during December 4, 5, and 6 was accompanied by the mysterious deaths of some 70 villagers and of large numbers of cattle. The nature of the phenomenon remained obscure, although various conflicting explanations were advanced. The majority of those affected were of advanced age.

The treatment of colored laborers in the Congo was denounced by the Socialist leader, Emile Vandervelde, before the Chamber on March 25. Assurance was given by Premier Jaspas that an inquiry was under way and that the conditions were being improved. Salary raises for all state officials, in accordance with the increased cost of living, were approved by the Cabinet Council in January. National patriotism was aroused during the year by the celebration of the centenary of the creation of the kingdom in 1830. The King and Queen inaugurated the celebration on April 26 by opening the Maritime, Colonial, and Art Exhibition at Antwerp. (See EXPOSITIONS.) In protest against old age pension rates and the demands of foreign workers in Belgian collieries, 25,000 coal miners went on strike July 4. Protests of the powerful Farmers' Union against large imports of Russian cereals, wines, glue, hides, and pelts, were met by a decree issued October 25 which made it necessary to obtain a license for the importation or transit of these commodities. For a discussion of the language dispute, see Louis Pierard, "Belgium's Language Question: French vs. Flemish," in *Foreign Affairs* for July, 1930. See CONGO, BELGIAN; CELEBRATIONS; and PHILOLOGY, MODERN.

BELIZE. See BRITISH HONDURAS.

BEMIS, EDWARD WEBSTER. An American economist and student of public utilities. Died in Springfield, Mo., Sept. 25, 1930. He was born in Springfield, Mass., Apr. 7, 1860, and was graduated from Amherst College in 1880, later receiving the A.M. degree from that institution in 1884 and the Ph.D. degree from Johns Hopkins University in 1885. He was professor of history and political economy at Vanderbilt University (1889-92), associate professor of political economy at the University of Chicago (1892-95), assistant statistician of the Illinois Bureau of Labor Statistics (1896), and professor of economics and history at the Kansas State Agricultural College (1897-99). In 1899 he turned from theoretical to practical economics, becoming director of the department of municipal monopolies in the Bureau of Economic Research in New York City, and in 1901 superintendent of water works in Cleveland, Ohio, holding the latter position until 1909. In 1910 he was appointed deputy commissioner of water supply, gas, and electricity in New York City, and at the time of his death was a consultant for cities, States, and other public bodies in appraisals and suits relative to the adjustment of rates for water, gas, and electricity. He was also a member of the advisory board of the valuation bureau of the Interstate Commerce Commission from 1913 to 1923. His works include: *Municipal Ownership of Gas Works in the United States* (1891) and *Municipal Monopolies* (1899).

BENSON, LOUIS FITZGERALD. An American hymnologist, died Oct. 10, 1930, in Philadelphia where he was born July 22, 1855. On being graduated from the University of Pennsylvania in 1877, he studied law and was admitted to the

bar, practicing until 1884 when he decided to enter the ministry. He was graduated from the Princeton Theological Seminary in 1887, and after ordination served as pastor of the Church of the Redeemer (Presbyterian) in Germantown, Pa., from 1888 to 1894. He then resigned to devote himself to the subject of hymnology and to editing the *Journal of the Presbyterian Historical Society* from 1903 to 1911. He was a special lecturer in liturgics at the Auburn Theological Seminary in 1902 and a lecturer on the Stone Foundation at the Princeton Theological Seminary in 1907, 1910, and 1926. The D.D. degree was conferred on him by the University of Pennsylvania in 1896. Besides his contributions to reviews and to dictionaries of hymnology, he was the author of *Hymns and Verses* (1897); *The Best Church Hymns* (1898); *Best Hymns—A Handbook* (1899); *Studies of Familiar Hymns* (1903); *The English Hymn—Its Development and Use in Worship* (1915); *Hymns Original and Translated* (1925); and *The Hymnody of the Christian Church* (1927). He also edited *The Hymnal*, published by authority of the General Assembly of the Presbyterian Church (1895); *The Hymnal for Congregational Churches* (1896); *The Chapel Hymnal* (1898); *The School Hymnal* (1899); *The Book of Common Worship of the Presbyterian Church* (with Henry van Dyke, 1906); *The Hymnal Revised* (1911); *A Book of Family Worship* (1916); *A Book of Worship for Soldiers and Sailors* (1917); *Christian Song* (1926); and *The Smaller Hymnal* (1928).

BEREA COLLEGE. A nonsectarian, co-educational institution in Berea, Ky.; founded in 1855 and designed to serve the educational needs of the mountain people of the Southern Appalachian region. The enrollment for the autumn of 1930 was 1774, distributed as follows: College, 467; normal, 185; academy, 473; foundation junior high school, 515; and training school, 125. The enrollment in the summer session of 1930 was 483, of whom 224 were in the college, 163 in the normal school, and 96 in the academy. The faculty numbered 106. The endowment amounted to \$9,218,661, and the income for the year ending June 14, 1930, was \$518,206. The library contained 57,907 volumes. President, William J. Hutchins, D.D., LL.D.

BERMUDA. A British colony in the Atlantic Ocean about 580 miles east of Cape Hatteras, North Carolina, consisting of a group of 360 small islands. About 20 of the islands are inhabited. Because of its picturesqueness and proximity to New York (677 miles), it is a favorite winter resort for American tourists, who number some 30,000 annually. Area, 19.3 square miles; population, according to the census of 1921, 20,127 (7006 white); estimated in 1928, 30,884 (15,556 white). The chief town, Hamilton (population 3000) is an important naval base.

Education is compulsory between the ages of 7 and 13. In 1928, 32 primary schools, with 3550 pupils, and 4 secondary schools, received government aid amounting to £11,109. Potatoes, onions, lily bulbs, and vegetables are the chief products and provisions, clothing, cotton goods, electrical goods, hardware, fuel oil, and woolen goods the leading imported articles. In 1928 imports were valued at £1,587,470 (excluding government stores) and exports at £177,015. Imports from the United States in 1929 were valued at \$4,000,000 and exports to that country at \$773,-

000. Revenues (1928) totaled £336,870; expenditures, £303,642; the public debt, £70,000. In 1927, 3,041,350 tons of shipping entered and cleared the ports. The administration is under a governor, assisted by an executive council of seven members and a legislative council of nine members, both appointed by the Crown, and an elected assembly of 36 members. Governor in 1930, Lieut. General Sir Louis Jean Bols.

BERNHARDI, bērn-hār'dā, GEN. FRIEDRICH VON. A German soldier and author, died in Berlin, July 10, 1930. Born in St. Petersburg, Nov. 22, 1849, he served in the Franco-German War, and from 1891 to 1894 was stationed in Berne, Switzerland, as military attaché. Later he went to Berlin as head of the history department of the Grand General Staff. He was general of cavalry and commander of the 7th Army Corps from 1907 to 1909, retiring in the latter year to write on military subjects. As spokesman of the Prussian militarists, he attracted international attention in 1912 by his book, *Germany and the Next War*, which advocated the highest degree of preparedness. At the outbreak of the World War he again received command of an army corps and served with distinction on the eastern front. In 1918 he was transferred to the western front and took part in the battle of Armentières. Translations of his works into English include: *Cavalry and Future War* (1910); *On War of To-day* (1914); *Britain as Germany's Vassal* (1914); *Germany and England* (1915); *The War of the Future in the Light of the Lessons of the World War* (1920); and *Germany's Heroic Struggle, 1914-18* (1922).

BERRIES. See HORTICULTURE.

BERYLLIUM. See CHEMISTRY, INDUSTRIAL.

BESSARABIA. A former province of the Russian Empire, joined on Apr. 11, 1918, to Rumania, whose title was confirmed by the Peace Treaties of 1919, but has never been conceded by the Soviet government of Russia. Area, 17,146 square miles; population, 2,344,800. See RUMANIA.

BETTELHEIM, bētt'l-hīm, ANTON. An Austrian author, died Mar. 29, 1930. Born Nov. 18, 1851, he was educated in Vienna and in Munich. He devoted himself almost exclusively to biographical writing, editing the collection *Führende Geister*, to which he contributed the notable biography of *Anzengruber* (1891). He also edited the *Allgemeine Deutsche Biographie* from 1907 to 1909. His principal works are: *Baumarchais* (1886); *Deutsche Geisteshelden* (1895); *Louise von François und Conrad F. Meyer* (1905); *Berthold Auerbach* (1907); *Prince Hohenlohe* (1910); and *Karl Schönherr und das österreichische Volksstück* (1926).

BHOPAL, H. H. NAWAB SULTAN JAHAN BEGUM, BEGUM OF. A former ruler of Bhopal, a state in the Central India Agency, died May 12, 1930. She was born July 9, 1858, and was married to Ahmed Ali Khan in 1874. As eighth in the dynasty founded by Dost Mohammed Khan in 1723, she succeeded her mother, H. H. Nawab Shah Jahan Begum, in 1901. In 1926 she abdicated in favor of her only surviving son, H. H. Haji Nawab Hamidulla Khan. The 25 years of her rule were characterized by progress in Bhopal. An enlightened ruler, Sultan Jahan Begum instituted reforms in government, made improvements in education, and advanced the position of women in the state.

BIBLE SOCIETY, AMERICAN. Organized in 1816, this society has steadily carried forward its specific purpose of "circulating the Holy Scrip-

tures without note or comment." This service is rendered without discrimination as to class, color, or creed. Bibles, Testaments, and Portions are sold without purpose of profit, and below cost or donated free when circumstances justify. The work in the United States is carried on through 10 home agencies and some 100 auxiliary, State and local Bible societies. Twelve additional agencies cover all Latin America and countries in the Near East and the Far East, correspondents helping the work in other countries, especially in Europe and Africa. During 1929 the society issued 11,102,664 volumes in 179 languages. Engaged in this work were 330 colporteurs, 1713 correspondents, and 2594 volunteers. The number of volumes issued in the United States by 1418 persons was 4,062,908, and in foreign lands by 3083 persons was 7,039,756. During the 114 years of its existence the society has issued 216,198,915 volumes of Scriptures and participated in the translation, publication, and distribution of the Scriptures in more than 300 languages, dialects, and versions.

The Scriptures in the languages of the Hopi Indians and of the Kuskokwim Eskimos were published for the first time and translations of the New Testament in Cakchiquel and the Gospel of John in Valiente in Central America were completed. In South America, the Psalms were translated into Bolivian Quechua; the Gospel of Mark was published in Aymara; the modern version of the Spanish Bible was reissued with corrections; and the increasing Japanese population in Brazil led to the issuing of a Japanese-Portuguese edition of the Scriptures. For use in Africa the revised edition of the four Gospels and the Acts in Benga and the New Testament in Tswa were issued; and new translations were published of the New Testament in Luragoli, the Gospel of Matthew in Shilluk, and First Corinthians through Jude (with the exception of Hebrews) in Olunyo. In the Near East progress was made in correcting the Turkish version, substituting Roman for Arabic characters to conform with the new Turkish law. In the Far East an improved translation of the Scriptures in Siamese was under way as well as translations in the Ilocano, Tagalog, and Samareno languages of the Philippines.

The income of the society for 1929 from all sources totaled \$1,055,413, while the expenditures totaled \$1,051,584. The officers were: E. Francis Hyde, president; the Rev. Eric M. North, Ph.D., and the Rev. George William Brown, M.A., general secretaries; the Rev. Lewis B. Chamberlain, D.D., recording secretary; Gilbert Darlington, treasurer; and Charles W. Fowle, assistant secretary.

BILLIARDS. Titles to the world's pocket billiard championship and the 18.1 balkline crown both changed hands in 1930. Erwin Rudolph of Chicago dethroned Ralph Greenleaf at the 11-day pocket-billiard tournament in New York in December, overcoming a 45-ball lead in the final night of the contest. Willie Hoppe, the 18.1 balkline champion, went down to defeat before Welker Cochran, who during the course of play established a high-run record of 106. Cochran's grand average was 33 69-107. There was no competition for the 18.2 balkline championship, won by Jake Schaefer of San Francisco in Jan-

uary, 1929. Johnny Layton, of Sedalia, Mo., retained his three-cushion professional championship. His closest rival among a field of eight was Otto Reisel, of Philadelphia. The national amateur Class A 18.2 balkline title was regained by Edgar T. Appleby, of New York, while Joseph R. Johann, a former champion, regained the Class B amateur 18.2 title. Other new amateur titleholders of the year were: J. Howard Shoemaker, of New York, national pocket billiard title; Nelson B. Mayo, Class C pocket billiard title; James Henry, national 14.2 balkline title; Frank L. Grey, national straight rail championship; and Robert B. Harper, of Denver, national three-cushion title.

BIRKENHEAD, FREDERICK EDWIN SMITH, FIRST EARL OF. A British barrister and statesman, died in London, Sept 30, 1930. He was born in Birkenhead, Cheshire, England, July 12, 1872, and was educated at Wadham College, Oxford, being elected a Vinerian law scholar in 1895. He was fellow and lecturer of Merton College, Oxford, in 1896; lecturer of Oriel College in 1897; and extension lecturer in modern history for Oxford University in 1898 and for Victoria University in 1900. In the latter year he was called to the bar at Gray's Inn, and his success as a barrister soon was recognized by his appointment in 1908 as King's Counsel and Bencher of Gray's Inn. He entered politics in 1906, being elected Unionist member of the House of Commons for the Walton division of Liverpool and holding this seat until 1919 when he was raised to the lord chancellorship. In Parliament he distinguished himself by his brilliancy as an orator and by his wide knowledge of public questions, coming to be considered one of the leaders of the Conservative as well as the Unionist party. At the outbreak of the World War he served in France with the Indian corps, but was recalled in 1915 to become Solicitor General and then Attorney General in Asquith's coalition cabinet. He also was knighted in that year. In 1917, on America's entry into the War, he was head of a special mission to the United States. On his appointment as Lord High Chancellor in 1919 he was created a baron and entered the House of Lords where he served until the fall of the coalition government in 1922. His outstanding achievement as Lord High Chancellor was the codification of the laws relating to property. On surrendering that office he was created First Earl of Birkenhead. In 1924 he reentered the government as Secretary of State for India, filling this post until 1928 when he resigned to become a director of Imperial Chemical Industries, Ltd., and other commercial concerns. The D. C. L. degree was conferred on him by Oxford University in 1922, and in the same year he was elected Lord Rector of Glasgow University and High Steward of Oxford University. In 1926 he became Rector of Aberdeen University, and in 1928 was made a Knight Commander of the Star of India. His works include: *Newfoundland*

(1906); *Toryism until 1832* (1907); *The Licensing Bill* (1908); *International Law in the Far East* (2d ed., 1908); *International Law* (4th ed., 1911); *Speeches, 1906-09* (2d ed., 1912); *The Destruction of Merchant Ships* (1917); *My American Visit* (1918); *The Indian Corps in France* (1919); *Points of View* (1922); *Contemporary Personalities* (1924); *America Revisited* (1924); *Fourteen English Judges* (1926); *Famous Trials of History* (1926); *Law, Life and Letters* (1927); *More Famous Trials* (1928); *The Speeches of Lord Birkenhead* (1929); and *Last Essays* (1930) published posthumously.

BIRMINGHAM-SOUTHERN COLLEGE. A coeducational institution for higher learning in Birmingham, Ala.; founded in 1856. The enrollment for the autumn of 1930 was 874, and for the summer session 803. There were 67 faculty members. The endowment amounted to \$780,000, and the income for the year was \$312,500. There were 25,000 volumes in the library. During the year a new woman's building costing approximately \$100,000 was under construction. President, Guy Everett Snively, Ph.D., LL.D.

BLISS, GEN. TASKER HOWARD, U. S. A., RET. An American soldier, died in Washington, D. C., Nov. 9, 1930. He was born in Lewisburg, Pa., Dec. 31, 1853. On graduation from the U. S. Military Academy in 1875, he was commissioned a second lieutenant in the 1st Artillery. In 1884 he was recorder of the board appointed by President Arthur to report on the military value of the interior waterways of the United States, and from 1885 to 1888 was professor of military science at the Naval War College. He later saw special duty with the Secretary of War (1895-97) and spent two years as military attaché at the American Legation in Madrid (1897-98). In the Spanish-American War, he served during the Porto Rican campaign, and at its close was made collector of customs at the Port of Havana and chief of the Cuban Customs Service. In 1902 General Bliss was appointed special envoy to Cuba to negotiate the treaty of reciprocity between Cuba and the United States. He was commandant of the Army War College in 1903, and from 1903 to 1905 was a member of the Joint Army and Navy Board and of the General Staff of the United States Army. Until 1909 he commanded the departments of Luzon and Mindanao in the Philippines, and on his return to the United States was elected president of the Army War College. In the early part of 1911 he commanded the provisional brigade on the southern California border during the Mexican insurrection, after which he was for a short time commander of the Western division. He was placed in command of the department of the East in 1911 and of the Southern department and the cavalry division in 1913. In 1915 he became assistant chief and on Oct. 6, 1917, chief of staff of the United States Army, with the rank of general. Although he reached the legal age of retirement on December 31 of that year he remained on active duty by order of President Wilson and was appointed to membership in the Allied Conference (1917) and on the Supreme War Council in France where his genius for organization and

administration was demonstrated. He was also a member of the American Commission to Negotiate Peace in Paris during 1918-19. He was appointed a brevet general by Act of Congress in 1918, and in 1920 was detailed by the President as governor of the United States Soldiers' Home, which office he held until 1927. The LL.D. degree was conferred on him by Bucknell University in 1916, Western Reserve University in 1923, and Harvard University in 1927. He was also a recipient of the Distinguished Service Medal.

BLISTER RUST. See FORESTRY.

BOHEMIA. A constituent member of the State of Czechoslovakia since the defeat of the Central Powers in 1918; formerly a crownland of Austria; situated in the northwestern part of the former Austro-Hungarian Empire, with Saxony and Silesia on the north, Moravia on the east, and Lower and Upper Austria on the south. Area, including the small Austrian and German territories which were added by the peace treaty to Czechoslovakia, 20,102 square miles; population, Feb. 15, 1921, 6,670,582; estimated population, Jan. 1, 1929, 6,976,909. Bohemia is represented in the Czechoslovak Legislature by nine Deputies and five Senators. See CZECHOSLOVAKIA.

BOILERS. According to statistics issued by the U. S. Department of Commerce the number and rating of boilers built in the United States during the twelve months of 1930, as compared with a like period for 1929, were as follows:

| | <i>Number</i> | <i>Sq. ft. heating surface</i> |
|-----------------------|---------------|--------------------------------|
| Jan.-Dec., 1929 | 18,526 | 19,468,534 |
| Jan.-Dec., 1930 | 13,166 | 13,470,390 |

The shrinkage in the number of boilers and their combined rating was due not appreciably to a decline in power capacity but rather to the fact that more boilers were being operated at higher outputs than formerly and also because practice in the distribution of heat absorbing surface in the steam generating unit was allocating more to air preheaters, water walls and economizers and less to the boiler proper.

The trend was still toward fewer and larger units, which, instead of being the exception, had become quite general. In 1929 the record for capacity of a single boiler unit was a million and a quarter pounds of steam per hour. While this record held through 1930, designs were under way for units of a million and a half pounds of steam per hour. A compelling reason for these large boilers was the urge to reduce unit investment costs and get a greater amount of capacity concentrated in a given space. This was especially important in localities where land values are high. At the Kips Bay heating plant in New York City, the latest boiler had double the capacity in the same floor area as was occupied by boilers installed in 1926.

Coincident with these increased capacities come larger stokers and pulverizers. While the largest boilers were fired with pulverized coal there were under construction boilers of 530,000 pounds of steam per hour, each of which was to be fired by a single under-fed stoker 69 tuyeres long. The largest pulverizing mills in use had a capacity of 40 tons of coal per hour.

According to the U. S. Department of Commerce the sales of stokers and pulverizers during 1930 were approximately in the ratio of 3 to 2, based on boiler capacity served. While indicating

that the stoker was holding its own in the competition with pulverized coal, many of these stokers were for heating boilers. The smoke-abatement agitation in many cities has had a favorable influence on stoker installations in place of hand firing in smaller plants. To the end of 1930 the installation of pulverized coal equipment in central stations served approximately 600,000 boiler horse power and in industrial power plants 500,000 boiler horse power. This represented a three-fold increase in pulverized coal firing in five years.

Because of the extensive construction of natural gas pipe lines over various sections of the country many power plant boilers were being fitted to operate on gas. Also many were operating on a combination of solid, liquid, gaseous, and waste fuels.

An experimental boiler designed to operate at 3200 pounds pressure recently was built for Purdue University. This was the first boiler for this pressure to be installed in the United States although some were in operation in other countries. In Europe high-pressure boilers were of relatively small capacity and of special design, whereas in the United States high-pressure boilers (1200 to 1400 pounds) were of large capacity and followed the same general designs as those for low and medium pressures with increased drum, header, and tube thickness.

In central station practice 1200 to 1400 pounds pressure continued as the limit in the United States and the number of such installations was on the increase. Besides the stations already operating at this pressure, high-pressure boilers were under construction for five more such plants. In the industrial power plant field one plant at the end of the year was about to go into service at 1800 pounds, two were installing 1200-pound boilers, several were operating at 600 to 800 pounds, and 400 pounds was becoming general for the newer and larger plants, especially in the process industries.

The advent of high pressures and large capacities necessitated increased attention to boiler feed water. Many had found it desirable to pre-treat water fed to evaporators with zeolites or the lime-soda process, and phosphate treatment was widely used.

While pressures increased, the upper limit in steam temperatures in the United States remained at around 750 degrees F. In 1930, however, several stations were laid down to operate at 825 to 850 degrees. This was in consequence of metallurgical advance resulting from research in the creep of metals at such temperatures. It led to the production of alloy steels for piping, valves, and fittings that would stand up under such service. The 1000-degree experimental installation of the Detroit Edison Company was not in operation at the end of the year.

One of the most important contributions to boiler practice during 1930 was the advance in welded construction. The U. S. Navy Department approved the use of fusion welding for 32 boilers that were to go in new scout cruisers, and for stationary practice several boiler manufacturers had developed effective welded production techniques in anticipation of a revision of the American Society of Mechanical Engineers Boiler Code to sanction the welding of fired pressure vessels. In fact, a tentative revision of the code along these lines had been prepared and circulated for comment among members of the society.

Water walls had become accepted practice for large boilers in central stations and their use was increasing in industrial plants. This applies to both stoker and pulverized-coal-fired boilers. For pulverized coal installation the slag bottom furnace was becoming popular. In this type of furnace the ash is maintained in a molten state in the furnace well and is tapped off and sluiced away periodically. Forty-six such furnaces were in service and 23 more were under construction.

Among the special types of boilers the mercury boiler holds interest. The latest installation of a 1000-kilowatt boiler and turbine unit at the Hartford Electric Light Company had been in regular service since February, 1930, and had operated at an average net heat consumption of 10,300 B.t.m. per kilowatt-hour. The General Electric Company had commenced plans for a 20,000-kilowatt installation in its own power plant at Schenectady, N. Y.

Many large steam boilers were operating regularly at efficiencies of 84 to 87 per cent and higher efficiencies were reported for short periods and on tests.

Aside from fuel-fired boilers, the electric boiler found wide application among many large paper mills in Canada. These mills are usually located at large water power sites or take hydro power from nearby streams. Surplus or low cost hydro power is employed in the electric boilers to generate steam for process in the manufacture of paper. Under these conditions the steam is generated at less cost than if it had to be produced from coal. As the demand for electricity for industrial power increases in these sections this surplus power will undoubtedly command a higher price and it will then be more economical in some cases to produce the required steam in fuel-fired boilers. See POWER PLANTS.

BOK, bok, EDWARD WILLIAM. An American editor, author, and philanthropist, died at Lake Wales, Fla., Jan. 9, 1930. He was born Oct. 9, 1863, in Helder, the Netherlands, and with his parents, forced by financial reverses to emigrate, went to the United States at the age of six. He attended the public schools at Brooklyn, N. Y., and after working as a reporter for the Brooklyn *Eagle*, at the age of 19, he became editor of the Brooklyn *Magazine*. Selling the magazine, he entered the advertising department of Charles Scribner's Sons of New York City. Meanwhile, he was manager for the Bok Syndicate Press (1886-91). This press sold the sermons of Henry Ward Beecher and Mr. Bok in 1887 edited the *Beecher Memorial*. In 1889 he became editor-in-chief of *The Ladies' Home Journal*, published in Philadelphia, and soon was able to make this magazine one of the most widely read periodicals in the United States. In 1919 he retired from its editorship to devote his entire time to civic welfare. He wrote his autobiography, *The Americanization of Edward Bok* (1920); *Two Persons* (1922); *A Man from Maine* (1923); *Twice Thirty* (1924); *Dollars Only* (1926); *Perhaps I Am* (1928). He had previously written *Successward* (1895), *Keys to Success* (1900), and *Why I Believe in Poverty* (1915). In 1923 he offered the American Peace Award, a prize of \$100,000 for the best practicable plan by which the United States could cooperate with other nations to achieve and to preserve world peace. He also established in 1923 the Harvard Advertising Awards, eight money prizes and a gold medal for the best examples of layout, typography, and

general excellence in American advertising. He made generous gifts to the Philadelphia Orchestra and gave several civic prizes in that city. In 1928 he dedicated to the United States his bird sanctuary, the Singing Tower near Lake Wales in Florida. He was buried in a crypt at the base of this tower.

BOKHARA, bô-kâ'râ. The name applied to a former central Asian state, and also to its capital city. The Bokharan People's Socialist Republic established in August, 1920, was incorporated in the newly formed Uzbek Soviet Socialist Republic, Dec. 5, 1924. See SOVIET CENTRAL ASIA under *Uzbekistan*.

BOLITHO (RYALL), WILLIAM. A British journalist, died in Avignon, France, June 2, 1930. He was born in Cape Town, South Africa, in 1891 and attended Oxford University. He served with the British army in France during the World War and was the only person to escape when buried alive with 15 others in a trench cave-in on the Somme in 1916. At the close of the war he joined the staff of the *Manchester Guardian*, and in 1923 became special European correspondent for the New York *World*. He visited the United States during 1928-29 and contributed a tri-weekly column to the *World* in which he brilliantly interpreted events of the day. His books include: *Italy under Mussolini*; *Leviathan*; *Cancer of Empire*; *Murder for Profit*; *Twelve against the Gods*; and *Camera Obscura* (posthumous). A play, *Overture*, was produced posthumously in New York in December, 1930.

BOLÍVAR CENTENARY. The centenary of the death of Simon Bolívar, Venezuelan patriot, soldier, and statesman, who liberated from Spanish rule of the territories now known as Venezuela, Colombia, Ecuador, Panama, Peru, and Bolivia, was observed on Dec. 17, 1930. Special ceremonies were held in the capitals of the six republics, in most of the other Latin American countries, and in various cities of North America and Europe. In Washington, exercises were held under the auspices of the Pan-American Union and addresses on Bolívar were delivered before the Senate by Senator Hiram Bingham of Connecticut and before the House of Representatives by Representative Temple of Pennsylvania. In London, the diplomatic corps attended a solemn requiem high mass at Westminster Cathedral and a tablet was unveiled by Foreign Secretary Henderson at Apsley House where Bolívar was received by the Duke of Wellington in July, 1810. Similar ceremonies were held in Paris, Rome, Genoa, Naples, Brussels, and Hamburg. The *Bulletin of the Pan American Union* for December, 1930, was a special number in commemoration of the Bolívar centenary. See SPANISH AMERICAN LITERATURE under *Venezuela*.

BOLIVIA. A republic in central South America, bounded by Brazil and Paraguay on the east, by Argentina on the south, by Chile and Peru on the west, and by Brazil on the north. Sucre is the seat of the supreme court and is historically regarded as the capital, but the actual seat of the Government and the largest city is La Paz.

AREA AND POPULATION. The area is 514,155 square miles; the population was estimated in 1928 at 2,861,212, including about 1,624,111 Indians, 496,042 whites, and 558,152 of mixed race. The census of 1910 showed a population of 1,766,451. The chief cities, with their populations in 1928 (estimated), were: La Paz, 142,549; Cocha-

bamba, 35,574; Potosi, 34,083; Sucre, 33,983; and Oruro, 40,000.

EDUCATION. Elementary education is free and nominally compulsory. In 1927 there were 70,228 pupils in public elementary schools, 15,019 pupils in private schools of various grades, and 5082 students in secondary and superior schools. The eight institutions offering university instruction had 107 teachers and 802 students. At Sucre and La Paz are the only two universities which possess more than one faculty.

PRODUCTION. Tin mining is the all-important factor in Bolivia's national economy, the metal constituting nearly 90 per cent of the value of the annual exports. The downward trend in tin prices commencing toward the end of 1927 was reflected in an increasingly severe business depression. The average price per ton fell from \$1555 in 1927 to \$1103 in 1928, \$986 in 1929, and a low point of \$534 in 1930. Bolivia's output of tin rose from 31,610 long tons in 1924 to 43,932 in 1929, an increase of 23.3 per cent, while world production rose from 140,783 tons to 190,163 tons. The cost of production in Bolivia was estimated at over \$632 a ton, as compared with less than \$486 in the Federated Malay States, the principal producer (see **TIN**). Other minerals produced are copper, silver, lead, zinc, bismuth, wolfram, gold, and borate of lime. Next to China, Bolivia is the world's chief source of antimony. Important petroleum resources are indicated and the Standard Oil Company in 1929 had 16 wells in production at Chaco Oriental. There is virtually no coal, and of the water-power resources, estimated at 2,500,000 horse power, only 13,500 horse power were developed in 1926.

Agriculture is primitive and relatively unimportant, although about 4,940,000 acres were under cultivation in 1930. The principal crops are potatoes, coffee, cacao, barley, highland rice, and rubber. Livestock in the country in 1929 was estimated at 1,854,915 cattle, 5,552,5074 sheep, 747,581 goats, 1,882,000 llamas and alpacas, and 375,738 equines. Forest resources are abundant, rubber being the chief product. American investments in Bolivia, largely in mining and public utilities, increased from \$10,000,000 in 1913 to \$133,000,000 in 1929 and British capital, from \$2,000,000 in 1913 to \$13,000,000 in 1929. The business situation in 1929 and 1930 was distinctly unfavorable, increased mineral production being more than offset by price reductions. The imposition of heavier taxes met with general opposition, particularly from merchants, whose profits had been small for some time.

COMMERCE. In 1929, imports totaled approximately \$25,706,000, as compared with \$23,187,000 in 1928, and exports amounted to about \$45,000,000, as against \$41,786,000 in 1928. Total mineral exports in 1929 amounted to 24,524,000 pounds, valued at 123,407,744 bolivianos (about \$43,809,749), of which tin was valued at 102,590,522 bolivianos (about \$36,419,635). In 1928, tin exports were valued at 89,710,121 bolivianos. The value in bolivianos of other mineral exports in 1929, with comparative figures for 1928 in parentheses, was: Copper, 5,336,927 (5,205,697); lead, 3,644,392 (2,820,483); silver, 7,076,679 (8,755,721); and antimony, 1,445,224 (1,375,891).

FINANCE. According to the national bureau of financial statistics, the ordinary budget for 1930 balanced at 47,580,108 bolivianos (1 boliviano exchanged at \$0.3555 in 1929), as compared with

estimated receipts of 46,983,073 bolivianos and estimated expenditures of 46,927,457 bolivianos in the 1929 budget. The chief items of expenditure in the 1930 budget were the service of the public debt, for which 18,769,728 bolivianos were appropriated, and the Ministry of War, which received an appropriation of 8,702,540 bolivianos. The first report of the National Economic Council established by the new provisional Government (see below under *History*) estimated (in September) that the budget deficit for 1930 would approximate 25,000,000 bolivianos.

The public debt in October, 1929, totaled \$63,885,128, of which \$61,904,000 represented the external debt, held mainly in the United States. Interest and amortization payments on the external debt were regularly effected during 1929, but the service of the internal debt and Government salaries fell in arrears. Out of a normal annual income of about \$16,000,000, the country had to pay approximately \$6,000,000 for amortization of and interest on foreign loans. On July 1, 1930, the total debt aggregated 190,419,299 bolivianos (about \$64,435,000). By November, 1930, Bolivian bonds on the New York market had fallen from \$100 to about \$60.

COMMUNICATIONS. There were 1309 miles of railway in operation in Bolivia in 1929 and an additional 225 miles, from Cochabamba to Santa Cruz, were projected. The linking of Bolivian and Argentine railways during the year reduced the traveling time from La Paz to Buenos Aires to 72 hours, from La Paz to Arica to 20 hours, and from La Paz to the Peruvian port of Mollendo to 32 hours. In 1928 there were 1125 miles of main highways and about 6843 miles of cart roads. Commercial air lines connected a number of the leading cities. Fortnightly air service between La Paz and Rio de Janeiro was inaugurated July 30, 1930.

GOVERNMENT. The Constitution of 1880 vests executive power in a President, elected for four years by direct popular vote and ineligible for re-election. Two vice presidents are similarly elected. There is a Congress of two chambers, the Senate of 16 members elected for six years, and the Chamber of Deputies of 78 members, elected for four years. One-third of the Senate and one-half of the Chamber retire every two years. The President selects a Cabinet of six members. President at the beginning of 1930, Dr. Hernando Siles, who assumed office Jan. 1, 1926, for the term ending Aug. 6, 1930.

HISTORY

Two important developments marked the history of Bolivia during 1930—a swift and largely spontaneous revolution which overthrew the régime of President Hernando Siles in June, and the peaceful settlement in May of the quarrel with Paraguay arising from frontier clashes in the disputed Chaco region in 1928.

THE REVOLUTION. The uprising against President Siles, which unquestionably enlisted the sympathies of the bulk of the population, came to a successful climax with the capture of La Paz on June 27. It had its roots in numerous grievances, the most pressing of which were the increasing burden of taxation (see above under *Production*), the suffering caused by the acute economic depression, and the apparent efforts of the President to perpetuate his thinly veiled dictatorship beyond the expiration of his term of office on Aug. 6, 1930. Political mismanagement of the Na-

tional University, dissatisfaction in the army at the régime of General Hans Kundt, German military expert made chief of staff by President Siles, and the resentment aroused among the Spanish elements at the influence exercised by Indians at La Paz were other factors contributing to the national unrest.

For the last two years of his rule, President Siles had exercised a "limited dictatorship." He governed without the aid of Congress and numerous political opponents, including the Vice President, Abdon Saavedra, were sent into exile or imprisoned. The resignation of the Cabinet on Mar. 2, 1930, was one of the signals of the impending storm. A new Cabinet was constituted March 13. On April 9 it was officially announced that the Presidential elections, normally scheduled for June, had been indefinitely postponed in order that a Presidential campaign might not obstruct the Government's efforts to relieve the economic depression. Some 300 army officers signed a manifesto protesting against this violation of the Constitution. On May 16, the Cabinet again resigned and the third Cabinet of the year was formed on the following day.

President Siles himself resigned on May 28, because of "grave reasons of state." He turned over the Government to his Cabinet, which called an election for June 29 to choose members of a constitutional convention, scheduled to meet July 28. This maneuver was generally regarded as paving the way for a change in the Constitution to permit the reelection of President Siles. Vice President Abdon Saavedra, in exile in Buenos Aires, immediately declared the assumption of power by the Cabinet a violation of the Constitution, announced that he would return to Bolivia to assume the Presidential office, and demanded that in the interim the Cabinet vest executive power in the President of the Senate, as provided by the Constitution. His statement aroused only derision among Dr. Siles' supporters in La Paz.

The first open revolt occurred June 16 at Villazon, near the southern border, where Roberto Hinojosa rallied a small force in support of a semi-communistic programme. He was defeated by Government troops June 20. Two days later students and workmen demonstrating in La Paz against the continuance of the dictatorship were fired upon by the police and several were killed. The enraged populace broke into Government armories, armed themselves, and attacked Government troops, but General Kundt quelled the uprising temporarily after street fighting in which 100 or more were killed. The garrisons at Oruru and Cochabamba rose in revolt June 25 under the leadership of Gen. José Blanco Galindo. On June 27 La Paz capitulated, after revolting cadets at the Military Academy there had won over a large part of the local garrison and bombed the loyal police forces with airplanes captured at the Government's aviation field. A military junta, headed by General Blanco Galindo, took over the Government, while President Siles and General Kundt, who had sought refuge in the Brazilian and German legations, respectively, were allowed to leave the country.

The military junta immediately restored order, freed all political prisoners, invited all exiles to return to aid "in the restoration of Bolivia," and enlisted the services of leading Bolivians as civilian advisers. It established freedom of the press, autonomy for the National University, a National Council of Education to supervise public educa-

tion, and an economic council to seek remedies for the economic crisis. Various other reforms were pledged. Early in August, the junta announced that elections for President, Vice President, and Congress would be held Jan. 4-6, 1931, and on August 22 a coalition Presidential ticket representing the three principal political parties was nominated by a committee of 12 designated by the junta. The candidates were: for President, Daniel Salamanca, head of the so-called Genuine Republican party and one of the most influential critics of President Siles; First Vice President, Ismael Montes, former President and head of the Liberal party; Second Vice President, Bautista Saavedra, a leader of the Government Republican party and a former President. Montes and Saavedra had returned from exile earlier in the month. On July 21, the junta expelled from its ranks Col. José Ayoroa, who had been ordered to England to investigate the Siles Government's contracts with the Vickers armament concern, but who left his ship at Antofagasta, Chile, and was reported planning a revolution at Uyuni.

Despite the energetic steps taken by the Provisional Government, the country plunged more deeply into economic depression. There were strikes and riots in the mining districts and on September 9 the junta again proclaimed martial law throughout the country, expressing fear that the general state of unrest might lead to further trouble. On September 10 and again on November 18, the Government reported the discovery of conspiracies against it by the followers of former President Siles.

The coalition ticket adopted in August for the January elections, split apart on November 29, when Ismael Montes resigned his nomination as First Vice President. He charged that there was a conspiracy in the army, supported by politicians, to give greater power to Señor Saavedra, the candidate for Second Vice President. Montes' place on the ticket was taken by José Luis Tejada Sorzano. Later the junta decided to eliminate the office of Second Vice President, which had been established to include all the leading political figures on the ticket. Both the Republican and Liberal parties having nominated Salamanca for President, the campaign developed into a contest between Tejada Sorzano and Bautista Saavedra for the office of Vice President. Electoral registrations, closed on November 20, showed a total of enrolled voters less than half of the figure under the Siles régime. The difference was attributed to previous fraudulent registrations on a large scale.

The National Economic Council, in its report forecasting a deficit of 25,000,000 bolivianos in 1930, recommended an immediate reduction of 30 per cent in all administrative expenditures and the reduction of service on the floating debt. The junta dispatched a financial mission to New York on November 21 to negotiate with American bankers for either a new foreign loan or the funding of existing loans under less onerous conditions. An internal "patriotic" loan of \$2,500,000 was floated in September, of which \$1,800,000 was covered. The proceeds were used to pay salaries of public employees, which had remained unpaid for several months.

CHACO SETTLEMENT. The quarrel between Bolivia and Paraguay arising from armed clashes between frontier patrols in the disputed Chaco region in December, 1928, was peacefully terminated July 23, 1930, with the formal exchange

of Fort Vanguardia and Boqueron. The capture of Fort Vanguardia by Paraguayan forces and the subsequent assault on Fort Boqueron by Bolivian troops led to the severance of diplomatic relations and the serious threat of war. With the transfer of the forts, under the supervision of two Uruguayan military officers, the situation in the Chaco reverted to the same status as before the clashes of December, 1928. The fundamental question of the ownership of the area and Bolivia's demand for an outlet to the sea remained to be settled. See PARAGUAY.

Settlement of the Fort Vanguardia incident was due largely to the mediation of the Uruguayan Minister of Foreign Affairs, Rufino T. Dominguez. A second armed clash between frontier forces of the two countries on Jan. 16, 1930, complicated the negotiations. Paraguay lodged a formal protest against Bolivia with the Secretariat of the League of Nations on January 23. Bolivia, in reply, denied any aggressive action. A Uruguayan mission, which was in Asunción at the time endeavoring to mediate the dispute, was forced to return home unsuccessful. Foreign Minister Dominguez continued his efforts, however, and on April 4 induced both countries to sign a protocol putting into effect the recommendations of the Commission of Neutrals for the restoration of the *status quo* in the Chaco. In accordance with this agreement, diplomatic relations between Bolivia and Paraguay were resumed on May 21.

The improvement in the relations of the two countries was indicated in September, when the Paraguayan Minister of War mistakenly attributed to Bolivians an attack made by Indians on Fort Falcon on the Rio Verde river on August 22. There was no recrudescence of the war fever manifested following the Fort Vanguardia incident and the War Ministry retracted its charge.

BOOTLEGGING. See PROHIBITION.

BOOTS AND SHOES. The U. S. Bureau of the Census, in its report on manufactures in 1929, stated the production of boots and shoes and slippers other than rubber, in the United

The U. S. Department of Commerce stated the production of leather boots and shoes for the year 1930, at 304,169,748 pairs, which may be compared with 361,402,183 pairs in 1929. Massachusetts led with 69,510,470 pairs, followed by New York with 69,041,978; Missouri, 40,424,040; Illinois, 21,392,976; New Hampshire, 20,743,332; Wisconsin, 16,007,089; Maine, 14,616,311; Pennsylvania, 13,211,846; Ohio, 11,280,099; and all other States, 27,941,007.

There was also a considerable decline in the number of pairs of boots and shoes exported to foreign countries but this tendency already had begun in 1926; the 1925 exportation, totaling 6,875,000 pairs, dropped in 1926 to 6,047,000 pairs, and continued to decline since, the 1930 exports totaling 3,684,113 pairs.

Shoe manufacturers in the United States in 1930 shipped 2,073,046 pairs valued at \$3,715,528 to the noncontiguous territories of Alaska, Hawaii, and Porto Rico. In other words, in 1930, 5,757,159 pairs of leather footwear, valued at \$12,006,397, were supplied countries outside Continental United States, as compared with 6,935,756 pairs, valued at \$15,803,764 in 1929. The peak of the trade with the noncontiguous was recorded in 1927 (2,366,000 pairs valued at \$4,544,000). The trade in 1928 and 1929 was slightly more than 2,100,000 pairs, and shows the slight decline to 2,073,046 pairs in 1930.

The tariff of 1930 which came into effect June 18, imposed on leather boots and shoes a duty of 20 per cent ad valorem. As a result, during the first six months of 1930, 3,236,149 pairs of leather boots and shoes valued at \$8,734,583 were imported, and in the last six months only 437,005 pairs, valued at \$1,386,092. During the the last six months of 1929 imports of leather boots and shoes totaled 3,034,532 pairs, valued at \$8,049,021.

Of the leather boots and shoes imported during 1930, 88.5 per cent were for women and misses, 7.2 per cent for men and boys, and 4.3 per cent for children. Czechoslovakia supplied the larger portion of the imported leather boots

States for that year as 363,168,013 pairs valued at \$939,487,444, or including only leather boots and shoes 320,991,861 pairs valued at \$890,866,795. The distribution by kinds and values was as follows: Men's, 97,933,920 pairs, \$312,510,718; youths and boys, 22,596,403 pairs, \$49,091,184; women's, 131,487,446 pairs, \$420,860,686; misses' and children's, 42,981,005 pairs, \$75,333,371; infants, 23,160,144 pairs, \$24,239,195; athletic and sporting, 2,842,943 pairs, \$8,831,641; Canvas and other textile fabrics, 3,625,423 pairs, \$11,632,546.

and shoes, or approximately 70 per cent (2,575,529 pairs). The grand total for 1930 of boots and shoes imported was 3,673,154 pairs, valued at \$10,120,675, distributed as follows: Men's and boys', 265,783 pairs, \$1,325,492; Women's and misses, 3,249,634 pairs, \$8,487,488; Children's 157,737, \$307,695. See LEATHER.

BORNEO. An island in the Malay Archipelago. See BRITISH NORTH BORNEO, BRUNEI, SARAWAK, and DUTCH EAST INDIES.

BOSNIA AND HERZEGOVINA, hër'tsā-gō-vē-na. Formerly provinces in the Turkish

Empire, which were incorporated in the Austro-Hungarian Empire in 1908. In 1918, after the collapse of Austria-Hungary, they became provinces of the newly established state of Yugoslavia. They were obliterated as administrative units by the law of Oct. 3, 1929, which redivided Yugoslavia into nine new provinces. The area was 19,768 square miles and the population, at the census of Jan. 31, 1921, 1,889,929. See JUGOSLAVIA under AREA and POPULATION.

BOSTOCK, HEWITT. A Canadian statesman, died in Monte Creek, B. C., Apr. 28, 1930. He was born in Walton Heath, Epsom, England, May 31, 1864, and was educated at Trinity College, Cambridge University. Although called to the bar by Lincoln's Inn in 1888, he did not practice law. Buying a fruit farm and cattle ranch in British Columbia, Can., he went there to live in 1893. The following year he founded *The Province*, a weekly newspaper in Victoria, which was later moved to Vancouver and published daily. From 1896 to 1900, he was a Liberal member for Yale-Cariboo, B. C., in the Dominion Parliament. He became a member of the Senate from British Columbia in 1904 and Liberal leader in 1914. In 1921-22 he was Minister of Public Works, resigning in 1922 to become speaker of the Senate.

BOSTON, MASSACHUSETTS. See MASSACHUSETTS, and under CELEBRATIONS.

BOSTON MUSEUM OF FINE ARTS. See ART MUSEUMS.

BOSTON UNIVERSITY. A nonsectarian institution of higher education in Boston, Mass.; founded in 1869. The enrollment for the summer and autumn sessions of 1930 was 12,593, distributed as follows: College of liberal arts, 733; college of business administration, 3375; college and extension courses, 700; college of practical arts and letters, 802; college of music, 265; school of theology, 278; school of law, 506; school of medicine, 223; school of education, 3290; school of religious education, 185; and graduate school, 523. The faculty numbered 557. The productive funds of the university exceeded \$4,373,557. Important gifts for the year approximated \$69,805. In the 10 libraries of the university there were 139,814 volumes, the liberal arts library alone containing 49,503 volumes. During the year the Sargent School of Physical Education, assessed at \$82,900, became a part of Boston University. In addition, the Sargent School camp, covering 250 acres at Peterboro, N. H., was purchased by the university. The Institute of Homemaking and Related Vocations was made a part of the School of Education so as to give students who wish to specialize along these lines a cultural background. President, Daniel L. March, A.M., S.T.B., Litt.D., L.H.D., LL.D.

BOTANY. The quinquennial meeting of the International Botanical Congress at Cambridge, England, during the week of August 10 to 23 inclusive, was an event of importance to botanists in all parts of the world. Professor A. C. Seward, of Cambridge University, presided, and the various sections, with their presidents, were as follows: Bacteriology, Prof. R. E. Buchanan, Iowa State College; Phytogeography and Ecology, Prof. H. C. Cowles, University of Chicago; Genetics and Cytology, Prof. O. Rosenborg, Botaniska Institutet, Stockholm; Morphology and Anatomy, Prof. J. C. Schoute, Groningen, Holland; Mycology and Plant Pathology, Prof. L. R. Jones, University of Wisconsin; Plant Physiology, Dr. F. F. Blackman, Cambridge University; Paleobotany,

Dr. D. H. Scott; Taxonomy and Nomenclature, Prof. L. Diels, Berlin-Dahlem.

In his introductory address Professor Seward directed attention to the difficulties experienced by paleobotanists in bridging the gap between the plant forms of the late Paleozoic and those that appear abruptly in the Mesozoic. He believes that the central Asian region, which has enriched our knowledge of the dinosaurs, may possibly supply some of the evidence now lacking in the evolutionary series. Of the many papers presented at the sectional meetings only brief mention can be made. Dr. T. W. Woodhead discussed in detail the results of his studies in the phytogeography of the southern Pennines, in England, to which reference was made in the YEAR BOOK for 1929 (p. 110). He exhibited a series of scale model maps illustrating the various stages of forest development and decline. Dr. J. H. Craigie, of the Dominion Experimental Farms at Winnipeg, Canada, discovered some time ago that the black stem rust of wheat exhibits a sexual phase in its life cycle, and had demonstrated that it follows the Mendelian ratios with respect to the inheritance of certain characters when hybridized. There are many different physiological strains of the rust, attacking varieties of wheat, and in some cases, as Dr. Craigie pointed out, the hybrid strain is more virulent than either parent strain. Professor C. H. Ostenfeld, of the University of Copenhagen, discussed problems of reforestation in Denmark, a country in which the original mixed forests, owing to years of selected cutting, have lost their valuable oak and pine timber, and now consist of almost pure stands of beech. Efforts were being made, Professor Ostenfeld stated, to increase the forest area by plantations of evergreens. Dr. William B. Briery, of Rothamsted, England, in the course of experiments with the grape fungus, *Botrytis cinerea*, found that the offspring of a single spore might exhibit both continuous and discontinuous variations, and that modifications could be produced at will by altering the culture medium.

The Congress gave consideration in its plenary sessions to the various suggestions and amendments offered to the tentative code of nomenclature adopted at the Congress of Vienna in 1905 and at Brussels in 1910. The principle of retaining lists of *nomina conservanda*, to include plant names established by long usage or for other cogent reasons, was accepted. It was decided that in the descriptions of new forms, a brief Latin diagnosis should be required to accompany the full description. An advisory committee was established to interpret the code and to consider further proposals for modification.

PATHOLOGY. Prolonged periods of drought and excessively high temperatures in many parts of North America during the summer of 1930 resulted in many losses by disease as well as by physical injury to crops. Thus bacterial soft rot was very prevalent among all vegetables; a severe outbreak of fireblight damaged the eastern apple crop, especially in New York; mosaic disease was abundant and destructive in the tobacco fields; and rose mosaic or infectious chlorosis caused much injury to propagating stocks on the Pacific coast. Commercial mushroom growers suffered considerable loss from the rose-comb and the truffle disease. The former produces an abnormality in the mushroom, and is probably the result of exposure to fumes or other oxidation products of mineral oil. The latter is caused by a truffle

which invades the beds, and which was described as a new species by Diehl and Lambert (*Mycologia* 22: 223-226. 1930) under the name *Pseudohalsamia microspora*. It apparently acts as a fungus weed rather than as a parasite.

Taubenhaus and Ezekiel (*Phytopathology* 20: 761-786. 1930) studied the overwintering of the cotton root rot (*Phymatotrichum omnivorum*), the control of which has heretofore been considerably impeded by incomplete knowledge of the life history of the fungus. Carrying out experiments in soil reaction (loc. cit. 803-816), the same authors found that the results indicate that acidification of the soil is inclined to diminish susceptibility of the cotton plant to attack. The banana wilt disease, *Fusarium cubense*, more generally called the Panama disease, was discussed by C. W. Wardlaw (*Ann. Bot.* 44: 741-766. 1930). It is a parasitic soil organism, attacking the suckers and roots. Apparently variable water supply is an important factor in root infection, but acidity or alkalinity of the soil are not.

The various mosaic diseases of cultivated plants continued to be a fertile subject for investigation by pathologists. F. G. Fajardo (*Phytopathology* 20: 469-494. 1930), writing on the mosaic disease of the bean, suggested control by the use of early maturing varieties and the production of uninfected seeds. F. M. Clara (*ibid.* 691-706) reported a new leaf disease of tobacco in the Philippines, caused by a bacterium described as a new species under the name *Phytomonas polycolor*. Damage to the crop is apparently reduced by seed disinfection with silver nitrate. Manila hem or abaca has been seriously injured in the Philippines by the disease known as bunchytop, which became destructive about seven years ago, and has since caused the abandonment of cultivation of this valuable plant in many regions. It is highly infectious, and is spread by an aphid, *Pentalonia nigronervosa* Coq. The disease was described in detail by Gerardo O. Ocfemia (*Am. Journ. Bot.* 17: 1-18. 1930). Some interesting results of studies in the physiology of parasitism were reported by R. Sahai Vasudeva (*Ann. Bot.* 44: 557-564. 1930), who found that the presence of one parasite or saprophyte in the inoculum of another markedly reduces the vigor of attack on the host. Experiments were made upon apples, using *Botrytis allii* in the inoculum of *Monilia fructigena*. A destructive disease of lima beans in Cuba and Porto Rico was described by Anna E. Jenkins (*Plant Disease Reporter* 14: 96-97. 1930). It is caused by the fungus *Elsinoe canavaliae*, which attacks leaves, stems, and pods, but does not seem to injure the seeds. The Dutch elm disease, *Graphium ulmi*, made its appearance in Ohio, as announced by May (*science*, n.s. 72: 142-143. 1930). Cultures from infected elms in Cleveland and Cincinnati were submitted to Dr. Christine Buisman of the University of Utrecht, who predicted last year that the disease would invade the United States.

Dr. R. J. Haskell, plant pathologist of the U. S. Department of Agriculture, stated that plant diseases cause annual damage to cultivated crops to the amount of \$1,500,000. English authorities estimate that diseases take toll of 10 per cent of the plant products of that country. It is natural, therefore, that phytopathology and physiology are the leading subjects of botanical investigation at the present time.

PHYSIOLOGY. Researches of plant physiologists centred largely around such subjects as the

toxicity of certain chemicals upon seeds or other plant tissues, the effect of artificial physical conditions upon growth, the chemical requirements of various plants, etc. Interest also developed in a new field of inquiry sometimes called plant morphogenesis, which may be defined as a study of the process whereby genetic entities become differentiated into cells and tissues with specific shapes and functions. It seems well established that the plant develops hormones or organ-forming substances analogous to those already known to exist in animals. The actual chemical constitution of these is unknown, though Hammett has shown that the sulphhydryl ion, SH, exerts a specific influence upon nuclear division. Physical factors, as light, gravity, moisture, etc. are also important, while evidence is also accumulating that there may be actual differences in electrical potential between two ends of a cell.

In a contribution from the Boyce-Thompson Institute for Plant Research (*Am. Journ. Bot.* 17: 416-482. 1930) Arthur, Guthrie and Newell described an elaborate series of experiments on the effects of artificial climates upon growth. The plants under observation were subjected to varying light intensity, increased or decreased length of day, etc. It was found that tuber production in potatoes was favored by low temperature in combination with increased length and intensity in light. The tomato proved to be the most sensitive to light of all the plants utilized in the experiments. The authors remarked that a practical application of these facts in crop production would be to supplement winter daylight with from 3 to 6 hours of artificial illumination.

Discussing the physiological importance of various mineral elements in plant tissues, W. O. James (*Ann. Bot.* 44: 173-198. 1930) showed that one significant effect of potassium is an increase of catalytic activity, leading to greater efficiency in starch production, his experiments also tended to show that loss of potassium is a causal factor in the aging or yellowing of leaves. According to Le Van (*Am. Journ. Bot.* 17: 381-395. 1930) certain toxic substances, notably the salts of various metals, cause a stimulation of carbon dioxide production, highest in the case of copper salts. F. E. Denny (*Am. Journ. Bot.* 17: 602-613. 1930) found that the freshly harvested corms of several varieties of gladiolus treated with the vapor of ethylene chlorhydrin, responded with rapid growth, some in about a week. Not more than one-half of these artificially accelerated corms furnished blooms, although this may have been partly due to unfavorable light conditions. Macht (*Am. Journ. Bot.* 17: 572-578. 1930), noting the different degrees of toxicity of 23 isomeric octyl alcohols on seedlings of the white lupine (*Lupinus albus*), emphasized the importance of using pure chemicals in pharmacological research.

Norwood C. Thornton (*Am. Journ. Bot.* 17: 614-626. 1930) found that cut roses, placed in carbon dioxide storage, had their life prolonged under certain conditions. Opening of the buds was also retarded, but storage for too long a period resulted in discoloration of the flowers. A series of experiments conducted by Dexter, Tottingham, and Graber (*Plant Phys.* 5: 193-214. 1930) indicated that the degree of resistance to cold weather injury in plants may be measured by the diffusion of electrolytes and other substances from chilled or frozen tissues into water after such tissues have been thawed. In this connection Smith and Bressman (*Journ. Agric. Res.* 40:

25-26. 1930) proved at the Oregon Experiment Station that germinating wheat grains survived twelve days of constant freezing at -12°C . Black, Eggleston and Kelly (*Journ. Agric. Res.* 40: 917-920. 1930), continuing their investigations on the toxicity of alkaloids obtained from various species of *Bikukulla*, reported that the western *B. formosa* yields from the dried tops an alkaloid producing convulsions and death in mice. J. B. McNair (*Am. Journ. Bot.* 17: 662-668. 1930) pointed out a possible relationship between the climatic distribution of oil and starch in seeds and their physical and chemical properties. As oil conducts heat less readily than starch, it may be of service in the seed as a protection against excessive cold in temperate climates or excessive heat in the tropics.

Cultural experiments by Lewis Knudson (*Bot. Gaz.* 89: 192-199. 1930) proved that the symbiotic condition in orchids is not obligatory either for germination or for growth and flower production.

AGRONOMY. J. S. McHargue and O. M. Shedd (*Journ. Am. Soc. Agron.* 22: 739-746. 1930) found that oats grown in purified sand cultures to which small amounts of compounds containing manganese, copper, zinc, boron or arsenic were added gave markedly increased yields. Copper and zinc produced a larger quantity of both grain and straw than manganese, while boron and arsenic gave more straw and less grain, this being especially noticeable in the case of arsenic. Hulbert, Remsburg, and Spence (*Am. Journ. Agron.* 22: 423-433. 1930) discussed methods of controlling perennial weeds with chlorates. Sodium chlorate first received attention as a herbicide in Idaho in 1927. Calcium and magnesium chlorates have also been found effective. The plants treated included Canada thistle, wild morning glory, quack grass, etc. According to Harper, sodium chlorate in spray is especially effective in killing Johnson grass.

Sulphur as a fertilizer produced striking increases in yield of alfalfa, as reported by Powers (*Journ. Am. Soc. Agron.* 22: 37-373. 1930), and Johnson and Fisher have found boron essential to the growth and fruiting of the tomato. W. D. Kimbrough (*Plant Phys.* 5: 373-386. 1930) discovered no apparent influence of fertilizer treatment on either the flavor or the keeping quality of watermelons.

GENETICS. J. W. Gregor and F. W. Sansome (*Journ. Genetics* 22: 373-388. 1930) conducted a series of experiments on timothy (*Phleum pratense*) and the related *P. alpinum* at the Scotch Plant Breeding Station, and discovered that there are two distinct forms of this well known pasture grass occupying different ecological areas and apparently intersterile. Hybrids were obtained between *P. phleum* and *P. alpinum*, but the latter is probably nevertheless distinct. Cecil Yampolsky (*Journ. Hered.* 21: 65-72. 1930) made some interesting graft experiments on the euphorbiaceous weed *Mercurialis annua*. This is a dioecious plant, and reciprocal grafts between male and female individuals indicated that the two sex elements can exist side by side in the same graft without influencing the morphological expression of either stock or scion. On the other hand, striking examples of sex reversal were obtained as the result of severe pruning (*Bull. Torr. Bot. Club* 57: 51-58. 1930).

T. H. Kearney investigated at length the genetics of the cotton plant. The taxonomic relations

between wild and cultivated species of cotton (*Gossypium*) have always been obscure, and most of them are probably the result of hybridization. It is due to this fact that comparatively few examples of simple Mendelian inheritance have been recorded. Professor H. K. Hayes (*Am. Naturalist* 64: 15-36. 1930) emphasized the importance of knowledge of the genetic nature of disease organisms in the study of disease resistance inheritance. The development of stem rust resistant wheats and wilt resistance varieties of flax are examples of practical work which have been carried on along this line.

An intergeneric hybrid between the sugar cane and cholam (*Andropogon sorghum*) has been successfully raised at the Imperial Cane Breeding Station at Coimbatore, India. The only other three intergeneric plant hybrids of possible economic value now known are maize-teosinte, wheat-rye, and cabbage-radish.

ECOLOGY AND TAXONOMY. Winifred E. Brechley and Katherine Warrington (*Journ. Ecol.* 18: 235-272. 1930), in the course of a numerical estimation of viable weed seeds found in soil examples from English grain fields, noted that comparatively few species germinate freely through the year, and that many have a natural period of dormancy. Some species also show a preference for certain manures. John Phillips (*Journ. Ecol.* 18: 193-234. 1930) has been engaged in a comprehensive study of the plant communities of Tanganyika, with special reference to their importance in the tsetse fly investigations. There are two definite formations in the central province, the deciduous scrub of the lowlands and the sub-tropical evergreen forest of the uplands above 1400 meters. G. A. Pearson, Director of the Southwest Forest Experiment Station, U. S. Forest Service, has initiated an extensive series of investigations of soil and air temperature, precipitation, soil moisture, and evaporation in various forest types.

Lucy E. Boothroyd (*Am. Journ. Bot.* 17: 678-693. 1930) made a critical study of the inflorescence in *Platanaceae*, the fundamental nature of which has been very obscure. She considers that the inflorescence is primarily a panicle, the main branches of which have been reduced to form a head, and the ends of the inflorescence also reduced to heads. This had led also to reduction of the bracts and flower parts. The family may well have been derived from some primitive rosaceous type. Professor D. H. Campbell (*Ann. Bot.* 44: 311-332. 1930), discussing at length the phylogeny of monocotyledons, remarked that while the majority of students considered them to have been derived from the dicotyledons, their dominantly herbaceous structure and aquatic habits might well indicate a primitive character, derived from ancestral Protangiosperms of Filicinae. In this connection J. W. Bews has offered evidence showing that angiosperms probably originated at a time when the climate was similar to that of the existing lowland tropics. Frère Marie-Victorin (*Journ. Bot.* 68: 161-171. 1930) examined the evidences of evolution in the flora of northeastern America and concluded that it diverged from that of the western part of the continent through isolation by an arm of the sea in Cretaceous times. From the European flora it became separated through isolation by disappearance of the North Atlantic land bridge during the Tertiary era. The paper also contained a discussion of the various endemic species found in the so-called "nuna-

taks" centring around the Gulf of St. Lawrence. These areas escaped the Wisconsin ice sheet and retained the flora of the previous period.

An event of significance during the year was the retirement of Dr. A. B. Rendle from the post of Keeper of Botany in the British Museum, which he had held since 1906, his total period of service in the Museum having reached forty-two years. See **HORTICULTURE**.

BIBLIOGRAPHY. Botanical works of importance published during the year include: H. H. W. Pearson, *Gnetales* (Cambridge Univ. Press); Lewis Hanford Tiffany, *The Oedogoniaceae*—a monograph, pub. by author; R. J. Pool, *Flowers and flowering plants—an introduction to the nature and work of flowers and the classification of flowering plants* (New York); E. C. Barton-Wright, *Recent Advances in Plant Physiology* (Philadelphia); W. J. Robbins and H. W. Rickett, *Botany* (New York); Arthur Bliss Seymour, *Host Index of the Fungi of North America* (Oxford Univ. Press).

BOWDOIN COLLEGE. An institution of higher education for men in Brunswick, Me.; founded in 1794. The enrollment of the autumn session of 1930 was 563. There were 52 faculty members. The productive funds of the college amounted to \$5,500,000, and the income for 1929-30 was \$476,000. There were more than 150,000 volumes in the library. President, Kenneth Charles Morton Sills, LL.D.

BOWLING. The American Bowling Congress tournament at Cleveland in the spring of 1930 attracted 2443 five-man teams. The champions were: Individual, Larry Shotwell, Covington, Ky., 774; doubles, Jim Devine and George Heup, Beloit, Wis., 1339; five-man team, D. Graff & Sons, Kalamazoo, Mich., 3100; all-events, George Morrison, Chicago, 1985. Joe Falcara of New York City continued as world's match-game champion. According to figures compiled by the American Bowling Congress, about 6,000,000 people in the United States bowl regularly on 160,000 alleys.

BOXING. Nine boxing titles in various classes changed hands during 1930. The most important of these—the heavyweight championship of the world—went to Max Schmeling of Germany, who won on a foul from Jack Sharkey in the fourth round of a scheduled 15-round bout in New York City, June 12. Up to the time when he fouled Schmeling, Sharkey appeared to be leading by a comfortable margin. The New York Boxing Commission subsequently abolished the punch below the belt, whether intentional or not, as a means of winning or losing a bout. The Sharkey-Schmeling fight was witnessed by 74,163 persons, who paid gate receipts of \$711,068. In February, Sharkey received credit for a knockout over Phil Scott of England at Miami, Fla. On Dec. 16, 1930, the New York State Athletic Commission picked Sharkey as leading contender for the heavyweight title.

The world's light-heavyweight title passed to Maxie Rosenbloom after being unclaimed for a year. Jakie Finkelstein, otherwise known as Jackie Fields, lost the world's welterweight title to Young Jack Thompson, who in turn was defeated by Tommy Freeman. With equal rapidity the world's lightweight championship passed

from Sammy Mandell to Al Singer and then to Tony Canzoneri. The world's featherweight champion, Christopher Battalino, turned back two challengers, Ignacio Fernandez and Kid Chocolate. Al Brown, Panama Negro, appeared the leading claimant to the bantamweight crown and Frankie Genaro and Midget Wolgast to the flyweight title, both of which were in dispute. Genaro and Wolgast battled to a draw in New York December 27. Mickey Walker still held the world's middleweight title, having met no challenger in his class during the year.

Jack (Kid) Berg, English lightweight, was considered by many the year's outstanding boxer. He won a verdict over the spectacular Cuban, Kid Chocolate, at the Polo Grounds, New York, August 4, and outpointed Billy Petrolle at Madison Square Garden on October 10. The huge and much publicized Italian heavyweight, Primo Carnera, ended his boxing career in the United States after a defeat in Boston at the hands of a second-rate contender, Jimmy Maloney. Later (November 10) he defeated Paulino Uzeudun, the Basque, before a record European fight crowd of 80,000 at Barcelona, Spain. William L. (Young) Stribling knocked out Phil Scott in the second round at Wimbledon Stadium, London, on July 28. George Godfrey, Negro heavyweight, who fouled Primo Carnera in a bout at Philadelphia, June 24, was ruled out as a heavyweight contender by the Pennsylvania State Athletic Commission and deprived of his boxing license in that State, and half of his purse. Another important fight of the year was that between Kid Chocolate and Fidel La Barba, former world's flyweight champion, the decision going to the latter. Jimmy McLarin, one of the leading welterweights, unexpectedly met defeat at the hands of Billy Petrolle at Madison Square Garden, November 21.

BOY-ED, KARL. Former German naval attaché in Washington, died in Hamburg, Sept. 15, 1930. In December, 1915, he was recalled at the request of President Wilson for alleged secret and hostile activities in the United States, Canada, and Mexico. The charges against him included plots to get German naval reservists into England as spies by supplying them with false passports from the Department of State and to provision German cruisers at sea through vessels leaving American ports with fraudulent papers.

BOY SCOUTS OF AMERICA. An organization incorporated in 1910 and chartered by Congress in 1916 to develop the character of boys and train them for the duties of adult life by influence brought to bear in their work and play. Its national constitution declares the intention to "promote the ability of boys to do things for themselves and others, to train them in scout craft, and to teach them patriotism, courage, self-reliance, and kindred virtues." Each boy, on joining the organization, takes the scout oath, admonishing him to keep himself "physically strong, mentally awake, and morally straight." The scout law requires him to exert such qualities as trustworthiness, loyalty, helpfulness, friendliness, courtesy, kindness, obedience, cheerfulness, thrift, bravery, cleanliness, and reverence. The movement is nonsectarian and without military or political connection.

The membership in October 1930, numbered 832,240, of whom 605,752 were boys and 226,488 scout leaders. There were 12 regional scout districts under the direct supervision of the national

scout executives and subdivided into 624 local councils. The boys are organized into troops consisting of 32 members, each troop being made up of patrols of eight or less members under a boy leader. A scoutmaster, commissioned by the national council, is provided for each troop; he must be an adult citizen of proved fitness for boy leadership. Troops are commonly formed in connection with schools, churches, or other existing bodies, and each must be sponsored by a troop committee of three or more adults, who select the scoutmaster and supervise the execution of the programme. In small areas, a farm or home scout patrol may be formed with as few as two boys; and a boy who lives in an area so isolated that he cannot join a troop or patrol may become a lone scout.

Among the foremost scout activities are camping and hiking, nature study, sea scouting, and many kinds of athletics and crafts, such as swimming, first aid, signaling, knot-tying, and bridge making. Successive ranks in membership—tenderfoot, second, and first class—are achieved by passing tests, graded in difficulty. Merit badges, 91 in number, may be attained by the scout of first class rank by meeting requirements for each; they cover proficiency in pursuits both of the useful and the hobby type. By earning a certain number of merit badges a boy may rise to the higher ranks of star, life, and eagle scout. In 1930 the organization provided opportunity for 300,000 boys to spend a week or more in Boy Scout camps. There were 652 camps conducted by local councils and more than 2400 troop camps. In its community service the Boy Scout movement coöperates with the U. S. Forestry Department in fighting and preventing forest fires and in conserving wild life, and planting trees. It also renders services in local campaigns of various sorts, such as clean-up and safety-first campaigns, and coöperates with many national societies and movements.

The official magazine for boys is *Boys' Life* and for scout leaders, *Scouting*. The organization also publishes merit-badge pamphlets, handbooks, and other material pertaining to the movement. The national officers in 1930 were: President, Walter W. Head; treasurer, George D. Pratt; national commissioner, Daniel Carter Beard; international commissioner, Mortimer L. Schiff; chief scout executive, James E. West; deputy chief scout executive, George J. Fisher. Headquarters of the national council, the governing body, are at 2 Park Avenue, New York City.

BRANCKER, AIR VICE MARSHAL SIR (WILLIAM) SEFTON. A British soldier and aviation expert, died in the R-101 disaster near Beauvais, France, Oct. 5, 1930. He was born Mar. 22, 1877, and attended the Royal Military Academy in Woolwich, being commissioned in the Royal Artillery in 1896. He served during the Boer War with the horse and field artillery, and from 1903 to 1912 was stationed in India in artillery and various staff appointments. In 1913 he was transferred to the War Office in London, and the following year, on the outbreak of the World War, became Deputy Director of Military Aeronautics and in 1916 Director of the Air Organization. He was commander of the Royal Flying Corps, Middle East, during the latter part of 1917, and in 1918 was appointed major-general in the Royal Air Force, serving as controller-general of equipment and master-general of personnel on the Air Council. In 1919 he retired from the army so as to aid in

the development of commercial aviation in England, and became affiliated with the Aircraft Manufacturing Company. Regular London-to-Paris airplane service was established by these interests. In 1922 he was appointed Director of Civil Aviation in the Air Ministry, and two years later flew to India to survey a projected airship route. He was also British representative on the International Commission of Air Navigation, and during 1928-29 was president of the Institute of Transport. He was created a Knight Commander of the Bath in 1919, and in 1924 was gazetted Air Vice Marshal.

BRANDES, MARTHE. A French actress, died Apr. 27, 1930, in Paris, where she was born in 1862. In 1884 she played at the Vaudeville, making her début in *Diane de Lys*. She entered the Comédie-Française in 1887, leaving in 1890 to return to the Vaudeville. Going again to the Comédie-Française in 1893, she was elected an associate in 1896. In 1903 she began to play at the Renaissance, the following three years marking the highest point in her career. Her acting was characterized by subtlety of interpretation, both of joy and of suffering. The rôles which she played included Dominique Brienne in *Le Passe*, the Queen in *Ruy Blas*, the Countess in *Le Mariage de Figaro*, and Suzanne d'Ange in *Le Demi-Monde*. Her final appearance on the stage was in 1914 at the Porte Saint-Martin in Hervieu's *Le Destin est maître*. Although a musician, painter, and author, as well as actress, after her retirement from the stage, she devoted her entire time to hospital and educational work for blind soldiers. She was awarded the Cross of the Legion of Honor.

BRĂTIANU, VINTILĂ. A Rumanian statesman, died in Micaesti, Dec. 22, 1930, at the age of 63. He was the third son of Ion C. Brătianu, the great Rumanian Liberal leader. Educated as an engineer in France, he practiced his profession for several years, then entered politics. When his brother, Ionel, assumed the leadership of the Liberal party in 1909, he was appointed adviser on financial and economic matters. Later during the World War he acted as Minister of War and Ammunition. When his brother returned to power in 1922, he was appointed Minister of Finance, and for six years put into practice his economic theories. The object of the Brătianus was to make Rumania self-sufficient through the creation of a number of new industries by means of protective tariffs and the help of the National Bank. The most disastrous part of their policy was their hostility to foreign capital, with the result that certain industries, such as agriculture, were starved of credit and their condition gradually grew worse. Vintilă served for a year as Prime Minister after his brother's death, but was forced at the end of 1928 to let the National Peasant party, under Iuliu Maniu, take the helm. Like his brother, he had been a staunch opponent of Prince Carol, advising King Ferdinand to exclude his son from the succession and stoutly opposing proposals for the return of the prince after the king's death. See RUMANIA under *History*.

BRAZIL. A federal republic, constituting the largest of the South American states, situated in the northern and eastern part of the continent. Capital and largest city, Rio de Janeiro. A site for a new federal capital has been selected in the State of Goyaz.

AREA AND POPULATION. The area is approximately 3,275,510 square miles, or more than 250,-

000 square miles greater than that of continental United States, and the total estimated population on Jan. 1, 1930, was 40,272,650, as compared with 30,635,605 at the census of 1920. The population in 1930 was divided among 20 states, one federal district, and one territory as follows: Alagoas, 1,189,214; Amazonas, 433,777; Bahia, 4,135,894; Ceará, 1,626,025; Espírito Santo, 661,416; Federal District, 1,468,621; Goyaz, 712,210; Maranhão, 1,140,635; Matto Grosso, 349,857; Minas Geraes, 7,432,243; Pará, 1,432,401; Parahyba, 1,322,069; Paraná, 974,273; Pernambuco, 2,809,814; Piahy, 809,508; Rio de Janeiro, 1,996,899; Rio Grande do Norte, 738,889; Rio Grande do Sul, 2,959,627; Santa Catharina, 948,398; São Paulo, 6,399,190; Sergipe, 547,965; Acre Territory, 113,725.

Immigration into Brazil, after declining from 121,569 in 1926 to 82,061 in 1928, increased in 1929 to 100,424. The 1929 arrivals were divided into national groups as follows: Portuguese, 38,879; Japanese, 16,648; Poles, 9095; Italians, 5288; Lithuanians, 4781; Spaniards, 4565; Germans, 4228. A concession of 3975 square miles of land in the State of Pará was granted in May, 1930, to the Japanese Company of Plantations, jointly managed by Brazilians and Japanese. The area, four times that of Switzerland, was to be settled by Japanese immigrants, 500 of whom arrived during the first year of the company's existence.

The chief cities, with their populations in 1920, are: Rio de Janeiro, 1,157,873; São Paulo, 579,033 (estimated at 1,000,249 in 1928); São Salvador (Bahia), 283,422 (estimated at 335,000 in 1930); Recife, 238,843; Belém, 236,402; Porto Alegre, 179,263.

EDUCATION. Education is free but not compulsory, except in seven States where it is both free and compulsory. In 1926 there were in the various States 30,650 primary schools with 1,470,000 pupils, 212 secondary schools, and 367 professional schools with more than 37,000 pupils. There are also 76 schools which train teachers, 97 industrial schools, 41 agricultural, and 48 commercial schools, besides one official university, the University of Rio de Janeiro, and two private universities.

PRODUCTION. Coffee is the outstanding factor in the economic well-being of this predominately agricultural nation, generally constituting 75 per cent or more of the total exports. The coffee crop normally represents about 78 per cent of the world supply; in 1929, 14,280,815 bags were exported, while the world consumption was estimated at about 22,000,000 bags. Of the total cultivated area of about 14,880,000 acres, a large part is devoted to coffee.

Other leading agricultural products are cacao, tobacco, rubber, balatá (gum), cotton, rice, sugar, yerba maté, silk cocoons, fruits and nuts, cereals, and mandioca (cassava). Brazil produces about 13 per cent of the world's supply of cacao, being surpassed only by British West Africa. Nearly half of the tobacco crop is grown in the State of Bahia. East India rubber plantations since 1912 have replaced Brazil as the chief source of supply, but trees indigenous to the Amazon Valley continue to produce the finest quality. There were 15,359,000 orange trees in 1930. The area devoted to cotton is estimated at 1,500,000 acres, the production in 1928-29 being estimated at 113,881 tons. Silk production increased from 3,620,100 kilos in 1925 to 18,837,100 in 1928 (kilo

equals 2.2 pounds avoirdupois). The forested area, estimated at 1,000,000 acres, produces woods of great variety, including rosewood, Paraná pine, and eucalyptus. The country has great potentialities as a producer of vegetable oils.

Livestock in the country at the census of 1920 included 40,000,000 cattle, 5,253,699 horses, 1,865,259 asses and mules, 7,933,437 sheep, 5,086,655 goats, and 10,168,549 swine. One-third of the cattle and most of the sheep are in the southern State of Rio Grande do Sul.

The mineral resources are important, the iron ore deposits comparing in size with those of the United States and constituting about one-fourth of the total world supply. Deposits of low-grade coal estimated at 2,000,000,000 tons have been discovered in the basins of Santa Catharina and Rio Grande do Sul. Gold also occurs in low-grade quartz veins. Manganese ore, the most valuable mineral product, is mined chiefly in Minas Geraes and for the most part exported to the United States. Diamonds, emeralds, and other precious stones are found.

Industrial development in Brazil has been fairly rapid in recent years, particularly in the State of São Paulo, where heavy customs duties protect local manufactures. Trade returns published in 1929 placed the number of cotton mills at 357, with 2,584,050 spindles, 78,383 looms, and 128,613 operatives. In São Paulo State there were 40 silk mills. Sugar mills in the country totaled 216, with an annual output of 850,000 tons of sugar and 121,000,000 liters of alcohol. Woolen, jute, and paper mills, packing houses, and some 2000 tobacco factories, comprise the other principal industries.

Power is derived mainly from imported coal, as the developed coal deposits are of inferior quality and far from the industrial centres. The potential water power available in more than 300 large waterfalls is estimated at about 60,000,000 horse power, but at the end of 1928 only 640,000 horse power, or about 5 per cent of that available, had been developed.

Foreign investments in Brazil at the beginning of 1930 were unofficially estimated at \$2,274,000,000, of which \$1,385,000,000 represented British capital, \$500,000,000 American, and \$549,000,000 investments from other countries.

A crisis in the textile industry, with numerous mercantile failures, and a serious world-wide depression in coffee, made 1929 and 1930 years of exceptional difficulty from the business viewpoint. In addition to the huge stock held in storage, the 1928-29 coffee crop totaled more than 28,000,000 bags, as compared with an average world consumption of about 22,000,000 bags. Other South American countries produce about 9,000,000 bags annually. This great overproduction was attributed to the artificial price maintained by the national coffee valorization policy adopted in 1926. In 1930 the valorization policy was drastically modified. A \$100,000,000 loan was floated by the State of São Paulo in New York and London to allow the gradual liquidation of accumulated stocks of coffee and the current marketing of future crops. Commercial difficulties were reflected in the fall of the exchange value of the milreis, which on Aug. 20, 1930, reached 10.50 to the dollar, the lowest point in seven years, and in a material reduction of the normal surplus of exports over imports.

COMMERCE. The total foreign trade in 1929 amounted to 7,388,220,000 milreis paper (\$871,-

457,890, computed at the average exchange rate for 1929 of \$1 for 8.478 milreis), of which 3,527,738,000 milreis (\$416,104,977) were imports and 3,860,482,000 milreis (\$455,352,913) were exports. Comparative figures for 1928 were: Imports, 3,694,990,000 milreis (\$441,825,899); exports, 3,970,273,000 milreis (\$474,742,076); total, 7,665,263,000 milreis (916,568,575). The visible favorable balance of trade for 1929 was 332,744,000 milreis (\$39,245,936), as compared with 275,283,000 milreis (\$32,916,777) in 1928. Brazil's annual foreign obligations total over \$170,000,000, leaving a deficit in 1929 of over \$130,000,000.

The United States strengthened its position as the chief source of Brazil's supply in 1929, furnishing imports valued at \$125,395,140, as against \$116,387,301 in 1928. Other leading sources of imports were: United Kingdom, \$79,943,029 (\$95,118,737 in 1928); Germany, \$52,787,685 (\$55,083,702 in 1928); Argentina, \$45,491,271 (\$50,981,346 in 1928); France, \$22,099,905 (\$28,046,394); Belgium, \$18,578,320 (\$17,409,900); Italy, \$13,456,357 (\$16,407,389). Brazil's exports to the United States decreased in 1929 to \$192,239,561 from \$215,764,916 in 1928 but constituted over one-third of the total exports. French purchases of Brazilian produce in 1929 totaled \$50,653,456 (\$43,519,789 in 1928), while German purchases fell to \$39,882,283 from \$53,160,588 in 1928. The United Kingdom, Argentina, and the Netherlands ranked next in the order named.

Of the total exports in 1929, \$408,393,607 consisted of vegetable products, \$41,604,741 of animals and animal products, and \$5,354,565 of minerals and mineral products. Imports were divided by classes as follows: Manufactures, \$249,879,924; primary materials, \$83,421,797; alimentary substances, \$81,900,213; and live animals, \$903,043. Chief export items in the order of importance in 1929 were coffee, hides and skins, raw cotton, frozen and chilled meats, yerba maté, and cacao. Leading imports, in order of importance, were machinery, wheat, wheat flour, iron and steel manufactures, automobiles, gasoline, coal and coke, cotton piece goods, wheat flour, trucks, cement, and kerosene.

FINANCE. In the budget for 1930, revenues were calculated at 2,281,505 contos and expenditures at 2,256,176 contos, respectively, leaving an estimated surplus for the year of 25,331 contos (all figures are for paper contos). In 1929, according to the President's message to Congress of May 3, 1930, revenues totaled 2,399,600 contos (about \$283,152,800 at the average exchange rate of \$118 for 1929), and expenditures amounted to 2,224,617 contos (about \$262,504,806). The surplus for the year was 174,983 contos (about \$20,648,000). The revenues included the surplus from the previous year, amounting to 198,354 contos, while expenditures included an "extra budgetary" sum of 206,923 contos.

On Jan. 1, 1930, the external debt amounted to £104,285,735, \$148,003,280, and 331,762,179 French francs. This represented a reduction during the year of £2,682,858, \$4,797,147, and 1,814,907 francs. The internal funded debt at the beginning of 1930 totaled 2,381,292 contos as compared with 2,392,746 contos at the beginning of 1929. The Permanent Court of International Justice at The Hague decided in 1929 that Brazil would have to pay the principal and interest of three outstanding franc loans in pre-war gold francs, instead of in paper francs, as claimed by Brazil.

COMMUNICATIONS. The railways of Brazil are theoretically vested in the state and are operated either directly by the State or Federal governments or by private companies on concession or lease. In 1930, the single track railway mileage was 19,787 miles, an increase of 75 per cent since 1907. In the same year highways extended 33,480 miles, of which 4340 miles represented first class roads and 29,140 second class. Road construction under way in 1930 included a 372-mile stretch between Rio de Janeiro and Bello Horizonte, capital of the State of Minas Geraes. The length of telephone lines in 1930 totaled about 570,000 miles. A ten-year concession for the operation of an international radio telegraph and radio telephone service from Brazil was granted a subsidiary of the International Telephone and Telegraph Corporation in 1930. On June 25, 1930, direct air-mail service between Rio de Janeiro and the United States was opened by Pan American Airways under contract with the Brazilian government.

GOVERNMENT. The executive power is vested in the President, who with the Vice President is elected directly by the people for four years and is ineligible for reelection; and the legislative power in the National Congress which consists of the Chamber of Deputies and the Senate, the former having 212 members elected for three years by popular vote on the basis of minority representation, and the latter, 63 members elected for nine years by direct vote, one-third being retired every three years. The Vice President presides over the Senate. President at the beginning of 1930, Dr. Washington Luis Pereira de Souza (assumed office Nov. 15, 1926); Vice President, Mello Vianna.

HISTORY

THE REVOLUTION. Brazil was the fourth South American country to experience a successful revolution in 1930. The revolt broke out October 3 in the southern states of Rio Grande do Sul and Minas Geraes and simultaneously in the extreme north of the Republic. Ten days of fighting gave the rebels control of 10 of the 20 states of the federation. Their triumphant advance from the South against São Paulo and from the North against Rio de Janeiro was retarded by the increasing opposition of government forces and a long-drawn-out civil war was in prospect. Then, with unexpected suddenness, the struggle was terminated October 24, when a junta of army and naval officers headed by General Fragozo deserted the government and seized control of Rio de Janeiro. A proclamation explained their action as intended to prevent the useless shedding of blood and destruction of property. President Washington Luis Pereira de Souza was forced to abdicate, and with the consent of the junta Dr. Getulio Vargas, leader of the rebellion, was inaugurated as Provisional President on November 3. The new régime was recognized by the United States on November 8 and by Great Britain and other leading Powers soon afterward.

The revolution had its immediate political origin in the presidential election of Mar. 1, 1930, in which Dr. Julio Prestes, Governor of the State of São Paulo and candidate of the Republican Conservative party, was elected. He received 1,093,027 votes as against 666,152 for Dr. Vargas, the Liberal candidate, who was also Governor of the State of Rio Grande do Sul. In the contest for the vice presidency, the Republican Conserva-

tive candidate; Dr. Vital Soares, Governor of Bahia, won by about the same majority over Dr. Joao Pessoa, Governor of Parahyba. Dr. Prestes and Dr. Soares, who enjoyed the support of President Washington Luis, carried 17 of the 20 Brazilian states, as well as the Federal district of Buenos Aires.

While the election itself was held peacefully, the year's campaign which preceded it was marked by considerable disorder (see 1929 YEAR BOOK). On Feb. 7, 1930, an assassin fired on the retiring Vice President, Mello Vianna, while the latter was addressing a political meeting at Montes Claros in Minas Geraes, wounding him in the neck and shoulder. Several persons were killed in rioting which followed. The unsuccessful candidates charged that President Washington Luis had insured the defeat of Dr. Vargas by illegal pressure on voters—particularly on public servants—by perverting the courts to serve the interests of his political followers, and by violating the autonomy of the individual states. There was resentment at the abrogation of an inter-party understanding under which the Presidency had been alternated between the two states of São Paulo and Minas Geraes. President Washington Luis, himself a Paulista, was accused of favoring the coffee and other interests of São Paulo, while neglecting industries in other states. Discontent with oligarchy was widespread and the economic situation contributed greatly to the political unrest. Financial maladministration, unduly large foreign loans (floated in New York for the most part), and the failure of efforts of the São Paulo Coffee Institute to maintain the world price of coffee, aggravated the economic depression resulting from overproduction and declining prices of Brazilian exports.

An immediate result of the political animosities aroused during the presidential campaign was the revolt led by Deputy José Pereira, a Republican Conservative, against the authority of President Joao Pessoa in the State of Parahyba. Pereira, with a force of over 1000 cowboys, made his headquarters at Princeza and repulsed with heavy loss efforts of the state police to disperse his following. On May 4, President Washington Luis recommended Federal intervention in Parahyba to insure "individual political rights." As the President of Parahyba was the Opposition candidate for Vice President in the March election, the Liberals charged that the President had intervened from partisan motives and that he had illegally authorized Federal troops to enter the disturbed area.

The assassination of State President Pessoa on July 26 at Recife, capital of the State of Pernambuco, by a political opponent, Joao Dantas, further embittered the Liberals. With the outbreak of the revolution against the Federal government, the army and naval officers sensed that the populace was overwhelmingly in favor of a change of government and acted at the critical moment to end the civil war. The *coup d'etat* in Rio de Janeiro was accompanied by lively street fighting and a brief counter-revolutionary outbreak, but casualties were slight. In São Paulo, where the Federal commander joined in the coup and was proclaimed Provisional President of the State, there was disorder and some looting. Through a tragic mistake, the German Hamburg-American steamship *Baden*, which sought to leave Rio de Janeiro harbor in the midst of revolutionary excitement, was fired upon from the Federal for-

tress of Santa Clara. Twenty-seven passengers were killed and 71 were seriously injured.

Only two days previous to the triumph of the revolution, the President of the United States, on request of the Brazilian Minister in Washington, declared an embargo on shipments of arms from the United States to the revolutionary forces. One week before, Secretary of State Stimson had announced that as an act of friendship for the Federal government of Brazil, the United States would permit that government to purchase war equipment from North American firms. This was the first time the United States had declared an arms embargo in the case of a revolution in South America. Yet the United States was the first of the great Powers to recognize the new government.

THE VARGAS RÉGIME. The Cabinet named by Provisional President Vargas consisted of: Foreign Minister, Dr. A. de Mello Franco; Interior and Justice, Osvaldo Aranha; Finance, José Maria Whitaker; Agriculture, Assis Brasil; Public Works, General Juarez Tavora; War, General Leite Castro; Navy, Admiral Isaias Noronha; Public Instruction, Francisco Campos; Labor, Lindolfo Collor. A few days after his appointment General Tavora resigned from the Cabinet and returned to the northern part of the Republic to consolidate the authority of the new government. He was succeeded by Americo de Almeida. Dr. Vargas announced November 1 that his first step as Provisional President would be to dissolve Congress and to reorganize the courts of justice. On November 5, the Provisional government invalidated all laws passed by Congress after October 3. The decree dissolving Congress and assuming absolute powers for himself and his government was issued by Dr. Vargas November 11. Legislative and deliberate assemblies of all states and municipalities were also dissolved, constitutional guarantees were suspended, a National Consultative Council and a special tribunal to try political crimes were established, and the fulfillment of all obligations assumed by the nation, states, and municipalities previous to the outbreak of the revolution was guaranteed. The decree provided further that the new Constitution to be drawn up must retain the federated, republican form of government and the provisions of the existing Constitution guaranteeing the rights of cities or municipalities and those of individuals. No great liberal reforms were expected from the new government, the leaders of which belonged to the Republican party in Rio Grande do Sul. The dominating figure in the party was Dr. Borges de Medeiros, ruler of his state for many years, but who in 1930 was living in comparative retirement at Cachoeira, Rio Grande do Sul.

Freedom was granted all political and military prisoners as they chose. Dr. Prestes later joined decree issued by the Minister of the Interior November 19, provided they were willing to accept ten years of exile. The following day former President Washington Luis, former Vice President Mello Vianna, and Carvalho de Britto, former head of the Bank of Brazil, sailed from Rio de Janeiro for Lisbon. São Paulo and the other Federal States were allowed to dispose of their prisoners as they chose. Dr. Prestes later joined Dr. Washington Luis in France.

Of the many complex problems facing the new Government, the currency situation was particularly serious. With the Treasury depleted by

PROMINENT FIGURES IN SOUTH AMERICAN POLITICS IN 1930

illeged mismanagement of the former régime, the Government was unable to reopen the money exchange closed at the outbreak of the revolution and likewise continued the moratorium to the end of the year. While these measures maintained the milreis quotations, fear that the currency would depreciate greatly with the resumption of free exchange made a new foreign loan essential and negotiations were opened with British and American bankers for about \$75,000,000. The banks of Rio de Janeiro and São Paulo oversubscribed within two days a domestic bond issue of \$36,000,000 announced on November 21. Among steps taken to reduce expenditures were the discharge of the French military and American naval missions to Brazil and the reduction from \$24,000 to \$12,000 of the President's salary. Business grew steadily worse toward the end of the year, the unemployed being estimated at 50,000 in São Paulo alone. Communists were reported active in connection with numerous strikes.

OTHER EVENTS. In June, previous to the revolt which deprived him of his office, President-elect Prestes paid an official visit to the United States, returning the visit paid to Brazil by President-elect Hoover early in 1929. He visited London also. Ratifications of the boundary signed by Brazil and Colombia in 1928 were exchanged on Jan. 9, 1930. The Brazilian-Paraguayan frontier was marked by a mixed commission in accordance with the boundary treaty ratified in 1929.

BRETHREN, CHURCH OF THE. A church established in the United States in 1719 in Germantown, Pa. It originated in Schwarzenau, Germany, in 1708 and is the largest of the five branches of the denomination formerly known as the German Baptist Brethren or Dunkers. Other churches of this group are: The Church of God (New Dunkards); Brethren Church (Progressive Dunkers); German Seventh-day Baptists; and Old Order German Baptists Brethren. The policy of the Church of the Brethren corresponds more nearly to the Presbyterian than to any other specific ecclesiastical form. It comprises 49 district conferences and holds a general conference annually. In 1930 there were 1029 churches, with a membership of 138,173, and 1160 Sunday schools, with an enrollment of 125,831 pupils. Foreign missionary work was carried on in India, China, and Africa, the total membership in the mission field being 5469. Expenditures for the year ending Feb. 28, 1930, totaled \$274,659. The denomination maintained eight colleges, one academy, and one theological seminary and training school, with an enrollment of 4138 students. The *Gospel Messenger* is the official organ.

Officers of the general conference in 1930 were: Moderator, the Rev. James M. Moore of Chicago; reading clerk, the Rev. John A. Robinson of Johnstown, Pa.; and writing clerk, J. E. Miller of Elgin, Ill. The Rev. J. W. Lear of Elgin, Ill., was executive secretary of the council of boards; the Rev. Otho Winger of North Manchester, Ind., president of the general mission board; the Rev. C. Ernest Davis of Mt. Morris, Ill., president of the board of religious education; the Rev. S. J. Miller of La Verne, Calif., president of the general ministerial board; and the Rev. Paul H. Bowman of Bridgewater, Va., president of the general education board. With the exception of the general education board, which is located at 3635 Ordway Street, N. W., Washington, D. C.,

the headquarters of all the boards are in Elgin, Ill.

BRETT, REGINALD BALIOL. See **ESHER, SECOND VISCOUNT.**

BREUER, PETER. A German sculptor, died in Berlin, May 2, 1930. He was born in Cologne May 19, 1856. After serving an apprenticeship as a carver in his native city, he studied modeling at the Munich and Berlin academies of art. In 1892 he became an instructor in sculpture at the Berlin Academy; in 1905, professor; and in 1909, a member of the academy's Senate. His first great work was "Spring," a charming young girl's figure, which he exhibited at the International Art Exposition in Berlin in 1891 and for which two years later he received a first class medal at the Columbian Exposition in Chicago. In 1894 he created "Adam and Eve," an expressive group which he exhibited at the Universal Exposition in Paris in 1900 and which was favorably compared with Rodin's "Kiss." "Let Little Children Come unto Me," one of his earliest Christ-groups, was awarded the gold medal at the Berlin Academy of Art in 1897. In 1902 he created "Jesus, the Children's Friend," and during the World War an especially beautiful conception of the compassionate Christ called "Christ on the Battlefield." Breuer's greatest fame was acquired through his monumental works, which include the Suarez and Bismarck monuments, in Breslau; the Kaiser Friedrich Memorial, in Cologne; the Kaiser Wilhelm Monument, in Halle; the Lillenthal Monument, on the bank of the Teltow Canal; and the National Monument, in Memel. Among his heroic statues are: Charlemagne, in the Reichstag Building, Berlin; Kurfürst Johann Sigismund, on the Siegesallee, Berlin; and the Beethoven Memorial. His work was characterized by action, simplicity, and nobility of thought.

BRIAND MEMORANDUM. See **LEAGUE OF NATIONS; INTERPARLIAMENTARY UNION; INTERNATIONALISM; UNITED STATES OF EUROPE.**

BRIDGES. The year 1930 was notable for the number of important bridge openings which had taken place during its twelve months. In France Freyssinet's Brest Bridge of three 612 ft. concrete arch spans, by far the longest concrete spans in the world, was opened on October 9. In America a concrete highway bridge, over the Raritan River below New Brunswick, N. J., a notable and beautiful work, but not a record breaking structure, was dedicated in December, 1929. The huge Columbia-Wrightsville multiple arch bridge (24 main and 20 approach arches) was opened late in 1930. Among cantilever spans may be noted the opening of the Vicksburg span over the Mississippi (the first bridge above the mouth of the river) on May 20, the Longview Bridge, over the Columbia River between Longview, Wash., and Ranier, Ore., with a 1200-foot span, on March 29, and the South Shore-Montreal cantilever on May 24. Also the opening of the Mid-Hudson Suspension bridge at Poughkeepsie on August 25, as well as the completion of two unique suspension spans in the West, the Royal Gorge, and the Kaibab bridges.

The change toward public ownership of toll bridges was noted in the 1929 YEAR BOOK. A survey made on August 1 showed, however, that while there were 296 toll bridges in the United States (compared with 233 on Oct. 1, 1929 and 287 on July 1, 1929) only 31 per cent of these structures were publicly owned. Several States had passed legislation which would insure public

ownership for all such constructions in the future.

The above figures would seem to indicate a very considerable decline in toll bridge building in the period July 1, 1929 to Aug. 1, 1930, when only 9 such bridges were opened. Yet recent years have been truly remarkable in the number and importance of bridge works. No less than seven bridges had been built over the Mississippi in the last two years, for example. At the end of 1930 bridge activity showed no signs of diminishing. Six new bridges were planned to cross the Mississippi, 51 toll bridges were under construction, and some State programmes were of considerable magnitude.—Kentucky, for example, where \$11,000,000 in bridge bonds had been issued to build 17 bridges, including one over the Ohio, on 13 road projects.

An apparently new idea in bridge financing and operation was inaugurated by the Alabama State Bridge Corporation during the year. This quasi-public organization purchased what amounted to multiple risk insurance on all its 15 toll bridges. The insurance covers damage from fire, lightning, winds, tornadoes, earthquakes, floods, ice, collision on or under the bridge, collapse, riot, or malicious damage. Such insurance would undoubtedly protect the Alabama Corporation from the fate which overtook the new Arkansas River Highway Bridge at Garland City, one span of which was dynamited by persons unknown on September 3. On the other hand it might be questioned whether even this broad policy would cover the unusual conditions which wrecked the Burrard Inlet Bridge over the Second Narrows at Vancouver, B. C., in September. The log carrier *Pacific Gatherer* drifting under the bridge with the rising tide lifted one 300-foot span and dumped it into the river. This was the twentieth accident to this work and insurance companies would probably decline the risk.

WELDING. During the year the first all-welded bridge in Europe was completed at Lowicz, Poland. It is a highway truss with a span of only 88½ ft. and was built for the Polish government. In the United States considerable progress was made in developing forms for welding and in reducing this new process of fabrication to standard practice. The highest welded building in the world, a 19-story steel frame 246 ft. high, was completed using arc-welded shop and field connections. In Boston, Mass., a 14-story welded steel frame building was also completed. While plans were prepared by one engineer to illustrate the application of welding to a building one mile high, and showing a 10 per cent saving over riveted connections, it seemed probable that this important process would develop slowly as suitable economic uses were found for it.

The desire to secure more beautiful bridges resulted in an annual award by the American Institute of Steel Construction which was given in 1930 to the Mt. Hope Suspension Bridge, the Lake Champlain Arch, and the Mt. Pleasant (N. Y.) rigid frame structure. In concrete bridges the Raritan River Arch was awarded a prize during the year.

The year also witnessed a new type of truss construction in the 256-foot span at Dueren, Germany. This is a double track railroad truss, 44 ft. wide and 47½ ft. high, and the two side trusses were inclined inward so as to meet in a common top chord over the centre of the bridge. Although the connection details may possibly prove difficult to fabricate it was possible that this new

triangular truss form might find wider application in the future.

TRUSS BRIDGES. It was interesting to note that of the seven highway bridges over the Mississippi built in the previous two years three were continuous trusses. A new highway bridge over the Tennessee River at Scottsboro, Ala., completed during the year, with a 700-foot continuous span over the main channel and four 200-foot simple spans, appeared to be the nearest approach to Lindenthal's record—775-foot spans over the Ohio at Sciotoville. The new 1257-foot highway continuous truss, with spans of 627 ft., at Quincy, Ill., was another notable example of this type of bridge and also of the extensive use of silicon steel in these modern structures.

SUISUN BAY BRIDGE. Rapid progress was made in the construction of this \$12,000,000 double track simple truss bridge to replace the railroad car ferry at the junction of Carquinez Strait and Suisun Bay, San Francisco. The unique "sand-island" scheme for constructing the deeper foundations (described in the 1929 YEAR BOOK) proved successful and the bridge was practically completed as the year closed.

MARTINEZ-BENICIA BRIDGE. This large simple truss bridge on the Southern Pacific Railroad at Martinez, Calif., replacing car ferries, was opened on November 1.

ARCH BRIDGES. Progress on the two greatest arch bridges in the world, at Sydney, Australia, and Kill van Kull, New York Harbor, continued to attract the attention of the bridge world during the year. The Sydney Arch was closed on August 18 and the New York Arch on October 4, thus marking the finish of the most difficult and dangerous phase of construction. It will be remembered that the spans of these two arches are almost identical (Sydney 1650 ft. centre to centre of end pins and Kill van Kull 1652 ft. 1 in.), while the Sydney arch is designed for much heavier loads than the New York work and therefore involves a far greater tonnage of steel (37,000 compared with 16,000). Both bridges were scheduled to reach completion during the year 1931.

CANTILEVER BRIDGES. The opening of the important cantilever bridges at Longview, Wash., and at Montreal, Canada, as well as plans for several bridges of this type, emphasized the fact that the cantilever holds its own in this Highway Era for spans intermediate between those of the truss and suspension types. The Louisville cantilever, recently completed, illustrates this point as its span of 820 ft. (with anchor arms of 500 and 362 ft.) is greater than even any continuous truss span and is about at the lower range of most modern suspension bridges. Another cantilever completed at Pittsburgh, Pa., over East Street Ravine illustrates the use of this type for even smaller spans. This bridge has its deck 220 ft. above the streets and has a main span of 545 ft. with side spans of 190¾ ft. each.

HERO-HACKETT BRIDGE. After refusing approval for a suspension bridge over the Mississippi at New Orleans, the U. S. War Department finally approved plans for a cantilever structure to connect New Orleans with Gretna, La. A channel span of 1760 ft. is involved with a vertical clearance over the river of 175 ft. According to the plans a novel type of spiral ramp will be used to reach the bridge level, from the low ground at either end of the bridge, instead of the long approach ramp customary in bridges of this nature.

SYDNEY HARBOR BRIDGE, SYDNEY, AUSTRALIA

The arch shown, 1650 feet centre to centre was closed August 18, 1930

SUSPENSION BRIDGES.—*Hudson River Bridge.* Bridge engineers were watching with great interest the construction of the great Hudson River Suspension Bridge at New York. The cable spinning (see 1929 YEAR BOOK) for this bridge was completed during the summer, whereupon the hangers, which support the floor system, were rapidly placed, and, when the year closed the floor beams had all been put in place and the steel erectors from New York and New Jersey clasped hands over the Hudson. The web and lower chord members of the stiffening truss were to be put in place during 1931. In the meantime the contract was let and rapid progress made on the massive concrete arch which spans Riverside Drive and on the other works of the complicated New York approaches.

GOLDEN GATE BRIDGE. While the Hudson River Bridge was nearing completion, final plans for an even greater structure were approved in August. As pointed out in previous YEAR BOOKS the Hudson Span of 3500 ft., although almost twice as great as that of any bridge yet built, was considered by bridge engineers as simply a step in the evolution of suspension bridges—even longer spans were sure to come if natural and economic conditions demanded them.

The Golden Gate Bridge at San Francisco with its span of 4200 ft. will exceed that of the Hudson Bridge by 700 ft. The U. S. War Department demanded the remarkable channel clearance of 220 ft. which would require the towers, supporting the cables, to be about 740 ft. high—about the height of the Woolworth Building in New York City. Numerous borings for the foundations of this huge structure had been taken and showed depths to rock varying from 80 to over 300 ft. It was evident from these tests that the foundation problem at the Golden Gate was going to be an extremely difficult one—indeed it was possible that some changes in plan might be necessary.

WALDO-HANCOCK BRIDGE. Contract was let late in the summer for a new State highway suspension bridge over the Penobscot River at Bucksport, Me. The span was to be 700 ft. with a channel clearance of 135 ft.

KAIBAB TRAIL BRIDGE. A new suspension bridge, small in size but erected under unusual requirements as to transportation of materials, was completed late in 1929 to replace an old structure where the Kaibab Trail crosses the Colorado River, just above the mouth of Bright Angel Creek, in Grand Canyon National Park. Some 122 tons of material had to be carried down 7½ miles of steep, zigzag pack trail to the canyon bottom where the bridge crosses about 75 ft. above water level. This limited the length of stiffening truss members to 10 ft. and their weight to 200 lbs. The old bridge may be described as a one-mule-and-rider suspension, and, due to strong wind currents in the canyon, frequently swayed dangerously. The new bridge is designed for a continuous load of pack animals with a 40 per cent allowance for impact. The stiffening truss is 440 ft. long and there is but one span; the cables hung from pockets or anchorages cut into the steep sides of the canyon. The main cables weighing one ton each, were carried down to the site on the shoulders of 42 Indians. Special lower "wind cables" were provided to prevent swaying.

ROYAL GORGE SUSPENSION BRIDGE. This 880-foot span, crossing the Royal Gorge of the Arkansas River about six miles west of Canyon City, Colo., was opened in December, 1929. As noted in

the 1929 YEAR BOOK this bridge was the highest in the world. Due to the fact that its deck, only 18 ft. wide, is 1053 ft. above the tracks of the Denver & Rio Grande Western Railroad, supported on the famous hanging bridge in the canyon bottom, tourists have found the crossing a very thrilling experience and have gone out of their way to cross on this structure. In the one month of July last the toll collections exceeded \$20,000. The bridge is unique in that no truss is used to stiffen the floor system. Stay cables under the bridge, similar to those used by Roebling in his famous Niagara suspension, hold the floor down to anchorages in the lower canyon walls and prevent the swaying which might be caused by wind.

CONCRETE BRIDGES. There was apparently considerable activity in this field during the year and a number of notable works were under construction or planned. The opening of the greatest concrete arch bridge in the world at Brest, France, on October 9 has already been noted. Other notable concrete spans completed in 1929 and 1930 include the beautiful Raritan River Bridge, N. J., the Soldiers' and Sailors' Memorial Bridge at Harrisburg, Pa., dedicated on August 22, the Washington multiple arch, 2407 ft. long, over the Seekonk River at Providence, R. I., and the great concrete bridge over the Susquehanna at Columbia, Pa. A bridge of 12 arch spans of 120 ft. also was building over the North Susquehanna River between Wilkes-Barre and Kingston, Pa., and a new bridge, the Cedar Avenue concrete arch, with two main spans at 265½ ft. each, was erected at Minneapolis, Minn.

ROGUE RIVER. In a multiple, open spandrel, reinforced-concrete arch bridge under construction by the Oregon State Highway Commission, the so-called Freyssinet system of arch construction was being used for the first time in America. This well-known French concrete expert had developed methods of construction (see previous YEAR BOOKS) which reduce to a large extent the so-called secondary stresses in concrete-arch construction; those due to the shortening of the arch rib due to temperature changes, shrinking of concrete in setting, river pier movements and the elastic compression of the arch rib. In some cases the stresses caused by these items may be very large and a material saving with increased stability is claimed for this method of construction. The Rogue River bridge consists of seven 230-foot spans, with concrete viaduct approaches and is typical of the many multiple-arch spans which have followed from the highway construction of this motor age.

THE GEORGE WESTINGHOUSE BRIDGE. Contract was let for this work, which was to carry the Lincoln Highway over Turtle Street and the Pennsylvania Railroad freight yards at Pittsburgh, Pa. Named after the famous American financier, inventor, and engineer, it will contain the longest concrete arch span in America. Five arches will span the crossing and the central arch of 420 ft. will exceed by just 20 ft. the present record span—that of the Capellen Memorial Arch at Minneapolis, Minn., built in 1923. See also FOUNDATIONS; CALIFORNIA; LOUISIANA; and NEW YORK, under *Political and Other Events*.

BRIDGES, ROBERT (SEYMOUR). Poet Laureate of England, died in Oxford, Apr. 21, 1930. He was born in Walmer, Isle of Thanet, Oct. 23, 1844, and was educated at Eton and at Corpus Christi College, Oxford. He then studied medicine at St.

Bartholomew's Hospital, London, and in 1867 began practice in London. During the fifteen years that he was active as a physician he was casualty physician at St. Bartholomew's Hospital, assistant physician at the Children's and Great Ormonde Street Hospitals, and physician at the Great Northern Hospital. In 1882 he abandoned medicine and retired to the village of Yattendon near Oxford, where he devoted himself to the writing of poetry and the study of prosody. Six years previously he had published *The Growth of Love*, a noteworthy collection of sonnets. In 1883 appeared *Prometheus, the Fire-Giver*, and in 1885, *Nero*. These tragedies were followed by six other plays: *Palicio*; *Ulysses*; *Christian Captives*; *Achilles in Scyros*; *Humours of the Court*; and *Fest of Bacchus*, all favorably received. *Demeter*, a mask, was written for the undergraduates at Somerville College, Oxford, and was acted by them in 1904. Other works of this period include *Eros and Psyche*, which many critics considered the greatest narrative poem since Keats's *Lamia*, and *Shorter Poems* (1890), in which his unusual talent as an adapter of classical meters to English verse was revealed.

Dr. Bridges succeeded Alfred Austin as Poet Laureate in 1913, his appointment being followed by the publication the next year of *The Poetical Works of Robert Bridges* (excluding the dramas) in one volume. It was not until his elevation to the laureateship that his work found popular appreciation. In 1916 he compiled *The Spirit of Man: An Anthology in English and French*, which, together with *Yattendon Hymnal* and *Ibant Obscuri* (1917), achieved a great effect in raising the morale of the nation during the World War. His collected war poems appeared in *Britannia Victrix* (1919); and *October and Other Poems* (1920). In *The Chiswell Book of English Poetry* (1924) and *New Verse* (1925) he continued his early experiments with quantitative and accentual verse and neo-Miltonic syllables. The crowning event of his career was *The Testament of Beauty* (1920), which won acclaim in every English-speaking country for the beauty of its philosophic conception and its artistic restraint. His critical works include: *Milton's Prosody* (1893); *John Keats, A Critical Essay* (1895); and *The Necessity of Poetry, An Address* (1918). Honorary degrees were conferred on him by Oxford, St. Andrews, Harvard, and Michigan Universities, and in 1923-24 he held the honorary fellowship in creative arts at the University of Michigan. He received the Order of Merit in 1929. His successor as Poet Laureate was John Masefield.

BRIGGS, CLARE A. An American cartoonist, died in New York City, Jan. 3, 1930. He was born in Reedsburg, Wis., Aug. 5, 1875, and studied at the University of Nebraska in 1894-96. In 1896 he became a newspaper artist on the St. Louis *Globe-Democrat* and, in 1898, a cartoonist on the St. Louis *Chronicle*. He was with the New York *World* (1898-99), the New York *Journal* (1900), the Chicago *American and Examiner* (1900-07), the Chicago *Tribune* (1907-14), and, after 1914, with the New York Tribune Syndicate. His cartoons, social in tone and portraying everyday incidents and feelings, were widely appreciated. They included "Skin-nay," "The Days of Real Sport," "When a Feller Needs a Friend," "Ain't It a Grand and Glorious Feeling?" "Mr. and Mrs.," "Somebody Is Always Taking the Joy out of Life," "How to Start the Day Wrong," "There's

at Least One in Every Office," "A Handy Man around the House," "That Guiltiest Feeling." He was also the author of *When a Feller Needs a Friend* (verses by Wilbur D. Nesbit, 1914); *Oh Man* (collection of cartoons, 1919); *How to Draw Cartoons* (1926).

BRIGHAM YOUNG UNIVERSITY. A co-educational institution in Provo, Utah, founded in 1875 and maintained under the auspices of the Church of Jesus Christ of Latter-day Saints. It comprises a graduate school; colleges of arts and sciences, education, commerce, applied science, fine arts; and a division of research and extension. In the 1930 summer session, 461 students were enrolled; the autumn session enrollment was 1200. The faculty numbered 106 members. The library contained 60,000 volumes and 50,000 pamphlets. The budget for the year was \$305,000. President, Franklin Stewart Harris, Ph.D.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE. An association founded in 1831 in York, England, incorporated by Royal Charter in 1928, and composed of 13 sections representing all branches of pure and applied science. The annual meeting for 1930 was held in Bristol, September 3-10, under the presidency of F. O. Bower, Sc.D., LL.D., F.R.S., Regius Professor of Botany at the University of Glasgow. The total membership in attendance was 2639.

At the opening session the president limited his address to his own specialty, the title of his paper being "Size and Form in Plants." The presidential addresses to the sections were as follows: Section A (Mathematics and Physics), "The Theories of Terrestrial Magnetism" by F. E. Smith; Section B (Chemistry), "The Chemical Research Laboratory at Teddington" by Prof. G. T. Morgan; Section C (Geology), "The Geological History of the Bristol Channel Region" by Prof. O. T. Jones; Section D (Zoölogy), "The Taxonomic Outlook in Zoölogy" by Dr. W. T. Calman; Section E (Geography), "The Scope and Aims of Human Geography" by Prof. P. M. Roxby; Section F (Economics), "Rationalization and Technological Unemployment" by Prof. T. E. Gregory; Section G (Engineering), "The Interdependence of the Engineer on the Physiologist, Bacteriologist, Economist, and Financier" by Sir Ernest Moir; Section H (Anthropology), "Evolution in Material Culture" by Dr. H. S. Harrison; Section I (Physiology), "The Synthetic Activities of the Cell" by Prof. H. S. Raper; Section J (Psychology), "Child Psychology" by Prof. C. W. Valentine; Section K (Botany), "Problems in Taxonomic and Economic Botany" by Dr. A. W. Hill; Section L (Education), "A Policy of Higher Education" by Lord Eustace Percy; Section M (Agriculture), "Veterinary Science and Agriculture" by Dr. P. J. Du Toit.

Important discussions at the section meetings included such subjects as the position of the British dye-stuff industry in Section B, to which many well-known industrial chemists contributed, and the relation between past pluvial and glacial periods, which Sections C, E, and H discussed jointly under the chairmanship of Prof. Herbert John Fleure. Considerable interest also was shown in the theory advanced by Dr. P. A. M. Dirac of Cambridge University that the space of the universe is full of electrons of minus or negative energy, and the announcement of Sir Ernest Rutherford regarding the complexity of the form and structure of alpha particles.

The centenary meeting of the British Association for the Advancement of Science was to be held in London, Sept. 23-30, 1931, under the presidency of Lieut.-Gen. the Rt. Hon. Jan C. Smuts, P.C., F.R.S. The other officers elected for 1930-31 were: General secretaries, Prof. J. L. Myres, O.B.E., F.B.A., and Prof. F. J. M. Stratton, D.S.O., O.B.E.; general treasurer, Sir Josiah Stamp, G.B.E.; and secretary O. J. R. Howarth, O.B.E. Headquarters of the association are in Burlington House, London, W. 1, England.

BRITISH COLUMBIA. A Canadian Province on the Pacific Ocean, bounded by Alaska, Yukon, and the Northwest Territories on the north, Alberta on the east, and the State of Washington on the south. Capital, Victoria.

The area is 355,855 square miles and the population was estimated at 597,000 on June 1, 1930 (524,582 at census of 1921). The chief cities, with their estimated populations in 1929, were: Victoria, 67,000 (37,728 at 1921 census); Vancouver, 300,000 (117,217); New Westminster, 18,000 (14,495). In 1928, births totaled 10,312; deaths, 5901; marriages, 4940. In the same year there were 1011 elementary schools, with 91,820 pupils; 76 high schools and 5 junior high schools, with 15,771 pupils; and 31 superior schools, with 588 pupils. The Provincial University had 1741 students in 1928-29 and there were 234 more at Victoria College.

Lumbering, mining, agriculture, manufacturing, and fishing are the principal occupations. Timber land is estimated at more than 100,000,000 acres. The products of forests, mines, farms, and fisheries in 1929 were valued at about \$244,000,000, or \$2,000,000 more than in 1928. The timber cut was 3,346,144,287 board feet, valued at \$93,301,000 (\$93,787,000 in 1928). Mineral production rose to \$68,245,443 (\$64,496,351 in 1928), and the dividends paid by mining companies totaled \$13,743,308. The gross value of mineral production in 1930 was estimated at \$55,164,515, a 19 per cent decline. The 409,369 acres devoted to field crops in 1929 yielded a return of \$20,398,000. The salmon pack in 1930 totaled 1,813,604 cases. The fish catch in 1928, principally salmon but including 305 whales, was valued at \$26,502,727. In the same year the output of manufactures, including the Yukon, totaled \$270,851,000, an increase of 10 per cent over 1927, while in 1929 the industrial payroll of the Province was estimated at \$192,000,000, or nearly \$9,000,000 more than in 1928. Copper, lead, coal, zinc, silver, and gold are the principal minerals produced. In 1928-29, 10,667 sea-going vessels of 12,238,749 tons entered the ports.

For the fiscal year 1928-29, ordinary revenues totaled \$21,094,427 and ordinary expenditures, \$22,825,520 (preliminary figures). The budget for 1930-31 estimated revenues at \$28,115,546 and expenditures at \$28,072,715. In 1930 the Legislature raised the gasoline tax from 3 to 5 cents per Imperial gallon. The gross funded debt on Mar. 31, 1929, was \$97,642,736 and sinking funds totaled \$18,568,711. Government is under a lieutenant-governor and legislative assembly of 48 members elected for five years. In the Dominion Parliament the Province is represented by 6 Senators and 14 members of the House of Commons. Lieutenant-Governor in 1930, Robert R. Bruce; Premier and Minister of Railways, S. F. Tolmie. In the Dominion general election of July 28, 1930, the Province returned 7 Conserva-

tives, 5 Liberals, 1 Laborite, and 1 Independent to the House of Commons. See CANADA.

BRITISH EAST AFRICA. A British possession covering a large area of Africa, and comprising KENYA Colony and Protectorate, UGANDA Protectorate, and ZANZIBAR. See these articles.

BRITISH EMPIRE. An empire consisting of: (1) GREAT BRITAIN and NORTHERN IRELAND. CHANNEL ISLANDS, and ISLES of MAN, (2) THE IRISH FREE STATE, INDIA, and the various British Dominions, Colonies, Protectorates, and Dependencies. See these articles.

BRITISH GUIANA, *gē-ā-nā*. A British colony on the northeastern coast of South America, including the settlements of Berbice, Demerara, and Essequibo; bounded on the east by Dutch Guiana, on the south by Brazil, and on the west by Venezuela. Area, 89,480 square miles; population, according to the census of 1921, 297,691, excluding about 9700 aborigines. Population in 1928, 307,784, including 126,964 East Indians. In the same year births totaled 8702 and deaths, 8575. The capital, Georgetown, had a population of 57,302.

Agriculture is the chief industry, with sugar constituting the principal crop and main source of revenue. Sugar production is about 117,255 tons annually from 50,050 acres. With the price of sugar in 1929 averaging \$57.18 per ton, as compared with \$70.66 in 1928, the colony suffered a severe economic depression in 1930, when the price went even lower (see GREAT BRITAIN under *History*). Other crops are rice, copra, coffee, coconuts, rubber, and limes. The forest area of 78,000 square miles produces timber and balata. Diamonds and gold are leading exports; bauxite, manganese, and mica deposits have been found. In 1929, exports totaled \$12,272,000 (\$14,926,000 in 1928) and imports, \$9,179,475 (\$11,860,000 in 1928). Canada and the United Kingdom were the leading markets. In 1928, revenues totaled £1,185,811 and expenditures, £1,159,139. The public debt (funded) on Jan. 1, 1929, was £2,618,424. Due to the sugar crisis budgetary deficits were considered certain for 1930 and 1931. Vessels entered and clearing the ports of the territory in 1928 numbered 3407, totaling 1,290,119 tons. There are 97 miles of railway, 450 miles of navigable rivers, 39 miles of canals and 427 miles of highway.

The colony is administered by a governor, assisted (since July 18, 1928) by an executive and a legislative council. Governor at the beginning of 1930, Brigadier General Sir Gordon Guggisberg, who was succeeded in June by Sir Edward Brandis Denham, formerly Governor and Commander-in-Chief of Gambia. According to the *London Times Weekly*, of May 15, 1930, the idea of transferring British Guiana to the United States in return for some concession on the American debt was "being freely discussed" in certain British circles.

BRITISH HONDURAS, *hōn-dōo-ras*. A British Crown colony on the Caribbean coast of Central America, east of Guatemala, and 700 miles west of Jamaica; sometimes referred to as Belize. Area, 8598 square miles; population, according to the census of 1921, 45,317; estimated, Jan. 1, 1929, 50,286. Chief town, Belize (population, 1921, 12,661). In 1928 there were 76 primary schools with 7601 pupils and five secondary schools with 544 pupils. The chief pursuits are agriculture and forestry, although only a small

part of the land is cultivated. In the higher lands, good pasturage is to be found.

The principal exports are bananas, mahogany, logwood, and other forest products, plantains, coconuts, and chicle. The bulk of the colony's trade is with the United States. In 1929, the foreign trade totaled \$9,933,548, the largest on record and 16 per cent greater than in 1928. Exports were valued at \$4,876,875 (including re-exports of \$2,951,666) and imports at \$5,056,673. For the fiscal year 1928-29 revenues totaled £213,923; expenditures, £215,406; and the public debt, £363,656. Shipping entering the ports in 1928 totaled 291,451 tons. There are 25 miles of railway. Wireless communication is maintained with New Orleans and Jamaica. Planes used in the daily air mail and passenger service between Miami, Fla., and Cristobal, Canal Zone, stop overnight at Belize. The administration is under a governor assisted by an executive council of six members and a legislative council of six official and seven unofficial members. Governor and Commander-in-Chief in 1930, Sir J. A. Burdon.

BRITISH INDIA. See INDIA.

BRITISH MALAYA. British Malaya includes the Straits Settlements, the Federated Malay States, and the Non-Federated Malay States. The total area is 56,603 square miles; the total population was estimated at 3,864,413 in 1928 (3,358,054 at census of 1921). Three other British protectorates in Malaysia—British North Borneo, Brunei, and Sarawak—are seldom included in the term British Malaya and are never covered by British Malayan statistics. See STRAITS SETTLEMENTS, FEDERATED MALAY STATES, NON-FEDERATED MALAY STATES, BRITISH NORTH BORNEO, BRUNEI, and SARAWAK.

BRITISH NEW GUINEA. See PAPUA.

BRITISH NORTH BORNEO. A British protectorate, comprising the northern part of the island of Borneo. Area, about 31,106 square miles; population, at the census of 1921, 257,804, most of whom were Mohammedan settlers in the coast regions and aborigines in the interior. Europeans numbered only 533. The chief towns are Sandakan, with a population of 11,936, on the east coast, and Jesselton, on the west coast. Statistics of finance and trade for 1928, with figures for 1927 in parentheses, were: Revenue, £453,167 (£454,588); expenditure, £261,370 (£256,440); imports, £1,186,262 (£1,224,705); exports, £1,523,057 (£1,978,596). The territory is under the jurisdiction of the British North Borneo Company and is administered by a governor in Borneo and a board of directors in London. Governor in 1930, A. F. Richards (appointed February, 1930).

BRITISH SOMALILAND. See SOMALILAND, BRITISH.

BRITISH SOUTH AFRICA. See SOUTH AFRICA, UNION OF.

BRITISH WEST AFRICA. The general name given to the following British colonies in West Africa: Nigeria (colony and protectorate); Gambia (colony and protectorate); Gold Coast (comprising the Gold Coast colony, Ashanti, and the Northern Territories); Sierra Leone (colony and protectorate). British mandated territories in Togoland and the Cameroons are included.

BRITISH WEST INDIES. A number of scattered island possessions of the British Empire in the West Indies, including (1) the Bahamas, (2) Jamaica and small adjacent islands, and (3) the islands along the east of the Caribbean Sea and near the coast of South America, in-

cluding the Leeward group, the Windward group, Trinidad, Tobago, and Barbados. See under separate articles.

BROADCASTING. See RADIO.

BROKERS' LOANS. See BANKS AND BANKING.

BROOKINGS INSTITUTION. An organization devoted to public service through research and training in the social sciences; established in Washington, D. C., in 1927. Its purposes are: To aid constructively in the development of sound national policies, and to offer training of a super-graduate character to students of the social sciences. It maintains, as operating units, the Institute of Economics, the Institute for Government Research, and a division of training in which only those who have already received the Ph.D. degree, or an equivalent training, are accepted as research fellows. It also provides headquarters for visiting scholars who come to the national capital to make use of the material available there on economic, political, historic, social, administrative, and legal problems, as found in the library collections and in the records of the various government departments.

By charter provision the investigations of the institution are conducted "without regard to the special interests of any group in the body politic, whether political, social, or economic." During 1930 the following studies were completed: *Porto Rico and Its Problems*; *International Control of Raw Materials*; *Bulgaria's Economic Position*; *Credit Policies of the Federal Reserve System*; *Birth Registration and Birth Statistics in Canada*; *Central Banks and the Control of Credit*; *Post-War Stabilization of Exchanges*; *The League of Nations as a Political Organization*; and *Japan's Economic and Financial Position*, which was undertaken on the invitation of the Finance Minister of Japan. The institution also published the following service monographs of the United States government: *The Forest Service*; *The Plant Quarantine and Control Administration*; *The Bureau of Entomology*; *The Aeronautics Branch, Department of Commerce*; and *The Bureau of Home Economics*.

The institution is supported from endowment funds and annual grants. The board of trustees, a self-perpetuating body, has general responsibility for determining the institution's policies and its programme of work, but does not assume responsibility for each particular investigation, its position in this respect being defined as follows: "The primary function of the trustees is not to express their views upon the scientific investigations conducted by any division of the institution but only to make it possible for such scientific work to be done under the most favorable auspices." The officers of the board of trustees for 1930-31 were: Chairman, Robert S. Brookings, founder of the institution; vice chairman, Leo S. Rowe; treasurer, Frederic A. Delano; and president, Harold G. Moulton. Headquarters are at 722 Jackson Place, Washington, D. C.

BROOKLYN INSTITUTE OF ARTS AND SCIENCES. An institution in Brooklyn, N. Y., composed of four divisions—education, museum of arts and sciences, children's museum, and a botanic garden. It was founded in 1824 and incorporated in its present form in 1890. Membership is open to all who are interested in any branch of science or art. The education division is divided into the following departments, composed of members interested in a particular field: Agriculture,

astronomy, botany, dramatic art, electricity, fine arts, geography, geology, home economics, music, pedagogy, philology, philosophy, photography, physics, political science, psychology, and sociology. These departments conduct courses and sponsor addresses, lectures, and concerts. A forum conducted by the departments of political science and sociology provides for the discussion of current problems. The enrollment in the school of pedagogy in 1930 was 1200, with an attendance at lectures of 284,762. The institute's museums contain collections in the fields of art, ethnology, and natural science; its botanic garden comprises more than 50 acres. Attendance at the museums during the year was 762,005 and at the botanic garden, 1,127,475. The library contained more than 27,000 volumes. In 1930 the permanent funds of the institute amounted to \$3,025,282: the funds to meet current expenses totaled \$876,337. The president of the board of trustees was Edward C. Blum; director of the division of education, Charles D. Atkins; of the museum of arts and sciences, William Henry Fox; of the children's museum, Anna Gallup; and of the botanic garden, C. Stuart Gager. Headquarters are at the Brooklyn Academy of Music, Brooklyn, N. Y.

BROWNE, THE RT. REV. GEORGE FORREST. A British prelate, died in Bexhill, Sussex, June 1, 1930. He was born Dec. 4, 1833, and was educated at St. Catharine's College, Cambridge. On taking orders in 1858, he became chaplain and lecturer of St. Catharine's College, and in 1863 was elected fellow. Two years later he went to Scotland as theological tutor at Trinity College, Glenalmond, and in 1862 was Bell lecturer of the Scottish Episcopal Church. His only pastoral experience was as rector of Ashley, near Newmarket, from 1869 to 1875. In 1869 he also was chosen secretary of the Local Examination Syndicate at Cambridge University, and served two terms as member of the Council of the university's Senate, 1874-78 and 1880-92. As a result of his researches in the field of runic archaeology he was elected Disney professor of archaeology at Cambridge in 1877. These researches were later embodied in *The Ham Crosses* (1889); *The Ancient Cross Shafts of Bewcastle and Ruthwell* (1917); *Antiquities near Dunecht, Aberdeenshire* (1921); and *Dunecht and Birse Titles and Notarial Signs* (1923). In 1891 he was nominated to a canonry of St. Paul's Cathedral, London, and four years later was consecrated Bishop of Stepney. In 1897, on the separation of the bishopric of Bristol from that of Gloucester, he was nominated to the new see and served as Bishop of Bristol until 1914. He was an able organizer and administrator and was especially active in church extension. The D.D. degree was conferred on him by Cambridge and Oxford and the D.C.L. degree by Durham University. In addition to his works on archaeology, he was the author of several volumes on early church history. Among these are: *The Venerable Bede* (1879); *Lessons from Early Church History* (1893); *The Church at Home before Augustine* (1894); *Augustine and His Companions* (1895); *Conversion of the Hierarchy* (1896); *Theodore and Wilfrith* (1897); *Alcuin of York* (1908); *The Venerable Bede, Life and Writings* (1919); and *King Alfred's Books* (1920). He also wrote *Ice Caves of France and Switzerland* (1865); *History of St. Catherine's College* (1902); *The Recollections of a Bishop* (1915).

BROWN UNIVERSITY. An institution of higher education in Providence, R. I.; founded in

1764. In the autumn of 1930, the enrollment was 2282, of whom 332 were graduate students; 1367, undergraduate men; 509, undergraduate women; and 74, school of education students. The faculty had 233 members, including 113 professors, 48 instructors, 61 assistants, and 11 lecturers. Among the new appointees were: Samuel T. Arnold, dean of undergraduate men; Ralph M. Blake, professor of philosophy; Robert B. Lindsay, associate professor of physics; Arlan R. Coolidge, assistant professor of music; and Henry B. Van Hoesen, librarian. The permanent productive funds of the university amounted to \$10,020,274, of which \$9,496,492 was an endowment of the men's college and \$523,782, an endowment of Pembroke, the women's college; the total income from these funds was \$520,844. The library contained 350,000 volumes. The building previously known as Rockefeller Hall, at the request of the donor, John D. Rockefeller, Jr., was to bear the name of Faunce Hall as a memorial to Dr. William H. P. Faunce (q.v.), former president of Brown University. President, Clarence Augustus Barbour, D.D., S.T.D., LL.D.

BRUMBAUGH, MARTIN GROVE. An American educator and former governor, died in Pinehurst, N. C., Mar. 14, 1930. He was born in Huntingdon Co., Pa., Apr. 14, 1862, and was graduated from Juniata College in Huntingdon, Pa., with the B.E. degree in 1881, receiving there in 1883 the M.E. degree and subsequently the B.S. and M.S. degrees. He received from the University of Pennsylvania the A.M. degree in 1894 and the Ph.D. degree in 1895. From 1884 to 1890, he was superintendent of schools in Huntingdon Co., and at the same time State conductor for the teachers' institutes of Louisiana (1886-91). He was president of Juniata College from 1895 to 1906, and, meanwhile was also professor of pedagogy at the University of Pennsylvania (1895-1900 and 1902-06), and first commissioner of education in Porto Rico (1900-02). From 1906 to 1915, he was superintendent of public schools in Philadelphia, following which he was governor of Pennsylvania until 1919. From 1924 until his death, he was again president of Juniata College. He wrote *History of the Brethren; Juniata Bible Lectures; Standard Readers* (5 vols.); *Stories of Pennsylvania and Liberty Bell Leaflets* (with J. S. Walton); *Life and Works of Christopher Dock*; and *Story of Roosevelt*. He edited the *Lippincott Educational Series*.

BRUNEL, brōō-nī'. A British protectorate on the northwestern coast of the island of Borneo. Area, about 2500 square miles; population at census of 1921, 25,454 (35 Europeans). Brunei, the chief town, has about 12,000 inhabitants. Mangrove extract, rubber, coal, sago, and jelutong are the chief products. In 1928, revenue totaled £41,389; expenditure, £40,134; and the public debt (on Dec. 31, 1928), £48,183. Sultan in 1930, Ahmed Tajudin Akluzul Khairi Waddin, a minor, who receives an annual allowance of £1400 from State funds. Government is administered by the British resident. Resident in 1930, R. J. F. Curtis.

BRUSSELS. See EXPOSITIONS.

BRYN MAWR COLLEGE. An institution for the higher education of women in Bryn Mawr, Pa.; founded in 1880. The enrollment for the autumn of 1930 totaled 500. The teaching staff numbered 82. The productive funds of the college amounted to \$6,678,000 in the autumn of 1930, and the income for the year 1929-30 was \$946,-

501. The number of volumes in the library was 134,000. President, Marion Edwards Park, Ph.D., LL.D.

BUCKNELL UNIVERSITY. A coeducational Baptist institution of higher learning in Lewisburg, Pa.; founded in 1846 under the name of University of Lewisburg but renamed in 1886 in honor of its benefactor, William Bucknell. In the autumn of 1930 the enrollment was 1173, of whom 766 were men and 407 women. Of the 442 students enrolled in the summer session of 1930, 241 were men and 201 were women. The faculty numbered 71. The productive funds amounted to \$1,700,000 and the income for the year was \$700,000. The library contained 55,000 bound volumes. President, Emory W. Hunt, D.D., LL.D., D.C.L.

BUCKWHEAT. Estimates of the Department of Agriculture placed the buckwheat production of the United States in 1930 at 8,975,000 bushels, being 2,499,000 bushels below the yield in 1929 and the smallest crop since 1883. The area harvested, 658,000 acres, 10 per cent below the small acreage of 729,000 acres of the previous year, was the smallest in 30 years. The average yield per acre was only 13.6 bushels or 2.1 bushels lower than the average acre yield of the preceding year and the lowest in 42 years. The crop was severely injured by drought in practically all sections where it was grown and among the food grains buckwheat was the only one in which the supply was seriously short. The quality also was lower than in 1929 and below the average for the 10 years 1919-1928. Although the crop was so short buckwheat sold on the farm on December 1, 1930, for an average price of 84.5 cents per bushel as compared with 95 cents the year before and less than the average price of recent years. At these prices the total farm value of the 1930 crop was \$7,588,000 and of the 1929 crop \$11,210,000.

The yields in the more important buckwheat producing states were estimated as follows: New York, 3,465,000 bushels; Pennsylvania, 2,488,000 bushels; Minnesota, 532,000 bushels; Ohio, 432,000 bushels; and West Virginia, 390,000 bushels. The average yields for these States were 16.5, 12.5, 9.5, 16 and 13 bushels per acre. Among the 23 States reporting buckwheat production, all east of the Rocky Mountains, Maine led in average yield per acre with 23 bushels and North Dakota stood last with 4 bushels. Michigan with a crop of 405,000 bushels in the previous year produced only 143,000 bushels in 1930 on an area reduced from 45,000 acres in 1929 to 22,000 acres with an average yield of 6.5 bushels per acre.

During the year ended June 30, 1930, the United States exported only 22,000 bushels of buckwheat valued at \$25,000 as compared with 229,000 bushels with a value of \$254,000 the year before. The imports during this period amounted to 8,180,000 pounds valued at \$154,000 while in the preceding fiscal year 3,633,000 pounds were shipped into the country.

BUENOS AIRES. See CELEBRATIONS.

BUFFALO, THE UNIVERSITY OF. A coeducational institution of higher learning in Buffalo, N. Y.; founded in 1846 under a charter received from the State Legislature. The enrollment for the autumn of 1930 was distributed as follows: College of arts and sciences, 779; school of law, 235; school of dentistry, 121; school of medicine, 273; school of pharmacy, 151; school of business

administration, 212; evening session, 1702. The enrollment for the 1930 summer session was 942. The faculty numbered 448, including 57 new appointees. The income for the year 1929-30, exclusive of gifts, amounted to \$904,526, while the endowment fund balance as of June 30, 1930, was \$4,633,947. The library contained 72,000 volumes and 61,000 pamphlets. President, Samuel P. Capen, Ph.D., L.H.D., Sc.D., LL.D.

BUILDING. According to *Bradstreet's* annual summary, the total value of the building permitted for in 1930 at 215 cities of the United States was \$1,671,403,078, as against \$2,913,131,600 in 1929, a decrease of 42.6 per cent. Of this, New York City furnished a total of \$408,741,972, as against \$944,366,782 in 1929, a decrease of 56.7 per cent, whereas the other 214 cities aggregate in 1930 was \$1,262,661,106, as against \$1,968,764,818 in 1929, a decrease of 35.8 per cent. The accompanying table gives the aggregates by groups of cities in 1930 and 1929, with the percentages of decrease noted. Aside from the decreases in the New England, Middle Atlantic, and Central Western groups, ranging from 34.2 to 52.5 per cent, shown in the table, the decreases in the various groups range in the neighborhood of 22 to 27 per cent.

Attention is called by *Bradstreet's* to the fact that the 1930 building permitted for, was the lightest since 1921, but the 1930 total, \$1,671,403,078, was much below the acreage of the expenditures since 1918, \$2,508,000,000, and it was considered a fair inference that just as the 1917 and 1918 totals reflected war-year conditions, so the heavily reduced total of 1930 likewise reflected below normal building, which might be expected to expand during the following year, favored as it would be by easier money, which was so conspicuously lacking in the year 1929.

BUILDING PERMITS IN THE UNITED STATES 1929-1930

[From *Bradstreet's*]

| | Twelve months | | Change, per cent |
|-------------------------------------|---------------|---------------|---------------------|
| | 1930 | 1929 | |
| New England . . . | \$126,347,639 | \$192,258,903 | D 34.2 |
| Middle Atlantic . . | 681,252,636 | 1,329,627,159 | D 52.5 |
| Central Western . . | 297,544,527 | 573,998,681 | D 48.1 |
| Northwestern . . . | 92,914,264 | 119,486,977 | D 22.2 |
| Southwestern . . . | 148,224,363 | 194,732,447 | D 23.8 |
| Southern | 150,057,682 | 206,560,005 | D 27.3 |
| Pacific and Moun- tain | 225,061,967 | 296,467,428 | D 24.1 |
| Total U. S. . . . | 1,671,403,078 | 2,913,131,600 | D 42.6 |
| New York City . . | 408,741,972 | 944,366,782 | D 56.7 |
| Outside N. Y. . . | 1,262,661,106 | 1,968,764,818 | D 35.8 |
| Canada | 128,428,110 | 182,169,795 | D 29.4 |

For the purpose of giving a precise measure of building activities over a period of years, the following table showing the aggregate expenditures at 120 identical cities since 1909 will be found interesting:

BUILDING EXPENDITURES SINCE 1909

| | | | |
|------------|---------------|------------|-----------------|
| 1909 . . . | \$888,114,741 | 1920 . . . | \$1,234,082,696 |
| 1910 . . . | 846,991,622 | 1921 . . . | 1,462,752,811 |
| 1911 . . . | 824,147,884 | 1922 . . . | 2,288,408,624 |
| 1912 . . . | 879,094,308 | 1923 . . . | 2,831,366,000 |
| 1913 . . . | 814,509,360 | 1924 . . . | 2,936,714,639 |
| 1914 . . . | 728,801,072 | 1925 . . . | 3,398,585,693 |
| 1915 . . . | 763,343,811 | 1926 . . . | 3,227,185,543 |
| 1916 . . . | 919,435,203 | 1927 . . . | 2,870,618,674 |
| 1917 . . . | 633,483,813 | 1928 . . . | 2,794,229,539 |
| 1918 . . . | 372,793,978 | 1929 . . . | 2,484,225,535 |
| 1919 . . . | 1,172,864,155 | 1930 . . . | 1,407,333,518 |

The 1930 construction value in the United States, according to the F. W. Dodge Corporation's review of building and engineering activity, showed a distinct decline in the value of contracts awarded in 37 States east of the Rocky Mountains, the total for the year being \$4,523,114,600, as compared with \$5,754,291,000 in 1929, \$6,628,286,000 in 1928, \$6,303,058,000 in 1927, \$6,380,915,000 in 1926, and \$6,006,426,000 in 1925. The totals for the various projects are included in the following table.

BUILDING IN THE UNITED STATES DURING 1930
[Returns from F. W. Dodge Corporation Review for 37 Eastern States]

| Classification | Totals for contemplated construction | | Yearly totals of contracts awarded | | |
|---|--------------------------------------|-----------------|------------------------------------|------------------------|-----------------|
| | No. of projects | Valuation | No. of projects | Sq. ft. of floor space | Valuation |
| Commercial buildings | 26,677 | \$ 854,189,600 | 22,598 | 91,852,600 | \$ 628,809,500 |
| Industrial buildings | 6,351 | 1,066,438,500 | 5,223 | 53,163,600 | 459,942,600 |
| Educational buildings | 6,043 | 480,187,900 | 4,771 | 58,550,300 | 376,051,200 |
| Hospitals | 1,587 | 261,238,100 | 1,221 | 19,120,000 | 163,120,600 |
| Public buildings | 2,123 | 256,928,800 | 1,477 | 17,023,700 | 139,814,600 |
| Religious and memorial buildings | 2,535 | 135,502,900 | 2,044 | 10,862,300 | 92,837,100 |
| Social and recreational buildings | 3,669 | 227,052,900 | 2,551 | 14,606,000 | 113,298,400 |
| Residential buildings | 83,190 | 1,641,372,700 | 74,713 | 230,039,300 | 1,101,312,500 |
| Public works and public utilities | 27,585 | 3,358,001,500 | 20,671 | 9,164,000 | 1,447,928,100 |
| Total construction | 159,760 | \$8,281,012,900 | 135,269 | 510,381,800 | \$4,523,114,600 |

The summaries of construction of the *Engineering News-Record* (New York) gave a total value of all construction in the United States in three years as follows: \$10,000,000,000 in 1928; \$9,130,000,000 in 1929; \$6,525,000, in 1930. After the record year 1928 the 9 per cent drop in 1929 was the result of a 31 per cent fall in residential building volume. The 30 per cent drop in 1930 was due to a further fall of 42 per cent in residential building and a fall of 24 per cent in other construction.

The only important component recording an increase was public-works construction. This component in 1928 and 1929 amounted to 36 and 37 per cent respectively, of all construction. In 1930, however, due to the building decline, public works totaled 53 per cent, though the increase over 1929 was only 3 per cent. The engineering construction component, including the larger structures of

all classes, dropped 20 per cent, due to the slump in building. This component, which amounted to 36 and 43 per cent of all construction in 1928 and 1929, totaled 49 per cent in 1930. The accompanying tabulation gives values in millions of dollars by classes and geographic sections for 1930 and 1929, and the average for six years. See ARCHITECTURE and FOUNDATIONS.

BUILDINGS WELDED. See BRIDGES.

BULGARIA. A constitutional monarchy in the Balkans lying to the south of Rumania and the east of Yugoslavia. Capital, Sofia; reigning King in 1930, Boris III, who succeeded to the throne upon the abdication of his father, Oct. 3, 1918.

AREA AND POPULATION. As a result of the World War, the area of Bulgaria was reduced from 53,305 to 39,814 square miles. The population according to the census of 1926 was 5,483,125, as compared with the actual population according to the census of 1920, of 4,846,971. The estimated population on Jan. 1, 1929, was 5,713,200. In 1928, there were 185,026 births, 98,658 deaths and 55,896 marriages. The chief cities, with their populations at the 1926 census, are: Sofia, 213,002; Philippopolis (Plovdiv), 84,655; Varna, 60,563; Ruschuk, 45,788; Slivno, 29,263.

EDUCATION. There is free and compulsory primary instruction for children between the ages of 7 and 14 years. In 1927-28, there were 4293 national primary schools, with 438,538 pupils; 1357 private elementary schools, with 65,781 pupils; 1361 national pro-gymnasias, with 142,179 students; 85 national gymnasias, with 25,224 students; and 176 national professional and domestic economy schools, with 16,332 students. The State University at Sofia had 299 teachers and 3780 students in 1928-29. There was also a free private university, with 2241 students.

PRODUCTION. Agriculture engages nearly 80 per cent of the population, the ownership of the land being widely distributed in small plots of from one to six acres. Of the total area of 25,786,550 acres, about 9,182,409 acres were cultivated in 1929, and the forest area totaled 7,203,160 acres. Methods of cultivation are primitive, although some modern machinery is being introduced. Agricultural yields in 1929 compared favorably with the previous year, but the lower prices adversely affected farm purchasing power. The chief crops, with the yield in metric tons for 1929, were: Wheat, 901,937; corn, 916,000; barley, 234,000; rye, 196,000; oats, 150,000; maslin, 92,000; millet, 34,000; sugar beets, 257,000; and sunflower, 66,060. The tobacco crop was estimated at 55,

054,000 pounds. The output of raw silk cocoons was 2389 metric tons; of rose leaves, 6000 metric tons; and of attar of roses, 2000 kilos.

The leading industries are tobacco, textiles, foodstuffs, metal, pottery, and woodworking. The production of manufactured tobacco, the leading state monopoly, amounted to 4920 metric tons in 1929, refined-sugar production to 35,880 metric tons, and coal production to 1,667,080 metric tons. Copper, lead, zinc, aluminium, and salt are other mineral products.

COMMERCE. Imports exceeded exports for the second consecutive year in 1929, the excess of imports totaling 1,892,000,000 leva (1 lev exchanged at \$0.0072), as compared with 808,000,000 leva in 1928. The import total was 8,288,000,000 leva (\$59,839,000), as against 7,041,000,000 leva (\$50,765,000) in 1928. Exports amounted to 6,396,000,000 leva (\$46,177,000), as compared with 6,231,000,000 (\$44,937,000) in 1928. The chief import items in 1929 were textiles, metals and their manufactures, machines and implements, and wood and its manufactures. Shipments of tobacco, the chief export commodity, were valued at 2,896,000,000 leva (\$20,222,000). Other leading exports were eggs, corn, skins, hides and furs, attar of roses, silk cocoons, and livestock. Germany furnished 22.2 per cent of the imports (21.2 in 1928); Italy, 10.8 (15.2); Czechoslovakia, 9 (10.7); United Kingdom, 8.8 (10.4); France, 8.2 (7.7); and Austria, 7.7 (8.1). Of the exports, Germany took 29.9 per cent (27.9 in 1928); Austria, 12.5 (15.3); Italy, 10.5 (11); and Poland, 8.5 (4.6). Imports from the United States increased to 271,900,000 leva (\$1,963,000), while exports to that country amounted to 107,014,000 leva (\$772,640).

FINANCE. Estimated budget receipts for the fiscal year ended Mar. 31, 1930, were 6,740,150,000 leva (7,569,905,000 leva in 1928-29) and estimated expenditures were 6,752,820,000 leva (7,481,513,000 leva in 1928-29). The chief item of expenditure was the sum of 2,106,500,000 leva set aside for the service of the public debt. Next in importance was an appropriation of 1,214,282,000 leva for the Ministry of War. The railroad budget is kept separate. Estimates for 1930-31 were: Revenues, 6,918,000,000 leva; expenditures, 6,436,000,000 leva.

The public debt on Oct. 31, 1929, totaled 1,518,744,490 gold francs, or 40,742,319,640 leva, according to the Ministry of Finance (39,970,000,000 leva on Jan. 1, 1929). As a result of reparation negotiations held at The Hague and at Paris early in 1930, Bulgaria's annual reparation payments were reduced from 13,000,000 gold francs (1 gold franc equaled \$0.193) to 11,500,000 gold francs, payable for 37 years. To meet the extraordinary expenses incurred as a result of the earthquakes early in 1929, the reparation payments for that year were cut in half.

COMMUNICATIONS. Freight traffic on Bulgarian railways increased to 362,000 carloads in 1929, as compared with 330,000 in 1928. There were 1728 miles of railway line in operation in 1929, all state owned, and 602 additional miles were under construction. In 1930, Bulgaria had 9576 miles of state highways, most of which was surfaced with crushed rock, and 46,500 miles of dirt roads. The appropriation for road construction and maintenance in 1930-31 was \$6,588,000. In 1929, 336 miles of highway were constructed, of which 335 miles were macadam.

Ships calling in 1929 at the Black Sea port of

Varna totaled 365 vessels of 632,310 tons (357 vessels of 609,656 tons in 1928); at Burgas, 435 vessels of 742,410 tons (440 of 746,687 tons in 1928). Shipping at the Danube ports in 1929 showed a slight increase over the previous year, totaling 9105 ships or lighters of 1,935,388 registered tons.

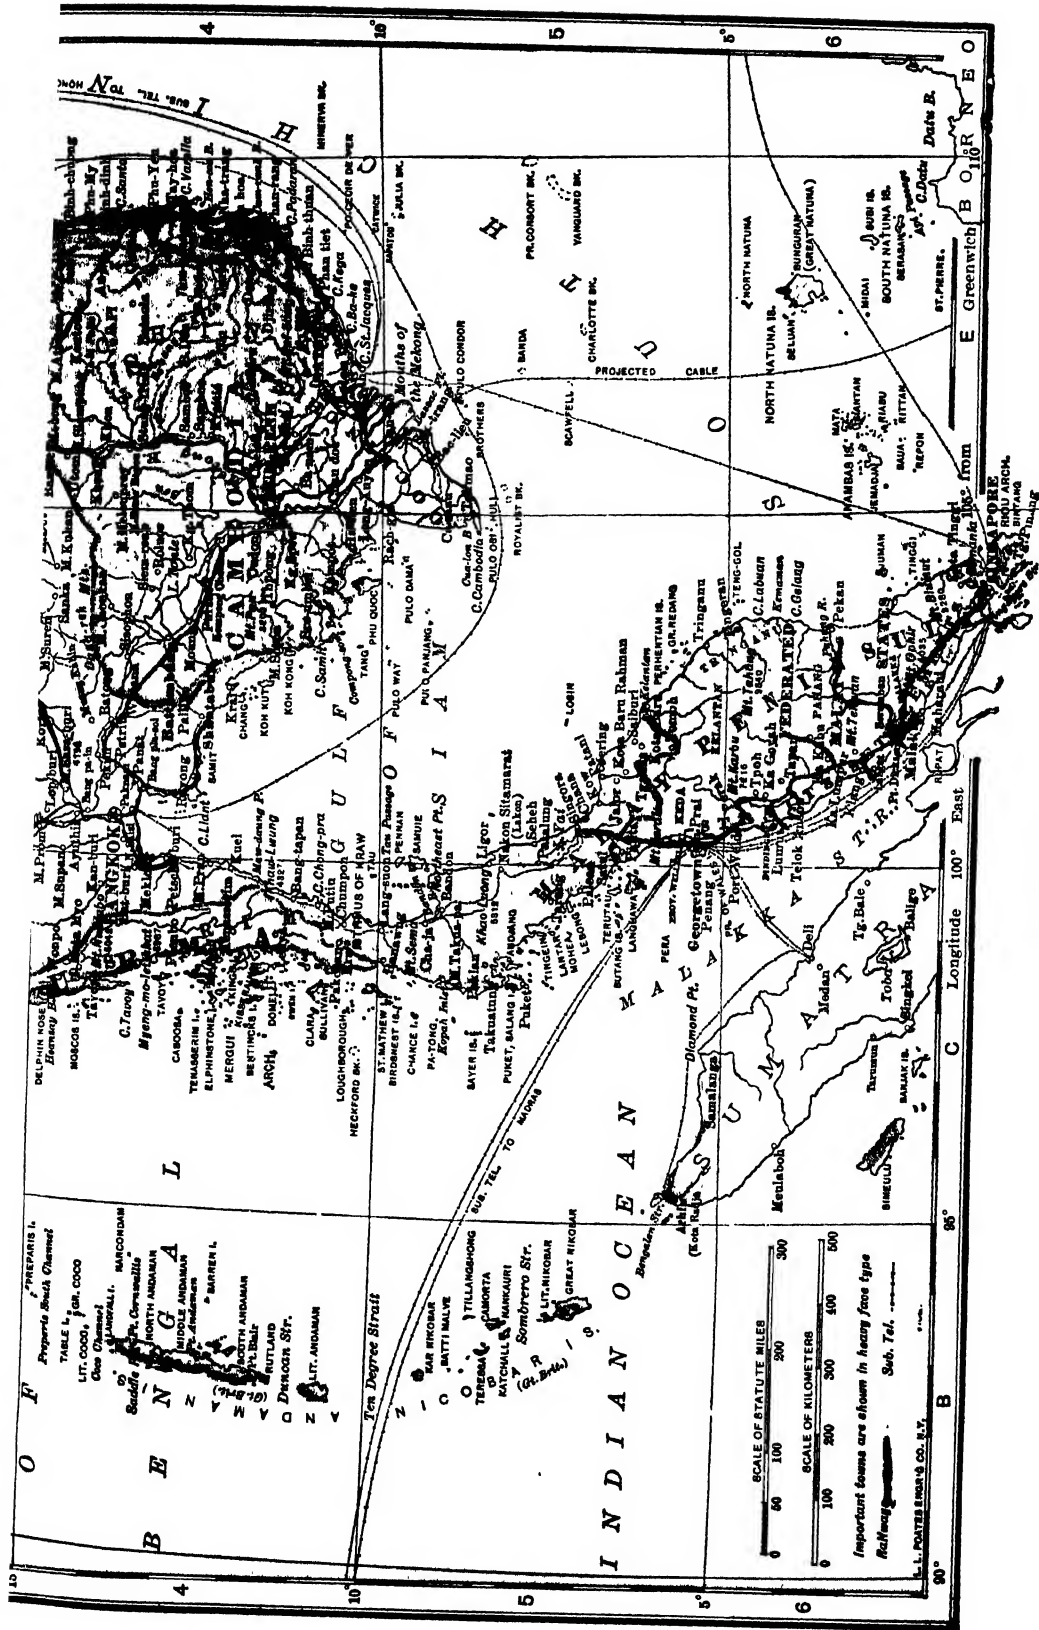

GOVERNMENT. The King is the head of the government, assisted by a council of ministers, nominated by him and a single legislative chamber, known as the Sobranie, composed of 273 members. The parties in the Sobranie, elected in May, 1927, contained the following party groups: Government Coalition, 168; Agrarians, 48; Macedonian Independents, 11; National Liberals, 14; Democrats, 12; Radicals, 2; Social Democrats, 10; others, 8. The ministry as organized Sept. 12, 1928, was as follows: Premier and Minister of Interior, André Liaptcheff; Minister of Education, Nicholas Naidenoff; Justice, Dr. Theodore Kuleff; Commerce, M. Tzvetco Bobotchevsky; Finance, Vladimir Molloff; Public Works, Slavico Vassileff; Posts and Railways, R. Madjaroff; Foreign Affairs, Athanas Buroff; Agriculture, Dimitri Christoff; War, General Bakardjief (Jan. 11, 1929).

HISTORY. The reorganization of Premier André Liaptcheff's Cabinet for the second time since it assumed office Jan. 4, 1926, occurred May 15, 1930, following long and stormy negotiations between the two factions in the government party, or Democratic Entente, headed by the Premier and his chief rival, Professor A. Tsankoff. Tsankoff, the Speaker of the Sobranie and a former Premier, secured minor posts on the Cabinet for himself and two of his followers. The Ministers of Foreign Affairs and Finances remained unchanged. The new Cabinet was constituted as follows: Premier, André Liaptcheff; Foreign Affairs, Athanas Buroff; Finances, Vladimir Molloff; War, General Bakardjief; Education, A. Tsankoff; Agriculture, M. Vassileff; Posts and Railways, M. Soljoff; Justice, M. Milanoff; Trade, M. Mischaikoff; Public Works, George Danailoff.

The entrance into the Cabinet of Professor Tsankoff, one of the most powerful figures in Bulgaria, had two important repercussions. It powerfully stimulated peasant discontent, already widespread as a result of the agricultural crisis, and led the government to challenge the power of the Imro, the secret Macedonian revolutionary organization, which heretofore had pursued its programme of assassination and terrorism in Serb-Macedonia with the more or less tacit support of the Bulgarian government. The peasants held Tsankoff responsible for the assassination of the peasant Premier Stambulisky in 1923 and the subsequent extermination of 25,000 members of the Agrarian party.

Tsankoff's insistence upon the stern repression of the Imro's activities, together with pressure exerted by Great Britain, and France, forced the government on July 18 to order the arrest of Ivan Mihailoff, leader of the terrorist wing of the Imro, and three associates. They were charged with responsibility for the murder on Mar. 4, 1930, of Vassil Poundeff, a Sofia journalist affiliated with the anti-Mihailoff faction of the Imro. Tsankoff was the sworn enemy of Mihailoff, whose agents in June, 1928, assassinated in Sofia Tsankoff's close friend, General Protogueroff, leader of the pacifist section of the Imro. Tsankoff had persuaded General Protogueroff to aban-

don the Imro's terroristic methods in favor of peaceful propaganda for Macedonian autonomy. Mihailoff openly acknowledged his responsibility for Protogueroff's execution and challenged the government to proceed against him. The Ministry, aware that the majority of Bulgarians and of the Sobranje sympathized with the Imro leader, hesitated to act until the return of Tsankoff. Mihailoff and one of his associates, Topukoff, were acquitted for lack of evidence on November 25. The other two defendants, Medaroff and Stanenkoff, were found guilty of Poundeff's murder and sentenced to 15 years' imprisonment. It was the first time a Macedonian feud murder led to a trial in the Bulgarian courts.

The Democratic Entente (Government party) registered an overwhelming victory in the municipal and country elections held Feb. 16, 1930. The voting was marked by disorders in several towns, and the Agrarians, or chief Opposition party, charged that the government used the gendarmerie to coerce the voters. The political unrest in the country was attributed to the "definitely critical" economic condition of Eastern agrarian Europe by Finance Minister Molloff in addressing the League of Nations Assembly Oct. 2, 1930. He said Bulgarian rural communities were unable to export their crops, their purchasing power had been reduced, and that in despair of improving their condition, many peasants were moving to the towns and cities. Government coalition candidates were defeated by Opposition coalition candidates in the majority of the local elections held November 9. The results raised hopes that the Right coalition, in power since 1923, would be overthrown at general elections scheduled for the spring of 1931.

MARRIAGE OF KING BORIS. With the dispensation of the Pope, King Boris III of Bulgaria and Princess Giovanna of Italy were married in the great basilica of St. Francis at Assisi, Italy, on Oct. 25, 1930, their betrothal having been announced in Rome, October 3. It was announced that the Vatican's dispensation had been granted only after both King Boris and Princess Giovanna had signed a written promise to baptize and educate all their children in the Roman Catholic faith. Thus the religious difficulty which had balked previous efforts of King Boris to arrange the marriage was met through the King's decision to ignore the traditional view of Bulgarian jurists that the Crown Prince must be baptized in the Greek Orthodox Church. Article 38 of the Bulgarian Constitution provides that the King must be a communicant of the Greek Church, but no such provision is made regarding the Crown Prince.

Orthodox clerical circles in Sofia showed disappointment when the religious ceremonies attending the arrival of the King and his bride consisted only of a registration and blessing, rather than a wedding. The Orthodox Metropolitan's speech of welcome included the significant sentence: "Now that a foundation has been laid for an Orthodox dynasty, the Bulgarian people will hope, with God's help, for unity, happiness, and prosperity." There were rumors that Boris had secretly returned to the Catholic faith, in which he was originally baptized previous to his father's profession of the Orthodox faith.

The union of the Bulgarian and Italian dynasties was widely regarded as an important move in Italy's policy of uniting the nations defeated in the World War in opposition to France and her

allies of the Little Entente. See ITALY, FRANCE, and JUGOSLAVIA, under *History*; also *REPARATIONS*.

BURIAT-MONGOL REPUBLIC. See *SIBERIA*, and *RUSSIA*.

BURMA. The largest and most easterly province of British India; since 1923, a governor's province under the Government of India Act of 1919. Area, 262,732 square miles; population (1921), 13,212,192. Rangoon, with a population of 345,505, is the capital. Mandalay, with 148,917 inhabitants, is the second city in size.

In 1927-28 there were 478,441 students in recognized schools and colleges and 197,441 in unrecognized institutions. Agriculture is the main occupation, supporting over 9,000,000 persons in 1930. Industry consists mainly in the preparation of agricultural and forest products for market, such as rice and lumber milling, oil refining, and cotton ginning. Factories of all kinds in 1927 numbered 967 and employed 101,586 persons. Rice is the principal crop, to which two-thirds of the cultivable area is devoted. Burma's mineral resources are important, tin, tungsten ore, and silver being mined commercially. The oil production in 1929 reached 262,000,000 gallons, valued at \$17,850,000. Teak production in 1928 approximated 341,963 tons from reserved forests alone. In 1929, imports from the remainder of India and foreign countries totaled \$131,474,000; exports, \$234,559,000.

Revised estimates for the fiscal year 1928-29 placed Government revenues at 1050 lakhs and expenditures at 1170 lakhs (1 lakh equals 100,000 rupees, or \$36,500 at par). The total sea-borne trade in 1927-28 totaled 113,600 lakhs. The railways of the province, extending 1930 miles in 1929, were taken over by the Government of India in January of that year. There were 1522 miles of surfaced roads, 7789 miles of unsurfaced roads, and 60 miles of canals, besides 1200 miles of navigable rivers. The Government is administered by a governor and a legislative council of 103 members, 80 of whom are elected and 23 nominated and *ex-officio*. Governor in 1930, Sir Charles Alexander Innes.

HISTORY. Friction between Burmese and Indian dock laborers in Rangoon led to rioting on May 26, 1930, which continued for several days, with the loss of several score lives and numerous injuries. Troops were required to restore order. An agitation for separation of Burma from India and for greater autonomy showed some evidences of developing. Separation from India was recommended on Dec. 9, 1930, to the Round Table Conference on India and accepted in principle by the MacDonald Government. The form of the new Burmese government was to be worked out at another conference between British and Burmese delegates. A native uprising occurred in the Tharrawaddy district of Southern Burma on Dec. 22, 1930. A number of armed clashes with British troops were reported before the end of the year.

Burma was shaken by a severe earthquake on May 5, the loss of life from the shock and the accompanying tidal wave which swept the Sittang river being estimated at over 2000. In Rangoon and Pegu, 58 miles north of the capital, there were numerous deaths and many Government and religious buildings were destroyed. See *EARTHQUAKES AND INDIA* under *History*.

BUSINESS REVIEW. The year 1930 was from a business standpoint a period of fairly

steady downward movement. Business had received a severe shock at the time of the panic and had undergone considerable recession before the close of 1929. It was believed at the opening of 1930, that this loss would speedily be recovered and a committee of business leaders formed by President Hoover for the purpose of keeping the community fully informed, issued statements from time to time tending to prove that recovery was in progress.

Later information showed that these outgivings were based upon an insufficient body of data. It was true, as the indexes of industrial production hereinafter cited, established, that the early months of the year were considerably better than the later ones, but they were far from good as compared with the corresponding months a year earlier. From April onward, steady declines set in and continued until the end of the year at which time practically all business indexes agreed in the view that there had been a loss of about 25—35 per cent below normal. The recession was especially rapid during the late autumn. Freight carloadings had been rather unsatisfactory from the beginning of the year and they continued to fall off heavily as the summer advanced, due to the steady decline of export trade and the shrinkage of demand for manufactures for home consumption. Building contracts which had occasionally shown some sporadic improvement during the latter part of the year receded definitely.

The accompanying table furnishes a review of industrial production and illustrates the generalizations just set forth.

INDEX OF INDUSTRIAL PRODUCTION

[Index numbers, adjusted for seasonal variations
1923-1925 average=100]

| Month | 1923 | 1924 | 1925 | 1926 | 1927 | 1928 | 1929 | 1930 |
|---------------|------|------|------|------|------|------|------|------|
| January ... | 100 | 100 | 105 | 106 | 107 | 106 | 117 | 102 |
| February ... | 100 | 102 | 105 | 107 | 109 | 109 | 117 | 110 |
| March ... | 103 | 100 | 104 | 107 | 111 | 109 | 119 | 109 |
| April ... | 107 | 95 | 103 | 107 | 109 | 109 | 122 | 110 |
| May ... | 107 | 89 | 103 | 106 | 111 | 109 | 123 | 106 |
| June ... | 105 | 85 | 102 | 107 | 108 | 108 | 126 | 99 |
| July ... | 103 | 83 | 103 | 107 | 106 | 109 | 124 | 89 |
| August ... | 102 | 89 | 103 | 111 | 107 | 112 | 123 | 88 |
| September ... | 100 | 94 | 102 | 112 | 105 | 114 | 121 | 91 |
| October ... | 99 | 94 | 105 | 111 | 103 | 114 | 117 | 87 |
| November ... | 97 | 97 | 106 | 108 | 99 | 112 | 106 | 83 |
| December ... | 96 | 101 | 108 | 105 | 99 | 113 | 99 | .. |
| Annual index | 101 | 95 | 104 | 108 | 106 | 111 | 119 | .. |

The downward movement which had thus been evident in manufacturing and transportation was also manifest, though not so markedly, in distribution. Chain store returns held up fairly well during the fore part of the year; while in those other retail enterprises which were willing to cut prices, fairly good results were reported for a much longer period. Nearly all businesses fell off in the volume of their transactions toward autumn. The month of December brought revival with an unexpectedly good Christmas trade, which in some of the centres was only 5 per cent below the preceding year. In other parts of the country, however, holiday trade was very much less prosperous. Employment was relatively poor at the beginning of the year and became worse as the season advanced. There are no general, trustworthy employment figures for the United States, but the best estimates placed the number out of work at the close of the year as between 4,000,000 and 5,000,000 persons. See UNEMPLOYMENT.

COMMODITY PRICES. Commodity prices at the middle of 1929 were still regarded as very stable.

Just after the panic had ended its first paroxysm there were minor recessions which most persons regarded as temporary. At the close of the year 1929, the average level was 94.2 or only 3 points below the figure registered for January. With the opening of 1930, however, the average level began to recede still further, weakness making itself felt in many directions. Moreover, in many special lines the existence of very great overstocks made it a foregone conclusion that a sharp recession of prices would be unavoidable. Copper prices broke sharply at the beginning of spring, and this recession was followed by similar losses in almost all nonferrous metals. Steel and iron prices finally suffered in the same way, and after May, the decline was fairly continuous up to the end of the year, at which time the total net loss was about 15 points.

Analysis of the various groups of prices shows that there was very great difference among the rates at which the different classes of commodities lost ground. The accompanying table shows the actual index numbers for all commodities with comparative figures for preceding years.

MOVEMENT OF WHOLESALE PRICES

| | 1926 | 1927 | 1928 | 1929 | 1930 |
|----------------|------|------|-------|------|------|
| January | 97.0 | 96.3 | 97.2 | 93.0 | 93.0 |
| February | 102 | 96.0 | 96.4 | 96.7 | 92.0 |
| March | 100 | 95.0 | 96.0 | 92.5 | 91.0 |
| April | 100 | 94.0 | 97.4 | 96.8 | 91.0 |
| May | 101 | 94.0 | 98.6 | 95.8 | 89.0 |
| June | 101 | 94.0 | 97.6 | 96.4 | 87.0 |
| July | 100 | 94.0 | 98.3 | 98.0 | 84.0 |
| August | 99 | 95.0 | 99.8 | 97.7 | 84.0 |
| September ... | 100 | 97.0 | 100.1 | 97.5 | 84.0 |
| October | 99 | 97.0 | 97.8 | 96.3 | 83.0 |
| November | 98 | 96.7 | 96.7 | 94.4 | 80.4 |
| December | 98 | 96.8 | 96.7 | 94.2 | 78.4 |

Taking the year as a whole, the weakest items were those in which price fixing agreements had been most general. This included most of the raw materials, such as metals, lumber, and the like, the food stuffs, particularly grains, and in a lesser degree textile products. Highly-manufactured goods showed substantial resistance to pressure and appeared able to maintain themselves, in a good many cases, partly because of the continuance of understandings among producers; but partly also because of the belief on the part of sellers that they would not appreciably broaden demand under existing conditions by cutting prices. This was an erroneous view as circumstances showed, but it accounted for the failure of a good many groups of retail prices to readjust themselves. Price cutting was not so prominent a feature of the year as it had been of the preceding year, due to the fact that, inasmuch as in a great many branches of business such agreements had already gone to pieces, prices were left to follow their own course. In retail trade, however, as already stated, the maintenance of prices was more successful, although an increasing number of "sales" reflected the necessity of producers for an outlet for goods and for an enlargement of cash in hand.

MANUFACTURING. Manufacturing establishments, at the opening of the year, had been strongly urged to maintain their working forces as far as possible, and to go ahead on the basis of "business as usual." Some leaders in business had made it a point to undertake a real test of this supposed policy, and did so. The plan, however, was not very successful, and in a good many cases resulted in a continuous growth of

overstock, so that even those who had undertaken to keep up production soon found it difficult to do so. By the end of the first half year, the project of maintaining production on its old basis had been very generally abandoned. During the summer, there was a series of unusually long "vacations" and following these only a very gradual restoration of men to employment.

During the last quarter of the year, a great many staffs had been reduced to not more than a third of the usual number while of those who continued occupied, a good many were on short time. Industries that were obliged to make specially large curtailments were exemplified by the automobile trade in which the year's production of cars was only 3,500,000 as against 5,500,000 the preceding year, and various branches of the textile industry in which extensive "lay-offs" took place very early in the year. The rubber industry was greatly depressed, while bad farming conditions compelled the partial closing of not a few farm-impelled producing enterprises. This condition of partial suspension prevailed very widely throughout the United States and was not limited to any one region or "section."

AGRICULTURE. Agriculture on the whole produced a fair normal or average crop. The output of wheat was slightly larger than the preceding year while cotton ran to about 14,350,000 bales. Both crops were much larger than had been desired, owing to the fact that the Federal Farm Board in its effort to stabilize the price of cotton, had endeavored to bring about a reduction of acreage in both products. This was unsuccessful and these two crops would probably have run considerably larger than they did had it not been for unfavorably dry weather. The dry weather, which assumed the proportions of a serious drought as early as mid-summer, was, however, most injurious in its effect on the corn crop which lost fully 20 per cent as a result of the unfavorable weather condition. The accompanying table shows the output in value of agricultural products for a few of the major crops. See also **AGRICULTURE.**

UNITED STATES AGRICULTURAL PRODUCTION,
1930

| | <i>Production</i> | <i>Value</i> |
|-----------------------------|-------------------|-----------------|
| Cornbushels | 2,081,048,000 | \$1,378,874,000 |
| Oatsdo. | 1,402,026,000 | 458,973,000 |
| Cottonbales | 14,243,000 | 674,044,000 |
| Cottonseedtons | 6,328,000 | 186,789,000 |
| Barleybushels | 325,893,000 | 128,197,000 |

As a result of this unfavorable agricultural situation and of almost total loss of crops in some limited regions, the world crisis in farm products, which was prevalent throughout the whole of Europe as well as South America, began to make itself apparent in the United States from mid-summer on, the values both of wheat and cotton, as well as of other products going to abnormally low levels before the end of the season, and inflicting upon the farmer serious embarrassment with (in some quarters) the necessity of direct relief, actually furnished by Congress and by other agencies.

GENERAL BUSINESS. General business in these circumstances could not be good and in fact was

almost uniformly unfavorable. Earnings for the first half of the year showed average losses of 25 per cent or more, while the railroads were off in their net earnings about 33 per cent. The final quarter of the year was better, comparatively speaking, than the earlier season, because the basis of comparison was the post panic quarter of 1929. This brought the average loss for selected industrial enterprises for the twelve months up to about 30-35 per cent while railroads for the year as a whole indicated a loss of rather more than 30 per cent. See RAILROADS. To this unfavorable record there were a good many striking exceptions which were afforded by other business enterprises which had been specially well organized or which had recently introduced economies or were otherwise in exceptionally favorable position to withstand pressure. Among these were some of the food-producing concerns which had profited by reductions in the price of their raw material, tobacco companies which seldom feel very direct effects of depression, and a number of others in the varying branches.

BUSINESS FAILURES. The business failures which had been so troublesome a feature of the previous few years and which had developed out of changing industrial conditions and the increasing severity of competition naturally underwent increase in 1930, as they would have done in any event owing to the difficulties of the time. In 1930, the general bad business, the difficult banking situation, and the underlying changes in the form and structure of trade, all combined to make a peculiarly hard year for the business man. As the year advanced, he began to feel the full force of the decline in volume of trade, so that many concerns which had been keeping up appearances so long as there was a fairly large turnover—although with a very small profit—now began to find their overhead expenses difficult to carry, and so ran “into the red,” while inevitably an unusually large number of enterprises passed their dividends. Business difficulties were widely diffused throughout the country and the total number of actual failures as shown by *Bradstreet's* was fully 20 per cent larger than had been the case during 1929. The table on page 123 reviews the business failure situation.

CALIFORNIA. POPULATION. According to the Fifteenth Census, the population of the State on April 1, 1930, was 5,677,251. The population on Jan. 1, 1920, was 3,426,861. The capital is Sacramento.

AGRICULTURE. The table in the next column gives the acreage, production, and value of the principal crops in 1929 and 1930.

Farms in the State numbered 136,455 in 1930, the total having increased but slightly above the 136,409 of 1925, but being substantially above the 117,670 of 1920.

MINERAL PRODUCTION. Petroleum, forming regularly the major part of the State's yearly total of mineral production by value, was obtained in greater quantity, 292,037,000 barrels in 1929, as against 231,811,000 in 1928; the value of this product was, for 1929, \$289,000,000 (estimated); for 1928, \$230,000,000. The limitation

| Crop | Year | Acreage | Prod. Bu. | Value |

of production by State authority worked to prevent a much higher output as to quantity, but did not effect any satisfactory improvement in the price by the barrel. Less gold was mined in 1929, the total being 412,479 fine ounces, as against 521,740 for 1928. Silver production also fell, to 1,176,895 fine ounces for 1929, from 1,478,771 for 1928. There were mined 1,426,889 pounds of lead in 1929; in 1928, 1,891,037. The mining of copper, on the other hand, increased, to 33,206,512 pounds for 1929, from 25,150,743 for 1928. Thus the total value of the production of these four metals for 1929, coming to \$15,088,228 for 1929, fell but little short of the corresponding total, \$15,381,783, for 1928. Higher prices for copper stimulated its production and helped keep up the total value of metals produced. By metals, the product of 1928 was valued thus: gold, \$10,785,315; silver, \$805,081; copper, \$3,621,707; lead, \$109,680. Totals for the State's production of natural gas, unavailable for 1929, were 246,215,000 M cubic feet for 1928 and 212,364,000 M for 1927; in value, \$56,695,000 for 1928 and \$50,946,000 for 1927. Gasoline extracted from natural gas attained 804,200,000 gallons for 1929, as against 584,111,000 for 1928; its value, \$69,000,000 (estimated) for 1929 as against \$53,885,000 for 1928.

The total value of the gold, silver, copper, and lead produced from placer and lode mining in California in 1930 was estimated at \$13,007,300, or a decrease of approximately \$2,083,300, compared with 1929, according to preliminary figures prepared by the U. S. Bureau of Mines. Gold, silver, and lead all showed increases in output compared with 1929, but copper declined in yield owing to the drop in price of the metal and the consequent curtailment of production. No recovery of zinc was reported in 1930. The value of the gold recovered from lode and placer mining in California in 1930 was estimated at \$9,033,600, compared with a value of \$8,526,703 in 1929. This was an increase of approximately 24,500 fine ounces in quantity and about \$508,900 in value over the yield in 1929. Gold from lode mines increased, with practically all of the larger gold mines showing a gain in output. Placer mining, largely confined to dredging operations, again showed a decrease in gold yield, but active mining of copper ore during the first half of the year

helped to increase the gold output. The silver output in 1930 was estimated at 1,448,000 fine ounces, valued at \$557,500, an increase of approximately 271,100 fine ounces in quantity and a decrease of about \$69,800 in value as compared with 1929. The yield of copper from mines in California in 1930 was estimated at 26,113,000 lbs., valued at \$3,238,000, a decrease of approximately 7,106,000 lbs. in quantity and of about \$2,608,500 in value, compared with 1929. At the end of 1930 only two of the principal copper mines in the State were in operation and one of these, the Mountain Copper Co., was diverting its operations from its copper properties to its gold-bearing gossan deposits.

TRANSPORTATION. The total number of miles of railroad line in operation on Jan. 1, 1930, was 8292.17. There were built, in 1930, 9.63 miles of first, and 18.32 of second track.

EDUCATION. For the better coordination of the divers teaching groups of the State there were held in 1930 a series of professional conferences covering all sections of California, and the possibilities of improved administrative relations and financial provisions were especially discussed. There were enrolled in the public schools in the year ended June 30, 1930, 1,407,190 pupils. Of these, 82,786 were in kindergartens, 769,739 in elementary grades, 228,611 in the regular high-school grades, and 305,493 in special classes in high schools; in the junior colleges were enrolled 20,561. The total expenditure of the school districts for education was \$149,952,241; of this, current expenditure contributed \$123,916,848.

CHARITIES AND CORRECTIONS. The State Department of Public Welfare, as organized in 1927, held the central administrative authority in 1930 with regard to institutions and activities for the care or custody of persons. Much of its work was apart from institutions. State aid was being furnished to some 16,000 children, and of this number 80 per cent were reported as remaining with their own mothers. In cases of adoption the State investigated the qualifications of the proposed foster-parents. Aid, largely outside of institutions, was supplied in 1930 to about 1400 blind persons or persons with impaired vision. The year saw the virtual inauguration of State aid to the needy aged. It was estimated in December, after 10 months' experience, that 7500 or more individuals would be qualified to receive this form of State assistance. Among the chief State institutions were Agnew State Hospital, Agnew; Industrial Home for the Adult Blind, Oakland; Mendocino State Hospital, Talmadge; Napa State Hospital, Imola; Norwalk State Hospital, Norwalk; Patton State Hospital, Patton; Pacific Colony, Padra; Nonoma State Hospital, Eldridge; Stockton State Hospital, Stockton; Ventura School for Girls, Ventura; Whittier State School, Whittier; Preston School of Industry, Ione; State prisons at Folsom and San Quentin.

POLITICAL AND OTHER EVENTS. The State act for the conservation of natural gas, which went into effect in September of 1929, was the subject of a legal conflict in the courts which lasted through much of 1930. A decision of a Superior Court judge affirmed the constitutionality of the act on March 12. The State director of natural resources then instituted proceedings to have the operators in the Santa Fe Springs district enjoined from wasting gas issuing from their wells. Later this official found difficulty in preventing

operators in the Kettleman Hills area from drilling to an extent judged as likely to upset restrictions established in agreement with the Federal authorities. The Federal Secretary of the Interior sought the cooperation of the Attorney-General in injunction proceedings in Federal courts, designed to stop wastage in the Kettleman area, but wastage went on, awaiting an effectual move on the part of the courts, and for the month of August it was estimated that 38 per cent of the natural gas output of the State had gone to waste.

Secretary of the Interior Wilbur went to California in July and worked there to put into effect a system of cooperative agreements for the development of petroleum and gas from Federal lands. This effort was concentrated chiefly in the Kettleman field, of which Federal lands made up about 30 per cent of the area.

The campaign for the pardon of Warren K. Billings and Tom J. Mooney, serving life sentences as participators in the bombing of the Preparedness Day parade of 1916 and the resulting death of 10 persons, was renewed. A group of sympathizers sought to get the State Supreme Court to recommend that the Governor grant pardons. The Court refused on July 4, by a vote of 6 to 1, to recommend the two men's release. Their friends then sought a witness, one J. MacDonald, who had testified at the trial. He was found to be in custody at Baltimore. Taken to California he testified before the Supreme Court that his original testimony of 1916, contributing to the conviction, had been false and prompted by some of the authorities.

The State Supreme Court reconsidered the matter of the proposed pardons for Mooney and Billings later in the year; it refused by 6 to 1 on December 1 to recommend pardon for either man.

The long maintained effort of the Great Northern and the Western Pacific to be allowed to build a connecting line between Klamath Falls, Oregon, and Keddie, California, thus forming a continuous route through the coastal States in competition with the existing route of the Southern Pacific, met with success; the Interstate Commerce Commission granted on June 20 the applications of the two systems for the construction of the desired line, some 200 miles in length. Many of the cities, including San Francisco, and counties of the northern part of the State supported the applications.

San Francisco put to a vote on August 26, the occasion of the primary elections, proposals for four bond issues, all of which were defeated. The proposals were: to issue \$44,000,000 in order to take over the distribution system of the Pacific Gas and Electric Company; to issue \$18,945,000 to take over the distribution system of the Great Western Power Company; to issue \$3,525,000 for constructing a power connection with the Hetch Hetchy power system; and to issue \$1,045,000 for a power plant on the Hetch Hetchy at Red Mountain Bar. The defeat of the power plan was not regarded as impairing the Federal grant of rights in the Hetch Hetchy basin for a water supply.

The Bay Bridge Commission created by President Hoover and Governor Young rendered early in August a report recommending that the projected \$72,000,000 bridge from San Francisco to the mainland be located on a line running from Rincon Hill over Goat Island to the vicinity of the Key System Mole. The report, according to a statement of Governor Young, cleared the

way for the public bridge building agency, the Toll Bridge Authority, to proceed to the completion of the project.

Los Angeles, the Southern California Metropolitan Water District, and the Southern California Edison Company executed with Secretary of the Interior Wilbur on April 6 contracts whereby they were to take 64 per cent of the water delivered by the projected Colorado River Dam. In order to provide for the growth of the city's needs for water up to the time when that from the Colorado would become available Los Angeles voted on May 20 to issue \$38,800,000 of bonds to increase its water supply. With some of these bonds purchases were made later of water lands in the Owens Valley.

Fruit Industries, Ltd., a subsidiary of the Grape Control Board and the collective organization said to represent some 20,000 of the grape growers of California, became an element in the plan of the Federal Farm Board for control of the grape industry. It was reported as having received from the Board in loans, up to November, some \$4,000,000. An advertisement appearing in a Milwaukee journal on November offered for sale unfermented grape juice as a wine ingredient and it was alleged that the grape juice came from the California growers and was thus in effect being marketed with the assistance of the Federal Government. The State's grape interests thus came in theoretical touch with the province of the Prohibition Bureau, but no definite policy of prosecutions was put into effect up to the end of the year.

The State District Court of Appeals at Los Angeles handed down on November 29 an opinion that the State's Oil and Natural Gas Conservation Act of 1929 was constitutional, and it denied a petition of certain oil operators for a writ of prohibition to prevent the enforcement of the act.

ELECTIONS. James Rolph, Republican candidate, was elected Governor on November 4 by a vote unofficially given as 972,270, as against 323,250 for Milton K. Young, Democrat. Frank E. Merriam for Lieutenant-Governor, Frank C. Jordan for Secretary of State, Ray I. Riley for Comptroller and Charles G. Johnson for Treasurer, all on the Republican ticket, were also elected. One Democratic and eight Republican incumbents were returned to the House of Representatives and one Republican candidate was sent to the House to replace a Republican. The Legislature remained in Republican control.

The voters were called upon to ballot on 26 questions, of which 20 were proposed constitutional changes, 5 laws proposed by initiative, and one a legislative act offered for referendum. The initiated proposal to establish daylight saving in the State was defeated, as was a Sunday-closing measure. A State issue of \$20,000,000 of bonds to promote veterans' welfare was approved. A revision of the usury law was beaten. An issue of bonds on State credit for San Francisco harbor was carried; also a provision for permanent registration of voters. In Los Angeles proposals to issue municipal bonds for power development and for sewers both failed of the requisite majority. The San Francisco project for a \$35,000,000 bridge at the Golden Gate was carried.

OFFICERS. Governor, C. C. Young; Lieutenant-Governor, H. L. Carnahan; Secretary of State, Frank C. Jordan; Treasurer, Charles G. John-

son; Comptroller, Ray L. Riley; Attorney-General, U. C. Webb; Adjutant-General, Richard R. Mittelstaedt; Superintendent of Public Instruction, Vierling Kersey; Director of the Department of Agriculture, G. H. Hecke.

JUDICIARY. Supreme Court: Chief Justice, William H. Waste; Associate Justices, William H. Langdon, John W. Preston, Jesse W. Curtis, Emmet Seawell, John E. Richards, John W. Shenk.

CALIFORNIA, UNIVERSITY OF. A coeducational institution of higher learning in Berkeley, Calif.; founded in 1868. Branches are found in various parts of the State: University of California in Los Angeles, with the colleges of letters and science, and education; branch of the college of agriculture in Davis; citrus experiment station and graduate school of subtropical horticulture in Riverside; Scripps Institution of Oceanography in La Jolla; Lick Observatory on Mount Hamilton; and agricultural stations at Kearney Vineyard near Fresno, near San José, and in the Imperial Valley. The number of full-time resident students in courses leading to degrees on Nov. 1, 1930, was 17,322, of whom 8832 were men and 8490 were women. The enrollment in the university extension division in 1929-30 was 39,196 in classes and 4790 in correspondence courses. The 1930 summer session enrollment totaled 8545. At the beginning of the autumn term, there were approximately 2000 members on the regular teaching staff and 100 on the extension staffs. The endowment funds for 1929-30 amounted to \$15,222,684, while the income from them was \$693,944. The total income for the year was \$16,154,867. The library contained approximately 1,150,000 bound volumes.

During 1930 there were completed on the Berkeley campus the Cowell Memorial Hospital, costing \$500,000; Giannini Hall for the college of agriculture, costing \$500,000; a new power plant, costing \$400,000; and International House, the gift of John D. Rockefeller, Jr., costing \$1,800,000. Three buildings for the new college of engineering group, to cost approximately \$500,000, were under construction; and about 13 acres of residence property were added to the campus, the buildings being razed for a recreational area development. In Los Angeles, the new campus with its five buildings costing \$325,000 were dedicated. There were also under construction Kerckhoff Hall, a student union building costing \$600,000 and a mechanics arts building costing \$100,000.

The sixth annual session of the Institute of International Relations was held at the International House on the Berkeley campus Aug. 8-15, 1930. The list of speakers included: Dr. W. J. Hinton, director of research of the Institute of Bankers, London, on "The Unity of British Imperial Interests in the Pacific"; Tamon Mayeda, editor of *Asahi Shimbun*, Tokyo, on "Japan in the Current of World Affairs"; Prof. J. J. L. Duyvendak of the University of Leyden on "Dutch Colonial Administration in the Far East"; Dr. P. C. Chang of Tsing Hua College, China, on "The Present Condition of Chinese Social and Political Life"; Dr. Jacob Viner of the University of Chicago on "Problems of Commercial Policy in the Pacific Area"; Rear Admiral W. C. Cole, U. S. N., on "Naval Strategy and the Web of Pacific Trade"; and Dr. Edwin M. Borchard of Yale University on "New Aspects of the Codification of International Law." Robert Gordon Sproul, B.S., LL.D., became president of the University of

California on July 1, 1930, succeeding William Wallace Campbell, who retired as president emeritus.

CALIFORNIA INSTITUTE OF TECHNOLOGY. An institution for collegiate and graduate instruction and research in the pure and applied sciences, in Pasadena, Calif.; founded as Throop Polytechnic Institute in 1891. Since the World War the progress of the institute has been rapid, including the erection of the Gates Chemical Laboratory, the Norman Bridge Laboratory of Physics, the High-Potential Research Laboratory, a laboratory of steam engineering, an engineering research laboratory, a seismological laboratory, the Daniel Guggenheim Graduate School of Aeronautics, and the William G. Kerckhoff Laboratories of Biology. The institute has no president, the administration centring in an executive council of eight, of which Robert A. Millikan, Ph.D., LL.D., Sc.D., is chairman.

CALKINS, MARY WHITON. An American psychologist and educator, died in Newton, Mass., Feb. 26, 1930. She was born in Hartford, Conn., Mar. 30, 1863, and was graduated from Smith College in 1885, receiving the M.A. degree from the same institution two years later. After a year of graduate study at Clark University she was appointed, in 1891, instructor in philosophy and psychology at Wellesley College and later professor of these subjects. As a psychologist, she not only contributed to the study of dreams, association, time and space experience, and numerous other problems, but developed the theory of personalistic or self psychology, summed up in the statement that "every idea is the experience of a self who is conscious." As a philosopher, she was said to be the first woman in the entire history of philosophy to achieve distinction. Her work in this field also centred about the importance of the self, or the idealistic view of mind. Building on the foundation of absolute idealism laid by Prof. Josiah Royce, of Harvard, she elaborated the view that the universe is completely mental in nature and that every mental existent is either a self or a part, aspect, phase, or process of a self. The Litt.D. degree was conferred on her by Columbia University in 1909 and the LL.D. degree by Smith College in 1910. She was a past president of the American Psychological Association and of the American Philosophical Association, and in 1928 was elected an honorary member of the British Psychological Association. Her works include: *An Introduction to Psychology* (1901); *Der doppelte Standpunkt in der Psychologie* (1905); *The Persistent Problems of Philosophy* (1907); *A First Book in Psychology* (1909); and *The Good Man and the Good* (1918).

CALLENDAR, HUGH LONGBOURNE. An English physicist, died Jan. 21, 1930. He was born at Hatherop in 1863 and was educated at Trinity College, Cambridge University, becoming a fellow there in 1886. During 1893-98 he was professor of physics at McGill University in Montreal, after which he returned to England as professor at University College in London. In 1902 he became professor of physics at the Imperial College of Science, an affiliation continued until his death. By his research in the measurement of heat, Professor Callendar set new standards of accuracy for physical and engineering measurements. In 1886 he communicated to the Royal Society his work on a platinum resistance thermometer, and he continued his researches

in temperature measurement at the Cavendish Laboratory until 1893, with the result that the applications of his thermometer are useful both to the research worker and to the engineer concerned with heat regulation in industrial operations. In 1928 he published a table of experimental values of steam up to and beyond critical pressure. Other publications are *Law of Condensation of Steam* (1898) and *The Imperial College of Science*, London (1904). He was elected a fellow of the Royal Society in 1899, and in 1906 was awarded the society's Rumford Medal. In 1920 he was made Commander of the Order of the British Empire.

CAMBODIA. A French protectorate constituting one of the five component states of French Indo-China. Area, 67,550 square miles; population at the census of 1928, 2,602,573, of whom 1953 were Europeans (excluding military forces). Phnôm-Penh, with a population of 83,079, is the capital and chief town. There are 282 French schools. The soil is fertile, but only a comparatively small area is under cultivation. The chief product is rice, its annual export amounting to about 250,000 tons. Other products include cotton, pepper, kapok, tobacco, rubber, silk, salt fish, hides, cattle, coffee, sugar, and iron. Imports in 1927 totaled 64,641,018 francs (68,009,173 in 1926) and exports, 23,500,000 francs (26,253,000 in 1926). The budget for 1930 balanced at 13,386,000 piastres, including 728,000 piastres appropriated for the use of the king and princes (the piastre was stabilized at 10 French francs, equal to \$0.392, on May 31, 1930). In 1928 there were 1009 miles of surfaced roads in the country. Executive authority is exercised by a French Resident-Superior, who acts through the native king. King in 1930, Sisowathmonivong (crowned July 22, 1928); Resident-Superior, A. Le Fol. Cambodia is famous for its ruins of ancient civilizations, particularly those of Angkor. See FRENCH INDO-CHINA.

CAMEROON, kâ'm-e-rōon, or CAMEROONS. The former German territory of Kamerun on the Gulf of Guinea, West Africa, bounded on the north by Nigeria and on the east and south by French Equatorial Africa and Spanish Guinea. Occupied by French and British troops in 1916, it was divided between the two nations in 1919 under mandates of the League of Nations.

FRENCH CAMEROON. France received an area of 166,489 square miles, in addition to 107,270 square miles ceded to Germany in 1911 and later incorporated in French Equatorial Africa. The population of the French portion in 1928 was estimated at 1,900,000, including 2009 Europeans. In 1928 there were 92 government schools, with 16,659 students, and 38 private schools. Tobacco, almonds, palm oil, timber, rubber, cacao, and ivory are the chief products. Imports (1928) totaled 207,727,000 francs, and exports, 155,297,000 francs. The general budget for 1929 balanced at 63,041,485 francs; the special railway budget amounted to 21,766,000 francs. Highways extended 2437 miles and railroads, 292 miles. Yaoundé is the seat of administration. Commissioner in 1930, M. Marchand.

BRITISH CAMEROON. The British portion, extending along the Nigerian frontier from the sea to Lake Chad, has an estimated area of 34,236 square miles and an estimated population of 700,050. Imports in 1928 totaled £320,605 and exports, £386,460. For 1926-27 the revenue was £90,224 and expenditure, £126,306. Since then the budget

has been incorporated with that of Nigeria. A total of 237 vessels entered the port of Victoria in 1928. The Governor of Nigeria is administrator of the territory. See NIGERIA.

CAMP FIRE GIRLS. An organization primarily for the adolescent girl. Its purpose is to "seek beauty, give service, pursue knowledge, be trustworthy, hold on to health, glorify work, and be happy." The programme evolved to carry out these aims has been planned to take care of the out-of-school time of girls. It makes use of symbolism, ceremony, and ritual and includes practically every wholesome activity which would naturally engage the interest of the young girl. Each girl, upon joining, selects a name for herself which expresses some ambition or ideal.

The activities of Camp Fire are grouped under the seven crafts, which form the basis of the system of honors and awards: Home, health, hand, camp, nature lore, business, and patriotism and citizenship. Distributed among these crafts are about 700 honors which the girl may earn as steps toward the winning of the three progressive ranks. The rank of wood gatherer typifies loyalty to organization and group; of fire maker, the ideal of wider loyalty to mankind and God; and of torch bearer, the highest rank, the desire to pass on undimmed to others that light which has been given to her. All symbolize the taking on of certain responsibilities and the carrying out of certain desires.

As a special project for 1930, Camp Fire girls studied Indian lore, their attention being particularly engaged with the Indians of their own localities. They made beautiful handwork, decorated with designs based on Indian symbolism; gathered together interesting exhibits of Indian relics and handicraft; and gave and sponsored programmes which had as their inspiration In-

normal schools or conducted independently. There was a registered enrollment of 2716, with 1951 graduates. During the summer of 1929, 20,000 Camp Fire girls attended more than 110 class-A camps (camps having an attendance of 25 or more), while thousands of others went camping in small groups with their leaders.

At the National Council of Camp Fire Girls, which met in Worcester and Boston, Mass., Sept. 4-7, 1930, Mrs. Lida Foote Tarr was elected president; Miss Florence Hughes, first vice president; Dr. Joseph E. Rayercroft, second vice president; Dr. Jay B. Nash, third vice president; Dr. Myron T. Scudder, treasurer. Lester F. Scott was secretary and national executive. The organization publishes *Everygirl's*, a monthly magazine for girls, and *The Guardian*, a programme resource for leaders, which is published monthly except during July and August. The national headquarters are at 41 Union Square, New York City.

CANADA. A dominion of the British Empire in North America, bounded on the north by the Arctic Ocean, on the south by the United States, and on the east and west by the Atlantic and the Pacific oceans, respectively. Capital, Ottawa.

AREA AND POPULATION. The total land area of Canada, revised according to the Labrador Boundary Award of 1927, is estimated at 3,504,688 square miles, of which 560,000 square miles is suitable for agricultural or pastoral purposes. The water area is about 180,035 square miles. Canada consists of nine provinces, each with its own parliament and administration, and two territories, viz., the Northwest Territories and Yukon Territory, each under a commissioner, assisted by a council.

The following table shows the areas of the provinces, etc., with the population at recent censuses:

AREA AND CENSUS POPULATIONS OF CANADIAN PROVINCES

| Province | Land area sq. miles | Water area ^a sq. miles | Total area sq. miles | Population, 1901 | Population, 1911 | Population, ^b 1921 |
|----------------------------|------------------------|--------------------------------------|-------------------------|---------------------|---------------------|----------------------------------|
| Prince Edward Island | 2,184 | | 2,184 | 103,259 | 93,728 | 88,615 |
| Nova Scotia | 20,743 | 685 | 21,428 | 459,574 | 492,338 | 523,837 |
| New Brunswick | 27,710 | 275 | 27,985 | 331,120 | 351,889 | 387,876 |
| Quebec | 571,004 | 23,430 | 594,434 | 1,648,898 | 2,005,776 | 2,301,199 |
| Ontario | 357,932 | 49,500 | 407,262 | 2,182,947 | 2,527,292 | 2,933,602 |
| Manitoba | 224,777 | 27,055 | 251,832 | 255,211 | 461,394 | 610,118 |
| Saskatchewan | 237,975 | 13,725 | 251,700 | 91,279 | 492,432 | 757,510 |
| Alberta | 248,800 | 6,485 | 255,285 | 73,022 | 374,295 | 588,454 |
| British Columbia | 349,970 | 5,885 | 355,855 | 178,657 | 392,480 | 524,582 |
| Yukon | 205,346 | 1,730 | 207,076 | 27,219 | 8,512 | 4,157 |
| Northwest Territories— | | | | | | |
| Franklin | 546,532 | 7,500 | 554,032 | 20,129 | 6,507 | 7,988 |

| Total | 3,504,688 | 180,035 | 3,684,723 | 5,371,315 | 7,206,643 | 8,787,998 |

^a The water area given above excludes all tidal waters except that portion of the St. Lawrence River between Pont-des-Montes and the foot of Lake St. Peter in Quebec.

^b Excluding 485 members of the Canadian navy.

dian legends, music, and ceremonies. There was keen interest shown in the project throughout the country, and it was felt that the desired goal was attained, namely, an appreciation of the Indians' contribution to American civilization, both in their art and their philosophy, and correct information regarding their history, customs, and present status.

The membership of the organization in 1929 was 219,978, including 164,519 Camp Fire girls and guardians and 35,520 Blue Birds, the youngest members. During the school year of 1928-29 and the summer of 1929, 119 Camp Fire training courses were given in colleges, universities, and

The population on June 1, 1930, was estimated by the Dominion Bureau of Statistics at 9,934,500, or 137,700 more than on June 1, 1929. The 1930 population was divided by Provinces and Territories as follows: Prince Edward Island, 85,800; Nova Scotia, 553,900; New Brunswick, 423,400; Quebec, 2,734,600; Ontario, 3,313,000; Manitoba, 671,500; Saskatchewan, 882,000; Alberta, 660,000; British Columbia, 597,000; Yukon, 3700; and the Northwest Territories, 9800.

The figures include about 105,000 Indians and about 6000 Eskimos widely scattered throughout northern Canada. More than 55 per cent of the population is of British origin, 28 per cent is of

French origin, and other European stocks constitute slightly over 14 per cent. The proportion of British stock is highest in Ontario and the Maritime Provinces; of French stock, in Quebec and New Brunswick; and of other European stocks, in the Prairie Provinces.

The principal cities, with their recent populations and the census population of 1921 (in parentheses), are: Montreal, 1,098,409 in 1930 (618,506); Toronto, 585,628 in 1928 (521,893); Winnipeg, 202,377 in 1928 (179,087); Vancouver, 149,262 in 1928 (117,217); Hamilton, 123,359 in 1927 (114,151); Ottawa, 22,731 in 1928 (107,843); Quebec, 31,071 in 1927 (95,193); Calgary, 72,500 in 1928 (63,305); London, 71,310 in 1930 (60,959); Edmonton, 69,744 in 1928 (58,821); Halifax, 58,372 in 1928 (58,372); St. John, 60,000 in 1928 (47,166); Victoria, 38,750 in 1927 (38,727); Windsor, 61,095 in 1928 (38,591).

In 1928, exclusive of the Territories, there were 236,194 births, 108,939 deaths, and 74,287 marriages. The province of Quebec, which has one of the highest rates of natural increase in the civilized world, had a birth rate of 31.6 per 1000 of population in 1928, as compared with a rate for the whole of Canada of 24.5. Immigration during the fiscal year ended Mar. 31, 1930, totaled 163,288, as against 167,722 in the previous fiscal year. The 1930 arrivals were divided as follows: 64,082 from the United Kingdom; 30,727 from the United States; and 68,479 from other countries. Canadians returned from the United States during the year numbered 26,133. At the census of 1921 there were in Canada 3,389,636 Roman Catholics, 1,409,407 Presbyterians, 1,407,994 Anglicans, 1,159,458 Methodists, and 421,731 Baptists. See CANADA, UNITED CHURCH OF.

EDUCATION. Education is directly controlled by the respective Provinces (see separate articles on each Province for educational statistics). The provincially-controlled schools of seven Provinces, excluding Quebec and Ontario, in 1928 had a total enrollment of 1,384,864 pupils, of whom 1,225,972 were in the elementary grades, and 158,889 in the secondary schools. In 1927, 557,732 pupils were enrolled in the primary schools of Quebec and 700,476 in the primary and secondary schools of Ontario.

Higher education is carried on in 23 universities and 88 colleges, 50 of the colleges, most of them classical colleges or seminaries, being in the Province of Quebec. Of the universities, six (New Brunswick, Toronto, Manitoba, Saskatchewan, Alberta, and British Columbia) are state controlled; four Dalhousie, McGill, Queens, and Western) are undenominational; and the remainder are denominational. In 1927-28, there were 19,377 students in the provincially-controlled universities, 9598 in other undenominational universities, and 27,067 in denominational institutions; a total of 56,042. In the same year the 88 colleges had an enrollment of 21,786.

AGRICULTURE. Of the total land area of 1,306,320,000 acres, approximately 358,162,190 acres are suitable for agricultural purposes. In 1928 only 59,351,811 acres were under cultivation and 9,528,043 acres were in use as pasture. The gross agricultural revenue in the same year totaled \$1,730,302,000, of which field crops contributed \$1,125,003,000, while the total agricultural wealth, including the year's production, was estimated at \$8,027,299,000. For 1927, the estimate was \$8,007,948,000. The total value of field crops produced in 1929 was \$979,750,400.

The yield of the stable crops in 1930 was higher than in 1929, with the exception of hay, but in general the harvest was sub-average and prices were unusually low. The production of the chief crops in 1929, with comparative preliminary estimates for 1930, are shown in the following table:

CANADIAN CROP YIELDS, 1930 AND 1929
[Units in bushels, except as indicated]

| | 1930 | 1929 |
|----------------------|-------------------------|-------------------------|
| Wheat | 395,854,000 | 304,250,000 |
| Oats | 429,156,000 | 282,838,300 |
| Barley | 189,963,000 | 102,313,300 |
| Rye | 22,286,000 | 13,160,500 |
| Flaxseed | 4,847,000 | 2,060,400 |
| Potatoes | 47,262,000 ^a | 39,930,000 ^a |
| Hay and clover | 15,104,000 ^b | 15,835,000 ^b |

^a cwt, ^b tons.

Estimates of other crops for 1930 were: Tobacco, 36,712,700 pounds; apples, 3,165,936 barrels. The apple crop was about 1,000,000 barrels under the 1929 production, but other fruit crops had higher yields. The wheat crop is the most important single factor in the national economy. While the wheat acreage for 1929 reached a record level, the production was reduced by drought to 304,250,000 bushels, and the value of the crop declined to \$346,502,000 from \$451,235,000 in the previous year.

The total area sown to the principal field crops in 1930 was estimated at 60,464,670 acres (59,607,034 in 1929). Despite generally improved harvests, the lower prices received for grain caused a decrease in the total value of the principal grain crops in 1930 to \$631,592,900 (estimated) from \$948,981,000 in 1929 and \$1,125,003,000 in 1928. Based upon average prices received by farmers at the point of production up to the end of the year, the value of the 1930 field crops was estimated as follows: Wheat, \$174,792,000; oats, \$102,919,000; barley, \$27,784,000; rye, \$4,401,000; buckwheat, \$7,124,000; mixed grains, \$18,435,000; flaxseed, \$4,194,000; potatoes, \$39,858,000; turnips, \$18,059,000; hay and clover, \$161,122,000; alfalfa, \$19,877,000; fodder corn, \$17,142,000; and grain hay, \$21,268,000. By Provinces, the total value of 1930 crops was estimated at follows: Ontario, \$178,445,000; Saskatchewan, \$121,023,000; Quebec, \$118,917,000; Alberta, \$95,189,000; Manitoba, \$54,139,000; New Brunswick, \$17,089,000; British Columbia, \$16,447,000; Nova Scotia, \$16,284,500; and Prince Edward Island, \$11,512,000.

The yield of maple sugar in 1929 was 11,698,925 pounds, valued at \$2,162,839, and of maple syrup, 2,174,084 pounds, valued at \$3,955,817. For 1930, the estimated maple sugar output was 8,208,000 pounds, and the maple syrup production, 2,185,000 gallons. Other special crops, with the quantity and value of production, were: Sugar beets, 244,930 tons valued at \$2,041,465 in 1928; tobacco, 29,786 pounds in 1929 (41,976 in 1928); honey, about 22,489,909 pounds in 1928.

Livestock in the country in 1929 totaled 3,376,487 horses, 3,778,227 milch cows, 5,152,711 other cattle, 3,728,309 sheep, and 4,381,725 swine. The wool clip in 1929 was placed at 21,234,000 pounds, valued at \$4,247,000, as compared with 19,611,430 pounds valued at \$5,099,000 in 1928. Eggs produced in 1928 were valued at \$84,442,727. The output of creamery butter (1929) was 174,724,465 pounds valued at \$67,291,136; of factory

cheese, 118,646,039 pounds valued at \$21,388,122.

FRUIT FARMING. In Nova Scotia, New Brunswick, Ontario, and British Columbia, fruit raising is an important industry, with apples as the most important crop. Peaches, pears, plums, cherries, grapes, and small fruits are grown in abundance. The production and value of the chief fruit crops in 1928 is given by the *Canada Year Book* for 1930 as follows: Apples, 3,235,970 barrels, \$11,297,867; grapes, 69,120,000 pounds, \$2,764,800; strawberries, 11,364,740 quarts, \$1,426,990; peaches, 605,770 bushels, \$1,200,345; and cherries, 271,250 bushels, \$836,137.

FISHERIES. Besides immense salt-water fishing areas, Canada has 220,000 square miles of fresh water abundantly stocked with many varieties of food fish. The product of Canadian fisheries in 1929 had a total value of \$53,518,521, or \$1,532,452 less than in the preceding year. The lakes of the three Prairie Provinces yielded more than \$4,000,000 of the total. The chief commercial fishes caught are lobsters, halibut, whitefish, pilchards, haddock, salmon, cod, herring, sardines, pickerel, trout, and smelts. The total investment in fisheries in 1928 was \$58,072,371; 62,785 persons were engaged in fishing and 15,434 in canning and curing establishments.

FORESTS. The total stand of merchantable timber in Canada in 1929 was estimated at 224,304,000,000 cubic feet, of which 91,473,000,000 were in the Eastern Provinces, 56,826,000,000 in the Prairie Provinces, and 76,005,000,000 in British Columbia. The total area under forest amounted to 1,151,454 square miles, of which 285,574 square miles were inaccessible. In 1927 the total value of forest products was \$205,631,727; the value of wood, wood products, and paper exported in 1928-29 was \$288,621,745. See **FORESTRY**.

FUR INDUSTRY. Raw fur production for the year ended June 30, 1929, was valued at \$18,054,499, as compared with \$18,758,177 for the previous year, a decrease of 4 per cent. The steady decrease in production, due to gradual extermination of wild fur-bearing animals, is being offset partially by the extensive development of fur farming. On Jan. 1, 1927, there were in operation 3067 fox farms, with 62,619 foxes, and 313 farms for other fur-bearing animals. Pelts sold from fur farms in 1927 were valued at \$2,154,350.

MINERAL PRODUCTION. Canada contains 16 per cent of the world's known coal resources, is the chief source of supply for nickel and asbestos, and ranks third in the production of gold, silver, and aluminium, fourth in copper and lead, and sixth in zinc. Mineral production increased from \$172,000,000 in 1921 to \$307,146,000 in 1929, a gain of 78 per cent. The 1928 mineral output was valued at \$274,989,487. In 1928 there were 22 separate metallic, non-metallic, and clay products, each of which had a production valued at \$1,000,000 or over. Mineral production by Provinces in 1929 was: Ontario, \$116,526,096; British Columbia, \$67,522,557; Quebec, \$45,389,837; Alberta, \$34,652,128; Nova Scotia, \$0,890,956; Manitoba, \$4,925,403; Yukon (Territory) \$2,932,704; New Brunswick, \$2,371,137; Saskatchewan, \$1,935,676; total, \$307,145,000.

Due to the drastic reduction in mineral prices and reduced outputs of many non-metallic minerals and structural materials, the total estimated value of mineral production in 1930 was \$276,865,000, or 11 per cent less than the 1929 figure. The values of the leading mineral products in 1930 were estimated as follows: Coal,

\$53,000,000; gold, \$43,193,296; copper, \$38,687,000; nickel, \$24,449,000; sand, gravel and stone, \$16,500,000; cement, \$17,686,000; lead, \$12,992,000; clay products, \$11,000,000; natural gas, \$10,561,000; silver, \$10,057,000; zinc, \$9,393,000; asbestos, \$8,800,000; petroleum, \$5,120,000; lime, \$4,477,000; gypsum, \$2,875,000; salt, \$1,575,000.

Capital invested in the mining industry in 1928 totaled \$841,967,982, the number of employees was 89,448, and salaries and wages amounted to \$115,954,022. The prospecting and development of one of the largest unprospected mineral areas in the world was going forward in northern Canada in 1930, largely as a result of the introduction of the airplane for use in reaching isolated fields.

MANUFACTURES. In the five years ended in 1930 Canada rose to second place in the manufacture of automobiles, to third place in paper and aluminium, and to fifth in rubber. In the amount of hydro-electric energy produced, Canada ranked second among the nations in 1930. The number of kilowatt-hours of electricity generated in 1929 was 18,600,000,000 (16,336,518,000 in 1928), and the turbine horse-power capacity of water-power plants totaled 5,727,162 (5,349,232 in 1928). Projects under construction were expected to add 1,600,000 horse power in the period 1930-32.

The gross value of manufactured products for 1928 was \$3,769,850,364, distributed among the several Provinces as follows: Ontario, \$1,949,724,119; Quebec, \$1,073,162,291; British Columbia and Yukon, \$270,851,669; Manitoba, \$159,435,094; Alberta, \$100,744,401; Nova Scotia, \$84,948,608; New Brunswick, \$67,413,742; Saskatchewan, \$59,125,280; Prince Edward Island, \$4,445,160. In 1927, the gross value of the manufactured output was \$3,425,498,540. The ten leading manufacturing industries are paper and pulp, flour- and grist-mill production, slaughtering and meat packing, sawmills, butter and cheese, automobiles, electric light and power, rubber goods, cotton yarn and cloth, and sugar refineries. The capital invested in manufacturing in 1927 was estimated at \$4,337,631,558, as compared with \$3,981,569,590 in 1926, and the number of persons engaged was 618,933 (581,539 in 1926).

According to the Dominion Bureau of Statistics, production of iron and steel manufactures in Canada was valued at \$732,390,039 in 1929. This total was 20 per cent above the corresponding figure for 1928 and exceeded in value the output for any previous year excepting 1918. The outstanding gain during 1929 was made in the railway rolling stock industry with a production valued at \$126,382,788 representing an increase of \$52,960,731 over the value of production in 1928. The automobile industry advanced by \$14,448,098 to \$177,315,593 and the auto parts group showed a gain of \$16,458,287 to \$33,465,444, although this gain was partially due to the inclusion of body and engine plants formerly included under automobiles. The 1929 production of steel was 1,379,688 tons, or 11 per cent above the 1928 figure. Pig iron production reached a new high level of 1,090,244 long tons (1,037,535 long tons in 1928). For 1930, production of steel at 1,011,743 tons was 26.6 per cent less than in the record year 1929. In 1930, production included 957,430 tons of ingots and 54,313 tons of castings, with 95 per cent intended for sale. Production of pig iron in Canada in 1930 at 747,448 long tons was

30.8 per cent below the record for the industry established in 1929.

The output in 1929 of chemical and allied products totaled \$168,598,892, or 14 per cent more than in 1928, according to a preliminary estimate. The sulphuric acid production was 110,749 tons, valued at \$1,375,599. For the year ended Mar. 31, 1930, cigarettes manufactured in Canada totaled 5,035,878,655 and the revenue collected from the excise on cigarettes was \$30,223,822.

Unemployed workers in Canada in August, 1930, were estimated at 150,000. Steps were taken by the Canadian Government to relieve the situation (see below under *History*).

INVESTMENTS. The Royal Bank of Canada estimated the foreign capital invested in Canada in June, 1930, at \$6,150,000,000, including \$3,650,000,000 from the United States, \$2,250,000,000 from Great Britain and \$250,000,000 from other countries. In 1928 and 1929, it was estimated, foreign capital entered Canada at the rate of \$10,000,000 a month. Canadian investments in foreign countries increased from \$800,000,000 in 1920 to \$1,800,000,000 in June, 1930, of which \$1,000,000,000 were invested in the United States, \$100,000,000 in Great Britain, and \$700,000,000 in other foreign countries.

BUSINESS CONDITIONS. The short wheat crop in 1929 and the low prices received for it, together with the estimated depreciation of \$5,000,000,000 suffered by Canadian listed and unlisted stocks in fall of 1929, induced caution in business circles during 1930. Grain prices continued to decline during 1930 due to accumulating surpluses and diminished export demand; in December, wheat sold at between 52 and 53¼ cents a bushel, the lowest level recorded since organized trading in the commodity began. The industrial depression had important repercussions in Canadian politics and at the Imperial Conference of 1930. See below under *History* and GREAT BRITAIN under *History*. The volume of business in 1930 was about 20 per cent below that of 1929.

COMMERCE. Preliminary figures for the fiscal year ended Mar. 31, 1930, placed total imports at \$1,248,273,582, as compared with \$1,265,679,091 in 1928-29, and total exports at \$1,144,938,070, as compared with \$1,388,733,075 in the previous year. The decrease for the year in the total value of trade was \$261,363,514, of which \$17,405,509 represented a drop in imports, \$243,451,370 a decrease in domestic exports, and \$506,635 a decline in reexports. The value of imports and exports by industrial groups in 1928-29 and 1929-30 is shown in the accompanying table compiled from the *Canada Year Book* for 1930.

During the calendar year 1929 merchandise imports were valued at \$1,298,944,000, or 6.2 per cent more than in 1928, while exports totaled \$1,208,375,000, or 11 per cent less than the 1928 export total of \$1,349,751,000. Imports from the United States in the calendar year 1929 reached \$893,607,000, a gain of 8 per cent over 1928. Exports to that country totaled \$522,585,000 or 6 per cent more than in the previous year. Of the \$68,000,000 increase in imports from the United States, about \$14,000,000 was accounted for by larger iron and steel imports, about \$12,000,000 by a 58 per cent gain in electrical apparatus imports, and some \$6,000,000 by 57 per cent increase in copper imports. Petroleum imports increased by \$15,000,000, chemical imports by \$2,000,000, or 7 per cent, and vegetable imports by \$2,000,000 or 25 per cent. In the same calendar year imports

* Fiscal years ending March 31.

from the United Kingdom increased by 2 per cent, imports from Germany, 11 per cent; from Japan, 4 per cent; and those from France decreased by 6 per cent.

The export gains in trade with the United States were registered chiefly in shipments of metals and newspaper. The small wheat crop was chiefly responsible for a 35 per cent drop in exports to the United Kingdom. Exports to other European countries also declined. The estimated value of foreign trade in 1930 fell off \$580,000,000, or 22 per cent, from 1929, the adverse balance of trade being estimated at \$98,467,000.

The accompanying figures showing imports and exports for the years 1924-25 to 1929-30 indicate the steady growth of imports as compared to exports.

CANADIAN IMPORTS AND EXPORTS, 1924-25 TO 1929-30

| Year ended March 31 | Total exports | Imports for home consumption |
|------------------------|-----------------|---------------------------------|
| 1924-25 | \$1,081,361,643 | \$ 796,932,537 |
| 1925-26 | 1,328,700,137 | 927,328,732 |
| 1926-27 | 1,267,573,142 | 1,030,892,505 |
| 1927-28 | 1,250,456,297 | 1,108,956,466 |
| 1928-29 | 1,388,773,075 | 1,265,679,091 |
| 1929-30 | 1,144,938,070 | 1,248,273,582 |

Canada's total trade, including visible and invisible items, in the calendar year 1929 was estimated at nearly \$4,000,000,000, with an unfavorable balance of about \$83,000,000. Forty per cent of the total consisted of so-called invisible items. Items of this category which showed debit balances were freight payments, \$38,000,000; interest, \$216,000,000; non-commercial remittances, \$9,000,000; and motion picture royalties, \$4,000,000. Items registering credit balances were ship-

ments of gold and subsidiary coin, \$47,000,000; tourist expenditures, \$188,000,000; insurance transactions, \$23,000,000; advertising, \$4,000,000; electrical energy, \$4,000,000; and capital of immigrants and emigrants, \$1,000,000. The Dominion Bureau of Statistics estimated tourist expenditures in Canada in 1929 at \$299,188,000, as compared with \$266,393,000 in 1928, \$230,223,000 in 1927, and \$83,734,000 in 1920. Of the total 1929 expenditures, \$288,500,000 was attributed to visitors from the United States. Expenditures by Canadian tourists abroad in 1929 were placed at \$111,301,000, of which over \$91,000,000 were spent in the United States. In 1930, American tourists spent nearly \$325,000,000 in Canada.

The leading countries participating in trade with Canada in 1928 and 1929, with respective trade totals, are given in the accompanying table.

FINANCE. For the fiscal year ended Mar. 31, 1930, the total of estimated actual revenues was \$447,322,000, a decrease of \$14,325,024 from the previous fiscal year, while the estimated actual expenditures amounted to \$402,815,000, an increase of \$22,513,504. Ordinary revenue, estimated at \$440,306,000, decreased \$14,157,874, while ordinary expenditure, amounting to \$360,050,000, increased \$9,097,076 over 1928-29. The surplus for the year was \$44,507,000. General revenues and expenditures in the Consolidated Fund for the years 1924-25 to 1929-30 are shown in the accompanying table compiled by the Dominion Bureau of Statistics.

The chief items of general revenue for 1929-30, with comparative figures for 1928-29 in parentheses, are as follows: Customs, \$179,430,000 (\$187,206,000); excise, \$65,036,000 (\$63,683,000); Post Office, \$33,345,000 (\$30,612,000); excise taxes, \$63,409,000 (\$83,009,000); and income tax, \$69,021,000 (\$59,422,000). The Mont-

CANADIAN PUBLIC FINANCE, 1925-30 * (Thousands of Canadian dollars)

| Fiscal year ended March 31, | Revenue | Expenditure | Grand Total |
|--------------------------------|-------------------|-------------------|----------------|
| | Total Ordinary | Total Ordinary | |
| 1925 | 351,515 | 318,892 | 351,170 |
| 1926 | 382,893 | 320,660 | 355,186 |
| 1927 | 400,453 | 319,548 | 358,556 |
| 1928 | 429,701 | 336,168 | 378,717 |
| 1929 | 455,464 | 350,953 | 388,806 |
| 1930 | 445,952 | 357,780 | 398,212 |

* Consolidated Fund figures do not include special receipts and expenditures. In 1929-30 special receipts amounted to \$1,370,000 and special expenditures to \$4,603,000.

real district reported a \$3,409,000 increase in income-tax receipts for the year and Toronto an increase of \$2,298,000. The budget estimate for expenditure in 1929-30 was \$404,245,000 and in 1930-31, \$399,358,000. The decrease for 1930-31 was due to the decrease in interest on the public debt and in amounts required for immigration, and ocean and river services. The 1930-31 appropriations for aviation, public works, and the Post Office and marine departments all showed increases. In the first eight months of the 1930-31 fiscal year, the Federal surplus of \$14,507,000 was converted into a deficit of \$23,500,000.

The unmatured funded debt outstanding Mar. 31, 1930, totaled \$2,195,000,000, representing a reduction, since the net debt reached its maximum in 1923, of \$227,000,000, or 9 per cent. In the same period, 1923-30, the per capita interest on the debt dropped from \$15.18 to \$11.25. The service on the debt during 1929-30 amounted to \$122,000,000, as against \$125,980,000 in 1928-29. The national wealth in 1929 was estimated at \$29,000,000,000, as compared with \$7,000,000,000 in 1900 and \$27,668,000,000 in 1927.

SHIPPING. On Jan. 1, 1929, vessels under Canadian registry numbered 8645 of 1,306,074 net tons. For the fiscal year ended Mar. 31, 1929, sea-going vessels entering Canadian ports numbered 22,531 of 27,464,158 net registered tons and those clearing totaled 22,895, of 26,944,369 net registered tons. In the same year, 95,047 ships of 49,046,588 net registered tons entered the coast-wise trade and 93,905 of 48,007,097 tons cleared. Including vessels on rivers and lakes, the total number of ships entering Canadian ports was 154,898 of 95,498,497 tons and the total departing was 155,237 of 95,290,415 tons. Vessels on rivers and lakes brought the total tonnage entered to 95,498,497, as compared with 86,368,065 in 1927-28, and the total tonnage cleared to 95,290,415, as against 86,963,348 in 1927-28.

RAILWAYS. The single-track mileage of Canadian steam railways in 1929 totaled 41,323 miles, of which 22,468 miles represented lines of the Canadian National Railways, operated by the government (excluding the Central Vermont Railway, 420 miles, and the Thousand Island Railway, 4.6 miles). The Canadian Pacific Railway was the chief private system, with a single-track mileage of 14,417 miles. In the calendar year 1929, all steam railways carried a total of 39,446,000 passengers (40,592,792 in 1928), and 137,425,000 tons of freight (141,230,026 in 1928). The total earnings were about \$533,501,000 (\$563,732,260 in 1928) and the total expenses were \$433,168,000 (\$442,701,270 in 1928). The decline in railway operations recorded in 1929 continued in 1930. The total revenue freight loaded between Jan. 1 and July 5, 1930, amounted to 1,583,728 cars, or 10.5 per cent below the total for the correspond-

RICHARD B. BENNETT

Prime Minister, Secretary of State for External Affairs,
Appointed Aug. 8, 1930

ing period in 1929. The ballasting of the Hudson Bay Railway, which reached Churchill in 1929, and improvements upon the port at Churchill were expected to delay the opening of that route for regular commercial traffic until the fall of 1931. In March, 1930, work was begun on the new \$50,000,000 Canadian National Terminal in Montreal. The plans called for the expenditure of \$10,000,000 annually for five years. On Sept. 30, 1930, the Canadian Pacific inaugurated passenger service into Prince Albert, Sask., over a newly completed line north from Lanigan. A total of 385 miles of new railway line were completed in 1930, as compared with 841 in 1929.

OTHER COMMUNICATIONS. Of the 381,976 miles of highway in Canada on Jan. 1, 1929, 7723 miles were hard surfaced, 56,393 miles were graveled, 140,541 miles were improved earth roads, and 177,316 miles were unimproved. It was estimated that in 1930 more than \$87,000,000 was spent on highway construction and maintenance, of which \$57,000,000 was spent by the Provincial Governments and about \$30,000,000 by counties and townships. In 1928, there was in Canada one motor vehicle for every nine of its population, as compared with one for every 4.9 of the population in the United States. Completion of the trans-Canada highway at Dominion expense was promised by Premier Bennett in August, 1930. The cost of remaining construction was estimated at \$50,000,000. The King Government had cut off the subsidies formerly advanced to the Provinces to carry on construction.

Planes of Canadian airlines in 1929 flew 6,284,079 miles, carrying a total of 124,751 passengers, 3,903,908 pounds of freight and express, and 430,636 pounds of mail. Comparative figures for 1930 were: Total mileage 4,350,970; passengers carried, 55,961; freight and express, 1,449,337 pounds.

For the calendar year 1928, there were 53,777 miles of telegraph line, the gross revenue for the year being \$14,740,641 and the operating expenses \$11,647,063. The telephone wire mileage at the end of 1928 was 3,982,867 miles, the number of telephones, 1,334,534; total revenue, \$61,791,333; operating expenses, \$51,542,544. The number of wireless and radio stations on Mar. 31, 1929, was 298,644, including 297,398 amateur broadcasting stations.

GOVERNMENT. Executive power is exercised in the King's name by the Governor-General of Canada, acting through a responsible ministry or cabinet. Legislative power is in a Parliament of two Houses: a Senate and a House of Commons, the former consisting of 96 members appointed for life and the latter of 245 members in accordance with the distribution act of 1924, elected for five years (unless sooner dissolved) by popular vote, including woman suffrage. Women are eligible for election to Parliament. The Governor-General in 1930 was Viscount Willingdon. As a result of the election of Sept. 14, 1926, the House of Commons was composed of the following parties: Liberals, 120; Conservatives, 92; Liberal-Progressives, 10; United Farmers of Alberta, 11; Progressives, 9; Labor, 3; and Independent, 2. The cabinet as formed on Sept. 25, 1926 was as follows: Prime Minister, Secretary of State for External Affairs, William Lyon Mackenzie King; Finance and Receiver General, Charles A. Dunning; National Defense, Col. J. L. Ralston; Postmaster General, Peter J. Veniot; Soldiers' Civil Reestablishment and Pub-

lic Health, James H. King; Justice and Attorney-General, Ernest Lapointe; National Revenue, W. D. Euler; Marine and Fisheries, Pierre J. A. Cardin; Secretary of State, Fernand Rinfret; Railways and Canals, Thomas A. Crerar; Interior, Indian Affairs, and Mines, Charles Stewart; Agriculture, William R. Motherwell; Public Works, John C. Elliott; Trade and Commerce, James Malcolm; Solicitor General, Lucien Cannon; Immigration and Colonization, Robert Forke; Labor, Peter Heenan; Minister without Portfolio, Senator Raoul Dandurand.

HISTORY

Of preëminent importance among the developments of 1930 was the national election of July 28, which ended nearly a decade of Liberal rule and launched the Dominion upon a new course under the Conservative leadership of Premier Richard B. Bennett.

The defeat of the Liberals under Premier Mackenzie King was sensational and overwhelming. Their representation in the House of Commons was reduced from 120 to 89, while the Conservative membership increased from 92 to 139, out of a total of 245, giving the latter party a clear working majority. In seven of the nine Provinces, the Conservatives emerged with handsome majorities. For the first time since the conscription issue of 1917 transformed Quebec into a citadel of Liberal strength they made a substantial impression, winning 25 out of the 65 seats allotted to that Province. The Conservative appeal failed only in Nova Scotia and British Columbia, where Liberal gains reduced the Conservative representation from 12 to 10 and from 12 to 7, respectively. The Conservatives also shattered the Liberal monopoly of power in the Prairie Provinces, gaining 11 seats in Manitoba, 7 in Saskatchewan, and 3 in Alberta. In Ontario, where larger gains were expected, the Conservatives won six districts in addition to the 53 previously held. The defeat at the polls of five of Premier Mackenzie King's Ministers emphasized the sweeping character of the Conservative victory. The composition of Parliament following the election was: Conservatives, 139; Liberals, 89; Progressives, 12; Labor, 3; Independents, 2. None of the eight Communist candidates polled a substantial vote.

CONSERVATIVE CABINET. On the day following the election, the Ministry of Premier Mackenzie King resigned. The Conservative Ministry, sworn in on August 7, was composed as follows: Prime Minister, President of the Privy Council, Secretary of State for External Affairs, and Minister of Finance, Richard B. Bennett; Minister of Fisheries, E. N. Rhodes; Labor, Senator Gideon Robertson, Justice and Attorney General, Hugh Guthrie; Trade and Commerce, H. H. Stevens; Railways and Canals, R. J. Manion; National Revenue, E. B. Ryckman; Postmaster General, Arthur Sauve; Pensions and National Health, Colonel Murray MacLaren; Public Works, H. A. Stewart; Secretary of State, C. H. Cahan; National Defense, D. M. Sutherland; Marine Alfred Duranleau; Interior and Superintendent of Indian Affairs, Thomas G. Murphy; Solicitor General, Maurice Dupre; Immigration and Colonization, and Mines, W. A. Gorden; Agriculture, Robert Weir; Ministers without Portfolio, Sir George H. Perley and J. A. MacDonald.

CAMPAIGN ISSUES. The significant tendencies of Canada's political development seen in the Conservative triumph were: (1) the drift toward a

nationalist policy of tariff protection for Canadian industries and away from imperial preference, except on a strictly reciprocal basis; and (2) the termination of the exclusive affiliation of the Roman Catholic Church and the French population of Quebec with the Liberal party, long deplored as a menace to the growth of a united Canada.

The main issue of the election, however, was the economic depression and the accompanying unemployment, for which the electorate evidently held the Mackenzie King Government responsible. With the exception of a few months in 1926, the Liberals had been in office since 1921. The most effective complaint raised against them was that they had no policy to remedy unemployment and that they had not brought lasting prosperity. In Quebec and Manitoba, where unemployment and trade depression were particularly acute, the Liberals suffered their heaviest losses. The Government's trade agreement with New Zealand, under which the sister Dominion dumped large quantities of state-subsidized butter on the Canadian market, antagonized the agricultural population and alienated much support.

The issue of imperial preference and of tariff retaliation against the United States was relegated to second place, much against the will of the Liberals. In the Dunning tariff (see below), the Liberals had imposed countervailing duties upon products imported from countries which taxed imports of similar Canadian products, while imports from the United Kingdom were granted a preferential rate. The Liberal campaign slogan was "Let Uncle Sam go his own way; our way is with John Bull." The Conservatives took the position that they would extend preferential tariff rates to Great Britain only in return for reciprocal concessions and that they would go much further than the Liberals in protecting Canadian industry against the competition of American and other foreign manufactures. On the tariff issue, the Conservatives appealed to the strongly protectionist French population in Quebec and particularly to the French Independent Nationalists, headed by Henri Bourassa. As Canada was the best customer of the United States, the campaign was followed with close interest in that country.

CONSERVATIVE LEGISLATION. One of the first acts of the Bennett Government was to call a special session of Parliament (September 8 to 22) to pass emergency unemployment and tariff legislation. A public works appropriation of \$20,000,000 was voted as an unemployment relief measure. The appropriation was to be supplemented by a similar amount from the Provinces, substantial contributions by municipalities, and approximately \$21,000,000 by the railways, making a total of between \$80,000,000 and \$90,000,000 in public outlays, which it was planned to release for expenditure within the succeeding 12 or 18 months. In connection with railway construction programmes, the Dominion Government agreed to pay interest estimated at \$1,600,000 in order that projects costing about \$20,000,000 and originally planned to cover a period of four years, might be undertaken at once. Of the total Dominion appropriation, \$4,000,000 was set aside for direct unemployment relief. Unemployment relief expenditures actually approved by the Federal Government up to November 5 totaled \$37,000,000, of which \$14,000,000 was to be expended by seven of the Provinces and the Yukon Territory,

\$11,514,000 by the Canadian Pacific Railway Company, \$11,139,650 by the Canadian National Railways, and \$500,000 out of the grade-crossing fund. As a further stimulus to employment, the Minister of Immigration on August 15 ordered the restriction of immigration from Europe.

The tariff revision effected by the special session carried out the Conservative election promises. Import duties on about 125 classes of goods, including textiles, shoes, paper, agricultural implements, cast-iron pipe, fertilizers, electrical apparatus, household equipment, gasoline, jewelry, and meats, were increased. The new rates became effective provisionally on September 17 and were finally adopted by Parliament, with certain modifications, on September 22. Important changes in the customs laws were also inaugurated.

The new tariff continued the practice of dividing the tariff schedules into three classes. A comparatively low preferential rate was fixed on certain classes of British goods, an intermediate rate on imports from countries granting reciprocal tariff concessions to Canada, and a high general rate on imports from countries granting no tariff concessions, such as the United States. In some instances the preferences granted Great Britain were less than those accorded in the Dunning tariff, sponsored by the Liberals. On the other hand, some British goods, such as agricultural machinery, were placed on the free list, while the general duty was increased. The changes in the customs laws were intended primarily to prevent dumping on the Canadian market, particularly by Soviet Russia.

Premier Bennett returned from the Imperial Conference held in September without any tangible advantage for Canada, to face a rising tide of discontent in the Prairie Provinces caused by the collapse of grain prices. A resolution favoring an independent dominion in the Canadian West was adopted at a district meeting in Saskatchewan early in November. See **GREAT BRITAIN** under *History*.

THE SIXTEENTH PARLIAMENT. The fourth session of the 16th Parliament convened at Ottawa Feb. 20, 1930, and adjourned May 30. Two of the chief measures of the Liberal Government enacted into law were the Dunning tariff and an amendment to the export law prohibiting the clearance of liquor to the United States. The latter measure was adopted by a vote of 162 to 11, after Prime Minister Mackenzie King had announced that it was intended to prevent even the apparent countenancing by Canadian Government officials of smuggling operations.

The Dunning tariff, which became effective May 2 and was later ratified by Parliament, represented the most drastic revision of customs duties since 1907. It gave expression to uneasiness and resentment aroused in Canada by the high duties on many Canadian products contained in the Hawley-Smoot tariff bill, then under discussion in the United States Congress.

According to an analysis by the United States Department of Commerce, it affected, adversely in most instances, American exports to Canada aggregating between \$175,000,000 and \$225,000,000 annually. A total of 216 items were added to the free list under the British preferential tariff, favorably affecting about \$200,000,000 of British Empire trade. Thus the competition for the Canadian market between the British Empire and the United States was substantially increased.

American products adversely affected were

mainly steel manufactures, machinery, fruits, and vegetables. A countervailing duty proviso, attached to a number of items, served further to increase rates on imports from the United States. The proviso stipulated that if any country imposed higher duties on specified Canadian products than those levied by Canada on the same products imported from such country, the Canadian rates would be raised to the same level.

The same session of Parliament ratified agreements for the return to the Prairie Provinces of their natural resources (transfer was effected Oct. 1, 1930) and for the restoration to British Columbia of control of public lands in the Railway Belt and the Peace River Block. Benefits of the Fair Wages and Eight Hour Day Act were extended to those employed on government construction work. The Canada Grain Act was consolidated; provision was made for increased grain storage facilities; an inquiry into the promotion of the livestock industry was inaugurated; a separate Department of Fisheries was created; the Companies Act was amended; and treaties with the United States for the protection of the Pacific sockeye salmon and halibut fisheries were ratified. Another act provided a bounty of 49½ cents a ton on bituminous coal mined in Canada and used in the iron and steel industry. Nonresidents serving as directors, officers, or employees of companies carrying on business in Canada were required to pay the Canadian income tax on interest or dividends received from such companies, under another law. An exception was made where the majority voting stock was controlled in Canada. The international treaty for the limitation of naval armaments negotiated at London in the spring was ratified also.

OTHER EVENTS. Among other events of the year were the appointment of Hanford McNider, former United States Assistant Secretary of War, as Minister to Ottawa and the opening by him of negotiations for an agreement on the St. Lawrence waterway project; the appointment in February of Mrs. Norman F. Wilson of Ottawa as Canada's first woman Senator; and the transfer in September of Vincent Massey from his post as Minister to Washington to that of Canadian High Commissioner in London. Mr. Massey resigned, however, immediately after the Conservative victory, and was succeeded by G. Howard Ferguson, Premier of Ontario. Viscount Willingdon, retiring Governor General of Canada, was appointed Viceroy of India, effective March, 1931. See **SVERDRUP ISLANDS, STRIKES AND LOCKOUTS, PROHIBITION, OLD AGE PENSIONS, POLAR RESEARCH, TRADE UNIONS.**

CANADA, THE UNITED CHURCH OF. The designation applied to the single body formed in 1925 by the union of the Congregational, Methodist, and Presbyterian churches in Canada; the Methodist churches of Newfoundland and Bermuda are also included. Since the formal consummation of the union on June 10, 1925, a total of 600 congregations, mostly in smaller towns and rural districts, have amalgamated into approximately one-half that number of self-supporting charges. The board of home missions has also established 285 new fields of home-mission status, each field including three or four places at which public worship has been inaugurated and regularly conducted. Since 1925, 375 fields which formerly received aid have become self-supporting and have passed off the home-mission list. Foreign mission work has been carried on in

Japan, Korea, China, India, Trinidad, and Angola (West Central Africa).

In 1929 there were in Canada, Newfoundland, and Bermuda 7402 preaching places (including home missions) in 3001 pastoral charges. Between June 10, 1925, and Dec. 31, 1929, the communicant membership had increased from 600,522 to 650,845, and the number of persons under pastoral care from 1,261,778 to 1,528,296. In the same period 127,000 persons were received as communicants on profession of faith. The fourth general council of the United Church of Canada was held in London, Ont., in September, 1930. The Rt. Rev. Edmund H. Oliver, D.D., F.R.S.C., was chosen moderator for 1930-32; the Rev. T. Albert Moore, D.D., was secretary. Headquarters are at 421 Wesley Buildings, Toronto, Ont.

CANALS. OHIO RIVER. U. S. The opening of the Ohio River canalization, "the greatest canalization project ever undertaken in this if not in any country," was noted in the 1929 YEAR BOOK. Figures of estimated transportation savings published by Col. C. W. Kutz, U. S. A., ret. (*Eng. News-Record*, March 13, p. 432) served to stir up an immense amount of discussion and to bring to the fore the whole problem of transportation in the United States. No tolls are charged for the use of the Ohio River route and Colonel Kutz's estimates were attacked as being unduly favorable to the water-way. *The Railway Age* (February 1) pointed out that the true cost of moving freight on the Ohio system not only involved the actual cost of handling the freight and operating and maintaining the barges, but should also include proper allowances for interest on the investment, sinking fund and taxes. These latter items were characterized as "hidden costs" by the Ohio State Chamber of Commerce and were shown to amount to 6.62 mills per ton mile, whereas the "disclosed costs," those given to the public and actually paid by the shippers were only 4.23 mills, for the government operations on the Mississippi and Warrior Rivers.

Obviously there must either be an end to subsidized transportation or the railroad situation must be changed. In 1930 the people of the United States were paying the taxes, interest, and carrying charges on tax-free means of transportation such as the Ohio canalization and the modern highway system. The cost of such transportation is therefore met by the carriers or shippers only in part and much of the burden is transferred to the tax payers. On the other hand the railroads pay taxes annually of over \$420,000,000, must earn interest on their bonded indebtedness, and are strictly regulated not only as to rates but also as to the hours and conditions of employment of their employees. Clearly there were gross injustices in the American transportation system as it had been developing in recent years and the Ohio River work may serve to focus public attention on this vicious situation.

WELLAND CANAL, CANADA. "With little attention from the outside world," says the *Engineering News-Record* (N. Y.), "a great engineering project has been under way during the past 17 years in Canada." Previous YEAR BOOKS have recorded progress on this remarkable canal and have noted its possible effects on Great Lakes transportation. Thoroughly modern in all respects, the new Welland work replaces the old and inadequate canal and furnishes practically a ship canal connecting Lakes Erie and Ontario. At a cost of over \$120,000,000 slack water navigation has been pro-

vided around Niagara Falls with a channel of 25-foot draft and with only 8 locks, whereas the old 14-foot draft channel required 26 locks. Perhaps the most notable feature of the new canal are the locks—notable alike for their great lifts and the completeness of their electrical and other equipment. At Thorold a flight of three locks with a total lift of 139½ feet surmounts the great Niagara escarpment. These locks are 80 feet wide, over 850 feet long and their great lift, 46½ feet each, place them among the largest in the world. It will be operated toll-free to both Canadian and American vessels, and, although much larger than demanded by present traffic needs, it is so designed that it can be made an essential part of the St. Lawrence River ship canal system when this is built. *Engineering* (London) has published during the year a series of articles on the Welland Canal, which are most thorough and are completely illustrated with photographs and detailed drawings. The canal was practically finished.

THE FORTH AND CLYDE CANAL, GREAT BRITAIN. It will be remembered that Smeaton, the famous British civil engineer, had built a canal joining the Firth of Forth and the Firth of Clyde in 1768–90. A special government committee reported during the year on the proposal which had been brought forward to build a new canal of ship size at this point. The committee reported adversely on the ground that the construction would be extremely costly, probably over \$250,000,000, which was compared with the \$85,000,000 Manchester Ship Canal, and that the possible traffic was conjectural but could not be expected to justify such an expenditure.

THE NEW IJMUIDEN LOCK, HOLLAND. Until a little over a century ago the harbor of Amsterdam, Holland, was approached through the shallow Zuider Zee. At that time a 47-mile canal was built connecting the harbor directly with the North Sea. In 1876 this canal was replaced by the shorter North Sea Canal. At the entrance to the canal, IJmuiden, 14 miles from Amsterdam, a lock was built. This was enlarged in 1896 and in 1924 construction was begun on an even larger work. Indeed the new lock opened by Queen Wilhelmina in April, 1930, was 1315 feet long and 161 feet wide, with 50 feet depth of water over the sill, is the largest lock in the world. Unlike the great mitring gates of the locks at Panama those of IJmuiden are of the rolling caisson type—practically rolling doors which slide perpendicularly to the axis of the lock, into pockets in the side walls. The largest ships may now pass through this canal from the North Sea directly to Amsterdam. For the purpose of comparison the dimensions of the new lock and those of the Kiel and Panama Canal locks are given:

| | Length in ft. | Width in ft. | Depth in ft. |
|------------------|------------------|-----------------|-----------------|
| IJmuiden | 1,315 | 161 | 50 |
| Kiel Canal | 1,083 | 148 | 45 |
| Panama | 1,000 | 110 | 41½ |

GERMAN CANALS. The great difference between the economic status of inland canal navigation in the United States and in Europe, particularly Germany, is illustrated by a comparison of the New York State Barge Canal situation with that of the German Mittelland Canal system. Both are large canals and both are built for approximately the same capacity, about 18 or 20 million tons a

year. The New York State work actually carries about one-tenth of this volume of traffic while the German canal transported some 12,000,000 cargo tons in 1925 and appeared to be growing in use. Information now available on this German work enables us to submit a brief outline of the development.

THE MITTELLAND CANAL, GERMANY. This great central German canal project, which was planned about the close of the Nineteenth century, was actively carried forward through the early years of the World War. Operations were again resumed on a large scale in 1922 and an important link in the system was completed in 1930.

The most interesting works on the canal line are the river crossings and locks. The Weser crossing was made by a concrete aqueduct of 8 spans and almost 1200 feet long, and the Elbe Valley will be crossed by another aqueduct, over 7 miles long, which includes 24 arches of about 100 feet span and a steel bridge. Important locks at Anderten and Allerbüttel were required on the Hanover-Elbe section to lift the barges to the 38-mile reach or level connecting these two points.

Barges of 1000 tons capacity were provided for, and it was found necessary to adopt a wider section in the later work—135 feet wide at the surface, 95 at the bottom, a draft of 6½ feet, and a depth of 13 feet. The canal locks are 738½ feet long and 30½ feet wide. The depth in the lock chambers of the new locks is about 10 feet and the Anderten lock, completed in 1928, has a lift of 49 feet, the largest of any inland lock in Europe.

BREMEN-RUHR, GERMANY. A report was published that a new canal from Bremen, Germany, to the Ruhr District, capable of accommodating vessels of 1300 tons is to be built to parallel the old 750-ton channel. See ILLINOIS and NEW JERSEY under *Political and Other Events*; NICARAGUA under *History*.

CANARY ISLANDS. A group of small islands off the northwest coast of Africa, belonging to Spain. Area, 2810 square miles; population, Jan. 1, 1929, estimated at 543,018. Santa Cruz de Teneriffe, with an estimated population of 56,309 (Jan. 1, 1929), and Las Palmas, population 71,374, are capitals of the two provinces into which the islands were divided by Royal Decree of Sept. 21, 1927. The University of Seville maintains an educational establishment in the Canaries and is in charge of higher education. There is regular steamship communication with Spain. The islands are under the administration of continental Spain through a local governor.

CANBERRA, AUSTRALIA. See CITY AND REGIONAL PLANNING.

CANCER. See SURGERY, PROGRESS OF.

CANTERBURY, FORMER ARCHBISHOP OF. See DAVIDSON, THE MOST REV. AND RT. HON. RANDALL THOMAS, FIRST BARON OF LAMBETH.

CAPE COLONY. See CAPE OF GOOD HOPE PROVINCE.

CAPE OF GOOD HOPE PROVINCE. The southernmost of the four original provinces of the Union of South Africa; formerly known as Cape Colony or the Colony of the Cape of Good Hope. Capital, Cape Town. Area, 276,536 square miles; population at the census of 1921, 2,781,542, of whom only 650,327 were Europeans. On June 30, 1928, the total population was officially estimated at 3,035,802, including 728,159 Europeans, 1,782,234 Bantus, 7961 Asiatics, and 517,448 of mixed

and other origin. The census of 1926 showed 706,137 Europeans. The chief towns, with their white population in 1926, were: Cape Town, 130,568; Kimberley, 17,268; Port Elizabeth, 33,371; East London, 23,210. The movement of population in 1928 among Europeans was: Births, 18,032; deaths, 7519; marriages, 6351. For non-Europeans, so far as registered, it was: Births, 37,719; deaths, 28,167; marriages, 9377.

Education is compulsory for white children. In 1928 there were 4610 aided schools, with 138,987 white pupils. Education of the 185,552 non-European pupils was carried on mainly by Church and missionary bodies. The state expenditure for education in 1928-29 was £3,270,454. The provincial revenue in 1927-28 totaled £4,104,044, including £2,423,393 received as a subsidy from the Union Treasury; expenditure (ordinary), £4,119,757. Administrator of the province in 1930, J. H. Conrahe (appointed 1929). See SOUTH AFRICA, UNION OF.

CAPE VERDE (vũrd) ISLANDS. A group of 14 islands off the western coast of Africa belonging to Portugal. Area, 1475 square miles; population at the census of 1928, 150,160. The chief products are sisal, castor oil, coffee, mustard, brandy, oranges, and hides. Estimated revenues and expenditures in 1928-29 balanced at 16,384,970 escudos (1 escudo exchanged at approximately \$0.0447 in 1929). Imports in 1928 totaled 60,958,321 escudos; exports, 1,727,192 escudos. St. Vincent, the chief port, is a coaling station for European navigation to South America. In 1928, 1125 ships entered the port. The islands are administered by a governor, whose seat is at Praia, the capital. Governor in 1930, Col. Antonio Alvarez Guedes Vaz. See PORTUGAL under *History*.

CARDINALS, NEW. See ROMAN CATHOLIC CHURCH.

CARINTHIA. A province of the Republic of Austria; formerly a crownland of the Austro-Hungarian Empire. Area, 3680 square miles; population at the census of 1923, 370,817, as compared with 396,200 in 1910. Capital, Klagenfurt, with a population in 1923 of 27,423.

CARLETON COLLEGE. A coeducational institution of higher learning in Northfield, Minn.; founded in 1866 and maintaining relations of coöperation with the Congregational, Baptist, and Protestant Episcopal churches. The enrollment for the autumn of 1930 was 932. There were 67 faculty members. The endowment amounted to \$2,754,282, and the total income of the year was \$642,988. There were 96,000 volumes and 30,000 pamphlets in the library. President, Donald John Cowling, Ph.D., D.D., LL.D.

CARNEGIE CORPORATION OF NEW YORK. Established by Andrew Carnegie in 1911, this corporation was formed for the advancement and diffusion of knowledge and understanding among the people of the United States, Canada, and the British colonies. Its total endowment is approximately \$135,000,000 of which \$10,000,000 is applicable elsewhere than in the United States. The corporation has conceived its function to be not that of an operating agency in itself, but rather that of an agency charged with the duty of studying and estimating those forces and institutions that make for the advancement and diffusion of knowledge and understanding in the areas specified and of aiding these institutions in such measure as may be possible within the income of the corporation, having care always to the fact

that the income of this endowment is to be a liquid asset for each generation.

In 1930, as in the previous year, approximately two-thirds of the annual income of the corporation was devoted to a reduction of unpaid obligations which on September 1 amounted to \$21,512,506. The annual report of the president, Frederick P. Keppel, showed that during the fiscal year 1929-30, the sum of \$3,709,250 was appropriated. Of this amount, \$729,750 was applied toward library service; \$159,500 toward the encouragement of adult education activities; \$513,500 toward the support of national organizations in the field of fine arts and of departments of art in colleges and universities and of projects for developing appreciation of the arts; \$739,500 toward the support of educational and scientific studies and research publications; and \$1,567,000 toward general interests, including the Carnegie Endowment for International Peace.

The corporation made scholarship grants for graduate study by prospective college teachers of the arts and by qualified students of library science. It continued to support various important projects, such as research in the study of vitamins, nutrition, investigation of high-frequency rays of cosmic origin, coöperative research in pyorrhea and otosclerosis, and study of susceptibility to infectious diseases. Various studies conducted by the American Historical Association, the Modern Language Association, the Institute of Economics, and the American Law Institute were continued through the year. From the income of its \$10,000,000 fund, the corporation continued its five-year programme in British Africa, involving a total of \$500,000. This included scientific research, aid to Jeanes Schools, exchange of educational visits, and library service, carried on largely through responsible local bodies. Various educational enterprises in Canada, Australia, and New Zealand also were aided.

The trustees of the corporation in 1930 were: James Bertram, Nicholas Murray Butler, John J. Carty, Samuel Harden Church, Robert A. Franks, William J. Holland, David F. Houston, Henry James, Frederick P. Keppel, Russell Leffingwell, John C. Merriam, John A. Poynton, and Elihu Root. Officers of administration were: Elihu Root, chairman of the board; Robert A. Franks, vice chairman and treasurer; Frederick P. Keppel, president; James Bertram, secretary; and Robert M. Lester, assistant to the president. The headquarters are located at 522 Fifth Avenue, New York City. See LIBRARY PROGRESS.

CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING, THE. A foundation established by Andrew Carnegie on Apr. 76, 1905, when he placed an endowment of \$10,000,000 in trust with 25 trustees, mostly presidents of universities and colleges, for the purpose of encouraging higher education in the United States, Canada, and Newfoundland, chiefly by providing retiring allowances for teachers in universities and colleges and pensions for their widows. The foundation was incorporated by Act of Congress in 1906. Its resources were increased by a further gift of \$5,000,000 from Mr. Carnegie in 1908, and by appropriations of \$1,250,000 in 1913 and \$12,000,000 in 1918 from the Carnegie Corporation, which Mr. Carnegie established in 1911. At the completion of its twenty-fifth year, June 30, 1930, the foundation had endowments and accumulated reserves amounting to \$32,150,000, and had distributed \$20,361,000 in

retiring allowances and pensions to 1100 teachers and 500 widows, chiefly through 94 associated institutions, selected because of their educational excellence.

The foundation publishes extensive annual reports, which deal with many educational problems. Its division of educational inquiry, established in 1913, has issued a score of comprehensive bulletins, dealing with medical, legal, engineering, dental, and vocational education, the training of teachers, intercollegiate athletics, and kindred subjects. In 1930 the foundation was engaged in a comprehensive study of the relations between secondary schools and colleges in Pennsylvania. Dr. Henry Suzzallo, former president of the University of Washington, succeeded Dr. Henry Smith Pritchett as president in August, 1930; Clyde Furst was secretary. The headquarters are at 522 Fifth Avenue, New York City.

CARNEGIE INSTITUTE OF PITTSBURGH. See ART EXHIBITIONS.

CARNEGIE INSTITUTE OF TECHNOLOGY. A nonsectarian institution for technical education at Schenley Park, Pittsburgh, Pa.; founded in 1900. The enrollment for the autumn of 1930 was 6577, including 2547 registered in the regular day courses and 4030 in the evening courses. For the summer session 814 students were enrolled. The faculty numbered 369, of whom 250 were on full time and 119 on part time. A coal research laboratory was opened under the direction of Dr. H. H. Lowry. The endowment of the institution was \$15,900,000 and the annual income \$794,000 (not including student fees). The institute has a campus branch of the Carnegie Library of Pittsburgh, which has 450,000 volumes. President, Thomas Stockham Baker, Ph.D., LL.D., Sc.D.

CARNEGIE INSTITUTION OF WASHINGTON. An organization founded in 1902 "to encourage in the broadest and most liberal manner investigation, research, and discovery, and the application of knowledge to the improvement of mankind." The institution attempts to advance fundamental research in fields not normally covered by the activities of other agencies, and to concentrate its attention upon specific problems with the idea of shifting attack from time to time to meet the more pressing needs of research. Its major activities in 1930 were carried on through the following departments and divisions: Department of embryology (located in the Hunterian laboratory of the Johns Hopkins University medical school); department of genetics (laboratory in Cold Spring Harbor, Long Island, N. Y.); geophysical laboratory; division of historical research, including the Section of Aboriginal American History, Section of United States History, and Section of the History of Science; department of meridian astrometry (headquarters in the Dudley Observatory, Albany, N. Y.); Mount Wilson observatory, in Pasadena, Calif.; nutrition laboratory, in Boston; division of plant biology (central laboratory at Stanford University); department of terrestrial magnetism; Tortugas (Fla.) laboratory of marine biology.

During 1930 the institution conducted a group of investigations in central Africa. They were concerned with movements of the earth's crust in the so-called Rift region, as expressed in seismic and volcanic activity; habits and psychology of a type of gorilla inhabiting a portion of the volcanic area examined; and geographical distribution of certain groups of animals, considered with special

reference to the geological factors which influenced their migration. In addition to researches on occurrence, history, and evolution of specific groups of animals and plants, the institution supported during the year studies on two of the greatest problems in the history of life: the beginnings of life, and the beginnings of human history in America. The first was concerned with remains from the earliest unaltered rocks, or strata of the Proterozoic age, in the Grand Canyon, while the second involved investigation of Gypsum Cave, Nevada, where man-made implements were found in close association with remains of the ground-sloth and other extinct animals. The outstanding piece of work, conducted by the division of historical research in the Maya field of Middle America, was the completion of the excavation and repair of the Caracol, a tower-like building of circular form at Chichen Itzá, which is believed to have served both as a temple and as an astronomical observatory.

The results of the institution's investigations are made known through the scientific journals, the institution's *Year Book*, a series of monographs which it issues, and other regularly established channels. During 1930 the executive committee authorized the publication of 18 volumes at an aggregate estimated cost of \$56,875. Total receipts of the institution from interest on endowment, bonds and bank deposits, sales of publications, refunds on grants, and miscellaneous items amounted to \$3,638,195 for the year, while total expenditures, including purchase of bonds, large projects, minor grants, publications, and administration amounted to \$3,590,631. The president in 1930 was Dr. John C. Merriam, and the administrative secretary was W. M. Gilbert. The officers of the board of trustees were: Elihu Root, chairman; Henry S. Pritchett, vice-chairman; and W. Cameron Forbes, secretary. The executive committee included: Elihu Root, chairman, W. Cameron Forbes, Cass Gilbert, John C. Merriam, William Church Osborn, William Barclay Parsons, Stewart Paton, and Henry S. Pritchett. Headquarters are at Sixteenth and P Streets, N. W., Washington, D. C.

CARNEIRO, kār nār'ō ANTONIO. A Portuguese painter, died in Oporto, Apr. 1, 1930. He was born in Amarante, Nov. 16, 1872, and studied art at the Oporto Academy and also in Paris under Benjamin Constant and J. P. Laurens. He exhibited at the Universal Exposition in Paris in 1900 and at the Louisiana Purchase Exposition in St. Louis in 1904. He was well known as a landscape and historical painter, having first gained recognition in this field with "Scenes from History of the City of Evora" (1901). His paintings of religious subjects, such as "The Baptism of Christ" and "The Last Supper," also earned him high honors. He was a fellow of the National Society of Fine Arts of Lisbon.

CAROLINE ISLANDS. A group of about 500 coral islets in the western Pacific, transferred from Germany to Japan under mandate of the League of Nations by the Paris Peace Treaty. The chief islands are Ponapé, with 8286 inhabitants; Yap, an important wireless and cable station, with 7332; and Parao, with 7257.

CARTELS. See CHILE, CUBA.

CASE SCHOOL OF APPLIED SCIENCE. An engineering college in Cleveland, Ohio; founded in 1881. In the autumn of 1930 the enrollment was 751 students. The summer session registration was 182. The faculty numbered 78

members. The endowment amounted to \$4,328,496 while the income for the year was \$411,466. The library contained 24,850 volumes. President, William Elgin Wickenden, D.Eng., D.Sc.

CATHOLIC UNIVERSITY OF AMERICA, THE. A national institution of higher education in Washington, D. C.; founded in 1887 by the Roman Catholic hierarchy with the approval of the Holy See and chartered by an act of Congress. It consists of the following schools: Sacred sciences; canon law; law (coeducational); engineering; arts and sciences; and graduate school of arts and sciences (coeducational). The enrollment for the summer session of 1930 was 755, while that for the autumn term was about 1000. Affiliated with the university is the Catholic Sisters' College (190 students); Trinity College for Women (382 students); National Catholic School of Social Service (44 students); and 30 religious houses of study in the immediate vicinity with an enrollment of about 800 students. In addition, there are affiliated throughout the United States 4 seminaries, 29 colleges, 225 high schools and academics, and 57 novitiates. The university is governed by a board of trustees (prelates, priests, and laymen) through the Rector, who is advised by an academic senate composed of representatives (lay and clerical) of the various faculties. The faculty of the university proper numbered 123, of whom 39 were full professors. The endowment amounted to approximately \$3,000,000. The library contained 300,000 volumes. Administrative officers: The Rt. Rev. James H. Ryan, S.T.D., Ph.D., LL.D., Litt.D., rector; the Rt. Rev. Edward A. Pace, S.T.D., LL.D., vice rector; and Richard J. Purcell, Ph.D., general secretary.

CAUCASUS, kă'kă-sūs. A term applied to the indefinite region in southern Russia, comprising the isthmus which separates the Sea of Azov and the Black Sea from the Caspian Sea; formerly an administrative division of the Russian Empire. It was divided into two districts of Transcaucasia and Ciscaucasia, of which the former, after the World War, was divided among the three republics of Armenia, Georgia, and Azerbaijan. These were incorporated under the constitution of 1923, in the Union of Soviet Republics, as the Transcaucasian Socialist Federated Soviet Republic. Consult each under its own title.

CELEBRATIONS. The memories of the past are conspicuously brought to the present by celebrations, and in the United States the series commemorating the great events of the War of the Revolution were finding a fitting culmination, for which preparations were being made, in the celebration at Yorktown where Cornwallis surrendered his army to Washington. The bicentenary anniversary of the birth of the Father of his Country was approaching, and the tercentenary of the founding of Massachusetts was held during 1930, while that of Maryland, to be held in 1933, was being organized.

Belgium, Greece, and Uruguay each held centenary celebrations which were not confined to

one day but were extended throughout the year. These are mentioned in the articles on these countries. Belgium expressed her celebration with expositions (q.v.) at Antwerp, Brussels, and Liège; Greece by the restoration of the Parthenon and other events; and Uruguay by a series of Olympic games, general athletic contests, and other festivities.

Some of the more important celebrations that occurred during the year follow:

February 10-December 30. President Hoover in an appropriate proclamation called attention to the fact that: Congress had authorized commemoration of the heroism of the fathers and mothers who traversed the Oregon trail to the Far West. On April 10, 1830, the first wagon train left St. Louis for Oregon, pioneering the way for the thousands of men and women who settled the Pacific States. On December 29, 1830, Ezra Meeker was born who carried over into our day the personal memory of his historic epoch. The Oregon Trail Memorial Association which he founded and which included men and women in all walks of life in all parts of the country, sponsored the movement to observe the period from April 10 to December 29 of this year as the covered-wagon centennial, to recall the national significance of this centenary of the great Westward tide, which established civilization across a continent. Accordingly a covered-wagon train, reenacting the departure of the first expedition over the Oregon trail 100 years previously, set out from St. Louis for the West on April 10, with 81 men riding in ten covered wagons, two ancient buggies and on horses and mules. Indians wearing war paint and feathers, men in fur caps and leather coats and pants, women in long flowing dresses and hoop skirts made the scene realistic as the expedition departed from a spot near the Mississippi River front and traveled five miles through St. Louis streets.

The expedition carried a message from the Governor of Missouri to the Governor of Oregon. Special celebrations were held at various places on the route, as at Caspar, Wyo., on July 3 when the Old Oregon Trail was thronged by youths and patriachs bound for Independence Rock for the opening of a three-day celebration of the Oregon Trail Centennial. The largest single group was a caravan of 200 Boy Scouts headed by Eagle Scouts of New York City boroughs traveling in the ox-moble owned by Henry Ford and originally built for the late Ezra Meeker.

February 10. The tenth anniversary of the reunion of Schleswig with Denmark was celebrated with appropriate exercises. Copenhagen was flag bedecked in honor of the event, while wreaths and flowers were placed on the graves of nationals of the allied powers. Commemorative meetings and festivals were held throughout Schleswig.

March 25. The day of the declaration of Hellenic Independence was celebrated by the completion of the restoration of the shattered columns of the north façade of the Parthenon in Athens, Greece. This restoration of "the most perfect structure ever erected" was begun in 1916 and was carried on largely by means of funds furnished by citizens of New York.

April 2. The 125th anniversary of the birth of Hans Christian Andersen was celebrated in Copenhagen, Denmark, at the exercises in the Town Hall; the speakers paid tribute to Andersen and special performances in commemoration of the noted author were held at the Royal Theatre.

April 6-10. The centenary of the establishment of the Mormon Church was celebrated in Salt Lake City by a historical address delivered by President Heber J. Grant and a pageant entitled "The Message of the Ages." A similar celebration was held in Independence, Mo., with addresses by prominent officials of the Mormon Church. See **LATTER-DAY SAINTS, CHURCH OF**.

April 10-13. The 250th anniversary of the founding of Carolina under the Lord's Proprietors as well as the same anniversary of the arrival of the first Huguenot fleet, fleeing from the wrath of Louis XIV of France, was celebrated with religious and other patriotic exercises in Charleston, S. C.

April 13. The 187th anniversary of the birth of Thomas Jefferson was celebrated with some 1200 meetings in various parts of the United States. Most of the observances were held on the 14th and many of the speeches broadcasted by radio. One of the chief speakers was President Edwin A. Alderman of the University of Virginia, whose tribute went on the air over a nation-wide hook-up.

April 26. Interesting exercises commemorating the landing of the first permanent settlers in the New World in 1607 were held at Cape Henry, Va., to which President Hoover and the governors of the 13 original States and those States originally part of Virginia were invited.

April 27. The 2000th anniversary of the birth of Vergil was celebrated throughout the world in literary and educational circles. In Italy on this date, a "Lucus Virgilianus" was opened consisting of a wood with all the trees, shrubs, and flowers mentioned in the Eclogues, the Georgics and in the *Aeneid*. Other celebrations were held in Mantua, Rome, Naples, and Brindisi, Italy. In the United States the celebrations were under the direction of the American Classical League and besides prizes, included commemorative medals, plaques, posters, postcards, and bookplates.

May 4. There was celebrated in Algiers the centenary of the possession by France of her great African colony. The elaborate ceremonies under the presidency of President Doumergue, included a naval review participated in by more than 80 vessels, including dreadnaughts, cruisers, destroyers, and submarines, and four squadrons of airplanes of the French Atlantic and Mediterranean fleets off Algiers; and also the unveiling of a statue of René Viviani, former prime minister, who was born in Algiers, as well as many festivities participated in by the native population and tribal chieftains. See **ALGERIA**.

May 11. The heroic resistance of the city of Leghorn, Italy against a besieging army of 20,000 Austrians in 1849 was celebrated this year with greater enthusiasm than usual owing to a visit by Mussolini.

May 14. The 119th anniversary of the independence of Paraguay from Spain was celebrated in Asunción with a military parade, naval demonstration, and other appropriate exercises. The day was also celebrated at the capitals of Argentina, Brazil, and Uruguay by receptions at the Paraguayan Legations, and at the schools in Buenos Aires, Rio de Janeiro, and Montevideo, bearing the name Republic of Paraguay School in accordance to the South American custom of giving the name of sister republics to schools.

May 16-23. The Golden Jubilee National Congress of the Salvation Army, the climax of the celebrations of fifty years' achievement by the organization in the United States, was held in New

York City. The 25th anniversary of Commander Evangeline Booth's service was also celebrated. The jubilee opened with a grand pageant at the Seventy-first Infantry Armory. Also on the programme during the celebration was a reception at City Hall, special Sunday services in the Metropolitan Opera House and other places throughout the city, and a grand musical festival. See **SALVATION ARMY**.

June 11. Buenos Aires celebrated the 350th anniversary of its founding by Juan de Garay 50 years after the Indians had destroyed the first settlement established by Francisco Pizarro's lieutenant, Pedro Mendoza. Refugees from the first settlement made their way up the river and founded Asunción, Paraguay. De Garay traveled overland from Pizarro's headquarters in Lima, Peru, to Asunción, gathered 60 civilians, brought them down the river and founded what is now the world's second largest Latin city.

June 15-25. The quadricentennial anniversary of the publication of the Augsburg Confession, the basic statement of Protestantism, was celebrated in Augsburg, Germany, by a series of events and attended by delegates from everywhere, including representatives from 30 American church denominations. A collection of valuable Lutheran Bibles in all languages were on exhibition. Historical plays were a part of the programme. A feature of the festival was open-air concerts by a corps of 600 trombone players. A solemn memorial service on June 25, 400 years after Martin Luther's friend and spokesman, Philip Melancthon, presented his confession to Emperor Charles V, sitting in conclave with his Diet to consider this "new Lutheran doctrine," concluded the sessions. See **LUTHERAN CHURCH**.

June 23. The sesquicentennial anniversary of a battle in which the American forces under Gen. Nathanael Greene defeated the British under Sir Henry Clinton, was celebrated in Springfield, N. J., with a series of exercises including a military parade in which there were floats, illustrative of the event, a sham fight, display of fireworks, and memorial services.

June 26-28. The 1000th anniversary of the Althing, the oldest parliament in the world, was celebrated in Reykjavik, Iceland, by a special session lasting three days which was attended by the King of Denmark, Princes Olav and Gustav, and other guests including several thousands who came from abroad. The American official delegation led by Senator Norbeck, consisted of Representative O. B. Burtness of North Dakota, F. H. Fljezdal of Detroit, Prof. Sveinbjorn Johnson of the University of Illinois and O. P. J. Jacobson of St. Paul, Minn. A series of special coins were issued in commemoration of the event. See **ICELAND**.

July 4. The sesquicentennial of the founding of Jonesboro, the oldest town in Tennessee, and known as the place where Andrew Jackson practiced law and fought his bloodless duel with Waightstill Avery, was celebrated with patriotic exercises and a historic pageant.

July 10. The 175th anniversary of the battle of Fort Duquesne, where Gen. Edward Braddock was killed, was celebrated in Braddock, Pa., by the unveiling of a monument to George Washington with appropriate addresses and by a historic pageant. A commemorative postage stamp was issued by the Post Office Department.

July 29. The 900th anniversary of the introduction of Christianity into Norway by King

Olav was celebrated in Nidaros, formerly Trondhjem, with the dedication of the restoration of the interior of the cathedral, a festival cantata, religious exercises, and other fitting ceremonies.

August 6. The annual occurrence of Oriskany Day, which commemorates the first check to the British in the Burgoyne campaign and during which the first American flag was flown from Fort Stanwix, was celebrated by an automobile parade from Schenectady to Rome, a distance of 95 miles.

August 11. The eleventh anniversary of the adoption of the Weimar constitution which created the present government in Germany was celebrated with festivities throughout the Fatherland, and particularly in Berlin where a pageant was presented depicting the freeing of the Rhine from its heavy chains, to the great joy of the other German rivers—each river being represented by a column of school children clad in gauzy blue, green, or brown, according to the color of the river.

August 14. The centenary of the independence of Ecuador as a sovereign republic was universally celebrated throughout that country and in the United States particularly by addresses and other exercises pertinent to the occasion in the building of the Pan-American Union in Washington.

August 16. The 150th anniversary of the death of Baron de Kalb who fell at the battle of Camden, S. C., was celebrated by the placing of a wreath on his statue in Annapolis, Md., by his descendant George de Kalb, in the presence of representatives of the U. S. Government, the State of Maryland, and members of patriotic societies.

August 18. The 343d anniversary of the birth of Virginia Dare, the first child of English parentage born in the New World, was celebrated by the erection of a memorial gateway at Manteo, N. C., the site of Sir Walter Raleigh's ill-fated colony.

August 20. The 175th anniversary of the expulsion of 6000 Acadians from Nova Scotia by the British was celebrated in Grand Pré, N. S., by a gathering of their descendants who after the celebration of a pontifical high mass, listened to patriotic and historical addresses appropriate to the occasion.

September 11. The 154th anniversary of the peace conference between Admiral Howe, representing the English colony, and the three Americans, Benjamin Franklin, John Adams, and Edward Rutledge, in an attempt to maintain peace between England and the American colonists, at the old Billow house, now Conference House, in Tottenville, Staten Island, N. Y., was celebrated by a reception at which patriotic addresses pertinent to the occasion were delivered.

September 18. The 120th anniversary of the independence of Chile was celebrated throughout that country, and in Santiago by a reception given by President Carlos Ibañez and the Ambassador from the United States, William S. Culbertson.

September 21-27. The tercentenary of the founding of Jersey City, N. J., was celebrated with an elaborate programme that began with special religious services and continued with tableaux and music depicting the early history, a parade of military, a historical pageant entitled "Yesterday, Today, and the Dawn of Tomorrow," patriotic addresses, an athletic field meet, and a display of fireworks.

October 1-15. The 2000th anniversary of the birth of Vergil was celebrated with imposing cere-

monies throughout the world and conspicuously in Italy, at Mantua where he was born; in Naples where he was buried; and in Rome where he spent most of his life. These celebrations culminated on October 15, the accepted date of the birth of the poet.

October 4-12. The tercentenary of the founding of Hoboken, N. J., was celebrated by a series of exercises which included a sham battle, a pageant of floats, a reception at Stevens Institute of Technology, a dramatic pageant, a field meet for athletics, and fireworks, and other events appropriate to the special named days which were designated as Religious Day, Hospitality Day, Business Men's Day, Transportation and Safety Day, and Historic Day.

October 7. The sesquicentenary anniversary of the battle of King's Mountain was celebrated on the battlefield in South Carolina with patriotic exercises, including an address by President Hoover in which he said that this battle ranked in importance with those of Lexington and Concord, and that as it spoiled the strategy of Lord Cornwallis, it deserved greater recognition than it had previously received.

October 4. The 250th anniversary of the founding of the village of Bedford, N. Y., was celebrated by a military display and a historic pageant written for the occasion by Rev. Arthur Ketchum. Also a telephone conversation was held between the Mayor of Bedford, England, and the local officials in Bedford, N. Y.

October 12-15. The 250th anniversary of the settlement and the 200th year of the granting of its charter by George II, was celebrated in New Brunswick, N. J., beginning with a union religious service and followed by a military, civic, fraternal, and historic parade, and a pageant, "The Drama on the Highway," with a cast of 3000 persons, was presented at Neilson Field. The Governor of the Province of New Brunswick, Canada, and the Mayors of the twelve "Brunswicks" in Georgia, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, Ohio, Tennessee, and Virginia were invited. A message of congratulation was received from President Hoover.

October 19. The 149th anniversary of the surrender of the British Army under Cornwallis to Washington at Yorktown, Va., was celebrated with patriotic exercises, including addresses by Governor Pollard of Virginia and others. A congressional committee was appointed with an adequate appropriation for the sesquicentennial celebration in 1931 at which President Hoover was expected to be present.

November 25. The 25th anniversary of the accession by King Haakon and Queen Maud to the throne of Norway was celebrated in Oslo by a religious service, a royal procession, the receipt of congratulations by the King, which were personally acknowledged by him by means of the radio, a gala dinner, and a torchlight procession. President Hoover sent a message of congratulation.

December 17. The 100th anniversary of the death of Gen. Simon Bolívar, the liberator of Spanish South America from the control of Spain, was celebrated with elaborate exercises in Argentina, Bolivia, Colombia, Ecuador, Peru, and Venezuela, and also in New York, Philadelphia, and Washington, and as well in London, Paris, Rome, and elsewhere in Europe. For other details of the anniversary, see BOLÍVAR CENTENARY.

December 17. The 275th anniversary of the admission of Jews in the New World was celebrated in Faneuil Hall, Boston, at which a message from President Hoover and others from various Christian leaders—Catholic and Protestant—were read, and addresses delivered by prominent persons including Bishop Sherrill of Massachusetts. The 23 Jewish settlers admitted to New Amsterdam on Dec. 17, 1655, by Governor Peter Stuyvesant have grown to over 4,500,000 persons.

December 28. The 74th anniversary of the birth of Woodrow Wilson was celebrated by appropriate exercises at the Washington (D. C.) Cathedral and by a dinner in New York City at which an address was made by Newton D. Baker, Secretary of War during Wilson's administration.

MASSACHUSETTS BAY TERCENTENARY. As told in the *YEAR BOOK* for 1929 (p. 157), the preliminary plans for these unusual state-wide celebrations were well matured by the end of 1929. For detailed information concerning the local celebrations, which were more than 150 in number, reference must be made to the issues of the *Nineteen-thirty News for the Tercentenary*. The beginning of the year was ushered in throughout the State "from the Berkshires to Cape Cod and from Essex County to Bristol County by public bells and chimes" which rang forth at noon, as well as by radio addresses and other means of announcement. The special celebrations began on Tercentenary Sunday, June 1, with religious, civic, and historic exercises that were thereafter continued during the year. These celebrations culminated in Boston during the week of September 14-20, when on the evening of September 15 an electrical parade was held of illuminated historical floats with escorts, picturing 300 years of growth and development of Boston and Massachusetts. This was followed on September 16 by the dedication of a memorial to the founders on Boston Common at which an address was delivered by Charles F. Adams and a poem by Edward Markham was read. September 17 was "Boston Day" and was celebrated by the greatest historical pageant ever presented in New England. It included 200 floats, 100 bands, and 40,000 marchers. The events during the remaining three days of the week were chiefly of a literary and musical character, closing on Saturday the 19th with a display of fireworks.

Incidental to these events was the presence during Boston Week in Charles Street basin of the reproduction of the ship *Arbella*, the vessel that brought Governor Winthrop and his party to New England and which came in state to Salem on June 12. Also to be mentioned was the Pioneers' village in Forest Park, Salem, which consisted of reproductions of dwellings of settlers in 1630 with period furniture, gardens, animals, and home industries in appropriate landscape setting which was continued during the year. Appropriate souvenirs, including medals, flags, and a special commemorative 2-cent postage stamp issued by the Government were available. And it may be added that an attractive series of permanent markers indicating historic sites were placed at important places throughout the State. A book recording the progress of fifty years since the publication in connection with the 250th anniversary of the settlement of Boston was in preparation and was to serve as a fifth volume in that series. Never before has such a successful presentation of the early history of a community

been so satisfactorily presented to the public and it is safe to assume that the permanent result will be a greater knowledge among the people of Massachusetts of the interesting events of the first settlement of that great Commonwealth.

WASHINGTON BICENTENNIAL COMMISSION. With the coming of the New Year, an increased interest began to be developed in the plans for the bicentennial celebration of the birth of Washington. Among the additions to the personnel was the appointment of George K. Eastman of Rochester, N. Y., to the Commission in place of Hanford MacNider of Iowa, who became Minister to Canada. Frederick V. Fisher, an assistant director of the San Francisco Exposition, was in June chosen executive officer of the Commission in the District of Columbia. He was associated with Representative Sol Bloom and Col. U. S. Grant 3d, who were associate directors representing the National Government. Suitable offices with an adequate force were established in Washington as well as a suite for women's work under the direction of the women members of the Commission.

A bill authorizing the approximate appropriation of \$200,000 was passed by Congress for the purpose of the preparation of a definitive addition of all the essential writings of George Washington, in 25 volumes. Provision also was made for the distribution of 100,000 copies of a pamphlet entitled *Honor to George Washington*, and 100,000 copies of a pamphlet *Reading About George Washington*. Two thousand copies of a set of directions for celebrations and pageants for the bicentennial was decided on as well as distribution of 120,000 copies of a portrait of George Washington. Preparation of a George Washington atlas, and a map showing places identified with the career of Washington was arranged for. The bill also authorized the George Washington Bicentennial Commission to appoint a director, a historian, an executive secretary, and other necessary personnel.

Tentative plans for the great celebration as published, provided for its beginning at noon on New Year's day when 10,000 school children of Washington, D. C., would stand on the steps of the Capitol and join in singing patriotic songs which would be broadcast over the Nation. The next event of National significance would come Feb. 22, 1932, Washington's birthday, when the central event was to be a memorial address by the President, a convocation of 14,000 of the most eminent educators in America in Washington. Then would follow President's day, March 4, when it was planned to hold a great public demonstration by the schools, public bodies, and citizens of Washington in exaltation of the high office of President. Next, on March 27, Easter Sunday, it was planned to hold a procession of the clergy of all faiths under the Stars and Stripes, together with high tributes to Washington as a churchman and a sermon by some world-renowned preacher. The next notable event would be on April 30, the anniversary of the inauguration of Washington, when there would be a parade led by the President and Vice President and all living former Presidents and Vice Presidents. May 30 was to be observed as Heroes' day, which it was planned to make the greatest Memorial day ever observed in America, with the life of George Washington as a soldier and statesman exalted as the exemplar in times of war and peace. Then would come Flag day, June 14, when a vast outdoor pageant was

contemplated, in which every State that had a star in the flag would participate.

It was planned to make Independence day an old-fashioned Fourth of July with parades, universal decorations of homes and public buildings, and fireworks. There were to be two observances in September. First, Labor Day, when there would be a Nation-wide tribute to labor. Next, Constitution day, when it was hoped to have large delegations representing the 40,000,000 members of fraternal organizations in Washington to pay tribute to Washington as a lodge member. Armistice day was to have a notable place in the year's pageant of holidays. Thanksgiving day would be devoted to the glorification of the American home and the old-fashioned ideals of the America of Washington's day. Plans for other key days were in the making at the end of the year. In addition August would be set aside as Pilgrimage month and September as Education month, with a gathering in Washington of the Nation's most notable educators. In addition tentative plans called for the observance of Patriots' day, April 19, the observance to be in the hands of patriotic organizations; Columbus day, October 12; Yorktown day, October 19, and Navy day, October 27. Other features of the year's celebration, as outlined by the committee, were: Pilgrimage of States, civic groups, national bodies, fraternal orders, labor, farmers, and youth to the shrines of Washington. Historic portrayals of George Washington amid the shrines of his birth, life, and death, were contemplated as well as presentations in Washington by American genius of the best in art, music, drama, science, philosophy, and literature of America. Athletics, sports, and regattas, and water carnivals were to be arranged along with colorful parades and outdoor pageants. There were to be loan exhibits of art, antiques, and historic treasures. Meetings in Washington of national bodies and conventions were to be held and conferences of educational, intellectual, and spiritual leaders of America. Dedication of memorials to George Washington were to include, Wakefield, Birthplace of Washington; Memorial Bridge over the Potomac; Memorial Highway from Great Falls to Mount Vernon; Masonic Memorial Temple to Washington at Alexandria, Va.; and other notable remembrances of Washington.

In 1905 the States commissions had been appointed generally by the Governor and sometimes following action by the State Legislative to cooperate with the National Commission. In New York the George Washington Bicentennial Commission in its second report suggested that a permanent memorial to Washington be erected, offering a choice of three memorials as follows: First, a great tower or temple, either on the Palisades or on the heights at the upper end of Manhattan Island, such a structure to have no utilitarian use but to stand as a testimony to Washington's honor alone; second, a memorial and museum at Albany within the group of the present State buildings; or third, the erection of an impressive memorial to Washington at the entrance to New York Harbor. An interesting undertaking, worthy of mention, was the appointment of a commission for the purpose of selecting one portrait which was to have official sanction as a part of the observance of the 200th anniversary of Washington's birth.

The Territory of Hawaii, as a part of its observance made formal application through Raymond C. Brown, chairman of the Hawaiian

Bicentennial Commission, for permission to place a memorial stone in the Washington monument, which was granted. The territories of Porto Rico and the Philippines, in addition to Hawaii, had no stone in the great monument to Washington, and it seemed probable that they would also unveil stones in the Washington monument on special days set aside for them in 1932.

The American Tree Association had in hand a programme approved by the Commission, for planting millions of George Washington memorial trees in the country before 1932, which was expected to result in the planting of 10,000,000 trees. This first planting was registered in the name of Edward W. Yiehe, Forest Hills, Long Island, N. Y. The National Park Association recommended to the Secretary of the Interior that some great national landmark be named for George Washington on the occasion of the bicentennial. Some national park probably will be chosen for this honor and will be called the "George Washington National Park."

| Total | 158,744 | 169,868 |

shipments in 1930 aggregated 158,744,000 barrels, as against 169,868,000 barrels in 1929, or a decline of 6.5 per cent. At the end of the year, the

stocks on hand at the various plants amounted to 25,848,000 barrels, as compared with 23,538,000 barrels at the end of 1929. At the close of December, 1930, the total output of finished cement, as compared with the estimated capacity of 165 plants, was 38.2 per cent as compared with 51.5 per cent at the close of December, 1929. The relation of production to capacity for the calendar year 1929 was 61.5 per cent, as compared with 66.4 per cent in 1929. The table on page 143 gives the production and shipments of finished Portland cement by districts in 1930 and 1929.

In addition to Portland cement, the production of clinker (unground Portland cement) in 1930 was 161,028,000 barrels, as compared with 168,988,000 barrels in 1929. Imports of hydraulic cement in 1930 totaled 977,997 barrels, valued at \$1,140,929, as compared with imports in 1929 of 1,727,900 barrels, valued at \$1,938,240.

CENSUS. During the year 1930 the Fifteenth Decennial Census of the United States was successfully taken. It was without doubt the most comprehensive statistical survey ever undertaken, whether measured by the scope and detail of the inquiries, or by the number of persons employed on the work, or by its cost, or by the mass of data which it had accumulated. The population enumerated in this census, covering continental United States and all outlying territories and possessions except the Philippine Islands, was 124,926,069; and the territory covered was about 3,628,000 square miles.

As summarized by Director of the Census W. M. Steuart in his Annual Report the work of taking the census consisted in—

1. Establishing the boundaries of 575 supervisors' districts. Each district contained a territory in which a supervisor would be responsible for the enumeration of the population and the collection of the statistics of agriculture, irrigation, drainage, and any other subjects that might be assigned him.
2. Subdividing each supervisor's district into enumeration districts not too large to be canvassed by the enumerators within the time fixed by the law and the regulations of the department.
3. The formulation of the schedules of inquiries covering the subjects to be included in the census as defined by law; and the preparation of the instructions and numerous forms required for the conduct of the field force. There were more than 400 printed schedules and forms used for this purpose, with a total edition of over 67,000,000 copies, besides a large number of mimeographed letters and forms distributed to the supervisors.
4. Selection and appointment of supervisors and enumerators. Each applicant for appointment to these positions was required to fill out a schedule designed to test his qualifications for the work.
5. Distribution of blank copies of schedules and other questionnaires and instructions to the field force.
6. The holding of conferences with the supervisors. These conferences were held in the principal cities of the United States, and, for the first time in the history of census taking in this country, the Director of the Census thus came in personal contact with every supervisor.
7. Instructions on the part of the 575 supervisors to the enumerators who were appointed to make the canvass in over 120,000 enumeration districts.
8. The selection and appointment of the office force that would be required in the office of each supervisor. This force consisted of 4,302 employees.
9. Making arrangements with the Indian Bureau for the Indian agents to act as supervisors for Indian reservations.
10. Making similar cooperative arrangements with the War Department, the Navy Department, and the State Department, as well as with the Bureaus of Lighthouses, Fisheries, and Navigation of the Department of Commerce.
11. Establishing cooperative arrangements with the chambers of commerce, the boards of trade, business clubs, newspapers, and prominent citizens, throughout the United States.
12. Giving publicity to the fact that a census was to be taken and appealing to every person to cooperate with

the bureau in its endeavor to make a perfect enumeration.

13. Supervising the work of the supervisors, enumerators, and agents employed throughout the United States during the enumeration which extended from April 1 to July 1.

14. Making arrangements for the announcement by the supervisors of the total population and number of unemployed in the different political subdivisions of their respective districts. This was the first time in the history of census taking in the United States that arrangements of this character have been made.

The field work involved in taking the census, covered the collection of the basic data—the securing of answers to numerous inquiries relating to individuals, farms, factories, and other enterprises, covering the subjects of population, agriculture, manufacturing, irrigation, drainage, distribution and unemployment. April 1 was selected as the date for the population and agricultural enumerations. The Census Bureau then took up tabulation and publication of the data collected, which was required to be completed by Dec. 31, 1932. There were approximately 20 million schedules handled, checked, and coded, preparatory to transcribing the data to punch cards.

The duties connected with the decennial census, necessitated an increase in the personnel of the Census Bureau from 925 to more than 7000. Ninety per cent of the permanent force were engaged in duties connected with the Fifteenth Census. This created a problem because experienced personnel engaged in other census activities were obliged to turn their attention to the conduct of the decennial census at the expense of other Census Bureau investigations, which had already attained large dimensions.

By the end of the fiscal year, June 30, 1930, the Bureau of the Census had announced the population of 745 cities of over 10,000 inhabitants each out of a total of about 940, and of 1821 counties out of 3098. Large numbers of smaller cities, townships, and other political subdivisions were also announced by that time. In all the Bureau made over 70,000 announcements before the first of July, 1930. At the corresponding date following the census of 1920, only 221 cities had been announced and no counties. These announcements were followed through the remainder of the calendar year by frequent bulletins and press statements for States and counties and for different industries.

In the census of distribution, which for the first time was conducted on a nation-wide scale, at the end of the fiscal year returns had been received from 1,500,000 retail and wholesale establishments and country buyers, 100,000 construction contractors, and 17,000 hotels. As these returns were received they were examined to insure consistency in the answers to the various questions, and much correspondence was necessary in order to complete the reports from some of the more important concerns. The publication of reports on this investigation began in the early autumn and continued throughout the year. The information presented in this preliminary publication covered the total net sales of the establishments, the inventories, employees, and salaries and wages, classified according to kind of business, by States, counties and cities.

During recent years, the scope of the U. S. Census Bureau's inquiries covering industry and commerce had been steadily extended. Where at the beginning of the century the only industrial statistics collected were those on manufactures and mines and quarries, gathered every ten years,

the Bureau had developed to a point where it issued periodically statistics on a great variety of subjects. The census of manufactures was on a biennial basis; the census of agriculture was taken every five years, while the new census of distribution as part of the decennial census is referred to elsewhere.

See article UNITED STATES for summaries of population, etc.; also UNEMPLOYMENT.

CENTRAL AMERICA. The term generally applied to the southern portion of the North American continent lying to the north of the Panama Canal and south of Mexico and consisting of the five states, Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador, and the British crown colony of British Honduras. See the articles on these respective countries. See EXPLORATION; ANTHROPOLOGY.

CENTRAL ASIA. See SOVIET CENTRAL ASIA.

CENTRAL STATIONS. See BOILERS; DYNAMO ELECTRIC MACHINERY; POWER PLANTS, STEAM.

CEREALS. See BARLEY; OATS; RYE; WHEAT.

CEYLON, sē-lōn'. An island in the Indian Ocean off the southern extremity of Hindustan, belonging to Great Britain. Capital, Colombo. Area, 25,332 square miles; population, at the census of 1921, 4,504,549; estimated in 1929 at 5,479,000. In 1921 there were 8099 Europeans; 29,403 burghers, or Dutch descendants, and other Eurasians; and the remainder of the population comprised Singhalese, Tamils, Moors, Malays, Veddas, and others. Registered births in 1928 numbered 213,311; deaths, 132,337; marriages, 30,146 (exclusive of Moslem marriages). Leading cities, with their populations in 1921, are: Colombo, 244,163; Jaffna, 42,436; Galle, 39,073; Kandy, 32,562. Buddhism is the religion of the majority. In 1928, there were 1171 vernacular schools, with 174,935 pupils; 1914 aided schools, with 231,556 pupils; 498 unaided schools, with 20,832 pupils; and 474 English and Anglo-vernacular schools, with 93,270 pupils.

Primarily agricultural, Ceylon specializes in such export crops as plantation tea, rubber, and coconuts. Half of the population's rice needs is raised locally, and cacao, cinnamon, citronella grass, and miscellaneous products are cultivated. About 3,200,000 acres are under cultivation. Livestock in 1928 included 1,618,000 cattle, 57,000 sheep, 47,000 swine, 170,000 goats, and 2000 horses. There are about 2600 elephants on the island, 1000 of which are tamed. Plumbago is extensively mined and small gold, monazite and thorium deposits have been found.

Imports in 1929, including bullion and specie, were valued at \$147,096,000 and exports at \$154,242,000. The principal exports (1928): Tea, £13,415,660; rubber, £5,383,671; desiccated coconuts, £1,322,674; copra, £2,120,109; and cacao, cinnamon, plumbago, coir, and areca nuts. Rice and paddy, cotton manufactures, sugar, manures, coal and coke, bullion, and spirits are the chief imports, in the order named. The United Kingdom in 1929 took £15,175,622 of the exports and supplied £5,920,186 of the imports.

For the fiscal year 1927-28, revenues amounted to £8,942,330 and expenditures to £10,140,480. The net public debt on Sept. 30, 1928, amounted to £12,650,893, and was incurred wholly for public works. Shipping entered and cleared in 1928 totaled 22,725,000 tons (British, 13,303,000 tons). There were 951 miles of railway line in operation (September, 1928), with several extensions

under construction, and 10,652 miles of telegraph wire. Surfaced highways extended 3644 miles. Government is in the hands of a governor, assisted by an executive council of nine ex-officio and nominated members, and a legislative council of 49 members, of whom 34 are elected. The colony is divided into nine provinces, each administered by a Government agent. Governor in 1930, Sir Herbert James Stanley, succeeded by Sir Graeme Thomson, former Governor of Nigeria.

MALDIVE ARCHIPELAGO. The Maldive Archipelago consists of 13 coral islets, 400 miles southwest of Ceylon. Inhabited by 70,000 Moslems (1921 census), they are ruled by a native sultan and pay an annual tribute to the Ceylon government. Millet, fruits, and edible nuts are the chief products.

CHACO. The South American frontier region in dispute between Bolivia and Paraguay. See BOLIVIA under *History*.

CHAMBER MUSIC. See MUSIC.

CHAMBER OF COMMERCE OF THE UNITED STATES. A national federation of more than 1800 business organizations, established in 1912 primarily as a vehicle for the expression of national business opinion on important economic questions. The President of the United States and other government officials aided in its organization, and it has since served as an agency for the coöperation of business and government in the furtherance of national economic policy, holding itself ready at all times to advise the government regarding the needs of business and the possible economic effects of legislative measures.

The members of the chamber are trade associations and local or regional chambers of commerce, these groups being represented on a board of directors, composed of 34 members chosen from geographical districts or specific fields of business and elected for a term of two years. The membership in 1930 consisted of 1819 business organizations, 9517 individual members, and 12,696 associate members. The policies of the organization are formulated only by resolutions adopted at its meetings or by direct referendum, in order that they may reflect as accurately as possible the opinion of all classes of business represented in the constituent membership. Among the questions to which the chamber directed its attention during the year were: The tariff, foreign trade policies, farm legislation, produce exchange trading, reduction of government in business, reorganization of Federal government departments and agencies, voluntary consolidation of railroads, adherence of the United States to the protocol of the Permanent Court of International Justice, prudent reduction of armaments, highways, air mail, passports, Federal Reserve policies, water-power policies, and immigration. It also worked with President Hoover in the formulation and operations of the National Business Survey Conference for dissemination of current trade data.

For the convenience of its members the chamber maintains at its national headquarters 12 service departments, covering the main divisions of business activity. The agricultural department aids local chambers of commerce in the solution of agricultural problems and the enhancement of trade area prosperity. The civic development department aids business men to approve not only local municipal and civil development but also matters of general national importance. The commercial

organization department assists member chambers in strengthening their organization and extending their usefulness to the communities which they serve. The department of manufacture aims to assist local chambers with their problems of industrial extension. The domestic distribution department attempts to promote better methods of distribution; it also has cooperated with the U. S. Bureau of the Census in working out a distribution census so as to obtain an accurate account of the channels of distribution, wages of employees, and volume of business in different parts of the country. The finance department studies methods of Federal, State, and local taxation and problems of corporation and international finance.

The foreign commerce department deals with tariff policies and import and export problems. The insurance department works to secure a more enlightened public attitude toward the insurance institution. The natural resources production department deals with the problems of water power, oil, coal, forest, and other natural resources. The trade association department serves as a clearing house as to the activities which a trade association can carry out most effectively. The transportation and communication department studies problems of rail, highway, waterway, and air transportation and of postal service and electrical communications. The research department covers the general field of economic research. Studies are also conducted by the following special committees: Aeronautics, education, electrical communications, Federal taxation, highway and motor transport, immigration, inland waterway transportation, national defense, railroads, and State and local taxation and expenditures. The chamber publishes a monthly magazine, *The Nation's Business*, with a circulation of more than 320,000, and issues from time to time reports on economic subjects.

The eighteenth annual meeting of the chamber was held in Washington April 28 to May 1, 1930. The officers elected for 1930-31 were: President, William Butterworth of Moline, Ill.; chairman of the board, Julius H. Barnes of New York City; vice presidents, A. J. Brosseau of New York City, W. Rufus Abbott of Chicago, William M. Wiley of Sharples, W. Va., Paul Shoup of San Francisco, Charles W. Lonsdale of Kansas City, Mo.; treasurer, John Joy Edson of Washington; secretary, D. A. Skinner of Washington. National headquarters are in Washington, with divisional headquarters in New York City, Atlanta, Chicago, Minneapolis, Dallas, and San Francisco.

CHANDERNAGOR. See **FRENCH INDIA**.

CHANEY, LON. An American motion picture actor, died in Los Angeles, Calif., Aug. 26, 1930. He was born in Colorado Springs, Colo., Apr. 1, 1883. After several years' appearance on the legitimate stage, he made his screen debut in 1912. His first famous rôle was that of the bogus cripple in *The Miracle Man* in 1919. He gained renown as a character actor and as a master of make-up, acquiring the sobriquet of the "man of a thousand faces." His important pictures include: *Outside the Law*; *Treasure Island*; *Oliver Twist*; *The Hunchback of Notre Dame*; *He Who Gets Slapped*; *The Unholy Three*; *The Monster*; *The Phantom of the Opera*; *The Tower of Lies*; *The Road to Mandalay*; *The Blackbird*; *Tell It to the Marines*; *Mr. Wu*; *Alonso, the Armless*; *The Unknown*; *Mockery*; *London after Midnight*;

The Big City; *Laugh, Clown, Laugh*; *While the City Sleeps*; and *West of Zanzibar*. His last picture was a talking version of *The Unholy Three*.

CHANNEL TUNNEL. See **GREAT BRITAIN** under *History*; **TUNNELS**.

CHAROST, ALEXIS ARMAND, CARDINAL. A French Roman Catholic prelate, died in Paris, Nov. 7, 1930. He was born in Mans Nov. 14, 1860, and attended the Seminary of Mans, the French Seminary in Rome, and the University of Angers, receiving the degrees of Doctor of Theology and Doctor of Canon Law. Ordained to the priesthood in 1883, he was successively professor at the Holy Cross College in Mans, secretary to Mousigneur Labouré in Rennes, and vicar-general and director of secondary education of the archdiocese. In 1913, while stationed in Lille as a parish priest, he was made titular Bishop of Miletopolis and auxiliary of Cambrai. When Lille was raised to the rank of a bishopric in November of that year, he was installed as the first Bishop. He was held as a hostage in the early months of the World War on account of the charge to his people during the German occupation of Lille that, although they were compelled to bow to force, they should "maintain a stout allegiance to the republic." In 1919 he became chancellor of the Catholic University in Lille, and the following year was made titular Archbishop of Chersonèse and coadjutor of Mousigneur Duborg in Rennes. He was elevated to the archbishopric of Rennes in 1921, and in December, 1922, was made a Cardinal-Priest by Pope Benedict XV, with titular jurisdiction over the Church of Santa Maria della Vittoria in Rome.

CHAUCER STUDIES. See **PHILOLOGY**, **MODERN**, under *English*.

CHAUTAQUA INSTITUTION. An educational movement established in Chautauqua, N. Y., in 1874 by Lewis Miller and the Rev. Dr. John H. Vincent, both prominent in the Methodist Episcopal Church. Its original idea was that of an assembly for Sunday-school teachers, but it was gradually developed into an institution affording during the months of June, July, and August a series of correlated lectures and entertainments. The three general fields of activity are the general assembly, consisting of an educational and popular series of lectures and addresses, concerts, operas, dramatic entertainments, and so forth; the summer schools, offering credit courses under the direction of New York University; and a home-reading circle, in which five outstanding books are designated for reading during the year, in addition to a news narrative appearing in a monthly review.

The attendance at the annual session in 1930 was estimated at 45,000. Among the lecturers at the general assembly were: Dr. Paul Harvey on "The Present Temper of the Orient"; Dr. Richard Burton on "Literary Tendencies Today"; Kenneth MacGowan on "Footlights across America"; Ameen Rihani, Arabian poet and statesman, on "Where East Meets West"; and Dr. Edward Howard Griggs on "Present Problems of American Life." The 1930 summer school included 17 departments, with 125 instructors and approximately 2500 students. Permanent buildings, valued at \$1,250,000, are owned by the institution; those under construction in 1930 included the Smith Memorial Library, the \$60,000 gift of Mrs. A. M. Smith Wilkes, and the community church. The officers in 1930 were: George E. Vincent, honorary president; Arthur E.

Bestor, president; William L. Ransom, chairman of trustees; Shailer Mathews, chairman of the executive board; Charles E. Peirce, secretary; and Jessie M. Leslie, treasurer.

CHEMICAL INDUSTRY, SOCIETY OF. See CHEMISTRY, INDUSTRIAL.

CHEMICAL SOCIETY, AMERICAN. See CHEMISTRY, INDUSTRIAL.

CHEMISTRY. The progress of this science during the year was continuous and persistent. Conspicuous among the favorite subjects for study and investigation was the atom, and much was developed as to its constitution. The sex hormones, both male and female, were analyzed, and it may yet be found that after all life is generated when a certain aggregate of atoms find themselves in a congenial environment. It was announced on November 13, that the Nobel prize in chemistry for 1930 was awarded to Prof. Hans Fischer of Munich for his success in synthetically producing hæmoglobin, the coloring matter of blood.

NEW ELEMENTS. In February, through the agency of the Science Service, the public press in the United States announced that by a new and highly sensitive method of analysis, in which it is possible to detect one part of a compound in several billion parts of water, there had resulted the discovery by Dr. Fred Allison and Prof. E. J. Murphy of the physics department of the Alabama Polytechnic Institute of evidence of the presence of Element 87 which was one of the missing elements. These scientists consistently found in samples of pollucite and lepidolite minima at points of the scale corresponding to an element of the chemical equivalent ascribed to ekacæsium, the name already given to Element 87. The fact that the minima characteristic of an element of the properties of ekacæsium appear at the appropriate parts of the scale in the chloride, nitrate, sulphate, and hydroxide compounds of these minerals affords evidence of considerable weight that the element is present in the samples under test, since by their method the compound instead of the element is detected, and different compounds of the same element appear at different regions of the scale.

ATOMS AND THEIR STRUCTURE. The results of several studies on the structure of atoms were published during the year.

Early in January Col. F. E. Johnson, a retired army officer, living in Washington, D. C., announced that he found atoms to be synchronous motor-generators built up of the isotopes of hydrogen and helium. That following neon, the tenth atomic number, there appear three neon structural units which differ only in the so-called K group, the L and M groups being the same in the three completed neon structural unit groups. The variation in these fundamental neon structural units is the cause of the "regular" and "irregular" doublets, which are also known as the "relativity" and "screening" doublets. Two of these neon groups with 10 and 8 orbital electrons, respectively, are successively built up as valence groups and determine the subperiods of the Periodic Table of the Elements. These three neon structural unit groups form 6 different double parallel groups. Colonel Johnston called them structural argon groups because they determine the argon periods of 18 corresponding to the first three full periods ending in argon, krypton, and xenon of the periodic table of the elements.

Isotopic variations of the neon and argon structural groups and the isotopes of hydrogen and helium in the valence groups enter into definite progressive periodic structural relations in forming the atoms of the successive atomic numbers. Thus the periods and subperiods of the periodic table of the elements result from the periodic structural neon group, two of which form an argon group and determine an argon period. Further, the first 100 elements are members of the first 5 argon periods, of which the first three consist of 18, the fourth of 14 ending in erbium, Atomic No. 68, and the fifth of 32 elements. There are only 13 rare earths and these lie between cerium and hafnium. They form two subclasses differing in the K group of the neon valence group. Thus in Nos. 65 to 68 the valence group has no K group, while the others are similar to lanthanum, Atomic No. 57.

Thus it appears that the electro-mechanical principles involved result in an atomic structure consisting of a nucleus and orbital electrons having the characteristics of a synchronous motor-generator belonging to an adiabatic invariant system. Further, the radon group of which mercury is the end product has no valence group, but, like the 13 rare earths, vary in the K group of the argon structural unit group. The great mystery of the radioactive elements is thus solved. Colonel Johnston finds that the structural unit is the argon group of six forms and each with isotopic variations.

Because of the fact that the two neon groups in an argon unit maintain synchronism through their isotopic separators, they can only vary by a particles, which are helium atoms. This results in four even and four odd series of which only three even ones have been found, namely, radium, thorium, and actinium. The unknown odd elements, Nos. 85, 87, and 93 belong to the odd series and exist somewhere. Each of these 8 series ends in a known isotope of mercury. Following Atomic No. 100 a parallel transition takes place corresponding to the parallel argon groups until No. 400 is reached, when there is a structural change covering the following 100 elements similar to the radon structure initiated in the mercury atom.

In March Dr. W. F. Maggers of the U. S. Bureau of Standards in Washington obtained spectra photographs which revealed the atomic structure of lutecium. Everything on earth, in the final analysis, is composed of atoms. An atom consists of a central body, somewhat like the sun in the solar system, with from 1 to 98 other bodies revolving around it. The number of planets, or electrons, distributed about the central nucleus, determines the kind of atom. Thus, if there is only one, it is an atom of hydrogen. If there are 98, it is an atom of uranium. Ninety kinds of atoms are known. The central body increases in size proportionate to the number of its planetary family. Nobody will ever see an atom. But it has been possible to photograph them which reveals how the atoms are made up. Each arrangement of planetary electrons, when made luminous, gives off light of a different composition. This is divided in a prism, and the distribution of spectrum lines studied. In this way, it was found, atoms are built up from the simpler to the more complex, according to a definite pattern, which seems to hold throughout nature. Electrons are arranged in successive "shells" around the nucleus. One electron is added to the hydrogen

atom, and the first "shell" is completed. The result is a helium atom. Then by some unexplained increase in the central mass which attracts other electrons, the process of building up the elements goes on. A second shell is built up outside the first. When this is completed in this case by light electrons, the product is neon. A new shell starts. Finally, with four shells composed of 54 electrons, is found the rare gas, xenon. Then begins the process of building up a fifth shell. Electrons are added until, with three new ones, the rare metal lanthanum is reached.

Dr. Magers attempted the difficult job of knocking off all three outer electrons by means of an electric spark, and then obtaining the spectrum of what was left. With the incomplete outer shell knocked out, a new shell was being built up just the same. Lutecium had a complete sixth shell of 14 electrons. In theoretical physics this is one of the greatest triumphs ever achieved in the Bureau of Standards.

At the meeting of the American Chemical Society held in Atlanta, Ga., in April, Prof. William D. Haskins of the University of Chicago, reported that he had succeeded in building up an atom. The proof consisted of two photographs of the process, obtained as a result of seven years' painstaking experimental work, which involved taking 34,000 instantaneous still photographs of helium atoms, moving at a speed of 11,000 miles a second, at the moment of collision with atoms of nitrogen gas into which they were propelled. According to his account, the helium atom became part of the nitrogen atom with which it was in direct impact, forming fluorine for an instant, which explosively threw off an atom of hydrogen, leaving oxygen as the result. For his experimental attempt to build up heavy atoms from light ones and thereby transmute one element into another, he selected the fast-moving α particles of helium cast off by the radio-active metal, thorium, at a speed of about 11,000 miles a second. Through an instantaneous shutter, about 12 of these α particles at a time were admitted into a glass cylinder filled with nitrogen gas and with supersaturated water vapor. As the α particles tore through the nitrogen gas, they electrified it in their path and the water vapor condensed in each path like a thread of steam. At the same instant, each thread of steam was made visible by a powerful illumination and a still photograph was taken. Each photograph showed an average of twelve threads of steam, scientifically known as tracks, located where the high-speed α particles of helium had torn through space. Owing to the open formation of matter it was most probable for these particles to make the complete trip through the space covered by the camera without encountering an atom of the nitrogen gas in direct impact.

Sir William Bragg, in an address before the Royal Institution in London, in May, announced that he had found that in nature certain atoms, certain molecules, certain combinations of molecules are preferred to others. Thus chemists have shown that cellulose is essentially some multiple of a certain group of atoms, 6 carbons, 10 hydrogens, and 5 oxygens. They have been able to show how the atoms in this group are attached to one another, which to which. They have gone further and shown that the 6 carbons are arranged in a sequence. They do not, however, make a long chain; 5 of them with the oxygen make a ring and the remaining carbon with certain attach-

ments hangs therefrom. This construction is for some reason the basis of the structure of plant life.

When a fine pencil of X-rays traverses a fibre of any kind, cotton, hemp, ramie, or jute, the rays are scattered in such a way that a photographic plate placed behind the fibre is covered with a diagram of fine spots. The new methods, by which crystal structure is analyzed with the help of X-rays, can be applied to this diagram and a beginning made with its interpretation. It appears that cellulose is composed in large part of a mass of small crystals. This is shown by the fact that there actually is a diagram. That the same diagram is obtained from all fibres, even from animal cellulose, shows that we are dealing with one and the same substance. It can further be deduced, by measuring up the spaces on the diagram, that there is in each crystal a periodicity parallel to the direction of the fibre, and this quantity can be determined exactly.

In a paper on X-ray Scattering and the Structure of Atoms, read before the American Physical Society in June, Prof. A. H. Compton, who recently had won the Nobel prize, said: "If you look at an atom, you will find it spherical in shape, the size of the spheres differing with the different elements. The electron surrounds the nucleus like a nebular haze, the nebula being thicker toward the centre than it is toward the circumference. We no longer find it convenient to say that it is a definite particle revolving in a fixed orbit around the nucleus. Rather it is like a cloud of raindrops, diffused through the sphere of the atom. Several weeks ago, I noticed a beautiful halo around the moon. Half an hour later the halo was visibly smaller in diameter, and it was no surprise when a few hours later rain began to fall. The interpretation of such halos, as due to the diffraction of the moonlight by droplets of water suspended in the air, is well known. The larger the droplets the smaller the angle of diffraction necessary for the appropriate phase difference between the rays coming from the two sides of the drop. So by observing the diameter of the halo we can estimate the size of the water drops which cause it. A shrinking halo means a growing drop and hence probable rain.

In a similar manner it is possible to find the size of molecules and atoms in a gas, by observing the diffraction halos produced when they are traversed by a beam of X-rays. We substitute X-rays for the moonlight, and instead of the rain drops or vapor, we use helium, neon, argon, or some other gas. The X-rays make diffraction halos on the gas, just as the moonlight makes it on the raindrops, and just as we can estimate the size and position of the rain drops, we can estimate the size and position of the electrons.

At a meeting of the National Academy of Sciences, held in Berkeley, Calif., Dr. Ernest D. Lawrence and Prof. N. F. Edlfsen of the University of California described a new kind of atomic superpower plant. It proposes to speed up atomic hydrogen particles to about 37,000 miles a second, so they can be used as bullets to bombard and possibly break the atoms of other elements. Other methods have required expensive, heavy equipment and high power, but the new apparatus can be set on a chair and used with little power. It combines an alternating current of electricity and magnetism to set the nuclei, or central masses of hydrogen atoms to whirling in widening circles at constantly increased speed until finally they

are shot out of a tube. Their speed is equivalent to the energy produced by a 1,000,000-volt X-ray tube, which is far greater than any ray power yet available. Rays of radium have atomic particles traveling about 12,000 miles a second. Scientists have shot these radium particles into gases and knocked out small pieces of atoms, but have not been able to break up entire atoms. What speeds of atomic bullets are needed to break up atoms and to put transmutation and power production theories to actual test are not known. At this same meeting the principle of identity, a new scientific mode of study to solve some of the paradoxes of modern physics, was explained by Dr. Gilbert N. Lewis of the same University. The study promised information about the nuclei of atoms. In recent years scientists have learned atoms are composed of electrons surrounding a central mass. This mass is the nucleus and has largely defied analysis.

ANALYTICAL CHEMISTRY. The reports of papers on improved methods of analysis and on new forms of apparatus were many, typical of which are the few here presented.

It is found by M. Wagenaar (*Pharm. Weekblad*, vol. 66, p. 1073) that the most sensitive reagents for strychnine are gold and platinum chlorides, picric acid, and mercurous iodide in presence of potassium iodide, with each of which 0.1 mg. can be detected at dilutions of 1 in 1000-5000. A review of the tests for acetic acid by D. Krieger and E. Tschirch (*Chem. Zeit.*, vol. 54, p. 42) seem to indicate that the only trustworthy process which is specific is the microchemical reaction depending on the formation of sodium uranyl acetate. H. Weber contributes (*Chem. Fabr.*, 1930, p. 69) important and ingenious devices for cooling, for supplying liquid continuously to a relatively small evaporating vessel, for continuously supplying liquid for washing slimy and troublesome precipitates, and for automatically filling pipettes and burettes. According to L. Ekkhert (*Pharm. Zentr.*, vol. 71, p. 417) the green color produced by ferric chloride when brought in contact with compounds containing adrenaline changes to red without the usual addition of alkali; 10 per cent sodium nitrate solution produces a red color darkening to blood-red after 1 to 2 minutes. Color reactions with some alkaloids and concentrated sulphuric acid were also given in this paper.

BIOLOGICAL CHEMISTRY. The status of this branch of chemistry was significantly expressed in the words of Dr. Paul R. Heyl in a paper presented by him before the Science Forum in New York City in January. "There is nothing occult or supernatural in the processes of life and eventually we will unravel its secret. Protoplasm is nothing but a chemical compound. I see no reason why some day we shall not be able to produce it. When we do so it may be living or it may be dead—no one can say."

According to a report presented at the Atlanta meeting of the American Chemical Society, held in April, a clew to premature old age was found in the newest vitamin. Only a year old in the recognized family of diet principles, vitamin G was presented to the chemists as possessing special control over growth. These newly found qualities were described by Prof. H. C. Sherman of Columbia University in whose laboratory experiments with rats showed that in these animals the vitamin is directly connected with growth. Lack of it may retard growth, stop it, or in ex-

treme cases cause death. In some rats the shortage caused premature old age. Loss of hair is one of its most commonplace danger signals. Its lack is suspected as a cause of pellagra and is presumably identical with the pellagra preventive diet discovered by Dr. Joseph Goldberger. The growth requirements of rats presumably apply to other mammals also. Vitamin G must play a prominent part in any adequately comprehensive conception of food values from now on.

Still another member of the vitamin family was suspected to be hiding behind G. Dr. Sherman called it the "new factor," saying that it too was important for growth, and that evidence of its presence had been detected by several other laboratories in addition to Columbia. This new factor is abundant in milk and presumably in meat. Vitamin G is also found in leaves, such as spinach, kale, and cabbage. It appears moderately in eggs.

At the Cincinnati meeting of the American Chemical Society, held in September, new methods of rejuvenation were discussed. Instead of transplanting the glands themselves which had so far proved unsuccessful, the new methods called for the employment of extracts which the ductless glands are known to secrete, these secretions to be administered either by injection or in the form of tablets or liquid medicines. Some of these extracts come from glands which, in all probability, could never be transplanted. While the experiments described had not been conducted on human beings, they opened up a new field in curing the sick, helping premature old age, and aiding in the development of subnormal youth. Some of the physicians present announced that the application of these gland experiments had cured cases of pernicious anemia, stomach ulcers, and had proved as effective in the treatment of the dreaded Addison's disease as insulin has in diabetes.

Some of the amazing practical experiments were reported by Dr. F. C. Koch of the University of Chicago, who said that a sex extract called hormone, obtained from men when injected into roosters, caused growth of their combs and wattles, which are nature's ornamental badges of the male sex. Sex hormones obtained from women caused the rooster's combs to grow as well as did the male extract. A different feminine hormone, however, obtained from women, caused roosters' feathers to change slightly, so as to show markings typical only of hen feathers.

Among others papers are the following: In studying the influence of insulin on narcotized animals H. Horsters and H. Brugsch (*Arch. Exp. Path. Pharm.*, vol. 147, p. 193) find that the administration of narcotics inhibits the convulsions accompanying insulin hypoglycemia, independently of any effect of the narcotic on the blood sugars level. It was found by B. Longo and C. Paderi (*Atti R. Accad. Lincei*, vol. 10, p. 322) that alkaloids act as excitants on seeds and plants containing them, the action being non-specific with the seeds and specific with the plants. According to J. W. Hershey (*Science*, vol. 71, p. 394) animals soon die in an atmosphere of pure oxygen; hemorrhage and the development of certain bacteria occur under these conditions. The addition of 0.03 per cent of carbon dioxide to the oxygen has little or no effect in prolonging life. Mice exist normally in a mixture of 79 per cent of helium and 21 per cent of oxygen and in one of 75 per cent of argon and 25 per cent of oxygen;

higher percentages of argon are harmful. The rare gases together with carbon dioxide appear to be essential to normal life in an atmosphere of 21 per cent of oxygen and 78 per cent of nitrogen. An increase in the percentage of oxygen up to 60 has little effect, but larger percentages had an adverse effect. Aluminum occurs in almost all animals and plants and may be necessary for the maintenance of life. According to the researches of C. Massatsch and H. Stendel (*Biochem. Zeit.*, vol. 220, p. 239) aluminum in the amounts likely to occur in foods is quite harmless. R. Brill (*Naturwiss.*, vol. 18, p. 622) reports that X-ray examination shows that natural silk fibroin consists of at least two substances, one of which is crystalline. The crystals are not preformed in the glands of the silk worm, but separate during the drying of the fluid secretion.

GENERAL CHEMISTRY. This branch of chemistry usually refers to those elements and their compounds that are derived from minerals, as distinguished from organic chemistry, the compounds of which were formerly reported as the result of the action of life. Some of the more notable advances in this subject are indicated by the following items:

According to J. R. Partington (*Journ. London, Chem. Soc.*, 1929, p. 2577) the existence of the compound $2\text{AsCl}_3 \cdot 3\text{SCl}_2$ as originally described by Rose, probably does not exist. He also described an improved method for the preparation of arsenic trichloride. The isobar at atmospheric pressure and the isotherms at 1000° , 800° , 640° , 600° , and 500° were determined for the system titanium-hydrogen by L. Kirschfeld and A. Sieverts (*Zeit. Phys. Chem.*, vol. 145, p. 227) whose results are published in a space diagram. The curves are similar to those obtained with zirconium and thorium.

An interesting series of experiments made by C. Fabry and E. Dubreuil (*Compt. Rend.*, vol. 190, p. 91) as to the formation of gold, mercury, and helium from lead by prolonged exposure to sunlight with old roof lead, resulted negatively, notwithstanding Mlle. Maracineanu claimed that solar radiation had revealed spectroscopically the transmutation of lead into gold. According to the investigations of D. G. Hill and G. B. Kistiakowsky (*Journ. Amer. Chem. Soc.*, vol. 52, p. 892) ethylene combines with hydrogen at the surface of cesium at 25° and more rapidly at 200° , but reaction is retarded by the formation of metallic hydride, sodium hydride alone was produced when the cesium was replaced by sodium.

Ammonia was not formed from nitrogen and hydrogen in the presence of cesium. Crystals produced by recrystallization in slightly deformed single crystals, according to K. Tomaka (*Mem. Coll. Sci. Kyoto*, vol. 13, p. 117) tend to have a definite orientation with reference to that of the mother crystal. The orientation is little affected by the direction of the stress applied before annealing, or the type of deformation produced by the stress. Chlorine trifluoride has been prepared by O. Ruff and H. Krug (*Zeit. anorg. Chem.*, vol. 190, p. 270) by heating either chlorine or its monofluoride with excess of fluorine. This trifluoride (ClF_3) is a colorless gas which condenses to a pale green liquid with a boiling point of 11° . The solid is colorless with a melting point of -83° . Its vapor pressures have been determined and the substance is best characterized by the value at 0° , namely $490 \pm 5\text{ mm}$. Chlorine trifluoride is extremely active chemically. Organic

materials are instantly ignited, and most of the elements are attacked explosively.

MINERALOGICAL CHEMISTRY. Study of the composition of minerals and other constituents of the earth's surface are of great value in the study of chemistry as is shown in the items that follow:

The interesting fact that two chemists, Dr. Jacob Papish and Zaida M. Hanford of Cornell University, have completed a series of analyses of six meteorites and have located traces of arsenic and of germanium, the latter an unusually rare element, was announced in February. The six meteorites were studied by placing parts of them in an electric arc. With the aid of a spectroscope the light from the arc was closely studied. Certain lines known to be due to germanium were observed in all the specimens studied. By a complicated chemical treatment quantities of arsenic and germanium were extracted from two meteorites. It was found by G. Tamman and E. Jenckel (*Zeit. anorg. Chem.*, vol. 186, p. 141) that the density of crystalline substances is not altered by subjecting them to a high pressure at a temperature at $10\text{--}30^\circ$ below their melting point, although the density of amorphous glassy substances is thereby increased, a difference naturally is to be expected in their behavior.

From a discussion of available data, C. E. St. John (*Astrophys. Journ.*, vol. 70, p. 160) concludes that the presence of the following elements in the sun is not yet definitely established: argon, krypton, neon, radon, xenon, actinium, arsenic, gold, bismuth, fluorine, chlorine, bromine, iodine, mercury, masarium, phosphorus, protoactinium, radium, polonium, rhenium, tantalum, iridium, selenium, tellurium, thorium, uranium, and the rare earths, holmium, illinium, lutecium, terbium, and thulium. Traces of germanium have been identified by J. Papish and Z. M. Hanford (*Science*, vol. 31, p. 269) in certain meteorites, namely, siderites from Mexico and Ontario, siderolites from Kansas and Chile, and aërolites from Texas and Michigan. Germanium and arsenic have been separated from the first two siderites. A. F. Kavarik describes (*Amer. Journ. Sci.*, vol. 20, p. 81) the data necessary for the calculation of the age of minerals from radioactive studies. He deduces a formula assuming that the radium and actinium are branch series from uranium—II, ending in isotopes of lead of the same atomic weight (206) and that ordinary lead is present in calculable quantity. The minerals peculiar to meteorites and those common to meteorites and the earth are discussed by G. P. Merrill in Bulletin 149 of the U. S. National Museum. The elements occurring in meteorites are also mentioned, and a type classification of meteorites is also given.

ORGANIC CHEMISTRY, or the chemistry of the carbon compounds is that branch of science that deals with the combinations of the element carbon with other elements, and formerly supposed to have had its origin from life processes. Since the synthesis of urea by the great German chemist Wöhler, which later led to the syntheses of artificial alizarin and indigo, it has been a most popular study for investigators. From among the many researches published during the year a few are given to show the trend of the science. H. B. Glass and E. E. Reid (*Journ. Amer. Chem. Soc.*, vol. 51, p. 3428) find that when benzene is heated with sulphur at 350° for 24 hours, thiophenol, diphenyl sulphide and disulphide, diphenylene

disulphide, and hydrogen sulphide are formed. The first product formed is probably thiophenol. With ethylbenzene a good yield of 2:4-diphenylthiophen is obtained as the sole product.

11. Ter Meulen, H. J. Ravensway, and J. R. G. de Veer recommend for the determination of oxygen in organic substances the use of a nickel boat filled with reduced nickel in place of the nickel asbestos mixture generally used; especially as drying is thereby much facilitated. S. Smith (*Journ. Chem. Soc.*, 1930, p. 508) finds that the mixed glucosides of *D. lanata* in crystallization from acetone deposit a fraction rich in a new glucoside which may be readily purified by taking advantage of its sparing solubility in 80 per cent alcohol, chloroform, and ethyl acetate. The colorless crystalline product which he calls digoxin has the composition $C_{41}H_{64}O_{14}$ and a melting point of 265°. Its Keller reaction is greenish yellow.

Most saponins according to the studies of L. Koeler and H. Raum (*Biochem. Zeit.*, vol. 219, p. 335) are not precipitated from alcoholic or other solutions by cholesterol but by the method of Kofler and others it can be shown that the saponins form loose compounds with cholesterol which are broken up even by ether. There is no parallelism between the capability of saponins to combine with cholesterol and the extent of their hemolytic action. Saponins behave towards ergosterol in the same way as towards cholesterol. H. M. de Lissner (*Rev. Cent. Est. Farm. Biochim.*, vol. 18, p. 348) finds that dinitroanthroquinone is both unsuitable and untrustworthy as a general precipitant for alkaloids.

The Liebig method of rapid combustion of organic substances, according to E. V. Zappi and A. Manini (*Anal. Assoc. Quim. Argentina*, vol. 17, p. 234) may be modified by supporting the boat in an expanded extension of the oxygen supply tube, outside of which a current from a bypass also passes. A more rapid current of oxygen may be used when combustion begins, and the analysis is completed in less than one hour. The conclusions reached by J. Kenyon and H. Phillips in a survey (*Trans. Faraday Soc.*, vol. 26, p. 451) of the Walden inversion during a ten-year period are that if, during a displacement reaction, the asymmetric radical separates as a positively-charged ion, the optical activity of the product results from the occurrence of the Walden inversion, and that if the optically active radical separates as a negatively-charged ion an optically active product results without the occurrence of an inversion. S. Erikson describes (*Svensk. farm. Tidskr.*, vol. 34, p. 1) a method for the analysis of mixtures of antipyrine and pyrazolidone which depends on the fact that both substances, but not the products of boiling pyrazolidone with hydrogen peroxide, give sparingly soluble pierates.

PHYSICAL CHEMISTRY deals with the action of physical forces in chemical compounds, thus the action of light on silver salts results in photography and the action of electricity on carbon produces artificial light. It is an important branch of science, some of the advances of which are given in the following items:

The atomic weight of chlorine according to the redeterminations of A. F. Scott and C. R. Johnson (*Journ. Phys. Chem.*, vol. 33, p. 1975) obtained nephelometrically from three samples of nitrosyl chloride is 107.880 with nitrogen = 14.008. J. H. Krepelka finds that the mean value of 13 determinations of the atomic weight of ar-

senic is 74.936, which is essentially the same as Ashton's value of 74.934, determined in 1927. A redetermination of the vapor pressure and vapor density of sodium made by W. H. Rodebush (*Nature*, vol. 125, p. 130) agrees with an apparent molecular weight of 25 for the saturated vapor at 706°. This yields a calculated value of approximately 0.75 volt for the heat of dissociation. An extensive study on the causes of the mercury bands by S. Mrozonski (*Zeit. Physik.*, vol. 60, p. 410) showed that atomic excitation has no effect on the primary spectrum but that it plays an important part in the production of bands. B. B. Ray finds (*Nature*, vol. 125, p. 856) that in passing through carbon, nitrogen, and oxygen, the copper $K\alpha$ radiation produces the new diffuse, and broad lines 1592, 1614, and 1643X, which he attributes to scattering of the radiation by the elements concerned. A portion of the nickel $K\alpha$ radiation in passing through carbon and nitrogen shows the new lines 1719 and 1746X. A quartz gas discharge tube containing nitrogen much diluted with helium was used as the source of light, and E. Ekfors (*Zeit. Physik.*, vol. 63, p. 437) made measurements by means of a vacuum spectrograph. He was successful in finding a few new terms and in establishing a displacement of 32 frequency units of the whole doublet system. The measurements also indicate splitting of the β term of about 7 units.

CHEMISTRY, INDUSTRIAL. In this branch of applied science distinct progress can be announced. The prevalence of research laboratories in large industrial plants has naturally led to the study of problems with the result that improved methods of manufacturing have been obtained, new uses for waste products have been found, and new applications for existing compounds have been developed. It seems probable that the United States, if not the leader among the nations of the world in chemical industry, comes very close to holding the place. Additional evidence of the progress of the chemical industries in the United States is shown by the increasing exportation of American products.

AMERICAN CHEMICAL SOCIETY. As usual, this society held two meetings during the year. The first in Atlanta, Ga., during April 7-11 at which 1449 persons were registered and 389 papers read before 17 divisions. Among the many papers presented at this meeting the following may be noted: W. Donald Munson, research chemist of the Southern Chemical Cotton Company, Chattanooga, Tenn., described progress in the production of chemical cotton. Lauren B. Hitchcock, chairman of the industrial committee of the Virginia section of the society, spoke on "Cellulose in Virginia" and Robert E. Hussey and Philip C. Sherer, research chemists of the Virginia Polytechnic Institute, told of the strides being made by the State's rayon industries. Prof. Charles E. Mullin, of Clemson College, S. C., reported on the development of new uses for artificial silks and wools. A formula for making xylose at about 5 cents a pound, a gift by the U. S. Government to industry, was presented by Dr. W. T. Schreiber of the Bureau of Standards. Trees and many kinds of plants abound with it. It has been found that xylose probably is the third most widely distributed organic compound in nature. Little is yet known of its food values. Even if food uses prove small, xylose is an important commercial discovery. Dr. Schreiber calls it a product whose potentialities are still to be fathomed from a

vast annual supply of a very cheap straw material. It has been sought by industry for acid-making and in some cases considered so useful that a price of 50 cents a pound was rated as economical. The Bureau of Standards formula makes it of cotton-seed hull bran. Dr. Schreiber says the United States can produce between a million and a million-and-a-half tons of this bran a year, now nearly a waste product. The bran is washed with hot water under pressure, and treated with diluted sulphuric acid and lime and finally whirled in a centrifugal. About half of it goes into sugar. The remaining bran is still useful, producing cellulose for clothing, carbon gums, and potash salts.

A meat substitute made from cotton seed was described by David Wasson of Montclair, N. J. It is a sweet, almost tasteless flour-like body which will keep as well as wheat flour. It carries 50 to 60 per cent protein, or two-and-a-half to three times as much as is found in meat and available for human food. When properly prepared it is palatable and nutritious. It not only can be eaten, but has been eaten by many people. A report made by Prof. R. J. Crane of Ohio State University, who is editor of *Chemical Abstracts* for the society and whose function it is to read the publication of American and foreign researches, gave the number of abstracts published in each country which he considered an approximate measure of research activity there. As measured in this way, he said, the United States, which took the lead away from Germany during the World War, had lost it again to Germany comparatively recently. Further, he found the British Empire maintained a steady research productivity, Japan was becoming more active chemically and Russia was showing more scientific activity than might be expected. Dr. Charles L. Clark of the University of Illinois reported on the value of the X-ray to examine the structure of synthetic fabrics and also on the development of synthetic thread which was, in some respects, about six times as strong as flax.

The second meeting of the American Chemical Society was held in Cincinnati, Ohio, during September 8-12 at which 1668 persons were registered and 394 papers read before 19 divisions. At this meeting a vigorous protest was unanimously adopted against the action of the Governor of Mississippi in summarily dismissing members of the faculties of State-supported schools and colleges "without charges being preferred or reasons publicly assigned." The resolution said in part, "this move was dictated entirely by political motives with no relation to the educational interests of the institution or the State. This action has aroused indignant opposition within the State, as expressed by educational leaders and by the press. We wish to add our protest to theirs. Further, we caution members of this division against accepting positions in these institutions until steps have been taken to prevent a recurrence of this unfortunate situation. We wish also to raise the question of the acceptance in the future of transfer credit from these institutions unless this condition is corrected."

Among the papers presented at the Cincinnati meeting were the following: Dr. Emery R. Hayhurst, of Ohio State University, described a new medical soap developed by him out of a new type of sulphur in coal gas. The sulphur resembles moist clay and is composed of much finer particles than other sulphurs. The soap was made by

mixing 25 per cent of this sulphur with castile soap and then perfuming. Dr. Hayhurst said that it produced remarkable effects when applied to cases of simpler chronic skin diseases. Chester H. Penning of the Swann Research Inc., of Anniston, Ala., reported on the physical characteristics and possible commercial uses of a new product or a series of products under the general name of "aroclor" which is a derivative of the new chemical known as diphenyl, a milky-colored substance made by uniting two benzene molecules and used commercially as a substitute for steam for carrying heat in gasoline refining. By adding chlorine in various amounts to diphenyl, the "aroclor" series is obtained, ranging in variety from a substance resembling water to light oils, and from thick sirupy substances and a light, amber-colored solid. Among the commercial applications for the new compound are protective coatings, waterproofing, flame-proofing, molding, electrical insulation, adhesives, printing inks, artificial leather, leather finishing, textile finishing, sealing waxes and chewing gum, as well as a substitute for Canada balsam in mounting microscope slides.

The use of "dry ice," or solid carbon dioxide, as a preserver of beef, was presented by D. E. Killeffer concerning which he said that it is now being employed to safeguard shipments by land and sea, and is being extended to commerce with the tropics. Carbon dioxide gas kills or prevents the growth of many common bacteria on meat, fish, and other fresh foods. It appears that carbon dioxide is absorbed by the surface of the flesh, and creates an acid condition which is very unfavorable to bacterial growth. Spoilage by bacteria can be prevented for a period as long as a week or ten days by immersing meat in an atmosphere of carbon dioxide. An efficient railroad transport car had been devised, and now a fleet of forty such cars was devoted solely to the transportation of "dry ice" to remote points. The transit loss in these cars even on a journey of several days was much less than that in loading and unloading them. By utilizing this method of rail transportation it easily was possible to supply peak demands in Chicago, Baltimore, and Washington from Niagara Falls, and to equalize supply and demand throughout the entire United States.

How to make 150 gallons of gasoline out of only 100 gallons of petroleum, through a recent development of the high pressure hydrogenation process, was described by R. T. Haslam and R. P. Russell of the Standard Oil Company of New Jersey. They explained five recent developments of hydrogenation, developed by Friedrich Bergius of Germany, whereby crude oil is squeezed in a highly heated atmosphere of hydrogen at about 3000 pounds to the square inch. Some of the hydrogen combines with the carbon in the oil to produce more hydrocarbons, thus making gasoline. The extra half gallon of gasoline is accounted for by the volume of the added hydrogen. Four other achievements of high pressure were reported, including one regarded by chemists as epoch-making. It was described as the reverse process, in which gasoline containing too much hydrogen has the extra hydrogen squeezed out of it. Gasoline with too much hydrogen is gummy and "knocks" badly. The new gas wringer squeezes it into a gasoline "dry" enough for use in automobiles. Hydrogenation also turns poor lubricating oil into a high-grade automobile oil, low-

quality kerosene into high-quality and cheap, heavy oils into gas, oil, and gasoline.

The president during the year was Prof. William McPherson of Ohio State University, Columbus, Ohio, and in accordance with the rules, Prof. Moses Gomberg of the University of Michigan was named for the year 1931. The membership of the Society was reported as 17,426.

SOCIETY OF CHEMICAL INDUSTRY. The 49th annual meeting of the Society was held in Birmingham, England, during July 14-19, with President Herbert Levinstein in the chair. The membership was reported as 4596 as against 4550. The Messel medal was awarded to Lord Brotherton "in recognition of his contribution to the prestige of chemical industry." His address, based on personal experience, was an account of the advances made in technical chemistry during the last 50 years. The presidency of the Society passed from Dr. Levinstein to Lord Melchett, better known by his family name of Alfred Mond, famous for his long connection with manufacturing chemistry, while H. G. Pooley was continued as secretary. The annual meeting in 1931 was to be held in London during the week beginning July 13, when the Society would celebrate the fiftieth anniversary of its founding. Active preparations for the "Jubilee" meeting were in hand. For the meeting in 1932 Nottingham, England, was selected.

MEALS. The Acheson medal of the American Electro-Chemical Society was awarded on Sept. 21, 1929 to Edward G. Acheson (the donor of the medal) for his "notable discoveries in electrochemistry, electro-thermics, and electro-metallurgy." Dr. Acheson was the inventor of carborundum. The Perkin medal of the American Chemical Society was on January 10 awarded to Herbert H. Dow of the Dow Chemical Company for his "development of improvements in the production of chlorine, bromine, magnesium, and other chemical materials." The Longstaff medal of the London Chemical Society was presented on March 27 to Dr. W. H. Mills, who by a long and steady series of papers on subjects of the highest importance during the past triennium had done most "to promote chemical science by research." The Society of Arts and Sciences awarded one of its gold medals on April 17 to Gilbert N. Lewis of the University of California as "the outstanding chemist in America." The American Institute of Chemists awarded its medal for "noteworthy and outstanding service to the science of chemistry and the profession of chemistry in America," on May 10, to George Eastman of the Eastman Kodak Company, who had spent great sums of money in developing the American chemical industry to make it independent of Europe. The Willard Gibbs medal of the Chicago Section of the American Chemical Society was awarded on May 24 to Dr. Irving Langmuir of the General Electric Company "for fundamental work on atomic hydrogen and on surface relations, and also on electrical discharge phenomena. Also for his contributions of great importance to nearly all branches of physical chemistry, including high vacuum technique, electronics, thermochemistry, and catalysis. And lastly for his presentation of a theory of atomic structure." The Grasselli medal of the American Section of the Society of Chemical Industry was presented on November 7 to Per K. Frolich for his work on synthesis under high pressure.

BERYLLIUM. This element, the cost of which

was reduced in price from \$100 to \$4 a pound by a new process developed by Alfred Schwarz of Jersey City, N. J., was thought likely to come into more extensive use on account of its valuable qualities. Beryllium is two-thirds the weight of aluminum. It is hard enough to scratch glass with ease. Its elasticity is equal to the highest grades of steel and is four times greater than that of aluminum. A proper alloy with aluminum, consisting of 50 to 70 per cent beryllium will make a structural material for airships and airplanes, which, because of its lightness and strength, can be used in smaller cross-sections, thus reducing the weight of any given ship by about one-half. This will make a very large additional carrying capacity available for "pay load." It means that all metal, fireproof planes can be built stronger and yet lighter, thus affording a larger "pay load" capacity. In other words, beryllium seems to be the metal that will make commercial airplanes out of the present-day flying gasoline tanks. Unlike aluminum this metal resists corrosion to a marked degree. Aluminum is also subject to an internal disease, known as "fatigue," which makes it treacherous. It begins disintegrating internally from the very beginning so that at any time some part of it may give way. Copper when alloyed with only 1 to 3 per cent of beryllium may be employed for the manufacture of automobile springs, lighter and stronger than any steel springs known today. This means great uplift to the copper industry. For the first year it was expected that the metal could be produced at \$4 to \$6 a pound, but later the cost would be reduced to \$2 a pound. Aeronautical engineers agreed that the use of this metal would greatly benefit the aviation industry and would probably put it in the place it deserves.

POTASSIUM. An extensive research on the extraction of potash from minerals had been organized by the U. S. Bureau of Mines. (See *YEAR BOOK* for 1928, p. 153, and for 1929, p. 169.) Special attention was given to Texas polyhalite, Wyoming leucite, and New Jersey greensands as raw sources of potash. This work, which was being conducted at the Bureau's non-metallic minerals experiment station in cooperation with Rutgers University in New Brunswick, N. J., indicated three economically feasible processes for the extraction of potash from polyhalite. According to a report issued in June, the progress on the extraction of potash from polyhalite had been very rapid, but so far as greensands and leucite were concerned the development of economically feasible processes necessarily was slow. Details of the polyhalite work were soon to be published. With regard to greensands and leucite, detailed economic surveys and analyses had been made of the various proposed processes and a limited number of the latter were selected as desirable subjects for laboratory investigations. The potash research organization was essentially as follows: First, the mining section which had done the core drilling in Texas and cooperated with the U. S. Geological Survey in estimating the character and extent of the potash deposits. Second, the economic and statistical section, which conducted economic analyses of proposed processes. Third, the chemical research division, which investigated the fundamentals of the chemistry involved in any process. Fourth, the chemical engineering laboratory which tests the more favorable processes semi-commercially.

RADIUM. It was announced in March by the Associated Press that an improved process of obtaining radium had been devised by Arthur Hand Burton, metallurgical chemist of San Francisco, Calif. The cost of recovering radium, valued at about \$65,000 a gram, depends largely upon the amount of ore which must be treated to produce a given quantity of radium, but the time required for the treatment is a formidable factor. From a normal period of 90 days the process of recovery was shortened in the recent experiments to less than 30 from mine to radium salts and it was expected that it would be reduced still further.

Announcement was made through the daily press in September of the discovery near Wilberforce, Ontario, of radium deposits which gave promise of exceeding those of the Belgian Congo, the world's richest supply. It was reported that investigations extending over several years have uncovered an apparently extensive deposit which averages 186 milligrams of radium to the ton of ore which is higher than found in the Congo. These deposits, it was claimed, would produce sufficient radium to supply the entire British Empire. It was believed that the Government could take over the property under legislation passed some years ago. The announcement of the discovery of this deposit followed closely that by Premier Ferguson that the province of Ontario proposed spending \$500,000 for the purchase of radium to equip a \$500,000 radium center in Toronto.

OIL HYDROGENATION. For ten or more years the oil refiners had been struggling with three problems, namely: (1) A rapidly increasing call from the motoring public for more gas—a demand that has multiplied nearly four times in the past decade. (2) Inability, with existing processes to draw more than approximately 42 per cent of gasoline from the average barrel of crude oil. (3) Consequent overproduction of heavy fuel oil and other residues exceeding the market demand for such products. For these problems hydrogenation provides a ready and satisfactory solution. This may be described as follows: Hydrogen in gaseous form is combined with the basis petroleum stock and subject to 3000 pounds pressure to the square inch. By varying the amount of hydrogen added it is possible to obtain products of predetermined and superior quality. It may be added that the essential difference between the cracking process and the hydrogenation process in general lies in the fact that cracking "breaks down" the petroleum atoms, while hydrogenation builds them up. Cracking with 1000 pounds pressure applied decomposes oil to yield some 60 per cent of gasoline and 40 per cent low-quality residue. In hydrogenation the pressure and temperatures used make it possible, in the presence of the catalyst, to add hydrogen to oils and produce yields running much higher.

Cracking was the first major attempt on the part of the petroleum refiner to alter the chemical structure of either petroleum or its distillates. Hydrogenation is a long step forward in this same direction. It is, however, a "building up" rather than a "breaking down" process, and an extremely close control can be exercised over the chemical composition of the product. The supply of crude oil is not unlimited. It is possible that the supply of certain crudes will be exhausted within two or more generations. Consider then the hydrogenation process, which may use low-

grade oils, coal, even such inferior grades as lignite, and in fact any carbonaceous materials, and produce high-grade petroleum products. Unrestricted by crude oil supply, the process utilizes equally well the lowest grades of crude oil, coal, shale, or even peat. It is a process of sufficient flexibility to allow, with the same equipment, the production of motor oil, kerosene, and anti-knock gasoline by merely varying the operating conditions.

The history of the development of this process is interesting. It began in the laboratories of the *Interessen Gemeinschaft Farbenindustrie Aktien-gesellschaft*. Germany has ample beds of cheap brown coal close to the surface and easily mined with mechanical equipment. Accordingly, the "I. G." concentrated at first on the conversion of coal into oil. In 1928 its experiments resulted in the erection and operation of a coal hydrogenation plant near Merseburg. More than 300,000 barrels of gasoline, similar in every way to petroleum gasoline, were produced from coal and coal tar in that year, and this amount has since been increased. The Standard Oil Company of New Jersey, having entered into an agreement with the "I. G.," studied the process in its development laboratories and for three years tested its application to the problem of reducing petroleum.

In the autumn of 1929, in Bayway, N. J., work was begun on the first large-scale commercial plant designed solely for the hydrogenation of petroleum. Two similar plants were constructed in Baton Rouge, La., and in Baytown, Texas. The Merseburg plant of the I. G. Farbenindustrie had extended its operations to cover both coal and oil. Operation of the first commercial petroleum hydrogenation plant in the world at the Bayway, N. J., refinery of the Standard Oil Company of New Jersey became an accomplished fact on Aug. 7, 1930. The establishment of these close relations between manufacturers of chemical products in Germany and similar concerns in the United States tending to monopoly, is very largely the element that has developed criticism on the part of other manufacturers in the United States. See "Action of United States on German Patents" in this article.

MOTOR FUEL. Announcement of new motor fuels are perennial, most of which are blends. The following was a typical specimen which seemed to have merit. It was a gift to the petroleum industry from the Department of Engineering Research of the University of Michigan. It was non-commercial, any one who wishes being free to use it. It was sponsored by the Natural Gasoline Association of America, and was developed under direction of Prof. George Granger Brown, director of research for the Association. His findings enable oil refiners to produce gasoline not only specially adapted to the modern automobile, but particularly fitted for all ranges of temperature encountered in the United States. He restores to gasoline two ingredients which have been largely removed in recent years by the methods of production and refining. One of these is natural gasoline, found in the natural gas removed at the well mouth. It is highly volatile, vaporizing so readily that it fires easily in cold weather. The other restored substance which gives the added power in hot weather is naphtha, usually removed in the refining and sold as such or included in kerosene. Its effect contrary to that of natural gasoline, retards vaporization.

According to a press announcement from Ottawa, Canada, of May 24 the production of gasoline in sufficient quantities to supply the market of Western Canada is possible in consequence of a statement by Dr. E. H. Boomer of the University of Alberta that a method had been discovered to extract the fuel from tar sand. He had developed a process for the application of hydrogen to the tar obtained from the sand, producing light oil that readily cracks to yield gasoline. Tar sand deposits in Northern Alberta were estimated by geologists to be virtually inexhaustible and hydrogen for the process is derived from the huge quantities of natural gas available in the region.

PREVENTION OF THE FORMATION OF CARBON DIOXIDE. A practical means of eliminating carbon monoxide, the poisonous gas that is formed when automobile engines are left running in closed garages, was announced in January. Dr. J. C. W. Frazer of the Johns Hopkins University announced that tests had shown a motor equipped with his device could run indefinitely in a closed garage without liberating carbon monoxide. Offensive odors from automobile exhausts, which abound in heavy traffic, could be suppressed by the chemical action and smoke also would be entirely consumed. Carbon monoxide is produced by incomplete combustion and by the use of a chemical catalyst which, when the exhaust vapors pass over it mixed with air, converts the monoxide to harmless carbon dioxide.

RUBBER. Great interest continued to be manifested in efforts to produce a cheaper method of obtaining rubber. Thomas A. Edison, who found that common flowers contain commercial rubber, had a "rubber mill" ready to run tests on a giant species of golden rod which he discovered in 1930 growing 14 feet high in Polk County, Fla. The rubber mill was a miniature plant by which the inventor hopes to extract live rubber from dried and pulverized golden rod leaves and stems. "I have just made a great discovery in this giant golden rod plant," he said. "I hope to cross-breed it with a variety containing high percentage of latex to produce an emergency rubber supply for the United States which farmers can grow and harvest in six months." Rubber plants of a species so productive that it had been exploited almost to the point of extinction in Madagascar were growing in Southern California and Florida and had withstood the climate during the winter of 1929-30 with no apparent damage, was announced in April by the Department of Agriculture. Only a few plants had been established, but this number was to be rapidly increased. The plants belong to the species *Euphorbia intisy*, and were brought to the United States by Dr. Charles F. Swingle, botanist of the department, who made a plant exploration trip to Madagascar with Prof. Henri Humbert of the University of Algiers.

The manner of obtaining "intisy" rubber is very simple and is one of the factors that led to the commercial disappearance of this plant. The latex, which flows from any cut, coagulates in the air without further treatment. All that one has to do is to make cuts in the stem, return in a few days and pull off bands of rubber of very high quality, especially desirable for the manufacture of automobile tires. The yield of rubber from stems less than one inch in diameter is so slight that it does not pay to tap them. However, during the time of commercial exploitation spiral

cuts were made all the way up the tree, and yields of 15 pounds or more of rubber could be obtained from a single tree.

An interesting press dispatch in October from Moscow reported that a number of Soviet scientific expeditions sent in search of rubber-bearing plants, had discovered several that rival even the well-established varieties in rubber content. Two known as "hondrilla" and "tau-sagyz," possess high percentages of rubber. The full extent of the hondrilla and tau-sagyz resources of the country were not established, but incomplete data showed that there were about 100,000,000 hondrilla bushes and 80,000,000 tau-sagyz bushes in the Soviet Union, which it was estimated contain about 30,000 tons of pure rubber. In 1930 five big rubber plantations, four of hondrilla of 61,750 acres and one of tau-sagyz of 12,355 acres, were established. In mountainous Transcaucasia a scientific station was opened for the cultivation of guayulla, another rubber plant. During 1930 this station raised more than 2,000,000 guayulla seeds. By the following spring about 20,000,000 guayulla seeds would be sown in the plantation of the station. The first factory for the production of rubber from tau-sagyz was completed and in 1931 eight factories more for extracting tau-sagyz rubber and four factories for the extraction of rubber from hondrilla were to be built.

In September Dr. George K. Burgess, director of the U. S. Bureau of Standards, announced in an address before the Inter-American Conference on Agriculture, Forestry, and Animal Industry at the Pan-American Union that rubber crystals had been evolved at the Bureau from crude petroleum by the extraction of certain hydrocarbons, with "solid rubber" an almost certainty if the work could be extended. Thus far "we have only the crystals. We cannot predict what the eventual product will be. It may be something having properties possessed by none of the metals, a new material with properties all its own, and nobody can say what these would be."

PAPER. An improved process of making pulp from yellow birch wood was announced from the State College of Forestry, Syracuse University, N. Y., in October. The investigation covered the conversion of yellow birch into paper pulp by using liquid chlorine as a pulping agent. The investigators found that the birch wood when pulped by this process gave a product four times as strong as when pulped by the soda process commonly employed in the conversion of hard woods. In addition to the extraordinary strength, it was found that the fibres were more flexible and bleached with less difficulty than the ordinary soda woodpulp from the same wood. It was believed that the process has good commercial possibilities.

ARTIFICIAL SILK. At the annual Canadian Chemical Convention held in Ottawa on May 27, Dr. Harold Hibbert, Professor of Industrial and Cellulose Chemistry at McGill University, reported that artificial silk could be made from water and carbon dioxide, the gas obtained from burning coal. Dr. Hibbert pointed out the manner in which plant life is able to manufacture cotton and wood from carbon dioxide and water of the atmosphere. It was long known that the plant forms a sugar from these units and the more difficult step was a method of converting these sugars and other natural plant products. After years of experimenting this step was brought about by adding a common bacterium to the

sugar. The discovery also means that it is possible to take ordinary cane or other sugars and convert them into cellulose, from which artificial silk and other materials are made. In the making of artificial silk from carbon dioxide and water, it is first necessary to form a sugar, as do the plants. Dr. E. C. C. Bailey did this by exposing the mixture of carbon dioxide and water to ultra-violet radiation, which resulted in the formation of a synthetic sugar. Professor Hibbert's experiment accomplished the second stage, the conversion of sugar into cotton and wood cellulose.

ARTIFICIAL WOOD. The study of commercial uses for corn-stalk products carried on by Burton F. and George N. Peek of Moline, Ill., in association with Chester C. Davis and Byron Hunicks of Chicago and Willis S. Brown of Belvedere, Ill., disclosed that practical processes for the manufacture of wall board and other materials had been developed at Iowa State College, Ames, under the direction of Prof. O. R. Sweeney. The patents and processes owned by the college were to be used by a corporation but the college was to supervise the development of the products past the experimental stages. Beside wall board, many other products may be manufactured, such as machine gears, pressed board, and imitation wood. Similarly it was found that by burning corn stalks in a septic tank there would be generated methane or marsh gas which was available for illuminating purposes, while the refuse may be made into paper.

NEW BUILDING MATERIAL. It was announced in August that fire, load, and water tests, conducted by Prof. Albin H. Beyer of Columbia University, on a new building material, disclosed that the new compound, after being subjected for four hours to temperatures averaging 1804°F. showed an increase in surface temperature of no more than 11°. The new material is composed primarily of Portland cement and concrete, with the addition of lime and a small quantity of aluminum powder and soda. When poured out in a semi-liquid form, the aluminum powder generates hydrogen in the liquid mass, causing the compound to rise like bread to two or three times its original volume. A layer of liquid floor-filling two inches deep will rise within an hour to a height of five inches or more, drying rapidly as it expands. The new material is from 66 to 75 per cent lighter than concrete, and so hard that a weight of 370 pounds to the square inch leaves no impression on its surface.

NEW DENATURANT. That a new non-poisonous denaturant for industrial alcohol, more effective than any previously in use, had been discovered by Dr. James M. Doran of the U. S. Prohibition Bureau, was announced in March at a conference of industrial alcohol producers. The denaturant is a product of petroleum and makes alcohol extremely difficult of conversion for drinking purposes. The producers offered assurance they would cooperate in the use of the new denaturant. Commissioner Doran declined to explain anything about the new denaturant beyond that it would first be used in ethyl acetate, a subsidiary formula of ethyl alcohol. Later it was planned to extend its use. Whether it would eventually supplant alcohol and denatol, the two denaturants now most commonly used, had not been decided.

AMERICAN LITIGATION ON GERMAN PATENTS. In previous issues of the YEAR BOOK, notably

1922 (p. 137), 1923 (p. 139), 1924 (p. 144), 1925 (p. 143), and 1926 (p. 156), this subject was presented and it seems therefore proper to give further development in the matter; which had again been brought into the Courts. Attorney General Hamilton Ward of New York State refused on January 30 to investigate the issuance of \$30,000,000 of debentures of the American I. G. Chemical Corporation by the National City Company, as demanded by Francis P. Garvan, president of the Chemical Foundation. Mr. Garvan charged that the issue was advertised deceptively, that the money was to be used to assist German manufacturers in competing with the American chemical industry, and that the transaction was otherwise improper.

AMERICAN PROCESSES IN GERMANY. An interesting report on the German market for American Chemical Processes appeared in *Commerce Reports* for July 28. It appeared that Germany had become an increasing receptive market for American chemical processes, particularly in recent years. Among these may be mentioned: (1) The American nitro-cellulose lacquer process; (2) a perfected American nitric acid oxidation process; (3) an American catalytic ammonia synthesis; (4) a perfected American process making titanium white paint; (5) an American process imparting a wood-grain surface to metal and other bases; (6) a petroleum cracking process that promised to be used in Germany to treat heavier fractions occurring in connection with the hydrogenation of tars; (7) the classic precipitator, or electrofilter removing impurities from condensed gases or precipitating therefrom valuable commercial salts; (8) an American flotation system for metal extraction from ores; (9) the American process producing contact sulphuric acid employing a vanadium oxide catalyst; and (10) the classic American process producing plastics by formaldehyde condensation.

There were numbers of other chemical products that were made and sold in Germany, including particularly the toiletries line. Manufacture on the spot according to American formulas is preferred in cases, in order to reduce costs. Occasionally, the American specialty is imported in bulk and packed in Germany. The line of American chemical specialties was becoming so diversified that it included even certain medicinal specialties, while German agents were competing with one another to introduce many of the well-known medicinal and toilet lines of household popularity in the United States. It is hardly necessary to repeat that a steady and thriving trade was maintained in a wide variety of American heavy, prime, raw, and semi-finished chemical materials that were indispensable for further chemical processing, such as, naval stores, sulphur, benzol, carbon black, borax, and phosphate rock. These sales of American chemicals, exclusive of petroleum products, to Germany were estimated at an annual value of about \$20,000,000. This amount excludes the financial returns from American chemical-process operations in Germany.

NECROLOGY. Among American chemists who died during the year and about whom biographical sketches appear elsewhere in this YEAR BOOK, were the following: William Henry Nichols, born in Brooklyn, N. Y., on Jan. 9, 1852; died in Honolulu, H. I., on Feb. 21, 1930; manufacturing chemist and president of General Chemical Com-

pany. John Howard Appleton, born in Portland, Me., on Feb. 3, 1944; died in Providence, R. I., on Feb. 18, 1930; for long years professor of chemistry in Brown University and author of many text books on chemistry. Charles Francis McKenna, born in New York City on June 4, 1861; died there on April 25, 1930, consulting chemist and in 1914 president of the Chemists' Club of New York. William John Matheson, born in Elkhorn, Wis., in 1857; died in Coconut Grove, Fla., on May 14, 1930; an authority on the application of coal tar dyes and a high official in corporations concerned with industrial chemistry. Allerton Seward Cushman, born in Rome, Italy, on June 2, 1867; died in New York City on May 1, 1930; founder of the Institute of Industrial Research and distinguished for his knowledge of industrial chemistry. Harvey Washington Wiley, born in Kent, Ind., on Oct. 18, 1844; died in Washington, D. C., on June 30, 1930; long chief of the division of chemistry in the Department of Agriculture and leading advocate of pure food. Harold Bailey Dixon, born in London on Aug. 11, 1852; died in Lytham, England, on Sept. 18, 1930; for many years professor of chemistry in Manchester University and in 1909-11 president of the London Chemical Society. Richard Kidder Meade, born in Charlottesville, Va., on Nov. 28, 1874; died in Norfolk, Va., on Oct. 13, 1930; consulting chemist with specialty of the manufacture of cement and author of *The Chemist's Pocket Manual* (1900). Herbert Henry Dow, born in Belleville, Ontario, on Feb. 26, 1866; died in Rochester, Minn., on Oct. 15, 1930; an authority on bromine and the world's largest manufacturer of that substance, also recipient of the Perkin Medal in 1930.

Fritz Pregl, born in Laibach, Austria, on Sept. 3, 1869; died in Graz, Austria, on Dec. 13, 1930; the recipient of Nobel prize in chemistry in 1923 for an antiseptic iodine solution which bears his name. Alfred Moritz Mond, Sir Alfred Mond, then first Baron of Landford and Lord Melchett, born in Farnworth, England, on Oct. 28, 1868, and died in London, England, Dec. 24, 1930; a great industrial chemist, successively chairman of Brunner, Mond and Co., the Mond Nickel Company, and the Imperial Chemical Industries; also at the time of his death president of the Society of Chemical Industry. Henry Leffmann, born in Philadelphia, Pa., on Sept. 9, 1849; died there in Dec. 25, 1930; a teacher of chemistry and author of standard works on sanitary chemistry.

BIBLIOGRAPHY. Some of the important books published during the year were: *Allen's Commercial Analysis* (volume 8, 5th ed.); *The Condensed Chemical Dictionary* (2d completely revised and enlarged ed.); Davies, *The Conductivity of Solutions and the Modern Dissociation Theory*; Ellis, *Hydrogenation*; Friend, *A Text-book of Inorganic Chemistry*, vol. II; Goddard, *Organometallic Compounds*; part 2, *Derivatives of Arsenic*; Hackl, *A Chemical Dictionary*; Jaffe, *Crucibles, the Lives and Achievements of the Great Chemists*; Kruyt, *Colloids* (2d ed.); Mellor, *A Comprehensive Treatise on Inorganic and Theoretical Chemistry*, vol. 10; Pregl, *Quantitative Organic Microanalysis* (2d English from 3d German ed.); Treadwell, *Analytical Chemistry, Qualitative Analysis* (vol. 1, 7th ed.).

CHESS. The world's chess title was not contested during 1930 and was retained by Dr. Alexander Alekhine of Paris. The champion

again demonstrated his supremacy, however, by winning all of his games at the international tournament concluded at San Remo, Italy, on February 4 and at the team tournament of the International Chess Federation at Hamburg, Germany, ended July 27. His final score at San Remo was 14-1. The Polish team won the International Chess Federation championship at Hamburg, wresting the title and the Hamilton-Russell Trophy from Hungary, which had held it twice. Akiba Rubinstein led the winning team, the other members being Dr. Savielly Tartakower, David Przepiorka, and Samuel Frydman. Hungary, Germany, Austria, and the United States finished in the order named. Isaac Kashdan, champion of the Manhattan Chess Club and a new member of the United States team at Hamburg, distinguished himself there and subsequently won first prizes in tournaments at Berlin, Gyor, and Stockholm. In the international masters' tournament in Frankfurt, Germany, in September, Kashdan finished second, the winner being Aron Nimzowitsch of Copenhagen, Denmark.

Frank J. Marshall, of New York, retained the championship of the United States. The Intercollegiate Chess League Team title was won by Columbia and the H. Y. P. W. College Chess League Team by Harvard. Martin C. Stark, of Harvard, won the intercollegiate individual championship.

CHICAGO. See ILLINOIS under *Political and Other Events*; CRIME.

CHICAGO, UNIVERSITY OF. An institution of higher education and research situated on the Midway Plaisance between Washington and Jackson Parks on the south side of Chicago. The University is privately endowed, coeducational and nonsectarian, although one-third of its 30 trustees must be Baptists. John D. Rockefeller founded the University in 1890, and his personal gifts amounted to a total of \$35,000,000 over a period of 20 years.

President Hutchins announced in November, 1930, that the faculty and trustees had approved a revision of the academic structure and educational programme of the university. The traditional graduate schools and undergraduate college were abolished, and a new divisional organization, consisting of the college, four upper divisions in arts and sciences, and the professional schools, was substituted. The college is a new entity, corresponding roughly to what has been called the junior college. The four upper divisions, which have been formed by grouping of departments, are the biological sciences, the physical sciences, the social sciences, and the humanities. The purpose of the college is to complete what may be termed the formal general education of the student, and to aid him in choosing a special field of interest. Requirements for admission to the new college have been simplified. High school graduates who were in the upper half of their class, scholastically, are henceforward eligible for admission as freshmen without further tests. Under the reorganization, the university may find it possible to eliminate the present numerical restriction of the freshman class.

For the average student, the college will require two years of work, probably with instruction in four major lecture courses as a basis, and smaller classes of the proseminar type, for those

interested and able to profit from such opportunities. While examinations will be held from time to time by individual instructors, they will be solely for the purpose of enabling students and instructors to determine what progress is being made. There will be no advancement on the basis of course credits or course examinations, nor will attendance at the lectures or classes be required. The student will leave the college division solely on the basis of a comprehensive examination, which he may take at any time he and his advisers think he is ready for it. Passing the comprehensive examination with a satisfactory degree of excellence, and with some distinction in one special field, will mean admission to one of the upper divisions of the university. Passing with a lower degree of excellence will probably mean either an honorable exit or more work.

In the upper division, the average student will spend two years specializing in one broad field, and will receive the bachelor's degree when he can pass the divisional comprehensive examination. In work beyond this level, there will be differentiation of training, according to the intent of the student to be primarily a teacher or a research worker, with corresponding differentiation in degrees granted. The advanced work (of the present graduate level) will benefit from the revised organization, because emphasis will be placed upon field, as represented in the divisions, rather than upon departments and subjects, as in the old order. For projects and coöperative efforts extending through many related subjects, the divisional organization is regarded as much superior to the former strictly departmental organization. That part of the reorganization programme which applies to the college was to be effective, it was planned, for students entering on Oct. 1, 1931. The divisional organization was already effective in application to the budget and administrative procedure. The professional schools, the organization of which remained unchanged, include law, medicine, divinity, library science, education, commerce and administration, and social service administration. The university year is divided into four quarters of 12 weeks each, permitting a regular term during the summer.

During the summer quarter of 1930, a total of 5310 different students were enrolled; during the autumn quarter of 1930, the enrollment was 7929. The total enrollment for 1929-30 was 14,245 individuals. These figures do not include the enrollment in the home study or correspondence department, which has an average of 7000 students at any one time. The members of the several faculties, exclusive of assistants, numbered 897 on Nov. 1, 1930. In all departments and in all grades of service, the university employed approximately 3000 persons. Important additions to the faculties during the year included the following: Dr. Fred-eric W. Schlutz, professor and chairman of the department of pediatrics; Harold Shepherd, professor of law; Donald Slesinger, professor of law and chairman of the Social Science Research Committee; Edwin H. Sutherland, professor of sociology; Dr. Franz Alexander, of the University of Berlin, as visiting professor of psychoanalysis; George A. Works, professor of education; Dr. Bengt Hamilton, professor of pediatrics; Dr. Richard E. Scammon, professor of anatomy; James W. Young, professor of advertising; Beardsley Ruml, dean of the division of social sciences and professor of education; and William O. Douglas, professor of law.

The assets of the university on June 30, 1930, were \$103,911,084, an increase of \$15,553,746 over the figure for the same date in 1929. These assets were divided as follows: Endowment, \$59,015,297; plant, \$34,654,581; current assets, \$4,650,105; other assets, \$5,591,099. The total income under the University's combined budget for the fiscal year 1929-30 was \$7,231,249, while expenditures amounted to \$7,199,032. Student fees provided 23.33 per cent of the university budget income, and endowment funds provided 42.22 per cent. The salary cost of instruction and research constituted 38.19 per cent of the budget expenditures, or \$2,605,484. The total amount of gifts paid in was \$14,515,758, the largest in the history of the university.

Among the important gifts, pledges, and bequests during the year were the following: From the General Education Board, an appropriation of \$1,500,000 for endowment, buildings, and equipment for the school of education; from an anonymous donor a gift of \$50,000, interest of which is to be used for increasing the salaries of outstanding teachers in the under-graduate colleges; to the Alumni Gift Fund, 800 individual pledges totaling \$41,506; from John D. Rockefeller, Jr., a gift of \$50,000 toward the endowment of the Ernest DeWitt Burton Memorial Professorship, and a pledge of \$290,000 to defray cost of a publication to be known as *Egyptian Paintings*; from Mrs. Anna L. Raymond a gift of \$36,000 to establish the James Nelson Raymond scholarships in the law school; from the Chicago Philanthropic Club, a gift of \$10,000 for support of a cardiac clinic; an allocation of \$250,000 to the school of social service administration from the estate of the late Conrad Hubert; from J. M. Hopkins, \$10,000; from Edward F. Swift, \$25,000; an appropriation of \$25,000 from the Carnegie Corporation, payable in five annual installments, for support of a *Journal of Library Science*; a pledge of \$25,000 from Mrs. William H. Moore to the support of the Oriental Institute.

Completion of five new structures during 1929 brought the number of buildings operated by the university for educational purposes to 82, including the Yerkes Observatory at Williams Bay, Wis.; the buildings of the Rush Medical College on the west side of Chicago; and the expedition headquarters of the Oriental Institute at Luxor, Egypt, Armageddon, Palestine, and Khorsabad, Iraq. The five buildings opened in 1930, valued at \$2,200,000, included the Bobs Roberts Memorial Hospital for Children; the Gertrude Dunn Hicks Memorial and the Nancy Adele McElwee Memorial, two orthopedic units of the University Clinics; Bernard A. Eckhart Hall, for physics, mathematics, and mathematical astronomy; and the botany research laboratory. Buildings under construction, at a total cost of \$5,700,000, included the new Oriental Institute building, the men's group of new residence halls, the graduate education building, the Chicago Lying-In Hospital and Dispensary, and the athletic field house. Contemplated construction for 1931 at a cost of \$4,500,000 included the women's group of new residence halls, the International House, and the art building. By the close of 1931, the university would have spent approximately \$30,000,000 on its programme of physical expansion in seven years.

The University of Chicago Press published 92 books during the year, 50 of these being results of original research and scholarship. The number

of scholarly journals published by the Press was increased to 18, with the addition of *The Library Quarterly*, the first number of which was to be issued in January, 1931. Accessions to the university libraries increased the number of bound volumes to 915,837, the number of pamphlets to approximately 400,000, and the number of periodicals received regularly to 4739. President, Robert Maynard Hutchins, A.M., LL.D.

CHILCOTT, ELLERY CHANNING. An American agriculturist, died in Ann Arbor, Mich., Nov. 14, 1930. He was born in East Hamburgh, N. Y., Apr. 8, 1859. At South Dakota Agricultural College he was professor of agriculture, 1892-97, and professor of geology and agronomy and vice-director, 1897-1905. He was also agriculturist in the United States Experiment Station, South Dakota, 1893-1905, and then was placed in charge of the dry-land agricultural investigations of the Bureau of Plant Industry, U. S. Department of Agriculture. In 1918 he was head of an agricultural mission sent to France and Algeria at the request of the French High Commission, and in 1928-29 organized the Central Great Plains Field Station, near Cheyenne, Wyo., for the U. S. Department of Agriculture.

CHILD LABOR. The great progress made in public sentiment with regard to child labor was evidenced by the new draft of the uniform child labor law adopted at the 1930 meeting of the Commission on Uniform State Laws. The last such uniform code was prepared in 1911. Under the new draft the minimum age for any gainful employment is set at 14 years, with the exception of street trades. It is to be observed that the definition of gainful employment, however, makes no provision for the inclusion of agriculture, domestic service and athletic games, and, therefore, children at the present time being employed in the beet sugar and cotton fields and as house workers, nurse girls and caddies remain without real protection. The chief provision of this new code are to be noted. They include the following: Hours of work and night work regulations which, in the 1911 code, applied to girls under 18 and boys under 16, now are made to include all children under 18. Further, children under 18 who are attending school may not work more than 10 hours a day both at school and under employment. Work permits are now required up to 18 instead of 16, and additional safeguards are provided for physical examination.

Particularly important was the raising of the educational requirement from the fifth to the eighth grade. The age for work in mines and quarries was raised from 16 to 18 years, and the enumeration of dangerous occupations in which children under 16, 18, or 20 years may not be employed was made more specific. It is to be noted that the code provides for relaxation of provisions affecting children engaged in street trades. Under the 1911 code, boys under 12 could not sell papers and boys under 14 could not work as boot-blacks. Under the new provisions boys of 9 years are permitted to sell papers. The official bulletin of the National Child Labor Committee, which has for twenty-five years consistently devoted itself to the protection of children employed in in-

dustry and to the raising of standards, comments on this new code in this fashion:

Although the new draft is a long step forward compared with its forerunner of 1911, it does not, as did the original uniform law, accept the highest standards existing in any State as the basis for its provisions. Four States, for instance, have adopted a 44-hour week for children and three States have either an 8- or 9-hour day for work and school combined as compared with the 48-hour week and 10-hour day for work and school combined provided for in the uniform law. Before criticizing this feature of the uniform law too harshly, however, it must be noted that in the uniform law, regulation applies to children up to 18 years, whereas in the States with higher standards such regulation applies only to children under 16. On the whole, however, the provisions of the uniform child labor law are more advanced than the existing legislation and except for the section dealing with street trades, in most States its adoption would mean a distinct advance.

LEGISLATIVE HISTORY. In the States of Massachusetts, New Jersey, and New York, in the legislative year 1930, the friends of child labor met with defeat in efforts to raise the entrance age into industry. In New York a bill fixing the minimum age for employment at 15 years passed the senate but did not come to a vote in the assembly. In Massachusetts a measure raising the minimum age to 15 years and the grade requirement from the sixth to the seventh grade was first weakened by amendment and then unfavorably reported on in the senate. The result was that the measure was lost. In New Jersey a bill was submitted to raise the educational requirement for children of 14 leaving school from the sixth to the eighth grade but failed to receive attention. In Massachusetts two bills were passed and signed by the governor: one lengthened the period of compulsory school attendance in cities, and the other made illegal the employment of children except in compliance with the compulsory educational law.

Legislative calendars in other States carried the usual child labor law projects but none of them met with success. The following is a list of some of these measures that failed of passage: in Rhode Island a bill for double-treble compensation for minors illegally employed involved in accidents; in Kentucky, Massachusetts, Mississippi and South Carolina, restrictions on the working hours of women and girls over 16; in Mississippi and North Carolina, the establishment of workmen's compensation systems, affording protection for children suffering injuries growing out of employment.

WISCONSIN. The Industrial Commission of Wisconsin reported that in the year 1929 it had issued 15,151 child labor permits of which 6173 were confined to Milwaukee. This compares with 14,326 permits in 1928 and 15,073 permits in 1925. In Milwaukee the number of permits issued in 1929 showed a slight falling off from the number of permits issued in 1925, while in the rest of the State there had been an increase. It is interesting to look into the results displayed of physical examinations given to the children. In Milwaukee, in 1929, out of 3623 children examined for permits only 6.7 per cent were free from any defects. The most common defects recorded were by per cents as follows: 62.5 per cent of the total group showed dental defects; 14.1 per cent had throat defects; 6.5 per cent eye troubles; 3.7 per cent showed malnutrition; and 1.3 per cent were suffering from heart trouble.

CHILDREN IN MARYLAND CANNERIES. An inquiry conducted by the Maryland Commission of Labor and Statistics indicated that, in the year 1929,

in the 405 canneries that were visited there were found to be 1276 children under 16 years of age at work. The Department pointed out that this situation was particularly lamentable in view of the fact that children employed in this activity labored under peculiar handicaps. The educational difficulty was particularly serious because the children were confined in the labor camps connected with the canneries until the close of the season.

FARM LABOR IN COLORADO. The National Child Labor Committee published during the year the results of a study of child labor on farms and in the beet fields of Colorado, made in the fall of 1924. A total of 329 families, including in all 1141 children, was investigated. Children, aged 6 to 15 inclusive, numbered 819 and of these 80.3 per cent were working in the fields. The report discovered that the children worked long hours, the average being 9 hours a day. It was significant to observe that of the 329 families, 155 fell in the contract and wage labor group. Almost without exception the heads of the families were Mexicans or Spanish Americans. The report characterizes these families as follows:

They represented the lowest economic grade, with unsatisfactory standards of living, poor housing, and all the disadvantages natural to an isolated group, tolerated mainly because of their industrial usefulness.

A particular difficulty, which is characteristic of all children working on farms, is the fact that the families are usually made up of migratory workers so that school retardation is the rule rather than otherwise. The report points out that the Colorado law exempts from its child labor statutes children under 14 working in fruit orchards, gardens, fields, or farms. However, as far as occupations in beet fields are concerned, the working conditions are in almost every particular comparable to employment in factory occupations. In this sense, therefore, remedial legislation was deemed to be of the utmost importance.

MINORS ILLEGALLY EMPLOYED. Illinois. The Illinois workmen's compensation act, amended in 1928, provides for the payment of 50 per cent additional compensation to minors injured while illegally employed. During the fiscal year July 1, 1928, to June 30, 1930, it was reported that 117 children had suffered injury from industrial accidents and that of this number, 77 were illegally employed. Thirty-eight accidents occurred to children while engaged in legal employment.

Pennsylvania. In 1928 there were 4760 accidents to minors under 18 years of age recorded by the State Department of Labor and Industry. Of a group of 156 cases investigated by the Department, it was found that 44 were non-compensable because the loss of time due to the accident was not in excess of 7 days. Of the remaining 112 cases, compensation was paid to 95 and compensation was refused to 17. The following indicates the nature of the settlements made in the 17 refused cases: more than under workmen's compensation, 2; approximately the same as under workmen's compensation, 4; less than under workmen's compensation, 1; only medical fees, 2; only funeral expenses, 1; no redress, 5; not determined, 2. The Bureau report recording this situation declares:

The present compensation status of illegally employed minors is far from satisfactory. Their exclusion from workmen's compensation benefits apparently has brought them no advantage, and certainly in some instances has brought them some hardships. . . . If the illegally em-

ployed minor is to receive justice and if the careless and unscrupulous employer is to be deterred from similar violation of the law, it is evident that some remedial legislation should be enacted. Such action does not lack precedent. Seven States already have legislation which has as its object the redress of illegally employed minors injured in the course of their employment.

Wisconsin. The compensation law of this State provided that a minor of permit age (children under 17 years of age) who was injured while employed without a labor permit was entitled to double indemnity. A minor of permit age or over who was injured while employed in a prohibited occupation was entitled to triple indemnity. As a result of the vigilance displayed by the Industrial Commission, the number of accidents to minors in which double or triple compensation was allowed had fallen off appreciably. In 1929 there were 39 cases of injuries to minors illegally employed as against 97 in 1921. In 1929 the amount of compensation allowed in such cases was \$19,250.

NATIONAL CHILD LABOR COMMITTEE CONFERENCE. The National Child Labor Committee, to whose activities must be attributed the great progress made in child labor legislation in the United States, held its twenty-fifth annual conference in New York City at the beginning of the year. Owen R. Lovejoy, long the Committee's leader and at the present time secretary of the Children's Aid Society of New York, insisted that only a Federal amendment could really cope with the problem. Governor Roosevelt, of New York, one of the speakers at the conference, declared that factories had been moving from the North to the South because of the absence in the Southern States of laws protecting child labor and workmen injured in industry. Governor Roosevelt expressed the opinion of leaders of the social legislation movement when he said:

I have said simply from the bottom of my heart, and some say that it is treason, that I would rather have the factories go. I have seen Northern mills that have gone South, and I have seen the conditions of employment that they have set up in those mills, not just for children, but for men and women, and I want to tell you that the time will come when public opinion in the South, with the growth of education of the average citizen, is going to bring the laws of the South and the standards of the South on the par of the laws and the standards of the North.

THE SCHOOLS AND CHILD LABOR. A bulletin issued by the Federal Children's Bureau applied itself to answering the question, Why do children leave school to go to work prematurely? The report cited the following as the chief reason, based on elaborate inquiries which it had been making over many years. Children left school because many school systems were not yet providing adequate training adapted to the needs of an industrial society. Other reasons cited were restlessness, impatience with discipline, and personal and family ignorance of the value of continued school training. The report further pointed out that illiteracy and the lack of the rudiments of a general education were characteristic usually of children inducted into industry at an early age. Thus, less than three-fourth of the 14- and 15-year-old children taking out employment certificates to go to work in 1927 in a number of industrial communities in the United States had completed the eighth or a higher grade, and one-fourth had completed only the sixth grade. The Children's Bureau outlined the following four programmes for the prevention of child labor:

1. The necessity for legislation aimed at child labor and for the strengthening of school attendance laws. 2. A sufficiently high wage for the chief breadwinner of the family to eliminate the necessity for income contributions from the labor of children. 3. The general acceptance of mothers' assistance acts by the States and the granting of sufficiently large pensions to allow children to remain in school up to the age of at least 16 years. 4. A recasting of our educational system in order to prepare children adequately to cope with the present-day problems of our civilization.

OTHER COUNTRIES. In 1930 the *Colombian Congress* was considering a new labor code, modeled after the draft conventions of the International Labor Organization, which was designed to prohibit night work for women and children between 10 P.M. and 5 A.M. In *Finland* a law was passed in 1929 to raise the minimum age for entrance into industry from 13 to 14 years in most industrial occupations. In *Great Britain* a measure passed in 1930 extended to 18 years the regulations under which young people might be sent abroad for the purpose of appearing in theatrical performances. The British education bill, providing for the raising of the entrance age into industry to 15 years, failed of passage because of obstacles raised by religious bodies not associated with the Church of England. Apparently the raising of the school-leaving age threatened to place additional financial burdens on these schools. The result was the withdrawal of the bill and an effort to formulate a compromise. CHILD WELFARE. **WHITE HOUSE CONFERENCE.** At Washington, on November 19, there was held the White House Conference on Child Health and Protection. President Hoover addressed the opening session of the Conference and at other meetings speeches were delivered by Secretary of the Interior Wilbur, Secretary of Labor Davis, and Miss Grace Abbott, Chief of the Children's Bureau. President Hoover stated that as against 35,000,000 children in the country classified as reasonably normal there were in addition 6,000,000 other children who might be regarded as being inadequately nourished and another 4,000,000 who were handicapped by defective speech, heart defects, behavior problems, tubercular infections, deafness, blindness, crippled limbs, and delinquency or dependency. He declared that at least four-fifths of these handicapped children were not receiving the attention or treatment they needed and he called upon the conferees to put the stamp of their expert approval upon the proposals and recommendations for child welfare which had been brought together as a result of a year's discussion and research conducted by the various divisions of the Conference. In one portion of his address President Hoover declared:

If we could have but one generation of properly born, trained, educated, and healthy children a thousand of the problems of government would vanish. We would insure ourselves of healthier minds and more vigorous bodies to direct the energies to yet greater heights of achievement.

The work of the Conference was divided into the following four sections: Section I, dealing

with medical service; Section II, dealing with public health service; Section III, dealing with education and training; and Section IV, dealing with the handicapped. An idea of the complexity of the Conference's preliminary activities may be obtained from the fact that under Section III, namely, education and training, some 80 subcommittees alone met to formulate suggestions. The Conference drew up what it called its "Children's Charter" made up of what was considered the 19 minimum requirements for a healthy and happy childhood. Some of these included the following:

Every prospective mother should have suitable information, medical supervision during the pre-natal period, competent care at confinement. Every mother should have post-natal medical supervision for herself and child.

Every child should have proper sleeping room, diet, hours of sleep and play and parents should receive expert information as to needs of children of various ages as to these questions.

The School should be so organized as to discover and develop the special abilities of each child and should assist in vocational guidance, but children, like men, succeed by the use of their strongest qualities and special interest.

Every child should have some form of religious, moral and character training.

Every child should be protected against labor that stunts growth, either physical or mental, that limits education, that deprives children of the right of comradeship, of joy and play.

Every waif and orphan in need must be supported.

Every child is entitled to the feeling that he has a home. The extension of the services in the community should supplement and not supplant parents.

Children who habitually fail to meet normal standards of human behavior should be provided special care under the guidance of the school, the community health or welfare center or other agency for continued supervision or, if necessary, control.

A Committee on Vocational Guidance and Child Labor formulated a thoroughgoing series of recommendations for the regulating of the labor of children. These standards called for the following: An age minimum of 16 years; compulsory school attendance up to 18 years except for children of 16 years who are employed or who are high school graduates; a maximum working day of 8 hours and a 44-hour week for children under 18 years; an 8-hour day for school and work combined for children under 16 years; night work restriction for children under 18 years; employment certificates for children under 18; physical examinations before employment; establishment of adequate machinery and personnel for enforcement of child labor and school attendance laws.

Only one controversial incident developed to mar the general unanimity expressed by the persons in attendance at the Conference. This was the difference of opinion that developed out of the recommendation submitted by the Public Health Service Section that the health activities of the Children's Bureau be transferred to the Public Health Service in the Treasury Department. The recommendation was supported by officials of the Public Health Service and by Dr. Haven Emerson, a public health authority of New York City, who urged that all Federal health activities might well be concentrated under the aegis of a single public agency and specifically recommended that the health activities of the Division of Child Hygiene and of Maternity and Infancy of the Children's Bureau be thus transferred. Opposition at once manifested itself to this proposal. Secretary of Labor Davis, Miss Grace Abbott, and representatives from a variety of social work and women's agencies pointed out

that the work of the Children's Bureau was directed by a single guiding principle and that severance from it of any of its activities would result in a loss of this point of view. In view of the fact that under the rules of the Conference no controversial questions could be decided, the matter was referred for further consideration to a continuing committee.

BIRTH AND INFANT MORTALITY. From statistics published by the Census Bureau, it was established that the birth and infant mortality rates for the United States were the lowest in 1929, with one exception, since the establishment of the registration area in 1915. In 1929 the mortality rate for infants under one year was 68 per 1000 births. Only in 1927 was the rate lower when it was 65. The birth rate was 18.9 per 1000 population, the lowest for any year since 1915. It was interesting to note that in a solid bloc of nine Southern States infant mortality decreased from 2 to 7 points per 1000 live births in 1929 as compared with 1928. In Arkansas the rate was 70 per 1000 live births; and in North Carolina, it was 79. Each of these States, however, represented the decrease of 7 points from 1928. In South Carolina the rate was 91, which was a decrease of 6 points over the previous year; in Georgia it was 77, which was a decrease of 5 points; in Tennessee it was 77, which was a decrease of 4 points; in Louisiana it was 74, which was also a decrease of 4 points. In Florida it was 65; in Mississippi it was 72; and in Alabama it was 73; each State showing a 2-point drop from 1928. By contrast one may note that Oregon's death rate was 48 and Washington's rate was 49. In New York the death rate was 61; in New Jersey, 60; in Connecticut, 64; in Iowa it was 53; in Kansas, 58; and in Nebraska, 52.

MATERNAL AND INFANT HEALTH. Previous YEAR BOOKS have devoted attention to the Maternity and Infancy Act of 1921. It was pointed out last year that the Act terminated on June 30, 1929, and was not renewed by Congress. When Congress adjourned in 1930 there were pending in the Senate two bills calling for the continuance of the appropriations by the Federal Government. However, at the close of the year Congress had yet not taken action on either of these measures. However, it is interesting to note that in a number of States larger State appropriations were made available for the continuance of the programme. Thus, nineteen States and the Territory of Hawaii reported that their legislatures appropriated for the continuance of the maternity and infancy work, amounts equal or exceeding the combined State and federal appropriations. These States were: Delaware, Kentucky, Maine, Maryland, Michigan, Missouri, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Pennsylvania, Rhode Island, South Dakota, Tennessee, Vermont, Virginia, and Wisconsin.

WORK OF THE CHILDREN'S BUREAU. As indicative of the widening scope of the activities being conducted under the Federal Children's Bureau mention may be made of some of the more important studies either in process of investigation or completion: Study of the case histories of 7537 maternal deaths, which represented one-fourth of all the maternal deaths in the birth registration area in 1927 and 1928; study of the frequency of rickets in New Haven and Porto Rico; study, through an examination

of autopsy records, of stillbirths and neo-natal mortality; study of injured miners under workmen's compensation laws; study of juvenile delinquency with particular bearing on the results of institutional treatment for delinquent boys in State industrial schools.

LEGISLATION RELATING TO CHILDREN. During 1930, legislative sessions were held in the States of Kentucky, Louisiana, Massachusetts, Mississippi, New Jersey, New York, Rhode Island, South Carolina and Virginia, and in most of these statutes were passed affecting the welfare of children. The more important of these laws that were added to children's codes already in existence are summarized below.

Child Hygiene. New Jersey provided for the employment of registered nurses in schools. New York provided for the employment of dental hygienists and clinic physicians by county boards and supervisors.

Child Labor and Compulsory School Attendance. Mississippi prohibited the employment of a child between 14 and 16 years of age in a factory workshop unless he had complied with the compulsory school attendance law. Another law in this State required attendance for the full school term in school districts having a population of 10,000 and over. The New Jersey legislature passed a resolution creating a commission to investigate the employment of migratory children. In Louisiana the maximum hours of work for girls 16 years of age and over were reduced to a nine-hour day and 54-hour week. The same law, however, removed the limitation of a maximum of ten-hour day and 60-hour week for boys 16 and 17 years of age.

Dependent Children. The Louisiana legislature enacted a new mothers' aid law. This law also authorized State aid to parishes and to the City of New Orleans, which were already appropriating sums for the work, and \$200,000 was voted for the biennium for State contributions. In New York the mothers' aid code was liberalized by the passage of two amendments which authorized aid to deserted wives whose husbands had been away two years instead of five and also for aid to a relative within the second degree when the mother was dead or permanently incapacitated. In South Carolina there was created an independent Children's Bureau. In Porto Rico there was created a special commission to take a census of all neglected and homeless children in the Island.

Juvenile Delinquency. A New York law authorized the State Department of Social Welfare to study the causes of juvenile delinquency and to collect and disseminate information relating to the question. New Jersey passed a law sponsored by the National Crime Commission regulating the sale and possession of firearms.

Mentally Defective Children. Congress enacted a law to establish a hospital for defective delinquents. The Virginia Colony for Epileptics and Feeble-minded was restricted to white persons not under 10 years and to feeble-minded white females not under 10 years and over 45 and white males not under 10.

GREAT BRITAIN. The House of Commons on Nov. 11, 1930, passed on its first reading a bill to make attendance in school compulsory up to the fifteenth birthday. A final vote was not reached by the end of the year. The act provided for the spending by the government of \$18,500,000 a year as maintenance grants for parents whose children

are to be kept in school the additional year. The law heretofore had fixed the compulsory school attendance age up to the fourteenth birthday. See **FOOD AND NUTRITION.**

CHILE, che'la, or chil'l. A South American republic, occupying the Pacific coastal region from Peru to the southernmost point of the continent. Capital, Santiago.

AREA AND POPULATION. With the extreme length of 2628 miles and an average width of 177 miles, Chile had a total area of 290,195 square miles, after the Tacna-Arica boundary adjustment of 1929. The population was 3,753,799 at the census of 1920 and was estimated at 4,364,395 on June 1, 1929. With the exception of several hundred thousand nomadic Fuegians, civilized Changos, and Araucans, the people are largely of European descent. In 1929 the birth rate per 1000 of population was 47.9 (52.2 in 1928); the death rate, 25.1 (23.7); and the marriage rate, 9.6 (11.1). The excess of immigrants over emigrants was 4177, as compared with 728 in 1928. Santiago in 1929 had about 739,492 inhabitants (507,296 in 1920) and Valparaiso, 286,947 (182,422 in 1920). Other towns, with their 1920 populations, are: Concepción, 64,074; Iquique, 37,421; Talca, 36,079; Chillan, 30,881; Antofagasta, 51,531; and Viña del Mar, 35,441.

EDUCATION. Primary education is compulsory for children between the ages of 7 and 15 and children under 16 years of age cannot be employed unless their school requirements have been met, under a law which became effective in December, 1929. The educational system was completely reorganized during the years 1928-30, some 600 modern primary schools were constructed, and intensive adult education reduced illiteracy from 60 to 20 per cent. The enrollment in the 3629 state primary schools in 1929 was 434,124; in 1928 there were 474 private primary schools, with 57,442 pupils. The State University of Chile had 2700 students (1928). A Catholic University, two industrial universities, and various lyceums and colleges are maintained.

PRODUCTION. Chile is divided into three economic zones, the northern mineral regions, the central agricultural area, and the southern pastoral and lumbering zone. While agriculture and stock raising are the main supports of the population, the mining industry furnishes nearly 90 per cent of all Chilean exports as well as funds for most of the imports. Manufacturing is important in the central and southern areas. The Chilean Statistical Bureau estimated the total value of mining production in 1927 at 1,256,300,000 pesos; of agricultural production, 1,115,000,000 pesos, and of the value added in manufacturing processes, 650,000,000 pesos. In 1930, the economic organization of the nation was being profoundly modified as a result of the trend toward consolidation of the mining industry, the growth of manufactures, and the problems created by surplus agricultural yields during the preceding three years.

Chile's annual mineral output is valued at two-thirds that of the entire mineral production of the continent. Huge nitrate deposits in the rainless northern provinces, estimated at over 3,000,000,000 tons, constitute the most valuable mineral resource. Between 1880 and 1930 the Government collected approximately \$1,000,000,000 on nitrate export duties. In the latter year the industry represented an investment of about \$175,000,000 and employed 65,000 persons.

After 1926 the nitrate industry faced increasing difficulties, due to the development in Europe and the United States of synthetic processes for the manufacture of nitrogen. In 1929, the 69 Chilean nitrate plants produced 3,237,594 metric tons, as compared with 3,164,800 tons in 1928, an increase of 2.3 per cent. Exports, however, increased by only 0.3 per cent, while total world stocks increased by 23 per cent. A severe crisis in the industry early in 1930 resulted in the Government's intervening with a programme of rationalization.

The principal metals mined are copper (in the production of which Chile ranks second), gold, silver, cobalt, iron, and manganese. Iron-ore deposits are estimated at over 1,000,000,000 tons. Coal, borate, salt, sulphur, and guano are other products. The iodine output constitutes about 80 per cent of the world's supply. Production of the principal minerals in 1929, with comparative figures for 1928 in parentheses, was as follows: Iodine, 1387 metric tons (994.5); copper bar, 303,200 tons (274,900); coal, 1,506,400 tons (1,375,600); nitrate of soda, 3,238,000 metric tons (3,163,000).

Of approximately 95,000,000 acres of arable land, only a small proportion is cultivated, including 2,500,000 acres under artificial irrigation. About 1,750,000 acres are devoted to barley, wheat, and oats. In 1929, the wheat crop totaled 808,000 metric tons; potatoes, 434,000 metric tons; alfalfa (1928), 398,000 metric tons. Fruits, grapes, vegetables, and tobacco are extensively grown, the estimated wine production in 1927-28 being 76,463,877 gallons. At the beginning of 1926, livestock comprised 4,092,872 sheep, 1,918,433 cattle, 323,581 horses, and 246,636 swine. Manufacturing establishments in 1927 numbered 9093, as against 7068 in 1925. In the latter year, 89,278 persons were employed in factories, with wages and salaries of 215,149,351 pesos. British investments in Chile in 1929 were estimated at £97,000,000 (about \$485,000,000) and American investments in 1930 at a total of about \$442,600,000.

Favorable conditions characterizing most branches of industry, commerce, and agriculture in 1929 gave way in 1930 to a depression caused by lower world prices for leading farm and mineral products. Workers released through the curtailment of nitrate and copper production were only partially absorbed by agriculture and the government's public works programme. Manufacturers reduced production, the farmers besought Government aid, and the Government was forced to curtail its public-works projects somewhat and to reduce the wages of the state employees.

COMMERCE. Chile's total foreign trade in 1929 amounted to \$468,000,000, of which \$167,370,000 represented the share of the United States. Exports were valued at \$275,305,000 (\$238,659,000 in 1928) and imports at \$193,102,000 (\$145,804,000 in 1928). The favorable balance of trade in 1929 was \$82,203,000, as compared with \$92,855,000 in 1928. In 1930 the value of exports suffered a precipitate drop, the balance of trade for the first six months being unfavorable by \$2,430,000, as against a favorable balance of \$56,812,400 during the same period of 1929.

Nitrate exports in 1929 were valued at \$114,872,000, or 42 per cent of the total; copper exports were \$105,489,000, or 38 per cent; iodine, \$9,459,000, or 3.5 per cent; wool, \$8,886,000;

meat, \$2,553,000; hides and skins, \$1,723,000; and iron ore, \$1,841,000. Coal and agricultural products comprise the remaining exports. Leading imports in 1929, in order of value, were textiles, automobiles, sacks, cattle, crude petroleum, sugar, iron and steel sheets, automobile chassis, cement, benzine, and foodstuffs. The United States furnished 33.9 per cent of the imports (30.7 in 1928); United Kingdom, 18.1 per cent (17.7); Germany, 16 per cent (13.9), and France, 5 per cent (4.8). Mineral exports in 1929 increased by 20 per cent over 1928, while among the imports, metallurgical products showed a 53.3 per cent increase, machinery and tools, 64.6 per cent; automobiles, 84 per cent; and cement, 143 per cent.

FINANCE. In the ordinary budget for 1930, adopted by Congress late in 1929, revenues were calculated at 1,214,650,000 pesos and expenditures at 1,159,323,798 pesos, respectively, the estimated accumulated surplus being 55,326,202 pesos. The 1930 extraordinary budget authorized total expenditures of 390,797,575 pesos, 250,000,000 pesos of which were to be borrowed. In May, 1930, however, the President announced the reduction of budgeted expenditures by 50,000,000 pesos "as a measure of foresight in the face of the economic crisis." The ordinary budget for 1931, as submitted to Congress Nov. 6, 1930, called for expenditures of 1,039,448,159 pesos (about \$124,734,000) and estimated receipts at 1,039,617,387 pesos (\$124,754,000). The extraordinary budget for 1931 totaled about 275,000,000 pesos, largely for public works to be financed by loans. The year 1930 ended with a surplus of about 2,500,000 pesos.

Ordinary revenues and expenditures during 1929 totaled 1,267,556,419 pesos and 1,189,934,016 pesos, respectively, leaving a surplus of 77,622,403 pesos, as against an anticipated surplus of 51,687,500 pesos. The surplus included 34,006,015 pesos carried over from 1928, while the expenditures included 15,406,000 pesos set aside for the purchase of state bonds with which to create an emergency fund. Extraordinary expenditures, mainly for public improvements, totaled 406,161,655 pesos, as against net revenues from loans and bankers' advances of 343,182,897 pesos and some 37,949,451 pesos carried over from 1928. The deficit of 25,029,307 pesos was met out of ordinary revenues.

On Dec. 31, 1929, the total direct state debt stood at 2,688,133,570 pesos, an increase of 202,740,128 pesos during the year, while the total indirect debt amounted to 1,132,842,818 pesos, an increase of 108,631,580 pesos during the year. The monetary unit is the peso, which was stabilized at \$0.1217 in 1925; the average exchange value in 1929 was \$0.1206.

COMMUNICATIONS. Railway lines in operation in 1930 totaled 6831 miles, of which nearly 70 per cent were state owned, 22 per cent British owned, and the remainder represented American investment. A railway construction programme inaugurated in 1928 called for the completion of 559 additional miles of track within six years at a cost of \$22,143,000. A three and one-half mile tunnel connecting Chile and Argentina via the Lonquimay Valley was to be finished by 1932 at a cost of over \$2,400,000. Passengers carried by all railways in 1929 numbered 918,000,000 (945,500,000 in 1928) and freight, 1,681,000,000 tons (1,511,400,000 tons in 1928). The state railways (1929) carried 842,500,000 passengers and

hauled a total of 1,056,600,000 tons of freight.

The total length of the Chilean highway system in 1930 was 24,800 miles, of which 13,286 miles were first-class roads, and 11,075 miles second class. A highway programme adopted in 1928 called for 4352 additional miles of modern roadway by 1935. Direct radio-telegraphic service between Chile and the United States was opened Feb. 3, 1930, and on May 3 and 11, respectively, radio-telephone service with the United States and with Spain was inaugurated.

The net tonnage of vessels in the foreign trade entering and clearing Chilean ports in 1929 was 3,438,000, and of those in the coastwise trade, 17,762,300.

GOVERNMENT. Under the Constitution of Oct. 18, 1925, executive power is vested in a president, assisted by a cabinet responsible to him, and legislative power in a national congress, consisting of a senate of 45 members, representing the nine provincial groups, and a chamber of deputies of 132 members, elected by departments. The President, who is elected for six years, is ineligible to succeed himself. President in 1930, General Carlos Ibañez del Campo, who assumed office July 21, 1927. A non-political cabinet, nominally headed by Minister of Interior Burmúdez, was appointed May 23, 1927, and reorganized Aug. 23, 1929.

HISTORY

POLITICAL DEVELOPMENTS. Despite advanced social legislation and the comparatively honest and efficient administration of President Ibañez, Chile in 1930 was not immune to the wave of revolutionary sentiment which overturned the governments in four neighboring states during the year. A revolutionary coup attempted by a number of prominent exiles at Concepción September 21 was foiled through quick action on the part of Gen. Victor Figueroa, Governor of the Province, and Gen. José María Barcelo, the military commander there. Subsequent agitation by students and political leaders caused the Government to take elaborate precautions against revolution, including the transfer of numerous army officers to other posts. A plot to blow up a bridge over which the President's train was scheduled to pass on December 9 was frustrated by the police and 15 alleged conspirators were arrested.

The uprising at Concepción was engineered by five Chileans who flew from Argentina in a plane piloted by two citizens of the United States. The leaders were Gen. Redrado Enrique Bravo and Col. Marmaduke Grove, both important officers in the Chilean army, who had been deported by President Ibañez. They were accompanied by three civilian exiles, Luis Salas Romo, Carlos Vicuña Fuentes, and Pedro Leon Ugalde. Romo was Minister of Justice under President Alessandri. Several army units were apparently pledged to the revolution and the Chacabuco regiment of infantry, garrisoned at Concepción, was reported to have revolted immediately upon the arrival of the airplane. The uprising was quelled, however by marines dispatched from the nearby naval base at Talcahuano, and the ringleaders were captured and imprisoned on the cruiser *Riveros* at the naval base. A rigorous censorship prevented the extent of the conspiracy from becoming known. It was announced in Santiago September 25 that 17 army officers were involved in the plot and had been relieved of their commands. Several

officers of the Chacabuco regiment were arrested, along with various civilians charged with complicity.

The trial in November of Senator José Maza, one of the arrested civilians, was marked by disorders on the part of students and political elements opposed to the government. On November 5 eight men, including Cornelio Saavedra, a former Cabinet Minister, were arrested for their alleged efforts to precipitate a revolution in connection with the trial.

President Ibañez in February assumed extraordinary executive powers for a period of six months, as a result of evidences of growing unrest. These powers expired on August 22. On September 28 it was announced that Congress would be dissolved and popular elections held under a new bill to be submitted to Congress by the President. The bill provided for the amendment of the Constitution so as to authorize the President to dissolve Congress whenever the interests of the country were held to require such action. In the meantime, student disorders at the University of Chile, growing out of the refusal to allow the establishment of a student council, caused the President to close the institution until April, 1931. An extraordinary session of Congress was convened November 17 to consider the suggested amendment to the Constitution, budget legislation, the establishment of a petroleum refinery, and upward revision of the tariff.

The assumption of extraordinary powers by the President in February was followed (February 24) by the resignation of Minister of the Interior Burmúdez and Minister of Justice Koch and later by the dissolution of the Cabinet. President Ibañez then summoned David Hermosillo, Mayor of Valparaíso, to form a new Ministry. The Cabinet functioned without an official premier, the Minister of the Interior being regarded as its nominal head.

OTHER EVENTS. The Department of Arica, administered by the Chilean Foreign Office for nearly 50 years pending settlement of the Tacna-Arica dispute in 1929, was incorporated in the Province of Tarapaca, effective May 1, 1930. One of the consequences of the Tacna-Arica settlement was the material reduction of the Chilean army. In 1930, a new law made the year of compulsory military service, formerly required of all male citizens reaching the age of 20, applicable to only 30 per cent of the male population of that age. Chile's growing influence was evidenced by the appointment of the first British Ambassador to Santiago. The Chilean representative at the Court of St. James's was raised to an equal rank.

Chile in 1930 had one of the world's most comprehensive social insurance systems. Over a million laborers, or 84 per cent of the calculated insurable labor population, as well as a large proportion of both public and private salaried employees were insured against old age, sickness, disability, and various other contingencies. Juan Luis Sanfuentes (q.v.), President of Chile during the years 1915 to 1920, died in Santiago, July 16, 1930. See EARTHQUAKES.

CHINA. A state of eastern Asia, established as a republic Feb. 2, 1912. Capital, under the Nationalist Government, Nanking. The name of Peking, the former capital, was changed to Peiping in 1929 by a Nationalist decree.

AREA AND POPULATION. China comprises 30 provinces, including three in Manchuria, and the dependencies of Mongolia, Sinkiang, and Tibet

over which it exercises nominal authority. It has an area of over 4,200,000 square miles, or nearly that of the United States and Mexico combined, and a population variously estimated from 442,000,000 to 485,000,000 or about one-fourth of the population of the earth. The 21 provinces of China proper embrace less than 1,900,000 square miles, but contain 435,000,000 of the population, while the remaining 2,300,000 square miles supports less than one-fortieth of the total inhabitants. The area and population by provinces and dependencies is shown in the accompanying table from the *Commerce Yearbook* for 1930. The table does not include the six new provinces created from former administrative districts in the north and west in 1929, as follows: Tsinghai (capital, Sining); Ningsia (Ningsiafu); Jehol (Chengtch); Suiyuan (Kweisu); Chaihar (Kalgan); and Sikang (Kangting). The population figures, however, are included in the grand total.

AREA AND POPULATION OF CHINA BY PROVINCES

| Province (capital) | Area square miles | Population, approximate, thousands |
|---|-------------------|------------------------------------|
| Anhui (Anking) | 54,826 | 19,833 |
| Chekiang (Hangchow) | 36,680 | 22,043 |
| Hopei (Peiping) | 115,830 | 34,187 |
| Liao-Ning (Mukden) | 56,000 | 13,800 |
| Fukien (Foochow) | 46,332 | 13,158 |
| Heilungkiang (Tsitsihar) | 203,000 | 2,500 |
| Honan (Kaifeng) | 67,954 | 30,832 |
| Hunan (Changsha) | 83,398 | 28,443 |
| Hupeh (Wuchang) | 71,428 | 27,167 |
| Kansu (Lanchow) | 125,483 | 5,928 |
| Kiangsi (Nanchang) | 69,498 | 24,467 |
| Kiangsu (Chinkiang) | 38,610 | 33,786 |
| Kirin (Kirin) | 105,000 | 7,500 |
| Kwangsi (Nanning) | 77,220 | 12,258 |
| Kwangtung (Canton) | 100,000 | 37,168 |
| Kweichow (Kweiyang) | 67,182 | 11,115 |
| Shansi (Taiyuan) | 81,853 | 11,081 |
| Shantung (Tsinan) | 55,984 | 30,803 |
| Shensi (Sian) | 75,290 | 9,466 |
| Szechwan (Chengtu) | 218,533 | 49,783 |
| Yunnan (Yunnanfu) | 146,714 | 9,839 |
| Total, China proper (approximate) | 1,897,000 | 435,000 |
| Sinkiang (Tihwa) | 550,000 | 2,500 |
| Mongolia (Urga) | 1,370,000 | 2,500 |
| Tibet (Lassa) | 465,000 | 1,500 |
| Grand total (approximate) ... | 4,300,000 | 442,000 |

As no general census has been taken, the above figures are but rough estimates. The Chinese Maritime Customs estimated the total population in 1928 at 451,842,000, inclusive of 19,290,000 in Manchuria, while the 1925 estimate of the Chinese Post Office was 485,508,838. Estimates for the chief cities show similar divergencies. Those prepared by the Chinese Post Office are: Shanghai district, 5,550,200; Shanghai (proper), 1,538,500; Foochow, 1,491,143; Canton, 1,367,680; Changsha, 1,271,903; Peiping (proper), 1,181,400; Peiping district, 4,014,619; Soochow, 1,027,091; Nanking, 902,441; Hong Kong, 874,420; Tientsin, 838,629; Mukden, 773,846; Hangchow, 729,948; Chungking, 716,585; Tsinan, 621,039; Wuchang, 597,907; Hankow (1930 census), 550,169. About 80 per cent of the total population of China are laborers or farmers. Chinese immigrating to British Malaya in 1929 numbered 293,167. Chinese abroad (1928) totaled about 6,246,682.

Foreigners in China in 1928 were estimated by the Customs authorities at 349,735, including 239,180 Japanese, 77,891 Russians, 12,383 British,

6023 Americans, 3026 Germans, and 2584 French. The Chinese press in 1930 estimated the foreign populations of Shanghai as follows: Japanese, 17,721; British, 6903; American, 3322; French, 1163; German, 1100; and Italian, 320. Effective Jan. 1, 1930, the Nationalist Government withdrew extra-territorial privileges of all foreigners in China.

Confucianism, Buddhism, and Taoism are the three indigenous religions, with Buddhism predominant. Mohammedans, found in every Province, are estimated at 20,000,000. In 1923, there were 2,208,800 native Roman Catholics, and in 1920, 618,601 native Protestants.

EDUCATION. The Nationalist government in 1930 continued its reorganization of the educational system on the French model wherever possible. There were nine government universities, and various private institutions of higher learning. The numerous Christian mission schools, colleges, and universities at Shanghai and other ports had about half a million students. Higher primary schools in 1923 numbered 10,236, with 582,579 pupils, and lower primary schools numbered 167,076, with 5,814,375 pupils.

PRODUCTION. China has an estimated area of 192,060 miles of arable land, divided into small holdings averaging about two acres and supporting directly about four-fifths of the population. Production is on a highly intensive basis, there being from two to four crops annually. The republic is the world's largest producer of rice, soy beans, tea, and tung oil, ranks second to Japan in the production of raw silk, and third or fourth in cotton and wheat. Wheat, barley, maize, millet, peas, and beans are chiefly cultivated in the north and sugar, rice, tea, and indigo in the south. Fruit and fibre crops are important. The estimated average annual production of the leading crops, with the percentage exported, is given by the *Commerce Yearbook* as follows: Wheat, 300,000,000 bushels, none; rice, 800,000,000 bushels, none; corn, 100,000,000 bushels, none; peanuts, 600,000 tons, 33 per cent; soy beans, 5,000,000 tons, 65 to 80 per cent; kaoliang, 200,000,000 bushels, 1 per cent; tea, 800,000,000 pounds, 15 per cent; tobacco, 500,000,000 pounds, 6 per cent; silk, 42,000,000 pounds, 48 per cent; cotton, 2,500,000 bales, 10 per cent. Pigs are raised everywhere and pig bristles are an important export.

Due to the occupation of great areas of virgin land in Manchuria by millions of Chinese settlers, the agricultural production of the country is rapidly expanding.

The process of industrialization is proceeding rapidly in the larger cities. The chief manufactures are cotton and woolen cloth, silk filatures, flour, iron products, and glass. There were (December, 1928) 120 cotton mills in China (43 Japanese-owned, 74 Chinese-owned, and 3 British-owned), with a total of 3,638,098 spindles and 29,788 looms. About 150 modern flour mills, 50 of them in Manchuria, were operated in 1925. Large iron works are located at Hanyang, near Hankow. Glass factories number about 400. Cigarette factories in Shanghai employed about 30,000 workers.

Coal deposits are widely scattered throughout China proper, the fields covering an area of 133,513 acres and the annual output totaling about 10,000,000 tons. There are large iron-ore deposits, production from which averages about 1,500,000 tons annually. Petroleum is being exploited on the Upper Yangtze and oil shale in South Manchuria

and Shansi Province. Copper and tin are mined in Yunnan, the tin output being about 10,000 tons annually. More than 60 per cent of the world's total production of antimony is supplied by China, which has a normal output of 25,000 tons. Gold, silver, lead, wolfram, molybdenum, bismuth, and salt are worked also. Salt production is estimated at 3,122,307 metric tons annually. See *AGRICULTURE* under *World Agriculture*.

COMMERCE. China's merchandise exports in 1929 totaled 1,015,687,000 Haikwan taels (\$650,040,000 at the average value of \$0.64 for the Haikwan tael for the year), as compared with 991,355,000 taels (\$634,476,000) in 1928, according to preliminary figures. Imports were valued at 1,281,321,000 taels (\$820,046,000), or 5.9 per cent in excess of the 1928 total of 1,195,969,000 taels (\$765,420,000). The import increase occurred in spite of higher customs duties and lower exchange rates. Exports of silver and gold, not included in the merchandise totals, amounted to 2,523,152,000 taels (\$1,614,817,000). The total trade for 1929, including junk trade (671,000 taels) and specie movements, amounted to 2,806,510,000 taels (\$1,796,166,000).

Business and commerce continued to suffer in 1929 from administrative complications, disruption of transportation, and internal disorder, but favorable crops in 1930 and the apparent termination of civil warfare induced optimism among Chinese business men. Japan continued as China's principal customer in 1929, taking 25.2 per cent of all Chinese exports (28 per cent in 1928) and furnishing 25.2 per cent of China's imports (27.8 in 1928). The remaining imports were supplied chiefly by the United States, 18 per cent (17 per cent in 1928); Hong Kong, 16.7 (20); Great Britain, 9.3 (9.5); Germany, 5.2 (4.6); Netherlands East Indies, 4.4 (4.4); India, 4.3 (4); and Belgium, 3.9 (1.4). After Japan, exports went principally to Hong Kong, which took 17.1 per cent in 1929 (18.4 per cent in 1928); the United States, 14 (13); Great Britain, 7.3 (6.2); Soviet Russia, 5.5 (9); France 5.5 (7.3); and the Netherlands, 3.9 (2.4). Germany increased her total trade with China by about 20 per cent, and Canada by 134 per cent. Due to the fact that a portion of the United States trade with China passes through Japan and Hong Kong and is included in the trade figures for those countries, the above percentages do not indicate the actual relative position of America's trade. Leading imports in 1929 were cotton and cotton manufactures, foodstuffs, petroleum products, metals and manufacturers, machinery and electrical equipment, and tobacco and tobacco products. Exports were chiefly textiles and materials, beans and bean products, vegetable food products (exclusive of beans), animal food products, hides and skins, metals and minerals, undressed furs, and pig bristles.

FINANCE. The report of Finance Minister T. V. Soong for the fiscal year ended June 30, 1929, placed actual revenues at 434,000,000 Yuan dollars (1 Yuan dollar exchanged at \$0.4716 in 1929) and expenditures at some 514,000,000 dollars. The 80,000,000-dollar deficit was met by flotation of additional loans. In the budget estimates for 1928-29, revenues were calculated at 457,740,000 dollars and expenditures at 507,870,000 dollars, the estimated deficit being 50,130,000 dollars. Of the actual expenditures, some 209,000,000 dollars represented military outlays, 28,000,000 went for civil expenses of the government, and

the remainder was devoted to the service of loans. The military expense account did not include outlays in Manchuria or in 11 other Chinese provinces which maintained their own armies or in which civil war occurred during the year. Customs receipts for 1929 were reported at 152,760,000 Haikwan taels (1 Haikwan tael exchanged at approximately \$0.65 in 1929), as compared with 82,332,526 Haikwan taels in 1928. Salt revenue collected throughout the whole of China in 1929 was placed at 133,000,000 Mexican dollars, compared with 113,000,000 dollars in 1928 and 86,000,000 dollars in 1927. (One Mexican dollar exchanged at about \$.42 in 1929, \$.46 in 1928, and \$.45 in 1927.)

On Jan. 1, 1929, the public debt was reported at \$1,034,569,000, converted at par, of which \$166,580,000 represented internal loans, and \$867,989,000 external loans. An unofficial estimate fixed the total debt in October, 1929, at \$1,232,000,000 (gold), of which approximately \$545,000,000 was secured upon the Maritime Customs Revenue. Another estimate (see Arthur G. Coons, *The Foreign Public Debt of China*, University of Pennsylvania Press, 1930) placed the total at over \$1,000,000,000.

COMMUNICATIONS. Railways in operation at the beginning of 1928 had 8750 miles of line, of which 5555 miles were government railways, 2305 miles were concessioned lines, and 890 were operated by commercial and industrial concerns. About half of the total mileage was in Manchuria (see MANCHURIA). The report of government railways for 1925, issued in 1930, placed the gross revenues of the 4347 miles of line reporting at 124,565,253 silver dollars (equivalent to about \$0.57 each) and the operating expenses at 70,378,396 dollars, leaving net revenues of 54,168,864 dollars. Passengers carried during the year totaled 39,715,720 and freight, 27,718,185 long tons. Concessioned railways in 1927 carried 21,434 tons of freight.

The huge internal trade is carried on mainly by navigable rivers, canals, and numerous badly kept roads. Improvements on the road system were vigorously pushed by the Nationalist government in 1929 and 1930. The Changsha-Chengchow highway in Hunan Province was completed in May, 1930, cutting the travel time between Hankow and Canton from 18 to 7 days. Other considerable programmes were under way in Szechwan Province, where about 1400 miles of dirt motor roads were completed, and in Kwangtung, Yunnan, and Kiangsu Provinces.

A contract providing for the extension of the Shanghai-Hankow air-mail and passenger line to Chungking and Cheungtu in Szechwan Province and the addition of two new air-mail and passenger routes was signed between the Nationalist Minister of Communications and the Curtiss aviation interests of the United States in September, 1930. The new lines were to run from Nanking to Peiping via Tsinan and Tientsin, and from Shanghai to Canton along the coast line, with stops at Ningpo, Wenchow, Foochow, Amoy, and Swatow. There is a fairly well developed telegraph service, with 52,050 miles of line. Direct radio communication with San Francisco, Berlin, and Paris was opened in October, 1930, with the completion of a government radio transmitting station near Shanghai. Telephones are in use in the principal cities. On June 27, 1930, the International Telephone and Telegraph Corporation took over the Shanghai Mutual Telephone Company operating in the International and French Settlements of

that city. The system included 36,219 phones and was connected with the government lines in the native section of Shanghai and points in the Yangtze Valley as far as Nanking. The transfer was consummated in the face of protests by the Chinese Ministry of Communications.

During 1928, a total of 186,851 vessels of 152,630,001 tons entered and cleared Chinese ports, including 141,106 steamers of 148,200,000 tons and 45,745 Chinese junks, of 4,360,000 tons. Of the foreign shipping, 48,523 vessels of 56,030,567 tons were British, 29,839 of 39,065,724 tons were Japanese, and 6377 of 6,364,102 tons were American.

GOVERNMENT. The "Organic Law of the Nationalist government of the Republic China" was promulgated Oct. 4, 1928, by the Executive Committee of the Kuomintang party, which exercises all political power and which assumed control and supervision of the new system of government. The law provided for the establishment of a state council as the highest unit of the National government, composed of from 12 to 16 members, from whom the presidents and vice presidents of five subordinate Yuan, or branches of the government, are selected. The chairman of the State Council is designated head of the government for purposes of representation, with the duties of Commander-in-Chief of the army and navy. The five Yuan (branches) of the government are the Executive, Legislative, Judicial, Examination, and Control Yuan. The Executive Yuan is assisted in the executive work of the government by 10 ministries and 4 boards. The Legislative Yuan, which is the highest legislative organ, consists of between 49 and 99 members appointed by the National government at the instance of the President of the Yuan. The system is to function only during the period of "political tutelage" of the Chinese people, which is limited to six years.

The Chairman of the State Council in 1930 was Gen. Chiang Kai-shek. Other members at the beginning of the year were T'an Yèn-k'ai, Hu Han-min, Ts'ai Yuan-p'ei, Tai Chi-t'ao, Wang Ch'ung-hui, Sun Fo, Ch'ên Kuo-fu, Ho Ying-ch'ên, Yang Shu-chuang, Lin Sên, Yen Hsi-shan, Chang Hsüeh-liang, Chang Chi, and Chao Tai-wên. Chairman of the five Yuan were: Executive, T'an Yèn-k'ai; Legislative, Hu Han-min; Judicial, Wang Ch'ung-hui; Examination, Tai Chi-t'ao; and Control, Chao Tai-wên. The Ministers functioning under the Executive Council at the beginning of 1930 were Foreign Affairs, C. T. Wang; Finance, T. V. Soong; War, Ho Ying-ching; Agriculture and Mines, Yi Fei-chi; Labor and Industries, Dr. H. H. Kung; Education, Chiang Meng-ling; Interior, Yen Hsi-shan; Railways, Sun Fo; Communications, Wang Po-chun; Health, Hsueh Tuh-pi.

HISTORY

The Nationalist (Nanking) government, headed by President Chiang Kai-shek, emerged victorious in 1930 from the most sanguinary civil war since the Boxer Rebellion. It was the ninth separate rebellion or mutiny against Nanking's authority since Chinese unity was proclaimed in June, 1928. The struggle left the Nanking régime in desperate financial straits and badly disrupted commerce and business. The outcome held forth greater promise than formerly, however, for the eventual establishment of real national unity. Meanwhile there was steady progress in freeing China of foreign restraints upon its sovereignty

Definite aid extended the Nationalist government by Japan seemed to evidence a growing rapprochement between the two Far Eastern powers, and relations with Soviet Russia, while by no means friendly, failed to reach the breaking point, as in 1929.

THE CIVIL WAR. The Nanking régime found itself at the beginning of 1930 with its prestige badly shaken by the events of 1929. President Chiang Kai-shek had narrowly averted a crushing military disaster. He had been shorn of all except nominal authority in Manchuria and north China, where Chang Hsüeh-liang, governor of Manchuria, Yen Hsi-shan, so-called "model governor" of Shansi Province, and Marshal Feng Yu-hsiang, the "Christian general," ruled as virtually independent war lords. A thinly-veiled understanding between Yen and Feng threatened an attack by their combined forces at the first favorable opportunity. There were serious defections from Chiang's supporters of the Right Wing of the Kuomintang, or Nationalist party, to the communistically-inclined Left Wing headed by Wang Ching-wei. Still other factors presaged the renewal of civil war—personal hostility toward Chiang Kai-shek by numerous military leaders, the traditional antagonism between north and south China, resentment in Peiping (Peking) at the removal of the capital to Nanking, and efforts of the Nanking government to consolidate its control of China through further political centralization and the disbandment of the personal armies of various war lords.

In February the radical General Chang Fa-kwei's "Ironsides" joined with the Kwangsi rebels under Pei Tsung-chi and launched an offensive against government forces defending Canton. In the same month General Shih Yu-shan led a rebellion against Nationalist authority in eastern Honan. These were minor threats, with which General Chiang Kai-shek was well able to cope.

A more portentous development came in the middle of February in the form of a telegram from Yen Hsi-shan urging Chiang Kai-shek to resign as President of China and generalissimo of the Nationalist forces and retire from politics. Yen promised that, if Chiang agreed, he would do the same. The Nanking leader declined and commenced energetic preparations to defend the capital against a northern attack. As Yen had, outwardly at least, previously maintained a neutral attitude toward Chiang, his telegram had the effect of openly aligning the whole of north China against the Nationalist general.

During March and April the nominal authority of the Nanking government in north China was completely eliminated. Local authorities, acting under orders from Yen Hsi-shan, took over the various offices and administrative bureaus maintained by the Central government in Peiping (Peking). On April 2, Yen announced that he had been chosen to head a military coalition against Nanking. He denounced Chiang Kai-shek as a dictator and the Nanking government as corrupt and too weak to rid the provinces of banditry. Two days later the Nanking State Council approved a mandate for "the arrest and subjugation" of the Shansi governor. The latter, on April 14, ordered that all customs revenue at Tientsin, except that assigned by the Nanking government to cover the foreign and domestic debt, be retained for his use.

The outbreak of hostilities on a large scale was delayed for more than a month, while both sides

angled for the support of Chang Hsüeh-liang. Apparently assured at last of the Manchurian's neutrality, the Northern alliance launched its major offensive on May 8, attacking Nationalist forces on three fronts in Kiangsu and western Shantung Provinces. The civil war thus inaugurated continued on a scale unprecedented for China through the summer. While the Northern forces considerably outnumbered those led by General Chiang Kai-shek, the latter held obvious advantages. His troops were better trained and equipped, particularly in airplanes, and his staff officers included 46 German veterans of the World War. He held control of the rich revenues of the Yangtze valley, and above all, he enjoyed the support of the Chinese trading and banking classes, who strongly desired the elimination of the rival war lords, so long a menace to their safety and prosperity.

The Northern generals, with their allies in south China, gained important victories during the early stages of the campaign. While Gen. Chiang Kai-shek was straining every resource to check the northern advance along the Peking-Hankow Railway in Honan Province and the Lunghai Railway, Gen. Chang Fa-kwei and his allies advanced from the south and on May 31 captured Changsha, capital of Hunan. A few days later Yochow, also in Hunan, capitulated to the southerners and the important cities of the Hankow area were threatened. To meet this situation, Chiang weakened his northern defenses and dispatched troops to Hankow, while his allies in Canton rushed reinforcement northward from the Shiuchow railroad in Kwangtung Province. Chang Fa-kwei and the Kwangsi rebels were driven from Yochow and Changsha in the middle of June. Their retreat southward blocked by the Cantonese, they were caught and decisively defeated in a three-day battle near Hengchow, Hunan, in the first days of July.

This victory, freeing 50,000 Nationalist troops for use on the hard-pressed northern fronts, came in the nick of time. For on June 28, Yen Hsi-shan drove the Nationalists from Tsinan, capital of Shantung Province, and pushed south and eastward toward the Yangtze and the sea, while on the Lunghai front in northern Honan the greatest battle of the war had been raging indecisively for more than a week. Almost simultaneously with the defeat of the Kwangsi rebels in Hunan, the Nationalists gained the advantage in the Lunghai battle, in which 300,000 troops were engaged over a 46-mile front. Feng Yu-hsiang's advance was checked and his Kuomintang armies were rolled back some distance toward the Yellow River.

Moving all available forces to the northern fronts, General Chiang launched a major offensive intended to recapture Tsinan and decisively defeat Marshal Feng. Feng counter-attacked to divert Nationalist troops from their Tsinan objective and the Lunghai battle was resumed on an extensive scale, only to end in a stalemate toward the middle of July. General Chiang made gradual progress in his campaign against Yen Hsi-shan and on August 15 recaptured Tsinan, thus insuring Nanking's control of central and southern Shantung and ending the Northern generals' effort to capture Hsuehchow, the strategic rail connection of the Tientsin-Pukow and Lunghai lines north of Nanking.

Meanwhile the concentration of Nationalist troops in the north gave free reign south of the Yangtze to hordes of bandits and peasants in-

flamed by Communist propaganda, who ravaged whole provinces at will, driving out the Nationalist authorities and in many instances establishing local governments on the Soviet model. The peasant revolt was directed mainly against the landlords, who were killed or driven out and their title deeds destroyed. Changsha fell again on July 28 before the assault of so-called Communists armies, who slaughtered hundreds of inhabitants, burned a large part of the city, and looted on an extensive scale. Refugees poured into Hankow and other Yangtze ports and foreigners were evacuated from a wide area in the interior. The "Red" armies were driven back from Hankow without difficulty, while government authorities there and in other cities of the disturbed area executed hundreds of persons suspected of planning Communist uprisings. Changsha was recaptured by Nationalist troops August 5, but the depredations of bandit and "Red" bands continued virtually unchecked in many of the central and western provinces. In Fnkien Province bandits murdered two British missionaries, Miss Edith Nettleton and Miss Eleanor Harrison, after holding them for ransom. About 22 other missionaries were captured and their missions and schools looted or destroyed, foreign ships on the upper Yangtze were fired upon, and the activities of pirates along the coast made commerce more than usually perilous. One American sailor was killed and a number were wounded during encounters between gunboats and anti-foreign forces along the Yangtze.

Another development threatening Chiang Kai-shek's position was Wang Ching-wei's decision, late in June, to accept the invitation of the Northern generals to aid in the establishment in Peiping of a rival national government to that at Nanking. As head of the "reorganization group," or Left Wing of the Kuomintang party, Wang Ching-wei was credited with having the support of students and local Kuomintang organs throughout the country. The Northern generals promised that the personnel of the new government would be chosen at a convocation of a People's Conference of all shades of political opinion—an item in Sun Yat-sen's programme which Chiang Kai-shek had ignored. Dissension among the disaffected Kuomintang groups and the northern generals delayed the formation of the new government until September 1, when a governmental framework similar to that of Nanking was established, with Yen Hsi-shan as chairman of the State Council.

The Peiping government was scarcely established before it was wrecked by the intervention of Chang Hsueh-liang in the civil war. On September 1 the Manchurian leader notified Nanking, in accordance with that government's rules of procedure, that his troops were occupying the territory around Peiping and Tientsin. On September 19 he issued a circular telegram demanding an immediate armistice and a conference to arrange a peaceful settlement. Manchurian forces occupied Tientsin September 21 and two days later assumed control of Peiping, apparently by arrangement with Yen Hsi-shan. The latter, with Wang Ching-wei and other members of the newly organized Peiping government, withdrew to General Yen's home province of Shansi.

The intervention of General Chang Hsueh-liang, while ostensibly in aid of neither side, redounded to the immediate advantage of Nanking. Chang announced that he would direct the mili-

tary affairs of Hopei (Chihli) Province and of adjacent territory occupied by his troops, but that civil affairs would be handled from Nanking. The Nanking government, in turn, appointed Chang "rehabilitation commissioner for the North," paying him \$3,000,000 to defray costs of the occupation of Chihli. With General Yen's armies out of the struggle, Chiang Kai-shek concentrated his forces against Gen. Feng Yu-hsiang in the northwest and by capturing Chengchow and Loyang early in October drove Feng's broken armies in pell-mell retreat toward Shensi Province. On October 9, Marshal Chang Hsueh-liang took the oath of vice commander of the army and navy in Nanking's forces, and General Chiang Kai-shek announced that the complete restoration of peace was assured.

As in the military crisis of 1929, General Chiang's tenacity and resourcefulness had triumphed over seemingly insurmountable obstacles. He emerged from the civil war with greatly increased prestige. But while he had overthrown his two most formidable rivals, a third had arisen in the person of Chang Hsueh-liang. With the best equipped army and the undepleted military and economic resources of Manchuria at his back, and with control of north China to the Yellow River, the young marshal wielded a power hardly second to that of Nanking. On what disposition he would make of it depended all hope of an early establishment of a truly national government for China.

Continued additions to Marshal Chang's troops in the Peiping and Tientsin areas and their occupation of strategic points created much uneasiness in Nanking, despite Chang's announced intention of cooperating with General Chiang Kai-shek. The Nanking leader met this threat by sending large forces into Shensi and Kansu Provinces, where they were in a position not only to prevent the reorganization of Feng Yu-hsiang's broken Kuominchun armies but also to render Shansi Province untenable in case of a clash between Nanking and Mukden. Other Nanking armies crossed the Yellow River to within striking distance of Shihchiachuang, the railway junction for roads leading to Peiping and Shansi Province.

At this juncture, Marshal Chang set fears of the renewal of civil war at rest by visiting Nanking and concluding an agreement with General Chiang Kai-shek (November 20). It was reported that Chang was recognized as the virtually autonomous ruler of Chihli, and other Provinces north of the Yellow River, with control of the railway revenues in that area and a free hand in the settlement of the dispute with Russia over the Chinese Eastern Railway. In return, he promised to drive the remnants of General Yen Hsi-shan's armies from Shansi. This news was followed by the announcement that 26 generals who had fought under Feng and Yen had pledged their allegiance to Nanking. On November 24, it was officially announced that 40 German military advisers of the Nanking government would go to Mukden to reorganize the arsenal there and that the office of the Nanking Vice Minister of War would be moved to Peiping. With the conclusion of the agreement between the two most powerful leaders in China, Wang Ching-wei left Peiping for Japan and General Yen was reported as leaving for a sojourn abroad.

Nanking's offensive against the Communist hordes ravaging large sections of the Yangtze

Valley got under way early in November, but no great headway appeared to have been made by the end of the year. On November 14, the capture of Kianfu, Kiangsi Province, by a Communist army numbering 30,000 was reported and a few days later the danger of a new Communist attack on Changsha caused many Chinese merchants to flee the city. Racial and religious strife between Moslems and Chinese in Kansu Province in December was reported to have cost the lives of some 30,000 Chinese and many Moslems. On December 29, the Nanking government ordered the dispatch of a military expedition against the Moslems.

While China was again torn by civil war and banditry on an unprecedented scale spread throughout the country, the famine, which during 1929 took a toll of more than 2,000,000 lives in the western provinces of Shansi and Shensi, continued its ravages. It was estimated that 7,000,000 persons died of starvation in north China during 1929 and previous to the harvest of 1930. Missionaries and investigators reported that cannibalism was widespread throughout the famine-stricken area. Banditry and the complete breakdown of transportation hindered relief work.

GOVERNMENTAL REORGANIZATION. With his war-worn troops enroute to south China to suppress bandit and Communist activities, President Chiang Kai-shek took steps to liberalize the Nationalist government, in accordance with a promise made late in 1929 and with the demands voiced in Chang Hsüeh-liang's peace circular of September 19. He addressed a manifesto to the people (on October 12) outlining five main features of the government's immediate programme as follows: (1) eradication of Communism and banditry; (2) rehabilitation of the national finances and their administration; (3) eradication of corruption and lethargy from the government; (4) economic development, which he considered necessitated the participation of foreign capital on "honorable terms"; (5) enforcement of district autonomy through a system of education and self-government by local units. The President's proposals, involving the promulgation of a new Constitution, immediately aroused opposition from Hu Han-min, chairman of the Legislative Yuan, and a conservative group of Kuomintang leaders. With T. V. Soong, the brilliant Finance Minister, and other influential liberals in the party supporting Chiang, a second split in the Kuomintang ranks threatened. On October 14, Soong, who was serving also as acting chairman of the Executive Yuan following the death of T'an Yën-k'ai, submitted his resignation, declaring he would no longer assume responsibility for financing the government unless given absolute control of the expenditure and allotment of funds. He was persuaded to continue his invaluable services to the Nationalist régime, his budget measures having been adopted at the plenary session of the Kuomintang party held in November.

The Kuomintang at the same time voted to suppress banditry and Communism within six months, to suppress the opium evil by the beginning of 1934, and to abolish likin (taxes on goods transported) in all Provinces on Jan. 1, 1931. A plan for the disbandment of surplus troops was also adopted, and the ancient system of holding villagers collectively responsible for the crimes of any one of their number was again proclaimed in force. A general amnesty for all political prisoners, except Communists and outstanding in-

surgent leaders, was to be issued Jan. 1, 1931. To end corruption, a law was enacted authorizing the State Council to sentence to life imprisonment or death any public official guilty of embezzlement or of receiving bribes. Increasing dissatisfaction with the pernicious activities of local Kuomintang organizations was voiced in the official report of the proceedings at the plenary session.

SINO-RUSSIAN RELATIONS. The terms of the Khabarovsk protocol of December, 1929, settling the immediate dispute over the Chinese Eastern Railway (see 1929 YEAR BOOK) was approved by Nanking after some months of delay. Soviet authorities were restored to joint supervision of the line, pending a final settlement of the dispute at the conference scheduled to open in Moscow, Mar. 15, 1930. The Chinese delegates, who apparently took their orders from Chang Hsüeh-liang in Harbin rather than from Nanking, did not reach Moscow until May 15 and then delayed the opening of the conference until October 11. The delay was undoubtedly inspired by a desire to await the outcome of the Chinese civil war. In the interval the activities of Russian White Guard elements in Manchuria led the Soviet press to charge that Chang Hsüeh-liang was encouraging White Guard forays into Soviet territory and the coercion of Soviet employees on the Chinese Eastern Railway. A sharp Russian note demanding suppression of White Guard bands in Manchuria was delivered to Chang shortly after the pick of his troops had been sent to occupy the northern provinces of China. Whereupon the Chinese delegates were reported to have suggested the immediate opening of the conference. The negotiations resulted in a deadlock before the end of the month and the renewal of armed demonstrations by Chinese and Russian forces along the Siberian-Manchurian border was reported.

OTHER DEVELOPMENTS. Other developments of the year included the return of Weihaiwei to China on October 1 in accordance with an agreement signed by the British Minister to Nanking on April 19. The harbor of Weihaiwei was leased to Great Britain on July 1, 1898, to be held so long as Russia occupied Port Arthur on the opposite coast. Following the capture of Port Arthur by the Japanese the lease was made to run as long as the Japanese remained in control. For some years Weihaiwei had been used mainly as a health station for British sailors in Far Eastern waters.

Reorganization of the Shanghai Provisional Court in deference to Chinese demands for greater control of the court was provided for by an agreement signed February 17 by representatives of the United States, Brazil, Great Britain, France, Holland, and Norway. The deputy judge system, under which foreign consular officers were permitted to intervene in all cases, was abolished, and Chinese law was made mandatory in disposing of all matters before the court.

An evidence of improved relations with Japan was seen in the signing of a Sino-Japanese tariff treaty at Nanking on March 12. It was reported that the treaty provided for the recognition by Japan of China's tariff independence, the abolition of likin and other irregular internal Chinese taxes, the approval by China of the famous Nishihara loans of 1918 and 1919, and reciprocal most-favored-nation treatment. The abolition of the likin, formally announced for October 10, was ordered postponed to Jan. 1, 1931, due to the Nanking government's acute need for funds. The

Nanking government on Dec. 29, 1930, promulgated new and higher tariff schedules to go into effect Jan. 1, 1931. The tariff increases were effected under an agreement for the extension of tariff autonomy to China, contingent upon the abolition of the likin, reached by the Powers in 1925. On Dec. 4, 1930, the Japanese government rejected a request for the return of Japan's Han-kow concession to China.

The adoption of the Christian religion by General Chiang Kai-shek, announced in Shanghai October 23, aroused hopes among Christian missionary circles that there would be a relaxation of the restrictive legislation affecting mission schools and churches in that part of China under Nationalist control. The Nanking leader, whose wife Mei Ling Soong was an American-educated Christian, was baptized by a Chinese pastor of the Methodist Church.

The State Department at Washington announced November 13 that it had submitted proposals for the gradual relinquishment of extra-territoriality in China. These proposals, it was stated, were similar to but not identical with the proposals made to the Chinese government by the British government on Sept. 11, 1930. Return to China of the British share of the Boxer indemnity as from Dec. 1, 1922, was agreed upon in an exchange of notes between the two governments on Sept. 19 and 22, 1930. The remitted funds were to be used to create an educational endowment through investment in Chinese railway construction projects. The Chinese government agreed to purchase materials used in connection with the expenditure of the funds in the United Kingdom.

The report of the Kemmerer Financial Commission, which concluded in December, 1929, a survey of the financial system undertaken at the request of the Nanking government, was published by the Ministry of Finance on March 29. Among its recommendations were the reorganization of the currency on a gold basis and reorganization of the Central Bank with exclusive power to issue paper notes, establishment of a gold standard trust representing at least 35 per cent of the value of coins in circulation, and administration of the fund by the Minister of Finance under supervision of representatives of three Shanghai bankers' associations. It was suggested that no actual minting of new gold coins take place and that the currency be maintained at parity by means of unlimited drafts on gold standard countries, with New York and London at the principal centres. At the end of 1930, \$424 in Chinese silver currency was worth only \$100 in gold.

The financial crisis caused by the drop in the value of silver induced Minister of Finance T. V. Soong to order the collection of import duties on a gold basis beginning with February 1. A new gold unit equivalent to \$0.40 replaced the haikwan (customs) tael. The silver decline caused distress throughout the country, resulting in the failure of a number of banks in Peiping. While the political developments of the year attracted the greater attention, a no less significant revolution in the social and economic life of the nation was taking place. Factors motivating this change were primarily the replacement of small workshops by large factories, the substitution of handicraft by machine technique, and the rise of a class of wage earners in place of the independent craftsmen. External evidences of the economic

revolution were the rise of a labor movement, increasing resort to strikes and lockouts, the growing demand for the alleviation of the evils of child and female labor, and the incorporation of labor legislation as an integral part of the government's social policy.

BIBLIOGRAPHY. Among the more authoritative recent works on China are: Arthur N. Holcombe, *The Chinese Revolution* (Cambridge, 1930); R. Y. Lo, *China's Revolution from the Inside* (New York, 1930); No Yong Park, *Making a New China* (Boston, 1929).

CHISHOLM, chí'z'om, GEORGE GOUDIE. A Scottish geographer, died in Edinburgh, Feb. 12, 1930. He was born May 1, 1850, and was educated at the University of Edinburgh. From 1895 to 1908, he was a university extension lecturer in London, after which, until 1921, he lectured in geography at the University of Edinburgh and, in 1921-23, was a reader in geography. He was also secretary of the Royal Scottish Geographical Society during 1910-25. Dr. Chisholm was a fellow of the Royal Society of Edinburgh and had been awarded the Gill Memorial by the Royal Geographical Society (1903), the silver medal by the Royal Scottish Geographical Society (1908), the Charles P. Daly Gold Medal by the American Geographical Society of New York (1917), and the Helen Culver Gold Medal by the Geographic Society of Chicago (1918). In addition to articles written for geographical journals and books of reference, he published *Handbook of Commercial Geography* (1st ed., 1889; 11th ed., 1928; Arabic trans, 1911). He was editor of Longman's *Gazetteer of the World*, first appearing in 1895 and thereafter often reissued.

CHOSEN. See KOREA.

CHRISTENSEN, JENS CHRISTIAN. A Danish statesman, died in West Jutland, Dec. 19, 1930. He was born near Ringkjøbing, Nov. 21, 1856. In 1890 he became leader of the Reform party, and in 1905 was a member of Denmark's first Liberal-Left Cabinet. He conducted negotiations with Germany in 1906 for the return of north Schleswig, and two years later, as Premier and Minister of Defense, inaugurated certain tariff and election reforms and defensive measures. He later served as a member of the Zahle Cabinet (1916-18) and of the Neergaard Cabinet (1920-22).

CHRISTIAN CHURCH. A Church originating in three religious movements: that of the Rev. James O'Kelly of Virginia, who in 1792 withdrew from the Methodist Episcopal Church; that of Abner Jones, who withdrawing from the Baptist denomination organized a separate church in Lyndon, Vt., in 1801; and that of a group of Kentucky Presbyterian ministers who formed a new denomination in 1804. These groups eventually united, all holding that minor differences in opinion should be subordinated to Christian Brotherhood. In 1929 the Christian Church had 1283 church organizations, 110,326 members, 1047 ministers, 1324 Sunday schools, 801 Christian Endeavor societies, and 307 women's societies. It sponsors home and foreign missions, educational work, publications, evangelism, Christian unity, social service and other general activities. Its home-mission work includes new Americans in the East, the lumber camps in Washington, Indians, mountaineers, and Negroes; its foreign field includes Japan, Porto Rico, South America, India, Africa, China.

The church has always made Christian union

one of its foundational principles. Several years ago through its commission on Christian Unity it proposed the rudiments of a plan looking toward the union of denominations in an overture to 22 denominations. The Congregational Church responded favorably. Conferences and negotiations followed between the two bodies which resulted in a unanimous vote for organic union in the general conventions of each church in 1929. During 1930 this coöperative movement was in process. The departments of home missions, foreign missions, and Christian education were united. The *Congregationalist* and *Herald of Gospel Liberty* were combined into one publication known as *The Congregationalist and Herald of Gospel Liberty*, with Dr. William E. Gilroy as editor-in-chief and Dr. F. G. Coffin, associate editor, and Mrs. Hermon Eldredge, news editor for the Christian Church constituency. The *Christian Sun* and *Southern Congregationalist* were also united into one publication. The Sunday-school literature was combined and was being distributed through the publishing houses of both denominations, each printing a part of it. State districts and local churches of the two churches united in a number of instances, and the process was to continue. Plans were being perfected to unite several educational institutions.

The first General Council of Congregational and Christian Churches was to be held in Seattle, Wash., in June, 1931, when a more complete cohesion of the two denominations would be effected. For obvious legal reasons the identity of the two churches must be preserved for some time, though the operation of all departments and programmes would be through the one church. Headquarters of the General Convention of the Christian Church are at Dayton, Ohio.

CHRISTIAN ENDEAVOR, INTERNATIONAL SOCIETY OF. An organization comprised of all Christian Endeavor societies in the United States and Canada, found among the evangelical and reformed denominations, and a member of the World's Christian Endeavor Union, comprised of Christian Endeavor societies in 87 countries. The first society was organized in Portland, Me., Feb. 2, 1881, by the Rev. Francis E. Clark, a Congregational minister, for the purpose of training young people in the duties of church membership and the activities of the Christian life. The present name was adopted by vote of the board of trustees in August, 1927, previous to which time it was known as the United Society of Christian Endeavor.

The International society consists of active organizations for each State and each Canadian Province. These, in turn, in 1930 were divided into 1200 city, county, and district unions, each including from 3 or 4 to 500 societies, with a membership in the United States and Canada of 2,500,000. Throughout the world there were in the same year approximately 80,000 societies, with a membership of 4,000,000. The international society is organized into the following departments to carry on its work: Christian vocations, which yearly gives vocational counsel to thousands of young people in high schools and colleges; travel and recreation, which supplies, free of charge, monthly church-centred recreation service to Christian Endeavor societies and church workers and conducts world-friendship tours to Europe for young people at cost; citizenship, which interests young people in citizenship problems, aids first voters, and works for moral

reform; army and navy, which promotes societies in army posts and navy yards and conducts meetings on thousands of merchant vessels (in some cities sailors' homes are conducted by Endeavorers); social service and prison work, which conducts classes for foreigners, helps in community enterprises, and conducts meetings and organizes societies in prisons. The society also promotes systematic and proportionate giving through the Tenth Legion, in which 77,532 have been enrolled; emphasizes regular habits of prayer and daily Bible reading through the Quiet Hour, in which 267,224 have been enrolled; and recruits for the Christian ministry and missionary work through the Life Work Recruits, in which 10,190 have been enrolled.

The world's convention, which was held in Berlin, Germany, Aug. 5-10, 1930, had an attendance of 17,000 delegates, representing 50 different countries. On this occasion there was launched a great Crusade-with-Christ for evangelism, world-friendship, and peace. The convention celebrating the fiftieth anniversary of the organization was to be held in San Francisco in July, 1931. The official periodical of the international society is the *Christian Endeavor World*. The officers for 1930 were: President, the Rev. Daniel A. Poling; vice presidents, the Rev. William Hiram Foulkes and the Rev. Howard B. Grose; treasurer, A. J. Shartle; and secretary, Edward P. Gates. Headquarters are at 41 Mount Vernon Street, Boston, Mass.

CHRISTIANS. See DISCIPLES OF CHRIST.

CHRISTIAN SCIENCE. A system of metaphysical or spiritual healing discovered by Mrs. Mary Baker Eddy in 1866. The first church was established by Mrs. Eddy in Boston in 1879 and given a charter by the Commonwealth of Massachusetts. In 1892 it was reorganized as a voluntary religious association known as The First Church of Christ, Scientist, in Boston, called more frequently by its adherents "The Mother Church." Mrs. Eddy wrote the textbook of the movement, *Science and Health with Key to the Scriptures*, published in 1875. The Sunday services of the church are conducted by first and second readers, the former reading from *Science and Health*, and the latter from the authorized version of the Bible. In 1930 there were approximately 10,000 practitioners of Christian Science in the United States and other countries, who devoted their entire time to healing the sick through prayer.

A board of directors administers the affairs of The Mother Church. Its annual meeting was held in Boston June 2. Reports indicated expenditures totaling \$1,839,503 from the general fund of the church during the year and \$928,905 from the permanent special funds. During the fiscal year ending May 31, 82 churches and Christian Science societies, including five university societies, were recognized as branches of The Mother Church; 21 new organizations were located in Europe, 2 in Africa, 5 in Australia, 4 in Canada, and 50 in the United States. The total number of recognized branches, including 39 college and university societies, was 2451. Three departments conduct the principal activities of the movement: the Board of Education, Board of Lectureship, and Committee on Publication. The Board of Education instructs and authorizes students to teach Christian Science; the Board of Lectureship consists of 26 members who deliver free lectures on Christian Science through-

out the world. During the year, 3822 lectures were delivered, of which 3412 were in the United States, Canada, and Alaska, and 410 in foreign fields. Lectures were given for the first time in Czechoslovakia and Poland.

The Committee on Publication aims to correct impositions on the public in regard to Christian Science. It also endeavors to guard the rights of Christian Scientists against restriction by public authority. The Christian Science Publishing Society, which publishes and issues the authorized literature of The Mother Church, operates under a deed of trust granted by Mrs. Eddy; its affairs are now administered by a board of trustees according to the Manual of the church. The publishing society issues the daily paper of the organization, *The Christian Science Monitor*; other periodicals include: *The Christian Science Journal*, *Christian Science Sentinel*, *Der Herold der Christian Science*, *Le Héraut de Christian Science*, and *The Herald of Christian Science* (Scandinavian edition). The Benevolent Association of the Church conducts sanatoria in Brookline, Mass., and San Francisco, Calif. Pleasant View Home in Concord, N. H., is a home for Christian Scientists of advanced years. The Hon. William W. Davis was president of The Mother Church for the year ending May 31, 1930. The headquarters of the church are located at 206 Massachusetts Avenue, Boston.

CHRISTMAS ISLAND. An island in the Indian Ocean lying 223 miles south of Java, annexed by Great Britain in 1888. Area, 58 square miles; population in 1928, 1421. Christmas Island is important because of its large deposits of phosphate of lime which constitute its only export. In 1928 exports were valued at £211,000; imports, £14,120. For administrative purposes, the island was incorporated within the Settlement of Singapore in 1900.

Christmas Island is also the name of the largest atoll in the Pacific Ocean. It belongs to the British colony of Gilbert and Ellice Islands.

CINCINNATI, UNIVERSITY OF. An institution for the higher education of men and women in Cincinnati, Ohio, founded in 1870. The registration for the autumn of 1930 was 10,135. The summer-school enrollment for 1930 was 1252. There were 596 members on the faculty. The endowment funds of the university for the year ending Dec. 31, 1929, amounted to \$6,767,034; the income for the same period was \$2,242,978. The library contained 164,117 volumes. During 1930 a new library building was completed, while Teachers College and Wilson Auditorium were under construction. A gift of \$2,000,000 also was received from Mrs. Annie Sinton Taft to endow the study and teaching of the humanities as a

memorial to her husband, Charles Phelps Taft. President in 1930, Herman Schneider, Sc.D.

CITY AND REGIONAL PLANNING. Although approximately 750 municipalities in the United States had planning departments at the close of the year 1930, New York City was without one until September 1, when a local law creating a single-headed department became operative, and the office was filled by the appointment of an engineer as commissioner. A master plan of the city will be prepared by the commissioner who will also coordinate projects of the various city departments in so far as they affect the plan of the city. The commissioner can make recommendations only. Under the new act the mayor has appointed an advisory commission of nine members, including the city planning expert who was director of the Regional Plan of New York and Environs. See 1929 YEAR BOOK. Enactment of zoning ordinances by about 60 municipalities during the year brought the total number of zoned places to some 900. Regional planning agencies, including counties, number about 50. In California, under a statute of 1929, 22 counties have appointed commissions, serving about half the area and more than half the population of the State.

Radburn, the "Town for the Motor Age" near Paterson, in the New Jersey metropolitan area, was making good progress. Its site, an area of 2 square miles of farm land, was laid out in 1928 for a population of 30,000, with provision for business and industry. The first family settled there on April 25, 1929, and was followed by 201 more within a year. The features of layout which justify the title, "Town for the Motor Age," are the separation of through from local traffic, with underpasses for the latter, and the further separation of pedestrian from vehicular traffic by putting service driveways and garages at the rear of the houses, throwing the space in front of the houses into lawns and gardens, which in turn connect with parks, the whole so arranged that foot traffic, and particularly children, can move across footways through lawns and parks to schools and other points with few street crossings and none at grade across through-traffic streets. Liberal provision for community recreation, outdoor and in, is provided, with capital and maintenance cost included in house rentals. Living quarters may be bought or leased.

Division of the entire state of New Jersey into four regional districts, each with power to provide and operate public works and utilities, was proposed in a bill submitted to the legislature by a legislative committee created in 1929 to study regional needs. Each district would have power to do anything lawful for cities, counties and other minor civil divisions of the state. Action was deferred and further study ordered.

County park systems have been growing rapidly of late, the number of counties having park systems or commissions to establish them having more than doubled in four or five years. The pioneer in this work was Essex County, N. J., in 1895. A comprehensive review of the subject, entitled *County Parks*, was published in 1930 by

the Playground and Recreation Association of America. The book lists 66 counties in the United States with park systems having a total area of 106,000 acres.

Zoning ordinances had been adopted by some 900 cities by the end of the year. Los Angeles, Calif., which as early as 1904 prohibited manufacturing in residential districts, thus anticipating, in part, the comprehensive zoning movement that began ten or a dozen years later, adopted a new zoning ordinance in May, 1930, adding building height and area limitations to those on use of land already in force. (See *Engineering News-Record*, Dec. 4, 1930, p. 891.)

Canberra, the new capital district of the Commonwealth of Australia, had a population of some 6000 early in 1930. Provision for the capital became effective Jan. 1, 1911; construction was started ten years later; and the seat of government was moved to Canberra in May, 1927. Construction progress on the town site, buildings, water supply, sewerage and sewage treatment systems, and other public works was reviewed, with plans and views, in *Engineering News-Record*, Dec. 4, 1930, p. 876.

For classified analysis of legal decisions on zoning and city planning, from June, 1923, to December, 1929, and for outlines of civic centre development or the grouping of public buildings in 54 cities of the United States, see *The Municipal Index*, 1930 (New York). For certain developments in Russia, see "City Planning in Soviet Russia," by Bertram W. Maxwell, in *National Municipal Review* for September. Among new books see Duffus, *Mastering a Metropolis* (New York), a popular account of the Regional Plan of New York and Its Environs; Guerard, *L'Avenir de Paris* (Paris); Brinckmann, *Stadtbaukunst vom bis zur Neu Zeit* (Potsdam), second edition of a book devoted not only to the horizontal layout of cities but also, as expressed in a notice in the *British Town Planning Review* for November, to "the 'townscape' or 'street-scape,' that is to say, to the general impression of so much of the town as meets the eye at any particular moment"; Ferriss, *The Metropolis of Tomorrow* (New York); Metzenbaum, *The Law of Zoning* (New York), a comprehensive review by the attorney for the village of Euclid, Ohio, in the case in which the validity of zoning was upheld by the U. S. Supreme Court.

CIVIC FEDERATION, THE NATIONAL. See NATIONAL CIVIC FEDERATION, THE.

CIVIL ENGINEERS, AMERICAN SOCIETY OF. An association of professional engineers, founded in 1852 to advance engineering and architectural knowledge and practice, to maintain high professional standards, and to encourage intercourse between men of practical science. It is made up of: Members, including civil, military, naval, mining, mechanical, electrical, and other engineers, in active practice twelve years, and qualified to design as well as to direct engineering work; associate members, those who have been practicing eight years; juniors, beginners in the profession; affiliates, persons qualified to cooperate with engineers, but not themselves engineers; fellows, contributors to the permanent funds of the society, who may not be eligible to member-

ship; and honorary members, persons of acknowledged eminence in engineering. The membership as of Dec. 16, 1930, was divided as follows: Honorary members, 17; members, 5826; associate members, 6196; juniors, 2492; affiliates, 138; fellows, 7. There were 51 local sections, and 95 affiliated student chapters in colleges throughout the United States.

Four general meetings of the society are held each year, including the annual meeting, annual convention, and spring and fall meetings. At the annual meeting, which was held in New York City, Jan. 15-17, 1930, awards were made of the following medals and prizes: The Norman Medal, to G. T. Rude; the Thomas Fitch Rowland Prize, to D. B. Steinman and William G. Grove; the James Laurie Prize, to R. H. Keays; the Arthur M. Wellington Prize, to F. C. Carstarphen; the Collingwood Prize for Juniors, to William J. Cox.

The spring meeting was held in Sacramento, Calif., April 23-25. The general sessions of this meeting considered the conservation of water resources and State supervision of the design and construction of dams. At the sixtieth annual convention, in Cleveland, Ohio, July 9-11, the chief topic of discussion was the coordination of city planning with rapid transit by rail. Presentation was made at this time of the Fowler Awards, as follows: The Phebe Hobson Fowler Professional Award—First Prize, to Arthur W. Berresford; Second Prize, to J. Vipond Davies; The Phebe Hobson Fowler Architectural Award—First Prize, to Morris Goodkind; Second Prize, to Charles M. Spofford; Third Prize, to G. F. Burch. The fall meeting, held in St. Louis, Mo., October 1-4, was devoted to the problems of a large city.

At each of the meetings some sessions were under the direction of one or more of the nine technical divisions, which presented papers on their special branches of engineering; conferences were held of representatives from local sections or student chapters; and special excursions were provided, to points of engineering interest. In addition to the general meetings of the society, both sections and chapters held meetings of their own at frequent intervals. Seven research committees, with a total personnel of about 60, were engaged throughout the year in special investigations. Nearly 100 members served on joint boards and committees, with representatives of other societies, for research and standardization.

The society publishes two monthly magazines: *Proceedings*, containing technical papers which are later collated, with discussions, in the yearly volume of *Transactions*; and *Civil Engineering*, which presents news of society affairs and articles of more popular appeal. The *Year Book* contains a list of members and general information about the society. A series of *Manuals*, published at irregular intervals, deals with various topics of engineering interest. The officers of the society in 1930 were: President, J. F. Coleman; vice-President, Arthur J. Dyer, A. J. Hammond, J. M. Howe, and Frank E. Winsor; secretary, George T. Seabury; treasurer, Otis E. Hovey. Headquarters are in the Engineering Societies Building, 33 West 39th Street, New York City, of which, with three other national engineering societies, it is joint owner.

CIVILIZATION STUDIES. See PHILOLOGY, MODERN.

CIVIL SERVICE REFORM LEAGUE, NATIONAL. Organized in 1881 for the purpose of put-

ting to an end the so-called spoils system of making appointments to public office, this organization has sought to accomplish its end by promoting administrative efficiency through the application of the merit system to the appointment, promotion, and tenure of government officials. It also has advocated, on the principle that public office is a public trust, that those best fitted through demonstrated ability and capacity should serve the State.

During 1930 the league sponsored legislation placing postmasters of the first, second, and third classes in the competitive civil service, and authorizing the President to include in the competitive classified civil service any office statutorily exempted from civil service rules. It urged upon the Attorney General elimination of a special rule by which "confidential" positions in the Department of Justice might be filled without examination, although similar positions in other Federal departments were required to be filled through examination. It urged the retention in the competitive classified service of all employees of the Prohibition Enforcement Bureau, when that bureau was transferred from the Treasury Department to the Department of Justice. It actively opposed the proposal in Congress to except from the merit system Federal probation officers. It sought the modification of the executive order giving war veterans greater preference in appointment to Federal civil service positions.

Through its field division the league endeavors to secure the adoption and improvements of civil service laws in various States and cities. Reports of its work are issued periodically. *Good Government* is the official organ. The officers in 1930 were: George McNaney, president; W. W. Montgomery, Jr., chairman of the executive committee; Howard R. Guild, chairman of the council; A. S. Frissell, treasurer; and H. Eliot Kaplan, secretary. Headquarters are at 521 Fifth Avenue, New York City.

CIVITAN INTERNATIONAL. An organization composed of selected professional and business men, throughout the United States and Canada, who have dedicated themselves to unselfish service to their city, county, State, and nation. The first Civitan Club was founded in Birmingham, Ala., in 1917, the word "civitan" being coined by one of the founders from the Latin "civitas." The motto of the organization is "Builders of Good Citizenship." The organization of field work was begun in 1920 when the international association was formed in Birmingham, and by 1921, when the first annual convention was held, there were 30 clubs. A total of 253 clubs had been chartered by 1930. The primary requisite for membership is that every applicant be a "duly qualified and registered voter."

Among the activities of the Civitan clubs in 1930 were constructive health programmes, including the prevention and cure of tuberculosis; care of crippled and under-privileged children; baby clinics; programmes for the curbing of crime, including juvenile delinquency; scout work and Boy Scout camps; pig, corn, and cotton clubs; juvenile court work; Americanization work; city beautification; street paving; building of municipal golf courses; the raising of scholarship funds; and the sponsoring of essay contests on good citizenship. The 1930 international convention was held in Asheville, N. C., June 15 to 18, while the 1931 convention was to

be held in St. Louis, Mo., June 21 to 24. The official organ is *The Civitan*, published monthly in Atlanta, Ga., Bruce Moran, editor. The officers for 1930 were: President, George W. Simons, Jr., Jacksonville, Fla.; vice presidents, Cary H. Howard, Tulsa, Okla., Claude B. Squires, Charlotte, N. C., Harold Tschudi, Baltimore, Md.; international secretary, Arthur Cundy, Birmingham, Ala.; and international treasurer, Claude L. Hagan, Birmingham, Ala. Headquarters are at 1007 Jackson Building, Birmingham, Ala.

CLAAR, klär, EMIL. A German dramatist and manager, died July 26, 1930. He was born in Lemberg Oct. 7, 1842, and made his first appearance as an actor at the Burgtheater, Vienna. After acting in various theatres from 1879 to 1900 he was director of the two principal theatres at Frankfurt-on-Main, but afterward confined himself solely to the management of the Schauspielhaus in that city. He wrote: *Samson und Delila*, a comedy (1872); *Shelley*, a tragedy (1876); *Die Schwestern*, a melodrama (1892); *Königsleid*, a tragedy (1895); and *Weltliche Legenden* (1898).

CLARK, CLARENCE DON. An American legislator, died in Evanston, Wyo., Nov. 18, 1930. He was born in Sandy Creek, N. Y., Apr. 16, 1851, and attended Iowa State University. On being admitted to the bar in 1874, he practiced in Delaware Co., Iowa, until 1881 and in Evanston, Wyo., until his death. From 1882 to 1886 he was prosecuting attorney of Uinta Co., Wyo. Upon the admission of Wyoming as a State he was elected to the Fifty-first and Fifty-second Congresses (1889-93). In 1895 he was elected to the U. S. Senate to fill a vacancy caused by the failure of the State legislature to elect, and was reelected for the terms 1899-1905, 1905-11, and 1911-17. In the Senate he was chairman of the committee on judiciary and was a member of the committees on finance, public lands, and railroads. In 1919 he was appointed a member of the International Joint Commission, serving as chairman of the United States section until his retirement in 1929.

CLARK, EDGAR ERASTUS. An American lawyer and public official, died in Monrovia, Calif., Dec. 1, 1930. He was born in Lima, N. Y., Feb. 18, 1856, and in 1873 entered the railroad service, serving for several years as brakeman and conductor. In 1889 he became Grand Senior Conductor of the Order of Railway Conductors of America and the following year was appointed Grand Chief Conductor, holding that office until 1906. In 1902 he was a member of the commission appointed by President Roosevelt to determine the issues involved in the strike of anthracite coal miners. Four years later he became a member of the Interstate Commerce Commission, receiving his appointment as a representative of labor and being reappointed by Presidents Taft and Wilson. He was a member of the board appointed in 1916 to report on the Adamson Eight-Hour Law, and in 1917 was an ex-officio member of the Railroad War Board where he advocated fair treatment of the railroads. After serving as chairman of the commission during the post-war period, he resigned in 1921 to engage in the private practice of law in Washington.

CLARKSON, COKER FIFIELD. An American lawyer and engineer, died at Scarborough-on-Hudson, N. Y., June 4, 1930. He was born in Des Moines, Iowa, May 11, 1870, and was graduated from Harvard University in 1894. After two years (1894-96) in the Harvard law school, he

was admitted to the Philadelphia bar in 1896, practicing there with the firm of Alexander & Magill until 1898. That year he began the practice of law in New York City, at first with the firm of Tracy, Boardman & Platt and, later, in his own office as a technical, corporation, and patent attorney. Becoming head of the engineering department of the Association of Licensed Automobile Manufacturers, he edited four annual volumes of the *Handbook of Gasoline Automobiles* and two volumes of mechanical branch bulletins and reports of tests. He also founded and edited the association's *Digest of Current Technical Literature*, in addition to writing widely on technical subjects. In 1909 he was made manager and head of the publicity department and, the following year, secretary and general manager of the Society of Automotive Engineers, which took over the engineering work of the Association of Licensed Automobile Manufacturers. He conducted research in electrical engineering, in standardizing material used in the automotive industry, and in telegraph and telephone construction.

CLARK UNIVERSITY. A nonsectarian university in Worcester, Mass.; founded in 1889. It comprises a college for men, a coeducational graduate division of arts and sciences, and a coeducational senior college (extension courses) granting the degree of bachelor of education. The registration for the autumn of 1930 was 500 including 250 undergraduates, 66 graduate students, 9 special students, and 175 extension students. The enrollment for the summer session was 216. There were 36 members on the faculty. The productive funds amounted to approximately \$5,000,000. The library contained 130,000 volumes. President, Wallace W. Atwood, Ph.D.

CLODD, EDWARD. An English writer on evolution and allied subjects, died in Aldeburgh, Suffolk, Mar. 16, 1930. He was born in Margate, Kent, July 1, 1840, but spent his childhood in Aldeburgh, attending the grammar school there until he was 15 years of age. In 1855 he went to London and, after working in various offices, in 1862 became a clerk in the London Joint-Stock Bank. Appointed secretary of the bank in 1872, he remained in that position until 1915. Following the publication of Darwin's *Origin of Species* in 1859, Mr. Clodd became interested in the theory of evolution. Without any scientific training, he acquired through reading and discussion an understanding of the new science of his day and became known for his anti-clerical views. His books on evolution, written in a popular style and designed especially for the young, include *The Childhood of the World: A Simple Account of Man in Early Times* (1873, rewritten, 1914); *The Childhood of Religions: Embracing a Simple Account of the Birth and Growth of Myths and Legends* (1875); *Jesus of Nazareth* (1880); *The Story of Creation: A Plain Account of Evolution* (1888); *A Primer of Evolution* (1895); *The Story of Primitive Man* (1895); and *Pioneers of Evolution from Thales to Huxley* (1897). He was a member of the Folk-lore Society, serving as president in 1895 and in 1896. He con-

tributed to the journal of the society and wrote several books on folk beliefs. They are *Myths and Dreams* (1885); *Tom Tit Tot, an Essay on Savage Philosophy in Folk-Tale* (1898); *Animism: the Sced of Religion* (1905); and *Magic in Names, and in Other Things* (1920). His *Memoirs*, published in 1916, gives a record of his friendship with literary and scientific men of the nineteenth century, such men as Thomas Henry Huxley, George Meredith, Thomas Hardy, Samuel Butler, and Andrew Lang. He was also the author of biographies of Henry Walter Bates, written in 1892 as a preface to an edition of Bates's *Naturalist on the Amazons*, of Grant Allen (1900), and of Thomas Henry Huxley (1902). He contributed to the *Quarterly Review* and *Fortnightly Review*, and to books of reference.

COAL. Obviously with a world-wide industrial depression the coal industry was bound to suffer, but it was gratifying to record that in the United States production fell off less proportionately than was the case with other commodities. But slight decreases were noted in shipments to the Great Lakes, New England and foreign countries, while the decline in domestic consumption was in no way striking. The leading and important decreases scored, however, were in consumption by railroads and public utilities. The *Coal Age* noted the average bituminous spot price at \$1.75 as against \$1.79 in 1929. Exports of bituminous coal from the United States in 1930 were 14,176,256 gross tons, as against 15,561,873 tons valued at \$65,741,852, Canada as usual taking the greatest amount—namely, 12,145,641 tons. During the year there was an absence of labor troubles in the coal industry. In Europe the coal industry also suffered correspondingly.

In 1930 the coal mining industry in the United States had 2014 deaths in and about mines, or with a production of 531,432,000 tons of coal a fatality rate of 3.79 per 1,000,000 tons, comparing with 3.59 in 1929. During the year there were 12 major disasters in the United States with 225 fatalities in 1929, 7 major disasters and 151 deaths.

PRODUCTION OF SOFT COAL IN 1930. The total production of soft coal during the calendar year 1930, including lignite and coal coked at the mines, was estimated by the U. S. Bureau of Mines at 461,630,000 net tons. This figure represented the total of the Bureau's current estimates for the fifty-two weeks in the year, and was subject to slight revision. Compared with the output in 1929, as shown by the annual canvass of mines for that year, the 1930 figure indicated a decrease of 73,359,000 tons, or 13.7 per cent. Figures for recent calendar years are given below:

| | Net tons | | Net tons |
|------|-------------|------|-------------|
| 1929 | 534,989,000 | 1926 | 573,367,000 |
| 1928 | 500,745,000 | 1925 | 520,053,000 |
| 1927 | 517,763,000 | 1924 | 483,687,000 |

ANTHRACITE. The production of anthracite in 1930, as estimated by the Anthracite Bureau of Information in Philadelphia, fell short of that of the preceding year by about 3,500,000 gross tons. The total production of anthracite for eleven months, January–November, 1930, as estimated by the U. S. Bureau of Mines (these figures including coal sold at the mines for local delivery and that consumed in the operation of the properties, and which are not included in the shipment figures) amounted to 56,663,000 gross tons. The

COAL AND LIGNITE PRODUCED IN THE PRINCIPAL COUNTRIES OF THE WORLD IN THE CALENDAR YEARS 1925-1929, IN METRIC TONS

¹ Estimate included in total.

² Approximate production.

³ Exclusive of output of State of Falcon (about 8,000 tons), for which estimate is included in total.

⁴ Exclusive of mines in the Saar under French control.

⁵ Mines under French control.

⁶ Year ended September 30.

⁷ Production less consumption at mines, for which data are not available.

⁸ Exports

⁹ Exclusive of Sakhalin.

¹⁰ Shipments

¹¹ Year ended March 31 of year following that stated.

total production in December, 1929, as estimated by the Bureau of Mines, was 6,837,500 gross tons, which was somewhat above the average for that month. Weather conditions in the closing month of 1930, while recording a few days of snappy temperatures, were generally favorable to the consumers rather than the producers of anthracite. Production declined accordingly and, it was estimated, would not exceed 5,800,000 tons, bringing the total for the year up to 62,463,000 tons which, when compared with that of 1929 (65,918,000 gross tons), showed a decrease of between 3,400,000 and 3,600,000 gross tons, or about 5½ per cent.

When the general depression which prevailed in 1930, the restricted purchasing power of the anthracite-consuming public, and the growing habit of hand-to-mouth buying were taken into consideration, and when compared with declines in other industries, this loss in anthracite production became practically negligible. And, moreover, the first four of the coal-burning months of 1930 were notable for their mild temperatures, resulting in a decreased production in those months of a little over 2,650,000 gross tons, or more than 75 per cent of the decrease for the entire year. It would appear from this that, all outward conditions considered, the anthracite industry in 1930 held up remarkably well.

Shipments, as reported to the Anthracite Bureau of Information, for the eleven months from January to November, 1929, amounted to 53,070,728 gross tons. For the eleven months, January to November, inclusive, in 1930 they amounted to a total of 49,456,323 tons.

The shipments of anthracite by months from Jan. 1, 1929 to November, 1930, were as follows:

| 1929 | Gross tons | 1930 | Gross tons |
|-----------|------------|-----------|------------|
| January | 5,811,972 | January | 5,405,788 |
| February | 5,168,197 | February | 4,708,707 |
| March | 3,628,691 | March | 3,430,940 |
| April | 5,160,520 | April | 3,662,647 |
| May | 4,817,334 | May | 4,750,368 |
| June | 3,778,679 | June | 4,052,939 |
| July | 3,687,586 | July | 4,345,841 |
| August | 4,564,426 | August | 4,821,790 |
| September | 5,360,130 | September | 3,899,405 |
| October | 6,477,729 | October | 6,177,851 |
| November | 4,615,464 | November | 4,200,047 |
| December | 5,831,534 | December | 4,889,057 |

The anthracite industry in 1930 was neither decadent nor despondent. Its confidence in the future was attested by the large capital investments made during the year. That the industry was faced with serious problems was granted by its best authorities but it has faced other problems in earlier stages in its history, as when it was, at recurring periods, driven from the blast furnace, the locomotive, the ocean liners, and the gas works. The problems of the industry in 1930 had their beginning principally in the labor troubles of 1922 and 1925-26, which for a period of more than five months in each instance shut off completely the supply of hard coal and produced in the minds of the anthracite-consuming public a feeling of antagonism for the time being and a not unreasonable doubt as to the advisability of depending upon anthracite for the supplying of future fuel requirements.

On Aug. 8, 1930, a notable agreement was entered into between the anthracite operators and their employees, which renewed for a period of five and a half years, or for six winters, assurances of industrial peace and an uninterrupted supply of that domestic fuel—Pennsylvania anthracite—for which there is no satisfactory substitute. The conditions under which the negotiations were conducted and the agreement reached were unusual. There was no strike or suspension, and there were no sensational or public features prior to the reaching of an agreement. The negotiations were carried on quietly in a New York office, but when agreement was reached the signing of the contract was made in public in the city of Scranton, and the event was made the occasion for a celebration. It was considered to mark a new era and a new spirit in wage negotiations. Strikes are taboo and the means for avoiding them are provided in the contract. Their utter futility had been demonstrated in the controversies of 1922 and 1925–26. Neither miners nor operators had recovered the losses then sustained. For the use of pulverized coal, see **BOILERS**. Also see **GEOLOGY**.

COCHIN-CHINA, kō'chin-chi'na. The southernmost colony in French Indo-China. Area, estimated at 26,476 square miles; population estimated in 1928 at 4,303,418, consisting chiefly of Annamites, Cambodians, Moïs, Chams, and Chinese, with a few Indians, Malays, Tagals, and 16,062 French (excluding military forces). Saigon, the capital, had a population in 1928 of 130,000, including 12,600 French and 650 other Europeans (exclusive of 3066 troops). Cholon had 192,416 inhabitants. There were about 20,640 schools, with 3750 teachers and 161,144 pupils.

Rice is the chief crop, to which 4,969,347 acres were devoted in 1928; production in 1927, 1,493,327 metric tons. Other crops are maize, beans, sweet potatoes, groundnuts, cotton, rubber, sugar cane, tobacco, coffee, coconuts, pepper, oranges, bananas, etc. Other sources of wealth are livestock and fisheries, the output of the latter being valued at 3,000,000 francs annually. Exports in 1928 totaled 2,798,975,000 francs and imports, 2,283,241,000 francs. The local budget in the same year balanced at 19,810,136 piastres (the piastre was stabilized at 10 gold francs, or \$0.392, on May 31, 1930). Saigon is the chief trading centre, steamers entering in 1928 totaling 933 of 2,288,505 tons. The territory is ruled directly by a governor and a colonial council of 24 members; it is represented in the French Parliament by one deputy. See **FRENCH INDO-CHINA**.

CODDLING MOTH. See **ENTOMOLOGY**, **ECONOMIC**.

COFFEE. See **BRAZIL**; **COLOMBIA**; **COSTA RICA**.

COFFER DAMS. See **FOUNDATIONS**.

COHN, ADOLPHE. An American educator, died Feb. 11, 1930, in Paris, where he was born May 29, 1851. Graduated from the University of Paris, he served in the Franco-German War (1870–71) before going to the United States in 1875. During 1882–84 he was tutor and instructor in French at Columbia University and, after teaching at Harvard University from 1884 to 1891, returned to Columbia as professor of Romance languages and literatures, retiring from that post in 1916. In 1898 he founded the Alliance Française in New York City and was its first president. He was an officer of the Legion of Honor and a Knight of the Crown of Italy. He delivered the French lecture in the Columbia University Lectures on

Literature in 1911. Professor Cohn was the author of *Le Sage's Gil Blas* (with R. Sanderson, 1889); *Voltaire's Prose* (with B. D. Woodward, 1897); and "Montaigne" (in *French Classics for English Readers*, 1907). He edited the Silver Series of Modern Language Textbooks and, with Dr. Curtis Hidden Page, the *French Classics for English Readers*. He translated the French edition of *War and Humanity*, by James M. Beck, and contributed to the first and second editions of the **NEW INTERNATIONAL ENCYCLOPÆDIA**.

COINS, VALUES OF FOREIGN. The legal estimates of the values of foreign coins on Jan. 1, 1931, as issued by the Secretary of the Treasury are given in the table on the following page.

COKE. The production of coke in the United States in 1930, according to preliminary reports received by the U. S. Bureau of Mines, was 48,310,308 net tons, a decrease of 19.3 per cent when compared with 1929. The chief cause of the decrease in coke production was the reduced activity of blast furnaces, the output of pig iron for 1930 decreasing 25.7 per cent below the level of 1929. (See **IRON AND STEEL**.) The production of beehive coke was 2,795,800 net tons in 1930 or but 5.8 per cent of the total production, being the lowest since 1880, and a decrease of 56.8 per cent as compared with 1929. The accompanying tables give the production of coke and pig iron for the years 1925–1930. The changes in relative proportions of beehive and by-product coke II continued. In 1913, the by-product ovens contributed only 27.5 per cent of the total output; in 1930 they contributed 94.2 per cent. The share of the beehive ovens declined in the meantime from 72.5 per cent in 1913 to 5.8 per cent in 1930. Pennsylvania was the leading State in the production of beehive coke, and the combined output of Pennsylvania, Ohio, and West Virginia in 1930 represented about 88 per cent of the total. Pennsylvania, as in other late years, was also the largest producer of by-product coke. The output of its by-product ovens in 1930 was 12,650,000 tons. As a producer of by-product coke, Ohio ranks second, Indiana third, Alabama fourth, and New York fifth.

TABLE 1—PRODUCTION OF BY-PRODUCT AND BEEHIVE COKE AND PIG IRON IN THE UNITED STATES, 1925–30

| Year | Coke—net tons produced | | Total | Pig iron |
|-----------|------------------------|------------|------------|------------|
| | By-product | Beehive | | gross tons |
| 1925 .. | 39,912,159 | 11,354,784 | 51,266,943 | 36,700,566 |
| 1926 .. | 44,376,586 | 12,488,951 | 56,865,537 | 39,372,729 |
| 1927 .. | 43,884,726 | 7,207,417 | 51,092,143 | 36,565,645 |
| 1928 .. | 46,313,025 | 4,492,803 | 52,805,828 | 38,515,714 |
| 1929 .. | 53,411,826 | 6,472,019 | 59,883,845 | 42,613,983 |
| 1930 * .. | 45,514,508 | 2,795,800 | 48,310,308 | 31,399,105 |

* Preliminary figures.

TABLE 11—PRODUCTION OF BEEHIVE COKE, BY GROUPS OF STATES, 1929–30
[Net tons]

| State | 1930 Preliminary | 1929 Final |
|--|---------------------|---------------|
| Pennsylvania, Ohio, and West Virginia | 2,450,500 | 5,865,000 |
| Georgia,* Kentucky,* Tennessee, and Virginia | 240,600 | 410,700 |
| Colorado, Utah, and Washington | 104,700 | 196,300 |
| Total | 2,795,800 | 6,472,000 |

* No production 1929 or 1930.

VALUES OF FOREIGN MONEYS—JAN. 1, 1931

| Country | Legal standard | Monetary unit | Value in U. S. money | Remarks |
|--|------------------|--------------------------------|---------------------------|--|
| Argentine Republic . . . | Gold | Peso | \$0.9648 | Currency: Paper normally convertible at 44% of face value. |
| Austria | Gold | Schilling | 1407 | |
| Belgium | Gold | Belga | 1390 | 1 belga equals 5 Belgian paper francs. |
| Bolivia | Gold | Boliviano | 3650 | 13½ bolivianos equal 1 pound sterling. |
| Brazil | Gold | Milreis | 5462 | Currency convertible at 4.567 paper milreis to the gold milreis (\$0.1196). |
| British Colonies in Australasia and Africa | Gold | Pound sterling | 4.8665 | |
| British Honduras | Gold | Dollar | 1.0000 | |
| Bulgaria | Gold | Lev | .0072 | |
| Canada | Gold | Dollar | 1.0000 | |
| Chile | Gold | Peso | .1217 | |
| China | Silver | Tael | Amoy | The tael is a unit of weight; not a coin. The customs unit has been the haikwan tael. The values of other taels are based on their relation to the value of the haikwan tael. The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to 63.7 per cent of the haikwan tael. January, 1930, news reports indicate import duties will be collected on a gold basis, the gold unit (unnamed) being equal to \$0.40; and the haikwan tael being initially converted at 1.5 of the new unit, but from Mar. 16, 1930, at 1.75 of the new unit, which is being tentatively called "sun." |

Two new by-product plants started operations in 1930. In January, the Wisconsin Public Service Company started a new plant of Koppers ovens at Sheboygan, Wisconsin; in August, the Dupont Ammonia Corporation began making coke at Belle, West Virginia. The total number of ovens added by these operations was 61. In addition, 440 ovens were installed and fired at existing plants. At the close of 1930, there were approximately 370 ovens under construction.

TABLE III—PRODUCTION OF BY-PRODUCT COKE, BY STATES, 1929-30
[Net tons]

| State | 1930 ^a | 1929 |
|--|-------------------|------------|
| Alabama | 3,993,000 | 4,753,967 |
| Colorado | 379,100 | 565,031 |

| Washington | 36,100 | 40,879 |
| West Virginia | 1,479,900 | 1,431,314 |
| Connecticut, Kentucky, Missouri, Rhode Island, and Wisconsin | 1,685,000 | 1,776,796 |
| Total | 45,514,500 | 53,411,826 |

^a From monthly reports furnished by operators.

Allowing for imports and exports, and for changes in producers' stocks, the indicated consumption of coke in 1930 was 46,360,314 tons. Of this, about 34,724,000 tons was consumed by blast furnaces in the manufacture of pig iron and ferro-alloys. The remainder was used in foundries, in smelting the non-ferrous metals, in the manufacture of water gas, in miscellaneous other industrial uses, and for domestic heating. In 1930, the quantity consumed for these purposes was about 11,636,000 tons, or 25.1 per cent of the total, as against 8,221,000 tons, or 18.1 per cent in 1913. The consumption for house heating was probably as great, or greater than in 1929. In that year, 7,376,320 tons of by-product and 134,703 tons of beehive coke were disposed of for domestic use.

COLGATE UNIVERSITY. A nonsectarian institution for the higher education of men in Hamilton, N. Y.; founded in 1819. In the autumn of 1930 there were 1009 students enrolled. The faculty numbered 86 members. The productive funds amounted to approximately \$4,250,000, and the income for the year was approximately \$410,000. The library contained 110,000 volumes. A new chemistry building, costing \$450,000, was opened in 1930. The building formerly used as a chemical laboratory was to be remodeled for use by the department of biology. President, George Barton Cutten, Ph.D., D.D., LL.D.

COLLOIDS. See **CHEMISTRY; SOILs.**

COLOMBIA. A republic in the northwestern part of South America, third in population and fourth in size among the countries of that continent. Capital, Bogotá.

AREA AND POPULATION. The area of Colombia is 440,846 square miles and the population according to the census of December, 1928, was approximately 7,967,788, as compared with 5,855,

077 in 1918. The total population was distributed as follows: whites, 20 per cent; Negroes, 5 per cent; Indians, 7 per cent; mulattoes, 18 per cent; mestizos, 50 per cent. Bogotá, the capital, had a population of 235,421 at the 1928 census. Other leading cities, with their populations in 1928, were: Barranquilla, 139,491; Cali, 124,857; Medellin, 120,440; Cartagena, 80,467; Manizales, 85,203; Ibaqué, 53,664; Cúcuta, 50,324; Bucaramanga, 44,427.

EDUCATION. Primary and secondary schools in 1927 numbered 7531, with 449,111 pupils; there were 25 industrial schools, with 1392 pupils, and 6 art schools, with 399 pupils, besides 17 normal schools (1926), with 987 pupils. National or departmental universities are conducted at Bogotá, Medellin, Cartagena, Popayan, and Pasto. The state religion is Roman Catholicism and the Church exercises control of practically all the national or partly national secondary schools.

PRODUCTION AND RESOURCES. Colombia is primarily an agricultural country, with coffee as the chief factor in the national economy. Because of its mild flavor, the price of the Colombian crop is largely unaffected by Brazilian overproduction. Coffee constituted 60 per cent of the total value of exports in 1928 and more than 90 per cent of the crop is purchased annually by the United States. Coffee shipments from the interior to the ports in 1929 totaled 2,863,171 bags of 60 kilograms each (2,795,111 bags in 1928). Tobacco, cotton, sugar, cacao, vegetable ivory, bananas, rubber, rice, wheat and maize, and a great variety of fruits are other crops. Colombia ranks second in the production of coffee and of bananas. The total value of agricultural products in 1927-28 was placed at 628,000,000 gold pesos (1 gold peso equals \$0.973), of which maize represented 160,000,000 pesos, coffee 90,000,000 pesos, and cattle, 56,000,000 pesos. There are about 10,000,000 cattle in the country.

According to the Minister of Industry, Colombia in 1929 had the world's largest production of emeralds and platinum, the largest production of gold in South America, and ranked second to Venezuela in the production of petroleum among South American nations. Gold exports in 1928 totaled 1,443,433 pesos. Petroleum production (1929) was 20,384,000 barrels, as against 20,000,000 barrels in 1928 and 323,000 barrels in 1922. Coal resources are estimated at about 27,000,000 metric tons and production is about 35,000,000 tons annually. Water-power resources are estimated at 4,000,000 h.p., of which 25,000 h.p. were developed in 1926. Silver, copper, and salt are other mineral products. Iron and manganese deposits are largely undeveloped. Forests cover about 150,000,000 acres. There are pearl fisheries under Government control on the coasts.

The economic depression, which commenced in 1929, continued during 1930. Coffee prices remained weak on the New York market, proceeds of other agricultural and mineral products were reduced, and the Government curtailed sharply its expenditures for public works and other public services. Unemployment increased during the year.

COMMERCE. Imports in 1929, according to preliminary figures, were valued at \$103,000,000 (\$123,000,000 in 1928) and exports at about \$123,620,000 (\$130,520,000 in 1928). Crude petroleum exports in 1929 amounted to 18,531,000 barrels, as against 17,891,000 in 1928. While exports of coffee and petroleum increased in quantity over 1928, the value was less. The import decrease was

due in part to the curtailment of the public works programme.

For the year ended June 30, 1930, exports to the United States totaled \$105,811,503, as compared with \$91,726,037 in the previous year, an increase of 15 per cent. Imports from the United States declined by 44 per cent to \$33,270,295 in 1929-30 from \$59,834,623 in 1928-29. Approximately 75 per cent of all the export trade consists of agricultural and pastoral products. Textiles, metals, and manufactures are the chief imports. The United States normally purchases about 85 per cent of Colombia's total exports and supplies about 50 per cent of the total imports.

FINANCE. Secretary of Finance Perez, on Sept. 10, 1930, estimated that the cumulative Federal deficit at the end of 1930 would be approximately \$32,000,000, or an increase of more than \$30,000,000 in three years. The budget for 1929 authorized expenditures totaling 106,120,106 pesos (1 peso equals \$0.9733 at par), of which 64,406,242 pesos represented ordinary expenditures and the balance extraordinary expenditures. Actual revenues for the year totaled 75,000,000 pesos (74,345,000 pesos in 1928). Owing to the failure to float contemplated foreign loans, extraordinary revenues fell far short of expectations, with the result that some public works had to be abandoned while others were financed from ordinary revenues. The substantial deficit incurred in 1929 was greatly increased in 1930, when ordinary revenues declined sharply from the 1929 figures. The revised budget for 1930 provided for expenditures of \$62,000,000 of which about \$14,000,000 was allotted to public works. To conform to decreasing revenues, the balanced budget for 1931 was fixed at 51,739,925 pesos, nearly 30,000,000 pesos less than the normal cost of government.

The balance due Dec. 31, 1929, on long-term foreign loans contracted by the national, departmental, and municipal governments and the banks of Colombia totaled 213,799,795 pesos, of which 70,294,535 pesos represented the national foreign debt, according to the *Revista del Banco de la Republica* of Bogotá. The national internal and external debt on the same date was placed by the Ministry of Industries at \$84,456,000, of which \$72,770,171 were held abroad. The Ministry estimated the national wealth at \$5,850,000,000, the per capita wealth at \$803.20, and the per capita public debt at \$10.55.

To meet the accumulated deficit, Congress in September, 1930, authorized the Government to contract a short-term loan up to \$30,000,000 and to effect economies in Government departments. The National City Bank of New York on August 15 delivered 4,000,000 pesos (about \$3,865,200) to the Bank of the Republic in Bogotá to cover the Government's debt to the latter institution, which had reached the legal limit of its loans. This transaction enabled the Bank of the Republic to extend a further credit of 4,000,000 pesos to the Government to meet current expenses. Under an arrangement concluded in July, the National City Bank agreed to honor at 50 per cent of their face value outstanding Government pay warrants totaling \$3,000,000.

COMMUNICATIONS. Fifteen railway lines were in operation in Colombia in 1929 (11 state-owned and 3 British), with a total length of 1750 miles. Most of them served as feeders to the Magdalena River, which is navigable for 900 miles and serves as the main traffic route from the

Caribbean to the interior. A 38-mile stretch of railway between Puerto Lievano on the lower Magdalena River and Facatativa was completed in 1930. Eventually the line will connect with the Cundinamarca railway and afford direct service between Bogotá and the coast. The Colombia National Railway bridge over the Magdalena River at Girardot was completed in 1930 also. New river boats designed to carry merchandise direct from Barranquilla to Girardot without transshipment at La Dorada were launched on the Magdalena in 1930 by German-Colombian interests. Motor roads total about 2340 miles and air lines link Barranquilla, Buenaventura, Girardot, Bucaramanga, and other leading cities. Improvements to the Pacific port of Buenaventura were completed at a cost of about \$4,500,000 in May, 1930, making it one of the most modern ports in Latin America.

GOVERNMENT. Executive power is vested in a president elected for four years by direct popular vote, and ineligible for reelection until four years after the expiration of his term. Legislative power rests with a Congress of two Houses, the Senate of 48 members, elected indirectly by electors for four years, and the House of Representatives of 113 members, elected by direct suffrage for two years. President at the beginning of 1930, Dr. Miguel Abadia Méndez, elected for the term 1926-30.

HISTORY

Profiting by a split in the ranks of the Conservative party, the Liberals returned to power for the first time in four decades in the election of Feb. 9, 1930. Their successful presidential candidate was Dr. Enrique Olaya Herrera, Colombian Minister to the United States, who previously had served twice as Minister of Foreign Affairs.

The Liberals, who had refused to participate in elections since 1921 because of alleged election frauds, entered their candidate late in the campaign, after Congress had met their demands by adopting a law requiring every voter to present a certificate of identification. Dr. Olaya Herrera conducted a spectacular campaign, traveling about the country mostly by airplane. Returns from 80 per cent of the election districts gave him 307,306 votes, to 157,508 for Gen. Alfredo Vasquez Cobo, insurgent Conservative candidate, and 133,061 for Dr. Guillermo Valencia, the Conservative party's nominee. A fourth candidate nominated by the Socialist Revolutionaries made little impression on the electorate.

A leading issue of the election was the policy to be followed in developing the resources of the country. Dr. Olaya Herrera favored an "open-door" policy for foreign investors, intensive development of the oil industry, and the non-partisan selection of competent men for administrative posts in the Government. He won strong support among the women of Colombia by his stand in support of woman suffrage and most of the progressive elements of the nation rallied behind him. The Roman Catholic Primate of Colombia, Archbishop Perdomo, first lent his support to Dr. Valencia in a circular issued January 22. On February 3 he withdrew his approval and urged members of the Church to switch their support to General Vasquez Cobo. The Liberal party had long advocated the restriction of the power of the Church and of its political influence in Colombia.

Pending his inauguration on August 7, Presi-

dent-elect Olaya Herrera returned to his post at Washington, where he officially repaid the visit made to Colombia early in 1929 by President-elect Hoover.

Once the political campaign was ended, the nation turned its attention to the increasingly alarming economic situation. Early in the year it was estimated that the low price of coffee would reduce the annual national income from that source alone by \$47,000,000, as compared with 1928. Minor economies, including the reduction of the army by 1000 men (the normal force is about 9000), proved insufficient to counterbalance the Government's declining revenues and Finance Minister Pérez on April 2 estimated the deficit at 19,000,000 pesos for the first quarter of the year. On April 4 the entire Conservative Cabinet resigned, principally because of a difference of opinion as to the measures needed to remedy the financial situation. The Cabinet crisis was ended April 14 by the appointment of a coalition Ministry of four Conservatives and four Liberals.

In contrast with the revolutionary disorders in other South American countries, the inauguration of President Olaya Herrera on August 7 was marked by a spirit of friendly coöperation on the part of the Conservatives who were retiring from power for the first time in over 40 years. In his Independence Day message (July 20), President Abadía Méndez promised that the transfer of administrations would take place in peace and harmony and urged national support for his Liberal successor. He said that the relations between Church and State, formerly a source of political controversy, were now acceptable to all parties. On the same day the newspaper *El Tiempo* published a manifesto signed by more than 100 Congressmen representing all factions pledging their support of all administration measures aimed at the improvements of economic and financial conditions. The fairness with which the Conservatives conducted the Presidential election was gratefully testified to by the Liberals.

President Olaya Herrera in his inaugural address said the major problems facing the country were the national finances, the depression in the petroleum and coffee industries, and highway development. He announced a policy of friendly coöperation with the United States. His Cabinet, which included four Liberals and four moderate Conservatives, was composed as follows: Foreign Affairs, Dr. Eduardo Santos; Interior, Dr. Carlos E. Restrepo; Public Works, Dr. Fabio Lozano; Industries, Dr. Francisco Chaux; Education, Dr. Abel Carbonell; War, Gen. Agustín Morales Olaya; Finance and Public Credit, Dr. Francisco de Paula Pérez; and Posts and Telegraphs, Dr. Julio Enrique Tascón.

In June, President-elect Olaya Herrera secured the consent of the coalition Cabinet to engage an American financial mission, headed by Professor Kemmerer of Princeton University, to study Colombian public administration, finance, banking practice, and political economy and propose ways for improvements in these fields. The commission arrived in Colombia in August and devoted some five months to the study, submitting recommendations which formed the basis of new legislation introduced into Congress.

President Olaya Herrera reorganized his Cabinet on December 15 by accepting the resignations of the Ministers of Foreign Relations and

of Public Works. Decrees were issued reorganizing the Public Works Department and the national railways. The North Central and Southern railways were ordered consolidated. The export tax on bananas was raised from two to three cents a bunch by the lower Chamber on December 7, but the constitutionality of the measure was challenged. The Administration's new oil bill, introduced into Congress on Dec. 19, 1930, provided for reductions in royalties to be paid on oil produced from private and public lands and made extensive alterations in the regulations governing the exploitation of oil fields.

While in Washington during the summer, Dr. Olaya Herrera commenced negotiations through the Ecuadorian Minister there for the resumption of diplomatic relations between Ecuador and Colombia, which had been severed in 1924 in connection with a boundary dispute.

COLORADO. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,035,791. The population on Jan. 1, 1920, was 939,629. The capital is Denver.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|------------------------|--------------|
| Hay | 1930 | 1,635,000 | 3,089,000 ^a | \$28,247,000 |
| | 1929 | 1,590,000 | 3,103,000 ^a | 35,174,000 |
| Wheat | 1930 | 1,459,000 | 21,780,000 | 11,595,000 |
| | 1929 | 1,397,000 | 18,012,000 | 16,691,000 |
| Sugar beets | 1930 | 243,000 | 3,299,000 ^a | |
| | 1929 | 210,000 | 2,612,000 ^a | 18,106,000 |
| Corn | 1930 | 1,516,000 | 37,142,000 | 23,028,000 |
| | 1929 | 1,366,000 | 23,222,000 | 17,416,000 |
| Potatoes | 1930 | 14,000 | 2,660,000 | 3,059,000 |
| | 1929 | 88,000 | 12,320,000 | 13,552,000 |
| Barley | 1930 | 612,000 | 15,606,000 | 6,242,000 |
| | 1929 | 651,000 | 13,671,000 | 7,382,000 |
| Dry beans | 1930 | 385,000 | 3,927,000 | 5,301,000 |
| | 1929 | 350,000 | 2,345,000 | 6,332,000 |
| Oats | 1930 | 212,000 | 7,102,000 | 2,557,000 |
| | 1929 | 212,000 | 6,572,000 | 3,155,000 |

^a Tons.

Farms in the State numbered 60,563 in 1930, as against 58,020 in 1925 and 59,934 in 1920.

MINERAL PRODUCTION. Coal, the chief mineral product of the State, was mined in 1929 about on the same scale as in 1928. There were produced, in 1929, 9,920,741 net tons of coal, and in 1928, 9,847,707; in value, \$26,254,000 for 1929 and \$27,613,000 for 1928. Gold production in 1929 fell below 1928 and 1927 as well. There were mined, in 1929, 220,285 fine ounces of gold, as against 258,564 in 1928; in value, \$4,553,700 for 1929 and \$5,345,000 for 1928. The output of the silver mining industry showed little change, being 4,415,838 fine ounces for 1929 and 4,384,072 for 1928; in value, \$2,353,642 for 1929, it fell below the total for 1928, \$2,564,682, by reason of lower average price for the metal. The production of lead, fourth in importance among the State's minerals, amounted to 27,651 short tons, valued at \$3,103,100, for 1928 and continued at approximately the same rate for 1929. The production of zinc, the third of the State's minerals in order of importance, was not available for 1929. For 1928, it was 35,731 short tons, and for 1927, 35,865; in value, \$4,359,182 for 1928 and \$4,590,056 for 1927. A substantial quantity of coal was coked; by-product ovens furnished 565,031 short tons in 1929 as against 605,822 in 1928; beehive ovens 144,200 short tons in 1928 and not far from the same quantity in 1929. Iron mines

shipped 50,754 long tons of ore in 1929 as against 52,713 in 1928, and blast furnaces produced secondary quantities of pig iron in each of these years. The petroleum production diminished to 2,298,000 barrels for 1929, from 2,774,000 for 1928; its value fell, for 1929, to \$2,300,000 (estimated), from \$2,750,000 for 1928. The smelters of the State, in addition to other minerals noted, yielded, in 1929, 10,519,784 pounds of copper; in 1928, 10,262,083. Copper produced was somewhat in excess of the yearly mine production of copper in the State. The only other mineral industry normally reported as exceeding \$1,000,000 a year was the manufacture of clay products. These attained, for 1928, the latest year of available figures, \$2,999,242; for 1927, \$2,998,486. The production of natural gas, however, much on the increase in 1928, attained for that year 2,291,000 M cubic feet and a value of \$786,000. The combined mineral products of the State attained for 1928 a value of \$58,594,688; for 1927, of \$58,855,263.

The estimated output of gold, silver, copper, lead, and zinc from Colorado ores and gravels in 1930 in terms of recovered and estimated recoverable metal was placed at 218,471 ounces of gold, 4,290,587 ounces of silver, 44,646,000 pounds of lead, 9,787,000 pounds of copper, and 72,903,000 pounds of zinc, by the U. S. Bureau of Mines. These figures may be compared with 213,690 ounces of gold, 4,397,377 ounces of silver, 48,889,906 pounds of lead, 8,905,074 pounds of copper, and 58,861,000 pounds of zinc in 1929. Compared with 1929 figures, gold showed an increase of \$98,838, silver a decrease of 106,790 ounces, lead a decrease of 4,243,906 pounds, copper an increase of 881,926 pounds, and zinc an increase of 14,042,000 pounds. The gross estimated value of the output of metals in Colorado in 1930 was gold \$4,516,196, silver \$1,651,876, lead \$2,321,592, copper 1,213,588, zinc \$3,426,441, or a total of \$13,129,693, as compared with \$15,293,343 in 1929.

TRANSPORTATION. The total number of miles of railroad line in operation on Jan. 1, 1930, was 4966.58. There were constructed, in 1930, 2.08 miles of additional second track.

EDUCATION. A committee report to the State Education Association proposed a campaign for the equalization of educational opportunity throughout the State. So-called opportunity schools for the instruction of illiterates were established in 1930 in some number. The school population of the State, for the year ending June 30, 1929, was estimated at 306,993 individuals aged from 6 to 21 years. There were enrolled in the public schools in that year 256,134 pupils. Of these, 180,078 were in elementary and 63,463 in high-school grades, while another 12,593 were in night schools. The expenditure of the year, for public school education, was \$25,157,459. The yearly pay of teachers was reported to average \$1400.

POLITICAL AND OTHER EVENTS. The State bound itself in a treaty with New Mexico and Texas, signed Feb. 11, 1929, and ratified by the Federal authorities in 1930, dealing with the allocation of the rights to the waters of the Rio Grande, that it would not increase its areas under irrigation from the river before the termination of the treaty in 1935. In July the disposal of the Moffatt Tunnel was brought before the Interstate Commerce Commission through the application of the Denver and Rio Grande Western

for permission to gain control of the Denver and Salt Lake Railroad, which in turn had a lease of the tunnel. Dispute over the rental and the completion of the cut-off line to connect Denver, through the tunnel, with Salt Lake City, had blocked the progress of the development. On account, partly, of this delay bonds of the Moffatt Tunnel District, the public body that had borne the cost of completing the tunnel, went into default on January 1; a legal action also was started in the interest of residents liable to assessment for these bonds, to have them declared invalid. See CHILD LABOR.

A conflict arose over the course of the Federal government in disposing of public lands in Colorado underlain with petroleum-bearing shale with an alleged content of 40,000,000,000 barrels of oil. Ralph S. Kelley, chief of the field division of the General Land Office, issued on September 28 a statement that petroleum producing interests were gaining concessions in such lands through political pressure and favored treatment. Secretary of the Interior Wilbur directed him to file specific charges. These were examined by the U. S. Attorney-General and declared without merit, and Mr. Kelley was discharged from his post.

A decision of the United States Circuit Court of Appeals at Denver, rendered on December 1, affirmed unanimously the validity of the lease of the Moffatt Tunnel made by the Tunnel Commission in 1926 to the Denver & Salt Lake Railroad Company. The decision recognized that the railroad had contracted for full railroad use of the tunnel and by implication, the right to sublease and to retain to itself any profits obtained through subleasing. The lease as thus affirmed provided for a rental based on an original estimated cost, for the tunnel, of \$6,720,000. The attempt of the Tunnel Commission to require rental based on the much greater actual cost of \$15,470,000 was rejected, and a protracted legal battle brought to an end, save for the possibility of an appeal to the U. S. Supreme Court. The completion of the cut-off route between Denver and Salt Lake City, reducing the rail distance intervening by 173 miles, had been suspended during the progress of the suit.

ELECTIONS. On November 4 Edward P. Costigan, Democratic candidate, was elected United States Senator by an unofficially reported vote of 180,181, to 136,236 for George H. Shaw, Republican. The seat had been filled in the 71st Congress by a Republican, Governor William H. Adams, Democrat, was reelected, defeating Robert Rockwell. The incumbents, three Republicans and one Democrat, were reelected to the House of Representatives. The lower branch of the Legislature passed to Democratic control, but the upper remained Republican. The proposals to hold a constitutional convention and to create an appointive State Board of Education were defeated.

OFFICERS. Governor, William H. Adams; Lieutenant-Governor, George M. Corlett; Secretary of State, Charles M. Armstrong; Treasurer, William D. MacGinnis; Auditor, Joseph P. Jackson; Attorney-General, Robert E. Winborn; Superintendent of Public Instruction, Katherine L. Craig.

JUDICIARY. Supreme Court: Chief Justice, Greeley W. Whitford; Associate Justices, Haslett P. Burke, John Campbell, John H. Denison, John T. Adams, Charles C. Butler, Julian H. Moore.

COLORADO, UNIVERSITY OF. A coeducational, State institution of higher learning in Boulder, Colo.; founded in 1876. The number of students enrolled for the autumn of 1930 was 3213; the summer session enrollment was 3460. There were 301 faculty members, exclusive of assistants. The total income for general maintenance from State tax fees, tuition, etc., was estimated at \$1,503,543, while \$551,025 was received for the operation of hospitals, including fees. The library contained 225,000 volumes, 17,600 pamphlets, and 2550 maps. President, George Norlin, Ph.D., LL.D.

COLUMBIA UNIVERSITY. A nonsectarian institution for the higher education of men and women in New York City; founded in 1754. At Morningside Heights, Broadway and 116th Street, are located: Columbia College (for undergraduate men); Barnard College (for undergraduate women); Teachers College, including the departments of education and practical arts; the professional schools of law, engineering, architecture, journalism, business, library service, and optometry; and the non-professional graduate faculties of political science, philosophy, and pure science. The College of Physicians and Surgeons and the School of Dental and Oral Surgery are on West 168th Street, the College of Pharmacy on West 68th Street, Seth Low Junior College in Brooklyn, N. Y., and St. Stephen's College at Annandale-on-Hudson, N. Y. In addition, through university extension classes and the summer session, courses are offered for resident students at Morningside Heights; and other courses are offered at Camp Columbia, as well as at several extramural centres.

On the basis of the enrollment on Nov. 1, 1930, the total number of resident students for the year was estimated at 37,794, distributed as follows: Undergraduates, 3757, of whom 1959 were in Columbia College, 1002 in Barnard College, 377 in Seth Low Junior College, 116 in St. Stephen's College, and 243 in other schools; and graduate students, 3209. The distribution of professional students was as follows: Law, 571; medicine, 432; engineering, 234; architecture, 138; journalism, 150; business, 464; dental and oral surgery, 281; pharmacy, 676; optometry, 36; library service, 289; and Teachers College, 6818. 9714 students were enrolled in university classes and 237 were unclassified. Of the 13,500 non-resident students, 10,000 were registered in home-study courses and 3500 in special and extramural courses. There were 13,887 students registered for the summer session of 1930. The grand total is exclusive of 3099 duplicate registrations.

The faculty and officers of administration in 1930 numbered 2809, of whom all but 49 were in active service. This number was distributed as follows: Professors, 338; associate professors, 144; assistant professors, 237; associates, 121; instructors, 406; lecturers, 82; assistants, 232; curators, 4; associates, instructors, lecturers, and assistants in Teachers College, 262; instructors and lecturers in the college of pharmacy, 22; instructors in extension and home study, not included above, 366; instructors in summer session, not included above, 517. Officers of administration of the university numbered 65.

Among the professorial appointees for the year

1930-31 were: Joseph W. Barker (dean of the School of Engineering); Wilbert Lester Carr (Latin); Lemuel Cross Dillenback (design); Frank Lewis Eidmann (mechanical engineering); Rustin McIntosh (diseases of children); Charles J. Martin (fine arts); Elmer Drew Merrill (botany); Samuel T. Orton (neurology and neuro-pathology); Franz Schrader (zoology); George B. Karelitz (mechanical engineering); Lowell Pierson Beveridge (music); Crawford F. Failey (biological chemistry); and Salo Baron (Jewish history, literature, and institutions). The visiting professors appointed for the year 1930-31 were: William B. Boyd, University of Glasgow; Karl M. Dallenbach, Cornell University; Jan J. L. Duyvendak, University of Leyden; Edmond Faral, Collège de France; William Leonard Langer, Harvard University; Sten Bodvar Lillegren, University of Greifswald; William W. McClelland, St. Andrew's University; Paul Merker, University of Breslau; Albert Jay Nock; John K. Norton, director of the division of research, National Education Association; Fortunat Strowski, Université de Paris; and John D. Willard, field representative, American Association for Adult Education.

In connection with the celebration of the 175th anniversary of the granting of the royal charter by which King's College was established in the province of New York, there was a series of lectures from October, 1929, to March, 1930, outlining the progress of the last quarter century in various branches of knowledge. Other important events of the year included the purchase of the invaluable library built up in the field of economic history, theory, and practice over half a century by Prof. Edwin R. A. Seligman; the dedication of the New York State Psychiatric Institute and Hospital at the Medical Centre; the establishment of a professorship in memory of Robert Johnston Niven to make possible bringing to the university distinguished men of letters and scholars who by their presence would give new stimulus and direction to the study of the humanities; the completion and equipment of the extension to Schermerhorn Hall; the beginning of construction of a residence hall for students at the Medical Centre; and the purchase of the King's Crown Hotel on West 116th Street.

The capital endowment in 1930, excluding value of plant (including Barnard College, Teachers College, College of Pharmacy, and St. Stephen's College), was \$78,513,531; the estimated total resources as of June 30, 1930 (including Barnard College, Teachers College, and College of Pharmacy), were \$137,720,023; and the annual budget for 1930-31 (including Barnard College, Teachers College, College of Pharmacy, and St. Stephen's College) was \$16,523,809. During 1929-30 the university received gifts in money representing a total of \$4,242,991. The principal additions to general endowment were \$370,000 from the estate of Amos F. Eno and \$13,500 from the Alumni Fund Committee. The chief additions to special endowments were the gift from an anonymous donor of \$90,380 to establish the Stanwood Cockey Lodge Foundation; \$63,100 from the estate of Frederick Bertuch to establish the Bertuch Fund; \$200,000 from the estate of Charlotte de Sers to establish the Robert Johnston Niven Fund. There was also a gift of \$109,000 from the late William Boyce Thompson for the departments of civil engineering, mining, and metallurgy, and substantial gifts

from many donors for various research projects. Gifts to income totaled \$1,303,790. The library contained 1,214,524 volumes. President, Nicholas Murray Butler, Ph.D., Hon.D., LL.D., Litt.D.

COMMUNISM. A world shaken by an abnormal combination of economic, political, and social convulsions provided fertile ground for the growth of the international Communist movement in 1930. Except in Germany, the preceding decade had witnessed a general recession of Communist strength from the peak reached in the immediate postwar years in Europe and in the other industrial nations of the world. The widespread unemployment and want accompanying the economic depression of 1929 and 1930 resulted, on the whole, in a revival of Communist activities and a growth in membership. Communist gains, however, were largely offset by a corresponding growth of Fascist and other anti-Communist groups, while democratic and republican parties lost ground, relatively speaking, to both Communists and Fascists.

In India, the Far East, and Latin America, the agents of the Communist International, which had headquarters in Moscow, derived support from both the economic suffering and growing nationalism of the native populations. Communists played an apparently important part in inciting internal disorders in India, the Afridi raids on the Northwest frontier, native uprisings in Indo-China, the wholesale depredations of peasant and bandit armies in Central and Southern China, and increasing unrest in the Dutch East Indies and among the submerged Indians and mestizos of Latin America. Communist propaganda was likewise held responsible for minor disorders in Turkey and among Negro miners in South Africa.

The difficulties of gauging the strength of the Communist movement were increased by the tendency among governmental authorities to attribute all forms of opposition to Communist influence. Indisputable evidence of the work of Bolshevik agents was furnished, however, by British authorities on the Indian border, and by French military chiefs in French Indo-China. A report on the work of Russian-trained Communist agitators in connection with political and industrial disorders in India and other countries was made by Solomon A. Lozovsky, general secretary of the Red International of Trade Unions, at a Communist International convention in Russia during the summer. World-wide unemployment demonstrations were held under Communist auspices and on orders from Moscow on Mar. 6, 1930, and again in connection with the annual May Day ceremonies.

Mexico severed diplomatic relations with Soviet Russia during the year, on the ground that Communist activities in Mexico and demonstrations before Mexican embassies and consulates in the United States and in Latin America were inspired from Moscow. In France and Great Britain

there were demands for similar action by way of retaliation for Russian-directed Communist propaganda in both countries and their colonies. In this connection, it is interesting to note that the Soviet Government's policy of disavowing responsibility for actions of the Communist International was rendered wholly untenable by developments in Russia. The dismissal on Dec 19, 1930, of Alexei Rykov, president of the People's Council of Commissars, by Josef Stalin, Communist dictator and general-secretary of the Executive Committee of the Russian Communist party, confirmed the contention of non-Russian diplomats that the Soviet Government and the Russian Communist party were one and the same thing. Rykov's office corresponded to that of Premier of Soviet Russia, while Stalin held no official connection with the Soviet Government.

It was widely charged in Europe and America that the flood of low-priced exports with which the Soviet Government demoralized a number of important world markets during the year was calculated to promote industrial maladjustment and political unrest in the capitalistic countries. Russia's need of foreign currency for the purchase of foreign machinery and technical aid was considered by other observers sufficiently desperate to explain the dumping of Soviet exports on world markets at whatever prices they would bring.

COMMUNISM IN THE UNITED STATES. The best evidence indicated that Communism gained comparatively few active adherents in the United States in 1930, despite a vigorous effort to check the steady decline in dues-paying members characteristic of the movement since 1919. The three main factions within the Communist fold varied their internal quarrels with intermittent demonstrations against capitalism and imperialism, in general, and against various government, municipal, and foreign diplomatic and consular officials, in particular. A Communist demonstration before the British Consulate in New York City on June 28, 1930, developed into a battle royal between rival Communist factions. In general, Communist influence within the American labor movement reached its lowest ebb since 1919. In claiming 15,000 members for the Communist movement in the United States, the Moscow *Pravda*, mouthpiece of the Communist International, declared on July 5, 1930, that of this total only 1500 members were organized "within 140 factory cells."

The number of Communist members and sympathizers in the United States was estimated at 500,000 by Representative Hamilton Fish, of New York, chairman of a special Congressional committee appointed to investigate Bolshevik activities. In a radio address on Nov. 29, 1930, Mr. Fish said that in the 1930 elections Communist candidates for Governor or United States Senator in less than half the States of the Union where they were on the ballots, polled an aggregate of about 100,000 votes. In New York City, 16,462 votes were cast for the Communist State ticket. Mr. Fish declared that about 70 per cent of the Communists in the United States were aliens and unable to vote. The actual dues-paying membership of the various Communist factions was estimated at between 10,000 and 12,000 by William Z. Foster, head of the Workers' (Communist) Party of America, in testifying before the Fish committee in Washington December 5.

Most competent non-Communist authorities on the subject placed the membership of the American party in 1930 at under 10,000.

Attention was directed to the Communist movement in the United States by the unemployment demonstrations of Mar. 6, 1930, in which the Communists were successful in enlisting large numbers of idle non-Communists. Demonstrations took place in 38 American cities, according to a survey by the American Civil Liberties Union. In 22 cities, they were prohibited or broken up or the participants clashed with the police. A total of 256 persons were arrested and 155 demonstrators and bystanders were injured seriously enough to require medical attention. Serious charges were lodged against the leaders only in New York City, where Foster and several associates were sentenced to three years in prison, in Buffalo, and Los Angeles. Foster and his aids were paroled within a few months, however. Additional Communist demonstrations were held in various American cities on May 1, but with little disorder.

One result of these demonstrations and of the increased violence displayed by the Communist "regulars" under Foster's leadership in the preceding months was the appointment of the Fish Congressional committee to investigate Communist activities. The committee continued its inquiry in various sections of the country throughout the year. Indications were that in 1931 it would recommend legislation curbing Communist activities and placing them again under the jurisdiction of the Department of Justice, whose authority to suppress revolutionary activities was rescinded in 1925. On May 2, 1930, Police Commissioner Grover A. Whalen of New York City made public documents purporting to implicate the Amtorg Trading Corporation, the Soviet commercial agency in the United States, as an instrument of subversive Communist propaganda. The documents were denounced as forgeries by Amtorg officials and were finally accepted as such, but not before the Amtorg representatives in New York City had been called before the Fish committee in July and the Russian press had threatened to terminate Soviet purchases in the United States.

COMMUNISM IN EUROPE. Outstanding developments with regard to European Communism during the year were the important gains made by the German Communists in the general elections of September 14, and the violent anti-Communist movement in Finland, provoked by increasing Communist activities, which drove Bolshevism completely underground. German Communists increased their strength in the Reichstag from 54 to 76 seats and polled approximately 4,587,000 votes, as against 6,400,000 by Adolph Hitler's Fascists and 8,572,000 by the Social Democrats, the strongest party. Subversive Communist organizations were uncovered during the year in Rumania, Hungary, and Italy. In most other European countries, where Communism enjoyed legal standing as a political party, moderate or insignificant gains were reported. Great Britain continued to show a remarkable immunity to Communist propaganda, despite the establishment of a Communist newspaper in London said to be subsidized from Moscow. In the Norwegian general elections on October 20 the Communist vote shrank to 22,000 from 40,070 in the preceding elections. See RUSSIA, GERMANY, FINLAND, CHINA, INDIA, TURKEY, RUMANIA, ITALY, HUN-

GARY, FRENCH INDO-CHINA, JAPAN, AUSTRALIA, MEXICO, FRANCE, under *History*, and *SOCIALISM*.

COMSTOCK, ANNA BOTSFORD. An American naturalist, died in Ithaca, N. Y., Aug. 24, 1930. She was born in Otto, N. Y., Sept. 1, 1854, and was graduated from Cornell University in 1878. In the latter year she was married to Prof. John Henry Comstock, the entomologist, with whom she collaborated in writing *How to Know the Butterflies*. She was assistant professor of nature study at Cornell from 1913 to 1920 and full professor from 1920 to 1922. She also edited the *Nature Study Review* from 1917 to 1923, and was noted as a wood engraver. At the time of her death she was associate director of the American Nature Association. In 1923 she was chosen by the National League of Women Voters as one of the 12 greatest living American women. Her works include: *Ways of the Sir-Footed* (1903); *How to Keep Bees* (1905); *Confessions to a Heathen Idol* (1906); *Handbook of Nature Study* (1911); *The Pet Book* (1914); and *Bird, Animal, Tree, and Plant Notebooks* (1914).

CONGO, BELGIAN. A Belgian colony in Central Africa, formerly the Congo Free State, which was annexed to Belgium in 1908. Area, estimated at 918,000 square miles; the native (Bantu) population is placed at 10,000,000. On Jan. 1, 1929, the white population numbered 23,276, including 15,900 Belgians. The chief city and former capital is Boma; by a royal decree of 1923, the capital was transferred to Leopoldville (population, 1620). Other important towns are Elizabethville, Stanleyville, and Coquilhatville. Catholic and Protestant bodies carry on missionary and educational work. About 231,684 children were in elementary schools in 1929.

Primitive agriculture is developing under Government supervision. Cattle thrive in the highlands of Katanga, Ituri, and Kivu. The Katanga district is also one of the world's most important sources of copper, the production in 1929 reaching 136,000 tons. Gold, diamonds, radium, cobalt, coal, and tin also are mined and iron, platinum, palladium, vanadium, zinc, and bauxite are known to exist. Important helium supplies were reported discovered in 1930.

Imports in 1929 were valued at 1,943,000,000 Belgian francs; exports, 1,444,000,000 francs. Leading imports, in order of the 1928 value, were machinery, provisions, and cotton goods. Chief exports, by quantity, were copper and copper ore, palm nuts, palm oil, copal (resins), cotton, tin, rubber, and diamonds. The Belgian franc in 1929 and 1930 exchanged at \$0.0278.

The budget for 1930, as presented to the Belgian Senate, estimated receipts at 690,810,000 francs and expenditures at 690,383,121 francs. Despite poor business conditions in the Congo in 1929, revenues exceeded the budget estimates. The public debt as of Dec. 31, 1927, amounted to 1,893,050,983 francs. Railway lines in operation at the beginning of 1929 totaled 2256 miles and the mileage at the end of 1930 was estimated at 3800. Completion of the railway from Lobito

Bay to Katanga in 1930 was expected to increase greatly the mineral output. Highways extended over 9000 miles, some 200 steam vessels provided transportation on thousands of miles of navigable rivers, and the chief administrative centres were connected by air lines. The colony is administered by a governor-general, appointed by the crown. Governor-General in 1930, Lieutenant-General Tilkens (appointed Dec. 27, 1927).

The districts of RUANDA-URUNDI, formerly in German East Africa, were turned over to Belgium as mandatory of the League of Nations and in 1925 were united administratively with the Congo. The area is 20,550 square miles and cattle raising is the main occupation. Budget estimates placed expenditures in 1930 at 36,441,000 francs and revenues at 36,687,000 francs. The death of 40,000 natives from famine in Ruanda Province was reported Aug. 22, 1930, by Bishop Claes, chief missionary of the Belgian Congo. Thousands of other natives emigrated to Uganda, Bishop Claes said. See BELGIUM under *History*.

CONGO, FRENCH. See FRENCH EQUATORIAL AFRICA.

CONGO FREE STATE. See CONGO, BELGIAN.

CONGREGATIONALISM. A religious denomination founded in the United States by the Pilgrims in Plymouth, Mass., in 1620 under the leadership of Brewster, Bradford, and Winslow. The origin of this movement lay in the Separatist activity in England. The Puritans of Massachusetts Bay followed a similar tendency and, as a result, the essential elements of Separatism and Puritanism were combined in Congregationalism. In this denomination, each church holds the right to frame its own statement of belief, and the policy of the denomination, as a whole, represents adaptation to conditions rather than accord with a theory of church government. The national council, by which the administrative affairs of the church are carried on, has no ecclesiastical authority, but includes ministerial and lay delegates elected by the State conferences and district associations.

The national council meets biennially, the session in 1929 having been held May 22-June 3 in Detroit, Mich. The principal feature of this meeting was the approval by the council of a plan of union with the Christian Church, which in turn was concurred in by the convention of the Christian Church on Oct. 25, 1929, in Piqua, Ohio. The plan provides that the membership of the National Council of Congregational Churches and the membership of the General Convention of the Christian Church shall constitute the voting membership of the General Council of the Congregational and Christian Churches, in which body the two denominations shall merge such interests as do not require the legal attention of either of the separate bodies, each of which will maintain its existence for necessary separate action for the time being. Provision also is made for the common administration of all benevolent activities, including home and foreign missions, religious education, and the like. Both bodies throughout their histories have been democratic in organization, and the plan of union provides for full local autonomy in the local church and in groups of churches associated together. The first meeting of the general council was called to meet in Seattle, Wash., June 25-July 3, 1931.

Statistics of the denomination as of Jan. 1, 1930, showed 5419 churches, 5629 ministers, and a church membership of 940,802. There were 3068

young people's societies, with a membership of 151,903. The Sunday-school enrollment was 713,810. The total raised for all benevolences was \$4,105,987, and the home expenses of the church were \$21,521,887.

The American Board of Commissioners for Foreign Missions is the oldest foreign-missionary society in America, having been organized June 29, 1810. On Jan. 1, 1930, there were 17 missions under 12 different flags; the stations connected with these missions numbered 97 and the out-stations 1641. The missionaries holding life appointments numbered 650 and included 148 ordained men, 76 unordained men, 211 wives, and 215 single women. There were also 91 associates serving for shorter periods, bringing the total number of missionaries up to 741, while native workers numbered 6183. Religious services were conducted in 2828 places; the organized churches numbered 819, with 102,864 communicants. The total church constituency numbered 300,249; Sunday schools, 1380; theological seminaries and training schools, 23, with an attendance of 1683 students; colleges, 11, with 4166 students; secondary schools, 80, and primary and elementary schools, 1243, with a total enrollment of 83,061. There were 26 hospitals and 56 dispensaries, with a staff of 48 physicians and 29 foreign nurses. Total expenditures of the board for the year ending Aug. 31, 1929, were \$2,133,752.

The field of the American Missionary Association included Negroes, Indians, and mountaineers in the South and Southwest; Orientals and Indians in the West; Porto Ricans, Mexicans, and Hawaiians. Statistics of the association showed that in 1928-29 there were 202 churches with 10,003 members and 24 schools with an enrollment of 5988 pupils. Expenditures during the same period amounted to \$1,283,703. The Congregational Home Missionary Society with its affiliate, the Congregational Sunday School Extension Society, organizes schools and churches and assists in the commissioning and support of pastors in four-fifths of the territory of the United States. In the remainder of the country similar work is done by independent State conferences. In 1929 these societies helped to maintain 602 churches and preaching stations, having a total membership of 31,010, and received 3166 persons into church membership; 519 home missionaries, including student summer workers, were enrolled. Expenditures amounted to \$495,513, and total receipts to \$499,371.

The Annuity Fund for Congregational Ministers was reported to have assets totaling \$8,518,489; the membership was 2472; and annuity payments amounted to \$104,670. The Congregational Church Building Society received \$561,316 in 1929 for current use and voted 202 church grants and loans and 31 parsonage loans amounting to \$601,371. Among the theological seminaries with which the denomination was affiliated were: The Chicago Theological Seminary; Divinity School of Yale University; Hartford Seminary; Oberlin Graduate School of Theology; Atlanta Theological Seminary Foundation; Union Theological College (Chicago); and Pacific School of Religion. In addition there were 41 colleges which have had some historical relation to Congregationalism, although a number of them are now undenominational.

The fifth decennial international council of the Congregational churches of the world was held in Bournemouth, England, July 1-8, 1930. This

council was attended by delegates from 15 different countries, 150 of them representing the churches of the United States. It consisted chiefly of fellowship and inspirational addresses, the principal topics under discussion being church union, world peace, and prohibition. Steps also were taken for a moderate degree of executive activity during the ensuing ten years, special provision being made for visits of officers of the international council to various groups of Congregational churches in different parts of the world. The accompanying table, reprinted from the *Congregational Year Book* for 1929, gives statistics of international Congregationalism:

INTERNATIONAL CONGREGATIONALISM

| Countries | Churches, Chapels, and Stations | Members of Churches | Members of Sunday Schools |
|-------------------------------------|--|---------------------------|------------------------------------|
| Africa ^b | 1,356 | 49,830 | 30,797 |
| Australia and New Zealand | 516 | 21,187 | 34,016 |
| Brazil ^c | 163 | 3,589 | 7,178 |

^a United Church. Comprises the former Presbyterian, Methodist, and Congregational churches.

^b Includes reports of London Missionary Society and American Board.

^c Repeated from last Year-Book.

The headquarters of the national council of the Congregational churches are at 287 Fourth Avenue, New York City, while the Congregational Publishing Society maintains branches at 14 Beacon Street, Boston, and at 19 South La-Salle Street, Chicago. The officers of the national council for 1928-30 were: Moderator, Dr. Fred B. Smith, New York City; associate moderator, Franklin Warner, White Plains, N. Y.; secretary, the Rev. Charles E. Burton, New York City; and treasurer, William T. Boulton, New York City.

CONGRESS. See UNITED STATES.

CONNECTICUT. POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,606,903. The population on Jan. 1, 1920, was 1,380,631. The capital is Hartford, population (1930) 164,072, (1920) 138,036. Other cities of over 100,000 were: New Haven (1930) 162,655, (1920) 162,537; Bridgeport (1930) 146,716, (1920) 143,555.

AGRICULTURE. The table in the next column gives the acreage, production, and value of the principal crops in 1929, and 1930.

Farms in the State numbered 17,481 in 1930, their total having declined greatly from 23,240 for 1925 and 22,655 at the census of 1920.

| Crop | Year | Acreage | Prod. Bu. | Value |

^a Tons. ^b Pounds.

MINERAL PRODUCTION. Clay products and the output of stone quarries formed in 1928, as normally, the bulk of the relatively small mineral industry of the State. The production of stone rose to 2,852,980 short tons for 1928, from 2,295,360 for 1927; by value to \$3,743,572 for 1928, from \$3,202,040 for 1927. The value of the clay products was, for 1928, \$2,558,384; for 1927, \$2,652,640. The production of lime attained the value of \$529,936 for 1928, and was below that of 1927, \$608,550. The total value of the mineral products of the State was, for 1928, \$7,599,655; for 1927, \$7,299,100.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$19,562,872 (of which \$1,751,776 was for local education); for conducting public-service enterprises, \$14,038; for interest on debt, \$656,865; for improvements, \$14,212,099; total, \$34,445,874 (of which \$14,600,249 was for highways, \$2,685,471 being for maintenance and \$1,914,778 for construction). Revenues were \$36,950,436. Of these, property and special taxes furnished 27.2 per cent; departmental earnings and compensation to the State for officials' services, 7.6; sales of licenses, 53.9 (in which was included State revenue from the gasoline sales tax, totaling \$3,666,501). The funded debt of the State on June 30, 1929, was \$16,291,100; net of sinking-fund assets, the debt was \$1,911,478. On taxable property assessed at \$2,803,670,028 were levied in the fiscal year State taxes of \$1,852,001.

TRANSPORTATION. The number of miles of railroad line under operation on Jan. 1, 1930, was 968.33. No further construction of railroad lines in 1930 was reported.

EDUCATION. The course of required study at the State normal school, for intending teachers, was extended to 3 years, from 2 years. For the academic year 1929-1930, the number of individuals of school age in the State was reported as 384,530. There were enrolled in the public schools in that year 312,782 pupils. Of these, 249,354 were in common schools or elementary grades and 63,428 were in junior high schools or in high schools. The expenditures of the year for public-school education were: current, \$28,164,164; total, including capital outlay, \$35,336,400. The year's salaries of teachers averaged \$1577 for the elementary and \$2218 for the high-school group.

CHARITIES AND CORRECTIONS. A Department of Public Welfare, established in 1919, inspects institutions of child care, jails, and county activities for dealing with delinquents and dependents. It promotes the organization of Juvenile Courts throughout the State. The chief of the State's charitable and correctional institutions operating in 1930 were the State Training School for Boys, the State Training School for Girls, Confederate

Soldiers' Home, State Hospital (mental), the State Training School for Mental Defectives, Academy for the Blind, and School for the Deaf.

POLITICAL AND OTHER EVENTS. The State Public Utilities Commission and the railroads in the State were attacked for not having observed a statute requiring that a railroad abolish its most dangerous grade crossings at the rate of one a year for every 50 miles of line. This attack was made by Albert Levitt, a professor of law in Brooklyn, N. Y., with a home in Connecticut, who had opposed the control of J. H. Roraback in the State Republican party organization. He obtained a mandamus to require the Attorney-General to bring proceedings to oust the members of the commission for failure to require compliance with the neglected statute. The case was then appealed to the State Supreme Court of Errors. While this appeal was pending the New Haven system, the chief railroad in the State, agreed with the Public Utilities Commission to eliminate several of the worst grade crossings in Hartford at an anticipated cost of about \$1,750,000 to be borne in part by the city. The Connecticut School for Boys, a State institution for delinquents, was subjected to an investigation by the Department of Welfare because of allegations of harsh treatment and the reported violent death of a boy inmate in February.

ELECTIONS. Dr. Wilbur L. Cross, dean-emeritus of the Yale Graduate School, who at the age of 68 had made a remarkable campaign as Democratic candidate for Governor, opposing Prohibition, was elected by a vote (unofficial total) of 216,047 to 209,425 for Lieutenant-Governor Ernest E. Rogers, his Republican opponent. Two Democrats and three Republicans were elected Representatives. The Legislature remained Republican.

OFFICERS. Governor, John H. Trumbull; Secretary of State, William L. Higgins; Treasurer, Samuel R. Spencer; Comptroller, F. M. Salmon; Attorney-General, Benjamin W. Alling.

JUDICIARY. Supreme Court of Errors: Chief Justice, C. W. Wheeler; Associate Judges, W. M. Maltbie, F. D. Haines, G. E. Hinman, John W. Banks.

CONNECTICUT COLLEGE. A liberal college of arts and sciences for the higher education of women in New London, Conn.; chartered in 1911 by the State of Connecticut. The enrollment for the autumn of 1930 was 567. The faculty numbered 60 members. The productive funds amounted to \$1,200,000, and the budget for the year, not including building operations, was more than \$500,000. There were 41,000 volumes in the library. During 1930 the college received approximately \$35,000 from the bequest of Mrs. Rienzi Robinson to establish scholarships which were awarded for the first time in September, and more than \$100,000 from the bequest of Lucretia Allyn to establish an endowed professorship, the first in the college. President, Katherine Blunt, Ph.D.

CONNELLEY, WILLIAM ELSEY. An American author, died in Topeka, Kans., July 15, 1930. He was born in Johnson Co., Ky., Mar 15, 1855. Largely self-educated, he had been a wholesale lumber merchant, a banker, and an oil producer. In 1905 he was instrumental in the formation of the Kansas Oil Producers' Association which, acting against the Standard Oil Company, brought about the dissolution of that corporation by the United States Supreme Court. He was also secretary for several years of the Kansas State His-

torical Society and president during 1921-22 of the Mississippi Valley Historical Association. His published works on the early history of Kansas, Indian traditions, and folklore include: *The Provisional Government of Nebraska Territory* (1899); *Wyandot Folk-Lore* (1899); *Kansas Territorial Governors* (1900); *John Brown—the Story of the Last of the Puritans* (1900); *Doniphan's Expedition* (1907); *Quantrill and the Border Wars* (1909); *Eastern Kentucky Papers* (1910); *History of Kansas* (5 vols., 1917); and *History of Kentucky* (5 vols., 1922). He was greatly assisted in his researches by his knowledge of the Indian languages, as exemplified in his publication of a Wyandot vocabulary.

COOK, WILLIAM WILSON. An American lawyer, died in Port Chester, N. Y., June 4, 1930. He was born in Hillsdale, Mich., Apr. 16, 1858, and was graduated from the University of Michigan in 1880, receiving a law degree there in 1882. Admitted to the New York bar in 1883, he practiced as a corporation lawyer until 1921. His books on law include *A Treatise on the Law of Corporations Having a Capital Stock* (8th ed., 1923); *Power and Responsibility of the American Bar* (1923); *Principles of Corporation Law* (1924); *American Institutions and Their Preservation* (1927). He made numerous gifts to the University of Michigan and, in his will, provided for a trust fund for the University law school estimated at \$12,000,000.

COÖPERATION. **CONSUMERS' COÖPERATIVES IN THE UNITED STATES.** For the year 1929 the federal Bureau of Labor Statistics made a study of 656 American coöperative societies, of which 604 were consumers, distributive or service groups, and 52 were the store departments of coöperative marketing associations. These 656 societies operated 845 establishments and employed 4046 full-time workers. The combined membership at the end of 1929 was 204,368. About 70 per cent of the total number of societies and 60 per cent of the membership were to be found in the North Central States. These consumers' societies had an aggregate capital stock of \$7,987,090, and reserves of \$4,324,375. Their business for 1929 amounted to \$64,665,369, of which the net earnings were \$2,980,481. Patronage dividends for 1929 totaled \$1,746,466. Table I (page 191) indicates types of business engaged in consumers' coöperative societies and the number of workers they employed. Table II indicates the amount of business done by the various types of consumers societies for the years 1926-29.

WHOLESALE COÖPERATIVES. In 1929, in the United States, there made their appearance two new wholesale coöperative organizations, viz.: the Eastern Coöperative Wholesale and the Union Oil Company. This second is a coöperative wholesale organization designed to serve the farmers' coöperative oil societies of the Middle West. The *Monthly Labor Review* reported that there were four similar organizations already in existence: the Farmers' Union State Exchange in Omaha, Nebraska, organized in 1914; the Coöperative Central Exchange, organized in 1917; the Minnesota Co-op Oil Company, organized in 1927; and the Grange Coöperative Wholesale organized in 1919. The new Eastern Coöperative Whole-

sale, in 1929, was doing a jobbing business only, not yet having extended its activity into warehousing. It was taking care of orders for flour, feed, groceries, oil, and the like. There were affiliated with it ten coöperative societies and, in addition, thirty-five unaffiliated societies were making their purchases through it. The *Monthly Labor Review* in presenting the activities of eight such wholesale coöperatives for the year 1929, indicated that the total sales among them was \$22,501,900, of which \$416,591 was net profits and \$297,036 was divided as patronage dividends.

13.0 per cent, respectively, of the total production in those lines.

Subsequently, plans were developed in the United States for establishing nation-wide coöperative sales agencies, with Federal Farm Board assistance. Associations were formed for the marketing of grain, livestock, wool, cotton, pecans, beans, and sugar beets, of which the first four were in operation during the first year.

COÖPERATIVE LEAGUE OF THE UNITED STATES. This society, which was organized in 1915 and which in 1920 reported a total of forty societies coöperating, in 1928 indicated that its member-

| Total | 366 | \$38,556,839 | 417 | \$42,420,446 | 504 | \$52,043,747 | 642 | \$64,665,369 |

FARM COÖPERATIVES. During the year the U. S. Department of Agriculture published "*Coöperative Marketing and Purchasing, 1920-1930*," a study in which for the first time the number of units of products handled by farm coöperative marketing associations was presented as a measure for coöperative activity. It was believed that quantities of products handled afford a more accurate measure than volume of business for determining gains and losses in coöperative processing, marketing, and purchasing.

According to this study, grain associations, including rice and dry beans, represented the largest group of the 12,000 farmers' business associations functioning in 1930, numbering 3448; followed by 2458 dairy-product, 2153 livestock, and 1384 fruit-and-vegetable associations. These groups were estimated to have handled, in the 1927-28 marketing season, 29.6; 27.0; 13.9; and

ship consisted of 116 societies which were paying full dues to the League. The League maintains an accounting bureau for the purpose of auditing books for the member societies in many of the eastern States. Only consumers' distributing, credit or service societies may become constituent members of the League. It will be observed, therefore, that marketing associations, which make up the most significant aspects of coöperation in this country, are excluded from membership on the grounds that they would detract too much attention from the problems of the consumers' societies. In the 116 societies affiliated there was to be found a total of 39,295 members with a share capital of \$2,887,986, and surpluses and reserves of \$1,444,973. Sales for 1928 totaled \$17,505,836, which was a net gain for the year of a little more than \$500,000 over the previous year.

CREDIT UNION MOVEMENT. Largely supported

by the Credit Union National Extension Bureau, the credit union movement in the United States had grown enormously in recent years. The purposes of this Bureau, which was located at Boston and which was financed by Edwin A. Filene, were as follows: to promote credit union legislation in the States; to assist in organizing credit union societies; to aid the credit union societies in the formation of State leagues; and to band these State leagues together into a national society. In view of the general unfamiliarity of the public and legislators with the requirements for a satisfactory credit union law, it was the first concern of the Bureau to prepare a standard law. Up to the end of 1930, this standard code has been passed in 32 States. Since Jan. 1, 1929, eight laws had been enacted. It would appear that most credit unions are usually formed among groups in which there is to be found some common bond, such as employment in the same plant, membership in the same organization, common nativity, etc. Thus, there were more than 200 such societies in the Federal Postal Service and 60 or more were among lodges of the Brotherhood of Railway Clerks.

COÖPERATIVE GASOLINE AND MOTOR OIL SOCIETIES. Since 1921 considerable progress has been made in the United States in the formation of co-operatively owned oil stations. It was estimated in 1930 that there were 400 such societies located for the most part in the States west of the Mississippi. The following reasons were advanced for the appearance of these coöperative groups: the almost universal use to-day of petroleum products; the small amount of capital necessary; the ease with which gasoline stations can be operated; the considerable margin between wholesale and retail prices which permits, therefore, a sizable return to consumers. It was reported that stations in operation had met with general success. For example, one such society, organized in Colorado, started in business in 1922 with 800 members and in 1930 boasted of 1400 members with a surplus of \$100,800, and dividends already paid of \$285,900. For the single year 1928 alone, dividends amounted to 26 per cent. There has also appeared a group of central purchasing co-operatives to supply the local stations. Among these may be numbered the Illinois Farm Supply Company, the Minnesota Coöperative Oil Company and the Union Oil Company. This last has an authorized capital of \$100,000 with shares of \$25 each. The programme of this particular society is of interest. It includes: a uniform name owned by the coöperatives; the handling of high-quality merchandise; coöperative advertising; co-operative buying of merchandise and equipment; the organization of new companies; development of a national chain of coöperative oil companies.

COÖPERATIVE HOUSING. In New York City, in 1920, there was organized among a group of middle-class workers a society known as Consumers' Coöperative Services, Inc. The initial project fostered by this group was a cafeteria and, in 1923, a coöperative laundry was taken over. In 1929 it was reported that the society had 3397 members and was conducting in all four cafeterias, four food shops, a bakery, and a lending library with a branch in each of the cafeterias. In 1925 this society shut up its coöperative laundry. In 1928-29 the organization reported a total business of \$612,226 with a net operating gain of \$32,530. In 1926 a part of the membership of the group organized a credit union which, in

1928, had on its books 272 members. It was reported that in 1930 the society had launched on a housing project. Plans called for the erection of a 12-story fireproof building designed to contain 66 apartments from one to four rooms each at a monthly rental of from \$25 to \$35 per room. The land and building were expected to cost \$666,000 of which \$321,000 was to be raised by first mortgage and \$140,000 by second mortgage bonds to be sold to the members. The tenants' investments, it was estimated, would total \$185,000.

LABOR BANKS. On June 30, 1930, there were operating in the United States 14 banks under labor union auspices, as compared with two such banks in 1920 and 36 such banks in 1925, when the movement was at its height. In 1930, these banks had total resources of \$69,000,000, as compared with resources of \$115,000,000 in 1925. The decline began in 1926 and had continued from year to year until then. The Brotherhood of Locomotive Engineers, which at one time owned an interest in 15 banks, was in 1930 no longer in the labor banking field. The most important bank in the group was the Federation Bank and Trust Company of New York with total resources of \$20,500,000, of which \$18,000,000 represented deposits. Second on the list stood the Amalgamated Bank of New York with total resources of \$12,800,000, of which \$11,400,000 represented deposits.

BUILDING AND LOAN ASSOCIATIONS. At the 38th annual meeting of the United States Building and Loan League, held in July, 1929, there were reported to be in existence 12,343 building and loan associations with a total membership of 12,111,209 persons and with total assets of \$8,695,154,220. The mortgage loans outstanding represented a total of \$7,787,405,383. The State of Pennsylvania headed the list and here the associations had assets of \$1,400,000,000. Ohio came second with \$1,283,000,000. New Jersey ranked third with total assets of \$1,151,000,000.

PHILIPPINES. In 1928 there were 550 agricultural coöperative associations in the Philippine Islands with a total of 90,000 members and with a total paid up capital stock of \$980,000 pesos. (The peso is worth 50 cents.) There was outstanding in loans to members in 1928 a total of 2,800,000 pesos.

COÖPERATION IN EUROPE. Data collected by the International Labor Office for 1930 indicated the continued growth of the coöperative idea in the countries of Europe. It is significant to note that in a number of the European nations, particularly Bulgaria and Great Britain, the central consumers' coöperative organization was the most important single business in the country. In Sweden, too, the Swedish Coöperative Union owned the largest flour mills of Europe while the Glasgow Coöperative Society owned the largest European bakery. In Germany the canning factory of the Coöperative Wholesale Society was the largest in the country and the same was true of the printing works operated by the German Consumers' Coöperative Organizations. It is interesting to note, too, that in Bulgaria 25 per cent of the country's sugar was handled by co-operatives. In Denmark 13 per cent of the total retail trade was coöperatively handled; 40 per cent of the cocoa trade; 25 per cent of the chocolate trade; 23 per cent of the retail food trade; 13 per cent of the wholesale food trade; 12.5 per cent of the coffee trade; 12.5 per cent of the margarine trade. In Germany 9 per cent of the lard trade was coöperatively handled and 5 per cent

of the sugar trade. In Great Britain 20 per cent of the meat trade was handled in this fashion; 15.5 per cent of the corn meal trade; 14 per cent of the sugar trade; 14 per cent of the tea trade; 14 per cent of the butter trade; 12 per cent of the bacon trade; 10 per cent of the milk trade; 8.6 per cent of the cheese imports; 8 per cent of the coal trade. In Hungary 25 per cent of the salt trade was handled in this manner; 20 per cent of the vinegar trade; 20 per cent of the gasoline trade. In Poland 11 per cent of bread production was coöperatively handled; 8 per cent of the salt trade; 6 per cent of the sugar trade; 5 per cent of the tobacco trade. In Sweden bread grains handled by coöperatives made up 25 per cent of the total. In Switzerland 10 per cent of the country's flour production was in the hands of coöperatives. Of course in agriculture the rôle of the coöperative society is of particular significance. In many nations of Europe the greater part, and in most a considerable proportion, was in the hands of coöperative supply societies. Thus, in Austria 80 per cent of seed potatoes was controlled by coöperatives. In Czechoslovakia 50 per cent of the saltpetre was thus controlled. In Sweden 25 per cent of super-phosphates was thus handled. The accompanying table indicates the scope of agricultural coöperative marketing associations in the indicated countries:

PROPORTION OF TRADE IN EACH SPECIFIED COMMODITY HANDLED THROUGH COÖPERATIVE MARKETING ASSOCIATIONS

| <i>Country and commodity</i> | <i>Per cent coöperatively handled</i> |
|-----------------------------------|---------------------------------------|
| Australia: | |
| Butter (exports) | 91.0 |
| Canada: | |
| Apples, British Columbia | 83.0 |
| Apples, Nova Scotia | 40.0 |
| Grain (exports) | 25.0 |
| Wool (exports) | 25.0 |
| Denmark: | |

| Oranges (exports) | 35.0 |

GREAT BRITAIN. In Great Britain there was an increase in membership in coöperative societies, over the year 1928, of 289,000 persons, with an increase in the paid in capital of \$67,834,000 and an annual business increase of \$37,583,000. During the three years 1926 to 1928, nearly 1,000,000

new persons joined the British coöperative movement. The British coöperatives are large employers of labor and in 1928 had 233,300 persons on their payrolls. In 1928 in this country there were in all 1454 societies of which 1293 were retail consumers' coöperatives, 2 were wholesale coöperatives, and 88 were workers' productive societies. The total membership in that year was 5,858,000 of which all but 50,000 were to be found in the consumers' societies. The paid in capital was \$869,000,000 divided as follows: \$608,385,000 in the retail consumers; \$237,154,000 in the wholesale societies; and \$10,229,000 in the workers' productive groups. The annual business of these three types was as follows: total, \$1,553,498,000; retail consumers, \$1,010,538,000; wholesale societies, \$501,291,000; workers' productive societies, \$18,336,000.

AGRICULTURAL COÖPERATIVES IN SCOTLAND. A government committee investigating the situation of the agricultural coöperatives in Scotland reported that there existed in 1930, 93 supply societies, 44 egg marketing societies, 19 dairy associations, 1 wool marketing society, 1 livestock society, 1 bacon factory, 1 slaughter house, and 1 association each for the purpose of marketing grain, fruit, and flour. It was the opinion of the committee that coöperative societies in this country had justified their existence and proved that coöperation for purposes of purchasing and marketing was a sound and practical method.

However, a measure of government support was important and for this reason recommendations were made for the purpose of enlisting governmental assistance. The recommendations of the committee among others were: 1. That the State should guarantee to recognize banks, loans and other drafts to approved agricultural societies up to the amount of £1,000,000 in view of the fact that the chief difficulty confronting agricultural coöperation is the inability to raise funds. 2. That a Scottish Agricultural Coöperative Federation be set up and that local societies be required to join this Federation and subscribe for shares in it. 3. That marketing contracts be adopted binding the members to deliver their crops to the association. 4. That a system of compulsory grading of products be introduced. 5. That steps be taken to protect marketing agencies against minorities which refuse to become members, that is to say, that if an association can prove that it handles not less than 75 per cent of the total production of a specified commodity, the minority group in this industry should be compelled to market through this association.

FRANCE. Since 1913 the history of French coöperation has seen great advances. In 1913 there was a total of 2980 cooperative societies with 864,922 members and sales totaling 317,000,000 francs. By the year 1928 the number of societies had increased to 3513 with a membership of 2,285,221 persons and a sales total of 3,552,883,000 francs. It is significant to note, too, that in the year 1928 there existed 52 regional unions controlling 3181 shops with a membership of 677,374. These unions reported sales amounting to 1,107,000,000 francs and a paid in capital of 66,067,000 francs. In France, membership in a coöperative society usually resides in the head of the family. It might be estimated conservatively, therefore, that the coöperative population of this country is in the neighborhood of 9,000,000 persons or almost one-fourth of the total inhabitants. Besides, many persons patron-

ize the coöperative stores without formally obtaining membership. It is generally recognized that on the continent of Europe, where coöperation looms large in the economic life, the movement serves as an effective check in the stabilizing of retail prices.

RUSSIA. In 1929 it was reported that membership in Russian coöperative societies, in the towns, included 13,800,000 members representing 70 per cent of the urban population. However, in rural communities only 31 per cent of the population had membership in coöperative societies. Russia has seen in recent years the greatest advances made in the development of the coöperative idea. Encouraged by the State—indeed coöperation is one phase of the Soviet communist programme—the coöperative movement has been steadily pressing into those activities not heretofore reached, particularly building trades, timber cutting, farm labor, and the workers in factories and infant industries. It was reported that the consumers' coöperative movement of Russia suspended the payment of patronage rebates in 1928. This was due to the fact that the coöperative societies charged below the current prices, unlike the practice in most countries. Thus, at the end of 1929 coöperative prices were 71.5 per cent lower than those of the private traders. It was reported that despite the cutting of prices by the Russian coöperatives there were still sizable margins of gain and that these profits were being employed for propaganda in cultural work. In 1926-27 the coöperative movement spent for such purposes almost \$3,000,000; but by 1938-39 this expenditure had mounted to \$15,700,000. See *AGRICULTURAL EXTENSION WORK; HORTICULTURE; GREAT BRITAIN under Industry*.

COPPER. The copper industry in 1930 was severely affected by the general worldwide industrial depression. Production and consumption, which made new high records in 1929, dropped sharply, according to the U. S. Bureau of Mines.

Although production and consumption in 1930 both were at a rate far below 1929, the decline in production lagged behind that in consumption, causing a substantial increase in stocks. Estimated stocks of refined copper at domestic refineries at the end of the year were the largest on record. Blister stocks, which first reflect any change in rate of production, were materially lower at the end of 1930 than at the end of 1929. Falling consumption and increasing stocks were accompanied by a severe drop in the price of refined copper. The price held at 17.77½ cents a pound at refinery from the middle of April, 1929, to the middle of April, 1930, when it dropped 4 cents. This drop was followed by numerous others which brought the price to a low for the year of 9.27½ cents a pound on October 23. The price jumped from 9.27½ cents a pound on November 11 to 11.40 cents a pound on November 15 and immediately started to drop again. On December 15 it was 9.77½ cents and on December 23 it was 10.07½ cents. Imports of unmanufactured copper established a new high record in 1929 while exports of metallic copper decreased; in 1930, for the first time in fifty years, imports exceeded exports.

The smelter production of copper in the United States from domestic ores in 1930, as estimated by the Bureau of Mines from reports of the smelters, was 1,375,000,000 pounds, compared with 2,003,000,000 pounds in 1929. The 1930 produc-

tion was thus 81 per cent lower than that of 1929, and was the smallest production recorded since 1922. The estimated smelter production from domestic ores for December as reported by the smelters, was approximately 100,000,000 pounds which was about 16,000,000 pounds lower than the average for the 11 months preceding. The production of new refined copper from domestic sources, determined in the same manner as smelter production, was about 1,485,000,000 pounds, compared with 1,983,000,000 pounds in 1929. In 1930 the production of new refined copper from domestic and foreign sources amounted to about 2,230,000,000 pounds, compared with 2,740,000,000 pounds in 1929—a decrease of 510,000,000 pounds or 19 per cent. The production of secondary copper by primary refineries dropped from 334,000,000 pounds in 1929 to about 250,000,000 pounds in 1930, or a decrease of 84,000,000 pounds. Thus the total primary and secondary output of copper by the refineries was 19 per cent lower in 1930 than in 1929, being about 2,480,000,000 pounds in the past year compared with 3,074,000,000 pounds in 1929.

The imports of unmanufactured copper during the calendar year 1930, according to the Bureau of Foreign and Domestic Commerce, amounted to 817,072,304 pounds, a monthly rate of 68,000,000 pounds, compared with 974,312,201 pounds for the entire year 1929, a monthly rate of 81,000,000 pounds. Imports in December totaled 55,000,000 pounds. The total imports for 1930 were estimated to show a decrease in quantity of approximately 157,000,000 pounds for the year, or a drop of about 15 per cent.

The exports of metallic copper during 1930 amounted to 744,472,936 pounds, compared with 983,126,326 pounds exported during 1929. Exports of refined copper in ingots, bars, or other forms in 1930 totaled 599,163,768 pounds, valued at \$79,691,216. Of this quantity the United Kingdom received 142,789,077 pounds, the highest amount; France was next with 141,237,293 pounds; Germany was third with 93,860,008 pounds; and Italy fourth with 83,756,062 pounds. Comparative figures for exports in 1929 were: To the United Kingdom, 175,449,512 pounds; to France, 175,264,821 pounds; to Germany, 178,879,194 pounds; to Italy, 84,491,310 pounds. Total exports in the same category in 1929 amounted to 822,453,924 pounds, valued at \$148,435,789. The 1930 exports of copper rods declined to 75,137,814 pounds, valued at \$10,958,235, as compared to shipments of 81,087,829 pounds, valued at \$14,584,737, in 1929. Exports of insulated copper wire and cable totaled 20,545,289 pounds, valued at \$4,639,577 (25,080,448 pounds, valued at \$6,176,455, in 1929); old and scrap copper, 33,875,740 pounds, valued at \$3,744,311 (37,635,489 pounds, valued at \$5,675,750, in 1929); copper wire, 15,750,425 pounds, valued at \$2,714,352 (16,868,636 pounds, valued at \$3,332,229, in 1929); and copper plates and sheets, 10,983,369 pounds, valued at \$1,876,248 (6,322,719 pounds, valued at \$1,576,383, in 1929).

Refineries in the United States reported that at the end of 1930 approximately 667,000,000 pounds of refined copper were in stock, more than double the reserve of 306,000,000 pounds at the end of 1929. The latter quantity, in turn, was well over two and one-half times the amount on hand at the end of 1928. It was estimated that stocks of blister copper at the smelters, in transit to refineries, and at refineries, and materials in process

of refining were about 371,000,000 pounds on December 31, compared with 500,000,000 pounds at the end of 1929, a decrease of 129,000,000 pounds. Total smelter and refinery stocks at the end of 1930 were 1,038,000 pounds, representing an increase of 232,000,000 pounds over stocks at the end of 1929, but 86,000,000 pounds less than the record stocks of 1920. The quantity of new refined copper withdrawn on domestic account during the year was about 1,277,000,000 pounds, compared with 1,779,000,000 pounds in 1929, a decrease of 502,000,000 pounds or 28 per cent. The method of calculating domestic withdrawals is shown in the accompanying table.

NEW REFINED COPPER WITHDRAWN FROM
TOTAL YEAR'S SUPPLY ON DOMESTIC AC-
COUNT, 1929-1930, IN POUNDS

| | 1929 | 1930 |
|---|----------------------|----------------------|
| Refinery production of new copper from domestic sources | 1,983,000,000 | 1,485,000,000 |
| Refinery production of new copper from foreign sources | 757,000,000 | 745,000,000 |
| Imports of refined copper (December, 1930, estimated) | 134,000,000 | 89,000,000 |
| Stocks of new refined copper on January 1 | 114,000,000 | 306,000,000 |
| | <u>2,988,000,000</u> | <u>2,625,000,000</u> |
| Exports of refined copper (ingots, bars, rods, or other forms) (December, 1930, estimated) .. | 903,000,000 | 681,000,000 |
| Stocks December 31 ... | 306,000,000 | 667,000,000 |
| | <u>1,209,000,000</u> | <u>1,348,000,000</u> |
| Total withdrawn on domestic account | 1,779,000,000 | 1,277,000,000 |

The same decline in production as was manifested in the United States held also throughout the world, and there were corresponding declines in prices and demand for the metal. The American Bureau of Metal Statistics reported the world production of copper, on the basis of refined copper content of blister copper, 1,769,635 short tons, as compared to 2,104,100 tons in 1929. Of the total for 1930, United States contributed 820,000 tons; Mexico, 58,535 tons; Canada, 113,004 tons; Chile and Peru, 280,554 tons; Japan, 87,924 tons; Australia, 14,658 tons; Germany, 65,060 tons; other European countries, 152,900 tons, and other countries, 177,000 tons.

Of the important developments outside of the United States mention may be made of two new refineries at Sudbury, Ontario, and the construction of a refinery at Montreal, Quebec. The Canadian production, as stated, amounted for the year to 113,004 tons, as compared with 121,151 tons in 1929 and 96,634 tons in 1928.

In the Belgian Congo the Union Minière du Haut-Katanga put its new Sogefor hydroelectric station at Lufira Falls into operation, but did not undertake any new or large expansion operations. Its output for the year was stated at 151,000 tons. In Northern Rhodesia development and expansion was well under way and it was estimated that the Roan-Antelope property would begin production at the rate of 50,000 tons of metal per year in September, 1931, while construction work was active at the N'kana mine at Bwana M'Kubwa, and at Mufulira. See GEOLOGY for discussion of Northern Rhodesia field.

In the new copper refining plants constructed improved processes continued to be introduced, and the economies which had characterized the

industry continued, especially at the large smelters and refineries. See METALLURGY. The general economic situation in connection with the copper industry as in previous years was of considerable importance in view of the artificial maintenance of a price which general opinion during 1930 seemed to consider not altogether justifiable, and serving to restrict the use of the metal. Then, too, the increased output which was bound to come from Canada and Africa naturally was a source of concern not only to American producers, but to the industry as a whole and particularly to consumers who believed they could buy cheaper in a not distant future. With Belgian Congo and Northern Rhodesia increasing their outputs, it was realized that further adjustments might be required.

COPYRIGHT. Registrations for the fiscal year 1929-30, according to the report of the United States Register of Copyrights, numbered 172,792, as compared with 161,959 for the preceding year. Of these, 61,835 were classed as books, but included pamphlets, leaflets, and contributions to periodicals, those printed in the United States numbering 55,943, those printed abroad in a foreign language, 4604, while the remainder, 1228, were English books registered for *ad interim* copyright. The chief classes of the remaining registrations, in the order of numerical importance, were: Periodicals, 43,039 numbers; musical compositions, 32,129; prints and pictorial illustrations, 9170; photographs, 4311; dramatic or dramatico-musical compositions, 5754; works of art, including models or designs, 2734; maps, 2554; drawings or plastic works of a scientific or technical character, 1087; motion-picture photoplays, 890; and motion pictures not photoplays, 1305. The renewals numbered 5937, as compared with 4948 in the preceding year. The fees applied during the year amounted to \$327,629. The total number of articles deposited during the fiscal year ended June 30, 1930, was 275,214.

The gross receipts of the Register's office for the fiscal year were \$336,980; the total expenditure for salaries, \$228,632, and for supplies, \$1357. The year's business showed a substantial increase over that of 1929, which was the largest in the history of the office up to that time. One copyright proclamation was issued during the year, namely, in behalf of citizens of the Irish Free State, Sept. 28, 1929, including protection with respect to the mechanical reproduction of music, under Sec. 1 (e) of the Copyright Act of 1909.

CORINTH. See ARCHAEOLOGY.

CORN. The estimated yields of corn in 1930 of 14 countries reporting to the International Institute of Agriculture, Rome, totaled 2,628,855,000 bushels as compared with 3,288,116,000 bushels in 1929. In these estimates the production of the southern hemisphere and of the Soviet Republics was not included. The yield of these 15 countries was 21.1 per cent below the production of the preceding year and 18.5 per cent under the annual average for the five years 1924-28. The area was reported as 128,458,000 acres in 1930 and 126,485,000 acres in 1929, placing the 1930 area 1.6 per cent above that of the year before and 1.8 per cent over the average for the five-year period mentioned. The production of the leading corn growing countries in 1930 exclusive of the United States was reported as follows: Rumania, 155,435,000 bushels; Jugoslavia,

137,888,000; Italy, approximately 116,000,000 bushels; Hungary, 52,328,000; Bulgaria, 34,062,000 bushels; and Spain, 27,327,000 bushels. The production of the Soviet Republics in 1929 was estimated at 165,741,000 bushels and the area planted in 1930 was reported as 9,625,000 acres. The 1929-30 corn crop of Argentina was estimated at 249,159,000 bushels, which was 7.5 per cent above the preceding yield. Canada in 1930 produced 4,801,000 bushels on 162,000 acres, the crop being nearly 7.4 per cent below that of 1929 and the area 6.5 per cent greater than the year before, but both yield and area were considerably below the average for the five years 1924-1928.

In the United States the corn crop of 1930 was the smallest since 1901 and in both years the low yields were largely due to drought. The growing season of 1930 was exceptionally dry in the southern part of the corn belt and sufficiently dry over the remainder to reduce the yield to a marked extent. A late growing season in many important States was very beneficial to the crop. The production as estimated by the Department of Agriculture was 2,081,048,000 bushels, the yield of the entire acreage whatever the method of harvesting or use of the crop. As compared with 2,614,132,000 bushels produced in 1929 this year's production was less by more than 20 per cent and it also stood over 26 per cent below the crop of 1928, and nearly 23 per cent below the average for the five years 1924-1928. The estimated production of husked and snapped corn was 1,743,795,000 bushels or 20.6 per cent less than in 1929 and 22.6 per cent under the five-year average. The 1930 acreage was reported as 100,829,000 acres, or 3 per cent above the 1929 acreage of 97,856,000 acres. During the previous 20 years the annual acreage has been about 100,000,000 acres, while in the 40 years preceding 1910 the area increased from about 37,000,000 acres in 1869 to 98,383,000 acres in 1909. The average yield per acre was 20.6 bushels in 1930, 26.7 bushels in 1929 and 28.2 bushels for the 10-year average. The area cut for silage was reported as 4,766,000 acres in 1930 yielding 28,956,000 tons, and 4,306,000 acres in 1929 yielding 29,987,000 tons. The acreage hogged down, grazed, and cut for forage was estimated at 11,362,000 acres as against 10,882,000 acres in 1929. Owing to feed shortage due to the drought a large acreage of corn stover after picking the ear corn was used as a substitute for hay. The December 1 farm price for shelled corn was 66.3 cents per bushel compared with 78.1 cents on the corresponding date in 1929 and on this basis the total farm value of the 1930 crop was \$1,378,874,000 and of the 1929 crop \$2,042,893,000.

The leading corn growing States reported the following yields: Iowa, 360,750,000 bushels; Illinois, 238,298,000 bushels; Nebraska, 235,695,000 bushels; Minnesota, 135,780,000 bushels; and Indiana, 110,197,000 bushels. All other States reported yields under 100,000,000. In average yield per acre the States mentioned ranged from 32.5 bushels for Iowa to 25.5 bushels for Illinois. The range for all the States was from 46 bushels per acre in Massachusetts to 4.7 bushels in Arkansas. The States leading in area were as follows: Iowa, 11,100,000 acres; Illinois, 9,345,000 acres; Nebraska, 9,171,000 acres; Kansas, 6,347,000 acres; and Missouri, 5,922,000 acres.

As determined by the U. S. Department of

Agriculture the cost of producing a bushel of ear corn in 1929 was 73 cents, the same as in 1928. The cost data included charges for labor and for the use of land so that a selling price of 73 cents per bushel for the 1929 crop would have paid for time and investment. As of November 1, 1930, the stock of corn held on farms was reported as 72,349,000 bushels or 2.8 per cent of the crop of 1929. The corn exports of the United States for the fiscal year ended June 30, 1930, amounted to 9,354,000 bushels valued at \$9,016,000 while during the preceding fiscal period they reached 40,744,000 bushels valued at \$90,917,000. In addition to the grain 231,000 barrels of corn meal, 6,174,000 pounds of corn breakfast food and 363,000 pounds of corn oil were exported during the past fiscal year. The imports for the same period were 496,000 bushels of corn as grain, or 6000 bushels more than for the preceding year. The exports of corn which reached the high record of 213,000,000 bushels in 1900 had declined since that time. The importance of glucose, corn starch, and other corn products in American foreign trade had increased in recent years.

Checked by the heat and drought the European corn borer did not spread in 1930 as much as anticipated (see ENTOMOLOGY, ECONOMIC). The National Corn Husking Contest of 1930 was held at Norton, Kansas, November 14, and Fred Stanek of Fort Dodge, Iowa, who won the championship also in 1924, 1926 and 1927, was the winner with 2160 pounds of corn husked in the prescribed 80 minutes. A class of U. S. army officers under the direction of the Department of Agriculture studied the methods and details of corn grading in accordance with the Federal standards for the purpose of qualifying as inspectors for the army.

CORN BORER. See ENTOMOLOGY, ECONOMIC.
CORNELL UNIVERSITY. A nonsectarian institution for the higher education of men and women in Ithaca, N. Y.; founded in 1865. There were 5725 students enrolled in the autumn session of 1930, distributed as follows: Graduate school, 782; law school, 179; medical school, the main division of which is in New York City, 237; arts and sciences, 1945; architecture, landscape architecture, and fine arts, 173; engineering, 990; veterinary medicine, 161; agriculture, 737; and home economics, 574, including 172 enrolled in a four-year course in hotel administration. Of these students 1342 were women. The registration for the 1930 summer session was 2385. The faculty, composed of 1153 members, had 305 professors, 202 assistant professors, 13 lecturers, 371 instructors, and 262 assistants. Additions to the staff of professors included: Carl Stephenson and Arthur P. Whitaker in history; Thomas V. Smith in philosophy; Whiton Powell in agricultural economics; and Day Monroe in home economics. The faculty lost by death Anna Botsford Comstock, professor of nature study, emeritus; Martin W. Sampson, professor of English literature; and E. Gorton Davis, professor of landscape architecture, and by retirement, William A. Hammond, professor of ancient philosophy and aesthetics and dean of the university faculty; M. C. Ernsberger, professor of heat-power engineering; and Willard Austen, librarian of the university library. Visiting lecturers in chemistry on the George Fisher Baker foundation were: Prof. Kasimir Fajans of the University of Munich and Prof. George Hevesy of the University of Freiburg.

The productive funds on June 30, 1930, were \$24,020,872. The income applicable to current expenses of the fiscal year 1929-30 was approximately \$8,000,000, including \$2,225,169 of State and \$411,242 of Federal appropriations. Gifts amounting to \$2,744,453 were received during the fiscal year. The lands and buildings were valued at \$13,500,000 and the equipment at \$4,448,000. The library contained 810,000 volumes. President, Livingston Farrand, M.D., L.H.D., LL.D.

COSMOLOGY. See ASTRONOMY.

COSTA RICA, kôs'ta rēkă. A republic of Central America lying between Nicaragua and Panama, and bounded by the Caribbean Sea on the east and the Pacific Ocean on the West. Capital, San José.

AREA AND POPULATION. The area is estimated at 23,000 square miles. The population was 741,524 at the 1927 census, as compared with 243,205 at the census of 1892. The estimated population on Jan. 1, 1929, was 492,542. Births in 1928 totaled 23,109; deaths, 11,332; marriages, 3517; immigration, 8858; emigration, 8420. Populations of the chief cities in 1929 were: San José, 52,555; Alajuela, 8866; Heredia, 7900; Puntarenas, 7854; Limón, 7757; and Cartago, 7313. Roman Catholicism is the state religion but religious liberty is guaranteed by the Constitution. About 75 per cent of the population is of European descent, 10 per cent mestizo, 10 per cent Negro, and 5 per cent Indian.

EDUCATION. Elementary education is free and compulsory. In 1929, there were 483 elementary schools, with 46,675 enrolled pupils; a lyceum for boys at San José, with 590 pupils; and a college for girls, with 650 pupils. There are normal schools or colleges at Heredia, Cartago, and Alajuela. The average attendance in elementary schools was 42,994.

PRODUCTION. Costa Rica is primarily an agricultural country, with coffee and bananas, the chief commercial crops, accounting for about nine-tenths of the export trade. Large areas not yet cleared for cultivation contain cedar, balsa wood, and large and virtually untouched stands of cabinet woods. The area under cultivation in 1929 totaled 1,155,000 acres, of which 127,728 acres were planted to coffee, and 92,133 acres to bananas. The other leading crops, ranking according to the area planted, were corn, cacao, sugar cane, beans, rice, potatoes, tobacco, and manioc.

Costa Rican prosperity hinges directly upon the quantity and the price of the coffee crop, the bulk of which is disposed of in Great Britain. A bumper crop in 1929-30 was more than offset by the acute depression in the coffee market, which led to a general curtailment of trade during 1929 and 1930. Banana production has steadily decreased since 1913, owing to the Panama disease, abandonment of exhausted lands, and legislation restricting the activities of foreign producers. Cacao production, on the other hand, more than doubled between 1922 and 1930. Sugar, once of importance, is playing a decreasing rôle. Livestock in the country in 1929 included 443,271 cattle, 101,755 horses, 9224 mules, 290 donkeys, 103,587 swine, and 1079 goats. Gold and silver mining are other important industries, and manganese deposits exist near the Pacific coast. A census of 1928 showed 6783 small factory establishments.

COMMERCE. Imports in 1929 totaled \$20,163,936, as compared with \$17,893,000 in 1928, while exports amounted to \$18,197,910, as against \$19,635,841 in the previous year. The unfavorable balance of trade was \$818,750. Leading exports, as enumerated in the President's message to Congress on May 1, 1930, were: Coffee, 19,676 metric tons (18,482 in 1928); bananas, 6,112,170 stems (7,323,481); cacao, 5906 tons (5769); lumber, 5016 tons (6445). Values of the respective exports in 1929 were: Coffee, 48,900,000 colones (1 paper colon equals \$0.25); cacao, 3,581,076 colones; lumber, 465,972 colones. Agricultural products, principally coffee and bananas, constitute more than 90 per cent of all exports. Leading imports are cotton and its manufactures, iron and steel, flour, petroleum, and motor cars. A total of 22,960 cattle, valued at \$683,494, were imported from Nicaragua in 1929.

During the year ended June 30, 1930, exports to the United States were valued at \$5,010,212, or 9 per cent less than in the preceding year; imports from the United States were \$6,173,681, or 26 per cent below the 1928-29 figure of \$8,360,936.

FINANCE. Ordinary revenues during 1929 reached a record level, totaling 35,395,988 colones (1 colon equaled \$0.25), as compared with 33,319,000 colones in 1928. The 1929 receipts were 7,900,000 colones over budget estimates. Expenditures, however, totaled 36,220,066 colones, also the largest on record. The disbursements included extraordinary expenditures totaling 7,490,897 colones for public works. The public debt increased by about 3,000,000 colones during the year to a total of 79,258,806 colones.

In his message to Congress on May 1, the President described the declining note circulation as sufficiently serious to demand emergency legislation to permit the *Caja de Conversión* to increase its currency issue. Note circulation of the *Banco Internacional de Costa Rica* and the *Caja de Conversión* declined from 15,325,000 and 6,700,450 colones, respectively, on Apr. 22, 1929, to 14,920,000 and 2,492,682 colones on Apr. 22, 1930.

COMMUNICATIONS. There were (1929) a total of 413 miles of railway line, of which 81 miles were Government-owned. Of the private lines, the Northern Railway and its leased line, the Costa Rica Railway, totaling 264 miles, earned net profits of \$849,413 in the fiscal year 1929 (\$488,531 in 1928). The net profits of the Government-owned lines were \$310,308 (\$210,930 in 1928). There are about 130 miles of motor roads. Air mail service was inaugurated in March, 1930, between San José and Puntarenas, where connection was made with international air lines. In 1928, 641 ships of 1,266,872 tons entered and 635 ships of 1,261,670 tons cleared the ports of the republic.

GOVERNMENT. The executive power is vested in the President who is elected for four years and legislative power in a chamber of representatives, called the Constitutional Congress, with 43 deputies, elected for four years, one-half retiring every two years. Voting for President, deputies, and municipal officers is secret, direct, and free. President in 1930, Don Cleto Gonzalez Viquez, who was elected on Feb. 12, 1928, for the term 1928-32. The Government in 1930 controlled only 18 seats in Congress, there being 14 members of the Opposition, and 11 Independents, who held the balance of power between the other parties.

HISTORY. Costa Rica's serious economic depression and the increasing difficulties of the Government's financial position provided the background for turbulent political activities during 1930. Early in February the Minister of Finance announced that the Treasury was confronted with a \$2,125,000 deficit for the calendar year 1930. Income for the year was estimated at \$2,000,000 less than in 1929, while appropriations were \$1,400,000 in excess of the 1929 outlays. The economic depression, caused principally by the lower market prices for coffee and cacao, curtailment of banana production by the United Fruit Company, and the Government's failure to secure a \$2,750,000 American loan with which to finance an extensive highway expansion programme already contracted for, were considered primarily responsible for the financial situation. Efforts to repeal the banana tax law featured the session of Congress which convened in May. On July 8, Congress voted to leave to the President's discretion the time and condition of the reëtry of Costa Rica into the League of Nations, from which it withdrew in 1924. An extra session of Congress was called when the regular session ended August 14 without action being taken on the proposed repeal of the banana law of 1929 and conclusion of a new contract with the United Fruit Company.

A quarrel between the Secretary of Public Works, Leon Cortes, and Rafael Castro Quesada, manager of the government-owned Pacific Railway, as to their respective authority, precipitated a Cabinet crisis in November and President Gonzalez Viquez was reported to have threatened to resign. To quiet the uneasiness aroused in the country by this possibility, the President issued two successive manifestoes announcing his determination to remain in office until the expiration of his term in 1932. The return by airplane to San José on November 11 of Manuel Castro Quesada, Costa Rican Minister to the United States, who made the sudden trip to lend support to his cousin, Rafael Castro Quesada, resulted in the resignations of both Minister Cortes and the manager of the Pacific Railways. On Dec. 3, 1930, President Gonzalez Viquez signed a bill authorizing a loan of \$2,750,000 for public works.

Unemployment riots in San José in May were reported to have resulted in the wounding of several participants. See PANAMA.

COST OF LIVING. See FOOD and NUTRITION.

COTTON. Estimates of the Crop Reporting Board of the U. S. Department of Agriculture on Dec. 8, 1930, were that the cotton crop of the United States for 1930 would amount to 14,243,000 bales of 500 pounds, 3.9 per cent less than the 14,828,000 in 1929 and about 5 per cent less than the average production of the 5 years 1924-1928. The average yield of lint per acre was estimated to be 150.8 pounds, as compared with 155 for 1929 and 155.1 pounds, the average for the period 1919-1928. Of 46,191,000 acres in cultivation July 1, 2.1 per cent were abandoned with 45,218,000 remaining for harvest. The farm value of the lint was estimated at \$674,044,000 and of the 6,328,000 tons of cottonseed \$136,789,000 or a total of \$810,833,000 for the crop.

Small consumption of cotton in 1929-30 as compared with recent years left a world-carryover of American cotton on Aug. 1, 1930, about 1,800,000 bales larger than on Aug. 1, 1929. This added to the current crop gave a world supply of American cotton of about 20,700,000 bales for

the 1930-31 season, about 1,400,000 more than for 1929-30, and 300,000 bales more than the average annual supply for 1925-29.

Areas planted to cotton in 1930 in important cotton-growing countries in the world, excluding China, amounted to 73,403,000 acres or about 0.84 per cent more than in 1929. The estimated production in 1930 in these countries was for United States, 14,243,000 bales; U. S. S. R. (Russia), 1,950,000; Egypt, 1,697,000; Mexico, 186,000; and Chosen (Korea), 152,000 bales.

The U. S. Bureau of the Census estimated the world's production of commercial cotton in 1929 at 26,673,000 bales, of which the United States produced 14,548,000 (running) bales; India, 5,120,000; U. S. S. R. (Russia), 1,325,000; Egypt, 1,750,000; China 1,825,000; Brazil, 535,000; Mexico, 246,000; Peru, 250,000, and all other countries 1,074,000 bales. The principal cotton producing countries and their crops according to the International Institute of Agriculture were as follows: United States, 14,828,000 bales; India, 4,402,000; Egypt, 1,726,000; U. S. S. R. (Russia), 1,225,000; Mexico, 246,000, and Chosen (Korea), 139,000. Considerable cotton also was grown in Anglo-Egyptian Sudan, 137,360 bales, and Uganda, 100,410 bales.

The cotton crop of the United States for 1929, as reported by the Bureau of the Census, the estimated crop for 1930, and the quantity reported ginned to Dec. 13, 1930, are shown in the accompanying table.

UNITED STATES COTTON CROP, 1929-30

| <i>States</i> | <i>Crop, 1929 500-lb. bales</i> | <i>Estimated crop, 1930 500-lb. bales</i> | <i>Reported ginned Dec. 13, 1930 Running bales</i> |
|----------------------|---|---|--|
| United States ... | 14,824,861 | 14,243,000 | 13,259,622 |
| Alabama | 1,541,550 | 1,495,000 | 1,421,380 |
| Arizona | 152,849 | 160,000 | 110,216 |
| Arkansas | 1,434,660 | 910,000 | 846,624 |
| California | 258,559 | 250,000 | 188,895 |
| Florida | 28,578 | 50,000 | 50,646 |
| Georgia | 1,342,643 | 1,625,000 | 1,558,221 |
| Louisiana | 808,825 | 710,000 | 694,496 |
| Mississippi | 1,915,430 | 1,500,000 | 1,429,640 |
| Missouri | 219,932 | 160,000 | 150,507 |
| New Mexico | 88,450 | 100,000 | 83,972 |
| North Carolina | 747,208 | 795,000 | 759,294 |
| Oklahoma | 1,112,666 | 900,000 | 822,525 |
| South Carolina | 830,055 | 1,040,000 | 981,260 |
| Tennessee | 515,774 | 400,000 | 360,724 |
| Texas | 3,941,626 | 4,100,000 | 3,754,798 |
| Virginia | 47,527 | 42,000 | 40,629 |
| All others | 8,539 | 6,000 | 5,795 |

The above table includes for 1930, under the ginning report, 478,421 round bales counted as half bales and also 17,411 bales of American-Egyptian cotton, practically all grown in Arizona. The estimated crop of Arizona for 1930 includes 28,000 bales of American-Egyptian cotton. The crop of Lower California, which is usually marketed through California, is estimated at 49,000 bales, not included in the totals.

Oil mills in the United States, during the cotton year ended July 31, 1930, crushed 5,015,714 tons of cottonseed. Among the products derived from the seed were 1,038,170 bales of lint, 1,383,597 tons of hulls, 2,231,992 tons of cake and oil meal, and 1,572,321,675 pounds of oil.

Exports of cotton and lint for the year ended July 31, 1930, amounted to 6,689,796 bales of cotton and 117,955 bales of lint or a total of 6,807,751. Mills in the United States consumed in this period 6,113,932 bales. The prin-

cial exports were to Germany, 1,687,366; United Kingdom, 1,256,042; France, 811,520; Italy, 652,430; other European countries, 832,688; and Japan, 1,020,016 bales. During the same period there were imported from Egypt, 215,181 bales; Peru, 19,427 bales; China, 44,033; Mexico, 39,324; British India, 58,449; and from other countries, 1,693 bales. The United States tariff act of 1930 provided a duty of 7 cents a pound on all imported cotton stapling $1\frac{1}{4}$ inches or longer.

Of the cotton used by American mills, the greater part was consumed in the cotton-growing States, 4,757,356 bales as compared with 1,142,663 in New England, and 213,913 in other States. Of 33,567,102 spindles in place December 31, 1930, 25,525,820 were active during December, of which 16,869,856 were located in cotton States, 7,784,158 in New England States and 871,806 in other States. The number of active spindle hours averaged in cotton States 223, in New England 116, and other States 104, and the percentage of idle spindles was highest in New England. According to the U. S. Bureau of Census, the world's consumption of cotton (exclusive of linters in the United States) for the year ending July 31, 1930, was approximately 24,946,000 bales. The International Federation of Master Cotton Spinners' and Manufacturers' Associations reported it to be 25,209,000 bales against 25,882,000 in the previous year.

Reduction in the total world consumption, 4 per cent, equivalent to about 700,000 American bales, came almost entirely in American cotton. World consumption of American cotton in 1929-1930 amounted to 13,023,000 running bales compared with 15,076,000 in 1928-1929, 15,407,000 in 1927-1928 and the record of 15,780,000 bales in 1926-1927. On the whole European countries used more Indian and sundries cottons and less American and Egyptian. Asiatic countries consumed about as much American cotton as in the previous season and also more Indian and sundries cotton.

The price of middling $\frac{3}{4}$ -inch cotton at the 10 spot markets averaged 15.79 cents per pound during the year ended July 31, 1930, compared with 18.67 in 1928-1929 and 19.72 in 1927-1928. For August, 1930, the price averaged 11.14 cents, September 10.15, October 9.82, November 10.09, closing on December 31 at 10.00 New York, 9.51 New Orleans, and 9.70 Galveston. The average price being paid to producers December 1, 1930, was 9.5 cents per pound for lint and \$21.62 per ton for cottonseed, compared with 16.4 cents and \$30.33, respectively, on December 1, 1929.

The movement of prices downward partly reflected the reduced world consumption of American cotton. Price differences during recent years were less favorable to American cotton and quality differences between it and foreign growths were less marked. Price, according to a survey by the Department of Agriculture, seemed to be the greatest single factor causing increased foreign consumption of exotic growths as compared with American during 1929-30. European spinners considered the deterioration of American cotton in quality and the concurrent improvement in quality of a number of foreign cottons as greatly influencing the shift from American to other growths of cotton. In his report for 1930, the Secretary of Agriculture pointed out that an adjustment between the quality of cotton produced and the consumers' preferences is very important if American cot-

ton producers are to maintain their supremacy in the world's cotton markets. Concluding his annual review, *The Future of American Cotton*, John A. Todd expressed the view that "Something must be done to alter drastically the recent tendency of American cotton production, for only by increasing the average yield, and therefore reducing the cost of production can America hope to compete with the increasing production of outside growths." The Federal Farm Board, cooperating with the Department of Agriculture in the fall of 1930, held a series of conferences in the South looking toward a reduction in the acreage of cotton and a readjustment of the farming programmes of cotton farmers. Cotton production based upon prospective market demand instead of upon prices the preceding season, was recommended as a means of stabilizing the cotton industry, in a special report by the Department of Agriculture on the world cotton situation and outlook.

Unusually hot, dry weather marked the 1930 cotton-growing season in most of the Cotton Belt from Alabama west. Reduction of the crop from drought was particularly severe in Arkansas, Oklahoma, and Texas, and estimated production in Mississippi, Louisiana, Tennessee, and Missouri, for the same reason, was considerably below 1929. The South Atlantic States had ample rainfall and from North Carolina to Alabama production and acre yields considerably exceeded those of 1929 and the average. Low temperatures in winter and hot, dry weather during June, July, and August rendered boll-weevil damage negligible. Boll weevil were present in considerable numbers only in the Carolinas although there were a few in nearly all sections.

Measures were begun by the Department of Agriculture and the State of Arizona to eradicate the pink bollworm, discovered in the Salt River Valley in October, 1929. Non-cotton zones were established and a field clean-up of about 47,000 acres of cotton was made. Funds were appropriated to compensate growers in the affected area for losses due to cessation of cotton growing. No traces of the insect were found in the Pecos Valley of New Mexico and the western extension of Texas, although infestation was unusually heavy in the Big Bend section of Texas and infested fields were reported in the Mesilla Valley in New Mexico and near Safford, Arizona. A large area in western Texas was released on November 17 from quarantine restrictions. All cotton produced in Mexico in areas adjacent to regulated zones in the United States was produced under regulations like those in regulated areas in this country. Control agencies paid the usual attention to the boll weevil, *Thurberia weevil*, cotton leaf worm, bollworm, cotton flea hopper, cotton aphid, and enlarged studies on the cotton leaf perforator. Further efforts were made in the Southwest to control the cotton root rot. See ENTOMOLOGY, ECONOMIC.

Cotton of the 1930 crop, ginned before Dec. 1, 1930, was slightly better in grade and different in staple from ginnings prior to Dec. 1, 1929, according to a report based on the 12,821,500 bales of American upland cotton reported by the Census Bureau as ginned prior to that date. Estimates were that 89.3 per cent was white in color, 72.9 white, middling or better, and 7.9 per cent cotton other than white and extra white. As to staple length, 13.7 per cent was estimated to be shorter than $\frac{7}{8}$ -inch; 76.3 per cent $\frac{7}{8}$ to $1\frac{1}{32}$

inches inclusive, and 10 per cent, $1\frac{1}{16}$ inches and longer. Of a total of 10,960,600 bales, or 85.5 per cent tenderable, 9,675,400 ranged in staple from $\frac{7}{8}$ to $1\frac{1}{32}$ inches inclusive, and 1,285,200 bales stapled over $1\frac{1}{32}$ inches.

The revised standards for American-Egyptian cotton providing for intermediate or half grades, effective August 1, 1930, were largely used in merchandising the 1929 crop.

The experimental cotton gin and laboratory authorized by an Act of Congress approved April 19, 1930, was erected by the U. S. Department of Agriculture on a site provided by the Mississippi Delta Branch Experiment Station for investigations aiming at the basis for better gin management and technique and at improvement in the quality of American-grown cotton.

Cotton production in other countries continued gradually to increase, due in part to a natural development of producing areas and in part to efforts by consumers to develop more stable sources of supply. The British Cotton Growing Association and the Empire Cotton Growing Corporation actively stimulated cotton production within the many political divisions of the British Empire. Although conditions in the industry continued to be unsatisfactory, the Association reported substantial progress from its activities in India, West Indies, Nigeria, Kenya, Uganda, Nyasaland, South Africa, Rhodesia, Sudan, Iraq, and Australia. The Corporation maintained its chain of experimental cotton stations in most of these countries and the practical results achieved in varieties, production practices and pest control appeared to justify the station work. The progress of its undertakings is published quarterly in the *Empire Cotton Growing Review* (London). The Central Cotton Committee of India, responsible for much of the financing of agricultural research and technology of manufacture of cotton in India had up to March 31, 1930, i.e., during the seven years of its existence as a corporation, spent Rs 2,022,500 for agricultural research, Rs 1,250,000 for technological research, and Rs 930,000 for administration. In 1930, it had 13 schemes for the betterment of Indian cotton and sanctioned funds for six more. The activities of the committee's Institute of Plant Industry in Indore were published in *The Application of Science to Crop-Production*, by A. and G. L. C. Howard.

The crops in 1928-1929 in the principal producing countries in the British Empire excluding India were estimated to be for Anglo-Egyptian Sudan, 141,750 bales; Uganda, 164,000; Nigeria, 28,450; Tanganyika, 22,930; Union of South Africa, 10,230; Australia, 8,240; West Indies, 5,000; Iraq, 4,290; Nyasaland, 3,740; and Cyprus, 1,800. In India, 4,402,000 bales were reported for 1929-1930 and 4,863,000 for 1928-1929, and the total area planted in 1929-1930 was estimated to be 25,692,000 acres.

Egypt, according to estimates of the International Institute of Agriculture, produced 1,697,000 bales in 1930, compared with 1,725,000 in 1929. The total included about 457,000 bales of Sakellarides. The planting of Sakellarides cotton was prohibited except in three provinces where the area was to be limited to 40 per cent of the present acreage. The government's policy of supporting the cotton market by purchase had widespread support at first but later the wisdom of continuing the policy was questioned.

Recommendations from a recent governmental inquiry were that the Egyptian government abstain from intervention in the Egyptian cotton market and, instead of limiting acreage, encourage extension in area and increase in acre yields by use of artificial fertilizers and pure strains of cotton.

Late estimates were that Asiatic Russia would produce about 1,950,000 bales in 1930 as compared with 1,351,000 bales in 1929. The area was reported at 3,760,000 acres compared with 2,560,000 acres in 1929, an increase of 47 per cent, or not much below the 50 per cent increase planned by the government. Considerable of the 1930 acreage was planted late, making fall weather conditions of great importance. Shortage of labor, transportation and picking facilities were expected to be serious problems. In 1929 considerable cotton remained in the fields due to the labor problem. The Russian cotton acreage expansion programme was perhaps the most successfully executed of the agricultural plans.

The International Cotton Congress was planned to be held in Paris, June 23-25, 1931. See AGRICULTURE; EGYPT; AGRICULTURAL EXTENSION WORK; ENTOMOLOGY. ECONOMIC.

COURTLEIGH, WILLIAM LOUIS. An American actor, died in Rye, N. Y., Dec. 27, 1930. He was born in Guelph, Ont., Canada, June 28, 1869. In 1889 he made his first appearance on the stage in *Brother and Sister*, and his first marked success was with Fanny Davenport in *La Tosca*, *Fédora*, and *Cleopatra* in 1891. He later became a member of Augustin Daly's repertoire company. Over a period of 40 years he appeared in such outstanding plays as *Northern Lights* (1895), *The Great Northwest* (1896), *Hedda Gabler* (1898), *A Rich Man's Son* (1899), *Lost River* (1900), *The Merchant of Venice* (1901), *Sherlock Holmes* (1905), *Divorçons* (1913), *Tiger Rose* (1917), *Trevelyan of the Wells* (1925), *Henry the Fourth* (1926), and *I-Aiglon* (1927). His last appearance was in the spring of 1930 in *Julius Caesar* and *Macbeth*.

CRAIGIE, PATRICK GEORGE. A British agricultural statistician, died in Lympstone, Devon, Jan. 10, 1930. He was born in Perth, Scotland, May 29, 1843, and was educated at Edinburgh University and at St. Catherine's College, Cambridge. After serving in the Royal Perth Militia and the 3d Battalion of the Royal Highlanders, he was appointed in 1871 secretary of the Local Taxation Committee and in 1879 secretary of the Central Chamber of Agriculture. In 1888 he was requested by the Royal Commission on Market Rights and Tolls to report on the markets of Paris and Brussels, and by the Agricultural Department of the Privy Council to report on the agricultural schools of France. On the formation of the new Board of Agriculture and Fisheries in 1890 he was appointed director of the Statistical Intelligence and Educational Department, hold-

ing this post until 1897 when he became assistant secretary. He resigned in 1906 to become Gilbey lecturer on the history and economics of agriculture at the University of Cambridge, where he remained until 1909. He was elected a Fellow of the Royal Statistical Society in 1874 and served as president during 1902-04. He was also secretary-general of the International Statistical Institute during 1905-07, and in recognition of his services to statistical science was awarded the gold medal of the Royal Statistical Society in 1908. He was created a Companion of the Bath in 1902. Among the noteworthy papers which he contributed to the *Journal of the Royal Statistical Society* are: "The Cost of English Local Government" (1877); "Ten Years' Statistics of British Agriculture" (1880); "Statistics of Agricultural Production" (1883); "The Size and Distribution of Agricultural Holdings in England and Abroad" (1887); and "The English Poor Rate, Some Recent Statistics of Its Administration and Pressure" (1888).

CRETE. Fourth in size among the islands of the Mediterranean and the site of an ancient civilization, Crete was ceded to Greece by Turkey, May 30, 1913. It lies 150 miles southeast of Greece. Area, 3326 square miles, population (census of 1928), 386,427. The capital, Canea, had 26,604 inhabitants (1928); Candia, the largest city, 33,404. Although two-thirds of the island consists of barren, mountainous region, agriculture is the sole industry, the chief products being currants, grapes, wine, olives, citrus fruits, some cereals, and garden products. In 1928 exports were valued at \$2,922,000 and imports at \$2,498,000. In the same year 2203 steam and 1294 sailing vessels entered the ports. Extensive improvements to the port of Candia were to be completed in 1931. The island is an intermediate station on the London-India air-mail line.

CRICKET. Australia successfully invaded England in 1930 and demonstrated its proficiency in the national sport by carrying back to the Antipodes "The Ashes," symbolic of world supremacy in cricket. The Australian team defeated England 2 to 1 with one drawn in a series of test matches. In 1929, the English team won four matches out of five in Australia. The Brooklyn Cricket Club won the annual championship competition of the New York and New Jersey Cricket Association. The Crescent A. C. and Fordham tied for second. The Cameron Cricket Club won the Metropolitan (New York) District Cricket League title. A team of cricketers representing the British West Indies played 21 games in and near New York during the summer, with 14 victories, 6 draws, and 1 defeat.

CRIME. The discussion of crime and its various ramifications continued an outstanding public question. The particularly flagrant gang feuds that characterized the larger cities of the United States, and the undisguised contempt for law as well as the inability of the law officers of the large cities to cope seriously with the problems presented, indicated that despite the creation of crime commissions and the greater severity of criminal codes, crime was still an outstanding American problem. It was generally agreed that in all the great urban centres of America there existed an underworld of criminals who kept up

a continuous warfare among themselves to obtain monopoly of the trade in prohibited goods and the control of various forms of blackmail, swindling, and banditry. There was no question that the organization of crime in these underworlds had taken on all the attributes of a well integrated industry, boasting even of bankers, the support of venal politicians, and the tolerance of law officers. There was no question, too, that organized crime could not exist without connivance of constituted authority. As the *New York World* said in discussing the continued existence of notorious personages in the underworlds of New York and Chicago without official molestation: "The business which they represent could not proceed under the immunity it enjoys if the law were not frequently betrayed by its officers, if there were not treason in the ranks of those who govern us."

It was becoming apparent, also, that the underworld was levying a huge tribute annually on legitimate business enterprise. How much the toll thus taken was, it was impossible to tell, but there could be no question that scores of activities were terrorized by armed gangsters who collected regular fees to prevent molestation. This process of holding up industry for tribute, which was commonly known as "racketeering," was said to be prevalent particularly in Chicago and almost to a like degree in New York City. It was being charged by persons familiar with the situation that the following industries among others were in the hands of gangsters who demanded money bribes to stave off terrorization: the wet wash laundry business, wholesale meat marketing, dry cleaning, prize fighting, milk delivery. These racketeers had seized control of a number of trade unions in the cities of New York and Chicago and were compelling trade unionists to pay high membership charges for protection from annoyance. As an example of this situation the Chicago Coal Merchants' Association charged that the coal teamsters union was in the hands of a thug and it would, therefore, refuse to negotiate a new contract with the union. So important had organized crime become a subject for general discussion that outstanding gang leaders received as much prominence in the daily press as did public officials. The names of "Al" Capone of Chicago, Arnold Rothstein and Jack Diamond, of New York, were almost household terms.

CHICAGO. The crime situation in Chicago continued to attract national attention. As a result of a series of gang killings early in March, the police were stirred to renewed activity and in 10 days rounded up 4500 persons. The local Association of Commerce had organized a city committee, headed by Col. R. I. Randolphs, to wage unceasing war on Chicago's gangdom, and the committee applied itself diligently to ferreting out known criminals, to assisting the staff of the State's attorney, and to the collection of evidence and the protection of State's witnesses. This committee declared that it had unlimited funds with which to carry on its work. The Chicago crime commission was also active. In May it outlined a programme for coping with gangsters which included the following: vigilant watchfulness and arrests; court action; deportation of criminal aliens; investigation to determine whether personal property taxes had been paid; investigation of the status of real estate holdings and whether or not taxes had been paid; investigation to determine whether or not criminals had paid United

States income taxes. The killing of Alfred L. Lingle, reporter for the *Chicago Tribune*, by a gangster, again served to draw attention to lawlessness in the second largest city in the country. Lingle was killed on June 9, but by the end of the year, despite the organized sentiment that had been aroused and the great rewards that had been posted for the capture of his slayer, the reporter's death remained unsolved.

A more cheerful note was struck by a report presented by the Federal Children's Bureau, which concerned itself with delinquency among boys in Chicago. The Bureau's investigators made a study of all boys between the ages of 17 and 20 inclusive, over the 11-year period 1915-1925 inclusive. It is to be noted that 16 is the outside age for cases under the jurisdiction of the juvenile court and that 21 is the initial age for cases under the jurisdiction of the regular criminal courts. In other words, these boys between 17 and 20 years inclusive were over the juvenile court age. It was found by the Children's Bureau that less than 12 per cent of the total arrests of males in any year were arrests of boys 16 to 20 years of age. The figures indicated that while there had been great increases in the number of arrests in Chicago during the 11-year period studied, these increases were essentially among the males of the older ages. A study of the cases disposed of in all criminal branches of the municipal court and the number disposed of in the boys court showed that while the total number of cases in the municipal court greatly increased and the ratio of these cases to 10,000 population of the same age and sex almost trebled from 1920 to 1925, there was a numerical decrease in the cases of boys 17 to 20 years. That is to say, the total number of such cases in 1915 was 7500 while in 1925 it was 5409; also, the ratio of boys' cases to 10,000 population of the same age and sex showed a total decrease of 41 per cent in the 11 years studied. It is interesting to note the report's statement concerning the causes for arrests. The report says:

The case histories show a comparatively small proportion of hardened criminals among any of the groups dealt with by the boys court. Complicating factors in the delinquencies of many of them were broken homes; poverty; lack of intelligent and sympathetic guidance at home; difficulties in school; shifting of jobs, with more or less unemployment; bad companions; and, in a considerable number of instances, mental dullness ranging down to definite mental defect and emotional instability. The court experience of some of the boys was more or less accidental, or their delinquency was a passing phase in their transition from boyhood to manhood.

NEW YORK CITY. In May, 1930, Police Commissioner Grover A. Whalen submitted the annual report of his department's activities for the year 1929. The Commissioner's report indicated substantial reductions in various types of crime. Particularly interesting was the statement that violent crime had been reduced by 11 per cent and that robbery and burglary in 1929 was 68 per cent lower than for the 1923-25 period. The Commissioner also declared that commercial vice and gambling had been eliminated. For the 12 months ending Dec. 31, 1929, goods valued at \$10,226,963 were lost or stolen in New York City, of which amount goods recovered totaled \$3,078,668. In 1928 the estimated loss of property was \$11,317,291, of which \$1,538,991 was recovered. These figures did not include the value of stolen automobiles. In 1929, 8670 cars were reported stolen as against 13,545 in 1928. In

1929, complaints of crime totaled 38,382. There were 14,871 cases disposed of by arrests while slightly more than that number were reported as pending. In 1929, there was a gain of 5.3 per cent in murders and manslaughter. The total number of killings in New York in that year was 357, of which 55 were attributed to gang feuds.

The New York Commissioner presented the following figures to indicate how New York compared with other large cities in the country with respect to the commission of crimes of violence:

| Cities | Population | Number of crimes of violence | Per cent per 100,000 population |
|------------------|------------|------------------------------|---------------------------------|
| New York | 6,064,484 | 4,519 | 74.1 |
| Chicago | 3,102,800 | 9,509 | 306.7 |
| Philadelphia ... | 2,035,900 | 2,210 | 110.5 |
| Detroit | 1,334,500 | 3,671 | 282.4 |
| Los Angeles | 1,300,000 | 6,963 | 535.6 |
| Cleveland | 984,500 | 4,675 | 467.5 |
| St. Louis | 859,200 | 5,646 | 705.7 |

The Commissioner's report placed particular stress on the necessity of creating a preventive programme, pointing out that 50 per cent of the City's offenders were under 21 years of age. During 1929 there were 2353 boys and girls aged 16 years who had been arrested in the five boroughs. The total of 17-year-old prisoners numbered 3998. Said the Commissioner in referring to the youth of the offenders to-day:

Crime of to-day, both of an abnormal nature and of exceptional violence, is generally committed by youths without any previous criminal or police history. This makes detection and apprehension of offenders most difficult. There seems to be an ever-growing spirit of disregard for the property rights of others, and while no attempt is made to analyze the theoretical causes of these tendencies of youth to crime, the mental attitude and cynicism of these youthful offenders to proper authority provides food for thought.

The Commissioner paid particular attention to the increasing activity of gangs. He pointed out that gangs were playing a large rôle in bootlegging, gambling, the illegal sale and distribution of narcotics and other illegitimate enterprises. They were, too, constantly attempting to widen the sphere of their activities to take in legitimate industry. During 1929, 295 cases of major crimes were solved through the arrest of gangs and gangsters. The Commissioner attributed this notable showing to information furnished by a secret service bureau set up in the department.

The following figures indicate the various types of violent crimes committed in 1929 and 1928. The 1928 figures are in parentheses. Total violent crimes, 7009 (7878); murder or manslaughter, 357 (339); felonious assault, 2490 (2559); assault and robbery, 1172 (1232); burglarly, 2990 (3708). Murder and manslaughter statistics for 1929 were 5.3 per cent higher than those recorded in 1928. The following analyzes the types of killings by the motives presented: gangster revenge, 25; commission of a felony, 40; family or love affair, 140; business dispute, 13; gambling dispute, 9; gangster dispute, 30; labor dispute, 1; dance hall dispute, 3; drunken dispute, 13; degeneracy, 4; unknown, 79. The proportion of murder cases in which arrests were made was reported at 68.6 per cent in 1929 as compared with 64.6 per cent in 1928. The proportion of assault and robbery cases which were closed by arrests was 51.4 per cent in 1929 as compared with 51.1 per cent recorded during the year 1928.

At the end of 1929 the police department of New York included 17,710 policemen and policewomen, and the department expended for the calendar year of 1929, \$48,705,918. In an effort to strike at juvenile delinquency the police department created in 1929 a crime prevention bureau manned by trained social workers.

As an indication of the efficiency of the New York police department, the figures of insurance companies are interesting. In 1929, 45 insurance companies reported that they had paid \$677,875 to cover losses incurred as a result of 1912 hold-ups and burglaries. In 1928 the losses paid had been \$727,500; in 1927 they had been \$855,531; in 1926 they had been \$1,920,631; and the annual average for 1923-25 had been \$3,037,581.

STATISTICS. The YEAR BOOK before has referred to the homicide statistics that had been collected by Dr. Frederick L. Hoffman of the Prudential Insurance Company for some 30 years. Presenting his figures for 1929, Dr. Hoffman finds that deaths by violence were increasing in the United States. In 140 American cities with a total population of 38,000,000, there occurred 3993 deaths from homicides in 1929, or a rate of 10.5 per 100,000 population. This compares with a rate of 10.4 in 1928. Dr. Hoffman, by way of contrast, showed that the homicide rate for 13 Canadian cities was 1.7 per 100,000 in 1928, and that for England and Wales it was 0.57 per 100,000. In the United States registration area in the same year the homicide rate was 8.8. The following 10 cities had the highest death rates in 1928 and 1929:

| | Deaths | | Rates | |
|----------------------------|--------|------|-------|------|
| | 1928 | 1929 | 1928 | 1929 |
| Memphis, Tenn. | 115 | 127 | 60.5 | 66.8 |
| Birmingham, Ala. | 122 | 114 | 54.9 | 51.3 |
| Atlanta, Ga. | 115 | 130 | 45.1 | 51.0 |
| Jacksonville, Fla. | 74 | 66 | 52.6 | 46.9 |
| Lexington, Ky. | 15 | 19 | 30.8 | 39.0 |
| Mobile, Ala. | 18 | 21 | 25.9 | 30.2 |
| New Orleans, La. | 111 | 124 | 25.9 | 28.9 |
| Covington, Ky. | 8 | 17 | 13.6 | 28.8 |
| Houston, Texas | 72 | 76 | 26.2 | 27.6 |
| Charleston, S. C. | 18 | 20 | 23.7 | 26.4 |

New York City's death rate from homicides was 7.1, and Chicago's death rate was 12.7. Dr Hoffman's observations may be noted. He said:

By common consent the enforcement of Prohibition has brought into existence an organization of crime and criminals such as no other country on the face of the globe has ever known in the history of the past. The enforcement of the law itself has caused a large number of violent deaths, classified as homicides, even though convictions were not obtainable in the courts. Gangsters and gunmen are being killed almost day after day, forming a not inconsiderable item in the large number of homicidal deaths, which nevertheless touches the security of every citizen, high or low. The root cause of the evil is unquestionably the ease with which concealed weapons are obtainable and widely distributed.

Another investigation conducted by Dr. Hoffman concerned itself with the suicide death rate in the United States. Dr. Hoffman pointed out that for six years this rate had been growing steadily though it was still lower than the rate in 1908, which was 21.5 per 100,000 population. In 1920, the year to have the lowest rate on record, the proportion was 12.3 per 100,000. In 1929, it was 18 per 100,000. In 151 cities with an estimated population of 38,000,000, 80 showed an increase in the suicide rate for 1928 while 56 showed a decrease. The 10 cities with the highest rates per 100,000 population were the following:

| | |
|------------------------------------|------|
| Sacramento, Calif. | 52.8 |
| San Diego, Calif. | 51.8 |
| San Francisco | 39.8 |
| Atlantic City | 36.6 |
| Quincy, Ill. | 32.7 |
| Terre Haute, Ind. | 31.3 |
| Manhattan and Bronx, N. Y. | 27.7 |
| Spokane, Wash. | 27.5 |
| Seattle, Wash. | 27.1 |
| Concord, N. H. | 26.4 |

In 1928, the total number of deaths from suicides in the United States registration area was 15,556, which was a rate of 13.6 per 100,000. On the basis of a population of 125,000,000 and a rate of 14 per 100,000, Dr. Hoffman estimated that there had occurred 17,500 deaths from suicide in the United States in 1929. Dr. Hoffman indicated that the stock market collapse of 1929 had a direct bearing upon the increase in suicides. He said on this subject: "When the suicide rates for a period of years are correlated to business failures there is a fair consistency in the correlation, the highest and lowest figures usually coinciding, though sometimes the highest suicide rate follows a year after the highest rate of business failures."

JUVENILE DELINQUENCY. The Federal Children's Bureau made public the results of its examination of the work of 12 juvenile courts located in the 15 States of California, Connecticut, Indiana, Massachusetts, Michigan, Minnesota, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, Washington, and Wisconsin. A total of 40,000 cases was examined by the Bureau. This report, which was the first national report on juvenile court statistics, covered only cases of delinquency and dependency and neglect. There was a total of 28,387 delinquency cases representing 25,456 children, and a total of 12,150 dependency and neglect cases representing 11,785 children. Of the 25,305 delinquent children for whom race was reported, 84 per cent were white and 16 per cent were colored. The proportion of children who were foreign born was small for all the courts except those of New York City. In New York 15 per cent of the delinquent white boys and 19 per cent of the delinquent white girls and 18 per cent of the dependent and neglected children of both sexes were foreign born.

Two-thirds of the delinquent boys and one-half of the delinquent girls were living with both their parents when referred to the court. It is interesting to note that in the cases of those delinquent juveniles living with only one parent, the absence of the other parent in most cases was due to death. Desertion was a much greater factor in dependent and neglected cases than it was in delinquency. More than one-third of the dependent and neglected cases were referred to court because of improper conditions in the home; more than one-fourth were referred for insufficient parental care, including lack of care because of death or illness of parents.

The offenses for which boys and girls came to the attention of juvenile courts differed in marked degree. Two-thirds of the boys were charged with stealing or with acts of carelessness or mischief. Two-thirds of the girls were charged with the following offenses: running away, ungovernable or beyond parental control, and sex offense. The largest percentage of boys and girls referred to these courts on delinquency charges were between the ages of 14 and 16 years. The

next largest group was between 12 and 14 years. Eight per cent of the delinquent boys and 4 per cent of the delinquent girls were under 10 years of age. In more than one-half of the delinquency cases the children were allowed to remain in their own homes pending hearing. Detention homes were used in more than one-third of the cases. It is to be noted that almost 1000 children were reported by 26 courts as having been detained in jails or police stations. The following were the dispositions of the 20,679 delinquency cases dealt with officially by the courts in question: 35 per cent were dismissed or continued indefinitely; 39 per cent were placed on probation; 15 per cent were committed to institutions. Almost all the official dependent and neglected cases were disposed of in one or another of the following three ways: commitment to institutions or child placing agencies (50 per cent); placement under supervision in their own homes (25 per cent); dismissal or investigation continuance of the case (25 per cent).

PRISONS. An inquiry made by the *New York Sun* in the spring of the year indicated that the prison population of the United States was in many areas the greatest in history. Of the 37 of the largest prisons of the country circularized, 19 reported record prison population as of March 20. San Rafael, Calif., had 4972 prisoners; Joliet, Ill., had 4162; Michigan City, Ind., had 2320; Fort Madison, Iowa, had 1220; Eddyville, Ky., had 1032; Frankfort, Ky., had 2314; Baton Rouge, La., had 2170; Jackson, Mich., had 4675; Jefferson City, Mo., had 4061; Raleigh, N. C., had 2345; Salem, Ore., had 882; Pittsburgh, Pa., had 1953; Howard, R. I., had 709; Columbia, S. C., had 697; Petros, Tenn., had 897; Richmond, Va., had 2670; Moundsville, W. V., had 2277; Walla Walla, Wash., had 1,197; Waupun, Wis., had 1286. The wardens attributed this increase to a number of conditions ranging from heavier sentences to industrial depression and the increased use of revolvers.

Col. George F. Chandler, who was appointed by Governor Roosevelt of New York, to investigate the reasons for the disastrous rioting in Auburn Prison late in 1929, submitted a report in which he attributed the outbreaks to the following factors: the activities of the prisoners' Mutual Welfare League which had come under the domination of desperate characters; lack of discipline; poor food; inadequate clothing; idleness; and the antiquated facilities of a prison more than 100 years old. Colonel Chandler, among his recommendations, included the following: immediate relief of overcrowding; more guards; the abolition of the selection of guards by civil service; the abolition of the Mutual Welfare League; placing the lines of communication with the outside world in the hands of civilian employees; more allowance for food and clothing; segregation of the incorrigible; and the abolition of special privileges. While the Mutual Welfare League came in for serious condemnation at the hands of public officials and the press, and it was generally recognized that its machinery at Auburn had been seized by a group of shrewd and desperate criminals, nevertheless it had its defenders. The National Society of Penal Information came to the support of the Mutual Welfare League. It is interesting to note the reasons cited by the Mutual Welfare League itself for the existence of prison discontent. These reasons were: excessive sentences with but little time off for

behavior; brooding over wrongs by prisoners who claim they are innocent; monotonous and insufficient food; stringent provisions of new legislation applied to convicts sentenced under old laws; withholding pay earned in prison by long-term prisoners until their discharge.

One of the worst prison disasters in years was the fire which broke out in the Ohio State Penitentiary in Columbus on April 21, and resulted in the death by suffocation or burning of 319 convicts. An additional 230 burned or smoke-choked men were sent to the hospitals. An official inquiry indicated that the guards had never received instructions for the routine to follow in case of fire, and that the loss of most of the lives was attributed to the delay in opening the cells. An additional reason for the terrible holocaust was the overcrowding of the penitentiary which had been originally built to house 1500 convicts and which at the time of the fire contained more than 4600 inmates.

Warden Lewis E. Lawes, of Sing Sing prison New York, pointed out that the outstanding cause of prison disorders was the prisoner's loss of hope. In amplifying on this opinion, Warden Lawes declared the following difficulties were inherent in our present system: The prisons were overcrowded because hundreds of men do not belong there at all. A large number of these persons should be at home and at work. Prison troubles in many States grow out of the strait-jacketed inflexible parole systems. Long prison sentences without reductions in releases and paroles had resulted in congestion. Said the warden:

Effectively handled, efficiently and intimately guided, thousands of prisoners could safely be released from our prisons throughout the country. There would be an end to crowding. Real classification and segregation would be possible. Work would be more general and important beyond measure, the hope of earlier release would be reflected in the prisoner's institutional conduct.

Doctor Hastings H. Hart agreed with Warden Lawes that the chief cause for prison outbreaks was the loss of hope in the minds of the prisoners. Doctor George Kirchwey, former warden of Sing Sing, tended to agree with both these authorities. Said he:

While the men are serving their sentences every effort should be made to keep up their morale, to keep alive and stimulate their self respect, and to prepare them to take their places in the world when they go forth from prison. . . . Above all the prison must not rob a man of his self respect. Men should live in prison and should leave prison with hope in their hearts.

HOOVER LAW ENFORCEMENT COMMISSION. In January the Commission on Law Observance and Enforcement made public its first detailed description of the work it had been doing since its organization seven months before. This report was only a statement of progress and did not as yet incorporate the final recommendations of the Commission. The report indicated that the work of the Commission had been divided among 11 committees as follows: police, prosecution, courts, penal institutions, probation and parole, prohibition, cost of crime, causes of crime, juvenile delinquency, criminal justice and the foreign born, abuses in enforcement, statistics. This preliminary statement went on to say:

A preliminary examination by the commission demonstrated unquestionably that the crime law enforcement machinery of the country is entirely inadequate; that prohibition, automobile theft, white slave traffic, immigration and other criminal laws of the Federal government had overtaxed the capacity and effectiveness

of the national machinery for enforcement. The relations of the State agency on law enforcement have also to be considered.

The Commission presented the following summaries of the activities of the sub-committees: *Police*.—The Commission made arrangements for the gathering of information in leading police laboratories in foreign countries relating to the most modern developments in the methods for detecting crime. A preliminary report was prepared by August Vollmer. *Prosecution*.—The work of this sub-committee was in the hands of Alfred Bettman, who had helped in the preparation of the Cleveland crime survey of 1921. *Courts*.—A special report was being made of the Federal judiciary and in an effort to cover the field more comprehensively a committee was created, made up of the deans of a number of law schools in the country, for the purpose of prosecuting the research further. *Penal Institutions*.—The commission set up a committee, headed by Dr. Hastings H. Hart of the Russell Sage Foundation, to prosecute the inquiry in this subject. *Prohibition*.—The Commission set up a machinery for the purpose of conducting research into the problems of the importation, manufacture and diversion of industrial alcohol, machinery for the administration of the law, the coöperation of Federal and State governments, the judicial machinery of enforcement, codification of the existing statutes. *Causes of Crime*.—Material was being assembled on the psychiatric aspects of crime under the direction of Dr. Herman J. Adler, State criminologist of Illinois, and Miss Mary Van Kleeck, of the Russell Sage Foundation. *Juvenile Delinquency*.—Preliminary inquiries were being conducted by Miss Grace Abbott, of the Children's Bureau, and Miss Leuroot, her assistant. The commission also had secured the services of Miss Miriam Van Waters to make an exhaustive inquiry into the causes of juvenile delinquency. *Criminal Justice and the Foreign Born*.—Under the direction of Dean Abbott, of the University of Chicago, a study of this subject was being pursued in California, Texas, New Orleans, Chicago, and New York. *Cost of Crime*.—This inquiry was being carried on under Goldthwaite H. Door assisted by Sidney P. Simpson. *Abuses in Enforcement*.—Walter H. Pollak, of the New York Bar, and Professor Zechariah, of the Harvard Law School, were collecting material relating to the use of the third degree, intimidation and other improper actions by police prosecutors and judicial officers as well as by the police. *Statistics*.—In an effort to foster the collection of statistics on crime and criminal enforcement, the commission set up a machinery to recommend administrative or legislative action. This was placed under the direction of Sam Bass Warner, of Harvard University.

Growing out of these activities of the Hoover Commission, President Hoover presented to Congress in April a programme calling for the enactment of legislation applying to the following five subjects: the transfer of prohibition enforcement from the Treasury to the Department of Justice; legislation to relieve court congestion; legislation to increase Federal prison accommodations and to improve the parole system; legislation to create a unified border control; legislation to give the District of Columbia a more adequate prohibition enforcement law.

George W. Wickersham, chairman of the Hoover Commission, in a paper read before the

American Prison Association on October 12, outlined some of the inadequacies of the present crime enforcement machinery. He doubted whether there existed in any city in the Union a properly trained police force. Mr. Wickersham also pointed out that the country, penal laws and their administration largely followed traditional lines and were made up of a mixture of revengeful and reformatory measures executed in an imperfect manner. The fundamental question before society was how could it best be protected against crime. The first consideration involved the machinery of prevention. Next in importance came detection, prosecution and conviction. Finally there followed the treatment of offenders. Said Mr. Wickersham: "Prevention is the most important . . . I cannot too strongly emphasize my conviction that the best protective measures against crime lie in the education of the young and the enlightened treatment of the young offender." As one of the most efficacious methods in the handling of criminals, the speaker recommended the reintroduction of the lash which, he pointed out, was still being employed in England and Canada but was to be found only in the State of Delaware in the United States.

In December, the National Crime Commission made public the report of the Commission's Committee on the Medical Aspects of Crime. This report recommended the following: 1. That the several States establish as rapidly as possible appropriate institutions for the various types of offenders. 2. That the larger courts be encouraged to establish their own psychiatric clinics and that the States establish for the smaller courts such facilities. 3. That the several States extend the principle of the indeterminate sentence and the greater discretion of the judges in disposing of cases. 4. That as a means of avoiding the scandal attendant upon the prevailing system of psychiatric expert testimony, the several States be urged to adopt a law similar to that in Massachusetts, known as the Briggs law, providing for the impartial and routine examination under State authority of persons held on criminal charges. In commenting on the success of the Briggs law, the report declared that this act had virtually abolished the battle of experts which in the case of Loeb and Leopold in Chicago and the case of Remus in Cincinnati had not only attracted wide attention but at the same time had brought into disrepute so-called expert testimony offered on the stand by psychiatrists.

BAUMES COMMISSION. The New York State Crime Commission, through its research office, continued to issue its enlightening reports on the handling of crime in New York State. In the autumn there was issued a report based on a four-year study of the factors contributing towards juvenile delinquency. The report pointed out that crime prevention ultimately depended upon the proper guidance of child behavior. The agencies governing the life of the delinquent child were listed as the home, the school, the recreation centres, and the gang. The report recommended the creation within municipalities of central organizations to integrate the action of all existing agencies on a neighborhood basis, and recommended that neighborhood councils, centrally housed with branches of welfare agencies in the same building, be set up. The report went on to say that "Crime is not only a livelihood, it is an

adventure. No programme that cannot provide stirring interest can hope to compete with it. The immediate problem then is to find ways and means of interesting delinquent excitement cravers in wholesome activities." In the detailed studies upon which the report was based, it was found that 85 per cent of the parents of juvenile delinquents were foreign born. A higher percentage of felons was found to come from homes where father and mother were living together than from broken homes. Another unexpected finding was that a higher percentage of delinquents was found in homes where the mother did income-bringing work at home than in homes where the mother worked outside. In October, a group of prison experts, in consultation with Governor Roosevelt, agreed that there was a necessity for revising the fourth offender laws written as a result of the recommendation of the Baumes Commission. It will be recalled that this law called for mandatory life sentences for persons convicted of four crimes, regardless of the nature of the crime. Another suggestion submitted to the Governor was the recommendation that a revision be made in the law which had practically abolished time off for good behavior.

CRITICISM. See LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; SCANDINAVIAN LITERATURE; SPANISH LITERATURE; ETC.

CROATIA (krō-ā'shī-ā) **AND SLAVONIA.** A former crownland of the Austro-Hungarian Empire, extending from the Adriatic Sea to the Danube River; from Dec. 1, 1918, to Oct. 3, 1929, a province of Yugoslavia. The administrative reorganization of Yugoslavia on the latter date eliminated Croatia as a governmental unit. On Jan. 31, 1921, its area was 16,920 square miles; the population, 2,739,593. The capital, Zagreb, or Agram, had 150,000 inhabitants in 1928. See YUGOSLAVIA, and ITALY under *History*.

CROLY, HERBERT. An American editor, died in Santa Barbara, Calif., May 16, 1930. He was born in New York City, Jan. 23, 1869, and attended the College of the City of New York during 1884-85 and Harvard University during 1886-87 and 1895-99. In 1900 he became editor of the *Architectural Record*, but after 1906 devoted himself exclusively to writing. During this period he produced the series of books on which rest his fame as a political philosopher—*The Promise of American Life* (1909); *Marcus Alonzo Hanna—His Life and Work* (1912); and *Progressive Democracy* (1914). In 1914, through a subsidy received from Mr. and Mrs. Willard Straight, he founded the *New Republic*, a journal of opinion dealing with current social and political questions and representing the principles of the progressive movement. He was the editor of this weekly until his death, and also prepared a biography of Willard Straight (1924).

CROPS. See AGRICULTURE; and articles on various crops such as CORN, OATS, TOBACCO, WHEAT, ETC.

CROSS-COUNTRY RUNNING. William C. Zepp, of the Dorchester Club, won the 1930 national senior cross-country championship contest held in Jersey City, N. J. Zepp covered the 6-mile course in 29 min. 42 sec. Joe McCluskey of Fordham finished only 30 yards behind the champion, while Gus Moore, former title holder, finished in tenth place. The team championship in this class was regained by the Millrose Athletic Association team of New York City.

The Middle West for the first time carried off the Intercollegiate A. A. A. cross-country championship in the annual meet held in Van Cortlandt Park, New York City, on November 18, Clark S. Chamberlain, of Michigan State, covering the 6 miles of rain-drenched course in 30:19½. Team honors were captured by Pennsylvania State College, with Syracuse second, and Harvard third. In the freshman 3-mile race, Frank A. McKenna and Frederick B. Knepper, both of Manhattan College, tied for first place and the team championship went to Syracuse. The Metropolitan Intercollegiate team championship was won by New York University, two of whose runners, Nat Lerner and George Barker, finished in first place in a dead heat.

The national intercollegiate cross-country title was won by Schenectady High School on the 2½-mile course at Branch Brook Park, Newark, N. J., on November 27. Gus Moore, of the Brooklyn Harriers, annexed his third Metropolitan (New York) A. A. U. senior cross-country title at Clove Lakes, Staten Island, on November 23. He led a field of 95 contestants. The team title in this event went to the Millrose A. A. for the fourth year in succession. The national junior championship was won by Andrew Lewis of the Detroit Y. M. C. A. and his team captured the team title.

CRUISER, NAVAL. See NAVAL PROGRESS.

CUBA. A republic of the West Indies consisting of the large island of the same name, the Isle of Pines, and small adjacent islands. Capital, Havana.

AREA AND POPULATION. The area is 44,164 square miles of which 41,634 are for the island of Cuba, 1180 for the Isle of Pines, and 2350 for the other islands. According to figures furnished by the Department of Justice, the population of Cuba on Dec. 31, 1929, was 3,607,918 (including 82,531 immigrants), distributed as follows:

POPULATION BY PROVINCES

| Province | Inhabitants |
|---------------------|-------------|
| Pinar del Rio | 304,275 |
| Havana | 951,359 |
| Matanzas | 349,578 |
| Santa Clara | 764,072 |
| Camagüey | 261,724 |
| Oriente | 894,380 |

The chief cities, with their populations (including suburbs) in 1929, were: Havana, 581,115; Santiago, 142,921; Camagüey, 87,461; Cienfuegos, 72,919; Manzanillo, 60,544; Guantanamo, 52,598; Matanzas, 46,390; Santa Clara, 26,800; and Sancti Spiritus, 25,926. Immigrants in 1929 numbered 17,179 or 10,135 less than in 1928. All passengers arriving in Cuban ports (1929) totaled 110,665 and those leaving, 119,926, as compared with 117,716 arrivals and 109,618 departures in 1928.

EDUCATION. Elementary education is free and compulsory. For the year ended June 30, 1929, there were 6952 elementary schools, with 340,945 pupils and 7493 teachers; 525 private schools, with 31,949 pupils and 1668 teachers; 84 night schools, with 8377 pupils; and 73 traveling teachers, who instructed 3458 children. The University of Havana had 3932 students in 1928-29.

PRODUCTION. Cuba is primarily an agricultural country, with sugar, the principal crop, dominating the economic situation. With its by-products, sugar normally constitutes 80 per

cent of the island's exports, while tobacco and its products account for 12 per cent. Cacao, cereals, coffee, potatoes, and fruits are other leading products. The price of sugar and the total value of sugar exports declined steadily after 1924, except for a temporary improvement in 1927, with the result that Cuba in 1930 was suffering from the cumulative effects of five years of depression. The price of sugar which had attained the unusual price of 22 cents per pound in 1919 was slightly over 1 cent in 1930. The sugar crop for 1929-30 was estimated at 4,600,000 tons, as compared with 5,156,159 tons in 1928-29, 4,493,123 tons in 1927-28, and 4,508,270 tons in 1926-27. Limitation of production in an effort to maintain prices was abandoned in 1928-29, but negotiations for the restriction of output by producers of Cuba, the United States, and other leading sugar producing countries were inaugurated in 1930. The Cooperative Sales Agency, created by Presidential decree in September, 1929, was discontinued Apr. 15, 1930, due to dissatisfaction on the part of producers. About 70 per cent of the Cuban sugar industry was owned by Americans in 1930 and total American investments in the island were estimated at \$1,500,000,000. See SUGAR.

Coffee production in 1929 totaled 45,366,037 pounds, but an additional 17,299,618 pounds were imported to meet local consumption needs. The diversification of agriculture under Government sponsorship, was making progress in 1930.

Livestock in 1929 included 4,572,367 cattle, 642,191 horses, 82,273 sheep and goats, and 3233 mules. The forested area, which included 1,250,000 acres of state forests, contains valuable cabinet woods, dye-woods, fibres, gums, and resins. Iron ore, copper, manganese, and gold deposits are worked. The tourist trade, mostly American, is Cuba's third largest source of general revenue.

COMMERCE. General imports in 1929 were valued at \$213,741,000 (\$212,817,000 in 1928), while domestic exports declined to \$272,440,000 (\$278,070,000 in 1928), according to preliminary figures. The export decline was due primarily to the lower prices for sugar; raw sugar exports increased about 25 per cent in quantity but fell off 5 per cent in value. Tobacco exports also declined by about 4 per cent. The excess of exports over imports was \$58,699,000, the lowest favorable balance since 1914 and 10 per cent less than in 1928. In 1928, the United States took 72.8 per cent of all Cuban exports and furnished 60.8 per cent of all imports. Great Britain, France, and Spain took 16.3, 1.7, and 1.6 per cent of the exports and supplied 4.9, 4.5, and 4.4 per cent of all imports, respectively.

For the fiscal year ended June 30, 1930, exports to the United States totaled \$150,055,288, or 30 per cent less than 1928-29 exports, which amounted to \$214,134,174. Imports from the United States declined to \$115,725,437 from \$132,489,617 in 1928-29, or 12.6 per cent. Sugar exports to the United States decreased by 33 per cent, falling in value from \$166,000,000 in 1928-29 to \$101,000,000 in 1929-30, and in quantity from 8,217,000 pounds to 5,516,000 pounds. The total value of exports to the United States was \$207,421,000 in the calendar year 1929, as compared with \$720,000,000 in 1920. In actual volume, however, shipments to the United States were 35 per cent larger in 1929 than in 1920, the divergence between volume and value being due principally to the decline in sugar prices. Im-

ports from the United States (1929) were \$128,898,000, or 1 per cent more than in 1928.

FINANCE. The budget adopted for the fiscal year ending June 30, 1931, balanced at 76,790,000 pesos (1 peso equaled \$1 at par), as compared with estimated receipts at 85,450,000 pesos and estimated expenditures of 85,392,000 pesos in the 1929-30 budget.

For the fiscal year ended June 30, 1929, actual receipts totaled 82,329,000 pesos, as compared with 84,789,000 pesos in 1927-28, while actual expenditures increased to 88,093,000 pesos from 83,150,000 pesos in 1927-28. The actual receipts listed for 1928-29 did not include \$7,000,000 transferred from the public-works fund nor \$579,000 borrowed from funds received from the liquidation of the *Banco Nacional*. Budgetary expenditures again exceeded actual revenues in the first half of the 1929-30 fiscal year. The 1930-31 budget was subsequently reduced to 69,000,000 pesos and on Dec. 24, 1930, a further reduction of 12,000,000 pesos was ordered, effective Jan. 1, 1931. Secretary of the Treasury Ruiz Mesa declared that the reductions were inevitable to save the treasury from bankruptcy.

Leading items in the 1930-31 expenditure budget were: National debt service, 16,527,726 pesos; education, 14,108,756 pesos; war and navy, 12,031,390 pesos; sanitation and public welfare, 5,539,103 pesos; communications, 5,319,780 pesos; and veterans' pension fund, 5,318,934 pesos. Customs receipts were estimated at 35,006,500 pesos and land rents, at 25,568,000 pesos.

According to the President's message to Congress, the national debt as of Feb. 28, 1930, totaled \$80,518,300, of which \$71,554,100 represented the external debt and \$8,964,200 the internal debt. The total was \$3,455,100 less than on the same date in 1929. This total was exclusive of public-works serial certificates and floating debt and also of advances against public-works certificates made by American bankers between 1927 and the end of 1929 and understood to aggregate nearly \$60,000,000. An additional loan of \$80,000,000 was secured from the Chase National Bank, New York, on Mar. 6, 1930, the Cuban government receiving an immediate credit of \$20,000,000.

COMMUNICATIONS. Vessels in the overseas trade entering and leaving Cuban ports in 1929 numbered 12,845, with a gross tonnage of 48,456,809 tons. In addition, coastwise vessels numbering 9344 entered the ports and 9403 sailed. Air transportation increased noticeably, with a total of 2824 planes of 17,340 gross tons calling at Cuban airports, the number being more than double that of 1928. There were over 3100 miles of railway lines in operation in 1929. The gross revenues of 20 roads, with 3063 miles of line, aggregated \$42,895,768 in 1928-29 (\$42,393,906 in 1927-28) and the net railway operating income was \$11,818,264 (\$10,303,960 in 1927-28). A total of 11,459,968 passengers and 29,501,410 tons of freight (21,165,087 tons of sugar) were carried during the year. Highways extended 1990 miles in 1930. A 700-mile central highway, traversing the length of the island, was virtually completed at the end of 1930 and a network of feeder roads was under construction which was expected to link every farming community and town with the highway system.

GOVERNMENT. Executive power is vested in a president and cabinet; and legislative power in a congress of two houses, viz., a senate with 24

members and a house of representatives with 128 members. President in 1930, General Gerardo Machado y Morales, inaugurated May 20, 1929, for his second term, which expires May 20, 1935.

HISTORY

POLITICAL DEVELOPMENTS. Spurred by acute economic depression and wide suffering, the Nationalist-led agitation against the virtual dictatorship of President Machado brought Cuba to the verge of revolt during the last quarter of 1930. Only the loyalty of Cuba's efficient and well-disciplined army prevented an armed uprising.

The focal point of the political crisis was the Congressional elections of November 1. President Machado in the summer of 1929 had relaxed the more drastic restrictions placed on anti-Government activities and had promised that the Nationalists would be allowed to participate in the 1930 elections. The bill authorizing the organization of the Nationalist party was not sent to Congress until the summer of 1930. In the meantime peace negotiations between the President and the Nationalists had been inaugurated through the good offices of Gonzalez de Mendoza, a Cuban business man. The Nationalists demanded the restoration of the Crowder code and other guarantees of a fair election as well as the recognition that the constitutional amendments of 1928, and therefore President Machado's second term, were illegal. They further requested the postponement of the Congressional elections in order that they might have time to organize their party machinery.

President Machado was reported to have agreed at first to resign if a plebiscite to be held in 1931 failed to give him a majority. He later withdrew his offer, which had been accepted by the Nationalists, declaring that he was bound to the three legal parties to hold the elections Nov. 1, 1930, and that he would accept no compromise. Congress, with the President's consent, defeated the bill to allow Nationalist participation in the election.

Critics charged that President Machado had stifled all opposition by unconstitutional means and that his rule had been marked by the assassination of labor leaders and journalists opposed to its continuance, the censorship of Opposition newspapers, and the dissolution of Opposition parties. They asserted that the President retained his power only through the support of American financial interests and the threat of American intervention under Article III of the Platt Amendment. They demanded revision of the treaty relations between the United States and Cuba, and particularly the repeal of Article III. Writing in *Foreign Affairs* (April, 1930), Cosme de la Torriente, former President of the League of Nations Assembly and former Ambassador to Washington, said that Article III "has not prevented revolutions; nor has it served to prevent violations of the most sacred individual rights, when individuals disposed to offend against those rights have chanced to be in power in Cuba. On the contrary, the possibility of American intervention has been exploited by unscrupulous politicians for selfish purposes."

Supporters of the Machado régime, while admitting the justice of some of the criticisms directed against it, asserted that these were more than offset by its record of progressive achievement. Leaders of all three of the legal political parties supported the President and his pro-

gramme, which included a comprehensive plan of public works development, nationalization of industries, and the promotion of public instruction and agriculture.

The Government's vigilance against public unrest became increasingly evident as the year progressed. The American-owned *Havana American* was raided by the police March 5 because it had rented its presses to one of the local Opposition papers. The suppression of the Workers' Federation of Havana and the National Federation of Workers, two of the largest labor groups in Cuba, for alleged Communism, was followed by a 20-hour general strike in Havana on March 20, in which 200,000 workers participated as a protest against unemployment and the dissolution of the two unions.

A delegation of striking workers petitioned the President to guarantee liberty of speech and freedom of the press, to recognize the right to organize, and to make certain economic reforms. The answer of the Government was the dissolution of nine unions which had taken part in the strike and the indictment of 42 labor leaders on the ground of inciting to disorder. A strike of port workers at Manzanillo in May was attributed to Communist agitators and 32 of the leaders were ordered deported. On May 18 three persons, including a lieutenant of the Rural Guard, were killed when the police attempted to break up a meeting of the Nationalist party at Artemisa, 60 miles from Havana.

The political crisis of the autumn commenced September 8 with the proclamation of martial law in the city of Palma Soriano, Oriente Province, following the discovery of a revolutionary plot there. Minor disturbances in other parts of the island caused the Government on September 12 to place guards over all railroads, highways, and Government buildings and to take elaborate precautions against a possible rebellion. Censorship of the news from interior cities was placed in effect in Havana September 14. On September 21, Senator David I. Walsh of Massachusetts, after a visit to Cuba, issued a statement in Washington urging immediate action of the U. S. Government to remedy what he declared to be the deplorable economic and political conditions in the island. Postponement of the opening of the National University at Havana pending the November 1 elections was next ordered by the Government, and students demonstrating against this action before the Presidential palace on September 30 were fired upon by the police. One student was killed and 12 students and police were wounded.

An exodus of currency from the country and the temporary closing of one of Cuba's oldest banks on September 27 threatened a general run on the banks and \$50,000,000 was rushed to Havana from Federal Reserve banks in the United States to check this tendency. On October 2, Secretary of State Stimson in Washington admitted his concern over the Cuban situation in a statement interpreted as indicating that the United States would not intervene in case of a revolution, unless a state of anarchy was threatened. The statement appeared to strengthen the position of the Government. A special session of Congress, called by President Machado in the emergency, on October 3 and 4 approved his request for authority to suspend all constitutional guarantees. Disorders attended the Government's suppression of editions of the newspapers *La*

Semana and Karikato on October 7. On the same day Dr. Cosme de la Torriente appealed to the people of the United States to maintain strict neutrality. The Nationalists, he indicated, would use only peaceful means in achieving their ends but he conceded the possibility of rebellion. The following day the President defended his administration at a demonstration of his adherents held at the Presidential palace. He offered to submit to an investigation of his administration, provided the preceding ones of Presidents Menocal and Zayas were probed also, but declined to postpone the elections. Former Presidents Menocal and Zayas had joined with the Nationalists in demanding a postponement of the voting.

The continuance of minor disturbances caused the President on October 14 to sign a decree forbidding the holding of assemblages of any kind throughout the republic until the day after the elections. The long list of Nationalist newspaper editors and labor leaders, whom the Opposition charged had been assassinated with the Government's connivance, was added to October 13 with the death of José Lora, editor of a Nationalist newspaper in Santiago, who said he had been shot by a member of the local police.

The Congressional elections of November 1 resulted in a victory for the supporters of the Machado dictatorship. Largely because of the boycott organized by the Opposition, it was estimated that only 30 per cent of the voters went to the polls. The aftermath of the elections was a new wave of political agitation. Following clashes in Havana on November 13, in which seven persons were killed and 50 injured, President Machado suspended constitutional guarantees in the city and imposed a press censorship. On November 20, the President asked Congress to authorize the extension of martial law to the entire island and the closing of the National University at Havana for three years. The extension of martial law was authorized November 26. In protest against the censorship, all Cuban papers published in Havana, except the government organ, *Heraldo de Cuba*, stopped publication. A Nationalist manifesto, made public in Key West, Fla., on November 22, under the signature of Colonel Carlos Mendieta, Nationalist leader, charged that the elections of November 1 had been marked by "glaring frauds" and protested against the Machado Government's "aggressions against the life and liberties" of the Cuban people.

Toward the end of November, the agitation died down. On December 1, President Machado revoked his decree instituting martial law in Havana, ended the censorship, and authorized the reopening of the National University and other government-supported schools. A few days later (December 5) he reorganized his Cabinet by announcing the following appointments: Secretary of Communications, General Manuel J. Delgado, formerly Secretary of the Interior; Interior, Dr. José C. Vivanco, former prosecuting attorney of the supreme court; Education, Dr. Carlos Miguel de Cespedes, formerly Secretary of Public Works; Public Works, Dr. Jesus Maria Barraque, formerly Secretary of Justice; Justice, Dr. Octavio Averhoff.

The temporary lull in the anti-Machado agitation was broken December 3. A student demonstration in down-town Havana ended with the death of one policeman and the arrest of 50 demonstrators, including four girls. The students were supported by professors and graduates of the

National University. On December 11, President Machado again imposed martial law, this time throughout the island. The censorship on messages passing from point to point within the republic was reimposed (December 12) and 40 professors of the Provincial Institute were dismissed (December 13) by executive decree on a charge of encouraging sedition among the students. Rumors that Machado would resign were flatly denied by him in a manifesto issued December 13. A series of bomb explosions in Havana and other cities commenced on December 18, causing little damage but much public apprehension.

A significant development in the situation was revealed December 26, with the Government's announcement that it had scotched a revolutionary conspiracy, in which a number of army officers were implicated. The Nationalists, it was alleged, planned to attack army barracks throughout the island on Christmas Eve. Prominent leaders of the Nationalist party were arrested in connection with the plot, among them Col. Aurelio Hevia, Secretary of the Interior in President Menocal's régime. Warrants were issued for the arrest of former President Menocal and Dr. Francisco Carrera Justiz, dean of the School of Science and Law at Havana University. Raids on Nationalist party headquarters and the home of former President Menocal on December 30 were reported to have nipped another conspiracy in the bud. These developments were marked by numerous arrests, imprisonments, and deportations.

Events in Cuba meanwhile were watched with intense interest in Washington. On December 3, the Foreign Relations Committee of the Senate agreed that the discussion in Congress of possible American intervention in Cuba would be unwise. Senator Walsh of Massachusetts on December 16 asked the Foreign Relations Committee to investigate the situation in Cuba. His move for a formal inquiry was blocked by invoking the rule forbidding the Senate to consider conditions in foreign countries except on request of the Executive. The Senate Committee was understood to favor the hands-off policy of the State Department.

OTHER EVENTS. Adoption of the Hawley-Smoot tariff act by the United States Congress in June, 1930, increasing the duty on Cuban sugar, inflicted a severe blow upon the island's primary industry, already badly demoralized by the low prices of sugar. As in other countries adversely affected, the tariff aroused widespread criticism of the United States. The Government was compelled to borrow heavily from American bankers to meet its obligations, besides cutting expenditures. In May the salaries of all public employees, excepting the army and police, were reduced between 10 and 15 per cent.

A plan for the stabilization of the sugar industry, proposed by Thomas L. Chadbourne and Viriato Gutierrez, was enacted by Congress and signed by President Machado on November 15. The outstanding feature of the plan was the segregation of 1,500,000 tons of raw sugar to be marketed by the National Sugar Export Corporation during the five-year period, 1931 to 1935, inclusive. A \$42,000,000 bond issue was provided under the law to pay for the sugar segregated at the rate of \$4 per bag of 325 pounds f. o. b. Cuban ports. Subsequent efforts of Mr. Chadbourne and his Cuban associates to secure an international agreement for the stabilization of the sugar industry by reduction of production and price

control failed through the refusal of German sugar beet producers to enter the proposed cartel.

An event of possible great significance to Cuba's industrial future took place September 15, when Professor Georges Claude's invention for producing electric current from the waters of the Gulf Stream was successfully placed in operation at Matanzas. Power is produced by cold water from the bottom of Matanzas Bay condensing the warmer water from the surface of the Gulf Stream.

In accordance with the recommendations of the American Ambassador to Cuba, Harry F. Guggenheim, the American State Department on May 8 announced that it would take no action in regard to the case of Joseph E. Barlow. Mr. Barlow, an American citizen, claimed damages of \$9,000,000 against the Cuban government for the alleged seizure of his lands in Cuba (see 1929 YEAR BOOK). The State Department ruled that he had not exhausted the legal remedies open to him in Cuba.

CULTURE, ANCIENT. See ANTHROPOLOGY; PHILOLOGY, MODERN.

CUMBERLAND PRESBYTERIAN CHURCH. A branch of the Presbyterian Church, originally the Cumberland Presbytery of Kentucky. It was formed in 1810, when the so-called anti-revival party of the church objected to the admission into the ministry of men, who were not up to the usual literary and theological standards, and to the doctrine of fatality as taught in the third and tenth chapters of the Westminster Confession of Faith. Its chief strength was in the Southern States, in consequence of which it was barely saved from disunion during the slavery dispute at the time of the Civil War. This situation led to the establishment of the Colored Cumberland Presbyterian Church. A general assembly which meets annually is the supreme judiciary. In 1930 the denomination comprised 11 synods and 60 presbyteries, and there were 1154 churches, reporting 746 ministers, and a church membership of 64,099. The Sunday-school enrollment was approximately 52,250. The property of the church was valued at \$3,411,862, not including \$500,000 endowment for education.

Missionary work was carried on among the Indians in the United States, and churches were maintained in China, where there was an organized presbytery in Canton with nine churches in South China. During the year mission work was opened up in South America. The denomination carried on educational work under the direction of the board of education and maintained Bethel College and the Cumberland Presbyterian Theological Seminary, both in McKenzie, Tenn. *The Cumberland Presbyterian*, published in Nashville, Tenn., is the official organ of the church. The 1930 national meeting was held in Olney, Texas, May 15-21, and the 1931 meeting was announced for May 21-27 in Evansville, Ind. The Rev. O. A. Barbee of Owensboro, Ky., was moderator of the general assembly, and the Rev. D. W. Fooks, Paducah, Ky., was stated clerk and treasurer.

CUMBERLAND PRESBYTERIAN CHURCH, COLORED. A branch of the Cumberland Presbyterian Church which was legally set apart as a separate unit in 1869. The membership of 178 churches of the denomination for which figures were given in the United States census or religious bodies of 1926 was 10,868. In 152 churches reporting Sunday schools, there were over 5000 pupils and 840 officers and teach-

ers. The value of church edifices, including furniture and equipment, as reported by 162 churches, was \$353,825. Of the 178 churches reporting in 1926, 60 were in urban communities and 118 in rural districts.

CURAÇAO, kōō'rā-sā'ō. A Dutch colony in the West Indies consisting of two groups of islands about 500 miles apart, one of them comprising the islands of Curaçao, Bonaire, and Aruba, and the other consisting of the southern part of St. Martin (the northern part belongs to France), St. Eustatius, and Saba. Area, 403 square miles; population, Dec. 31, 1928, 65,727, of whom 43,581 were on the island of Curaçao. The capital is Willemstad, on the island of Curaçao, with a population of 20,041. Births registered in 1928 totaled 2407, deaths, 1097; marriages, 676. In the same year there were 41 schools with 8989 pupils. The chief products of the colony are maize, beans, pulse, cattle, salt, and phosphate of lime. The chief industry is the refining of crude oil imported from Venezuela and Mexico. Imports in 1928 amounted to 267,895,026 guilders and the exports to 260,066,649 guilders (1 guilder equaled \$0.4022 in 1928). Vessels entering the ports (1928) numbered 10,655 of 37,079,972 net tons. The revenue for 1930 was estimated at 7,385,325 guilders and the expenditures at 6,555,853 guilders. Authority to connect by cable the islands of Curaçao, Aruba, and Bonaire with each other, with the mainland, and also with the All America Cables system was granted by the Netherlands government in 1930. The length of cable required was 600 miles. The colony is administered by a governor assisted by a council of four and a colonial council of 13 members, all nominated by the sovereign. Governor in 1930, Major B. W. T. van Slobbe (appointed Jan. 1, 1930). See NETHERLANDS, THE.

CURLING. Canada retained the Gordon International Medal in 1930 by defeating the United States 271 to 205 at Utica, N. Y. Forty rinks from the two countries participated. The Boston Country Club Team No. 1 won the Stockton Cup, defeating St. Andrew's Golf Club of New York in the final of a three-day tournament in Boston, 24 to 11.

CURRENCY. See COINS, VALUE OF FOREIGN; FINANCIAL REVIEW; MONEY; UNITED STATES.

CURTISS, GLENN HAMMOND. An American inventor and aviation pioneer, died in Buffalo, N. Y., July 23, 1930. He was born in Hammondsport, N. Y., May 21, 1878. He early became interested in mechanics, his first experiments being with the bicycle and motor cycle. He established a factory for the manufacture of motor cycles in Hammondsport in 1902, and five years later established the world's motor-cycle record of a mile in 46 $\frac{3}{4}$ seconds at Ormond Beach, Fla. His interest in aviation was aroused in 1904 through a request from Capt. Thomas Scott Baldwin to design a special motor for the dirigible, *California Arrow*. His success resulted in an order from the U. S. government to build the motor for Dirigible No. 1 of the U. S. Army. In 1907 Curtiss became associated with Alexander Graham Bell in the organization of the Aerial Experiment Association of America. In 1908 in the *June Bug*, which had been constructed by the Association under his supervision, he won the *Scientific American* trophy for the first public flight of a mile in the United States, at a speed of almost 40 miles an hour. The next year he again won this trophy, covering a distance of 24.0 miles in

52.3 minutes at Mineola, Long Island. For this exploit he was elected by the Aero Club of America to represent the United States in the international aviation meet held in Rheims, France, in August, 1909, on which occasion he won the Gordon Bennett cup and the prix de la Vitesse over a 20-kilometer (12.42 miles) course in a biplane of his own design. He attained his greatest triumph on May 29, 1910, when he made his record-breaking flight in a Curtiss biplane from Albany to New York in 2 hours and 51 minutes and won the \$10,000 prize which had been offered by the *New York World*.

By 1912 Curtiss had perfected his hydroaëroplane or so-called flying boat, with which he had been experimenting for several years, by equipping an aëroplane with pontoons. In 1914 he designed and built for Rodman Wanamaker the *America*, the first multi-motored flying boat and heavier-than-air flying craft designed for trans-Atlantic flight. When the World War broke out he, with J. N. Willys, expanded the Curtiss factories to meet the war demands first of Great Britain and Russia, and then of the United States. These included the G. H. Curtiss Manufacturing Company, Curtiss Aëroplane Company, Curtiss Motor Company, Curtiss Engineering Company, and Curtiss Aëroplane & Motor Corp., located mostly in Buffalo, N. Y. In this period he developed the *Wasp* motor, with which world records for speed and altitude were achieved, and built for the U. S. Navy the Navy-Curtiss flying boats 1, 2, 3, and 4, the latter, in 1919, being the first aircraft of any kind to cross the Atlantic. He also designed and built several machines of distinctive plan, such as scooters, life boats, combined land and water aircraft, speed motor boats, and autoplanes. He was active between 1909 and 1919 in organizing the Curtiss Flying Service and in establishing flying schools in Hammondsport and Buffalo, San Diego, Newport News, Miami, and Atlantic City. With the exception of the Wright brothers, no other American did so much as he toward advancing and popularizing aviation. He was the author, with Augustus Post, of the *Curtiss Aviation Book*.

CUSHMAN, ALLERTON SEWARD. An American chemist, died in New York City, May 1, 1930. He was born at the United States Consulate in Rome, June 2, 1867, and was graduated from the Worcester (Mass.) Polytechnic Institute in 1888. In 1889-90 he studied at the universities of Freiburg and Heidelberg, after which he returned to the United States and received an M.A. degree from Harvard University in 1896 and a Ph.D. the following year. He was associate professor of chemistry at Bryn Mawr College in 1900-01. From 1902 to 1910 he was assistant director in the Office of Public Roads of the U. S. Department of Agriculture and chemist in charge of investigations. In 1910 he founded the Institute of Industrial Research and until 1924, was its director. During the World War he served in the Army Ordnance Department with the rank of Lieutenant-Colonel, being stationed at Frankford Arsenal. In addition to scientific bulletins and papers, Dr. Cushman wrote *The Corrosion and Preservation of Iron and Steel* (1910), and *Chemistry and Civilization* (1920). Other subjects in which he made investigations were the extraction of potash from feldspathic rocks, the use of ground rock as fertilizer, and the properties of road materials. He was the recipient of the medal of the Franklin Institute of Philadelphia in 1906.

CUSTOMS TRUCE. See LEAGUE OF NATIONS.
CYCLING. Lucien Michaud, of France, won the world's professional sprint championship for the fourth consecutive year, but new title holders appeared in other world cycling events. Eric Moeller of Germany captured the world's professional motor-paced title, while the world's professional road title went to Alfredo Binda of Italy, and the world's amateur sprint championship to Louis Gerardin of France.

In the United States, Cecil Walker of Australia captured the American all-around professional championship for the sixth successive year, as well as the professional sprint title. Franco Georgetti, of Italy, was another outstanding professional cyclist of the year, winning the American motor-paced championship for the fourth year in succession and pairing with Paul Brocardo, of Italy, to win the 49th international six-day race in Madison Square Garden, New York, December 7-13. The American amateur sprint and all-around titles were won by Dominick Tucillo, riding for the Acme Wheelmen, of New York, and the American amateur road title by Robert Thomas, of Kenosha, Wis.

CYPRUS. A British island, situated 40 miles from the coast of Asia Minor and 60 from the coast of Syria; the third largest island in the Mediterranean Sea. Area, 3584 square miles; population, according to the census of 1921, 310,715, of whom 61,339 were Moslems. In 1928 births registered numbered 9959 and deaths, 5235. Nicosia, the capital, had 18,579 inhabitants in 1921. A total of 47,577 pupils were enrolled in 971 elementary schools in 1928. With about one-third of the arable land under cultivation, agriculture forms the chief occupation of the people of the island. Forests and vineyards are being rapidly developed. Other farm products are wheat, barley, oats, potatoes, linseed, wine, olive oil, cotton, and fruit. Asbestos and iron are mined and exported in considerable quantities.

Imports during 1929 were valued at £1,983,833 and exports at £1,635,736. Shipping entered and cleared the same year totaled 2,048,764 tons. Excluding the island's share of the Turkish debt charge, expenditure in 1928 amounted to £679,980; revenue, £713,753; public debt, £174,107. The island is under a governor, aided by an executive council and a legislative council of 24 members, of whom 9 are office-holders and the remainder elected for five years, 12 of them by non-Mohammedan voters and 3 by Mohammedan voters. On May 1, 1925, the island was given the status of a colony. Governor during 1930, Sir Ronald Storrs.

HISTORY. A demand from the Greek representatives on the Legislative Council of Cyprus that the island be ceded to Greece was flatly rejected by Lord Passfield, British Secretary of State for Colonies, according to a White Paper issued by the British government in February, 1930. The Greek memorial, published in the White Paper, complained of conditions on the island under British administration and declared the only solution was "union with our mother country, Greece." Failing this, they asked the extension of responsible government to the island. Lord Passfield replied that he did not consider the island ripe for a further experiment in constitutional government. The memorialists asserted they represented five-sixths of the population, which was denied by the government. See ARCHAEOLOGY.

CYRENAICA. An Italian colony on the north coast of Africa. It formed part of Libia until 1919, when Libia was divided into Cyrenaica and Tripolitania for military and administrative purposes. (See TRIPOLITANIA.) The area is estimated at about 285,640 square miles including the hinterland zone of Cufra; population, according to the census of 1926, about 185,000 natives, and 10,000 Europeans. Benghazi is the principal town with a population of 31,298 in December, 1928, exclusive of the garrison. The chief occupation of the people is agriculture, although there are possibilities for cattle raising. Barley and wheat are the chief products. In 1928 imports totaled 260,943,000 lire (178,238,195 lire in 1927) and exports, 24,896,000 lire (14,908,000 lire in 1927). Cotton goods and sugar are the chief imports; sponges, barley, wool and goats' hair, tunny fish and cattle, the chief exports. Revenues and expenditures for 1929-30 were estimated as follows: Revenue of the colony, 55,880,000 lire; state contribution, 198,210,200 lire; total, 254,090,200 lire; civil expenditure, 52,000,000 lire; military expenditure, 206,350,000 lire. The military force in 1929 consisted of 500 officers and 16,000 men, including 13,000 native troops. Governor during 1930, General Pietro Badoglio, appointed December, 1928, with headquarters in Tripolitania; Lieutenant-Governor, General Graziani (appointed March, 1930).

In his campaign to stamp out rebellion among the nomad tribesmen of the Gebel district in southern Cyrenaica, General Graziani in 1930 moved the entire native population of the region, numbering about 80,000, hundreds of miles across the desert to pasture lands allotted them on the Mediterranean coast. About 600,000 head of cattle were moved with them. The move was planned to cut off the supplies of the nomads, who levied upon the resident population.

CZECHOSLOVAKIA, *čcheko-slovákia*. A central European republic, formed Oct. 28, 1918, out of the Slav regions of the old Austro-Hungarian Empire; comprising the former Austro-Hungarian provinces of Bohemia, Moravia, Silesia, Slovakia, and Ruthenia, together with the portion of the Teschen district assigned to Czechoslovakia at the Ambassadors' Conference July 28, 1920. Capital, Prague.

AREA AND POPULATION. The total area of Czechoslovakia is 54,207 square miles. The population at the census of Feb. 15, 1921, was 13,613,172 (estimated at 14,600,000 on Jan. 1, 1930). By race, it was distributed in 1921 as follows: Czechoslovaks, 8,760,937 (65.5 per cent); Germans, 3,123,568 (23.3 per cent); Magyars, 745,431 (5.5 per cent); Ruthenians, 461,849 (3.4 per cent); Jews, 180,855 (1.3 per cent); Poles, 75,853 (0.5 per cent); others, 25,871 (0.2 per cent). There were also 238,808 aliens. The largest cities with their populations in 1921 are: Prague, 676,657; Brno, 221,758; Ostrava, 113,709; Plzeň, 108,023; and Bratislava, 93,189. The majority of the people are Roman Catholics, who numbered 10,383,833 in 1921. Czech is the official language, but about 25 per cent of the population speak German as their native tongue.

EDUCATION. Elementary education is compulsory between the ages of 6 and 14. In October, 1928, there were 14,484 elementary public and private schools, with 1,534,454 pupils, and 1799 higher grade schools (public and private), with 235,876 pupils. Secondary Latin and technical schools (1927-28) numbered 353, with 95,541

students, and public, or state-aided, schools of commerce, 171, with 32,421 students. The four universities at Prague (Czech), Prague (German), Brno (Czech), and Bratislava (Slovak) had a total of 16,663 students in 1927-28 and the four technical high schools had 10,734 students. About 93 per cent of the population over six years of age are literate.

PRODUCTION. Czechoslovakia inherited about three-fourths of the industrial resources of the former Austro-Hungarian Empire and the north-western section is one of the most highly developed industrial districts of Europe. In addition, the nation is self-contained in most agricultural commodities, although considerable quantities of livestock, wheat, corn, and lard are imported. Of the total population, about 45 per cent are engaged in industry and commerce and 40 per cent in agriculture.

Arable land comprised 43 per cent of the total area in 1928; permanent grass and pasture, 18 per cent; and woodland and forests, 33 per cent. Official estimates of the principal crops for 1930, in metric tons, were: Wheat, 1,900,000; rye, 700,000; barley, 520,000; and oats, 230,000. For 1929, the cereal yields in quintals were: Wheat, 13,081,000; rye, 16,154,000; barley, 12,778,000; oats, 13,664,000; and maize, 2,489,000. Sugar production in 1929 was 1,030,000 metric tons. There are flourishing beer, spirits, malt, and foodstuff industries. The fruit crop (1928) included 179,281 tons of apples, 95,330 tons of pears, and 261,978 tons of stone fruit.

Production of the leading minerals in metric tons for 1929, with figures for 1928 in parentheses, was as follows: Coal, 16,750,674 (14,460,305); lignite, 22,555,210 (20,128,000); coke, 3,200,000 (2,777,000); pig iron, 1,642,482 (1,569,264); steel, 2,151,340 (1,732,000). Salt, zinc, manganese, graphite, garnets, gold, silver, copper, and lead are produced also. There were 289 coal mines in 1928, employing 97,403 workers. Textiles, glass and stone, foodstuffs, furniture, machinery, metals, paper, and chemicals are the leading manufactured products. Leather working is extensively carried on. There were in 1930 a total of 1740 textile factories, with 200,000 mechanical looms and 5,000,000 spindles, employing 304,000 workers. Textile production averages about \$420,000,000 annually, of which about one-half is domestically consumed. Textile exports in 1929 were valued at \$211,650,000 (\$218,000,000 in 1928).

COMMERCE. The favorable balance of trade characteristic of former years was retained by a narrow margin in 1929. Imports, including bullion, increased to 19,918,797,000 crowns (1 crown equaled \$0.0296 from 19,207,903,000 crowns in 1928, while exports declined to 20,415,969,000 crowns from 21,224,211,000 crowns in 1928. The export surplus was 497,172,000 crowns, as against 2,016,308,000 crowns in the previous year. Czechoslovakia in 1929 ranked first in the exportation of glass and of boots and shoes. The chief exports (1929), in millions of crowns, were: Cotton yarns and manufactures, 2881; woolen yarns and manufactures, 2104; iron and manufactures, 1802; leather and leather goods, 1416; glass and glassware, 1378; sugar, 1068; cereals, 1004. Leading imports were: Raw cotton, 1953; raw wool, 1559; cereals, 1154; cattle, 944; fruit and vegetables, 858; silks, 828. Imports came mainly from Germany, with Austria, Poland, and the United States ranking in order. Germany,

Austria, and Great Britain were the chief export markets. Exports in 1930 were valued at about \$523,000,000 and imports at \$468,000,000.

FINANCE. Budget estimates for 1930 placed the total revenues at 9,419,867,000 crowns and total expenditures at 9,366,904,000 crowns, as compared with an estimated revenue in 1929 of 9,569,907,000 crowns and an estimated expenditure of 9,534,373,000 crowns. In the 1930 budget, direct taxation was estimated to yield 1,597,000,000 crowns (1,050,000,000 crowns from the income tax). Capital expenditure in state enterprises was calculated at 1,212,000,000 crowns (640,000,000 crowns in 1929). Final figures for 1928 showed totaled revenues of 9,925,800,000 crowns and expenditures of 9,607,400,000 crowns, leaving an actual surplus of 318,400,000 crowns, as against an estimated surplus of 35,500,000 crowns in 1929 and 53,000,000 crowns in 1930.

Revised in accordance with agreements reached at the Hague Conference in January, 1930, the national debt at the beginning of 1930 stood at 38,092,000,000 crowns (\$1,129,000,000), according to preliminary figures from semi-official sources. Of the total, 29,610,000,000 crowns represented the internal debt, a reduction of 536,000,000 crowns during 1929, and 8,482,000,000 crowns the external debt. The external debt was divided, in crowns, as follows: 8 per cent sterling loan of 1922, 1,531,000,000; liberation tax (current capital value), 1,190,000,000; and funded debts to United States, 3,881,000,000; to Great Britain, 89,000,000; to Caisse Commune, 1,121,000,000; to France, 340,000,000; and to Italy, 330,000,000.

The gold standard for Czechoslovak currency was adopted late in 1929. The crown (equivalent to \$0.02964) is the monetary unit, with 100 crowns equal to an *hrivana*.

COMMUNICATIONS. The total length of railway lines in 1929 was 8477 miles, of which 6899 miles, or 81 per cent, were Government-owned and operated. The Government operated an additional 1422 miles, or 16.8 per cent, under contract with private owners, the remaining 155 miles being privately operated. Freight and passengers carried in 1928 were more than double the figures for 1919. In 1928, operating revenues of the state railways were 4,511,573,240 crowns and other revenues 448,487,714 crowns, while operating expenses were 4,017,975,014 crowns and other expenses 355,666,038 crowns. In 1929 there were approximately 45,130 miles of highways, of which 5580 were national roads, 31,050 miles were second-class roads, and 8500 miles third-class roads. Virtually all were surfaced. Expenditures by the National government for highway work during 1930 were estimated at 350,000,000 crowns. This excluded appropriations from general revenues (76,750,000 crowns in 1929) and those by provincial, district, and local governments.

The Danube is the principal waterway, with Bratislava as the chief port; the Elbe and Vltava rivers are extensively used also for freight shipments. Thirteen international air routes and four national routes were in operation within or across Czechoslovak territory in 1928.

GOVERNMENT. According to the constitution adopted by the National Assembly, Feb. 29, 1920, executive power is vested in a president, elected for seven years by the two chambers in joint session, who appoints and recalls his ministers; and legislative power in a senate of 150 members

elected for eight years and a chamber of deputies elected for six years, the former elected by all citizens over 26 years of age and the latter by all citizens over 21 years of age. The principle of proportional representation is applied. The composition of the Chamber of Deputies following the election of Oct. 31, 1929, was as follows: Czech Agrarians, 46; Czech Socialist Democrats, 39; Czech National Socialists, 32; Communists, 30; Czech Clericals, 25; German Social Democrats, 21; Slovak Clericals, 19; German Agrarians and Socialists, 14; Czech Small Traders, 12; Hungarian Christian Socialists, 9; German National Socialists, 8; German Nationals, 7; Poles and Jews, 4; League for Election Reform, 3.

President in 1930, Thomas Garrigue Masaryk, reelected May 27, 1927. The coalition Government formed Dec. 8, 1929, was constituted as follows: Prime Minister, František Udržal (Czech Agrarian); Foreign Affairs, Dr. Eduard Beneš (Czech National Socialist); National Defense, Dr. K. Viskovsky; Finance, Dr. Karl Engliš; Interior, Dr. J. Slávik; Commerce, Dr. Josef Matoušek; Health, Dr. František Spina; Railways, Rudolf Mlčoch; Social Welfare, Dr. Ludwig Czech; Justice, Dr. Alfred Meissner; Agriculture, Bohumil Bradáč; Education, Dr. Ivan Dérer; Posts and Telegraphs, Dr. Emile Franke; Public Works, Jan Dostálek; Unification of Laws, Dr. Jan Šrámek; Food, Rudolf Bechyně. The Cabinet represents a coalition of all Czech parties, bourgeois and socialists, and the German-Magyar Agrarians and Social Democrats.

HISTORY

THE POLITICAL SITUATION. Save for an effort to deprive Foreign Minister Eduard Beneš of his Cabinet portfolio, which he had held for ten years, because of his failure to obtain greater concessions at The Hague Reparations Conference in January, domestic politics in 1930, in contrast with 1929, remained quiescent for the most part.

The final settlement reached at The Hague, described under REPARATIONS, was bitterly criticized on the ground that Czechoslovakia was required to make payments on terms somewhat similar to those demanded of her defeated enemies of the World War. Dr. Beneš saved his position by a powerful defense of his policies delivered before both Chambers of Parliament on January 30. He denied charges that the Little Entente alliances and the alliance with France had alienated the friendliness of Great Britain and Italy. On the other hand, he said, the unity of purpose displayed by the Little Entente at The Hague had strengthened Czechoslovakia's political position and the final concessions obtained were such as to justify the policies he had followed during the previous decade.

The dissatisfaction aroused by The Hague settlement was thought to have injured Dr. Beneš's chances of succeeding President Masaryk as head of the republic, of which the two were cofounders. The President was known to favor his selection, and had been expected to resign on his eightieth birthday, March 7. Consequently Dr. Masaryk's announcement that he would serve the balance of his term was received as evidence that he did not consider the time propitious for the election of Dr. Beneš.

The Communist party, which lost ground in the elections of 1929, was further weakened in the autumn of 1930 by the defection of the miners' section of the International Union of Com-

munists and other considerable groups, who joined the Social Democratic party. Waning enthusiasm for the Communist programme and the refusal of Moscow to sanction compromises which would have enabled the party to adapt its policies to special conditions in Czechoslovakia contributed to the defections. The new additions strengthened Socialist hopes for the establishment of a Socialist Ministry. Efforts to unite the four Roman Catholic parties into a compact bloc were temporarily defeated in June, when the Czechoslovak People's party announced that it did not consider the time opportune for such a step. The negotiations were inspired by the weakened parliamentary position of the Catholic forces following the election of 1929.

The Slovak autonomist agitation appeared to have died down, temporarily at least. The action of the Bratislava Court of Appeals in reaffirming in the middle of April the 15-year prison sentence passed on Prof. Voiteich Tuka, Slovak autonomist leader, aroused comparatively little interest. The verdict was again confirmed by the Supreme Court of Czechoslovakia on July 31. Professor Tuka, a Slovak deputy in Parliament and unofficial head of the Slovak People's (Catholic) party, was convicted in 1929 of high treason and military espionage. Revelations during his sensational trial of his relations with Hungarian groups seeking revision of the Trianon and Versailles peace treaties had alienated much of the Slovak leader's support.

CZECH NATIONALISM. Czech nationalism vented itself in violent anti-foreign demonstrations during the year. The Prague newspapers assumed the lead in voicing the anger of European Slavs at the execution in September of Italian subjects of Slav extraction charged with terrorist activities. Despite a ban placed on anti-Italian demonstrations by the Government, the Italian legation in Prague was stoned by a mob on September 11. Nor was Italy the sole target of Czech resentment. German and Jewish motion picture theatres in Prague were invaded and badly damaged by demonstrators on September 24, while a few days previously an American and an Austrian were prosecuted for alleged verbal insults to the country's honor. An intimation from President Masaryk that he would be willing to consider revision of the Czechoslovak-Hungarian frontier aroused indignation among extreme Czech nationalists, as well as much interest in the chaucelleries of Europe.

OTHER EVENTS. The proposal for a customs union among the Danube states was sympathetically received in Prague, after the alarm aroused by the prospect of the formation of an agricultural bloc by Rumania, Yugoslavia, and Hungary had subsided.

About 121,000 acres of fertile, arable land near the German border were transferred from the Prince of Liechtenstein and the Order of Teutonic Knights to the Czechoslovak government for redistribution, under an agreement concluded by the three parties at Olmütz on August 18. The former owners surrendered the properties for nominal compensation to avoid forcible confiscation under the country's new land laws. It was planned to distribute the land principally to Czechs in order to create an additional barrier against Germany.

While purely political problems were less pressing than in the previous year, the world-wide economic depression brought in its wake the

difficult questions of farm relief and unemployment insurance, complicated by declining national revenues. To insure the expenditure of unemployment benefits for the purposes intended, and at the same time to help relieve the agricultural depression, the Ministry of Agriculture in May announced that doles would be distributed in the form of tickets exchangeable for meat, bread, vegetables, and milk, rather than in cash. It was suspected that the cash payments had been used in part for the purchase of liquor. See **LITTLE ENTENTE; JUGOSLAVIA, FRANCE, and HUNGARY under History; and REPARATIONS.**

DAHOMÉY, dà-hō'ml. A French colony on the west coast of Africa forming a subdivision of the colony of French West Africa. (See **FRENCH WEST AFRICA**). The colony has only about 70 miles of coast, but a wide hinterland. Area, 62,772 square miles; population, according to the census of 1927, 1,057,260, of whom 1000 were Europeans. The chief centre of trade and the seat of the government is Porto Novo with a population of about 27,000. Potatoes, corn, manioc, yams, and some cotton are raised. The forests contain oil palms of commercial importance. The chief exports are palm oil and palm kernels. Imports in 1928 amounted to 134,349,000 francs; exports, 97,773,000 francs. The local budget for 1927 was 31,000,000 francs. Governor in 1930, M. Reste.

DAIRYING. The year 1930 was marked by very unusual and unsettled conditions in the dairy industry which is generally recognized as one of the most stable of agricultural enterprises. A number of factors contributed toward this condition, especially the industrial depression and falling price level, the drought, heavy stocks of dairy products which were on hand at the beginning of the year, the revised tariff, failure of expected seasonal rises in prices to occur, and conditions in world markets.

In recent years there has been an organized effort to increase the consumption of dairy products in the U. S. and the chief difficulty in the marketing of these products in 1929 was attributed to the lack of an active demand. Notwithstanding the efforts to increase consumption, the Bureau of Agricultural Economics estimated the consumption of butter, cheese and canned milk in 1930 to show a decrease of a little less than 1 per cent as compared with 1929. The consumption of these products in 1929 was 1.4 per cent less than that in 1928. Had it not been for the large carry-over from 1929 the condition would likely have improved in 1930, as production of canned milk was reduced 10 per cent and production of butter 4 per cent with cheese production showing an increase of less than 1 per cent. There was thus a considerably greater reduction in production than in consumption.

There was a feeling of unsteadiness among fluid milk producers because surplus fluid milk could not be diverted to the manufactured products at an advantage, as the prices for surplus fluid milk were low. Butter prices dropped to the lowest levels since 1921, being less than 40 cents per pound on the New York market during practically all of the year, and less than 30 cents at the end of the year. Butter prices also failed to make expected seasonal advances. An important factor in the low prices was the willingness of those storing butter and cheese to take small profits rather than hold

for better prices. This situation resulted in the movement of butter and cheese out of storage during August, several weeks earlier than is normally expected. Although the amount of butter in storage on July 1, 106,522,000 pounds, was the largest on record, the early movement from storage reduced the supplies so that by November 1 there were less than 110,000,000 pounds as compared with 138,000,000 pounds in storage at the same time in 1929. The 1930 storage was about 2,000,000 pounds less than the five-year average for November 1. Cheese in storage on November 1 was practically equal to 1929 and the amount of canned milk was nearly 10 per cent less in 1930 than in 1929.

The drought extending over practically all of the United States east of the Rockies was not without its effect on the dairy enterprise. Owing to the supplementary feeding of dairy cattle as practiced in many sections even on pasture, actual production was not reduced as much as might at first be expected. The reduction in pasture obviously cut in on summer production, but it is really the short harvest resulting from the drought that may be expected to have its greatest effect in the winter 1930-31, when the shortage of late summer and fall harvested feeds becomes apparent. Much relief to the stricken areas resulted from the emergency freight rates for feed granted to areas in 21 States. The emergency rates expired November 30.

A factor not mentioned in the above discussion but having an important bearing on the net prices received by the producers for dairy products was the relatively low price of feeds. The reduced 1930 production may be expected to modify this situation. Reports indicate that there was an increase in the heifer calves being raised, which also will have to be considered as potential consumers of the reduced supply of feed. Low feed prices prevailed into the fall, a situation which acted somewhat as a stimulant to production.

The year 1930 will be remembered as one marked by unsteadiness and unexpected conditions but with the general low prices the index of the farm price of dairy products was reported by the U. S. Bureau of Agricultural Economics as well above the average of all farm products during most of the year.

The passage of the tariff act of 1930 placed the following duty on imported dairy products: milk 6½ cents per gallon, cream 56.6 cents per gallon, butter 14 cents per pound, oleomargarine 14 cents per pound, cheese 7 cents per pound and casein and lactarene 5½ cents per pound. With the exception of Swiss cheese the rates were all increases as compared with the 1922 tariff and it was hoped they would help to prevent foreign competition.

INTERNATIONAL CONDITIONS. The weakness exhibited in the domestic markets for dairy products in the United States was if anything more pronounced in the world markets. The British butter markets suffered from the receipt of large stocks of colonial butter and in Germany prices were too low to encourage imports. In most of the year the prices in these markets were, however, not low enough to make it profitable to ship large amounts of dairy products to the United States on account of the tariff.

Domestic imports and exports of the United States were both somewhat less in 1930 than in

1929. There continued, however, to be an excess of imports over exports valued at about \$8,000,000 in 1930. The major export product was canned and dried milk which in the twelve months of 1930 amounted to 96,682,467 pounds. Cheese made up the largest part of the imported dairy products. A total of 68,310,716 pounds were received during 1930, coming mostly from Italy and Switzerland.

In New Zealand conditions were so favorable for dairying that a new record for butter exports was established. The New Zealand Department of Agriculture reported that 213,570,000 pounds of butter were graded in the 1929-30 season as compared with 182,909,000 pounds in the previous season. The amount of cheese graded was about one per cent greater in 1929-30 than in 1928-29. The last part of 1930 was also favorable for production of dairy products.

Similar conditions prevailed in Australia and the exports of butter in the last 4 months of 1930 were unusually heavy. Production was stimulated by spring rains which were general except for certain parts of New South Wales.

With conditions of heavy production prevailing in New Zealand and Australia and heavy production also in Argentina and Denmark, the European markets were sluggish. During the first eight months of 1930 Great Britain imported 525,728,000 pounds of butter and 231,572,000 pounds of cheese, the former slightly exceeding and the latter being a little less than imports for the corresponding period of the previous year. The imports of butter by Germany were less in 1930 than in 1929. It appeared that although prices were relatively low as compared with previous years, the retail prices retarded consumption on account of existing business conditions.

TRENDS IN RESEARCH. Research at the State Agricultural Experiment Stations and the U. S. Department of Agriculture covered many phases of dairying. In the production work there was much interest in nutrition and feeding. For example, the Minnesota Experiment Station demonstrated that cattle do not need vitamin C in their rations as calves made normal growth on vitamin C deficient rations, and showed the presence of vitamin C in the livers. Cows on the deficient rations produced milk containing vitamin C, indicating that cattle are able to synthesize this vitamin but it appeared that the synthesis did not occur in the digestive tract, as was previously found to be the case with vitamin B.

Studies of the utilization of and ability to withstand deficiencies in calcium and phosphorus by dairy cattle were conducted at a number of the institutions each dealing with specific problems related to the subject. The West Virginia Station found that a low calcium or phosphorus ration lowered the ash content of calves but the proportion of calcium and phosphorus in the bones was not altered. At the Massachusetts Experiment Station calcium and phosphorus supplements to the rations of dairy cows on non-legume roughage did not appear to influence milk production. The mineral supplements did, however, increase body weight and favored reproduction. The Michigan and Ohio Experiment Stations found little or no advantage from the use of calcium and phosphorus supplements to a good ration in which legume hay was included along with other cattle foods.

SITE OF THE HOOVER DAM AND PROPOSED WORKS

In carefully controlled studies at the New Hampshire Experiment Station conducted in cooperation with the Carnegie Institution of Washington it was found that cattle eliminate excess heat, when under high metabolic pressure, by the excretion of carbon dioxide and water vapor through the lungs and skin. The insensible perspiration thus acts as a safety regulator under such conditions.

The U. S. Department of Agriculture and the State experiment stations maintained a continued interest in the quality of cheese and butter and in the better utilization of waste dairy products. In experiments in the Bureau of Dairying a simplified method of making casein was worked out which was expected to be a great help to the industry. Improvements and modifications were also developed in some of the methods of manufacturing such products as milk proteins, milk sugars, etc.

Investigations of bacterial and chemical products affecting the quality of butter, cheese, and ice cream were plentiful and progress was made in helping to assure better quality in the products.

An outstanding development in milking methods was the so-called "Roto Lactor" which was constructed at the Walker Gordon Farm at Plainsboro, N. J., to milk 1680 cows three times a day. This new system for certified milk production was publicly demonstrated before a group of prominent dairy officials and scientists.

Announcement was made that the Ninth International Dairy Congress would be held in 1931 in Copenhagen, the capital of Denmark.

PERSONNEL. Dr. S. M. Babcock, inventor of

the Babcock butterfat test, was on Oct. 22, 1930, granted the Capper Award for distinguished service to agriculture by a living American just two weeks before Dr. Babcock's 87th birthday. The award carries with it in addition to the gold medal a \$5000 cash prize. Dr. C. L. Allen, Assistant Professor of Dairying at Cornell University, resigned. The death is noted of Peter M. Harwood, general agent of the Dairy Bureau of the Massachusetts State Department of Agriculture from 1901 to 1923.

Porcher, *Dry Milk* (Milwaukee, 1929). See AGRICULTURAL EXTENSION WORK.

DALMATIA. A crownland of Austria until the downfall of the Dual Monarchy in 1918, and then a province of Yugoslavia until the administrative reorganization of Oct. 3, 1929 (see JUGOSLAVIA). It extended from Bosnia and the Herzegovina west to the Adriatic Sea. Area, 4916 square miles; population, according to the census of Jan. 31, 1921, 621,429.

DAMS. While the publication of final plans for the Hoover Dam in December turned atten-

SITE OF THE HOOVER DAM AND PROPOSED WORKS

tion to this work, several other important structures were under construction. Rapid progress had been made on the Owyhee Dam of the U. S. Reclamation Service where a huge cableway of 1300-foot span and carrying an 8-cubic-yard bucket had been installed. Two other notable arch dams were under way. The Ariel Dam on the Lewis River in Washington of the constant angle type 300 feet high was being built by the Phoenix Utility Co. for the Inland Power and Light Co. The arch is 700 feet long and there are gravity sections of 600 and 140 feet at the ends. The big Tujunga Dam near Los Angeles and built for flood control is also a first order structure, with a height of 200 feet and of the variable radius type. The Bagnell Dam on the Osage River Project, Mo., for the Union Electric Light and Power Co., 2543 feet long and 148 feet high and involving over $\frac{1}{2}$ million cubic yards of concrete, should also be mentioned.

Near Tijuana, Mexico, satisfactory progress was made on the highest slab and buttress, or Amburssen type, reinforced concrete dam yet attempted. This dam, known as the Rodriguez, was planned for a Mexican Government irrigation project and was to be 187 feet high above stream bed.

The Don Martin Dam, also in Mexico, part of an extensive irrigation project undertaken by the Mexican Government (see 1929 YEAR BOOK), was also completed during the year. This work involved an embankment 3484 feet long with a maximum height of 105 feet and connected with a concrete spillway 565 feet long. Interesting features included the reinforced-concrete revetment of the upstream slope of the earth dam.

Work was also started (on June 12) to raise the Aswan Dam on the Nile for the third time. Built in 1902 to an elevation of 357.32 feet, it was raised in 1912 to 373.92 and is now being again increased to 393.6 feet. Discouraged by the interference of what he claimed were inefficient inspectors and the failure of the Egyptian government to make payments, the principal contractor on the work later committed suicide but the construction will doubtless be continued.

HOOVER DAM. Perhaps the most important development during the year was the official opening of work on the great Hoover or Boulder Canyon Dam by Secretary Wilbur on September 17 and the publication of the final plans for the work on which bids were to be called on Mar. 4, 1931. A few quantity estimates on this work illustrate its gigantic scale. The dam will be 730 ft. high (25 ft. more than originally planned), built with a gravity section on a 500-foot radius curve and 1180 ft. long at the crest. Some 5,000,000 cubic yards of concrete are required; 30,000 tons of steel will be used; 70 miles of grout holes are planned to solidify the side walls and foundations; four 50-foot diversion tunnels (two to be used later as spillway conduits and two as penstocks) are projected; and 2000 tons of special needle valves have been designed to control the flow from the reservoir. Add to these record-breaking figures the fact that the dam is to be built in one of the remotest regions of the United States and is estimated to require seven years to build, and some conception of the size of the undertaking is apparent.

The construction calls for the placing of the concrete in columnar units approximately 50 by

50 ft. in plan with special arrangements for cooling and grouting between the masses.

Thus, in spite of the refusal of the State of Arizona to accede to the plans and her opposition at every step in the proceedings, the Boulder Canyon project may be said to have actually been started. It was understood that Arizona proposed to take the matter to the U. S. Supreme Court but there appears to be little doubt that the contract for the work will be let during the coming year and construction started.

EARTH DAMS. The year 1930 was not particularly kind to earth-dam constructions. The great Cobble Mountain Dam, west of Springfield, Mass. was practically at a standstill due to the failure of the contractor to meet the engineer's specifications and his subsequent withdrawal from the work. It was understood that the work had been relet and would again go forward. At the Saluda Dam, a record-breaking work near Columbia, S. C., disaster was narrowly escaped when a 100-foot section involving about 125,000 cubic yards of fill, washed out on February 19. This dam, a semi-hydraulic construction 208 ft. high, had been brought within 19 ft. of the top when the water in the segregation pool, about 8 ft. deep and a mile long, broke through. Fortunately the upper embankment, although it failed in part, held sufficiently to keep back the water in the reservoir back of the dam which had been allowed to rise to a point 66 ft. below the top level.

In the case of the Alexander Dam, under construction on the Island of Kauai, Hawaii, the failure was more complete. This dam was being built by the hydraulic method of chemically treated, fine volcanic ash. It was to have been 125 ft. high, but the failure in March involved some 257,000 cubic yards of fill and might result in the abandonment of the project. Still another failure on November 23 wrecked a large part of the recently completed Corpus Christi Dam on the Nueces River in Texas. The north end of the concrete spillway was apparently undermined and the abutment and approximately half of the earth embankment were washed out.

While some of these difficulties were probably due to bad design or construction methods, the Saluda failure served to call attention to one of the difficulties of the semi-hydraulic method of construction where the core material is washed from the inner slopes of the upstream and downstream embankments. This process undoubtedly leaves irregular areas of porous beach material, practically washed gravel, between the core and the slope embankments, and it was probable that this fact could not be ignored in this type of construction.

ROCK-FILL DAMS. The major problem in the evolution of the rock-fill type of dam from a more or less temporary structure to a type suitable for long life works, has been in the development of a permanent waterproof diaphragm or cover over the upstream face of the rock fill. Timber or even steel plates when used for this purpose were admittedly limited in life, but did possess sufficient flexibility to accommodate themselves to the setting of the rock fill which would inevitably occur. With the advent of reinforced-concrete facing great attention was given to preparing a carefully placed facing to the rock fill to take the concrete "deck." This deck in turn was made in sections so that to a certain extent it could accommodate itself to possible slight settlement of the fill.

In the Salt Springs project under construction

by the Pacific Gas & Electric Co. on the Mokelumne River in California, the upstream face of the dam was being built arched or curved in plan, so that normal settlement of the fill and the compacting due to water pressure would leave a horizontal convexity, and thus reduce stresses in the facing slabs due to settlement. The rock facing, made up of large stones carefully placed by derricks and with all spaces chinked with smaller stones, covers the entire upstream face and is 15 ft. thick. In this facing grooves were left vertically and horizontally for concrete bearing courses, which support the edges of the reinforced concrete facing slabs—each of which are 60 ft. square. The facing varies in thickness from 3 ft. at the bottom to 1 foot at the top. The great height of this structure, 328 ft., made it imperative to give special attention to these most recent technical refinements in rock-fill dam design.

See also FOUNDATIONS.

DANA, PAUL. An American journalist, died Apr. 7, 1930, in New York City, where he was born Aug. 20, 1852. He was graduated from Harvard University in 1874 and from the law school of Columbia University in 1878. In 1880 he became connected with the *New York Sun*, of which his father, Charles Anderson Dana, was editor, and whom he succeeded as such in 1897. He retired from the editorship in 1903. He was a member of the Board of Park Commissioners of New York, from 1891 to 1894, serving as chairman in 1894. He was on the staff of the first brigade of the National Guard of New York in 1883 with the rank of major. During the World War, he was on the Committee for Relief in Belgium and, in May and June of 1915, was stationed in Namur.

DANISH LITERATURE. See SCANDINAVIAN LITERATURE.

DANZIG, dānts'ik. A Baltic port, occupying a strategic position at the mouth of the Vistula river, which, with its surrounding territory, was established as a free city on Nov. 9, 1920, under the terms of the Treaty of Versailles. It was formerly a part of the German Empire. Area, about 754 square miles; population in 1929, 407,629, of whom 236,064 were in the city proper.

Essentially German in character, the city is the chief outlet for the commerce of Poland, which exercises joint control with the Free City of the harbor administration. Danzig also is within the Polish Customs administration. Exports, in metric tons, in 1929 included: Coal, 5,300,000; grain, 285,000; timber, 613,000. The amount of merchandise passing through the port in 1929 was much larger than in 1925, but the active participation of the Free City in its purchase and sale steadily declined with the establishment of Polish government agencies for the direct sale of sugar, timber, and grain, and the direct purchase of such Polish imports as potash salts and nitrates. The prosperity of Danzig was further threatened by the growth of the new Polish port of Gdynia (see *POLAND* under *Communications*). The net tonnage of vessels entering the port in 1929 was 3,888,000 and of vessels clearing, 3,912,000. The budget for 1929 balanced at 128,000,410 gulden (1 gulden equaled about \$0.194).

Administration of the Government rests with the President of the Senate, which is the highest State authority. There is a Diet of 120 members elected for four years. The Diet elects the members of the Senate and its President. The Diet elected Nov. 13, 1927, included 42 Social Demo-

crats, 25 German Nationalists, 18 Centrists, 8 Communists, and 27 representatives of other parties. There is a High Commissioner appointed by the League of Nations. High Commissioner in 1930, Count Manfred Graving, appointed in 1928; President of the Senate, Dr. H. Sahm. In the elections for the Diet of Nov. 16, 1930, the National Socialists (Fascists) increased their vote to 34,394, or 24 times the vote of 1483 received in the elections of 1927. The Communists doubled their vote and the Centre gained slightly, while all other parties suffered losses. See GERMANY and POLAND under *History*; and WORLD COURT.

DARLINGTON, THE RT. REV. JAMES HENRY. Protestant Episcopal Bishop of the Diocese of Harrisburg, Pa., died in Kingston, N. Y., Aug. 14, 1930. He was born in Brooklyn, N. Y., June 9, 1856, and was graduated from New York University in 1877 and from the Princeton Theological Seminary in 1880. In 1882 he was ordained a deacon and then a priest in the Protestant Episcopal Church, serving during 1882-83 as assistant and during 1883-1905 as rector of Christ Church, Brooklyn. He was also archdeacon of Brooklyn during 1896-98. In 1905 he was elected first Bishop of Harrisburg. He declined an appointment on the United States Commission to Russia following the World War, but became head of the Serbian Relief Fund in the United States. During 1910-25 he was chairman of the commission appointed by the Protestant Episcopal Church to confer with the Eastern Orthodox Churches and the Old Catholics, and in 1920 visited Constantinople, Athens, and other European centres for the purpose of making a concordat. He lectured at New York University in 1902-03. The Ph.D. degree was conferred on him by Princeton University in 1884; the D.D. degree by New York University in 1895; the LL.D. degree by St. John's College in 1905, Dickinson College in 1907, and Lafayette College in 1927; and the D.C.T. degree by Halki Greek Seminary, Constantinople, in 1923. He was also an officer of the French Legion of Honor; grand commander of the Order of the Redeemer of Greece; officer of the Order of St. Sava of Serbia; commander of the Order of Queen Isabella la Catolica of Spain; commander of the Order of the Crown of Italy; commander of the Order of Leopold II of Belgium; and Knight of the Holy Sepulchre, an honor conferred by the Patriarch of Jerusalem. In addition to editing *The Hymnal of the Church*, he was the author of *Pastor and People* (1902) and *Verses by the Way* (4th series, 1929).

DARTMOUTH COLLEGE. A nonsectarian institution for the higher education of men in Hanover, N. H.; founded in 1769. The 1930 autumn session had an enrollment of 2322 students, most of whom were working for the B.A. degree, the exceptions being 17 graduate students, 43 students in the medical school, 21 in the Thayer School of Civil Engineering, and 124 in the Tuck School of Administration and Finance. There were 275 members on the faculty. The productive funds amounted to \$15,000,000. During 1930 the construction of three dormitories and a group of four connected buildings for the Tuck School, including administration offices and class rooms, dormitories and a refectory, was completed. The Fisher Ames Baker Memorial Library contained 300,000 volumes; in 1930 a gift of \$1,000,000 was received from the donor, George F. Baker, as an

endowment for its maintenance. President, Ernest Martin Hopkins, A.M., Litt.D., LL.D.

DATE SCALE. See ENTOMOLOGY, ECONOMIC.

DAVID, EDUARD. A German socialist, died in Berlin Dec. 24, 1930. He was born in Ediger-on-the-Mosel June 11, 1863, and was educated at the University of Giessen. In 1893 he founded the socialist paper *Mitteldeutsche Sonntagszeitung* and became a leader of the Social Democrat party. During 1896-97 he also edited the *Mainzer Volkszeitung*. He was a member of the Reichstag from 1903 to 1918, and during the World War severely criticized the tactics of the military party, including the unrestricted U-boat campaign and the Brest-Litovsk Treaty with Russia. In October, 1918, he was made an Under-secretary for Foreign Affairs, and in February, 1919, became first president of the National Assembly in Weimar. He was appointed Minister of the Interior in the Bauer Cabinet in June, 1919, which office he held until the following March. He wrote: *Sozialismus und Landwirtschaft* (part i, 1903, and part ii, 1922) and *Die Sozialdemokratie im Kriege* (1915).

DAVIDSON, THE MOST REV. AND RT. HON. RANDALL THOMAS, FIRST BARON OF LAMBETH. Former Archbishop of Canterbury and Primate of All England, died in London, May 25, 1930. He was born in Edinburgh, Apr. 7, 1848, and was educated at Harrow and at Trinity College, Oxford. On taking orders in the Church of England in 1874, he was assigned to a curacy at Dartford, Kent, whence he was called three years later to be chaplain and private secretary to the Most Rev. Archibald Tait, Archbishop of Canterbury. In 1878 he married the Archbishop's second daughter, and through this close relationship, both personal and official, obtained an intimate acquaintance with religious and political trends. He continued in this post until 1883, serving for a year after Archbishop Tait's death under his successor, the Most Rev. Edward White Benson. During 1881-83 he also acted as examining chaplain to the Rt. Rev. Joseph B. Lightfoot, Bishop of Durham, and in 1882 was appointed sub-almoner to Queen Victoria. In 1883 the Queen conferred on him the Deanery of Windsor, which carried with it the post of domestic chaplain to the sovereign. In 1891 he was advanced to the post of Clerk of the Closet and also was made Bishop of Rochester. Four years later he became Bishop of Winchester, one of the oldest sees which, with London and Durham, ranked next to the archbishoprics of Canterbury and York in importance. Holding a seat in the House of Lords, he took a special interest in legislature pertaining to social and moral reforms. He was translated to the primacy on the death of Archbishop Temple in 1902, his enthronement taking place in Canterbury Cathedral, Feb. 12, 1903.

Among the outstanding events of Archbishop Davidson's primacy were the Lambeth Conferences of 1908 and 1920, which reflected the mind of the Anglican communion throughout the world on broad public questions. The Sixth (1920) Conference was marked by a discussion of the relations between the Anglican churches and other Christian bodies, and an appeal was issued to all Christian peoples to cooperate in the establishment of a really Catholic Church, based on organic unity rather than uniformity. Archbishop Davidson cultivated friendly relations with the Greek Orthodox Church, receiving in 1922 from Meletios IV, Archbishop of Constantinople and Patriarch

Ecumenical, the Greek Orthodox Synod's acceptance of the validity of the Anglican ordinations.

Again in 1926 the Archbishop was influential in the cancellation of the British general strike through the adoption of his formula by Prime Minister Baldwin and the strike leaders. During the World War Archbishop Davidson placed himself at the head of the National Mission of Repentance and Hope, which aimed at the deepening of the religious life of the nation. The outgrowth of this movement was the passage in 1919 of the Enabling Act under which the Church Assembly and its subordinate councils were set up. The Archbishop presided over the sessions of this body from 1920 to 1928, during which period a number of important measures were passed for presentation to Parliament. The chief of these was the Revised Prayer Book Measure, on which he had worked for 20 years. He believed that it would accomplish a two-fold purpose, in enriching the services of the Church and enabling them to satisfy needs unforeseen in the seventeenth century, and in reconciling the differences between the high and low branches of the Church. The Prayer Book Measure was passed by the House of Lords, but fear that it sanctioned still greater growth in the power of the Anglo-Catholic party caused its rejection in the House of Commons on Dec. 15, 1927, and again on June 14, 1928. This rebuff was said to have hastened his resignation.

Archbishop Davidson resigned on Nov. 12, 1928, giving as his reason that he felt he was too old to fill adequately so arduous a position. In recognition of his spiritual leadership he was created a baron, so that his services might still be available in the House of Lords. He was the first archbishop to resign his office and was also the first prelate of the Church of England to be made a temporal peer. He was created a knight of the Grand Cross of the Royal Victorian Order in 1904 and received the Royal Victorian Chain in 1911. He was decorated by Greece in 1918 and by Belgium and Serbia in 1919. He was also the recipient of honorary degrees from Oxford, Cambridge, Durham, Edinburgh, St. Andrews, Aberdeen, Toronto, and Columbia Universities. His works include: *Life of Archbishop Tait* (2 vols., 1891); *The Lambeth Conferences of 1867, 1878, and 1888* (1896); *The Christian Opportunity* (1904); *Captains and Comrades in the Faith* (1911); *The Testing of a Nation* (1919); and *Occasions* (1925). His successor to the primacy was the Most Rev. Cosmo Gordon Lang, Archbishop of York. See ENGLAND, CHURCH OF.

DAVIS, WILLIAM STEARNS. An American educator and author, died in Exeter, N. H., Feb. 15, 1930. He was born in Amherst, Mass., Apr. 30, 1877, and was graduated from Harvard University in 1900, receiving the Ph.D. degree there in 1905. In 1904-05 he lectured at Radcliffe College and in 1906-07 he was an instructor at Beloit College. In 1907-09 he was associate professor of medieval and modern European history at Oberlin College and, from 1909 to 1927, professor of history at the University of Minnesota. He wrote both history and historical fiction. His books include *A Friend of Caesar* (1900; 2d ed., 1913); *God Wills It* (1901); *Belshazzar* (1902); *The Saint of the Dragon's Dale* (1903); *Falaise of the Blessed Voice* (1904); *A Victor of Salamis* (1907); *Outline History of the Roman Empire* (1909); *The Influence of Wealth in Imperial Rome* (1910); *The Friar of Wittenberg* (1912);

Readings in Ancient History (1913); *A Day in Old Athens* (1914); *A History of Mediæval and Modern Europe* (1914); *The Roots of the War* (1918); *A History of France* (1919); *A Short History of the Near East* (1922); *Life on a Mediæval Barony* (1923); *The Beauty of the Purple* (1924); *The White Queen* (1925); *Europe Since Waterloo* (1926); and *Gilman of Redford* (1927).

DAWES PLAN. See REPARATIONS.

DAWLEY, THOMAS ROBINSON, JR. An American traveler and author, died June 2, 1930, in New York City where he was born, Apr. 18, 1862. He ran away to sea at the age of 17 and during the ten years that he was an itinerant adventurer gained a wide knowledge of political and social conditions in the countries of Europe and Latin America. On his return to the United States in 1889 he studied law in Providence, R. I. In 1896 he was sent by *Harper's Weekly* to Cuba to write a series of articles on conditions in the island during the insurrection. As a result of his visits to the insurgent camps he was arrested and imprisoned in Morro Castle and was later expelled from the island by General Weyler, the Spanish Governor-General. He returned to Cuba the following year and remained with General Gomez, the insurgent commander. During the Spanish-American War he was a volunteer aide to Gen. Nelson A. Miles and later to Gen. W. K. Shafter. After the capture of Santiago attempting to publish an American daily newspaper in Cuba, *The Times of Cuba*, he was incarcerated under an old Spanish judicial system in Havana and his newspaper plant was seized. After his release and return to the United States, he went to Spain in the interests of the *Century Magazine*.

In 1901 Mr. Dawley was special correspondent for the *Outlook* at the Pan-American Conference in Mexico City, and in 1902 was one of the American delegates to the International Coffee Congress in New York City. Two years later at President Roosevelt's request, he made a report, on political and social conditions in Santo Domingo. He served as special agent of the U. S. Labor Bureau during 1907-09, being assigned to investigate labor conditions among women and children in the textile mills of the southern Appalachian region. The results of this investigation were embodied in *The Child That Toileth Not* (1912). During 1916-17 he was on the editorial staff of the *Providence Journal*, and served for a brief period during the World War in the War Risk Bureau. In 1920 he returned to Guatemala, where he attempted to introduce welfare work and founded the "Casa del Nino" for the protection and instruction of poor children. He also took an active part in the overthrow of the Cabrera government and was appointed official publicist to the Herrera government. On the overthrow of that government a few months later he returned to New York City, where he wrote articles on Latin America, Spain, and the West Indies.

DEATH RATE. See VITAL STATISTICS.

DEBTS, PUBLIC. See PUBLIC FINANCE and GREAT BRITAIN, etc., under *Finance*.

DECEPTION ISLAND. Deception Island (Lat. 63° S., Long. 60° 15' W.) near the northern extremity of Graham Land is a volcanic island into whose breached crater the sea has entered and provided an excellent land-locked harbor for the whaling vessels congregating in the adjoining waters each year. See POLAR RESEARCH.

DEFECTIVES. See CRIME; CHILD WELFARE.

DELAWARE. POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 238,380. The population on Jan. 1, 1920, was 223,003. The capital is Dover.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|---------|-----------|-------------|
| Corn | 1930 | 138,000 | 2,815,000 | \$2,562,000 |
| | 1929 | 134,000 | 4,288,000 | 3,773,000 |
| Wheat | 1930 | 106,000 | 2,067,000 | 1,612,000 |
| | 1929 | 107,000 | 2,033,000 | 2,358,000 |
| Hay | 1930 | 69,000 | 82,000* | 1,823,000 |
| | 1929 | 83,000 | 120,000* | 2,069,000 |
| Potatoes | 1930 | 5,000 | 250,000 | 288,000 |
| | 1929 | 6,000 | 492,000 | 787,000 |
| Sweet potatoes | 1930 | 9,000 | 675,000 | 608,000 |
| | 1929 | 8,000 | 1,160,000 | 1,044,000 |

* Tons.

Farms in the State numbered 9758 in 1930, as against 10,257 in 1925 and 10,141 in 1920.

MINERAL PRODUCTION. The exploitation of the State's native minerals, forming but a slight part of its industry, continued in 1928 to consist chiefly of the manufacture of clay products. The total value of such products for 1928 was \$274,894; for 1927, \$293,089. Some stone was quarried and sand and gravel were produced in minor quantities for local needs. The entire yearly mineral production attained, for 1928, \$481,584; for 1927, \$493,377.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$5,378,742 (of which \$1,501,343 was for local education); for interest on debt, \$506,593; for permanent improvements, \$3,758,102; total, \$9,643,437 (of which \$2,541,364 was for highways, \$325,967 being for maintenance and \$2,215,397 for construction). Revenues were \$14,790,646. Of these, property and special taxes formed 72.4 per cent; departmental earnings and remuneration to the State for officers' services, 5.0; sales of licenses 16.0 (including taxes of \$841,081 on sales of gasoline). The State's funded debt outstanding on June 30, 1929, was \$12,391,285. Net of sinking fund assets, it was \$6,483,873. On property there were levied in the year no general State taxes.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 325.11. No further construction in 1930 was reported.

EDUCATION. Systematic instruction in art was introduced in the public school system in 1930, and a plan for the similar treatment of musical instruction was authorized. The junior high school, which had been legally adopted as part of the school system, was reported to have made marked development. The number of individuals of school age in the State was estimated, for 1930, at 51,933. The pupils enrolled in the public schools in the academic year 1929-30 numbered 43,147 (gross), or 42,098 (net). Of the net total, 35,089 were in elementary and 7009 in high-school grades. The year's expenditure for the public schools totaled \$5,240,271. The yearly salaries of all public-school teachers averaged \$1402; of high school teachers alone, \$1780; and of elementary teachers, \$1340.

CHARITIES AND CORRECTIONS. There was under consideration in 1930, a measure to bring the control of the welfare work of the State under a sin-

gle central organization. The State Board of Charities, a body of five members, two necessarily women, all holding office by appointment of the Governor, had supervisory duties over the State institutions of care and custody, without direct authority over them. The following institutions, each under the direction of its own trustees or managers, were supported in whole or in part by State appropriation: Delaware State Hospital, at Farnhurst; State sanatoria for sufferers from tuberculosis (under the State Board of Health); Detention Home; Ferris Industrial School; Delaware Industrial School for Girls (white); Industrial School for Girls (colored); New Castle County Workhouse; New Castle County Farm for Women; Kent County Jail; Sussex County Jail.

POLITICAL AND OTHER EVENTS. Unemployment in the Wilmington district was severely felt among the manufacturing workers during the summer. Threats were made to bomb the Pennsylvania Railroad shops and the Harlan plant by airplane unless the unemployment were relieved.

ELECTIONS. With the support of one of the leading members of the du Pont family, Laumot du Pont, Senator Daniel O. Hastings, Republican and supporter of Prohibition, was reelected on November 4, defeating former Senator Thomas F. Bayard, Democrat, who had the support of Pierre and Irene du Pont. A Republican Legislature and Representative (R. G. Houston) were elected.

OFFICERS. Governor, C. Douglas Buck; Lieutenant-Governor, J. Henry Hazel; Treasurer, George S. Williams; Auditor, Edward Baker; Secretary of State, Charles H. Grantland; Attorney-General, Reuben Satterthwaite, Jr.

JUDICIARY. Chancellor, Josiah O. Wolcott; Chief Justice of Supreme Court, James Pennewill; Associate Justices, Richard S. Rodney, Herbert L. Rice, William Watson Harrington, Charles S. Richards.

DELAWARE, UNIVERSITY OF. An institution of higher learning in Newark, Del.; founded in 1833. The enrollment in 1929-30 was 715, of whom 400 were men and 315 were women. These were distributed as follows: Seniors, 135; juniors, 129; sophomores, 193; freshmen, 256; graduate students, 2; specials, 2. The enrollment in the 1930 summer session was 335. The faculty numbered 114 members, 86 of whom were on the regular teaching staff, the others being members of the experiment station and extension staffs. Appropriations from the State and Federal governments amounted to approximately \$375,000; invested endowment funds amounted to \$540,000. The library contained approximately 55,000 volumes. President, Walter Hullahen, Ph.D., D.C.L., LL.D.

DELTAITE. See MINERALOGY.

DE MOLAY, ORDER OF. A nonsectarian secret organization for young men between the ages of 16, and 21; founded in 1919 by Frank S. Land in Kansas City, Mo., and named in honor of Jacques De Molay, the last military grand master of the Knights Templars. The members are pledged to the precepts of love of parents, reverence, patriotism, cleanness, courtesy, fidelity, and comradeship, and to the promotion of the public school system and good citizenship. The order is governed by a grand council of Freemasons, while the chapters are sponsored by Masonic bodies or groups of Masons. However, it is not a junior Masonic fraternity, and more than 60 per cent of its members are from non-Masonic families. In November, 1930, there were about 200,000

members and more than 300,000 former members in 1300 cities of the United States, Alaska, Hawaii, Porto Rico, the Philippines, Canada, Mexico, and France. The International Greater DeMolay Movement was started in 1930 so as to make the organization world-wide. Frank S. Land, the founder, was grand scribe. Headquarters are at 201 East Armour Boulevard, Kansas City, Mo.

DENISON UNIVERSITY. A coeducational Baptist institution of higher education in Granville, Ohio; founded in 1831. The enrollment for the autumn of 1930 was 911 and for the summer session 109. The faculty numbered 66. The amount of endowment was \$3,362,756; the net income for the year was \$136,600. There were 66,495 volumes in the library. The trustees authorized the erection of a new library building, work on which was to be started in the spring of 1931. Plans were being made for the celebration of the university's centennial anniversary in 1931. President, Avery Albert Shaw, D.C.L., D.D.

DENMARK. The smallest of the three Scandinavian states; comprising the peninsula of Jutland with its adjacent islands in the Baltic, the Faroe Islands, a part of Schleswig as a result of the plebiscite of 1920 under the terms of the Treaty of Versailles, and Greenland, the only colony or possession. Iceland is a free sovereign state, but united to Denmark under the King of Denmark, who is also head of the Government of Iceland. Capital, Copenhagen. King in 1930, Christian X.

AREA AND POPULATION. The area is 16,568 square miles, including the Faroe Islands, which have an area of 540 square miles; population, according to the census of Nov. 5, 1925, 3,434,555 (estimated in July, 1929, at 3,518,000). Births in 1928 totaled 68,516; deaths, 38,484; marriages, 27,300. Emigration, chiefly to the United States and Canada, totaled 6277 in 1929. The population of Copenhagen in 1925 was 587,150; with suburbs, 731,496. Other large cities with their 1925 populations are Aarhus, 70,226; Odense, 52,376; Aalborg, 42,819; Horsens, 28,135; and Randers, 26,856.

EDUCATION. Elementary education is free and compulsory between the ages of 7 and 14. Denmark had 4485 lower schools in 1928, with 492,301 pupils; of these, 3867 schools were maintained by local communities and the remainder were Government or private schools. Higher instruction was provided by 278 technical schools, with 27,000 students; 20 normal schools, with about 2000 students; 94 commercial schools, with about 12,000 students; and 22 agricultural and 61 high schools, with about 9600 students. The University of Copenhagen had about 4500 students and there were a number of other technical and professional schools.

PRODUCTION. Agriculture is of primary importance in Danish economy, due to the lack of coal, iron, and other natural resources, and agricultural products constitute three-fourths of the value of the annual exports. A census in 1928 showed 6,892,000 acres, or about 70 per cent of the total area, under cultivation, divided as follows: Grain, 3,238,000 acres; root crops, 1,271,000; other crops, 78,000; green fodder and grass, 2,125,000; fallow land, 180,000. The Government for many years has fostered the division of the land into small parcels and about 92 per cent of all farmers own the land they cultivate. The coöperative dairies and slaughterhouses in-

cluded 80 per cent and 70 per cent, respectively, of all Danish farmers. The chief crops grown, with the production in bushels in 1929, are: Wheat, 11,721,000; rye, 10,433,000; barley, 51,075,000; oats, 73,855,000; potatoes, 39,389,000. Beet sugar production totaled 134,000 metric tons; forage roots, 22,288,000 metric tons; sown hay, 920,000 metric tons.

Crops in 1928, 1929, and 1930 were excellent, but prices received declined noticeably in the latter year. The return on capital invested in agriculture in 1929 was 6.2 per cent. Livestock in July, 1929, included 521,000 horses, 3,031,000 cattle, and 3,616,000 swine. There were 22,000,000 hens. Only about 8 per cent of Denmark is wooded and two-thirds of the forested area was artificially planted. The catch of 15,565 boats engaged in the fisheries in 1928 was valued at about \$10,000,000.

Industrial establishments in 1925 totaled 89,175, with 392,000 employees, including 270,000 laborers. Only 26,300 factories used mechanical power. Most of the world's motor ships are built in Danish yards. In 1929, the shipyards turned out 32 ships of 170,000 tons dead weight, with an aggregate horse power of 168,000, as compared with 215,000 tons of 125,000 horse power in 1928. Factory production in 1928 included 1,295,000 liters of strong beer, 718,000 liters of small beer, 162,050 tons of beet sugar (nine factories), and 76,520 tons of margarine (140 factories).

Industry remained fairly active in 1930, with the exception of shipping, which was badly depressed; unemployment increased toward the close of the year.

COMMERCE. Danish foreign trade was unusually active in 1929, reaching the highest figures in actual gold value since 1920. Imports rose to 1,792,000,000 crowns from 1,736,000,000 crowns in 1928, while exports, including reexports, increased to 1,707,000,000 crowns, from 1,657,000,000 crowns in the preceding year (preliminary figures). Two-thirds of the gain in exports was accounted for by increased shipments of agricultural products. Grain imports decreased markedly, due to record domestic crops, but imports of mineral oils, automobiles, iron and steel, textiles, and fuel oils showed marked gains. Germany, Great Britain, and the United States, in the order named, were the leading sources of imports; exports went mainly to Great Britain, Germany, and Sweden. Exports to the United States and its possessions rose to \$4,457,000 in 1929 from \$4,099,000 in 1928. In the same year Great Britain took Danish exports to the value of £56,178,663 and supplied imports to the value of £10,671,482.

FINANCE. For the fiscal year ended Mar. 31, 1930, Treasury operations yielded a surplus of 12,000,000 crowns (1 crown equaled \$0.2668 at par). Budget estimates for the year placed revenues at 323,100,000 crowns and expenditures at 316,800,000 crowns, the estimated surplus being 6,300,000 crowns. Revenues from state capital in the same year were estimated in the budget at 43,598,000 crowns and expenditures at 57,620,000 crowns. In the 1930-31 budget, ordinary revenues of 321,700,000 crowns were anticipated to exceed ordinary expenditures of 311,100,000 crowns by 10,600,000 crowns.

Actual returns for 1928-29 showed a deficit of 10,900,000 crowns in the ordinary account and of 20,335,000 crowns in the capital account. Ordinary revenues and expenditures were 312,000,-

000 and 322,900,000 crowns, respectively, and capital revenues and expenditures, 61,486,000 and 81,821,000 crowns, respectively. Current state expenditures showed a steady decline from 1925-26 to 1930-31. The public debt on Mar. 31, 1929, stood at \$367,493,760, of which \$193,325,940 represented the foreign debt.

COMMUNICATIONS. Railways open for traffic in 1929 totaled 3297 miles, of which 1598 miles belonged to the state. The total value of state railways and equipment on Mar. 31, 1929, was placed at 440,774,000 crowns. In the same year there were 4720 miles of main highways. There were 98,300 motor vehicles in the country in September, 1929. Danish commercial airplanes covered 103,540 miles in 1928, carrying 1600 passengers, 34 tons of freight, and six tons of mail. There were 922,113 miles of telephone wire (1929), of which 869,918 were privately owned and operated.

On July 1, 1930, the Danish merchant fleet comprised 512 steamers of 743,704 tons; 151 motorships of 356,451 tons; and 62 sailing vessels of 15,769 tons. Earnings, exclusive of coastwise shipping, totaled 205,000,000 crowns gross in 1929, as against 186,300,000 crowns in 1928, an increase of about 10 per cent. The per capita tonnage of 325 per 1000 inhabitants is surpassed only by Norway, the Netherlands, and the United Kingdom.

GOVERNMENT. The system of Government is that of a limited monarchy, executive power being vested in the King, who acts through a responsible ministry, but who has no power to declare war or make peace without the consent of the Rigsdag, or Parliament. Legislative power is vested in the Rigsdag, which is composed of the Folketing (lower house) and the Landsting (upper house). The Folketing has 149 members, of whom 117 are elected on the basis of proportional representation and the remainder divided among the parties not having obtained sufficient returns at the district elections; the Landsting has 75 members, elected indirectly by voters over 35 years of age. The composition of the Lansting after the election of September, 1928, was as follows: 28 Liberals, 27 Socialists, 12 Conservatives, and 8 Radicals. The Folketing, elected Apr. 24, 1929, consisted of 44 Liberals, 16 Radicals, 61 Socialists, 24 Conservatives, 1 Slesvig (German party), and 3 Georgistic party members. King Christian X (born Sept. 26, 1870), succeeded his father, Frederik VIII, on May 14, 1912. The Ministry as formed in April, 1929, was headed by Th. Stauning, Socialist, who was Prime Minister during 1924-26. Other members were: Agriculture, K. M. Bording; Foreign Affairs, P. Munch; Interior, B. Dahlgaard; Social Affairs, K. K. Steincke; Justice, C. Th. Zahle; Defense, L. Rasmussen; Public Instruction, F. Borgbjerg; Ecclesiastical Affairs, N. P. L. Dahl; Public Works, J. F. N. Friis-Skotte; Finance, C. V. Bramsnaes; Commerce and Industry, C. N. Hauge.

HISTORY. The issue of national disarmament, upon which the Socialist-Radical coalition had been returned to power in the election of Apr. 24, 1929, continued as the outstanding political question in 1930. The Stauning Ministry had sought to carry out its campaign promises by introducing a drastic disarmament bill into the Folketing on Oct. 3, 1929 (see 1929 YEAR BOOK). The expected opposition to the measure developed in the Landsting, or upper house, however, and the Ministry was unable to force the bill through Parliament before the Spring session adjourned.

Conservative opposition to the disarmament measure was bolstered by reports that the Swedish government, through its Foreign Minister and Minister to Denmark, had expressed concern over the proposed scrapping of Danish military and naval forces. In February, the Government indicated its willingness to compromise on certain details of the disarmament bill to which objection had been raised by the moderate Left groups. It insisted, however, upon the reorganization of the military and naval forces on a purely defensive basis and on the abolition of conscription.

A Conservative maneuver to obstruct the Government's programme by proposing the appointment of a committee to investigate the country's military obligations as a member of the League of Nations was defeated by Parliament on April 5, the Government taking the stand that disarmament was a purely domestic question. The conservative opposition in the Landsting, however, mustered sufficient votes to block the consideration of any disarmament measure framed without reference to Danish obligations under the League Covenant. In doing so it openly defied the threat of the Government to push through a constitutional amendment abolishing the Landsting. Since constitutional obstacles prevented the dissolution of the Landsting before 1934, the Ministry's disarmament measure appeared unlikely of passage before that time. Nevertheless, the Government in July decided to sell Denmark's most powerful warship, the *Niels Juel*, to the Chinese Government. It was reported that another cruiser would be scrapped, leaving the country practically defenseless from a naval standpoint. On October 9, a new defense bill was introduced into Parliament, proposing the reduction of the annual military budget from \$15,000,000 to \$5,000,000.

In line with its domestic policy, Denmark on April 28 served notice on the League of Nations that it would make the reduction of world armaments a condition of its adherence to any agreement in excess of those already embodied in the League Covenant. The announcement had specific reference to the draft convention for financial assistance to a victim of aggression, then before the League Committee on Arbitration and Security for revision.

The Social Democrats were strengthened during the year by the accession to their ranks of leading Danish Communists, who withdrew from their own party because of objectionable policies and leadership imposed upon them by the chiefs of the Third International in Moscow. The failure of Communism's appeal to the Danish people was reflected in the fact that in 1930 the party had not a single representative in either house of the Rigsdag. A comprehensive measure for the extension of social reforms was introduced into the Folketing by the Government on October 28.

Rumors that Great Britain was negotiating to purchase Greenland and that the United States still claimed certain interests there, despite the withdrawal in the Virgin Islands treaty of its claims in north Greenland based on Commodore Perry's expedition, were flatly denied by Premier Stauning in an interview July 21, 1930. He said no application had been received from a foreign power and that Denmark had no thought of selling Greenland.

A bill for revision of the liquor laws, which was expected to produce 10,500,000 kroner (about

2,814,000) through higher import duties on wines and spirits, was introduced into Parliament March 21. It was intended to replace the 10 per cent tax on all foods and drinks served in hotels and restaurants, an unpopular measure which produced about 15,000,000 kroner annually. See FAROE ISLANDS for nationalist agitation; ICELAND for celebration of 1000th anniversary of the first Althing; and GREENLAND.

DENNIS, ALFRED LEWIS PINNEO. An American educator and historian, died in Worcester, Mass., Nov. 14, 1930. He was born in Beirut, Syria, May 21, 1874, and was graduated with the A.B. degree from Princeton University in 1896 and with the Ph.D. degree from Columbia University in 1901. From 1901 to 1904 he was professor of history and political science at Bowdoin College; from 1904 to 1905, associate professor of history at the University of Chicago; from 1905 to 1906, lecturer in history at Harvard University; and from 1906 to 1920, professor of history at the University of Wisconsin. After engaging in research work for several years he became in 1923 professor of history and international relations at Clark University, which chair he held at the time of his death. During the World War he was a captain in the Military Intelligence Division of the General Staff of the United States Army, and in 1919 was stationed at the American Embassy in London as an assistant military attaché, reporting to the Paris Peace Conference. His works include: *Eastern Problems at the Close of the Eighteenth Century* (1901); *The Anglo-Japanese Alliance* (1923); *Foreign Policies of Soviet Russia* (1924); *John Hay* (in Secretaries of State series, 1928); and *Adventures in American Diplomacy* (1928).

DENVER, UNIVERSITY OF. A coeducational institution of higher learning in Denver, Colo.; founded in 1864. The registration for the autumn of 1930 totaled 2734, distributed as follows: Graduate school, 42; college of liberal arts, 999; school of engineering, 185; school of law, 83; school of dentistry, 24; school of commerce, 830; art school, 88; and city college, 483. The faculty had 203 members. The endowment amounted to \$1,975,277, while the income for the year was \$70,543. The library contained 61,581 volumes. During 1930 a new library building costing \$350,000 was under construction, and the Memorial Chapel was to be remodeled to conform with the architectural style of the quadrangle on which the library was located. Chancellor, Frederick M. Hunter, Ed.D.

DEPAUW UNIVERSITY. A coeducational institution for higher learning in Greencastle, Ind., under the auspices of the Methodist Episcopal Church; founded in 1837. The enrollment for the autumn session of 1930 was 1605, including 935 men and 670 women. Of this number, 1430 were registered in the college of liberal arts and 175 in the school of music. In the summer session of 1930 there were 129 students. The college of liberal arts had a faculty of 91 members and the school of music a faculty of 16. The productive funds of the university amounted to \$5,478,847, including assets of \$2,207,307 of the Rector Scholarship Foundation. The income from productive funds was \$290,585, while the total current income for the year was \$708,870; \$123,292 of the income from productive funds

was for scholarships. The total amount of gifts for permanent funds received during the year was \$148,875. The university also was made the residuary legatee in the will of the late John H. Harrison and was to receive a bequest of approximately \$1,500,000. Asbury Hall, a recitation and lecture hall erected at a cost of \$250,000, was completed in 1930, as was also a \$20,000 plant to house the offices and shops of the superintendent of buildings and grounds. The library contained about 70,000 volumes. President, G. Bromley Oxnam, D.D., LL.D.

DESTINN, EMMY. A Bohemian dramatic soprano, died in Budweis, Czechoslovakia, Jan. 29, 1930. Born in Prague, Feb. 26, 1878, and received her first musical instruction on the violin. She later studied voice under Madame Marie Loewe-Destinn, making her debut as Santuzza in "Cavalleria Rusticana" at the Berlin Royal Opera in 1898. She was so successful on that occasion that she was permanently engaged for the Berlin Opera, and in gratitude to her teacher changed her name from Kittl to Destinn. Her European fame dated from her appearance as Senta in *Der Fliegende Holländer* at Bayreuth in 1901. In 1905 she created the leading rôle in Puccini's *Madame Butterfly* in London, and in 1907 was selected by Richard Strauss to sing the title rôle in his *Salome* for the Paris and Berlin productions. She became a member of the Metropolitan Opera Company in New York in 1908 and was one of the popular favorites, her repertoire including more than 80 operas. She returned to Bohemia in 1916, and in 1923 was married to Captain Naishbach, a Czech aviator.

DETROIT, UNIVERSITY OF. An institution of higher education in Detroit, Mich., under the auspices of the Roman Catholic Church and conducted by the Jesuit Fathers; founded in 1877. In the autumn of 1930 there were 3844 students registered, distributed as follows: Arts and sciences, 567; engineering, 1085; commerce and finance, 921; law, 202; foreign trade, 60; Saturday and Thursday extension school, 563. The summer school registration was 446. The faculty numbered 198. The productive funds in 1930 totaled \$1,218,446. There were 52,000 volumes in the library. President, the Very Rev. John P. McNichols, S.J., Ph.D., LL.D.

DIAMONDS. The United States is the largest consumer of diamonds in the world and in 1930 its imports amounted to 209,591 carats of rough, uncut diamonds valued at \$5,640,789, as against 354,367 carats valued at \$9,877,975 in 1929. Corresponding imports of cut and unset diamonds were 295,351 carats valued at \$23,267,696 in 1930 and 416,992 carats valued at \$42,009,583 in 1929.

The mine production in South Africa was considerably decreased during the year, both as regards mine and alluvial production, due to the restriction of production to maintain prices. It was estimated that fully one-half of the workers of the diamond cutting industry in Belgium and Germany were unemployed in September, and as

many as 70 per cent in Holland. The recently established cutting industry in South Africa continued in an unsettled condition.

The DeBeers Company, for the year ended June 30, 1930, showed sales expansion and profits about the same as in the previous year, but an increased balance was recorded. There was organized in 1930, by the Conference producers and the Diamond Syndicate, the Diamond Corporation, Ltd., with a capital of £2,500,000 designed to carry surplus stocks of the various producers and distribute them over a period of years, with as little interference as possible with current production. The five-year agreement with the Diamond Syndicate expired at the close of 1930 and the various producers, the Syndicate, and the Government of South Africa held conferences to provide for continuing the agreement.

DIEKEMA, GERRIT JOHN. An American diplomat and lawyer, died in The Hague, the Netherlands, Dec. 20, 1930. He was born in Holland, Mich., Mar. 27, 1859, and was graduated from Hope College in 1881 and from the law school of the University of Michigan in 1883. After admission to the bar he practiced in Holland, being a member of the firm of Dickema and Kollen from 1901 to 1911 and of Dickema, Kollen and Ten Cate from 1911 to 1929. He was a member of the Michigan Legislature from 1885 to 1891, acting as speaker of the House of Representatives in 1889. He was also president of the Michigan Municipal Commission during 1894-95, chairman of the Republican State Central Committee during 1900-10 and in 1927, and manager of the speakers' bureau of the Republican National Committee, Chicago, in 1912. From 1901 to 1907 he was a member of the Spanish Treaty Claims Commission. In April, 1907, he was elected to the United States Senate to fill the unexpired term of William Alden Smith, and two years later was elected a member of the House of Representatives of the Sixty-first Congress (1909-11) from the fifth Michigan district. He was appointed Minister to the Netherlands by President Hoover in August, 1929. The LL.D. degree was conferred on him by Hope College in 1913.

DISARMAMENT. The Preparatory Disarmament Commission of the League of Nations finished its sessions and its own existence on Dec. 9, 1930, at Geneva, bequeathing for the use of the future world disarmament conference, expected in 1932, a skeleton convention. Hugh S. Gibson, chief of the American delegation, urged in his final address that the different governments frankly acknowledge the short-comings of this convention, while educating public opinion, as the only real cure, to further concessions. Following is a brief summary:

The convention agrees "to limit and so far as possible" to reduce armaments. Personnel is fixed. This limitation of trained reserves is not adopted, but left for further discussion. Land material is limited by budget expenditure; naval by both budget and quantity. Both global and category tonnage limits are fixed, but transfer privileges—from one category to another—increase in proportion to smallness of the navy. A committee of experts, sitting December 11, will work out a plan for limitation of annual expenditure of land, sea, and air forces. A permanent commission is to be set up to obtain detailed information on the observance of disarmament agreements. Poison gas and bacteria are to be banned in warfare. A clause to safeguard menaced national security is adopted.

The working out of the details of the process of limiting budgetary expenditure on land, sea, and air armaments was begun at Geneva on December 11 by a committee of experts from eleven countries. According to the principle to be followed, expenditure would be limited not considering the war budget of each country in relation to those of others, but in relation to its own preceding expenditures. This would be done to meet objections by the United States and others to budgetary limitations, on the ground of differing wage scales. However, the United States still remained opposed to this method of armament limitation.

The establishment of a permanent disarmament commission, to meet at least once a year, and provision for world-disarmament conferences to meet at regular intervals in the future, were amongst the fruits of the recent final sessions of the Permanent Disarmament Commission, which ended its labors on December 10. The Commission's plan provides that in the event of a violation of the disarmament convention, or of steps menacing the security of any nation, machinery is to be set in motion for consultation both by members and non-members of the League of Nations.

See LEAGUE OF NATIONS; MILITARY PROGRESS; NAVAL PROGRESS; PEACE; and DENMARK, NORWAY, GERMANY, FRANCE, ITALY, and GREAT BRITAIN under *History*.

DISCIPLES OF CHRIST. A communion, known also as the Churches of Christ, which sprang from a movement for Christian unity, in American Presbyterian circles at the beginning of the nineteenth century under Barton W. Stone in Kentucky and Thomas and Alexander Campbell in western Pennsylvania. This is the largest religious body having its origin in America and in 1929 ranked fifth among Protestant communions in the United States. In polity the churches are congregational. There were six major agencies of the denomination in 1929: The United Christian Missionary Society; board of education; board of temperance and social welfare; Association for the Promotion of Christian Unity; pension board; and the missionary societies of the different States and Provinces of Canada. These agencies are corporations and are related in an advisory way to the International Convention of the Disciples of Christ which meets annually in the late summer or early autumn.

The total church membership throughout the world in 1930 was 1,670,436, a gain over 1929 of 1936; and in the United States and Canada, 1,554,678, a loss of 18,567. The Bible school enrollment for the world was 1,229,285, a gain over the previous year of 27,400; and for the United States and Canada, 1,049,535, a loss of 70,555. Contributions, missionary, benevolence, and educational, reported for the fiscal year in the United States and Canada totaled \$3,751,070. The church erection fund amounted to \$2,766,943, and the ministry aided 410 ministers and missionaries.

The general missionary work of the churches is organized under the United Christian Missionary Society, with headquarters at 222 Downey Avenue, Indianapolis, Ind. Its board of managers of 120 is composed of an equal number of men and women. The foreign missionary work in 1930 embraced the Belgian Congo, Africa, China, India, Jamaica, Japan, Mexico, Philippine Islands, Porto Rico, Argentina, Paraguay, and

Tibet (Batang, on the border). Statistics showed that during the year there were 6434 baptisms in the foreign field. The 512 mission schools had a total enrollment of 16,757. The communion maintained 16 hospitals and 20 dispensaries which gave 463,717 treatments, an increase of 28,926 over the previous year. Work in America was conducted among the French, highlanders, immigrants, Negroes, Orientals, Spanish Americans, and Mexicans. The department of benevolence maintained six homes for children, an equal number of homes for the aged, and one hospital. In 1930, 29 colleges cooperated with the board of education. Bible chairs were also maintained in four State universities; and 59 young people's conferences were held, a gain of four over the precious year. Among the periodicals published by the communion are *World Call*, *Christian Evangelist*, and *Christian Unity Quarterly*.

The international convention of the Disciples of Christ was held in Washington, D. C., Oct. 14-19, 1930. This was followed by the world convention of the same body October 20-24. The registered attendance at these conventions was over 7000, and 30 different nations were represented, including the mission fields. The international convention for 1931 was to be held in Wichita, Kan., and the next world convention in Leicester, Eng., in 1935. Important resolutions on peace, prohibition, and the rural church were passed. The constitution of the United Christian Missionary Society was revised so that the president and vice-presidents were to be elected for four years instead of for one year, and the election of the remaining officers was left with the executive committee. One of the main features of the convention was the recognition of the nineteen hundredth Pentecostal anniversary. The president of the international convention for the year was R. H. Long of Kansas City, Mo. Dr. Stephen J. Corey of Indianapolis, Ind., was acting-president of the United Christian Missionary Society until October, when he was elected its president.

DIXON, HAROLD BAILY. A British chemist, died in Manchester, England, Sept. 18, 1930. He was born Aug. 11, 1852, and attended Westminster School and Christ Church College, Oxford. He was Millard lecturer at Trinity College, Oxford, during 1879-86; Bedford lecturer at Balliol College during 1881-86; and succeeded Sir H. E. Roscoe at Owens College in 1886. He also served on many public commissions, including the Royal Commission on Explosions of Coal Dust in Mines (1891-94) and the Royal Commission on Coal Supplies (1902-04), and from 1911 to 1914 was a member of the executive committee of the Home Office on explosions in mines. During the World War he was deputy inspector of high explosives for the Manchester area, and in 1918 was a member of the alcohol fuel committee. In 1922 he was made honorary professor of chemistry at the University of Manchester, and in 1927 supervisor of research on the ignition of gases, under the Safety in Mines Research Board. He was president of the British Chemical Society, 1909-11 and was appointed chairman of the Royal Technical College at Salford in 1916, chairman of the Salford higher education committee in 1919, and chairman of the selective committee for the

Northwest district for the Ministry of Labor in 1922. He received the Royal Medal of the Royal Society in 1913, and in 1918 was created a commander of the Order of the British Empire. His works include: *Conditions of Chemical Change in Gases* (1884); *Rate of Explosion in Gases* (1893); *Movements of Flame in Explosions of Gases* (1902); *Atomic Weight of Chlorine* (1905); *The Ignition Temperatures of Gases* (1909); *The Firing of Gases by Compression* (1914); *The Velocity of Sound in Gases at High Temperature* (1921); *The Propagation of the Explosion-Wave* (1923); *The Velocity of Sound in Gases and Vapors* (1924); *The Ignition of Carbon Disulphide* (1925); *The Explosion-Wave in Cyanogen Mixtures* (1926); and *The Burning of Gases in Nitrous Oxide* (1927).

DOMINICA. See LEEWARD ISLANDS.

DOMINICAN REPUBLIC (SANTO DOMINGO). A West Indian state occupying the eastern part of the island of Haiti, the western part of which comprises the Republic of Haiti (See HAITI). Capital, Santo Domingo.

AREA AND POPULATION. The area is estimated at 19,332 square miles; the population at the census of 1921 was 897,405 (estimated at 1,200,000 in 1929). The chief cities, with their estimated populations in 1927, were: Santo Domingo, 35,000; Santiago, 20,000; San Pedro de Macoris, 20,000; Puerto Plata, 9000; La Romana, 9000; and La Vega, 7000. Of the total population in 1927, 25 per cent were white (mainly of Spanish descent), 25.4 per cent were black, and the remainder were mestizos or yellow. In 1929, a total of 13,705 persons entered the Dominican Republic and 12,826 departed. The movement was mainly to and from Haiti and Porto Rico. In February, 1930, there were 841 schools, of which 33 were technical, and a total enrollment of 90,366 (average attendance, 55,842). Public school teachers numbered 1807.

PRODUCTION. The national economy is based almost exclusively on agriculture, with sugar cultivation as the predominant industry. Tobacco, cacao, and coffee, are the other chief crops. Of the total area, about two-thirds, or 9900 square miles, are suitable for cultivation and about 6600 square miles were under cultivation in 1929. The 21 sugar centrals in operation in 1928 were mostly American owned and operated, although little sugar is sold in the United States. American investments in the Republic at the end of 1929 totaled \$69,322,000, as compared with \$4,000,000 in 1913.

While crops were normal in 1929, the low prices received for sugar, cacao, and coffee resulted in a general depression, commencing in the autumn of that year. Trade stagnation grew steadily worse during the first half of 1930 and was rendered acute by the great hurricane of Sept. 3, 1930, which devastated crops and farm lands in the most populous section of the country (see below under *History*). The cacao crop in 1930 was estimated at 44,000,000 pounds, or 90 per cent of the 1929 crop.

Besides sugar refining, the principal industries are the manufacture of rum and alcohol from sugar cane, straw hats, cigarettes, cigars, matches, soap, and other items for local consumption. There are fairly extensive but largely

undeveloped timber resources. The chief forest products are *lignum-vitæ*, mahogany, and railroad ties. Gold and copper are the principal minerals found, others being iron, low-grade coal, silver, platinum, rock salt, and quicksilver.

COMMERCE. The industrial depression in 1929 was reflected in figures for foreign trade, which totaled \$46,465,041, as compared with \$55,542,468 in 1928, a decrease of \$9,076,527. Imports were valued at \$22,729,444 (\$26,787,940 in 1928) and exports at \$23,736,497 (\$28,754,528 in 1928). The favorable balance of trade in 1929 was \$1,007,053 (\$1,956,588 in 1928). While the value of exports declined in 1929, the quantity increased to 751,544 tons from 743,585 tons in the previous year. The values of shipments of the chief export crops, with comparative figures for 1928 in parentheses, were: Sugar (raw), \$12,258,831 (\$16,911,925); coffee, \$2,444,238 (\$2,135,682); cacao, \$3,870,084 (\$4,250,415); leaf tobacco, \$1,381,482 (\$1,274,410). Leading imports in 1929 were: Grains, fruits, and vegetables, \$3,383,447; cotton and its manufactures, \$3,263,515; mineral oils, \$1,948,298; iron and steel manufactures, \$1,400,307; machinery and apparatus, \$1,213,130; meats, \$1,058,395; and miscellaneous foodstuffs, \$1,049,022.

Of the imports in 1929, the United States furnished \$13,457,238, or 59 per cent (61 per cent in 1928). Germany, England, British India, Siam, France, and Canada, in the order named, were the other leading sources of imports, the first three supplying in each case about 5 per cent and the last named about 3 per cent. Exports were distributed as follows: Ireland, \$6,678,734 (mainly sugar intended for transshipment), or 28 per cent of the total; United States, \$5,427,102, or 23 per cent; France, 2,742,701, or 12 per cent; England, \$2,224,144, or 9 per cent; Porto Rico, \$1,914,329, or 8 per cent; Canada, \$1,048,508, or 7 per cent; and Germany, \$940,468, or 4 per cent. For the year ended June 30, 1930, exports to the United States dropped to \$7,876,809 from \$9,203,772 in the previous year, while imports from the United States declined to \$11,032,115 from \$16,073,537 in 1928-29.

FINANCE. Gross customs collections in 1929 totaled \$4,989,527, of which \$4,891,423 represented duties on importations, as compared with gross collections of \$5,290,308 and import duties of \$5,191,481 in 1928. The Dominican Government received \$3,477,845 as its share of the gross customs collections, while \$1,219,148 was allocated by the customs receivership for the service of the outstanding debt, including \$119,148 credited to the sinking fund established under the American Dominican Convention of 1924. The administration of the receivership during the year cost \$236,036.

In the 25 years of the Dominican Customs Receivership ended Apr. 1, 1930, collections totaled \$100,268,199 and receipts from all sources aggregated \$101,207,630. Receivership and customs expenses totaled \$4,398,243, or 4.39 per cent of all collections, while \$45,266,818, or 45.15 per cent of all collections, were remitted to the Dominican Government. Loans floated by the Dominican Government from 1908 to 1929 inclusive, aggregated \$45,661,300, of which \$19,684,300 were outstanding on Dec. 31, 1929. The Dawes Mission of 1929 placed the total national debt in that year at \$22,650,000. During the same period segregations and payments for the service

of loans, interest, and amortization totaled \$47,834,074.

Budget estimates of the Dominican Government for 1930 placed revenues at \$14,292,210 (including \$7,683,655 from special funds) and expenditures at \$14,042,098. For 1929, the budget estimates were: Revenue, \$13,984,860; expenditure, \$13,967,544. Chief sources of estimated revenue (1929) were: Customs \$5,453,529; internal revenue, \$6,118,417; state lottery, \$2,991,305; new loan, \$4,185,953.

COMMUNICATIONS. The total highway mileage in 1929 was 699 miles, excluding some 600 miles of inter-communal roads. In the same year there were two small public railways, with 149 miles of line, and 255 miles of private lines on the large estates. In 1929, a total of 1693 vessels of 2,311,885 registered tons cleared the ports of the republic in the foreign trade, and 1906 vessels of 2,741,204 tons entered. The telephone system is owned and operated by the Government and there are five Government wireless stations. The telegraph system, 1034 miles in length, is privately owned. Air lines connect with the United States and South America.

GOVERNMENT. The Republic is governed under a constitution adopted by the Constituent Assembly on June 13, 1924. Executive power is vested in a president and cabinet of seven ministers. The President is ineligible for a second successive term. The senators and deputies are elected for four years by direct popular vote. Each of the 12 provinces is represented by one senator and (in practice) by two deputies. President at the beginning of 1930, Horacio Vásquez, who assumed office on July 12, 1924; Vice President, Frederico Velazquez.

HISTORY

HURRICANE OF 1930. The city of Santo Domingo, the oldest European settlement in the New World, was virtually destroyed by a hurricane on September 3. The loss of life was placed at 2000 and the injured at 6000, while property damage was estimated at from \$20,000,000 to \$40,000,000. Only about 400 of the 10,000 buildings remained standing following the storm, considered the worst in the city's history. The cathedral and other structures erected in the early 16th century escaped destruction, but the Presidential palace, and buildings occupied by the Cabinet secretaries, the Chamber of Deputies, the Court of Appeals, Fire Department, and the French and American legations were wholly or partly wrecked, along with the buildings of the water, light, and telephone companies and the Pan-American Airways. A large bridge over the Ozama River was demolished. The damage was confined largely to the city and its vicinity.

The National Congress immediately invested President Trujillo with emergency powers, special control of foodstuffs was established, the dead were cremated on huge funeral pyres, looting was suppressed, and efforts were made to care for the injured and some 30,000 homeless persons in the churches and other buildings which escaped destruction. Medical supplies, doctors, food, and other essentials were immediately rushed to the city from Porto Rico, Cuba, and the United States. In accordance with the financial agreement with the United States, the Dominican Government sought permission of the State Department at Washington to float a

\$3,000,000 loan for hurricane relief and other government purposes.

POLITICAL DEVELOPMENTS. The Government headed by President Horacio Vázquez was driven from power by a virtually bloodless revolution which broke out in the northern part of the Republic on Feb. 23, 1930. Within five days the insurgents were in complete control of the entire country and President Vázquez had been succeeded by Gen. Rafael Estrella Ureña, one of the insurgent leaders, as Provisional President.

Political unrest, manifest for a year preceding the revolt, was noticeably increased during 1929 by the announcement that President Vázquez would stand for reelection in May, 1930. He was first elected President in 1924, under a Constitution providing for a single four-year term. In 1927 his party amended the Constitution so as to allow a single six-year term, which President Vázquez proceeded to fill. In 1929 his supporters again amended the Constitution, restoring the four-year term for the Presidency but removing the prohibition concerning reelection. They also amended the 1924 electoral law in a way which convinced the Opposition groups that there was no possibility of defeating the Government party at the polls. Accordingly a northern group, called the *Partido Compactación*, demanded that the local election boards be composed of an equal number of Opposition and Administration members. The President's rejection of this demand precipitated the revolution.

The Vázquez régime was overthrown without a technical change of Government, and with little bloodshed. John M. Cabot of the American legation staff traveled through skirmish areas to interview the insurgent leaders and arranged for a conference between them and representatives of the Government in the legation building, where President Vázquez had taken refuge. As a result of the conference, President Vázquez on February 28 signed a decree designating Gen. Estrella Ureña as Secretary of State for the Interior. As the Vice President, José Alfonsaca, had resigned at the outbreak of the revolution, Gen. Estrella Ureña automatically became Provisional President, under the constitution, upon the resignation of President Vázquez.

General Estrella Ureña, who took office as Provisional President March 4, appointed a new Cabinet, in which the former Ministers of Finance, Justice, and Public Works were retained. He named Dr. Rafael Brache as Minister to the United States, the latter's credentials being accepted by President Hoover April 24. The Provisional President, with the consent of Congress, called an election for May 16 to name a permanent President, and became candidate for Vice President on the Government ticket, which was headed by Gen. Rafael Leonidas Trujillo, commander of the insurgent forces and a former private in the U. S. Marine Corps.

The candidates nominated by the Opposition, a coalition of the National Progressive parties, were Federico Velásquez, the Vice President under President Vázquez, and Angel Morales, the retired Dominican Minister to the United States. Two days before the election the Opposition candidates withdrew and urged their followers to refrain from voting, on the ground that the members of the Junta Central Electoral, or election board, had been illegally appointed and that the election was therefore invalid. The Government candidates were accordingly elected without op-

position. The new President, who was only 37 years old, was inducted into office August 16. He announced his Cabinet as follows: Presidential Secretary, Rafael Vidal; Interior and Police, Jacinto B. Peynado; Foreign Relations, Rafael Estrella Ureña; Treasury, Roberto Despradel; Justice, Public Instruction, and Fine Arts, Elias Brache Jr.; War and Navy, Antonio Jorge; Public Works, José Jimenes; Agriculture and Commerce, Cesar Tolentino; Health and Welfare, Aristides Fiallo Cabral; Labor and Communications, Teodulo Chevalier.

General Trujillo's election was followed by the exodus of his political opponents to San Juan, Porto Rico. Among the expatriates were the two defeated candidates, former President Vázquez, former Vice President José Dolores Alfonsaca; Gustavo Diaz, president of the Senate; and a number of former Cabinet members and Congressmen. They charged that General Trujillo had established a military dictatorship and driven them from the country. Some spoke of appealing to the United States to guarantee a free and fair election. Government spokesmen contended that the Opposition leaders had left the country voluntarily. Reports of disorganized revolts against the Trujillo régime continued. Gen. Cipriano Bencosme, who carried on a guerrilla warfare against the Trujillo Government in Moca and Puerto Plata Provinces, was killed in a battle with Government forces on November 18.

DORDRECHT. Dutch port opened in 1930. See NETHERLANDS, THE, under *Communications*.

DOURINE ERADICATION. See VETERINARY MEDICINE.

DOW, HERBERT HENRY. An American chemist, died in Rochester, Minn., Oct. 15, 1930. He was born in Belleville, Ont., Canada, Feb. 26, 1866 and was graduated from the Case School of Applied Science in 1888. The following year he became associated with the Midland (Mich.) Chemical Company, Inc., and later founded the Dow Process Company and the Dow Chemical Company, acting as president and general manager of the latter at the time of his death. He developed many new chemical processes, including the electrolytic extraction of bromine, and held more than 100 patents. During the World War he was a member of the advisory committee of the Council of National Defense. The D.Eng. degree was conferred on him by the Case School of Applied Science in 1924 and by the University of Michigan in 1929. In 1930 he received the Perkin Medal awarded by the Society of Chemical Industry.

DOWLING, THE MOST REV. AUSTIN. A Roman Catholic archbishop, died in St. Paul, Minn., Nov. 29, 1930. Born in New York City, Apr. 6, 1868, he was graduated from Manhattan College in 1887. He studied for the priesthood at St. John's Seminary in Brighton, Mass., and at the Catholic University, and was ordained June 24, 1891. After serving for two years in East Providence, R. I., he was appointed instructor in church history at St. John's Seminary. In 1897 he became editor of *The Providence Visitor*, a diocesan weekly, and in 1905 he was made rector of Saints Peter and Paul's Cathedral, Providence. He was appointed first Bishop of Des Moines, Jan. 31, 1912, and was elevated to the archbishopric of Saint Paul, Minneapolis, Mar. 10, 1919, in succession to Archbishop Ireland. Until 1929 he was chairman of the de-

partment of education of the National Catholic Welfare Conference, and as such officially sponsored the suit by which the U. S. Supreme Court June 1, 1925, declared unconstitutional the law prohibiting parochial schools in Oregon. The honorary S.T.D. degree was conferred on him by the University of Louvain, Belgium, in 1927.

DOYLE, SIR ARTHUR CONAN. A British novelist, died in Crowborough, Sussex, England, July 7, 1930. He was born in Edinburgh, Scotland, May 22, 1859, and received his education at Stonyhurst College and the University of Edinburgh. From 1882 to 1890 he was engaged in the practice of medicine in Southsea, near Portsmouth, England. He also served during the Boer War as senior physician to the Langman Field Hospital. Although successful as a physician, he abandoned that profession about 1892 to devote his entire time to writing. He was one of the most versatile authors in English literature. His first important novel, *A Study in Scarlet* (1887), was the progenitor of the series in which the famous detective, Sherlock Holmes, appeared. These included: *The Sign of Four* (1889); *Adventures of Sherlock Holmes* (1891); *The Memoirs of Sherlock Holmes* (1893); *The Hound of the Baskervilles* (1902); *Return of Sherlock Holmes* (1904); and *The Case Book of Sherlock Holmes* (1927). Holmes became one of the most popular fictional characters, and the stories woven about his adventures were considered to approach the similar productions of Edgar Allan Poe in their ingenuity of invention, humor, and atmosphere of fascinating mystery and even horror. Conan Doyle became equally famous during this period as the author of historical romances, including *Micah Clarke* (1888); *The White Company* (1890); *The Refugees* (1891); *The Great Shadow* (1892); *Rodney Stone* (1896); *The Exploits of Brigadier Gerard* (1896); *The Tragedy of the Korosko* (1898); *Adventures of Gerard* (1903); and *Sir Nigel* (1906). His other works include collections of short stories: *Round the Red Lamp* (1894); *The Stark Munro Letters* (1895); and *The Green Flag, and Other Stories* (1900); plays, *Halves* (1899); *The Story of Waterloo* (1900, in which Sir Henry Irving appeared); and *The Fires of Fate: A Modern Morality Play* (1909); and poems entitled *Songs of Action* (1898) and *Songs of the Road* (1911). Among his later novels are: *The Crime of the Congo* (1910); *The Lost World* (1912); *The Poison Belt* (1913); and *The Land of Mist* (1925).

On his return from South Africa in 1900 Conan Doyle published *The Great Boer War and Cause and Conduct of the War in South Africa*, in which he attempted to explain England's position; the latter pamphlet was widely circulated and was translated into 12 European languages. He played a similar rôle during the World War, producing *History of the British Campaign in France and Flanders* (vols. i to vi, 1915-20); *A Visit to Three Fronts* (1916); and *The British Campaign in Europe, 1914-18* (1928). After the death of his oldest son in the War he became an active apostle of spiritism. He visited Australia, the United States, and Africa in the interests of his new belief, recounting his experience in *The Wanderings of a Spiritualist* (1921); *Our American Adventure* (1923); *Our Second American Adventure* (1924); and *Our African Winter* (1929). His writings on spiritualism include: *A New Revelation* (1918); *The Vital Message* (1920); *The Coming of the Fairies* (1922); and

History of Spiritualism (2 vols., 1926). His reminiscences were published in *Memories and Adventures* (1924). He was knighted in 1902. See **PSYCHICAL RESEARCH**.

DRAINAGE. See **RECLAMATION**.

DRAKE UNIVERSITY. An institution for the higher education of men and women in Des Moines, Iowa; founded in 1881. The number enrolled in the autumn of 1930 was 1526, distributed as follows: College of liberal arts, 477; commerce, 247; education, 366; law, 97; fine arts, 290; and Bible, 69. The summer session registration was 624. The faculty numbered 99. The fixed endowment amounted to \$1,363,676. The number of volumes in the library was 53,029. President, Daniel W. Morehouse, Ph.D.

DUBOIS, FRED THOMAS. Former United States Senator from Idaho, died in Washington, D. C., Feb. 14, 1930. He was born in Crawford Co., Ill., May 29, 1851, and was graduated from Yale University in 1872. In 1880 he went to Idaho (then the Territory of Idaho), and during 1882-86 was United States marshal there. As a delegate from the Territory of Idaho to the Fiftieth and Fifty-first Congresses (1887-90), he was active in securing the admission of Idaho to the Union as a State in 1890 and became the first United States Senator from the new State. He was reelected for a second term in 1901. Although he served in the U. S. Senate as a Republican and was a delegate to the Republican National Convention in 1888, 1892, and 1896, he later became a Democrat and went as a delegate to the Democratic National Convention in 1904 and 1908. In 1918-20 he served as a civilian member of the Board of Ordnance and Fortification in the U. S. War Department and, from 1924 until his death, he was a member of the International Joint Commission to settle disputes over boundary waters between the United States and Canada.

DUKE UNIVERSITY. An institution for higher education in Durham, N. C., comprising an undergraduate college for men, an undergraduate college for women, a school of nursing, undergraduate departments of engineering and forestry, a graduate school of arts and sciences, graduate schools of religion, law, medicine, and dietetics. It had its beginning under the name of York Academy, established in 1835 in Randolph County, N. C., and expanding later into Union Institute, then into Normal School, and in 1858 into Trinity College. In 1892, Trinity College was moved to Durham where it continued under that name until 1924, when the greater Duke University was made possible through benefactions from James B. Duke, as described in the article on **Duke University** in the 1925 **YEAR BOOK**. Enrollment for the autumn of 1930 was 2305, distributed as follows: Undergraduates, 1721; school of religion, 131; school of law, 79; school of medicine, 70; other graduate schools, 202. For the summer session of 1930 there was an enrollment of 1212. In the autumn of 1930 the faculty, including officers but

not staff assistants, numbered 278. In addition there were 74 teachers in the 1930 summer school who were not included on the regular staff of Duke University. The endowment funds of the university amounted to \$22,627,960, and the income for the year was \$1,135,304. Gifts received during the year 1929-30 amounted to \$30,000, while the Angier B. Duke Memorial Student Loan Fund exceeded \$1,250,000 in value. The library contained 195,000 books and 31,000 catalogued pamphlets, together with newspaper files very complete and of great value.

In the fall of 1930, Trinity College, the undergraduate school for men of Duke University, and the several graduate schools were moved to the west university campus located on a 5100 acre tract of land approximately a mile distant from the old or east campus, on which there was operated an undergraduate coordinate woman's college of Duke University. When in 1924, Duke University began its programme of expansion, the east campus was purposely fitted for the educational uses and purposes of a woman's college. The west campus, built of native North Carolina stone of the Cambrian formation taken from a quarry owned by Duke University, housed Trinity College, the undergraduate college for men of Duke University, and the several graduate schools. President, William Preston Few, Ph.D., LL.D.

DUNKERS or DUNKARDS. See BRETHREN, CHURCH OF THE.

DU PONT, T(HOMAS) COLEMAN. An American capitalist and former United States Senator, died in Wilmington, Del., Nov. 11, 1930. He was born in Louisville, Ky., Dec. 11, 1863, and attended Urbana University and the Massachusetts Institute of Technology. In 1883 he became an engineer with the Central Coal & Iron Co. of Central City, Ky., and for several years was engaged in coal and iron mining in Kentucky, acting as president of the McHenry Coal Company, the Main Jellico Mountain Coal Company, and the Central Coal & Iron Co. In 1893 he removed to Johnstown, Pa., where he became general manager of the Johnson Steel Company and also became interested in the construction and management of street railways. He then became associated with the powder company founded by his great grandfather, Eleuthere Irénée du Pont de Nemours, in Wilmington in 1802. He served as president of the E. I. du Pont de Nemours Company from 1902 to 1915, developing it into one of the greatest industrial organizations in the United States. Later he purchased the controlling interest in the Equitable Life Assurance Society and erected the Equitable Building in New York City. He also owned a chain of hotels, including the Waldorf-Astoria, McAlpin, Savoy-Plaza, and Martinique in New York City, the New Willard in Washington, the Bellevue-Stratford in Philadelphia, and the Du Pont in Wilmington, and at his own expense built and presented to the State of Delaware a \$5,000,000 paved highway, extending the entire length of the State and known as the Coleman du Pont Highway. In 1908 he was made a member of the Republican National Committee, and in 1921 was appointed to fill the vacancy in the United States Senate caused by the resignation of Senator J. O. Wolcott. He was elected to the Senate for the term 1925-31, but on account of continued ill health resigned his seat in December, 1928.

DUTCH EAST INDIES. A possession of the Netherlands in the East Indies, comprising the

group of islands in the Pacific lying between 6° N. and 11° S. latitude, and between 95° and 141° E. longitude. Capital, Batavia.

AREA AND POPULATION. The usual method of dividing the colony is as follows: (1) Java and Madura, divided into 17 residencies, each under a resident and several assistants at the head of a large number of native officials; (2) the Outposts, consisting of Sumatra, Borneo, Celebes, a part of New Guinea, the Molucca Archipelago, Timor Archipelago, Bali, and other small islands, under functionaries variously entitled governor, resident, controller, etc. The area is estimated at 733,642 square miles; population, on Jan. 1, 1928, 52,824,569, of whom 37,433,760 were in Java and Madura. Europeans in Java and Madura totaled 169,608; natives, 36,705,673; Chinese, 479,838; Arabs, 34,297. A census in 1930 placed the population of Java and Madura at 42,264,600; total population 60,366,000. The estimated populations of the chief cities in 1928 were: Batavia, 311,456; Surabaya, 255,124; Soerakarta, 157,724; Semarang, 179,079; Bandoeng, 149,656; and Jogjakarta, 107,622 (all in Java). Bandjermasin (64,947) is the largest city of Borneo; Palembang (60,783), of Sumatra; and Makassar (53,590), of Celebes.

Public and private elementary and secondary schools, exclusive of trade and technical schools, numbered 18,483 (in 1929), with a total enrollment of 1,673,932. There were 192 public European primary schools, with 25,830 pupils, and 12,226 village schools, with 948,531 pupils.

PRODUCTION. Agriculture is the basic industry. The area under cultivation in 1928 was 6,869,980 acres, of which 64,087 were Government estates, 899,891 acres were private lands, 171,349 acres were hired from native princes in Java and Madura, 5,218,132 acres were hired on long-term leases from the Government, and 516,541 acres were hired on short-term leases from natives. Of the total, 2,815,219 acres were planted.

It is estimated that the islands furnish more than nine-tenths of the world's cinchona bark, three-fourths of all kapok, more than one-half of the pepper, over one-third of the rubber, one-fifth of the agave fibre, one-sixth of the tea, and nearly one-eighth of all the sugar, as well as important quantities of tobacco, tin, coffee, cacao, petroleum, and palm oil. The area devoted to so-called "native" cultures in Java and Madura in 1928 totaled 18,728,299 acres, devoted mainly to rice, maize, cassava, sweet potatoes, ground-nuts, soya beans, tobacco, and other secondary crops. The sugar crop for 1930 was estimated at 2,591,076 tons, while the area planted to estate rubber at the beginning of 1930 was officially placed at 1,353,000 acres.

Production of the leading minerals in 1929 was: Tin, 35,367 metric tons; petroleum, 37,924,000 barrels; coal, 1,850,000 metric tons; gold, 107,898 troy ounces; silver, 1,968,000 troy ounces. Industrial establishments in 1927 included 186 sugar mills, 321 rubber plants, 226 tea factories, 470 rice mills, and 233 establishments for the preparation of animal and vegetable oils.

As in other agricultural countries, declining prices of export commodities and the absence of foreign buyers resulted in economic depression during 1930.

COMMERCE. Compared with 1928, imports in 1929 increased about 14 per cent in value, while exports declined by 6 per cent. Including parcel post, gold, and silver, imports in 1929 totaled

1,162,179,000 florins (\$467,195,000) and exports amounted to 1,481,024,000 florins (\$595,372,000), according to preliminary figures. The favorable balance of trade was 318,845,000 florins (\$128,177,000), as compared with 616,482,000 florins (\$247,826,000) in 1928.

The principal exports are sugar, rubber, coffee, tea, tobacco, and cinchona bark, and the leading imports are automobiles, iron and steel, ammonium sulphate, machinery and tools, textiles and yarns. Trade is chiefly with the Netherlands, Singapore, the United Kingdom, and the United States. Imports from the United States in 1929 totaled \$45,651,000 (\$34,445,000 in 1928), while exports to that country amounted to \$82,306,000 (\$86,142,000 in 1928). Netherland East India is the chief bulwark of the commercial, economic and financial organization of the Netherlands.

FINANCE. Preliminary returns on budget operations in 1930 indicated a deficit for the year of 105,874,000 florins (\$42,650,000), as compared with an estimated deficit of 69,740,187 florins from anticipated revenues of 848,680,296 florins and anticipated expenditures of 911,420,483 florins. In 1929, the deficit amounted to 66,273,132 florins, revenues totaling 816,078,231 florins and expenditures 882,351,363 florins. The preliminary budget for 1931 placed ordinary expenses at 517,079,000 florins (\$207,866,000), or 317,000 florins (\$127,000) less than the estimated ordinary revenues, while extraordinary expenses were calculated at 62,224,000 florins (\$25,014,000), which was 51,977,000 florins (\$20,895,000) more than the anticipated extraordinary revenues. The public debt on Jan. 1, 1930, stood at 980,211,000 florins (1,011,677,000 florins on Jan. 1, 1929).

COMMUNICATIONS. At the beginning of 1929 there were 4558 miles of main and light railways, both state and private, of which 3421 miles were in Java and 1108 miles in Sumatra. Government telegraph and cable lines extended 14,559 miles, and there were 18,489 miles of Government telephone and cable lines and 21 Government radio telegraph stations. Wireless telephone service between the Netherlands and Batavia was inaugurated early in 1929. In 1928, 12,364 steamers of 10,634,629 registered tons and 8698 sailing vessels of 492,579 tons entered the ports. A fortnightly air-mail service linked the colonies with the mother country. A weekly air-mail service from Batavia, Java, to Medan, Sumatra, and return was reported to have been inaugurated in September, 1930.

GOVERNMENT. Executive authority is vested in a governor-general, assisted by an advisory council of five members. Both the Governor-General and members of the Council are nominated by the Queen of the Netherlands. Legislative authority is shared between the Governor-General and the Volksraad, or legislative assembly, established in 1918. The chairman of the Volksraad is appointed by the Crown. Part of the members are appointed by the Government and part are elected by the local councils. Legislation passed by the Netherlands Parliament in 1929 provided that the Volksraad must consist of 30 native, 25 Dutch, and not more than five foreign-born subjects, such as Chinese. Governor-General in 1930, Dr. A. C. D. de Graeff, appointed Mar. 26, 1926.

The island of Anak Krakatau, lying between Sumatra and Java in Sunda Strait, disappeared beneath the surface of sea Aug. 9, 1930, during intense activity of its volcano. On the previous

day the island had a height of 170 feet. See NETHERLANDS, THE.

DUTCH GUIANA, gè-à-nà, or SURINAM. A possession of the Netherlands on the north coast of South America lying between French Guiana on the east and British Guiana on the west, bounded on the south by Brazil. Area, 54,291 square miles; population, Dec. 31, 1929, about 148,960, inclusive of Negroes and Indians in the forests. Paramaribo, the capital, had 46,929 inhabitants. In 1928 there were 3825 births, 1925 deaths, and 467 registered marriages. Among the chief products are sugar, cacao, bananas, coffee, rice, maize, rum, cotton, bauxite, gold, and balata. In 1929 imports totaled \$3,414,000 (\$3,696,000 in 1928) and exports \$3,191,000 (\$4,697,000 in 1928). Local revenues are insufficient to meet expenditures and Holland provides an annual subvention. The budget for 1930 estimated expenditures at 8,316,000 guilders, revenue at 5,472,000 guilders, and the subvention at 2,844,000 guilders (1 guilder equals \$0.4020 at par). The executive authority rests with a governor and an assisting council, both nominated by the Crown. Governor in 1930, Dr. A. A. L. Rutgers, appointed Apr. 1, 1928.

DUTCH REFORMED CHURCH. See REFORMED CHURCH OF AMERICA.

DUTCH WEST INDIES. The name applied to the Dutch possessions in the West Indies, viz., Dutch Guiana and Curaçao. Consult those titles.

DYNAMO ELECTRIC MACHINERY. With the construction of turbine generators, designed for operating at 1200 pounds steam pressure, and the increase of the upper limits of steam temperature, and the development of new designs, especially in the field of triple tandem-compound units, there was to be recorded during the year a notable increase in the capacity of generators operating at 1800 revolutions per minute.

The 110,000-kilowatt turbine generator for the Ford Motor Company at River Rouge, described in the YEAR BOOK for 1929, was completed and was the largest generating unit built for 1200 pounds steam pressure, as well as the largest turbine generator ever built for industrial use. In this unit, generators are duplicate 1800 revolutions per minute machines, and the steam is reheated to 550° F. in steam reheaters adjacent to the turbine. This turbine generator was built by the General Electric Company, which also installed the first triple tandem-compound unit of 105,000-kilowatt capacity at the Powerton Station of the Superpower Company of Illinois. This was a 22,000-volt generator with a double winding, and was the largest 1800 revolutions per minute generator in operation at the end of the year.

A triple tandem-compound 150,000-kilowatt turbine generator was under construction for the Chicago District Electric Generating Corporation, and involved a single 150,000-kilowatt machine with a double-winding and external blowers with 22,000 volts and operating at 1800 revolutions per minute. Notable tandem-compound turbine generators that the General Electric Company had under construction during the year were two 160,000-kilowatt units, driving a single generator and operating at 1800 revolutions per minute, instead of 1500 revolutions per minute of an earlier machine, in the East River Station of the New York Edison Company. The 16,500-volt generators were the largest 1800 revolutions per minute machines that had been constructed up

to 1930, and were to have a full load rating of 160,000 kilowatts or 200,000 kv-a.

The Westinghouse Electric and Manufacturing Company also reported a significant trend in steam turbo-generators toward constantly larger size, both in the four-pole and two-pole units. This company had designed single unit air-cooled 1800 revolutions per minute machines up to 200,000 kv-a. capacity, and had built 3600 revolutions per minute units up to 18,750 kv-a. capacity. In two-pole generators, a uniform type of construction had been developed, simplifying frame construction and making it easier and quicker to assemble. In this design iron pipes of relatively large diameter were used as the cross members, and were welded to equally spaced steel sheet plate throughout the length of the machine, providing a rigid skeleton frame and a convenient means of ventilating the middle sections of the core. The laminations of the core are built up on through bolts held between the end plates, while the outside of the frame is covered with cheap steel plates.

Aside from the steam-turbine units, there were important developments during the year in hydroelectric plants (see WATER POWER), and a notable water-wheel generator was completed for the Spier Falls plant of the New York Power and Light Corporation. It was a 47,000 kv-a. generator, with a directed main exciter and a direct connected pilot exciter. This was built by the General Electric Company, which also had under construction a 77,500 kv-a. vertical-shaft water-wheel generator at the Dnieper River development in Russia. This was one of nine units required for this development, and the machines were to be the largest water-wheel generators ever constructed, operating 88.25 revolutions per minute under a hydraulic head of 123 feet. The total weight of each generator was to be approximately 880 tons, the weight of the rotor and shaft about 445 tons and the shaft itself, 36 feet long and 40 feet in diameter, about 68 tons. See BOILERS; POWER PLANTS; WATER POWER.

The Mercury-Arc Rectifier referred to in the 1929 YEAR BOOK continued to find increased application for railway operation. The General Electric Company had under construction during the year two 2000-kilowatt rectifiers, designed for 2900-volt direct-current supply for the Italian State Railways, while a 1500-kilowatt unit was being installed by the Paris-Orleans Railway. The mercury-arc rectifier was an important feature of the Delaware, Lackawanna & Western electrification (see ELECTRIC RAILWAYS), and also figured in the designs for the new subways in Manhattan and Brooklyn in New York City. The city of Los Angeles installed two 1500-kilowatt 600-volt rectifiers, while a 2000-kilowatt, 600-volt unit was installed by the City of Detroit, and two 1500-kilowatt, 600-volt units were under construction for the Montreal tramways, and two 3000-kilowatt, 600-volt rectifiers for the Boston Elevated Railway.

The General Electric Company reported that during 1930 there were placed in service approximately 60,000 kilowatts of mercury-arc rectifiers by that company, while there were designed or put under construction approximately 90,000 kilowatts of mercury-arc rectifier substations.

Synchronous converters also figured in railway substations, and a number of large units were being built for substations on the New York Central Railroad's West Side track improvement in

New York City, and for the Philadelphia Rapid Transit Company, the Omaha and Council Bluffs Street Railway Company, and the Pacific Gas and Electric Company at San Francisco.

Among the notable transformer units completed during the year was a 100,000 kv-a. three-phase auto-transformer designed by the General Electric Company to transform 12,000 volts to two circuits of 24,500 volts. The equivalent transformer capacity of this unit was 57,000 kv-a.

EAMES, CLAIRE. An American actress, died in Richmond, Eng., Nov. 8, 1930. She was born in Hartford, Conn., Aug. 5, 1896, and studied for the stage at the American Academy of Dramatic Art. She made her debut at the Greenwich Village Theatre, New York City, in 1918 in *The Big Scene*, and three years later appeared as Mary Stuart in John Drinkwater's play of that name. Her other important rôles included: Mrs. Tiffany in the Provincetown Playhouse's revival of *Fashion* (1924); Proserpine Garnett in Shaw's *Candida* (1924); Carlotta Ashe in Sidney Howard's *Lucky Sam McCaver* (1925); the Empress Carlotta in the Theatre Guild's production of *Juarez and Maximilian* (1926); and Carrie Callahan in Sidney Howard's *Ned McCobb's Daughter* (1927). In 1927 she went to London where during the next three years she achieved distinction in *The Silver Cord*, *The Unquiet Spirit*, and *The Sacred Flame*. She was married to Sidney Howard, the playwright, in 1922, but was divorced from him in 1930.

EARTH, STUDY OF. See GEOLOGY.

EARTHQUAKES. It was estimated that an earthquake was felt in some part of the world on an average of at least 4000 times annually, though fortunately the vast majority of these quakes are either feeble and harmless or else occur under the sea or in thinly populated regions; in the United States alone, 200 or more are usually reported each year. Thousands of additional disturbances, too faint to be felt, may be recorded by delicate seismographs. The year 1930 had the usual quota of earthquakes, several of which ranked as severe local disasters; but until its tranquillity was broken by the quakes of May 5 and May 6 in Burma and Persia the crust of the earth had been unusually free from seismic disturbances ever since the world-shaking Aleutian Islands shock of Dec. 17, 1929.

Ito, Japan, on the west coast of Sagami Bay, was shaken by a remarkable series of quakes which continued almost incessantly for two months, beginning the middle of February, though they were not of destructive intensity. From February 13 to April 11, 3684 shocks were recorded; 209 occurred on March 9 alone. The shocks came in groups that coincided with low tide; the foci appeared to be confined to an inverted conical block of the earth's crust, which had its apex at a depth of 6 kilometers (3.7 miles) and its base (2 kilometers—1.2 miles—in radius) on the sea bed, suggesting the presence of a hidden extinct volcano with this cone occupying its former crater.

The most destructive earthquake ever felt in the south of Burma occurred on May 5. The epicentre was near the seaport of Pegu; this city was practically destroyed by the quake and the resultant fire and sea-wave. Rangoon also suffered heavily. Several hundred lives were lost.

The Burmese quake was followed the next day by an equally destructive shock in northwest Persia, with the epicentre in the Azerbaijan district near Salmas. Two thousand lives were lost

in the district, and several thousand people were injured, according to preliminary reports.

An earthquake with an epicentre 320 miles northeast of Calcutta caused considerable damage on July 3, but no loss of life. The focus was probably unusually deep, so that the quake was comparatively non-destructive in spite of the fact that it was strong enough to disturb an area of 500,000 square miles.

The most destructive earthquake that had occurred in Italy since the Avezzano disaster of 1915 took place about 1:00 A.M. on July 23 in the southern provinces of Basilicata and Campania; the epicentre was near Lacedonia. Two thousand people were killed, and 4500 injured. An area of 95,000 square miles was disturbed, and more or less damage was caused over an area of 490 square miles. Basilicata is one of the most unstable regions of Italy, and has been the scene of many great earthquakes.

A slight quake with an epicentre near New Orleans occurred on October 19. It may have been due to readjustments that took place as a result of the accumulating stresses set up by the load of the sediment deposited on the Mississippi delta.

An earthquake occurred in Chile on October 17, with an epicentre off the coast near Santiago.

The northern Izu Peninsula in eastern Japan was shaken on November 26, with extensive damage to many towns and villages; about 250 lives were lost, and several hundred people were injured.

A quake in Argentina on December 24 destroyed the village of La Poma, and resulted in the deaths of about 40 people. See SEISMOLOGY; ALBANIA, ITALY, JAPAN, and BURMA under *History*.

ECONOMIC ASSOCIATION, AMERICAN. An organization founded in Saratoga, N. Y., in 1885 to encourage economic research, especially the historical and statistical study of the actual conditions of industrial life; to issue publications on economic subjects; and to encourage perfect freedom of thought and discussion upon current problems from an economic point of view. The membership, which in 1930 totaled approximately 3700, comprises persons interested in the study of political economy or the economic phases of political and social questions. During the first 25 years of its existence the association published mainly monographs on special economic topics, dealing largely with current problems, which make up 28 volumes and furnish the best existing guide to the progress of economic thought in the United States. The official periodical is the *American Economic Review*, a quarterly founded in 1911, which aims to supply material showing the progress of economic thought. Papers read at meetings are published in the *Proceedings* of the association and furnished free to members.

The association held its annual meeting, in Cleveland, Ohio, Dec. 29-31, 1930. Among the topics discussed at this meeting were: "The Russian Economic Situation"; "The Modern Merger Movement"; "Industrial Changes and Unemployment"; "International Economic Relations"; and "The Business Depression of 1930." The officers for 1930 were: President, Matthew

B. Hammond, Ohio State University; vice presidents, B. H. Meyer, Washington, D. C., and George O. May, New York City; counsel, John E. Walker, Washington, D. C.; and secretary and treasurer, Frederick S. Deibler, Northwestern University. The elected members of the executive committee were: William H. Kiekhofer, University of Wisconsin; Edmund E. Day, New York City; Ernest L. Bogart, University of Illinois; Richard T. Ely, Northwestern University; Joseph H. Willits, University of Pennsylvania; and Stuart Daggett, University of California.

ECUADOR, ek'wá-dór. A South American republic on the northwest coast of the continent between Colombia on the north and Peru on the south. Capital, Quito.

AREA AND POPULATION. The area in 1930, still undetermined because of the boundary dispute with Peru, was variously estimated at from 110,000 to 284,000 square miles, including the Galapagos Islands (2868 square miles), situated 600 miles west of Ecuador in the Pacific. The population is estimated at from 1,500,000 to 2,000,000 and includes about 601,000 inhabitants of pure European blood, 291,000 of mixed blood, and 660,000 Indians, of whom 200,000 are savages virtually untouched by civilization. In 1928 there were 97,653 births, 51,584 deaths, and 14,754 marriages. The official census in 1903 placed the population at 1,328,821. The chief towns with their approximate populations are Quito, 80,702; Guayaquil, 100,000; Cuenca, 30,000; Riobamba, 20,000; and Ambato, Loja, and Latacunga, each with about 10,000 inhabitants.

EDUCATION. Elementary education is free and nominally compulsory. In 1928, there were 1761 primary schools (1371 Government, 99 municipal, and 201 private schools), with a total attendance of 128,744; 20 secondary schools, or colleges, with 2831 students; and four training colleges for teachers, with 985 students. There are universities at Quito, Guayaquil, and Cuenca, the aggregate attendance in 1928 being 776. Buildings of the Central University at Quito were destroyed by fire Nov. 9, 1929.

PRODUCTION. Ecuador is primarily an agricultural country, cacao being the principal export and the chief support of the nation's economic life. Some 6000 estates along the coastal region, with an estimated area of 250,000 acres, are devoted to the cultivation of cacao. Production, however, has been seriously curtailed by the "Witchbroom" disease. Cacao shipments from Guayaquil declined from 51,900 tons in 1922 to about 16,183 tons in 1929; in value, the shipments decreased from \$5,157,944 in 1928 to \$3,826,944 in 1929. The marked decline in the volume of cacao exports and in the prices received was the most important factor in the severe economic depression which gripped the country in 1929 and 1930.

Other leading agricultural products are ivory nuts, rubber, coffee, tobacco, cinchona bark, hat straw, and tropical fruits. Sugar, rice, cotton, aloe fibre, lentils, maize, wheat, barley, potatoes, and vegetables are grown in lesser quantities.

The total area under cultivation was estimated at 11,480,000 acres and the value of the annual gross production at 416,000,000 sucres.

Petroleum production in 1929 totaled 56,569,984 gallons, from which the Government derived a revenue of 1,010,672 sucres. Considerable gold is mined, and the country is believed to be rich in silver, copper, iron, lead, and sulphur, but mining is not an important industry. Salt is a Government monopoly. There are few known coal deposits; water-power resources are estimated at 1,000,000 h.p., of which 5500 h.p. were developed in 1926. The extensive forests are rich in dye-woods, kapok and cinchona trees, and other valuable timber.

The chief manufacturing industry is the making of Panama hats. There were 14 textile factories in 1928, and others devoted to the production of sugar, chocolate, shoes, flour, and beer. The textile and hat industries flourished in 1929. Exports of straw hats were valued at \$1,154,079, as compared with \$730,263 in 1928. Although the 1929-30 cotton crop totaled about 3,042,000 pounds, additional cotton had to be imported to meet the needs of the textile industry.

COMMERCE. Exports in 1929 declined to 86,036,822 sucres (1 sucre exchanged at \$0.20 in 1929) from a total of 98,379,028 sucres in 1928, according to the Director General of Statistics. The decrease in actual value of exports was 7,417,358 sucres, as the sum of 4,924,848 sucres, included in the 1928 total, represented gold shipped by the Central Bank of Ecuador as deposits and for coinage. The decrease in 1929 was attributed to the smaller quantity of cacao exported, the drop in cacao, coffee, and tagua (vegetable ivory) prices, and the overstocked condition of European markets, which normally take 93 per cent of the Ecuadorean exports of cattle hides. The value of the leading exports in 1929 in sucres, with figures for 1928 in parentheses, was: Cacao, 21,256,296 (29,653,059); petroleum, 15,142,502 (11,634,655); coffee, 11,071,576 (17,275,208); Panama hats, 6,788,455 (4,507,806); tagua, 6,076,270 (6,279,981); rice, 4,255,794 (2,812,025); and cattle hides, 718,385 (1,890,735). Imports in 1929 were valued at 84,835,000 sucres, as compared with 82,924,000 sucres in 1928. The favorable trade balance was the lowest since the World War.

For the year ended June 30, 1930, exports to the United States increased slightly to \$5,522,904 from \$5,483,825 in 1928-29, while imports from that country declined to \$5,309,339 from a total of \$6,759,754 in the preceding year, a falling off of 21 per cent.

FINANCE. The ordinary budget for 1930, as approved by the Council of State, Dec. 20, 1929, balanced at 64,037,200 sucres (1 sucre equals \$0.20 at par), as compared with a revised budget of 64,694,828 sucres in 1929. Chief revenue items were direct and indirect taxes, which were expected to aggregate 55,487,020 sucres. In the expense budget, 19,647,022 sucres were allotted to government, police, and justice, 9,421,677 sucres to education, 9,071,113 sucres for military purposes, 7,431,486 sucres to the Treasury, and 6,150,816 sucres for the service of the public debt.

Customs revenues, which constitute the principal source of income, declined to 26,249,203 sucres in 1929 from 26,727,701 sucres in 1928, according to preliminary returns. Actual ordinary receipts were 59,269,000 sucres and ordinary expenditures were placed at 53,694,000 sucres.

The public debt as of Jan. 2, 1930, stood at 122,772,468 sucres, of which 110,822,839 sucres represented the external debt, and 11,946,629 sucres the internal debt. The National Assembly decreed in 1929 that the balance of the external debt should be deposited in the Central Bank rather than remitted to the bondholders and that meanwhile the Executive should enter into negotiations for funding on more favorable terms. President Ayora was quoted as saying in July, 1929, that the Government hoped to refund the debt on the basis of 75 per cent of the existing capital figures, and with this possibility in mind was depositing 10,000 sucres (\$2000) daily toward the interest and principal. Americans who had been serving as Comptroller General and Superintendent of Banks were supplanted in 1929 by Ecuadorean citizens.

COMMUNICATIONS. Nine railways in operation in 1929 had a total mileage of 698 miles. There were few highways, most of the roads being little better than bridle paths. Air services connected the leading cities with the Panama Canal and with numerous points in Colombia, Peru, Chile, and Argentina. A fortnightly passenger and freight service between Ecuador and the United States was established by an American steamship company in 1930. Guayaquil is a port of call for nine European steamship lines.

GOVERNMENT. Under the Constitution promulgated Mar. 26, 1929, executive power is vested in a president, elected for four years by direct vote of the people, and legislative power in a congress of two houses. The Senate consists of 32 members elected for four years by the Provinces and the various professional and occupational groups. The Chamber of Deputies is composed of 56 members elected for two years by the direct vote of literate male and female citizens. President in 1930, Dr. Isidro Ayora, who assumed office in April, 1926, and was reelected Mar. 27, 1929, by the Constituent Assembly for the term ending Aug. 31, 1932. Premier, Julio E. Moreno.

HISTORY

Political unrest and financial stringency due to the continuance of the economic depression contributed their quota of difficulties to the Ayora Administration during 1930. The President's efforts to balance the budget by reducing appropriations for the army led to a political crisis in October, from which Dr. Ayora emerged in a stronger position than any he had occupied since his *coup d'etat* of 1925. The crisis was precipitated by the resignation of Julio Moreno, the Minister of Interior and ranking member of the Cabinet, who had been the target of Opposition and army attacks. His withdrawal left Col. Carlos Guerrero, the Minister of War, in line for succession to the Presidency and when President Ayora presented his resignation to Congress on September 29 that body was faced with the certainty of a military Cabinet if it did not support the President. At the same time the army, which had clashed with Congress, offered him unreserved support if he would continue in office. Congress refused to accept the resignation, which President Ayora withdrew the following day. The incident left him free to continue his administration without interference from the military element and with the prestige accruing from a vote of confidence from the first constitutional Congress since 1924. Having apparently circum-

vented danger of a revolutionary movement directed by the army or by Opposition politicians, the President was confronted only by the problem of radical agitation among the Indian and mestizo masses.

The economic depression had been accompanied by an alarming increase in banditry in the coastal areas, resistance to Government tax collectors, and increasing labor unrest, attributed to Communist propaganda. A number of clashes between alleged Communists and Government officials and troops were reported during the year. Congress on Dec. 8, 1930, ended a stormy four-month session after passing a budget for 1931 totaling 61,200,000 sucres, or 1,200,000 sucres more than the President proposed. As the necessary arrangements for the settlement of the foreign debt were not adopted, a special session was in prospect. Miguel Angel Albornoz, vice president of the Central Bank of the Republic, was appointed Minister of Interior on November 24. Under authority of a law granting autonomy to municipalities passed by Congress, Guayaquil inaugurated the city manager plan of government on December 17. As the first trial of the plan in a Latin American city, the experiment aroused much interest in South America.

Seeking foreign guidance in tiding over the financial stringency, the Government engaged William F. Roddy, an American member of the Kemmerer financial commission to Ecuador in 1926-27, to serve for 10 years as customs adviser. A shortage of funds for public instruction, public works, and sanitation was reported early in the year and the educational fund promised to be further depleted as a result of a law prohibiting the operation of public gambling places, formerly taxed for school purposes.

The reported proposal of a group of rich American sportsmen to purchase the Galapagos Islands, a favorite winter haunt for American yachtsmen, aroused suspicions in Ecuador that the United States government was seeking to obtain the islands for a naval base for the protection of the Panama Canal. In October, residents of Quito were reported to have petitioned Congress to lease the Galapagos to France, Germany, or Japan as a means of meeting the financial crisis.

The National Congress, which in 1929 had incorporated anti-clerical provisions in the new Constitution, ordered Señorita de Sárraga, an anti-Catholic lecturer, out of the country on January 25 after troops had been called out to protect her from a mob in Quito.

EDUCATION IN THE UNITED STATES. STATISTICS. *Enrollment.* The United States Office of Education estimated that the enrollment of pupils for 1930 was: elementary schools 21,370,000; public high schools 4,030,000; and private and parochial elementary and secondary schools 2,704,000. This makes an estimated total of 28,104,000 pupils in elementary and secondary schools.

The enrollments in 1927-28, the last year for which definite figures were available, were: public kindergartens 695,490; private kindergartens 54,456; a total of 749,946. There were in public elementary schools 20,572,927, and in private elementary schools 2,234,999, a total of 22,897,926.

The enrollment of students in public high schools was 3,940,855, and in private schools 380,508, making a total of 4,321,361. The total enrollment in all elementary and secondary schools in 1927-28 reached a total of 27,879,233.

The enrollment in public industrial schools for delinquents was 84,317; schools for the deaf 17,496; schools for the blind 6084; schools for the feeble-minded and subnormal 104,021; schools for Indians 34,718; Government and other public schools in Alaska 8571; and private commercial and business schools 188,363. Including the 274,348 enrolled in teachers colleges and normal schools, and the 868,793 enrolled in universities, colleges and professional schools there was a total of 29,410,615 enrolled in educational institutions within the United States.

Expenditures. The total expenditures for public elementary and high schools was \$2,184,847,200. For private schools of the same class, \$228,258,290. The grand total for all schools including colleges and universities was \$3,033,706,590.

Property. State departments of education reported a total value of property used for public school purposes of \$5,486,938,599. Private high schools reported a total valuation of \$635,848,000 including endowments of \$75,376,000. It was estimated that private elementary schools had property valued at \$400,000,000.

Students in Certain Courses in High School. From time to time the U. S. Office of Education has collected information regarding the subjects that high school students study. The report for 1928 shows that the increase in enrollment has given to each subject a larger number of students than was reported in 1922. The per cent of the total number of students who study some of the subjects has changed to a remarkable degree. In 1928, a total of 777,081 were enrolled in Latin classes. This was 24.71 per cent of the total number of students reporting. While this represented the largest number of Latin students ever reported, it shows a marked decrease in the proportion of the student body who study Latin. From 1900 to 1910 about one half of all high school students studied Latin. As a subject, therefore, Latin was only about one half as popular as it was twenty years earlier. Courses in English language and literature enroll over 93 per cent of the students. History comes next with an enrollment of about 53 per cent. Algebra was studied by 36 per cent, Latin by nearly 25 per cent, vocal music by 21 per cent, and geometry by 20 per cent of the students reporting.

The study of German presents an interesting contrast. In 1915 the schools reported that courses in this subject enrolled about 24 per cent of all high school students. In 1922 less than 1 per cent and in 1928 less than 2 per cent were enrolled in German classes.

Only 8165 students were reported as studying Greek. This is only .26 per cent of the total reporting, and about one-third as many as studied this subject in 1900.

Many newer subjects such as general science, sociology, economics, commercial geography, typewriting, and mechanical drawing have come to occupy important places among the school subjects.

Teachers. The public elementary schools employed 642,712 teachers. The public high schools 189,222 teachers. The grand total of teachers in all educational institutions was 1,010,232.

Textbooks. For the year 1928, sixty publishers of school and college textbooks reported net sales in the United States amounting to \$49,097,466. For elementary school purposes 39,406,677 books were sold for \$22,735,745. The high schools used 18,633,290 books for which they

paid \$16,288,422. About 65 per cent of the total cost of books used in the public schools was for free textbooks bought by boards of education.

RADIO. An Advisory Committee on Education by Radio was appointed by the Secretary of the Interior. A report presented in June, contained the following recommendations:

1. That there be established in the Office of Education, Department of the Interior, a section devoted to education by radio, and charged with such responsibilities as the following: (a) To receive from the advisory committee on education by radio its files and collected documents, to keep this material up to date and available for reference by the many students of the subject; (b) to organize some of the material into bulletins to be issued as demand warrants; (c) to outline techniques for research and carry on investigations into the best methods of broadcasting and compare the results of lessons sent to schools by radio with the results obtained by other means; (d) to keep the educational interests of the country fully posted on and alive to the importance of this new instrument as an educational tool; (e) to attempt to prevent conflicts and duplication of effort between various broadcasting interests; (f) to furnish advice on the educational soundness of programmes suggested and to supply typical programmes upon the request of any station whether educational or commercial.

2. That the funds necessary for financing such a section in the Office of Education be provided in the regular budget for the Department of the Interior.

3. That there be set up in connection with this unit an advisory committee representing educational institutions of commercial broadcasters, and the general public. This committee should consist of 9 to 15 persons whose residence is such that they can meet from time to time for actual consideration of problems arising in the Office of Education. This committee may well administer any funds remaining in our budget to promote research into the techniques of radio education.

4. That an effort be made to secure from interested persons or foundations an amount of money sufficient to bring to the microphone, for a period of two to three years, a high grade programme in certain formal school subjects and to check carefully the results obtained. The committee believes that as much as \$200,000 per year for a period of three years may be wisely expended in this manner, under direction of a nonpartisan committee of educators and laymen.

5. That the secretary bring to the attention of the Federal Radio Commission the importance of the educational interests in broadcasting, and that he keep the President of the United States informed of the desirability of having on this commission spokesmen for programmes which will tend to improve the general well-being of the American people.

It also was urged that the Federal Radio Commission reserve certain wave lengths for educational institutions. During the year there was a much wider use of radio for educational purposes. Walter Damrosch broadcasted four series of Friday morning concerts, each including twelve programmes. The first series was devoted to a study of the make-up of a symphony orchestra, the second emphasized the different rhythms and tempos of music, the third series considered the more complicated forms of symphony, the fourth was devoted to the works of the more important composers.

As in the two previous years, there was a handbook for teachers "giving full descriptive notes covering each composition played."

A study conducted by professors in the University of Wisconsin showed that the teaching of music and current events by radio was more effective than resulted from ordinary classroom instruction.

The American School of the Air was inaugurated in February. This was sponsored by a general advisory board of nationally known educators headed by Dr. Ray Lyman Wilbur, Secretary of the Interior, the Columbia Broadcasting System and the Grigby-Grunon Company. Various specialists accepted invitations to become members of the staff and Dr. William C. Bagley was

made dean of the advisory faculty. The institution presented a wide range of subjects and there was a notable degree of success. The University of Florida also made use of the radio in connection with its extension courses. Cleveland employed radio in the teaching of arithmetic.

SURVEY OF SECONDARY EDUCATION. A national survey of Secondary Education was authorized by Congress in 1929. An appropriation of \$225,000 was made and a period of three years beginning July, 1929, was allowed for the completion of the work.

The responsibility for the survey was placed with the U. S. Office of Education. Commissioner William John Cooper was to act as director. Dr. Leonard V. Koos was made associate director. Commissioner Cooper organized a three-fold advisory system. A group of nine prominent educators were to act as consultants. They were expected to consider and recommend the major policies to be followed in the survey. There is an advisory committee of thirty members "who counsel regarding undertakings and act as interpreters of the survey to those engaged in Secondary Education." A third advisory group consists of laymen. "This committee will assist in giving direction to the various investigators, will scrutinize the findings of the survey, and will be prepared to interpret the results intelligently to the public."

The investigations which were to be undertaken were in "four fields: namely, the organization of schools and districts, the secondary school population, administrative and supervisory problems, and the curriculum and related problems."

The following were the principal special studies undertaken: Provisions for individual differences; marks and marking systems; plan for promotion of pupils; school district organization; administrative and supervisory staffs; practices in the selection and appointment of teachers; school publicity; study of selected secondary schools in smaller communities and rural areas; characteristics of small high schools; legal and other regulatory provisions of secondary education; horizontal organization of secondary education; secondary school population; the curriculum; special problems in reorganization; guidance, and junior high-school reorganization.

TEACHER TRAINING. During the period of the World War it was easy for teachers to find profitable employment outside of the schools. Salaries of teachers were low and often the conditions surrounding the work were not pleasant. This exodus left the schools with a shortage of teachers. At the same time the institutions that trained for teaching had greatly decreased registrations. As time passed, however, there were marked increases in the salaries that schools paid, and improvement in the conditions under which teachers work. In many States, pension systems were established, and in the majority of places permanent tenure schemes were established. As conditions within the schools improved many of those who had left earlier came back. Normal schools and teachers colleges increased their enrollments until the number of such students was a fourth of the total number of teaching positions in the country. As early as 1925 there were evidences that there was or soon would be an over-supply of teachers, for the public schools. This condition continued until in 1930 the situation had become serious. State officials in New York asserted that there were no less than five thousand surplus

teachers in the State. In some cases the classes that were graduated from normal schools three years previously had not received appointment.

During the year the Congress appropriated \$200,000 "to make a study of the qualifications of teachers in the public schools, the supply of available teachers, the facilities available and needed for teacher training including courses of study and methods of teaching." Dr. William J. Cooper, United States Commissioner of Education, was made the director of the survey. The Secretary of the Interior appointed Dr. Edward S. Evenden to act as associate director, and a group of specialists who were to act as a board of consultants. The survey was to occupy three years. It was the first thorough-going investigation that had been made of teacher training in its relation to the requirements of the schools.

Tendencies. Some pronounced tendencies were becoming prominent in public education. The changes that were involved are of such a radical nature that parents have difficulty in understanding their significance. In previous times it had been possible for adults to make use of their own experiences in school when they considered the education of their children. There were many features of school procedure that were so different from those of even a decade earlier that parents were at a loss to understand what was done in the modern schools.

Organization. The first change that perplexes the adult is the proposed change in school organization. Until the early years in this century it was not uncommon to have an elementary school organized on a nine-year plan. This meant that children began the regular work at the age of 5 or 6 and normally were promoted to the high school after 9 years.

There were decided objections to this scheme. It was urged that the increasing length of the school year made it unnecessary to require nine years in the elementary school. Also the increased importance of professional training made it impossible for graduates from such schools to enter upon their life work until late in their twenties. The only part of the educational system in which time could easily be saved was the elementary school. Nine-year elementary schools rapidly disappeared. At the same time there was a stronger insistence upon children reaching the age of 6 before they began school.

In many cities kindergartens receiving children at the age of 4 or 5 were started. This was in effect a nine-year system, only the extra year was at the beginning rather than the end of the elementary course. By 1930 about one-quarter of the children who were eligible to kindergartens were being provided with such opportunity. Children who pass through this institution enter the regular school in company with those who have never been in kindergartens. The school is organized to provide for the majority, consequently it is often difficult to justify kindergartens on the ground that children who attend them later do better in the regular school. The desire to be more economizing in school expenditures was causing some places to abandon kindergartens.

Recently those who worked in the field of childhood had become convinced that the years from one to five are of supreme importance in the education of the child. To meet this need, nursery schools were developed. In these children from 18 months to four years were received. These were still in the experimental stage, but some of the

best minds in the profession were devoting attention to these institutions. It was not the purpose to begin the work of the kindergarten or elementary school at a still earlier age. Rather the attempt was made to provide suitable conditions for the mental, emotional, and physical growth of the child.

The junior high school had a prominent place in most city systems. This school cared for the years that represented the seventh and eighth in the regular elementary school and the first in the high school. The intention was to bridge the gulf that existed between the elementary school and the high school. It was believed that the best interests of the pupil required that he have opportunity to "explore" some of the secondary fields while he was yet in the elementary school, consequently it was desired that the methods employed should be those of the elementary school while a part of the subject matter should be that of the secondary school. There were marked differences of opinion regarding the extent to which the junior high school has achieved its purpose. There were those who insisted that the effect had been to bring high school studies two years earlier in the child's life. The survey of secondary education that was in progress would certainly consider many of the problems that were disturbing both school officials and parents.

The senior high school cares for the last three years of secondary education. These are the years in which the chief emphasis has been upon the college preparatory work. School officials commonly complained that the colleges require a type of training that is not well suited to any but those who enter college. College authorities on the other hand insisted that restrictions had been so eliminated that with the single exception of English, it was possible for a candidate to enter college with any subjects of his choosing. The difficulty that existed in public high schools was due in large measure to the fact that colleges differed in their entrance requirements, because they differed in the character of the college courses that were offered. The public school officials felt compelled to have their high school offer courses that insured admission in any college. This attitude made it difficult to change public high schools.

The junior college is a late development. In it high school graduates are able to pursue much of the work ordinarily given in the freshman and sophomore years in colleges. This postpones the students leaving home for two years, and this in turn reduces the expenses of a college education. There were at least 430 such institutes with an enrollment of over 67,000 in 1930.

Subject Matter and Methods. Changes of equal importance were taking place in the subject matter and methods in the parts of the school system with which the adult was familiar. Earlier the work in the elementary school was characterized by the term "the three R's." Pupils devoted themselves to the learning of these subjects. Under modern conditions there were schools in which the pupils did not study geography and history or even arithmetic as subjects. The school is no less concerned with having the children obtain a knowledge of these subjects, but it approaches the matter in a very different manner. The work of many schools was organized about "activities" or "units." Several States had published courses of study based upon activities and units.

There was difference of opinion as to the mean-

ing of the terms. Generally the name unit was applied to the subject matter that was involved in dealing with some topic that the pupil considered or may be led to consider as a valuable one. Such a topic is "The importance of the fur trade in America to-day," another "The history of the development of the fur trade in America." In dealing with these topics pupils need to learn among other things the geography of the country, some phases of history, the kinds of fur bearers, the uses, preparation, and marketing of furs, and the methods of obtaining furs. There are numerous needs for the use of arithmetic, reading, and composition. It was urged that all of the knowledge that was thus gained was connected with topics or problems, and as a consequence the learning of the ordinary school subjects was as effective by this plan as by the older methods.

Activities as used in the course of study refer to such opportunities as exist for self-expression on the part of the learner. These include original composition either in prose or poetry, art in various forms, and construction. In addition to mental exercise, the pupil actually enters into some form of activity that ends in a product that may be observed.

Discipline. The control in a classroom in which the newer methods operate is in some respects quite different from that which was common earlier. There is, for example, a greater degree of freedom allowed. It is assumed that the motive for the pupil's efforts will come from his own interest in the work to be done, rather than from the teacher's commands.

Those not familiar with the newer conceptions of control are almost certain to identify the freedom allowed as license. In the transition from a sternly teacher-dominated school to one in which child initiative and responsibility are emphasized, it was probable that the pendulum had swung too far in the direction of extravagant freedom. In many places this difficulty was receiving careful attention.

It was too early to reach definite conclusions regarding the efficiency of the changes in subject matter and methods. The change had been made so recently that complete testing had been impossible. More important still, those who advocate the changes insist that the most important advantages of the new schemes were found in the attitude of the learners, and that such attitudes were not subject to any existing tests.

Grouping. For a decade or more the movement had been toward grouping children so that those of equal or like ability would be together. The usual procedure was to consider the pupil's mental ability as determined by intelligence tests, his achievement as determined by standardized tests, and sometimes the teacher's judgment of him. This or similar plans were in operation in the great majority of school systems.

Recent researches have served to cast doubt upon the validity of such methods of grouping. A few of the more progressive schools have abandoned the plan and in its place they emphasize the care of the individual, through smaller classes for pupils having difficulties and such remedial measures as are required.

Taking schools as a whole there was still a strong tendency to group children so as to have at least three ability groups. The brightest pupils make up one, the dull a second, and the third group is made of those whose ability is between that of the members of the other two groups.

THE WHITE HOUSE CONFERENCE. Public school teachers and administrators manifested great interest in the reports that were submitted at the "White House Conference on Child Health and Protection." Different committees brought to the attention of the nation facts that are of supreme importance to the schools. Among these reports was one by the Committee on the Infant and Preschool Child. It stated that there are within the country 16,000,000 children under six years of age. This is about 13 per cent of the total population. Of the number who are five and six only about 27 per cent are in kindergartens. Many children do not have adequate out-of-door play facilities, and there is little or no preparation for the life that the child will lead when he enters the school.

Within the schools there were approximately 27,000,000 children. It was estimated that more than 70 per cent of the school population suffer from physical defects that interfere with mental as well as physical development. Fully 30 per cent were already retarded in school progress because of sickness and physical disability. Contrary to the usual view, city children suffer less from physical defects than do those who live in the country. It is apparent that the values of life in the country are offset by the lack of medical care which is available in the city.

Among the 19 points in the programme proposed by the conference, a certain number had direct bearing upon the schools. See *CHILD WELFARE* for a summary. See also *GREAT BRITAIN, FRANCE, etc., under Education.*

EGYPT. A state in northwestern Africa, established as a nominally independent kingdom Mar. 15, 1922, following the termination on Feb. 28, 1922, of the British protectorate declared Dec. 18, 1914. It occupies the lower valley of the Nile and parts of the Libyan Desert, the region between the Nile and the Red Sea, and the Sinai Peninsula. Egypt's claim to jurisdiction over the Anglo-Egyptian Sudan is denied by the British. Capital, Cairo. Ruler in 1930, King Fuad I.

AREA AND POPULATION. While the total area of Egypt proper, excluding the Sudan, is about 383,000 square miles, the cultivated and settled area covers only about 13,600 square miles. The total population at the census of 1927 was 14,213,364, as compared with 12,750,918 at the census of 1917 and 9,734,405 in 1897. From 1917 to 1927 the annual rate of increase was 1.09 per cent. Births registered in 1928 totaled 629,433; deaths, 380,376. The cultivated areas in 1929 were probably the most densely populated in the world, with an average of three persons to an acre. Populations of the leading cities in 1927 were: Cairo, 1,064,467; Alexandria, 573,063; Port Said, 100,899; Tanta, 90,016; Mansura, 63,676; Asyût, 57,136; Faiyûm, 52,863; Zagazig, 82,839; and Damanhûr, 51,709. At the 1927 census, Moslems formed 91.19 per cent of the population; Christians, 8.34 per cent; Jews, 0.45 per cent.

EDUCATION. Primary instruction is supplied mainly by native schools called *maktabs*. The

number of *maktabs* receiving state aid and under inspection in 1928-29 was 2271, with 198,796 pupils. In addition, 2581 *maktabs*, with 320,362 pupils, were under direct control of the Ministry of Education or the Provincial Councils. There were various higher elementary and higher primary schools, special and technical schools, and the Mosque and University of El-Azhar at Cairo, which with its six branches in other cities had 2168 students in 1928-29. El-Azhar is the centre of Moslem culture and learning. About 88 per cent of the population are illiterate.

PRODUCTION. Agriculture is the main support of the population and cotton is the leading crop and chief export commodity. The area available for cultivation in 1928-29 was estimated at 8,192,187 feddans (1 feddan equals 1.038 acres), of which 723,141 feddans were appropriated for public utility purposes and 1,852,676 feddans remained unreclaimed. Of the 5,425,098 feddans under tillage, 4,931,083 feddans were distributed among 2,115,052 native landowners and 494,015 feddans were held by 5957 foreign landowners. The area devoted to cotton in 1928-29 was 1,738,472 feddans and the crop was estimated at 1,640,000 bales (averaging 478 pounds net), as compared with 1,626,000 bales from 1,516,199 feddans in 1927-28. Wheat, barley, maize, rice, lentils, beans, onions, millet, rice, and sugar cane are other crops.

Cotton normally accounts for 80 per cent of the total export values. Prices declined sharply in 1929 and while the volume of cotton exports increased by 2.6 per cent over 1928, the total value showed a decrease of 8.4 per cent. The resulting depression in general economic conditions was increased in 1930 as prices continued their decline. The Government attempted to relieve the situation by purchasing a portion of the cotton crop and by advancing loans to producers to prepare for the next crop.

More than half of the land under cultivation could not be tilled without irrigation. To insure a constant supply to meet Egypt's estimated water requirements of 40,000,000 acre-feet annually, a number of irrigation projects were under construction in 1930. Most important of these was the raising by 30 feet of the height of the Assuan Dam. Work was commenced in June, 1930, and was to be completed in 1933 at a cost of \$12,500,000, exclusive of \$10,000,000 for the expropriation of lands and other damages. The Nag Hamadi barrage in upper Egypt was approaching completion and plans had been completed for a new reservoir at Gebel Aulia on the White Nile. Livestock in the country in 1928 included 791,757 cattle, 788,491 buffaloes, 1,179,538 sheep, 180,470 camels, 35,768 horses, 768,780 donkeys, and 548,493 goats.

Phosphate is the chief mineral produced, others being petroleum, manganese, zinc, lead, gold, silver, and salt. Phosphate exports in 1929 totaled 216,571 metric tons, as compared with 168,972 metric tons in 1928; respective figures for shipments of metallic ores were 201,279 and 105,283 metric tons. Manufacturing is expanding under a high protective tariff placed in effect Feb. 17, 1930. Sugar and petroleum refining and the making of boots and shoes, rugs, leather articles, cigarettes, furniture, and matting and basket work are the chief industries.

COMMERCE. A decrease of 7.8 per cent in the total value of exports and a corresponding increase in the value of imports, resulted in an un-

favorable balance of trade amounting to £E4,337,520 (1 Egyptian pound equaled about \$5) in 1929, as compared with a favorable balance of £E4,121,290 in 1928. Exports and re-exports totaled £E53,352,190 (\$266,760,950) in 1929 and £E57,563,036 (\$287,815,180) in 1928, while imports were £E56,089,512 (\$280,447,560) in 1929 and £E52,043,969 (\$260,219,745) in 1928. Re-exports amounted to £E1,600,196 in 1929 and £E1,397,780 in the previous year. The United Kingdom took 34.7 per cent of the total exports (38.3 in 1928), followed by the United States, which took 14.2 per cent (10.9); France, 12.4 (8.5); Italy, 6.8 (6.7); and Germany, 5.9 (6.0). The leading sources of imports, in the order named, were: United Kingdom, 21.2 per cent (21.8 in 1928); France, 9.9 (10.2); Italy, 9.8 (9.5); Germany, 7.3 (6.8); and the United States, 5.0 (5.2).

FINANCE. For the fiscal year commenced May 1, 1930, the Government estimated receipts at £E38,062,000 and expenditures at £E44,950,000, indicating a withdrawal of £E6,888,000 from the reserve fund. The new tariff which went into effect Feb. 17, 1930, was expected to yield about £E3,000,000 (\$15,000,000) annually in increased revenues. For 1929-30, estimated receipts were £E38,950,000 and estimated expenditures, £E47,410,000, leaving an anticipated deficit of £E8,460,000 to be supplied from the reserve fund. As allotments for public works were only partially used, preliminary returns for 1929-30 indicated a surplus of £E3,840,000. Final returns for 1928-29 placed the surplus for the year at £E3,137,416, due to the partial expenditure of public-works funds. The Treasury's reserve fund on May 1, 1929, amounted to £E39,852,370, of which £E4,000,000 was earmarked for the newly created agricultural reserve fund, leaving a balance of £E35,852,370.

The public debt in October, 1929, amounted to £89,996,000. Charges on account of debts of all kinds, as shown in estimates for 1929-30, amounted to £E4,893,938.

COMMUNICATIONS. In 1930 the state-owned railways totaled 3222 miles of line, including 2316 miles of main line, and the three privately-owned railways had 963 miles of line, including 863 miles of main line. For the year ended Mar. 31, 1929, the state railways carried 27,224,737 passengers and the freight originating on these lines totaled 7,936,948 tons; operating revenues totaled £E7,163,000 and operating expenses, £E4,122,000, in addition to capital improvements of £E790,000. Total receipts of the three private lines in 1928-29 amounted to £E482,472. A new railway connecting Benha, Menouf, and Kafr El Zoyat was placed in operation Apr. 7, 1930.

Highways maintained by the Ministry of Communications totaled about 3726 miles. Air lines connect Cairo and Alexandria with Great Britain and with India, via Bagdad, Basra, and Karachi. Alexandria is the chief port, handling approximately 85 per cent of the imports and 93 per cent of the exports of the country. In 1929, a total of 2270 vessels of 5,252,700,000 tons arrived at Alexandria, as compared with 2173 vessels of 4,965,800 tons in 1928. Vessels passing through the Suez Canal totaled 6274 of 33,406,000 tons in 1929 (6084 vessels of 31,905,900 tons in 1928).

GOVERNMENT. A new Constitution, promulgated Oct. 23, 1930, replaced that of Apr. 19, 1923 (see below under *History*). The new Constitution duplicated the document it replaced in

declaring Egypt an independent, sovereign state, making the throne hereditary to the descendants of Muhammed Ali, Islam the state religion, and Arabic the official language, and empowering the King to dissolve the Chamber of Deputies and suspend sessions. It reduced the membership of the Chamber of Deputies from 230 to 150 and that of the Senate from 121 to 100, of whom 60 are appointed by the King. The term of Senators is 10 years and that of Deputies is 5 years. Direct elections for the Chamber of Deputies, provided for in the 1923 Constitution, were replaced by a two-degree system, in the first degree of which suffrage was restricted to all those capable of understanding the significance of the right of suffrage and its proper use. Deputies must be 30 years old and Senators 40, and the King is authorized to control demagoguery in Parliament. In legislative matters, Parliament was made supreme. King Fuad I, ruler in 1930, ascended the throne Mar. 15, 1923. In the election of Dec. 22, 1929, the Wafd, or Nationalist party, captured 205 of the 232 seats in the Chamber of Deputies, and the Independents, allied with the Wafd, secured 20 of the remaining 27 seats.

HISTORY

Failure of negotiations for an Anglo-Egyptian settlement and the outbreak of a bitter struggle between King Fuad and the Wafd, or Nationalist party, in connection with which Parliament was again dissolved and a new Constitution promulgated, were the outstanding developments of a politically turbulent year in 1930. Political unrest was stimulated by the sufferings imposed on the Egyptian masses as a result of the severe economic depression.

ANGLO-EGYPTIAN NEGOTIATIONS. The far-reaching proposals advanced by the British Foreign Secretary, Arthur Henderson, in August, 1929 (see 1929 YEAR BOOK), had aroused hopes for the conclusion of a treaty which would grant Egypt her independence, while safeguarding the interests of foreigners in the country and of Britain in the Sudan and at the Suez Canal. The British offer was favorably received in Egypt and on February 6 the overwhelmingly Nationalist Parliament voted to permit the newly formed Government of Premier Nahas Pasha to enter into negotiations with Mr. Henderson. An Egyptian delegation, headed by Nahas Pasha, carried on negotiations with a British delegation in London throughout the month of April, 1930, without reaching an agreement. On May 8, it was announced in the House of Commons, amid Conservative cheers, that the parley had broken down. The rock upon which the conference foundered was the Egyptian demand that, as a condition of their signature of the treaty, the Anglo-Egyptian Agreement of 1899 should be reviewed in all its aspects within one year and that the immigration of Egyptians into the Sudan should be unrestricted. These and related proposals were interpreted as aiming at the restoration of the absolute Egyptian sovereignty in the Sudan which collapsed as a result of the Mahdist revolt in 1881.

According to a British White Paper on the negotiations, agreement was reached on all other points at issue, including the thorny question of the defense of the Suez Canal. Despite its failure, the conference broke up in an apparently friendly spirit. Mr. Henderson announced that he was willing to resume negotiations whenever Egypt

was ready, while Nahas Pasha made complimentary remarks about the friendly spirit shown his delegation in England. These diplomatic amenities were discounted by the announcement shortly before the conference adjourned that since the appointment of Nahas Pasha as Premier early in January, 29 British officials in the Egyptian civil service had received notices terminating their appointments, while 14 others had retired voluntarily.

FUAD AND THE WAFD. Conflict between the King and the Wafdist government for the control of Egypt became evident soon after the elevation of Nahas Pasha to the Premiership. It came to a head in June when the King refused to sign a bill, drafted by the Cabinet, providing heavy penalties for any Minister who attempted to suspend constitutional liberties, as had been done on four occasions in the preceding 5 years. The Wafd demanded Fuad's approval on the ground that the bill was intended to safeguard the Constitution. The King refused, seeing that its effect would be to deprive him of prerogatives vested in him by the Constitution. Premier Nahas Pasha, on June 17, presented his resignation as a protest against the King's refusal to sign. His resignation was accepted, but on the same evening he asked for and obtained a unanimous vote of confidence from the Chamber of Deputies.

Fuad called upon Ismail Sidky Pasha, a prominent business man and economist but with little popular support, to form a new Government. In the Sidky Ministry, approved by the King June 20, the 10 portfolios were divided equally between the Ittihadists (Unionists) and the Liberal Constitutionals. The Premier served also as Minister of Interior and of Finance, while the portfolios of Foreign Affairs and Justice went to Hafez Afi Bey and Yehra Ibrahim Pasha, respectively, who had resigned from the Liberal party, which refused to cooperate. Other members of the Cabinet were: Public Works and Agriculture, Hafez Hassan Pasha; War, Tewfik Rifaat Pasha; Communications, Tewfik Doss Pasha, representing the native Christians; Education, Ali Maher Pasha; and Wakfs, or Pious Foundations, Hilmy Issa Pasha.

The new Ministry had no hope of securing a Parliamentary majority. Fuad, however, on June 21 exercised the royal prerogative under the Constitution and adjourned Parliament for one month; on July 12, again in accordance with the Constitution, he decreed the closure of the session. As the Constitution provided that Parliament need not be summoned again until the middle of November, the Sidky Ministry was thus enabled to govern without Parliament for nearly six months. The Nationalist Parliament disbanded quietly on June 22, after the members had taken a solemn oath to defend the Constitution with their lives, but Wafdist resentment was manifested in a series of sanguinary riots and demonstrations in Alexandria, Cairo, Port Said, and other cities. Rioting in Alexandria on July 15, in which 17 were killed and over 400 injured, including 11 Europeans, caused Great Britain to dispatch two warships to that city, while Premier MacDonald warned both the Sidky government and its Nationalist opponents that they would be held equally responsible for damage to foreign interests. Sidky Pasha, in a vigorous response, expressed resentment at the British Premier's interference in what he termed the internal affairs of Egypt.

By vigorous action and the support of troops, the police, which were largely under British direction, succeeded gradually in checking the epidemic of rioting, but not until extensive damage had been done to European and other foreign shops and to municipal properties. The Wafd next presented the King with a petition, signed by a two-thirds majority of both Houses, urging an extraordinary session of Parliament. Upon Fuad's refusal, the Nationalist deputies convened unofficially on June 26 and adopted resolutions of non-confidence in the Sidky Ministry and favoring the non-payment of taxes. Intense antagonism aroused against the King by these events was seized upon by Abbas Hilmi II, who was ousted as Khedive of Egypt by the British Dec. 19, 1914, to promote his campaign for restoration to the throne. While Hilmi's candidacy aroused no enthusiasm in Egypt or Great Britain, the possibility of the deposition of Fuad was widely discussed.

The approach of the date provided in the Constitution for the summoning of Parliament confronted the Government and King Fuad with a dilemma, which they sought to solve by the promulgation on October 23 of a new Constitution, the general effect of which was to give the King unlimited power in practically all branches of the Government (for details of the Constitution see above under *Government*). As was to be expected, the new Constitution encountered the violent opposition of the Wafd and also of the Liberal Constitutional party, headed by former Premier Mohammed Mahmud Pasha, which withdrew its support from the Sidky Ministry. Mahmud Pasha declared the Constitution "demolishes the sovereignty of the people and makes democratic government impossible in Egypt." There were few protest demonstrations, however, possibly due to elaborate military precautions taken to prevent them and to the increasing gravity of the economic situation. On November 24, it was reported that Parliamentary elections would be held in February or March, 1931. Sidky Pasha undertook the organization of a People's party, mainly among his political adherents, on a platform of complete independence, sovereignty over the Sudan, an agreement with Great Britain, abolition of the capitulations, and the admission of Egypt into the League of Nations.

OTHER EVENTS. In its efforts to alleviate the critical situation caused by the decline in cotton prices, the Government on June 11 advanced an additional \$40,000,000 credit for the purchase of cotton and loans to cotton producers, bringing the total appropriated for this purpose to \$80,000,000. On August 28, the Government ordered the reduction of all land rents for the year beginning September 1 by one-fifth, with the proviso that the reductions be made good if conditions improved. It was also decided to postpone collection of some \$15,000,000 due on Government advances to farmers in cash and fertilizer.

A treaty of conciliation and friendship, signed with the United States Aug. 27, 1929, was ratified by Parliament on May 26, 1930. William M. Jardine, who was Secretary of Agriculture under President Coolidge, was appointed Minister to Egypt during the Summer. Negotiations for settlement of matters in dispute with Ibn Saud, King of Nejd and the Hejaz, were started late in 1930. See **COTTON; DAMS; RECLAMATION.**

EGYPTIAN ARCHAEOLOGY. For discoveries by archaeologists in 1930, see **ARCHAEOLOGY**,

EGYPTIAN EXPLORATION FUND. See **ARCHAEOLOGY.**

EIELSON, CARL BEN. An American aviator of Norwegian descent, whose body, with that of his companion, Earl Borland, was found near his wrecked airplane about 90 miles southeast of Cape North, Siberia, by a searching party in February, 1930. In 1923 Lieutenant Eielson, the first pilot to use an airplane in Alaska, was employed by the U. S. Post Office Department to carry mails between Fairbanks and McGrath during the winter. He joined Capt. George Hubert Wilkins in making trial flight tests over the Arctic Ocean in 1926 and flew with him more than 500 miles to the northwest of Point Barrow, Alaska, in 1927. In April, 1928, he piloted Captain Wilkins's plane from Point Barrow to Spitzbergen by way of northern Greenland, a skillful 24-hour flight; and, in December of the same year, he piloted him in the Antarctic in a 1200-mile flight, during which they discovered that Graham Land was a series of islands. On Nov. 9, 1929, Lieutenant Eielson and his mechanic set off in an airplane from Teller, Alaska, to aid the vessel *Nanuk*, ice-bound off Cape North, Siberia. Their machine crashed when they flew into a blizzard.

ELECTRICAL ENGINEERS, AMERICAN INSTITUTE OF. A national organization representing the electrical engineering profession; founded in 1884. The objects of the institute are the advancement of the theory and practice of electrical engineering and of the allied arts and sciences, the maintenance of a high professional standing among its members, and the development of the individual engineer. It is governed by a board of directors, elected by the membership, consisting of a president, the 2 junior past presidents, 10 vice presidents, 12 directors, and a treasurer. In 1930 there were 58 sections of the institute located in various cities throughout the United States and 106 branches in colleges giving courses in electrical engineering. Three annual conventions are held, in addition to regional, local section, and branch meetings. The 1930 winter convention was held in New York City Jan. 27-31; the summer convention in Toronto June 23-27; and the Pacific Coast convention in Portland, Ore., Sept. 2-5. Much of the institute's work is accomplished through its standing and technical committees, of which there were 40, in 1930. It maintains, in cooperation with other national engineering societies, the engineering societies library and a national employment service. There are three grades of members as follows: Associate, member, and fellow. The total membership on Oct. 1, 1930, was 18,301.

The principal publications of the Institute are the monthly *Journal*, the quarterly *Transactions*, the *Standards of the A. I. E. E.*, and the *Year Book*. The medals awarded by the institute in 1930 included the Edison Medal, to Dr. Frank Conrad of the Westinghouse Electric and Manufacturing Company for his contributions to radio broadcasting and short-wave radio transmission; Lamme Gold Medal, to William J. Foster for his contribution to the design of rotating, alternating current machinery; John Fritz Medal, to Admiral Watson Taylor, U. S. N., for outstanding achievement in marine architecture, for revolutionary re-

sults, and for persistent research in hull design; and Hoover Medal (in conjunction with the national societies of civil, mining, and mechanical engineers), to President Herbert Hoover in commemoration of his civic and humanitarian achievements. The Commission of Washington Award for 1930 was voted to Dr. Mortimer E. Cooley, dean-emeritus of the colleges of engineering and architecture of the University of Michigan, for his vision and constructive leadership in the education of the engineer.

The officers of the institute elected for 1930-31 were: President, William E. Lee; junior past-presidents, R. F. Schuchardt and Harold B. Smith; vice-presidents, Herbert S. Evans, W. S. Rodman, C. E. Fleager, E. C. Stone, C. E. Sission, H. V. Carpenter, G. C. Shaad, I. E. Moulthrop, H. P. Charlesworth, and T. N. Lacy; directors, F. C. Hanker, E. B. Meyer, H. P. Liversidge, J. Allen Johnson, A. M. MacCutcheon, A. E. Bettis, J. E. Kearns, F. W. Peek, Jr., C. E. Stephens, A. B. Cooper, A. E. Knowlton, and R. H. Tapscott; national treasurer George A. Hamilton; national secretary, F. L. Hutchinson. Headquarters are in the Engineering Societies Building, 33 West 39th Street, New York City.

ELECTRICAL INDUSTRIES. According to the estimates of the National Electric Light Association, electric power companies in the United States expended some \$850,000,000 for new construction, extension, and betterment of facilities in 1930. Of this amount approximately 70 per cent was for transmission and distribution facilities, and 30 per cent for power houses. Construction programmes in many cases were accelerated to sustain or promote employment, and were spread, generally, throughout the country.

Approximately 2,750,000 horse power of additional generating capacity was placed in operation during the year, or an increase of some 7 per cent. Of this, 2,000,000 horse power, or 73 per cent, was in fuel-burning plants, and 750,000 horse power was in hydro-electric plants. Some 10,000 miles of transmission line, together with a large mileage of distribution lines, were added.

The industry noted the addition of some 550,000 new customers, of which 472,000 were new domestic users, and it was recorded that 70 per cent of all American homes were wired. The average household customer had increased his consumption during the year from an annual rate of 500 kilowatt hours to 550 kilowatt hours, and the increase of electricity for cooking and water-heating was a particularly important element, as where this business was most fully developed, the increase for consumption in households was highest.

In the electrification of some 100,000 additional farms during the year, a gain of 18 per cent was recorded, and was the largest number ever added in a single year. Since 1923 the number of electrified farms had increased at a rate which doubled every 3½ years. By the end of 1930, over 680,000 farms were electrified, and marked increases were taking place, both in the way of numbers and facilities.

Considering the output of electric power for the entire United States, the 1930 record was 1.6 per cent less than for 1929, but 9 per cent above 1928. The aggregate generation by all power sources contributing to the public supply was approximately 89.08 billion kilowatt hours. The production of hydro-electric plants was cut down by the drought, and emphasized the importance

of fuel-burning plants, and of inter-connection of facilities, which continue to develop.

The gross revenues from all classes of customers of the electric lighting and power companies in 1930 was estimated at approximately 3 per cent above 1929, or \$2,009,357,000. The increase in electricity used by household consumers and small power and light concerns more than offset the lessened demand from industrial power users. There was a decline in the average price per kilowatt hour for home use of approximately 5 per cent, and it was found that with increased consumption, so that local plant capacity could be more fully utilized, prices for domestic electricity would continue lower.

The importance and growth of the electrical industry in 1930 was indicated by the estimates of the *Electrical World* (New York), which gave the capital investment as \$23,590,000,000, as against \$12,650,000,000 in 1920, and \$5,740,000,000 in 1910. The revenue of the industry for 1930 was estimated by the same authority as in excess of \$6,240,000,000, as compared with \$3,370,000,000 in 1920, and approximately \$1,025,000,000 in 1910. The extent of the industry is indicated in some of the bulletins of the U. S. Census of Manufactures for 1929, as, for example:

| | |
|---|---------------|
| Radio apparatus | \$342,000,000 |
| Insulated wire and cable | 296,000,000 |
| Generators, motor generators, etc. | 168,000,000 |
| Household appliances | 76,000,000 |

The electrical manufacturing industry in 1930 was estimated as capitalized at approximately \$2,000,000,000, and the annual value of the manufactured products, it was interesting to note, almost equaled the capital invested.

A notable development of the year was the increased use of electric welding in building construction. (See BRIDGES.) Eighty-four additional cities and towns permitted the use of electric welding in place of power riveting, which, on account of noise, had become a serious menace. The 19-story office building of the Dallas Power and Light Company was completely welded, and during the year the Dallas Gas Company began work on a structure of 22 stories, which was to be completely fabricated with arc-welding.

One of the developments of the year from the General Electric Company was thyrite, which was utilized in lightning arrestors installed on systems operating with the highest commercial voltages used. This was thought to afford protection in a field where important researches had been under way to secure electric service uninterrupted by such natural phenomena.

ELECTRIC LIGHTING. A preliminary estimate of the number of incandescent lamps sold in the United States during 1930 indicated a total of 563,778,000 for both large and miniature lamps, according to the review of the electrical industry by John Liston in the *General Electric Review* for January, 1931. Toward the close of the year, there were added to the line of inside-frosted lamps the 150, 200, 300, and 500-watt sizes, which had previously utilized only clear glass. A pre-focused spot lamp was developed for theatre spotlight service, which overcame difficulties heretofore experienced in focusing these lamps in service and permitted an accurate adjustment of the spotlight mirror at the factory with the lamp in a definitely fixed position. The photoflash lamp, a new development in the field

Assembling for Factory Test 110,000 kw. Vertical Compound Steam Turbine Generator Set for Ford Motor Company

of photography, incorporated a radically new principle in lamp making. It consists of a bulb and base, similar to the familiar 100-watt lamp, but differs from that lamp in that instead of having the usual coiled filament it consists of several sheets of extremely thin aluminum foil in an atmosphere of pure oxygen. A tiny 1.5-volt filament, coated with a special getter, accelerates the start of the flash. The lamp will operate equally well on any voltage from 1.5 to 125 volts. The duration of the flash is about $\frac{1}{60}$ th of a second, sufficiently fast to stop the usual movements of people. A single lamp provides ample light for photographing individuals and small groups. More lamps in suitable reflectors are required for larger assemblies.

A leading development of the year was the use of batteries of flood lights to illuminate baseball and football fields for evening games. On May 2 a league game of baseball was played at night at Des Moines, Iowa, under conditions of illumination practically approximating daylight. Flood lights of the General Electric Company were installed with such success at this field that during the year 18 baseball fields and 89 football fields were permanently equipped for night games.

The use of flood lighting in connection with large buildings was illustrated in connection with the Merchandise Mart in Chicago, said to be the largest building in the world. Here, in an elaborate scheme of illumination, more than 600 General Electric projectors were used.

During the year street lighting installations were studied and developed on a larger scale than previously, both permanently and in connection with special celebrations, as, for example, the Mardi Gras celebration at New Orleans.

ELECTRIC RAILWAYS. The important advance to be recorded during 1930 in the field of electric transportation was due, in large measure, to marked progress in the electrification of steam lines. The most notable work of the year in the United States, probably, was that of the Delaware, Lackawanna Railroad, which, on August 1, began the electric operation of its Montclair Division, and at the end of the year had completed the electrification of the main line between Morristown and Hoboken. On this system multiple-unit cars are used, employing 3000 volts direct current, which was employed for the first time in the United States, and for the first time on a large scale in any part of the world. A new type of converting unit was employed where the power supply was provided by mercury-arc rectifiers. See DYNAMO-ELECTRIC MACHINERY. The general plan involved the use of a total of 141 motor-trailer units, each consisting of a 3000-volt motor car and semi-permanently coupled trail car, and about 40,000 kilowatts of mercury-arc rectifier converting equipment located in five substations. Trains of eight and ten cars were put into use and operated successfully. It was planned to extend the electrification to Dover early in 1931.

At the new Union Terminal in Cleveland, Ohio, 22 204-ton 3000-volt locomotives were in active use during the year, eliminating steam engines in the congested districts of the city, the electric zone extending from Collinwood on the east through the Union Terminal to Linnale on the west, a distance of 17 miles. It was found that these new locomotives could handle larger trains at greater speed even than was anticipated, and the innovation was considered a distinct success.

Progress also was made in the extensive electrification programme of the Pennsylvania Railroad, and a section between Philadelphia and Trenton was placed in service, using multiple-unit motor cars. Two high-speed passenger locomotives were built during the year, and work was being done on additional passenger locomotives and a freight unit. The plans developed by the General Electric Company, involved twin motors for the passenger locomotives, with a rating of 1250 horse power each, or 2500 horse power applied to the two driving axles of the unit. For the freight locomotives there were four motors of the single armature type, with approximately 2500 horse power for four driving axles. The electrification programme, in progress during the year, eventually would require some 300 locomotives when in full operation.

Still another development of the year was the extensive use of self-propelled locomotives in connection with the West Side electrification of the New York Central lines in New York City. There were placed in service 35 oil-electric-battery locomotives, capable of operating either from external power, or from the oil-engine-storage-battery plant which they carried. These particular locomotives were used principally for switching service south of Sixtieth Street. The New York Central had been electrified from Grand Central Terminal as far north as Harmon, and all passenger service for a number of years had been worked by electric locomotives. In 1930 six of 42 6-axle freight locomotives were placed in service on this section, and the remainder were to be delivered during the following year. With this development the complete elimination of steam locomotives from Manhattan Island was in sight.

The General Electric Company supplied the Great Northern Railway during the year with four new generator-type locomotives, similar to those in use, while for the New York, New Haven, and Hartford Railroad, 10 new 200-ton A-C, D-C locomotives of larger size than any previously in service were being constructed at the Erie Works of this same company. These locomotives were designed for handling main line passenger trains in and out of the New York Central Terminal, or possibly into the Pennsylvania Terminal.

The electrification of the Reading Company around Philadelphia made rapid progress during the year, and line construction was completed while motor-car equipment was well under way. The latter involved motors and transformers for 40 motor cars, two control equipments, three 8000-kv-a. transformers for the distribution system, and 40 high-speed, single-phase circuit breakers. An improvement in the motors, which the General Electric Company had designed for this service, was supplying them with 12 poles, which would give better commutating characteristics.

In Chicago, as well as in New York, oil-electric locomotives were placed in service, while the Delaware, Lackawanna and Western Railroad installed locomotives of this type in their electric zone for handling freight. These were capable of operating either from the 3000-volt trolley or from oil-engine-battery power. Various types of oil-electric locomotives for freight switching, or industrial railways were placed in service during the year.

For branch line service on steam railways, the gas-electric car not only was increasing its mileage, but also was being built with greater capacity. Cars of this nature able to haul four trailers

were extensively built, and were used by the Minneapolis & St. Louis Railroad, the Canadian Pacific Railway, the Gulf, Mobile and Northern Railway, and the Chicago, Burlington and Quincy Railroad. The Lehigh Valley and the Erie had gas-electric motor cars equipped with two units aggregating 600 horse power, while a gas-electric drive was provided for a 200-ton wrecking unit of the Cleveland Union Terminal Company. This latter device not only had motors geared to four of the eight axles, but electric cranes at each end capable of handling loads up to 105 tons. A similar unit was under construction for the New York Central zone in New York City. It was believed that the gas-electric car would meet many of the conditions that had developed in branch line service where bus and truck competition otherwise would involve the abandonment of service.

A notable summary of the *Electrification of Steam Railroads*, not only in the United States, but throughout the world, was prepared by the Electrification of Steam Railroads Committee representing steam railways, power companies, consulting engineers, and electrical manufacturers. This study covered not only the United States, but other countries, and was published by the National Electric Light Association in September, 1930.

ELMIRA COLLEGE. An institution for the higher education of women in Elmira, N. Y.; founded in 1852 and operating under its present charter since 1855. The enrollment for the autumn of 1930 was 592. There were 60 members of the faculty. The endowment of the college amounted to \$837,420; and the income for the year was \$431,251. There were 30,000 volumes in the library. President, Frederick Lent, Ph.D., D.D., LL.D.

ELVERSON COLLECTION. See ART SALES.

EMERSON, EDWARD WALDO. An American author, son of the philosopher, Ralph Waldo Emerson, died Jan. 27, 1930, in Concord, Mass., where he was born July 10, 1844. He was graduated from Harvard University in 1866 and, in 1874, received a medical degree there. After practicing medicine for several years, he gave his entire time to literary work. As his father's literary executor, he wrote *Emerson in Concord* (1888) and edited *Correspondence of John Sterling and Ralph Waldo Emerson, with Sketch of Sterling's Life* (1897), *Centenary Edition of the Works of Ralph Waldo Emerson* (annotated, 1903), and *Emerson's Journals* (with W. E. Forbes, 1909). His other works include *Life and Letters of General Charles Russell Lowell* (edited, 1907); *Life of E. K. Hoar* (with M. Storey, 1911); *Henry Thoreau as Remembered by a Young Friend* (1917); *The Early Years of the Saturday Club of Boston, 1855-1870* (1918).

EMERTON, JAMES H. An American naturalist and illustrator, died in Boston, Mass., Dec. 5, 1930. He was born in Salem, Mass., in 1847. He was considered one of the leading authorities on spiders in the United States, contributing 11 papers on "The New England Spiders" to the *Transactions of the Connecticut Academy* (1882-1915) and publishing *The Structure and Habits of Spiders* (1878) and *Common Spiders of the United States* (1902). He also constructed zoological and anatomical models for museums in Cambridge, New Haven, New York, Philadelphia,

and Washington, and illustrated Packard's *Guide to the Study of Insects*, Scudder's *Butterflies in North America*, A. E. Verrill's papers in *Reports of the United States Fish Commission* (1874-84), and C. S. Minot's *Embryology*. He was secretary of the New England Federation of Natural History Societies from 1906 to 1919.

EMORY UNIVERSITY. A coeducational institution for higher learning in Atlanta, Ga.; founded in 1836. The enrollment for the autumn of 1930 was 1209, distributed as follows: College of arts and sciences, 547; school of business administration, 117; graduate school, 65; school of theology, 51; law school, 56; medical school, 209; library school, 50; junior college at Oxford, 74; junior college at Valdosta, 40. The enrollment for the 1930 summer session was 834. The faculty numbered 238, 143 of whom were full-time members. The endowment amounted to \$4,582,230, and the income for the year was \$861,542. There were 115,000 volumes in the library. A new auditorium costing \$250,000 was under construction in 1930. It was the gift of Mrs. C. H. Candler and T. K. Glenn as a memorial to their father, Wilbur Fiske Glenn. President, Harvey W. Cox, Ph.D., LL.D.

ENGLAND, CHURCH OF. The Established Church of England. Its faith is represented in the United States by the Protestant Episcopal Church (q.v.). The King is the supreme governor of the church, possessing the right to nominate to vacant archbishoprics and bishoprics. The King and the First Lord of the Treasury also appoint to certain deaneries, prebendaries, and canonries, and the Lord High Chancellor to certain canonries. For administrative purposes, the country is divided into two provinces: The Convocation of Canterbury and the Convocation of York, each under the control of an archbishop. The church assembly, established in 1920 "to deliberate on all matters concerning the Church of England and to make provisions in respect thereof," consists of three houses, composed of bishops, clergy, and laity, respectively, the laity being elected every five years by the lay members of the diocesan conferences, which consist of representatives elected by members of the church. Every measure passed by the church assembly must be submitted to an ecclesiastical committee, consisting of 15 members of the House of Lords and 15 members of the

House of Commons. This committee reports on each measure to Parliament, and the measure becomes a law if it is passed by both Houses of Parliament. Parochial affairs are managed by parochial church meetings of parishioners and by church councils elected by such meetings. In 1929 the number of Easter communicants was 2,475,846; of baptisms, 444,013; of incumbents, 12,864; of dioceses, 43; and of clergymen, between 16,000 and 17,000. Voluntary parochial contributions received during the year amounted to £7,086,883; total contributions from all sources were £9,910,053.

The outstanding event of 1930 was the holding of the seventh Lambeth Conference. Three hundred and eight names appear on the official list of Bishops "assembled from divers parts of the earth," attending the conference. The conference was inaugurated by services at Canterbury Cathedral and at St. Paul's Cathedral on July 5 and 6. From July 7 to 12 the conference sat in full session to discuss the following subjects: The Christian doctrine of God, the life and witness of the Christian community, the unity of the church, the Anglican communion, the ministry of the church, youth and its vocation. The further consideration of these subjects was referred to large and carefully selected committees which reported to full sessions of the conference held from July 28 to August 9. A thanksgiving service at Westminster Abbey on Sunday, August 10, marked the close of a memorable gathering. An encyclical letter from the bishops was issued during the same week. It was accompanied by the text of the resolutions formally adopted by the conference and by the reports of its committees and aroused widespread interest and discussion.

The more outstanding among these resolutions referred to war and peace, marriage and sex, and unity among Christians. The conference indorsed arbitration as a method of settling international disputes and appealed to the religious leaders of all countries to give their support to the ideals for which the League of Nations stood. The most controversial of the 12 resolutions, which were adopted in regard to marriage and sex, was that pertaining to birth control. This was summed up as follows: "In those cases where there is a clearly felt moral obligation to limit or avoid parenthood, and where there is a morally sound reason for avoiding complete abstinence, the conference agrees that other methods may be used, provided that this is done in the light of the same Christian principles."

In regard to unity among Christians, the conference requested the Archbishop of Canterbury to appoint Anglican representatives, and to invite the Ecumenical Patriarch to appoint representatives of the churches of the East, to be a doctrinal commission in preparing a joint statement on points of difference and agreement between the Anglican and Eastern churches. The conference also made overtures to the recently united Church of Scotland and evangelical free churches of England for the establishment of a closer relationship, and sympathetically received the proposals for the union of Anglicans, Methodists, Presbyterians, and Congregationalists in missionary work in South India.

By a happy coincidence the year of the Lambeth Conference was marked by a number of important diocesan functions of special interest. At Canterbury special services were held during June to mark the dedication of the Norman cathedral 800

years before and other landmarks in the cathedral's history. Norwich celebrated in August the thirteen hundredth anniversary of the foundation of the original see of East Anglia. Diocesan jubilee services were held at Southwark Cathedral in May, and similar celebrations in the following month marked the twenty-fifth anniversary of the formation of the see of Birmingham. A great service held in Liverpool Cathedral on July 13 to commemorate the jubilee of the formation of the diocese was attended by about 200 of the members of the Lambeth Conference. On June 25 the King and Queen and other members of the royal family attended the first of a series of several services of thanksgiving held to mark the reopening of the eastern portion of St. Paul's Cathedral, London, which had been closed since March, 1925, for repair and restoration. Another important event was the reopening on November 4 of St. George's Chapel, Windsor, which had been under repair for ten years.

The usual meetings of the Convocations of Canterbury and York took place in February, when resolutions of protest against the persecution of religion in Russia were passed. Neither convocation assembled in July owing to the Lambeth Conference, but special meetings of both were held in November when the Archbishop of Canterbury and the Archbishop of York took the opportunity of dealing with some of the criticisms of the resolutions passed at the Lambeth Conference.

Many matters of great importance came before the Church Assembly which held, as usual, three five-day sessions during the year. The measures which received final approval were the Clergy Pensions (older incumbents) Measure, the Pluralities Measure, and the Benefices (transfer of rights of patronage) Measure, the Episcopal Pensions (sodor and man) Measure, the Benefices (Diocesan Board of Patronage) Measure, the Benefices (exercise of rights of presentation) Measure, the Channel Islands (representation) Measure, and the Channel Islands (church legislation) Measure. The first three of these Measures had already received the royal assent. The Clergy Pensions (older incumbents) Measure supplemented earlier legislation in respect to pensions by providing a certain and uniform system of pensions for those clergy who were too old to come within the scope of the Clergy Pensions Measures of 1926 to 1928. The Pluralities Measure raised the limit of the annual value of benefices tenable in plurality from £200 to £400 and enabled commissioners under the Union of Benefices to recommend the creation of a plurality instead of a union of the benefices concerned. The secret transfer of advowsons had long been the subject of complaint, and the Benefices (transfer of rights of patronage) Measure imposed upon a patron who wished to transfer an advowson the obligation to disclose his intention of so doing both to the bishop of the diocese and to the parishioners of the parish concerned. The two other measures dealing with the long vexed question of patronage were attempts to provide means and machinery whereby the views of those most immediately concerned might be put forward and considered before an appointment to a benefice was finally made.

At its spring session, after a full day's debate, the Assembly adopted by 382 votes to 105 a resolution, moved by the Archbishop of York, expressing the desirability of a commission being ap-

pointed to inquire into the present relations of Church and State. At the autumn session the Archbishop of Canterbury announced the names of the commissioners appointed by himself and the Archbishop of York and stated that Viscount Cecil of Chelwood had consented to preside. The general principles of the majority report of the Archbishops' commission on religious education were approved at the spring session and the recommendations of the commission in regard to the establishment of a central council of religious education were the subject of a long debate which resulted in the recommendations being approved by a narrow majority. On the completion of the first ten years of the existence of the Assembly a volume of essays by the Archbishop of York and other well-known churchmen, entitled *The Church Assembly and the Church*, was issued during the autumn session of the assembly.

The Church Congress resumed its series of annual meetings—interrupted in 1929 by a well-attended gathering, in October at Newport, over which the Bishop of Monmouth presided. The Anglo-Catholic Congress was held in London in July when it was estimated that 20,000 persons were present at an open-air service at Stamford Bridge attended by the Patriarch of Alexandria and about 20 bishops. The Islington Clerical Conference of Evangelical clergy was held on January 14 at the Church House, Westminster, and in April the 13th Conference of Evangelical Churchmen—formerly known as the Cheltenham Conference—met at St. Peter's Hall, Oxford, the general subject of the conference being "God's Call to Union." "Problems of Personal Life" was the subject discussed at the 17th Conference of Modern Churchmen, held at St. Hugh's College, Oxford, August 18-23 under the presidency of the Dean of St. Paul's.

The year was marked by several changes in the episcopate. Dr. J. R. Harmer, who had been Bishop of Rochester since 1905 (after being Bishop of Adelaide for ten years), resigned his see and was succeeded by Dr. Martin Linton Smith, Bishop of Hereford. The Bishop of Coventry (Dr. C. L. Carr) was translated to Hereford, and the Rev. Mervyn George Haigh, the principal chaplain to the Archbishop of Canterbury, was nominated to the see thus rendered vacant. Another vacancy was created by the sudden death on October 28 of Dr. Ernest Harold Pearce, Bishop of Worcester since 1919.

An addition to the list of Bishops Suffragan was made by the appointment on March 28 of Canon E. S. Woods to be Bishop Suffragan of Croydon and Archdeacon of a newly-constituted Archdeaconry of Croydon, while still retaining his position as Vicar of Croydon. The resignation on March 29 of Dr. R. E. Trefusis (who died only a few weeks later), Bishop Suffragan of Crediton for more than 33 years, was followed by the appointment of the Ven. W. F. Surtees, Archdeacon of Exeter. Another change due to resignation was the appointment of Canon G. A. Hollis, principal of Wells Theological College, as Bishop Suffragan of Taunton in the room of Dr. C. F. de Salis. By an order in council gazetted October 31, the Rev. C. R. Hone, rector of Whithy and Archdeacon-designate of Pontefract, was appointed to the newly created Suffragan Bishopric of Pontefract. Canon Sherwood Jones, rector of Middleton, was appointed Bishop of Hulme in place of the Rev. Dr. J. C. Hill, who resigned.

Among the outstanding events affecting the

episcopate overseas were the resignations of Dr. W. M. Carter, Archbishop of Capetown; Dr. E. F. Robins, Bishop of Athabasca, (who returned to England as Assistant Bishop in the diocese of Norwich); and Dr. C. H. Golding-Bird, Bishop of Mauritius, who had been appointed Assistant Bishop in the Diocese of Guildford and Archdeacon of Dorking. Dr. F. W. de Witt Batty, Coadjutor Bishop of Brisbane, was elected Bishop of Newcastle, New South Wales, in succession to Dr. G. M. Long who died suddenly while attending the Lambeth Conference, and the Ven. G. W. Douglas, Archdeacon of Korogwe, was appointed Bishop of Nyasaland in place of the late Dr. T. C. Fisher.

Preëminent among the churchmen who died during 1930 was the Most Rev. Randall Thomas Davidson, former Archbishop of Canterbury (q. v.). His death on May 25 was the occasion of tributes from men of all classes and creeds, showing that his successor, the Most Rev. Cosmo Gordon Lang, had aptly expressed the feeling of Christians throughout the world in applying to him the words, "He had in his own generation served the counsel of God." Another notable figure was Dr. George Forrest Browne (q. v.), who died at the advanced age of 97 on June 1. He will be remembered for his work as Bishop of Stepney (1895-97) and Bishop of Bristol (1897-1914), as well as for his work in elucidating the early history of the church he served so long. The Ven. Ronald Irwin (Archdeacon of Dorking), Canon Morley Stevenson, Canon A. J. P. Shepherd, Canon Charles Theobald (at the age of 98), Canon H. P. Cronshaw, Canon R. D. Swallow, Canon G. H. Shorting, Chancellor H. E. Campbell, and Canon G. H. Whitaker were among other well-known names in a long list of clergy, while among laymen prominently identified with the work of the church were such members of the Church Assembly as Prof. C. H. Turner (q. v.), Chancellor A. T. Lawrence (q. v.), and Col. Geo. Hesketh, as well as Miss Eleanor Harrison and Miss Edith Nettleton, two missionaries, who were murdered by Chinese bandits.

The church assembly's budget for 1931, amounting to £145,078, was adopted at the summer session. In view of the serious shortage of clergy (to which renewed attention was drawn in the report of the commission on the staffing of parishes presented to the church assembly in November), a generous response was once more made to Earl Grey's appeal for sponsors for ordination candidates. Upwards of £26,162 was raised by this means during 1930, making a total sum of £113,071 contributed since 1926 towards making provision for affording financial aid to 592 specially selected candidates for holy orders.

The officers of the church assembly in 1930 were: Chairman, the Archbishop of Canterbury; vice-chairman, the Archbishop of York; treasurer, Col. Sir R. Williams, Bart.; secretary, Sir Philip W. Baker-Wilbraham, Bart.; assistant secretary, Guy H. Guillum Scott; chairman of the house of bishops, the Archbishop of Canterbury; chairman of the house of clergy, the Archdeacon of St. Albans. Headquarters are at 8 Dean's Yard, Westminster, S. W. 1, London. See INDIA under *History*.

ENTOMOLOGY, ECONOMIC. The year 1930 was made notable in the field of entomology by the

release on November 15, after 19 months, of the Federal quarantine on Florida products as an outcome of the apparently successful campaign of eradication conducted against the Mediterranean fruit fly. The Medfly, probably the most destructive of all insect enemies of fruits, which since its appearance in Spain in 1842 had spread throughout the world, was discovered for the first time on the North American continent at Orlando, Florida on April 6, 1929. Its dire threat to American horticulture was at once met by the Federal Government and the State of Florida cooperating in a campaign of eradication from some 1000 infested properties, scattered over 20 counties in the central part of the State, which resulted in this most fortunate outcome—an outstanding accomplishment in the field of applied entomology.

Probably the most outstanding development in insect infestation as affecting American agriculture was the finding of an exceedingly heavy infestation of the pink bollworm over a large area in the Salt River Valley of Arizona, where the growing of long-staple cotton is a specialty, followed by an emergency appropriation by Congress to aid in its eradication. The importance of the inspection of imported products as a protection against the introduction of foreign insect pests was emphasized by the detection and destruction by inspectors at Atlanta, Georgia, in the cotton belt, of a small package of cotton seed infested by the pink bollworm that had been sent by mail from India. The importance of the passenger carrying airplane as a potential source of danger in the introduction of pests such as the Medfly in infested fruits discarded en route was called to attention. On the other hand the airplane was pressed into service as an aid in the introduction of insect parasites. The Argentine ant was first discovered in Louisiana whence it has spread into adjoining States and California and was reported during the year as having appeared in February in a greenhouse at Baltimore, Maryland.

NECROLOGY. The year saw the passing of Prof. Stephen A. Forbes of Illinois, one of the most remarkable characters known in the history of American entomology, who died on March 13 at the age of 86. On August 24, Mrs. Anna Botsford Comstock, author of popular works on insects, passed away at her home in Ithaca, N. Y., at the age of 76.

MEDITERRANEAN FRUIT FLY. The Federal quarantine on Florida products was released on November 15 as a result of the successful outcome of the campaign of eradication of the Medfly. No infestation had been found in a commercial grove since Nov. 16, 1929, and only two very minor infestations had been located since that date, one on Mar. 4, 1930, in Orlando consisting of 10 larvae in two sour oranges, the other on July 25, 1930, consisting of two pupæ recovered from the soil under the fruit of a sour orange in a back yard in St. Augustine. An intensive inspection of fruits both in groves and in packing houses was to be continued indefinitely as a precaution against the spread of any infestation that might develop in the future and the eradication work with any such infestation was to be conducted by the Florida Plant Board.

In the course of this work the Federal Government expended approximately \$6,355,000. The work of the year was carried on under an emergency appropriation of \$1,290,000 which became available Dec. 21, 1929, and an appropriation of \$1,740,000 made available May 27. An emergency

fund of \$1,500,000 was made available for the work at the discretion of the President should infestation of sufficient number and intensity to justify its expenditure occur. The eradication was accomplished largely through the application of poison bait sprays and the enforcement of clean culture methods.

On January 9 the Secretary of Agriculture announced the appointment of a Federal fruit-fly board composed of five outstanding entomologists of which W. C. O'Kane of New Hampshire was the chairman. The work was carried on under the direction of Dr. Wilmon Newell until March 20, when for two and one half months the Federal work was discontinued due to lack of available funds, after which it was continued under the direction of the chairman of the fruit-fly board. In the course of the eradication work there were destroyed by official forces some 608,000 boxes of citrus fruits, 50,000 bushels of host vegetables and 28,000 bushels of minor and noncitrus fruits. In research work conducted in Hawaii during the winter and spring of 1929-30 it was found that a cold-storage temperature between 30° and 31° F. for 15 days was fatal to Medfly eggs and larvae present in the fruit. Since these temperatures are well within the range of standard cold-storage practice and can be easily maintained without risk of freezing this method was authorized on March 4 near the end of the shipping season in the spring, for use in the place of the lower temperature previously employed.

MEXICAN FRUIT WORM. A heavy infestation of the Mexican fruit worm involving 106 properties was found in fruit growing in Matamoras, Mexico in September, 1929, and in three back-yard plantings at Brownsville across the river in Texas. The infested areas on both sides of the Rio Grande were cleaned up, poisoned bait was applied to the trees and fly traps kept baited. The pest appeared to have passed the zone of defense in western Mexico, having appeared in the state of Sinaloa on the Gulf of California where it presents an increasing threat to fruit centres in the Southwestern States, it already having been intercepted in two lots of plums by inspectors stationed at Nogales, Arizona.

ORIENTAL FRUIT MOTH. The oriental fruit moth by 1930 had invaded practically all important peach-growing districts east of the Rocky Mountains from Canada to Georgia. It caused severe injury to the peach and has become an important enemy of the apple and quince. Work with so-called bait traps gives promise of considerable aid in its control. The rearing and distribution in the orchards of parasites, particularly the *Macrocentrus ancylivora* which also attacks the strawberry leaf-roller, carried on by the Federal Bureau of Entomology and a number of State experiment stations has brought about a high percentage of parasitism. This parasite was observed in Connecticut to have parasitized from 80 to 100 per cent of the larvae by August in orchards where liberations had been made of parasites received from New Jersey. As high as 80 per cent of the eggs were found parasitized by September 5 in an orchard at New Haven by *Trichogramma minutum*. Extended observations in Delaware indicate that a large amount of the damage to late apples is due to the work of the oriental fruit moth which after the peach crop has been picked centres its attack on apples.

CODLING MOTH. The injury caused by the codling moth to fruit was quite generally severe in the

Eastern United States and in the Mississippi Valley region but was much below normal in the Northwest. It appeared to have been stimulated by the unusually high summer temperatures, and severe late injury was reported from the entire drought area. The activities in control work resulting from the spray-residue situation continued with the view to securing an effective substitute for lead arsenate. Several fluorine compounds have proved nearly equal in effectiveness to lead arsenate when used in the arid sections of the Northwest. Cryolite and the fluosilicates of potassium and barium have given the greatest promise. The combination of nicotine sulphate with weak white oil emulsions proved equal in effectiveness to lead arsenate in the Northwest, and in Kansas, in an unusually dry season, was nearly as satisfactory. In New Jersey pineol soluble diluted with equal parts of water when properly applied destroyed 100 per cent of the overwintering larvæ, with no injury to the bark. In Washington State nicotine oil combinations proved as effective as lead arsenate when applied in the cover sprays for the first brood and was decidedly more effective when applied in the second brood sprays. In Idaho the combination of lead arsenate and oil produced 15 per cent more sound apples than when the arsenic was used alone. In work with banding materials and chemicals 97 per cent of the cocooning larvæ were found to be destroyed in this way. Work in New Jersey indicated that either white oil pyrethrum or nicotine tannate will give as good control of the codling moth as will the arsenic sprays.

PINK BOLLWORM. The appearance of the pink bollworm in the long-lint cotton fields of the Salt River Valley of Arizona, where it was first discovered at Gilbert on Oct. 24, 1929, was an event of great importance which called for the best efforts of the entomologist. Restrictions were at once placed by the State prohibiting the movement of unsterilized cottonseed from any gin in the valley. Sterilizers were constructed and in operation within 30 days. After delimiting the infestation, which was found to involve 40,000 acres of cotton, all shipments of cotton products which might spread the infestation were traced. On January 9 two noncotton zones covering 134,400 acres were declared, with a restricted zone surrounding of 205,440 acres. An intensive cleanup and eradication campaign conducted by the Federal Department of Agriculture coöperating with the State on a 50-50 basis included a thorough cleanup of the fields by cutting and burning the stalks and volunteer or stub cotton.

The work was made possible through an emergency appropriation by Congress which provided for compensation for the loss suffered by farmers, through enforcement of the noncotton zone, one half of which expense was to be met by the State. The eradication of the extensive outbreak of the pink bollworm that occurred in 1927 in several counties of western Texas was brought to a successful conclusion with their release on November 17 from all quarantine restrictions, only a single infestation, in the 1928 crop, having been discovered since the 1927 crop.

MEXICAN BOLL WEEVIL. It was concluded after three years of experimental work in Florida that calcium arsenate diluted with hydrated lime, when well mixed and diluted, will control the boll-weevil as well as will the undiluted material. The boll-weevil parasite *Bracon melitor* appeared in cotton fields throughout Georgia and destroyed as

high as 18 per cent of the larvæ in bolls and 35 per cent in hanging squares.

THURBERIA OR ARIZONA BOLL WEEVIL. The *Thurberia* boll weevil has now become generally distributed in all of the cotton areas in the Santa Cruz Valley of Arizona and the infestation was much heavier in 1929 than ever before. The safeguards enforced to prevent its spread into non-regulated areas are the same as those used for the control of the pink bollworm.

JAPANESE BEETLE. The extension of the Japanese beetle regulated area during the fiscal year ended June 30 resulted in an increase of 22,535 square miles with about 43,888 square miles extending from Massachusetts to Virginia now under regulation. The quarantine regulations were revised to bring the State of Rhode Island and counties in Massachusetts, New York, Pennsylvania, Delaware, and Virginia under regulation.

ASIATIC BEETLES. The quarantine that had been maintained for a year against the Asiatic beetle and the Asiatic garden beetle in States from Connecticut to Virginia and the District of Columbia was raised on March 1. This came as a result of investigations and surveys which showed that their habits and economic status did not warrant its maintenance.

MEXICAN BEAN BEETLE. The Mexican bean beetle increased its range slightly in the Northeastern States, having spread into Connecticut and Massachusetts where it was found for the first time in 1929. Owing to the lack of normal precipitation and the warm weather the mortality of the beetle was higher than usual, it being reported as either absent from fields or decidedly reduced in numbers throughout the New England and Middle Atlantic regions. Under the weather conditions prevailing in South Carolina in 1929 magnesium arsenate was the only arsenic that was effective in controlling it and harmless to the plant.

EUROPEAN CORN BORER. The spread of the European corn borer during the year 1929 was about normal in the western area or 20 to 30 miles from the known infestation. Commercial damage by it to the corn crop still remained small and was confined to the older infested area near Lake Erie and to particularly favorable areas in Southeastern Massachusetts and Rhode Island. The winter mortality of the larvæ was considerably lower in southern Ontario than during the first three years of the infestation. The work with parasite introduction progressed quite satisfactorily, approximately 600,000 parasites of 17 species having been released during the season up to July. The recovery of parasites from previous liberations was very encouraging. The infestation in the Maritime Provinces of Canada continued very local and light. In the Philippines where it is one of the most important enemies of corn in some localities over 50 per cent of the crop was destroyed.

SATIN MOTH. The satin moth was abundant in the spring and heavily infested poplar and willow trees in the New England area. It continued to spread northward and appeared in New Brunswick and Nova Scotia. In British Columbia the infestation continued to spread on Vancouver Island and in the Lower Fraser Valley.

GIpsy Moth. The increased infestation by the gipsy moth in the barrier-zone area in the western part of New England and eastern New York in 1929 made a deficiency appropriation by Congress of \$100,000 necessary in March with which to thoroughly clean up and spray the area infested.

In the extermination work in New Jersey a single gipsy moth infestation was found in Picataway and it appears that the ten-year effort to eradicate the pest from the State has been almost accomplished. An infestation covering quite an area discovered in December, 1929, at North Roslyn, Long Island, N. Y., was scouted and cleaned up.

ALFALFA WEEVIL. The alfalfa weevil which was originally known to occur in a comparatively small area around Salt Lake City, Utah, appeared in a rather severe infestation at Medford, Oregon, some 200 miles from the nearest known infestation. This is the first known spread of the pest west of the Cascade Mountains.

VEGETABLE WEEVIL. The vegetable weevil, first discovered in Mississippi, is now known to occur in 116 counties in the States of Louisiana, Mississippi, Alabama, and Florida and to also occur in California.

DATE SCALE ERADICATION. In continuation of the eradication work with the date scale the inspection force was tripled and inspections were carried on over the entire date-growing areas of Arizona and California, interrupted only by the more frequent inspection and treatment of infested gardens. Many thousand infested palms in abandoned seedling gardens were dug out and destroyed.

INSECTICIDES, REPELLENTS AND INSECT CONTROL. Rotenone, one of the insecticidal constituents of derris root and other fish poisoning plants, when dissolved in acetone and used in .05 to 2 per cent solutions, was found to give excellent protection against the clothes moth and other major fabric pests when the woolen goods were thoroughly impregnated. The protection imparted to the treated fabric appeared to equal that imparted by any proprietary moth-proofing solution now offered the public and a public service patent application was filed by the Federal Department of Agriculture.

A further study of poison-bait applications for adults of the Mediterranean fruit fly definitely established the practicability and usefulness of copper carbonate as a substitute for arsenical poisons and this spray was utilized widely by growers and others during the season. Experiments extending over a three-year period in New York indicate that the lubricating oil emulsion is an efficient and economical treatment for use against the onion maggot. Spreaders including oil derivatives and various oleates were discovered in Florida that will reduce the cost of nicotine sprays as aphicides by half. A ball of paradichlorobenzene the size of a moth ball (1/6 oz.) was found when placed in cyclamen flats as the plants were set out in Illinois to be the most practical means of control for the destructive cyclamen mite ever developed.

In work in New York State lime-sulphur containing nicotine sulphate was the spray preferred for use against the rosy apple aphid. Pyrethrum extract and soap was found in New Jersey to destroy wireworms without injuring the plants on which they are feeding. It was reported that the fumigation of highly absorptive commodities such as nut meats, in vacuum, is greatly facilitated by the admixture of carbon dioxide with other gases.

PARASITE CONTROL OF INSECT PESTS. There was an increased activity in the work of rearing and introducing insect parasites of some of the more important pests with many reports of real accomplishments. This was particularly true of the work with the larval and egg parasites of the

oriental fruit moth. The first plant for the commercial production of the many host *Trichogramma* egg parasite was established in California where a stock of this parasite was offered for sale by a commercial entomologist. The species was employed with considerable success against the sugar-cane borer in Louisiana cane fields. A detailed report was made of the remarkable control of the coconut moth, which threatened the copra industry of Fiji, brought about through the introduction of the tachinid parasite *Ptychomyia remota* from the Federated Malay States.

INSECTS AND DISEASE. The common house mosquito *Culex pipiens* was implicated in the transmission of both fowl and pigeon pox of poultry. The transmission was found to take place for as long as 38 days after the mosquito became infected and probably for the course of its life. *Aedes albopictus*, a mosquito common in the Philippines was discovered to be an effective carrier of dengue fever, as is the yellow fever species. Observations made at the front in the World War have led to investigations which show that the larvæ of certain flies bring about a remarkable healing of wounds and inflamed bones (osteomyelitis). Nearly 300 patients have been treated with success in this way. A study of methods of propagating the larvæ for use in surgery (q.v.) was begun.

INSECT TRANSMISSION OF PLANT DISEASE. False cranberry blossom, the most serious disease of the cranberry in New Jersey was found to be carried from plant to plant by the blunt-nosed leaf hopper. A disease of peanuts known locally in North Carolina as "pouts" which resembles the tipburn of potatoes was found to be caused by leaf hoppers. Two different aphid species were discovered to be capable of transmitting the virus of tobacco mosaic from tomato to various solanaceous hosts. A mosaic-like disease of beans in Haiti was discovered to be transmitted by a leaf hopper.

BIBLIOGRAPHY. Recent works in entomology include: J. H. and A. B. Comstock and G. W. Herrick, *A Manual for the Study of Insects* (Ithaca, N. Y., 1930, 19th ed., rev. and enl.); A. D. Imms, *A General Textbook of Entomology* (London, 1930, 2d ed., rev.); I. J. Kligler, *The Epidemiology and Control of Malaria in Palestine* (Chicago, 1930); T. W. Sanders, *Garden Pests* (London, 1929); J. D. Tothill, T. H. C. Taylor, and R. W. Paine, *The Coconut Moth in Fiji: A History of its Control by Means of Parasites* (London, 1930); G. A. Weber, *The Bureau of Entomology: Its History, Activities and Organization* (Washington, 1930); C. Toumanoff, *The Diseases of Bees* (Paris, 1930). See ZOOLOGY.

EPI'RUS. An ancient geographical expression for the northernmost division of Greece; after the Balkan Wars of 1912-13, the name attached to an administrative province formed in northwest Greece from newly acquired territories.

EPISCOPAL CHURCH. See PROTESTANT EPISCOPAL CHURCH.

EPWORTH LEAGUE. See METHODIST EPISCOPAL CHURCH.

ERITRE'A. An Italian colony on the African coast of the Red Sea, extending 670 miles from Cape Kasar to Cape Dumeirah on the Strait of Bab-el-Mandeb. Area, 45,754 square miles; population, at the census of 1921, 402,793 natives and 4681 Europeans. The seat of government is Asmara, situated 7765 feet above sea level, with a population of 18,500 (3500 Europeans). Massawah is the principal trade centre, with an estimated population of 12,275. The natives are

chiefly Coptic Christians and Mohammedans. The local trade is almost entirely confined to camels, oxen, sheep, goats, and their products. For 1928, imports were valued at 195,627,391 lire and exports at 93,712,746 lire. In 1929-30, the estimated revenue and expenditure of the colony were: Colonial revenue, 48,351,435 lire; State contribution, 22,501,435 lire; expenditure for civil administration, 31,466,185 lire; for military purposes, 16,885,250 lire. In 1929 there were 258 miles of railway. Governor in 1930, Corrado Zoli (appointed in 1928).

ERGOSTEROL. See VITAMINS.

ERLANGER, ər'läng-ər, ABRAHAM LINCOLN. An American theatrical manager, died in New York City, Mar. 7, 1930. Born in Buffalo, N. Y., May 4, 1860, he moved while a child with his parents to Cleveland, Ohio, and was educated in the public schools of that city. He formed a partnership with Marc Klaw in New York City and, from a small beginning as a theatrical booking firm, Klaw & Erlanger became producers of plays and owners of many theatres. Mr. Erlanger was also a member of a number of other theatrical firms and, organizing them into the Theatrical Syndicate, he, as director, gained control of the leading theatres and touring companies of the United States. In 1907 the Shubert Brothers' interests were incorporated with those of Klaw & Erlanger, but later withdrawn. Klaw & Erlanger added vaudeville to their other productions, playing in more than 50 houses in the United States, but later abandoned the field. In 1920 Mr. Erlanger dissolved his partnership with Mr. Klaw, but continued to produce plays. His productions after this date include *Just Suppose* and *Monsieur Beaucaire* (1920); *The Perfect Fool* and *Two Little Girls in Blue* (1921); *The Yankee Princess* and *To the Ladies* (1922); *Hassan* (1924); *Ilconcymoon Lane* and *Happy Go-Lucky* (1926); *The Nineteenth Hole* (1927). Among the productions of Klaw & Erlanger were Hall Caine's *The Christian*; *Ben Hur*; *The Merry Widow*; and *The Pink Lady*.

ESH'ER, REGINALD BALIOL BRETT, SECOND VISCOUNT. An English statesman and author, died Jan. 22, 1930, in London, where he was born June 30, 1852. The son of the first Viscount Esher, a distinguished English jurist, he was educated at Eton and at Trinity College, Cambridge University. He served as private secretary to Lord Hartington, a political leader opposing Disraeli, from 1878 to 1885. During 1880-85, he was also a Liberal member of Parliament for Penryn and Falmouth. From 1895 to 1902, he was secretary to the Office of Works, organizing the second Jubilee and the funeral of Queen Victoria, and the coronation of King Edward VII. In 1902 he was appointed on the commission to inquire into the conduct of the South African War, in 1904 he became chairman of the War Office Reconstitution Committee, and he was a permanent member of the Committee of Imperial Defense. At the beginning of the World War, he went to France, where he performed various military duties. Lord Esher, as a personal friend of the rulers of England, was believed to possess important influence in the government. As deputy-governor and, later governor of Windsor Castle (1901-30), he had access to the papers of Queen Victoria. As the result of his research at Windsor, he published *The Correspondence of Queen Victoria* (1907)

and *The Girlhood of Queen Victoria* (1912). He also wrote *Footprints of Statesmen* (1892); *Today and To-morrow* (1910); *Influence of King Edward: Essays* (1914); *After the War* (1918); *The Tragedy of Lord Kitchener* (1921); *Ionious* (1923); *Cloud-Capt Towers* (1927), his reminiscences. In 1921 Lord Esher sent his diary and a sealed package of papers dealing with Lord Haig's work in France to the trustees of the British Museum with instructions that they should not be opened until 1981. It was expected that the diaries, when opened, will yield valuable information for the historian of the period.

ESKIMO STUDIES. See ANTHROPOLOGY.

ESSAYS. See LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; SCANDINAVIAN LITERATURE; SPANISH LITERATURE; ETC.

ESTONIA. A republic on the eastern shore of the Baltic, bounded by the Gulf of Finland on the north, Russia on the east, and Latvia on the south. Formerly a part of the Russian Empire, it was declared independent on Feb. 24, 1918, and its independence was recognized by Soviet Russia by the treaty of Feb. 2, 1920. Capital, Tallinn (Reval).

AREA AND POPULATION. The total area is about 18,353 square miles and the estimated population on Jan. 1, 1929, was 1,116,553, of whom 87.7 per cent were Estonians, 1.7 per cent Germans (Balts), and 10.6 per cent Russians and other nationalities. The populations of the chief cities in 1929 were: Tallinn, 132,000; Tartu (Dorpat), 65,000; Narva, 27,000; Pärnu, 22,000.

EDUCATION. Elementary education is free and compulsory for children between the ages of 7 and 16, under a law which became effective Jan. 1, 1930. Elementary schools in 1927-28 numbered 1333, of which 1286 were public and 47 were private schools. There were 80 middle schools (28 private), besides various special and professional institutions. The University of Tartu (Dorpat) had 4008 students in 1928 and the Technical Institute at Tallinn, 504 students.

PRODUCTION. Agriculture and dairy farming are the principal occupations, engaging 70 per cent of the population. The area under cultivation (1928) was 2,532,799 acres, while forests occupied 2,200,000 acres, meadows, 2,602,274 acres, and pastures, 1,826,402 acres. Agricultural production in 1927-28 was valued at \$65,800,000, including \$29,300,000 in field crops and \$36,500,000 in animal products. Production of the leading crops, in bushels, in 1929 was: Wheat, 1,268,000; rye, 5,748,000; barley, 5,654,000; oats, 10,451,000; potatoes, 27,621,000; linseed, 461,000. Live-stock in 1929 included 604,616 cattle, 474,730 sheep, 279,439 swine, and 205,406 horses.

Butter represents about 26 per cent of the total exports. Dairy factories in 1927 numbered 384, of which 85 per cent were coöperative. Other important industries involve the production of paper, cement, oil (from shale), timber, matches, flax, and leather articles. The output of shale oil in 1929 was 517,650 metric tons (446,216 in 1928).

COMMERCE. Estonian imports in 1929 totaled 122,967,500 crowns (131,373,500 crowns in 1928) and exports amounted to 117,471,300 crowns (127,108,900 crowns in 1928). The Estonian crown equaled about \$0.268. The balance of trade was unfavorable for the second consecutive year, the surplus of imports totaling 5,496,200 crowns, as against 4,264,600 crowns

in the preceding year. Leading sources of imports were: Germany, 37,107,000 crowns; United Kingdom, 12,360,000 crowns; Poland, 9,665,000; Sweden, 6,746,000. Exports went mainly to: United Kingdom, 44,707,000 crowns; Germany, 31,276,000 crowns. The United States in 1929 took exports valued at \$873,600 (\$1,092,500 in 1928) and furnished imports valued at about \$800,000. Dairy products, timber, textile products, and paper were the chief exports; grain and flour, raw cotton, fish and fish products, metals, and machinery the leading imports.

FINANCE. In the budget for 1929-30, total revenues were estimated at 93,800,000 crowns and total expenditures at 92,500,000 crowns, including ordinary revenues of 84,800,000 crowns and ordinary expenditures of 80,600,000 crowns. The budget for 1930-31, as accepted by Parliament Mar. 23, 1930, called for expenditures of 91,775,200 crowns. Actual revenues in 1928-29 totaled 92,162,000 crowns and actual expenditures, 90,786,000 crowns. The public debt on Mar. 31, 1929, totaled 111,470,460 crowns, of which 110,904,181 represented the external and 566,279 the internal debt. Of the foreign debt, about \$16,062,000 was held in the United States.

COMMUNICATIONS. The total mileage of Estonian railways in 1929 was 1126 miles, of which 695 miles were broad gauge and 431 miles narrow gauge. During the year ended Mar. 31, 1929, the railways carried 8,475,000 passengers and 2,110,000 metric tons of freight, the total revenues being \$4,179,830, or \$578,589 more than in the previous year. The railway, telephone, and telegraph systems are Government owned. A total of 2814 vessels of 922,260 tons entered and 2856 vessels of 918,170 tons cleared the ports in 1928. In the same year the merchant marine consisted of 74 steamers of 38,767 tons and 291 sailing vessels of 24,815 tons.

GOVERNMENT. According to the constitution of Dec. 21, 1920, executive power is in the hands of a state head or "State Elder" and a ministry, both chosen by and responsible to the State Assembly; legislative power, in the hands of the State Assembly of 100 members elected for three years on the basis of proportional representation and by direct, universal, and secret suffrage. Provision is made for referendum and legislative initiative. The composition of the State Assembly following the elections of May 11-13, 1929, was as follows: Socialists, 25; Agrarians, 24; Settlers, 14; Radicals, 10; Populists, 9; Workers' Party, 6; Minority Nationals, 5; Christian party, 4; and Houseowners, 3. Prime Minister and State Head in 1930, Otto Strandmann (Radical), heading a coalition of the Farmers' Union, and the Christian, People's, Radical, and Settlers' parties.

HISTORY. The struggle between radical and conservative elements assumed a more violent aspect in 1930 after the municipal elections held at the end of January, in which the extreme Right and Left parties registered gains. The Communists were charged with the assassination on April 4 of Gen. J. Unt, a leader in the Estonian independence movement in 1917-18. The following day the Workers' party, which was dominated by Communists, was ordered dissolved by Minister of Interior Kalbus. M. Kalbus, who had held the same post in four Cabinets, resigned on April 12 ostensibly because of ill health, his post being filled by Ado Anderkopp of the Radical party. To curb radical excesses, Parliament on

July 3 passed a military emergency law, extending the powers of the State Head, who is also commander-in-chief of the army, and investing him with authority to dissolve Parliament in certain emergencies.

The conservative Agrarians were no less discontented than the Socialists and Communists with the policies of the Centre parties forming the Government. They demanded farm relief in the form of a protective tariff, Government loans on more favorable terms to stimulate farming, reductions in the budget, in the membership of the State Assembly, and in the salaries and pensions of Government officials, restriction of the franchise to taxpayers, an extension of powers of the Executive, and downward revision of inheritance taxes. Alleged efforts of Agrarian Opposition leaders to engineer a *coup d'état* early in August, led to the arrest of two of them and the imposition of fines equivalent to a jail term of two months.

Further steps toward the cultural and political rapprochement of Estonia and Latvia, were taken during the visit of Foreign Minister Lattik to the Latvian capital in September. Arrangements for the establishment of a customs union between the two countries were virtually completed in 1929. This movement for closer co-operation, in which Lithuania was included, received something of a check as a result of fears aroused in Latvia and Lithuania by an exchange of visits between President Moscicki of Poland and State President Strandmann of Estonia. Assurances were given by both Poland and Estonia that the visits had no political implication other than the promotion of good will. A Finnish-Estonian commercial treaty was ratified by the Estonian Parliament Mar. 29, 1930.

ETHIOPIA (ABYSSINIA). A country of east Africa, situated between the Anglo-Egyptian Sudan and the European colonies fringing the Red Sea and the Gulf of Aden. Capital, Addis Ababa, with a population of from 60,000 to 70,000; ruler in 1930, Negus (King) Tafari Makonnen.

The area is estimated at about 350,000 square miles and the population at 10,000,000, of whom somewhat less than 3,000,000 are Abyssinians proper. The Abyssinians, who constitute the ruling race, are Christians of Hamitic origin. The Gallas, comprising two-thirds of the population, Somalis, and Danakil are other important tribes. Besides the capital, Dire Dawa (population, 30,000) and Harrar (population about 40,000) are the chief cities. The gradual abolition of domestic slavery, still a recognized institution, was provided for in an edict issued by Negus Tafari in March, 1924.

PRODUCTION, ETC. Ethiopia is a strictly pastoral and agricultural country, possessing numerous cattle, sheep, and goats. There are small and crudely cultivated crops of grain, cotton, sugar cane, dates, coffee, and grapes. Hides, skins, wax, grain, and coffee are the only products of sufficient quantity for export. The forests abound in valuable timber and include extensive growths of wild coffee plants. Foreign enterprise is stimulating the more extensive cultivation of coffee and cotton. Iron ore and placer gold are mined to some extent and potash deposits were being exploited in 1930 with the aid of Italian capital. Coal, copper, silver, and platinum also are found.

Ethiopia's total foreign trade in 1926 amounted to 588,000,000 French francs, of which 385,000,-

000 francs represented the trade passing through Djibouti, French Somaliland, 138,000,000 francs that via Eritrea, and 65,000,000 francs that via other routes. Exports consist mainly of hides and skins, coffee, wax, ivory, and civet; imports of cotton textiles, artificial silk, corrugated sheets, hardware, etc. A railway from the port of Djibouti extended 488 miles to Addis Ababa. The mileage of highways of all kinds in 1930 was estimated at 2050 miles, including 50 miles of macadamized roads in and near the capital, 1000 miles of miscellaneous rough highways, and 1000 miles of caravan tracks and trails.

GOVERNMENT. Under the constitution adopted Oct. 31, 1907, and modified in 1919, the supreme power rests with the King, who, since 1907, has been assisted by a cabinet and, since 1910, by the Council of Elders. There is no popular representation, the governmental system being essentially that of a feudal monarchy, in which the Coptic Church plays an influential and conservative rôle. In 1923 Ethiopia joined the League of Nations.

HISTORY. Modernization of the ancient and still largely feudal Kingdom of Ethiopia, which since the World War had proceeded gradually under the enlightened leadership of the King, was greatly advanced as a result of developments during 1930.

A serious revolt led by conservative and clerical elements opposed to the King's progressive policies was crushed in a decisive battle on March 31. On Apr. 3, 1930, occurred the death of the Empress Zauditu (q.v.), who since her coronation in 1917 had ruled jointly with Ras Tafari and had stood as a bulwark of conservative and isolationist sentiment. These events left the way clear for the proclamation of Ras Tafari as Emperor, with the title of Haile Selassie I, the speeding up of the tempo of westernization, and more rapid eradication of the slave trade, which still persisted in the country.

The revolt against Negus Tafari broke out early in the year under the leadership of Ras Gugsa Wali, divorced husband of Zauditu. The battle of March 31 was fought with forces estimated at 50,000 on each side. The King triumphed largely through the aid of three pursuit planes, manned by French pilots, whose bombs and machine gun fire precipitated the rout of Ras Gugsa's followers. The rebel chief was killed in the fighting.

Barbaric splendor and lavish pageantry marked the coronation of Negus Tafari as Emperor on November 2. The ritual was performed by the Coptic Archbishop of Ethiopia in the presence special plenipotentiaries from the leading world powers, including the United States. The Emperor's consort, Waziru Menen, was crowned Empress Etege Menen at the same time. The cost of the ceremony was estimated at \$3,000,000. Everett Colson, assistant to the American financial adviser in Haiti, was selected as financial adviser to the Emperor on Sept. 27, 1930, from a list of financial experts submitted by the State Department in Washington on request of the Abyssinian representatives there.

Of outstanding importance in connection with the development of Ethiopia was the conclusion on Mar. 1, 1930, with British consent, of a preliminary agreement between the Government and The J. G. White Engineering Corporation of New York for the construction of the long-contemplated dam at the outlet to Lake Tsana to impound the waters of the Blue Nile. The dam,

together with a road connecting it with Addis Ababa, was estimated to cost about \$15,000,000. In accordance with the preliminary agreement, the American company in October commenced detailed investigations of the engineering problems involved in building the dam and the road. These were to be completed late in 1931, when another conference of representatives of the company and of the governments of Great Britain, the Sudan, and Ethiopia, was to be held to take final action upon the project.

An Anglo-Ethiopian treaty of 1902 bound Ethiopia not to permit the construction of the Lake Tsana dam "except in agreement with his Britannic Majesty's Government and the government of Sudan." Construction of the dam was delayed for nearly 30 years by Ethiopia's refusal to sanction its construction under British auspices, for fear of further encroachments upon the country's independence, and by British reluctance to have the work done by a non-British firm.

EVANGELICAL CHURCH. A denomination formed by the union of the Evangelical Association and the United Evangelical Church. The former was the outgrowth of a religious movement started in Pennsylvania in 1800 by the followers of Jacob Albright. In 1892 a number of ministers and members organized themselves into a separate denomination known as the United Evangelical Church. At length the growing conviction that the two churches should be reunited led to the appointment of commissions which drew up the so-called enabling act. The new organization was officially established in Detroit in 1922. At the time of merging the Evangelical Association had 167,416 members and the United Evangelical Church, 92,001. At the end of 1930 there was a total membership of 260,852, of whom 223,565 were in the United States and Canada. There were 12,989 persons received into membership during the year on profession of faith.

In 1930 the denomination had 23 conferences in the United States, 2 in Canada, 1 in Japan, 2 in Germany, and 1 in Switzerland. There were 2020 itinerant preachers and 411 local preachers. Sunday schools numbered 2803 with a total enrollment of 361,219 persons; 613 schools were in Europe, chiefly in Germany and Switzerland, with an enrollment of 42,068. The Christian Endeavor Society membership was 44,093. There were also 1627 woman's missionary societies, with a membership of 43,393. The total value of all church property was \$38,965,388. The amount of money raised during the year totaled \$7,082,013, an average of \$27.15 per member.

The chief schools of the denomination are: North Central College and the Evangelical Theological Seminary in Naperville, Ill.; Western Union College in Le Mars, Iowa; Albright College and the School of Theology in Reading, Pa. The denomination also maintains two orphanages and six old people's homes in the United States, as well as several hospitals. Official periodicals are the *Evangelical-Messenger* and *Christliche Bot-*

schafter, published in Cleveland, Ohio. A quadrennial general conference was held in Milwaukee, Wis., October, 1930.

EVANGELICAL SYNOD OF NORTH AMERICA, THE. A religious communion strictly evangelical in principle as historically crystallized from the Reformation of the sixteenth century and as embodied in the Reformed and Lutheran doctrinal statements, accepting these statements as far as they agree. Where they disagree the Evangelical Synod adheres to the pertinent passages of Holy Scripture and avails itself of the liberty of conscience prevailing in the Evangelical Church. The communion was founded in 1840 at Gravois Settlement, Mo., and was consolidated in 1877 with similar communions. It is organized into 19 districts and has a synodical administration, with legislative powers vested in the biennial district conferences and the quadrennial general conference; the congregations are self-governing in strictly local affairs.

The Evangelical Synod, in 1929, had 1303 congregations, 1119 pastors, and 258,228 individual members, also 1300 Sunday schools with an enrollment of 189,228. Money raised by the congregations for all purposes amounted to \$6,344,406, while the total value of church property was \$44,246,488. Missionary work was carried on in the United States, India, and Honduras. The home mission board, which reported a total income of \$110,478, employed 110 pastors in 136 fields in the United States. The foreign mission board, which reported a total income of \$205,922, employed 32 missionaries and 317 native helpers in India and 11 missionaries in Honduras.

The denomination supports three educational institutions: Eden Theological Seminary in Webster Groves, Mo.; Elmhurst College in Elmhurst, Ill.; and Oakwood Institute in Cincinnati, Ohio. It also publishes the following periodicals: *The Evangelical Herald*; *The Tidings*; *The Light Bearer*; and *Der Friedensbote*. The Rev. C. W. Locher, D.D., became president of the Evangelical Synod on the death of the Rev. J. Baltzer in 1930. Administrative offices of the general council are at 2013 St. Louis Ave., St. Louis, Mo.

EXNER, FELIX M. An Austrian meteorologist, died Feb. 7, 1930, in Vienna, where he was born Aug. 23, 1876. After studying at the University of Vienna, where he received the Ph.D. degree in 1900, he became assistant at the Zentralanstalt für Meteorologie und Geodynamik. In 1908 he was appointed professor of cosmical physics at the University of Innsbruck, returning to the University of Vienna in 1917 as director of the Zentralanstalt and professor of geophysics. His research work was concerned with the mechanics of changes of pressure and the correlation of meteorological factors in different parts of the world. He was joint editor of the *Meteorologische Zeitschrift* from 1909 to 1923 and was the author of *Dynamische Meteorologie* (1924).

EXPERIMENTAL PSYCHOLOGY. See PSYCHOLOGY.

EXPERIMENT STATIONS. See AGRICULTURAL EXPERIMENTAL STATIONS.

EXPLORATION. Popular interest in exploration in 1930 centred largely in the various

expeditions to the Arctic and Antarctic regions, discussed under POLAR RESEARCH. Nevertheless, collecting expeditions from the various museums were active in many regions of the world and explorers, aided in many cases by airplanes, materially extended man's knowledge of the globe. Archaeological and anthropological investigations are described under their separate headings. The centenary of the Royal Geographical Society was celebrated at its London headquarters during the week of Oct. 19, 1930. Many foreign scientists were in attendance. In connection with the centenary, the society published *The Record of the Royal Geographical Society, 1830-1930*, by Hugh Robert Mill. It was announced that the International Geographical Congress would meet in Paris, Sept. 16 to 24, 1931.

NORTH AMERICA. An expedition sponsored by the National Geographic Society and headed by Dr. Robert F. Griggs studied the processes of revegetation on Kodiak Island, Alaska, which was covered with a blanket of pumice by the eruption of Mt. Katmai in 1912. The exploration and prospecting of the Canadian North by airplane and by Canadian Mounted Police patrols continued during the year. Completion of the topographic survey of the United States by 1948 was envisaged in an intensified programme inaugurated early in 1930 by the Hoover Administration. Up to that time, only 44 per cent of the country had been mapped under the original programme adopted in 1880. Archaeological sites in Arkansas and New Mexico were visited by Dr. Clark Wissler of the American Museum of Natural History, New York City. The rugged and archaeologically unknown Carrizo Mountain region in northeastern Arizona was studied by an expedition headed by Charles L. Bernheimer and Earl Morris.

CENTRAL AMERICA. The Mayan ruins of Central America again attracted the attention of a number of scientists. During December, 1930, an expedition under the auspices of the Pennsylvania University Museum, using a twin-motored amphibian plane, explored three groups of ruins in British Honduras and Guatemala which evidently had not been examined before. Approximately 10,000 square miles of territory in Mexico, Guatemala, and British Honduras which had not been viewed previously from the air and which few foot parties had penetrated were reconnoitered by plane. Numerous photographs were taken. Ruins at El Gallo, 15 miles east of Lake Peten, Guatemala, were surveyed and many previously unreported features were noted. The expedition was headed by Percy Childs Madeira, Jr., of Philadelphia, with Gregory Mason as field leader. Dr. George C. Vaillant and Clarence Hay of the American Museum of Natural History conducted archaeological investigations in Mexico and Guatemala and Gilbert C. Klingel headed another expedition from the same museum which sailed in December, 1930, to spend a year and a half in the West Indies and Central America studying lizards. An expedition of the New York Zoological Society studied ocean life in the vicinity of Bermuda. Other ocean studies were conducted in the Bahamas by the Bacon-Miner Expedition of the American Museum of Natural History.

SOUTH AMERICA. An expedition of 11 members headed by Capt. Vladimir Perfilieff sailed from New York Dec. 26, 1930, to record native and animal life of the Matto Grosso region of Brazil

with sound films. The expedition was expected to require a year. The National Geographic Society dispatched an expedition under Dr. Ernest G. Holt to study geographic conditions in the virtually unknown region of the Brazil-Venezuela boundary. The deltas of the Orinoco and the Amazon were studied and photographed by another National Geographic Society expedition, which made an aerial survey of air routes along the east coast of South America. Accompanied by his wife and representatives of the American Indian Heye Foundation, Dr. Herbert Spencer Dickey ascended the Orinoco River to within 50 miles of its source. The Otley-Anthony South American Expedition of the American Museum of Natural History returned to New York in April, 1930, after having collected mammals from various localities and conducted a reconnaissance of a wide area. The party visited six South American republics, crossing the Andes six times. An archaeological reconnaissance of Ecuador and Peru was made by Dr. Ronald L. Olson of the same museum.

AFRICA. One of the most notable African explorations of 1930 was that made into the Libyan Desert in October and November by Major Bagnold, of the British Army Signal Corps. Accompanied by five British officers and officials and using three converted Ford automobiles, Bagnold covered 3100 miles of desert, of which 300 miles were through the supposedly impenetrable "sand sea," in search of the "lost oasis of Zerzura." The oasis was not found, but the expedition discovered the possibility of an automobile route directly south from Assiut to the Sudan, entered unexplored territory east of Selima, and found stone ruins of an ancient civilization about 150 miles north of Owenat.

ASIA. Returning to Washington in the spring of 1930, Dr. Joseph Rock reported on his explorations and extensive collections in Szechwan Province, China, as head of the National Geographic Society's 1927-30 Asiatic Expedition. The gorges of the Yatung River, at one place more than two miles deep, were visited by the expedition. The inaccessibility of the Himalayan peaks was again demonstrated by the failure of a party of European mountaineers, headed by Prof. G. O. Dyhrenfurth, in a dramatic effort to scale Kangchenjunga, which, with an altitude of 28,150 feet, is eclipsed only by Everest. Jonsong Peak, 24,340 feet high, was scaled by six members of the expedition on June 3 and June 8 in two parties. Although it was the highest mountain summit ever reached by man, a higher altitude was reached by the 1924 Everest expedition. For a stirring narrative of the expedition, consult F. S. Smythe, *The Kangchenjunga Adventure* (London, 1930).

Another fruitful season was spent in the fossil fields of the Gobi Desert by Roy Chapman Andrews. Forty complete fossils of shovel-tusked mastodons were found in one deposit. The Morden-graves Expedition to Russian Turkestan secured prized specimens of the saiga antelope and of the long-haired Siberian tiger for the American Museum of Natural History. Professor Kulik, head of the Russian Academy of Science Expedition to study the giant meteorite which fell in an isolated region of Siberia in 1908, returned to Moscow in October after spending two years in scientific observations of the phenomenon. He reported that all vegetable and animal life within a radius of nearly 100 miles of the meteorite had

been wiped out and that the surrounding terrain was pitted with enormous holes. Discovery of a glacier in the Sablya range of the Urals at 64°-65° north latitude by a Russian expedition under A. Aleshkov disposed of the general belief that the Urals possessed no permanent ice.

OCEANS. A complete survey of the South Sandwich Islands, lying 1200 miles east-southeast of the Falkland Islands, was made by scientists on board the new research ship of the Royal Geographical Society, *Discovery II*. The islands were found to be of little value. A report of deep-sea studies carried on by the ill-fated ship, *Carnegie*, of the Carnegie Institution of Washington, previous to its destruction in Western Samoa in 1929, was given before the American Geophysical Union meeting in Washington on May 1, 1930. Samples taken by the *Carnegie* showed that the Pacific waters were divided into three general layers—an upper layer where an active plant and animal life is maintained, a middle layer in which a decomposition of organic remains is taking place, and a lower layer which represents water conducted from polar regions.

See ANTHROPOLOGY, ARCHEOLOGY, GEOGRAPHIC SOCIETY, NATIONAL; and GEOGRAPHICAL SOCIETY, AMERICAN.

EXPOSITIONS. **IBERO-AMERICAN EXPOSITION.** This beautiful exposition was opened on May 9, 1929, in Seville and continued until June 21, 1930. On June 23 President Hoover sent a message of congratulation to the King of Spain on the success of the exposition "which had given such brilliant expression to the close association of Spain and all the Americas." The usual awards of diplomas of honor, gold and silver medals were made at the close of the event and the U. S. Department of Commerce received a grand prize and diplomas of honor went to the Bureau of Lighthouses, Bureau of Foreign and Domestic Commerce, Patent Office, and Motion Picture division of Foreign and Domestic Commerce, while gold medals were awarded to the Bureau of Standards, Division of Information of the Bureau of Mines, Bureau of Aeronautics, Radio Division, Steamboat Inspection Service, and Bureau of Navigation. Also a number of exhibitors from the United States received awards, notably grand prizes to the R. C. A. Victor Corporation, the General Motors Corporation, and the Chrysler Automobile Company. In October the United States Government formally presented to the city of Seville two pavilions which were used in the Ibero-American Exposition. The buildings were received by the Mayor, Count Acion, from American Vice Consul Smyth. The Barcelona Exposition was formally closed on January 15 as an international event, King Alfonso and Premier de Rivera participating in the ceremonies.

BELGIUM. Conspicuous among the features with which the centenary of the independence of Belgium was celebrated was a series of international exhibitions which were held in Antwerp and Liège and art exhibitions in Brussels and Mons.

Antwerp. This exposition occupied a triangular space of about 123 acres, less than a mile and a half distant from the centre of the city from which it was easily accessible by means of several street railways, motor busses, and other vehicles. The grounds were beautifully laid out with attractive parks and lovely lakes. The exhibits were organized in five sections as follows: (1) Colonial, including colonial products, and all kinds of articles destined for and used in the Colonies; (2)

Maritime, consisting of maritime works and navigation in every detail, as well as the management, working, and equipment of sea and inland ports; (3) Transport, comprising short distance transport, motor cars, air service, and aeroplanes; (4) Agricultural and Horticultural, with methods of instruction, clearing of land, forestry, dairy-farming, and flowers and decorative plants; and (5) Retrospective Flemish Art which was described as "the moral crowning of it all, as it will be a real glorification of the past." In addition there were on tracts of land comprising seven acres each a "Park of attractions," and a reproduction of "Old Antwerp," resembling the similar feature of the exposition held in Antwerp in 1894. The exposition was opened on April 26, by King Albert and members of the royal family who visited on foot the exhibits and the King made an address extolling the vitality of Belgium's industry and the extension of her commerce through Colonial undertakings. The exposition continued open until October 31.

Brussels. The capital city of Belgium contributed to the centenary two art exhibits, one of which was held in the Palais des Beaux-Arts, restricted to art work of the period 1830-1930 and was described as "the finest collection of Belgian painting ever assembled." The other was devoted to "Ancient Belgium Art," that is, to work done prior to 1830 and was also of superior character.

Liège. The exposition held in Liège was devoted chiefly to science and methods of imparting scientific instruction. The site chosen covered an area of 165 acres and was on both sides of the river Meuse, which was spanned by two bridges. There were ten large pavilions devoted to exhibits as follows: Mining, Metallurgy, Mechanics and Education; Electricity and Sciences; Transport and Engineering; Chemistry, Textile Manufacture; Belgian ministerial departments; Arms, motorcycles and bicycles; Glass and Ceramics; Festival Hall; Sugar; and Gas. These were in the modernistic style, with pyramidal setbacks and high straight façades. Special pavilions surrounded with gardens were erected by Czechoslovakia, Egypt, France, Italy, Japan, Luxemburg, Netherlands, Poland, Spain, and Switzerland, while Austria, Brazil, Chile, China, Colombia, Germany, Great Britain, Greece, Morocco, Rumania, Sweden, and Turkey were among the nations exhibiting in the International Pavilion. There was a special exhibition of old Walloon art, which included paintings and statues by old masters, crafts such as brass hammering and silversmith work, enamels, crystals, and pottery.

More than 40 international congresses of sciences were held during the life of the Exposition including the Thirteenth International Congress of Geology, the Congress of the French Association for the Advancement of Sciences, the Fifth International Congress of Physiotherapy, the annual meeting of the International Scientific Radiotelegraphy Union, the Juristic Congress of the International Wireless Committee, and the International Union for Pure and Applied Chemistry. The exposition was formally opened by King Albert and Queen Elizabeth on May 3 and continued until November 1.

Mons. In this ancient city that suffered so tragically in the invasion of 1914 there was assembled under the auspices of "Les amis du Hainaut," by Louis Pierore, a well-known connoisseur of art, a collection from the works of

the masters of the province of Hainaut comprising 115 canvases, supplemented by drawings, prints, manuscripts, sculpture, and applied art.

FUTURE EXPOSITIONS: Paris. A great international colonial and overseas exposition of which Marshal Lyautey was appointed president was under active preparation to be held in the Bois de Vincennes, just outside of Paris, in 1931. After the exposition the colonial palace was to serve as a permanent museum for French overseas territories. American participation was solicited and Congress appropriated \$250,000 for the cost of preparing an exhibit. Later the President appointed C. Bascom Slemp commissioner-general, who then visited Paris in September and under whose direction plans were prepared for a display of products from the colonial possessions of the United States. Later in the year Dean Wallace Brett Donham, of the Harvard Graduate School of Business Administration, was appointed President of the American Committee, which included George Harrison Phelps, of Detroit, Chairman; and Pierre C. Cartier, Dr. Alexis Carrel, Congressman Sol Bloom of New York, and Jean Tillier, director of the French Line, as Vice-Presidents. The United States was erecting on the Paris Exposition grounds, as the official American exhibit, a life-size replica of Mount Vernon, the home of George Washington, which was to be furnished and decorated in the original manner.

Chicago. In accordance with the provisions of the Act of Congress the President was authorized whenever \$5,000,000 had been raised by the citizens of Chicago to invite all foreign governments to participate in the world's fair to be held in that city in 1933, and when that information was conveyed to President Hoover by Rufus C. Dawes and Maj. L. R. Lohr, president and general manager respectively of the exposition, the State Department was instructed by President Hoover to issue the invitations. In January the plans for the Exposition began in part to be given to the public, and announcement was made that one of the islands was to be a colossal outdoor relief model of the United States on the scale of one foot to a mile, which means that it would be 3000 feet long and half that wide. But the exaggeration of the vertical relief was to be about ten times the national scale, making the Colorado Rockies 20 to 30 feet in height above the lake level and 10 to 20 feet above the ground on either side. Actual work on the buildings was begun on May 27 when the first shovel of dirt was dug for the Grant Park structure which was to be the \$300,000 Administration Building located east of the Outer Drive between the Field Museum and Soldier Field. It was to be 3 stories high, 340 by 120 feet, of concrete and asbestos board, with a metal ribbed roof. Construction of buildings for transport display was to follow.

Science was to play the leading rôle in exhibits of the Exposition because science had been the cause of most of the great transformations of the century of progress. Thus botanists were to tell the story of the growing mastery of man over the soil. The story of steel was to be set forth under the direction of men from great research laboratories. The astounding advances in medicine were to be recorded by eminent physicians, physiologists, chemists, and bacteriologists. Nor were the social sciences to be neglected. Every branch of knowledge was to be treated in its relation to human life. Science and invention were to be shown, throughout the hundred-year

period, altering the habits of the common man, changing the nature of the home, building great cities where rude log cabins used to stand, binding the continent together so that journeys which a century ago took months may now be accomplished in hours. The World's Fair trustees signified their intention of coöperating with the trustees of the Art Institute in the matter of erecting a building for the department of fine arts for the Exposition of 1933, which later should serve as the permanent home of the Art Institute of Chicago.

Regina. An international grain fair to be held during July 25–August 6, 1932, in Regina, Sask., was proposed by a Canadian organization of which the Governor-General is the patron. The purpose of the exhibition and conference was to stimulate interest in the improvement of the quality of cereal crops throughout the world and the dissemination of the latest knowledge on agriculture in general. Sixty foreign countries were invited to participate and prize money amounting to \$200,000 was promised. The financial support of Canada in 1929 was assured by a grant of \$100,000 and another of equal amount by the latest session of Parliament. The Canadian Pacific and the Canadian National Railways promised \$25,000 each, and aid was given by many other leading corporations of the Dominion. The exhibits were to be housed in a building being erected for the purpose at a cost of \$250,000 by the city of Regina and the Province of Saskatchewan.

Vancouver. It was proposed to hold a world's fair in British Columbia in 1936, and for that purpose the premiers of Manitoba, Saskatchewan, Quebec, and other provinces, as well as the authorities of the Canadian railways systems offered their cordial support. It was believed that a Vancouver world's fair would cost Vancouver and Canada not less than \$15,000,000. If it succeeded in cementing Asiatic contacts it would be worth to the Pacific Coast and to all North America a sum in industrial prosperity beyond calculation.

TRADE FAIRS: Leipzig. The usual spring fair was held during March 2–8. At the close it was claimed that an atmosphere of distinct optimism regarding business prospects for the near future prevailed in spite of political and economic uncertainties, and that preliminary reports indicated that unexpectedly good business was done, especially with regard to the sale of German products abroad. Home buying power, however, was naturally weak and limited owing to the depression that had prevailed for some time. It was claimed that 33,000 foreigners of which 3000 were from the United States, visited the fair, which was 12 per cent more than the previous year, but the number of exhibitors decreased by 11 per cent because the smaller German companies were unable to bear expenses.

The year 1930 marked the one hundredth anniversary of American participation in the fair, 10 merchants having crossed in 1830 in a sailing ship and then proceeded by order to the fair.

On May 31 an International Fur and Hunting Exposition was opened in Leipzig and was continued during the summer. The exhibits included virtually everything relative to the industry, and the display as a whole was regarded the most complete ever assembled. Five thousand square feet in the "Hall of the Nations" was occupied by the U. S. Departments of Commerce and Agriculture in a joint exhibit depicting the preservation, breeding, and trapping of the leading fur-

bearing animals of the United States and in giving statistical information on the size of the American fur industry and the methods by which it was carried on. The autumn fair was held during August 31 to September 6, at which there were about 8500 concerns exhibiting their wares. A special feature was an office where information about the tariff laws of all countries could be obtained. The theatres gave special performances.

Nantes. This famous fair, the fourth of its kind, held in Nantes, France, during Apr. 3–14, 1930, was of particular interest to manufacturers of agricultural implements and machinery, the automotive industry and firms generally whose products find their principal markets in agricultural districts.

EXTENSION WORK IN AGRICULTURE.

See AGRICULTURAL EXTENSION WORK.

FACTA, LUIGI. An Italian statesman, died Nov. 5, 1930, in Pinerolo, Piedmont, where he was born Sept. 16, 1861. On graduation from the University of Turin he began the practice of law, and in 1892 became Liberal Deputy for Pinerolo in the Italian Chamber. He entered official life in 1900 and was several times Under-Secretary of Justice, and of the Interior. In 1910 he became Finance Minister in the Luzzatti Cabinet and during 1911–14 in that of Giolitti. After supporting Giolitti in his stand for neutrality, he gradually became an interventionist, approving Italy's entry into the World War on the side of the Allies. He reentered the Government in 1917 as Minister of Justice in the Orlando Cabinet and as Finance Minister in the last Giolitti Ministry (1920–21). In February, 1922, he became Premier, holding that office until the march of the Fascisti on Rome in October. While Premier he presided over the International Economic Conference which met in Genoa in the spring of 1922. Although an anti-Fascist, he was made a senator for life in 1924 by his successor, Mussolini, in recognition of his "distinguished services to the State."

FAIRS. See EXPOSITIONS.

FALKLAND ISLANDS. A colony of the British Crown situated in the South Atlantic 300 miles east of the Strait of Magellan, consisting of: East Falkland, 2580 square miles; West Falkland, 2038 square miles; including in each case various adjacent small islands, about 100 in number. In addition to these are South Georgia, with an estimated area of 1000 square miles, and other dependencies, including the South Shetlands, the South Orkneys, the Sandwich group, and Graham Land, together with all unknown seas and lands of the Antarctic Ocean extending as far as the South Pole. Title to the Falkland Islands also is claimed by Argentina. The estimated population in 1928 was 2296 (998 females). In the same year the chief town, Stanley, had 988 inhabitants. Sheep raising, whaling, and seal hunting are the chief occupations. In 1928 there were 631,405 sheep pastured on 2,248,000 acres. Whale oil exported in 1928, amounted to 787,826 barrels. Total exports in 1928 were valued at £4,225,106; total imports, £583,087. In the same year revenue totaled £268,110; expenditure, £191,005. Governor in 1930, Arnold W. Hodson.

FAROE ISLANDS. A group of 21 islands belonging to Denmark and lying midway between the Shetlands and Iceland. Area, 540 square miles; population in 1925, 22,835. The capital is Thorshaven, with 2896 inhabitants. Sheep farming and fishing are the main occupations. A Nationalist movement has been gaining strength for some years. On July 29, 1930, there were anti-Danish demonstrations in Thorshaven, during which the Danish flag in front of the Government buildings was replaced by the Faroe Islands flag. A resolution demanding complete independence was introduced into the local Parliament September 13 by the Nationalist party. It was opposed by the party in power. See DENMARK.

FASCISM. See GERMANY, ITALY, FRANCE, AUSTRIA, and FINLAND under *History*.

FAUNCE, WILLIAM HERBERT PERRY. An American clergyman and former president of Brown University, died in Providence, R. I., Jan. 31, 1930. He was born in Worcester, Mass., Jan. 15, 1859, and was graduated from Brown University in 1880 and from the Newton Theological Institution in 1884. Meanwhile, he was an instructor at Brown University (1881-82). He was pastor at the State Street Church in Springfield, Mass. (1884-89), and at the Fifth Avenue Baptist Church of New York City from 1889 to 1899. After 1899, Dr. Faunce was president of Brown University, retiring as emeritus president in June, 1929. He lectured in the divinity school of the University of Chicago in 1896-97, was a member of the board of resident preachers at Harvard University in 1898-99, and Lyman Beecher lecturer at Yale University in 1907-08. He was president of the World Peace Foundation. In addition to contributions to religious and educational periodicals, he wrote *The Educational Ideal in the Ministry* (1908); *What Does Christianity Mean?* (1912); *Social Aspects of Foreign Missions* (1914); *Religion and War* (1918); *The New Horizon of State and Church* (1918).

FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA. An organization established in 1908 by 28 Protestant denominations to act for them in matters of common interest. At the end of 1930 it included most of the major Protestant denominations of the United States, as follows: Northern Baptist Convention; National Baptist Convention; Free Baptists; Seventh-Day Baptists; General Convention of the Christian Church; Churches of God in North America (General Eldership); Congregational Churches; Disciples of Christ; Evangelical Church; Evangelical Synod of North America; Friends; Methodist Episcopal Church;

Methodist Episcopal Church, South; African Methodist Episcopal Church; African Methodist Episcopal Zion Church; Colored Methodist Episcopal Church in America; Methodist Protestant Church; Moravian Church; Presbyterian Church in the United States of America; Presbyterian Church in the United States (South); Protestant Episcopal Church; Reformed Church in America; Reformed Church in the United States; Reformed Episcopal Church; United Brethren in Christ; United Presbyterian Church of North America; United Lutheran Church in America. Of these, all were full and official members with the exception of the United Lutheran Church, whose relationship was consultative, and the Protestant Episcopal Church, whose national council co-operates in certain specified areas of work.

The total number of local churches included in the constituency of the Federal Council according to the Census of Religious Bodies issued by the United States government in 1920, was 136,076; clergymen numbered 116,644 and the total communicant membership, 22,010,312.

The council, made up of members designated by the several denominations to act for them, meets quadrennially, the last meeting having been held in Rochester, N. Y., in 1928. It has an executive committee, of about 100, meeting annually. An administrative committee, including one or more official representatives from each of the denominations, meets monthly in New York City. This committee includes cooperative agencies carrying on specialized work for the churches, among them being the Home Missions Council, the Council of Women for Home Missions, the Council of Church Boards of Education, the American Bible Society, the Student Volunteer Movement for Foreign Missions, and the International Council of Religious Education. The council also serves as a connecting link between the churches and great social agencies, such as the American Red Cross, child welfare organizations, and the U. S. Bureau of Public Health.

Special tasks of the council are carried on by a group of commissions. The commission on evangelism develops a united approach to the evangelistic work of the churches. The commission on the church and social service is the centre through which the churches deal unitedly with social issues, giving particular attention to the developing of better relations in industry. The department of research and education issues a weekly information service bulletin in which contemporary social questions are discussed from the standpoint of Christianity; it also makes special studies from time to time, the outstanding one in 1930 being an investigation of the Centralia (Wash.) affair, involving the killing of four World War veterans by members of the I. W. W. on Armistice Day, Nov. 11, 1919.

The commission on church and race relations furthers efforts of the churches in promoting co-operation and good will between the white and colored peoples in the United States. The commission on international justice and good will endeavors to mobilize the Christian forces to abolish war by building up effective international agencies for coöperation, devoting its attention during 1930 especially to the development of projects for good will between children of the United States and other countries, to the study of the reduction of naval armaments, and to support of American membership in the Permanent Court of International Justice. Other commissions of

the council deal with Christian education, relations with religious bodies in Europe, religious work in the Canal Zone, army and navy chaplains, and relations with the Eastern churches.

The programme of the council is carried on with funds contributed in part by individuals interested in the work and in part by appropriations from the various denominations. The official organ is the *Federal Council Bulletin*, issued monthly and furnishing general religious news. Important publications during 1930 included: *The Handbook of the Churches*; *The Social Work of the Churches*; and *Rural Social Resources*. The council also sponsors a series of religious radio programmes, broadcast over a nation-wide hook-up of stations and including three Sunday afternoon addresses and a daily period of morning worship.

The officers of the council in 1930 were: President, the Rev. Francis J. McConnell, Methodist Episcopal bishop of the New York City area; chairman of the executive committee, the Rev. Walter L. Lingle, president of Davidson College; chairman of the administrative committee, the Rev. Luther A. Weigle, dean of the Yale Divinity School; chairman of the Washington committee, the Rev. William F. McDowell, Methodist Episcopal bishop of the Washington area; and chairman of the Western committee, the Rev. Herbert L. Willett. National offices are at 105 East Twenty-second Street, New York City, the general secretaries being the Rev. Charles S. Macfarland, the Rev. John M. Moore, and the Rev. Samuel McCrea Cavert. Offices also are maintained in the Woodward Building, Washington, and at 77 West Washington Street, Chicago.

FEDERAL FARM BOARD. See AGRICULTURE; HORTICULTURE.

FEDERAL PRISONS. See CRIME.

FEDERAL RECEIPTS AND EXPENDITURES. See PUBLIC FINANCE.

FEDERAL RESERVE BANKS. See BANKS and BANKING; also FINANCIAL REVIEW.

FEDERAL TERRITORY. An area of 940 square miles within the State of New South Wales, set aside in 1909 as the site of a Federal capital for the Australian Commonwealth. Estimated population Jan. 1, 1930, 8282, of whom about 6900 resided in the new capital city, Canberra. The Federal Government was moved to Canberra in 1927.

FEDERATED MALAY STATES. A group of states, constituting a large part of the Malay Peninsula, under the protection of Great Britain, comprising: Perak, with an area of 7800 square miles; population in 1921, 599,055; capital, Taiping; Selangor, 3156 square miles; population, 1921, 401,009; capital, Kuala Lumpur, the largest city in the federation with a population of 80,000; Negri Sembilan, 2550 square miles; population, 1921, 178,762; capital, Seremban; Pahang, 14,000 square miles; population, 1921, 146,064; capital, Kuala Lipis. The total area is 27,500 square miles; the population in 1921 was 1,324,890, including 510,821 Malays, 494,548 Chinese, 305,219 natives of India, 5686 Europeans, and 3204 Eurasians. The estimated population in 1928 was 1,533,611. The Government restricted Chinese immigration in 1930 to relieve unemployment. In 1927 there were 1179 schools with an average attendance of 69,861.

PRODUCTION. Rice, coconuts, rubber, sugar, tapioca, pepper, gambier, and nipa palms are the chief products. The main industries are the rais-

ing of rubber and the mining of tin. In addition to valuable timber, the forests produce resins, canes, and gutta-percha. Besides tin, gold and coal are mined extensively; other minerals found but not worked in quantities are lead, iron, copper, tungsten, manganese, silver, zinc, plumbago, mercury, arsenic, and scheelite. Electric power for the exploitation of the Perak tin mines was made available by the completion in 1930 of a hydroelectric project on the Perak river near Chen-deroh. In 1928, imports totaled £22,277,700 and exports £32,422,705. For 1927, comparative figures were £20,309,979 and £39,619,922. Estimates placed the 1929 rubber production at between 300,000 and 350,000 long tons.

FINANCE. Revenues in 1928 totaled £11,159,815 (£12,297,187 in 1927) and expenditures, £12,717,161 (£10,880,790 in 1927). The public debt on Jan. 1, 1929, stood at £9,255,000, part of which represented the contribution toward the Singapore naval base.

COMMUNICATIONS. The railway system of the whole peninsula south of Siam was government owned or controlled. In 1928 it extended 1111 miles, with about 81 miles of additional line under construction. The highways, which made possible intensive motor competition with the railways, consisted (1928) of 2672 miles of surfaced roads, and 105 miles of unsurfaced roads. There were in addition 1952 miles of bridle roads and paths. In the same year the telephone and telegraph lines aggregated 2926 miles.

GOVERNMENT. The states are under British protection, with the Governor of the Straits Settlements as *ex officio* High Commissioner. There is a native ruler, assisted by a British Resident, in each of the four states. High Commissioner in 1930, Sir Cecil Clementi.

FEDERATION OF LABOR, AMERICAN. See LABOR, AMERICAN FEDERATION OF.

FELTON, SAMUEL MORSE. An American engineer and railroad president, died in Chicago, Ill., Mar. 11, 1930. He was born in Philadelphia, Pa., Feb. 3, 1853, and was educated at the Massachusetts Institute of Technology. In 1868 he was a rodman on the Chester Creek Railroad, and in 1870-71 leveler and assistant engineer on the Lancaster Railroad. He was promoted rapidly, serving as chief engineer and then as general superintendent and general manager of several roads (1873-85). From 1885 to 1890, he was vice president of the Erie Railroad and, during 1890-92, president of the East Tennessee, Virginia & Georgia Railway. He was president of the Louisville Southern Railroad in 1891-93, and, at the same time, vice president of the Memphis & Charleston, the Mobile & Birmingham, and of the Knoxville & Ohio railroads. He was president and receiver for the Cincinnati, New Orleans & Texas Pacific Railway during 1890-99; receiver for the Columbus, Sandusky & Hocking Railway, 1897-99, and for the Kentucky and Indiana Bridge Company from 1893 to 1900. He was president of the Chicago & Alton Railroad from 1899 to 1907, and, during 1907-09, president of the Mexican Central Railway Company. In 1909 he became president of the Chicago Great Western Railroad, and chairman of the board in 1925. In 1916 he served as consulting engineer and railway adviser to the chief of engineers of the United States army, and on the entrance of the United States into the World War, was appointed director general of military railroads by the Secretary of War (1917). Before returning to the active presidency

of the Chicago Great Western Railroad, Mr. Felton served as chairman of the Port and Harbor Facilities Commission of the United States Shipping Board (1918-19). He was awarded the Distinguished Service Medal by the United States and the Cross of the Legion of Honor by France.

FENCING. International fencing competition in 1930 was featured by a series of matches for the Col. Robert Thompson Trophy held in London in July between American and British teams. The United States won by 25 points to 23. In the annual Amateur Fencers' League of America tournament held in New York City, Lieut. George C. Calnan, U. S. N., regained the national and open foils championships, defeating Joseph Levis of Boston, the 1929 titleholder, in both final matches. The national sabre championship was captured by Norman Cohn, of the New York Fencers' Club, and the national *épée* title by Marcel Pasche of the J. Sanford Saltus Club, New York.

Yale University won the team championship in the annual intercollegiate tournament for the fourth successive year, as well as the foils and the *épée* titles. The Columbia team retained the sabre title, while Yale and the Army tied for three-weapon honors. In the women's division, Mrs. Harold Van Buskirk won the national foils title, defeating Miss Marion Lloyd in the final, and the Salle d'Armes Vince team, New York, consisting of Miss Lloyd, Miss Dorothy Locke, and Miss Joy Magnus, captured the national team title. Nedo Nadi, famous Italian fencer, visited the United States during the year and engaged leading American fencers in impressive exhibitions.

FERGUSON, WILLIAM J. An American actor, died in Pikesville, Md., May 4, 1930. He was born in Baltimore, Md., June 8, 1849, and made his first appearance on the stage with a stock company at Ford's Theatre, Washington, in 1864 where a year later, when playing in *Our American Cousin*, he witnessed the assassination of President Lincoln. He was subsequently a member of Mrs. Conway's Stock Company in Brooklyn and of Wallack's Company. His first notable success was as Captain Redfern, the detective, in *Jim, the Penman*. With John T. Raymond he appeared in *Colonel Sellers* and with Richard Mansfield played character rôles, such as the valet in *Beau Brummell*. He later appeared in *Hazel Kirke*; *The Fatal Card*; *The Girl from Maxim's*; *The Brighton Burglary*; *A Modern Magdalen*; *Romco and Juliet*; *The Secret of Polichinelle*; *Friquet*; *The Walls of Jericho*; *The Love Letter*; *The Toy-maker of Nuremberg*; and *The Turtle*. At the time of his death he was engaged in writing his reminiscences, entitled *W. J. Ferguson's Sixty Years on the New York Stage, or a Peep Behind the Scenes*.

FERRANTI, SEBASTIAN ZIANI DE. An English electrical engineer and inventor, died in Zurich, Switzerland, Jan. 13, 1930. He was born in Liverpool, Apr. 9, 1864, and was educated at the Hampstead School, at St. Augustine's College, Ramsgate, and at University College, London. He began the construction of his first dynamo at the age of 14, and continued his interest in electricity. The S. Z. de Ferranti & Co. was established at Charterhouse Square in 1883, with Dr. Ferranti as engineer to the company. In 1886 he was appointed engineer to the Grosvenor Gallery Company, formed to light by electricity the Grosvenor Gallery. Under the direction of Dr. Ferranti, the station was moved to Deptford and expanded to form the London Electric Supply Corporation.

For this early high-tension station, he designed generators, transformers, mains, and all the complicated switchgear. Resigning his position as chief engineer to the London Electric Supply Corporation in 1892, he established at Hollinwood, near Manchester, a plant for the manufacture of electrical apparatus. He designed and installed the million-volt transformers later used in the National Physical Laboratory at Teddington. As president of the Institution of Electrical Engineers in 1910-11, he made an address notable for prophecies of trends in electrical development. In his work, Dr. Ferranti dealt with the difficult problem of generating and distributing electrical energy by alternating currents. His inventions, or suggestions for inventions, of electrical apparatus include the Ferranti alternator, the Ferranti rectifier, the Ferranti concentric cable, the Ferranti steam engine, the Ferranti switchgear, the Ferranti steam valve, the Ferranti electric house meter, an induction furnace, systems of electric welding, and high-speed spinning machinery for cotton mills. He was a fellow of the Royal Society.

FERRIS, JEAN LÉON GÉRÔME. An American painter, died Mar. 18, 1930, in Philadelphia, Pa., where he was born Aug. 8, 1863. He first studied with his father, Stephen James Ferris, and then with Christian Schuessle in Philadelphia. In 1884 he entered the Académie Julian in Paris, where he was a pupil of Bouguereau. After studying privately with Gérôme, he went to London, in 1888, to study historical painting at the South Kensington Museum. His best known work is a series of 60 paintings depicting outstanding events in American history, which he commenced in 1900 and which, since 1917, has been housed in Congress Hall, Philadelphia. It is characterized not only by able technique but by skill in differentiation of type. Among the important titles are: "The Eve of Discovery"; "The Mayflower Compact"; "The First Thanksgiving"; "The Landing of William Penn"; "The Bell's First Note"; "Writing the Declaration of Independence"; "The Darkest Hour, Valley Forge"; "The Ship That Sunk in Victory"; "Washington's Inauguration"; "Lincoln and the Flag"; and "Let Us Have Peace." Mr. Ferris also made a special study of early types of American vehicles, ships, and ordnance, models of which are displayed in the Congress Hall Museum.

FERSMANITE. See MINERALOGY.

FERTILIZERS. In the neighborhood of 650 firms were engaged in the manufacture of fertilizers and fertilizer materials during the year in the United States. The fertilizer industry continued to utilize the rapid developments in the production of fixed nitrogen compounds and of concentrated fertilizers. The constantly increasing use of inorganic fertilizer materials, the tendency to eliminate low-grade fertilizers, and the increased use of synthetic fertilizer salts continued and expanded, and were gradually transforming the fertilizer industry into a chemical industry. Researches and investigations were concentrated largely on the development of new manufacturing processes and the further improvement of those already in use, the production of new fertilizer compounds, and the development of new sources of raw materials and of the utility of by-products from other industries for this purpose.

Remarkable progress was made in the development of synthetic fertilizer materials, especially in the fixation of atmospheric nitrogen. Accord-

ing to the Bureau of Chemistry and Soils of the U. S. Department of Agriculture the possibility of cheapening the cost of ammonia production seemed most promising through the development of the synthetic ammonia process. Considerable progress was made in determining the mechanism by which ammonia catalysts function, and iron catalysts appeared to be particularly active in ammonia synthesis. New catalysts also were developed which operate at lower temperatures and give more complete conversion. Progress was made in the production of urea from ammonia and carbon dioxide, and the factors influencing the conversion of ammonium carbonate to urea and the means of controlling them in commercial production were more completely defined.

Information continued to accumulate on the formation of the nitrogen oxides and on the effects of certain poisons on the catalysts which was of both scientific and industrial importance in nitrate fertilizer production. Evidence also was obtained that light of a very short wave length will serve as an activator of nitrogen. The total supply of nitrogen fixed commercially continued to be but a small percentage of that constantly being fixed in or added to the soil by natural agencies. It was determined in this connection that the fixation of nitrogen by *Azotobacter* requires no appreciable quantity of energy, but the presence of either calcium or strontium is essential.

The United States was still dependent in large measure upon imports for its nitrogen supply. Agriculture continued to be the largest user of nitrogen and led also in the variety of forms used. The growth of the world's fixed nitrogen industry was not so marked. The world's largest air fixation plant in Germany, for example, was reported to have produced less nitrogen than at any time since reaching its capacity, its output being little more than one-half that of the previous year. The principal British fertilizer export was ammonium sulphate which showed a substantial increase. Certain French companies started the direct production of calcium nitrate and nitro-phosphate by the gas-oven arc process.

The German potash industry appeared to be operating at approximately the same level as during the previous year, and its most notable competitor was the production in France. The constant gain in potash output by the United States, Poland, and Spain did not seriously threaten the German position. Some Russian potash was offered in the world markets for delivery from the Solikamsk mines in 1931.

Promising new potash deposits were encountered in the Province of Navarra in Spain, the stratum being nine meters thick. Progress in the development of American potash was encouraging according to the Bureau of Chemistry and Soils, the current annual production of potash salts being more than 100,000 tons valued at \$3,000,000. However, the United States still spends about \$23,000,000 annually for imported salts, of which \$18,000,000 is for agricultural potash.

Information continued to accumulate on low-cost methods for the production of potash from available potash bearing minerals. *The Report of the Secretary of Agriculture* for 1930 stated that the feasibility of volatilizing the potash from leucite by smelting with special reagents, and of subsequent recovery of the potash in concentrated form was demonstrated. This can be done to special advantage simultaneously with the volatilization of phosphoric acid. The materials thus ob-

tained can be combined to form potassium phosphate, a highly concentrated fertilizer. Enormous deposits of leucite exist in Wyoming along with plentiful supplies of high-grade phosphate rock and cheap fuels. The alunite of Utah appeared to be a promising raw material for potash and alumina, and progress was made in the development of improved extraction methods that increase the latent potash resources of the raw material and the commercial quality of the alumina. The commercial possibility also was indicated of effecting practically complete separation of the potash as sulphate from the associated calcium and magnesium compounds of Texas polyhalite by ammonia-carbon-dioxide treatment, according to the Bureau of Chemistry and Soils. Ammonium sulphate is produced as a by-product.

Phosphoric acid represented an item of expense in American fertilizer practice almost as great as nitrogen, according to the Bureau of Chemistry and Soils, and efforts were continued to develop methods for more economically converting phosphate-bearing minerals into suitable available fertilizer materials with the conservation of important by-products. Studies of the complete chemical composition of the various grades and types of phosphate rock were continued to provide a basis for this work. Information continued to accumulate regarding the relation of the various impurities of phosphate rock, such as carbonates, sulphates, and fluorine, to the chemical composition of the natural rock, it being shown that fluorine is definitely combined as a part of the phosphate bearing mineral. Further evidence also was obtained that furnace methods for the production of phosphoric acid will lower costs, allow the utilization of low-grade materials now discarded, and produce highly concentrated products. Consideration also was given to possible improvements in the production of phosphoric acid by the sulphuric acid process, and some evidence was obtained of the possibility of substituting dilute phosphoric acid for sulphuric acid in the production of phosphatic fertilizers. Fluosilicates, by-products of phosphate production, offered possibilities as substitutes for arsenic compounds in the manufacture of insecticides. The Netherlands superphosphate industry continued to occupy a predominant position in the world market. New deposits of phosphates aggregating 5,000,000 metric tons were opened in Algeria.

Interest continued in the development of concentrated fertilizers containing two or three of the essential nutritive elements and 30 per cent or more of plant food, attention being devoted especially to ammoniated superphosphate. Work was continued on the preparation of potassium nitrate, it being discovered that this salt may be produced by the treatment of potassium chloride with the oxides of nitrogen. The Department of Agriculture and the State agricultural experiment stations continued the experimental comparison of concentrated fertilizers with ordinary strength fertilizers on prominent soil types, bringing out the superiority of the former in many cases, especially on soils of good water-holding capacity. The development of special fertilizer-distributing machines adapted to the concentrated materials also continued with considerable success.

Fertilizer consumption in the United States was again estimated at approximately 8,000,000 short tons during 1930. This continued to be considerably below the potential productive capacity of

the factories. The United States was again below European countries in the profitable use of fertilizers. Germany continued to lead the world in the consumption of fertilizers, it being estimated by the U. S. Department of Commerce that approximately one-fourth of the total world consumption of chemical plant food is in Germany. German consumption during the year ended April 30, 1930, established a new high record in spite of depressed agricultural conditions. According to Horace Bowker (*The American Fertilizer*, Vol. 7 (1930) No. 11, pp. 23-26) crops in the United States take out of the soil about 5.75 billion pounds more phosphorus, nitrogen, and potash than is replaced. C. J. Brand (*The American Fertilizer*, Vol. 73 (1930) No. 11, pp. 26-28d) stated that the possibilities of expanding fertilizer consumption in the United States were relatively unscratched. Although the United States had 340,000,000 acres of crop land more than Germany, she used 346,000 tons less of plant food.

According to the latest available figures there was a general decline in the production of fertilizer materials during the year. Although superphosphate production during October, 1930, was below the level of October, 1929, manufacturers' stocks of superphosphate increased from September to October, 1930, and were 15 per cent greater than during the same period of the previous year. On the other hand ammonium sulphate production declined each month following April, 1930, and during October was 26 per cent less than for October, 1929. There was again a decided decrease in imports of fertilizers and materials, the decline being very rapid during the year. Imports were at the lowest level since 1926. Imports of nitrogenous materials showed the greatest decline. It appeared, however, that the volume of trade during the year approximated that of 1929. The United States export tonnage of rock phosphate during 1930 exceeded that of any year since 1913. Exports of by-product ammonium sulphate were curtailed during the year, and the imports rose sharply in the last quarter. Probably the outstanding event of the year was the agreement reached between European producers of atmospheric nitrogen and representatives of the Chilean nitrate industry designed to limit production, avoid competition, and maintain prices. See CHILE under *Production*.

BIBLIOGRAPHY. Sources of information regarding progress in the production and use of fertilizers are numerous. Current progress is recorded in *The Fertilizer Review* published by the National Fertilizer Association at Washington, D. C., and in *The American Fertilizer* published in Philadelphia, Pa. Statistics of the fertilizer trade and industry will be found in reports of the Bureau of Foreign and Domestic Commerce, especially in the weekly *Commerce Reports*, and of the Census Bureau of the Department of Commerce. Other publications of interest were: C. J. Brand, *Recent Developments in the Fertilizer Industry* (Washington, D. C., 1930); J. Weigert and F. Fürst, *Sorte und Düngeung* (Berlin, 1929); and J. König, *Die Ermittlung des Düngerbedarfs des Bodens* (Berlin, 1929).

FESTIVALS. See MUSIC.

FEWKES, J(ESSE) WALTER. An American ethnologist, died in Forest Glen, Md., May 31, 1930. He was born in Newton, Mass., Nov. 14, 1850, and was graduated from Harvard University in 1875, taking his Ph.D. degree there in 1877. After pursuing the study of zoölogy further

at the University of Leipzig, he was appointed in 1881 assistant in the Museum of Comparative Zoölogy at Harvard. In 1890 he became editor of the *Journal of Ethnology and Archaeology*, and five years later was appointed ethnologist with the Bureau of American Ethnology which was under the direction of the Smithsonian Institution. His first field experience was as director of the Hemenway Southwestern Archaeological Expedition in Arizona from 1891 to 1894. Subsequently, during 1908-26, he was in charge of the excavation and repair of prehistoric cliff dwellings and Indian pueblos in Mesa Verde National Park, Colo.; Casa Grande and Pueblo, Ariz.; and Weeden Island, near Tampa, Fla. He was promoted to be chief of the Bureau of American Ethnology in 1918, serving until his resignation in 1928. He was also president of the American Anthropological Society during 1911-12 and was vice president of several other scientific societies. The LL.D. degree was conferred on him by the University of Arizona in 1915. In 1892 he was created a knight of the Order of Isabella the Catholic of Spain. His works include: *Snake Ceremonials at Walpi* (1894); *Archæological Expedition to Arizona* (1895); *Two Summers' Work in Pueblo Ruins* (1897); *Aborigines of Porto Rico and Neighboring Islands* (1907); and *Casa Grande, Arizona* (1913).

FIELTIZ, fē'lits, ALEXANDER VON. A German composer, died in Bad Salzungen July 30, 1930. He was born in Leipzig, Dec. 28, 1860, and studied piano in Dresden under Schulhoff and composition under Kretschmer. After serving as orchestra leader in Zürich, Lübeck, and Leipzig, he went to live in Capri, Italy, in 1887 on account of his health. After his return to Germany in 1897 he was for some time a teacher in Stern's Conservatory in Berlin. During 1905-08 he taught at Ziegfeld's Musical College in Chicago, and also conducted the Chicago Symphony Orchestra, organized by himself and not connected with the orchestra of the same name (which then was the Theodore Thomas Orchestra). In 1908 he returned to Stern's Conservatory, and in 1915 became director. He was chiefly known as composer of songs, of which the cycles *Mädchenlieder* and *Eliland* are the best known. He was also the composer of two suites for the orchestra and the operas *Vendetta* (1891) and *Das Stille Dorf* (1900).

FIGDOR SALE. See ART SALES.

FIJI ISLANDS. A British Crown Colony, comprising a group of about 250 islands in the South Pacific, of which some 80 are inhabited. Area, 7083 square miles; population on Dec. 31, 1928, including Rotuma, estimated at 176,793 (157,266 in 1921). Of the 1928 population, 4569 were Europeans, 91,029 Fijians, and 70,996 Indians. The capital, Suva, on the south coast of Viti Levu, had 1741 inhabitants in 1921.

Bananas, coconuts, maize, sugar cane, tobacco, rice, pineapples, cotton, and timber are the principal products. In 1927, imports and exports were £1,408,609 (£1,483,169 in 1928) and £1,635,935 (£2,633,238), respectively. Revenue in 1929

amounted to £677,944 and expenditures to £642,124. On Jan. 1, 1930, the public debt stood at £944,878. The total tonnage entered and cleared from the ports of the islands in 1928 was 1,353,049. A private narrow-gauge railway runs from Tavua 120 miles to Sigatoka. Executive power is vested in a governor, appointed by the Crown, who is aided by an executive council and a legislative council, of which the governor is president. The governor is also high commissioner for the Western Pacific. Governor in 1930, Sir Murchison Fletcher (appointed 1928).

FINANCIAL REVIEW. Business in the United States during the year 1930 was characterized by fairly steady decline to an apparent low point in November. Inasmuch as December is always a difficult month for comparisons because of the existence of a large holiday trade, it would be out of the question to say whether the low point of November would be the expected "turning point" in the post-panic depression or not. But the steady decline of business until toward the end of the year was an accomplished fact—some indexes of production showing that the total turnover for the month of November was the smallest since 1908. This course of development was considerably masked by the fact that during the year extended effort was made to put forth encouraging statistics and statements of business operations, in the endeavor to have it appear that satisfactory progress toward recovery was being generally made. In spite of these efforts, the decline continued with a volume of business toward the close of the year which amounted to a little more than 75 per cent of pre-panic figures, while corporation net earnings lost about 30 per cent and railroad net earnings were off 30-33 per cent.

STOCK EXCHANGE OPERATIONS. Transfers on the N. Y. Stock Exchange reached a total of approximately 800,000,000 shares for the year or about 30 per cent below the 1,125,000,000 shares transferred during 1929. The total volume of bonds was a little over \$3,000,000,000 as against not far from the same figure a year before. While it was true that there were no such remarkable turnovers on individual days as had occurred in 1929, the process of liquidation and of "unloading" which was going forward in the market at intervals throughout the year resulted in some heavy days' transactions, there being a total of 93 days on which transfers exceeding 3,000,000 shares each, took place. Upon 45 occasions dealings exceeded 4,000,000 shares and a considerable number of intermediate days of heavy activity were also registered. On 18 days transfers were over 5,000,000 shares and on 2 days over 6,000,000 each. It was unfortunately true, however, that most of this selling was for the purpose of realizing so that it did not prove profitable to financial houses and the value of Stock Exchange seats toward the end of the year fell as low as \$86,000.

Reviewing the experience of the stock market during the 12 months, it becomes evident that three major periods may be recognized. The first of these covered the months of January-May inclusive and were characterized by efforts to produce a kind of after panic boom. Many stocks rose in value materially, recovering a substantial percentage of the ground that they had lost in

the autumn of 1929. This trading was partly artificial,—brought about for the purpose of liquidating holdings on as favorable a basis as practicable. In part, it was due to the erroneous expectations of traders who were of the opinion that the panic would be short-lived and that recovery would assert itself very promptly.

At the end of the first period, consideration of very unfavorable earnings statements issued by corporations had begun to show conclusively that the advance of business toward its old levels was not going forward as had been predicted or asserted. Accordingly a fresh selling movement started, gained great headway during June, and went on sporadically during the summer and early autumn. It was accentuated and accelerated by the fact that earnings statements continued to become less and less satisfactory as time went by, the summer quarter particularly proving disappointing. With the autumn, a third period in the history of the exchange opened. In this, special banking influences began to exert themselves, growing out of the fact that bank failures had become numerous and were also on the average considerably larger per unit. In consequence of such failures, it had become necessary to "unload" security holdings or in other cases to sell them in order to provide resources which would permit the banks to meet demand obligations and so avoid failure. From this developed a special weakness in bonds during the autumn with stocks also declining sharply.

The banks in general had at the opening of the year been inclined to feel that they ought to make a strong attempt at liquidation. During January and February, such efforts were obviously in the process of making. They were, however, set at naught by the great flood of new issues which had been poured out upon the market, and by the continuing succession of issues which absorbed the entire savings capacity of the nation, beside leaving a balance which had to be carried by more and more increase of bank credit. The efforts of the banks to bring about liquidation gradually slowed down. During the latter part of the spring and early summer, there was a rearrangement of credit in which brokers' loans were gradually transferred to the form of direct bank loans on securities. During the latter part of the season, with this adjustment nearly completed, many investors began to desire to purchase securities at attractive prices, and fresh demands were made on the banks for accommodations. The result was that, taking the year as a whole, the volume of loans protected by securities was very little reduced, the maximum cut being only about \$400,000,000 out of a total of about \$7,500,000,000. At the same time, the banks increased their own investment holdings, with the result that at the close of the year, the total amount of bank funds engaged in investments and loans on securities aggregated nearly as much as at the opening of the year. It might fairly be said, therefore, that practically no progress had been made in relieving the banks during the twelve months. See BANK AND BANKING.

No account of the banking situation of 1930 or for that matter of financial conditions at large would be complete without a summary of the extent to which commodities were a factor in speculation and the speculative use of bank loans. The year had begun with a very large overstock of staple commodities such as copper, wheat, sugar, coffee, and a great variety of staples of other

kinds. Early in the year, the arrangements for price control of these items had begun to break down. Copper sank to 10 cents during the year after a first break during the spring which set it back to 14 cents. Wheat fairly steadily declined to a level of 75 cents in Chicago. The great stock of automobiles which had been over-produced just prior to the beginning of 1930 was gradually worked off, but the output for the year which

activity during the third quarter followed by almost complete stagnation in the fourth quarter. The accompanying tabulation gives the results for the year as a whole, according to the *New York Journal of Commerce* compilation.

MOVEMENT OF GOLD. The movement of gold out of the United States, which had been in progress at the opening of January, did not long continue but shortly slowed and then came to a stop. Imports of gold on a sporadic basis then set in, and continued at intervals for the remainder of the year with the result that about \$300,000,000 net increase was the result of the year's operations. The Federal Reserve Bank statement for the close of the year showed that approximately all the imported gold had been transferred to the Reserve System. Throughout the year the question of what is called "free gold" at Reserve Banks (the surplus of gold held above that required to furnish the legal holdings behind notes and deposits) continued to receive extended discussion and investigation, with the result that the narrowness of this free gold became more than ever apparent. Such narrowness resulted from the fact, especially, that the distribution of the gold among reserve banks was such as to render a considerable part of it unavailable at points where it was wanted. The export balance of the United States remained about the same as during the preceding year, owing to the fact that despite a great falling off in the total volume of trade, there was about the same relationship as before, between the two branches of the business.

The movement of silver during the year was, however, more troublesome than that of gold. Due to the great fluctuations in its price, artificial currents of silver were set up and tended strongly to disturb trade with the far East.

The tables on page 264 summarize the situation.

INTERNATIONAL BALANCE. The export business of the United States was considerably interfered with during the year 1930 by reason of a disturbance of conditions following upon the panic of 1929 and the later spread of this panic practically to all parts of the world. Very early in the year, the movement of goods out of the country which had already suffered a severe setback during the latter part of 1929 underwent

had been in 1929 above 5,500,000 cars was cut to 3,500,000. In these circumstances, and with no apparent tendency to reduce over-produced stocks of commodities in general, the year inevitably saw a shrinkage of prices, and a steady downward drive of the value of shares which were dependent upon these staple articles, for their future prospects.

NEW ISSUES. New issues during 1930 should have been greatly reduced in amount but during the first half of the year, ran on at about the same rate as during the preceding year. The first six months saw a total on the market of about \$4,500,000,000. Then came a sharp reduction of

another recession, so that it was evident, by the middle of the year, that trade had fallen behind by about 20 per cent. The close of the 12 months practically indicated a general decline of about 25 per cent of the year. This shrinkage was due to two facts—a natural falling off resulting from the reduction of buying power in foreign countries, and an artificial reduction due to the shrinkage in commodity prices which made the export value of American products appear decidedly less important than would have been the case had shipments been priced at somewhat the same level as in the preceding year. Exports of manufactured goods (except automobiles which fell off 44 per

^a For detailed explanation of this figure, which is derived from preceding columns, see Federal Reserve Bulletin for December, 1928, p. 831.

cent) held up unexpectedly well, some specialties even increasing in volume. The decline in imports which ran substantially parallel with that of exports resulted in a net balance not very far from that of the preceding year, the total being in round numbers \$4,000,000,000 exported and \$3,260,000,000 imported, or an excess of approxi-

mately \$740,000,000 in exports over imports.

In the accompanying table, figures relating to the export-import situation of the United States are furnished on a monthly basis. The so-called balance of international payments for the preceding year is also furnished as issued by the Department of Commerce in its usual annual survey.

UNITED STATES FOREIGN TRADE AND GOLD MOVEMENTS

* Largely a deduction from American tourist expenditures.

^b Issued outside our balance-of-payment area. Usually American statistics of public offerings include those of all Territories and possessions; although Hawaii, Porto Rico, and Alaska are parts of our customs area.

^c One of four important items whose amounts are extremely uncertain. It is supposable that most of the net discrepancy in the entire statement (arising from errors and omissions) results from errors in this group of items. Accordingly the original estimates of these items were all altered according to a uniform ratio which would eliminate 60 per cent of the net discrepancy in the entire statement. Before the items were thus altered, the net discrepancies for the years 1928 and 1929 were respectively — 31 and — 23.

^d Estimated "net export of long-term private capital."

^e Discrepancy, due to net errors and omissions. Total errors and omissions would probably be much greater, since they tend to offset one another.

COMMODITY PRICES. Although commodity prices had shown a very decided degree of stability during the years of 1927-29—a stability which has been erroneously ascribed by many to some policy on the part of the Federal Reserve Board—the year 1930 revealed an unprecedentedly dis-

turbed situation. Credit inflation had now been brought back to a close, while the enormous stocks of goods which had accumulated in most staple industries during the preceding year or two were pressing heavily upon the market. This was conspicuously true of such items as wheat, copper,

sugar, coffee, cotton, and a great variety of others. Before the end of spring, 1930, very decisive recession had occurred in nearly every essential staple and this downward movement continued practically throughout the year, leaving the level of prices at the end of December, substantially at low point, with an index of approximately 87, as compared with 93 at the beginning of the 12 months (the base or 100, being the prices of 1926). Prices of agricultural products had been especially weak. Cotton and wheat which had been temporarily held up by the policy of the Farm Board during the last two months of 1929 were especially reactionary. The closing quotation of wheat for the year (No. 2 red) was approximately 76 cents in Chicago, as compared with 146½¢ the year earlier, cotton also which had been 17.30 at the end of 1929 was 10 cents (middling upland) at the end of 1930. These figures, and particularly wheat, would have been much lower, judging from prices abroad, had it not been for the policy of the Government and particularly of the Farm Board. Family beef which was quoted at \$27 to \$29 at the end of 1929 suffered in sympathy with cereals, closing 1930 at 20 but mess pork which had been \$26.50 closed at \$28.50. See AGRICULTURE; LIVESTOCK; and articles on various commodities.

FOREIGN EXCHANGE. General conditions in foreign exchange had been tolerably satisfactorily maintained during the year although the suspension of specie payments in Argentina which had been announced just at the close of 1929 continued to exert an unfavorable inference on the currency quotation of that country, while gold exports were very heavy. There was difficulty also in maintaining the exchange position of countries like Brazil, where doubt existed as to the debt situation and its probable future. Some signs of weakness were also shown in the currency quotations of certain of the European states, particularly those where stabilization had not yet been effected, as for example in Spain. Bankers were troubled by the difficulty they experienced in regulating the movement of gold and in checking the inward movement to France and the United States, while Great Britain and Germany, as well as other countries, by reason of loss of gold experienced some difficulty in maintaining a satisfactory rate for their own currencies. The operations of the International Bank, of which a great deal was said, turned out to be a factor of little or no significance, the operation of the bank being small and the only transaction in which it was interested, but might have affected exchange, being the placing of a loan of \$300,000,000 in connection with the adjustment of German reparations during the month of June. The accompanying table sketches the foreign exchange situation for the year.

MONEY RATES. Money rates underwent further great changes in 1930. Starting the year with rates of either 4½ or 5 per cent at Federal Reserve Banks, according to location, rates were cut in New York to 4 per cent on February 7, 3½ per cent on March 14, 3 per cent on May 2, 2½ per cent on June 20, and 2 per cent on December 23. The other Federal Reserve Banks had made similar cuts either before or after those of the Federal Reserve of New York, although their rates remained at the close of the year ½ or 1 per cent higher than those of the latter institution. Early in the year, the demand for call money had been greatly reduced and the price of it had

* Demand rate.

fallen. It continued to rule generally below rates at the Federal Reserve Bank of New York and was in large supply up to the end of the year when trades took place as low as $1\frac{1}{2}$ per cent. Business rates on the other hand showed very little change. There was a slight downward movement from time to time, as demands declined, leaving supply rather in excess of current requirements, but up to the close of the year the average charge throughout Western and Southern cities had fallen only to about the level of 1928 or a trifle lower. Even these figures were attained only by "weighting" the returns, thereby giving a decidedly different result from that which actual figures would have furnished.

The great liquidation of brokers' loans which took place throughout the year resulted in a corresponding transfer of credits to the banks and this great demand for bank credit tended to keep up rates in spite of the decline that was occurring in commercial requirements. Federal Reserve credit did not respond very closely to the changes in discount rates, but continued to move irregularly in accordance with changes in demand, rather than changes in the condition of the stock market.

In the investment field, the year was characterized by several severe shrinkage of price which carried both stocks and bonds down to practically the level of 1927 by the end of the year. Holders of fixed rate securities of the best grades succeeded fairly well in maintaining their position owing to the demand of investors seeking a "safe" means of placing their funds. Second-grade bonds lost ground heavily, particularly those of railroads, and preferred stocks also underwent very decided recession. There were likewise severe losses in common stocks, even among those which possessed well-sustained dividend records of long continuance. Changes in these directions occurred as a result of general lack of confidence and could not be directly traced to alterations in the rate or supply of money.

See BANKS AND BANKING; BUSINESS REVIEW; PUBLIC FINANCE; TAXATION; and articles on various commodities.

FINE ARTS. See PAINTING; SCULPTURE; ART EXHIBITIONS; ART MUSEUMS; ART SALES.

FINLAND. An independent republic of Europe, bounded on the east by Russia, on the north by the Arctic Ocean and Norway, on the west by Sweden and the Gulf of Bothnia, and on the south by the Gulf of Finland. Formerly a grand duchy of the Russian Empire, it was declared independent Dec. 6, 1917, and became a republic under the constitutional law of July 17, 1919. Capital, Helsinki (Helsingfors).

AREA AND POPULATION. Finland has an area of 132,608 square miles, excluding water area, and a population estimated at 3,611,791 on Jan. 1, 1929, as compared with 3,364,807 at the census of 1920. Only 17.65 per cent of the population were urban residents in 1928. In the same year births numbered 77,523; deaths, 48,713; and marriages, 25,520. Emigration in 1929 totaled 7889 (5055 in 1928). The chief towns, with their populations on Jan. 1, 1929, were: Helsinki (Helsingfors), 227,375; Turku (Åbo), 63,918; Tampere (Tammerfors), 54,015; Viipuri (Viborg), 54,120. Of the 1920 population, 2,754,228 spoke Finnish, 340,963 Swedish, 4806 Russian, 2378 German and 1603 Lapponic. Finnish and Swedish are both official languages. The great majority of the Finns adhere to the Lutheran religion.

EDUCATION. Elementary schools in 1928 numbered 9639, with 336,481 pupils. There were 194 secondary schools, with 46,834 students; three universities (one Finnish at Helsinki and one Finnish and one Swedish at Turku), with 5170 students in 1929; and numerous technical, commercial, agricultural, infant, and professional schools. The primary school age is from 7 to 15 years. About 93 per cent of the population over 15 are literate.

PRODUCTION. Finland is unsuited to agriculture, although 65 per cent of the population gain a livelihood from the cultivation of less than 7 per cent of the total land area. Only a small part of the cereals consumed can be raised in the country, due to extreme weather conditions and the scarcity of fertile land. There were 250,749 farms in 1920, devoted mainly to rye, barley, oats, potatoes, and hay. Cattle raising and dairying were expanding in 1930 and butter and cheese products ranked third among the chief exports. Livestock in 1928 included 1,916,610 cattle, 1,313,910 sheep, 393,746 horses, 434,838 swine, and 10,592 goats.

Forests, chiefly pine and spruce, constitute the chief source of industrial wealth. They cover three-fourths of the total area and 40 per cent are state owned. Wood-working industries employ nearly half of all industrial workers and their products constitute over four-fifths of all exports. Production of newsprint in 1929 was 201,908 tons; of other paper, 112,249 tons; of cellulose (dry weight), 609,656 tons; of mechanical pulp (dry weight), 166,700 tons. Sawn timber sold was 9,960,000 standards and the production of plywood totaled 140,000 cubic meters. Other leading industries produce paper, food, drink, textiles, machinery, ships, leather articles, clay and stone products, and light and power. Copper is the only valuable metal found in large quantities. Manufacturing establishments in 1928 totaled 4021 and employed 169,729 persons, as compared with 3787 employing 159,141 in 1927. Gross value of production in 1929 was 13,721,344,200 marks, of which 6,264,625,100 marks was added during the process of manufacture. Wages paid totaled 2,277,044,000 marks (1 mark equalled \$0.0252).

The coöperative movement dominates all commercial activities, coöperative societies handling about one-third of the retail and one-half of the wholesale trade of the country. At the end of 1926 there were over 5000 coöperatives, with more than 700,000 members.

COMMERCE. While Finnish imports declined noticeably in 1929 to 7,001,000,000 marks from 8,012,907,000 marks in 1928, exports increased slightly to 6,430,000,000 marks from 6,245,282,000 marks in the previous year. The unfavorable balance of trade was reduced to 571,000,000 marks, as compared with 1,767,625,000 marks in 1928. The drop in imports in 1929 was attributed to the economic depression, while the reëntry of Russia into the timber exporting business reacted unfavorably on the Finnish lumber industry. Both imports and exports declined during the first half of 1930, as compared with the same period in 1929.

FINANCE. Budget revenues for 1930 were estimated at 4,469,300,000 marks (1 mark equalled to \$0.0252) and budget expenditures at 4,595,500,000 marks, as compared with actual receipts of 4,342,000,000 marks and estimated expenditures of 4,272,300,000 marks in 1929. The esti-

mated deficit of 126,200,000 marks for 1930 was to be covered from the Treasury surplus.

The public debt at the end of February, 1930, totaled 3,105,800,000 marks, of which 2,555,200,000 marks represented the foreign funded debt, 196,000,000 marks the foreign floating debt, and 354,600,000 marks the funded internal debt. The foreign debt was increased in 1930 by the flotation of a \$12,000,000 bank loan in France and of a \$8,000,000 loan for the city of Helsinki (Helsingfors) in the United States. Public finance is featured by the stable currency, large capital investments, mainly in Government-owned enterprises, and a comparatively small public debt.

COMMUNICATIONS. Of the 3232 miles of railway lines in operation in 1929, all but 165 miles belonged to the state. Revenues of the state lines in 1928 totaled 891,871,000 marks and the total expenditures were 713,010,000 marks. There were 19,251 miles of main highways in the same year, while a remarkable system of lakes, linked with each other and with the sea by canals, furnished other means of international communication. A total of 55,475 vessels and 17,171 timber rafts used the canals in 1928. The telegraph system, with 12,297 miles of wire, and part of the telephone system (10,037 miles of wire) were state owned also.

GOVERNMENT. Executive power is vested in a president elected for six years by 300 electors, who are chosen by direct election in the same manner as members of the Diet. Legislative power is exercised by the Diet (single chamber) in conjunction with the President. The latter governs through Ministers appointed by him, his decisions being taken in the Council of State of 10 Ministers, who are responsible to the Diet. Members of the Diet are elected for three years by direct vote of all citizens over the age of 24. The composition of the Diet following the elections of July 12, 1929, was: Social-Democrats, 59; Agrarians, 60; National Unionists, 28; Socialist Labor (Communist), 23; Swedish party, 23; Finnish Progressive party, 7. President in 1930, Dr. Lauri Relander, elected February 16, 1925. The Council of State, appointed Aug. 16, 1929, was Agrarian and included: Prime Minister, Kyösti Kallio; Foreign Affairs, J. H. Procopé; Finance, T. H. Reinikka; Interior, A. V. Linturi; Defense, J. Niukkanen; Justice, Prof. E. Kaila; Education, A. Kukkonen; Agriculture, K. J. Ellilä; Communications, J. T. Lahdensuo; Commerce and Industries, P. V. Heikkinen; Social Affairs, H. Paavilainen.

HISTORY

ANTI-COMMUNIST MOVEMENT. A vigorous national movement to eradicate communism from Finland occupied the centre of the political stage during 1930, to the virtual exclusion of the prohibition and other important issues. Increasing communist activities during the winter of 1929-30 led to violent reprisals by conservative and bourgeois elements and to the inauguration early in 1930 of the Lapua, or anti-communist, movement among the peasants of the district surrounding the village of Lapua. The Lapuan agitation quickly spread to the whole of Finland, forcing the resignation of Prime Minister Kallio's Agrarian Cabinet on July 2 and the dissolution of the Diet July 16, and scoring an overwhelming victory in the elections to the new Diet held October 1 and 2, from which the communists were barred. The new Diet adopted legislation

legalizing the measures by which the communist movement had already been virtually eradicated. Meanwhile excesses of anti-communist groups threatened a break-down of Finland's democratic institutions and the Ministry took drastic steps to reestablish law and order.

The Kallio Cabinet, whose programme included a pledge of active resistance to communism, sought to conciliate the rising bourgeois anger by introducing drastic anti-communist bills at an extraordinary session of Parliament convened July 1. It was determined, however, to avoid a Fascist dictatorship. The measures did not satisfy the Lapuans and were equally obnoxious to the Communist and Social-Democratic representatives in Parliament, who considered them too severe. The latter joined with the extreme Right in defeating the Cabinet by a vote of 112 to 68.

The new Cabinet, formed July 5 by the veteran conservative statesman, P. E. Svinhufvud, represented a bourgeois coalition from which the Social-Democrats and Communists were excluded. The National Unionists obtained 4 of the 12 Cabinet posts, the Progressive 3, Agrarians 3, and Swede-Finns, 2. A great demonstration was held in the capital under Lapua leadership two days after the formation of the Cabinet to impress upon it the necessity for aggressive anti-communist measures. The Cabinet's programme failed of the required majority, due to the opposition of the Social-Democrats, and on July 16 the Diet was ordered dissolved. In the elections of October 1-2, the parties in favor of the Cabinet's bills polled about 712,000 votes to 396,500 for those opposing them, and won 144 of the 200 seats in the Diet. The passage of the bills was thus assured. These measures made it illegal for a communist to hold public office and authorized the Ministry to establish a virtual dictatorship, without reference to Parliament, whenever it considered such a step necessary for the protection of the state.

The political campaign was marked by the arrest of hundreds of communists, the suppression of bolshevist newspapers, and the kidnaping and beating of communist public officials and leaders. A number were expelled across the Russian border, while others fled to Sweden. Liberal and moderate spokesmen who criticized such measures were threatened with similar treatment. On October 14, former President Stahlberg and his wife were kidnaped by Fascist extremists, but escaped while being spirited away to the Russian border. The former President had vigorously attacked the unconstitutional methods of the Fascists. The arrest of Gen. Martti Wallenius, chief of the Army General Staff, followed on October 22. He was said to have admitted instigating the Stahlberg abduction and was suspected of conspiring to establish a Fascist dictatorship. The Lapu leader, Kosola, denied any complicity in the kidnaping. On December 18, Wallenius and Colonel Kuussaari, also of the general staff, were each sentenced to three years in prison and dismissed from the army for their part in the abduction.

FINNISH-RUSSIAN RELATIONS. The Soviet government in September dispatched several vigorous protests against the banishing of Finnish communists to Russia. The Finnish government replied that it was unable to prevent the forcible expulsions, but pointed out that they were due to the Communist activities sponsored by Russian organizations. The Finnish Foreign Office

refused to consider other Soviet protests written in Russian, which Finland declined to accept as a diplomatic language. The Soviet press declared in June that a Baltic alliance was in process of formation under Finnish leadership, which aimed to capture Soviet Karelia. Some color was given to this charge by the revelation that General Wallenius had consulted with anti-communist leaders in Poland, Lithuania, Estonia, and Latvia, previous to the failure of his alleged conspiracy to establish a dictatorship in Finland.

PROHIBITION. Efforts to amend the prohibition law, which had proved quite as thorny a problem as the prohibition experiment in the United States, failed for the most part during the spring session of Parliament and in the latter part of April the Agrarian (Government) party voted 159 to 44 to retain the prohibition plank in the party platform. This stand is explained by the fact that the party favors the rural, as against the city population. Sentiment in the centres of population was increasingly "wet," according to reports. In June, the Government appointed a commission to undertake an extensive investigation of the prohibition situation and to report during 1931. Convictions by the lower courts of violations of the prohibition laws in 1929 numbered 12,567, as against 10,116 in 1928; in Helsinki (Helsingfors), convictions for drunkenness and prohibition violations rose from 21,105 in 1928 to 22,907 in 1929. The Government's bill to legalize beverages with a 3 per cent alcoholic content was defeated in Parliament December 19, 1929 to 86.

OTHER EVENTS. A commercial treaty with Estonia was concluded during the year. On June 27, Iceland signed a pact of friendship and arbitration with Iceland, Norway, Sweden, and Denmark (see ICELAND).

FIRE INSURANCE. See INSURANCE.

FIRE PROTECTION. An increase in the fire loss of the United States for the year 1930 was an expected result of the business depression. Incendiary fires usually increase during periods of financial stringency, and other fires occur where maintenance and supervision of property is relaxed as a result of unsatisfactory business conditions. Fires officially classified as of incendiary origin are responsible for only about 1 per cent of the loss in fires of known origin, but many fire authorities believe that the influence of incendiarism, both direct and "unconscious," is much greater than indicated. It was generally agreed that the upward trend of fire losses during 1930 was largely due to business conditions. Another contributing factor, of particular importance in rural areas, was the drought.

The fire losses for the year, according to the monthly estimates of the National Board of Fire Underwriters, are as follows. The monthly losses for 1929, are given for comparison:

| | 1929 | 1930 |
|----------------------|---------------|---------------|
| January | \$ 44,713,835 | \$ 42,344,035 |
| February | 41,520,290 | 43,206,940 |
| March | 41,277,814 | 42,964,392 |
| April | 36,845,795 | 43,550,996 |
| May | 32,129,408 | 38,415,142 |
| June | 33,605,663 | 31,818,266 |
| July | 31,985,493 | 34,847,750 |
| August | 30,446,893 | 36,043,879 |
| September | 29,249,355 | 35,230,456 |
| October | 31,652,335 | 36,838,614 |
| November | 29,061,869 | 35,682,577 |
| December | 39,726,338 | 42,669,915 |
| Total 12 months | \$422,215,128 | \$463,612,762 |

The fire loss for 1930, while greater than that of the preceding year, was slightly lower than that of 1928, and well under the average for the previous ten years. The accompanying table of annual fire losses in the United States from 1910 to 1930 inclusive shows the trend over a period of years. The general conclusion was that the increased losses of 1930 represented a temporary condition and was not indicative of any permanent upward trend in losses:

| | | | |
|------------|---------------|------------|---------------|
| 1916 | \$258,377,952 | 1924 | \$549,062,124 |
| 1917 | 289,535,050 | 1925 | 559,418,184 |
| 1918 | 353,878,876 | 1926 | 561,980,751 |
| 1919 | 320,540,399 | 1927 | 472,933,969 |
| 1920 | 447,886,677 | 1928 | 464,607,102 |
| 1921 | 495,408,012 | 1929 | 422,215,128 |
| 1922 | 506,541,001 | 1930 | 463,612,762 |
| 1923 | 535,372,782 | | |

Students of the fire problem pointed out that fire losses should not be considered as absolute figures, but should be related to the total amount of property exposed to fire. On this basis the general trend of relative loss was very definitely downward. This may be explained by the increasing attention given to fire prevention and protection, the larger use of fire-resistive materials in building construction, the increased installation of automatic sprinklers, and the spreading idea that the public fire department is not only an agency for fire extinguishment, but should likewise be active in fire prevention work. The fire prevention bureau had become a regular division of the public fire department in most of the larger American cities, and during the year 1930 many smaller city fire departments added fire prevention bureaus for inspection work and related fire prevention activities.

LARGE LOSS FIRES IN 1930. The Nashua, N. H., fire of May 4, 1930, destroying more than three hundred buildings (200 of them dwellings), rendering 322 families homeless and causing a property loss of over \$2,000,000, was the only major conflagration of the year. The spread of this fire to conflagration proportion was due to sparks falling on dry wooden shingle roofs over a wide area. During the twelve-month period there were listed but five fires involving a loss of one million dollars or over as compared with fifteen fires the preceding year and twenty in 1928. It is difficult to generalize about the large fires of the year, but the greatest number have been in miscellaneous manufacturing property. Property at rail and water terminals, which as a whole is notoriously poorly protected against fire, contributed many of these large losses. Lumber mills, also generally poorly protected and hazardous due to their large storage of combustible products, were generous contributors to the list of large loss fires.

The number of fires of the general conflagration type were notably few. Nashua's conflagration of May 4, already mentioned, was the outstanding one. Group fires on August 5 at Gore, Virginia, and on November 16 at Waukegan, Ill., also might be included in the class of general conflagrations. In general the geographical distribution follows the concentrations of burnable values as they are generally regarded, but it was interesting to note the considerable number which occurred at points where the property was situated beyond the limits of a municipal water supply or organized fire department.

The causes of fires in the United States, compiled by the Actuarial Bureau of the National

endowment for 1929-30 was \$1,301,366, and the total income was \$285,826. The library, which was housed in the new building erected in 1930 through gifts from the General Education Board, the Rosenwald Fund, and the Carnegie Corporation, contained approximately 30,000 volumes. Thomas Elsa Jones, Ph.D. was president; A. A. Taylor, A.M., dean; and Jesse F. Beals, treasurer.

FLANDERS. See **BELGIUM** under *History*.

FLAX. The flaxseed production in 1930 of 14 countries reporting to the International Institute of Agriculture, Rome, was estimated at 47,414,000 bushels which was 28 per cent above the yield of 37,045,000 bushels in 1929, but nearly 8 per cent below the average annual production for the five years 1924-1928. The crops of some of the more important producing countries exclusive of the United States were estimated as follows: India, 14,960,000 bushels; Canada, 4,459,000 bushels; and French Morocco, 293,000 bushels. Lithuania reported a production of 1,606,000 bushels and Latvia of 755,000 bushels of flax and hemp seed. Argentina, ranking first in flaxseed production in South America and the southern hemisphere, reported a yield of 52,254,000 bushels for the crop year 1929-1930 as compared with an average of 70,309,000 bushels for the preceding five years, although the area sown was larger than the five-year average. The area sown for the crop of 1930-1931 was given as 7,403,000 acres.

The Department of Agriculture estimated the flaxseed crop of the United States in 1930 at 23,682,000 bushels compared with 17,049,000 bushels in 1929 and a five-year average of 23,800,000 bushels. The area sown, 4,389,000 acres, the largest on record and 2,152,000 acres above the average for the ten years 1919-28, resulted from a substitution of flax acreage for wheat in the spring wheat States and helped to increase the acreage harvested. Owing to a marked abandonment of flax acreage in North Dakota, South Dakota, and Montana due to drought only 3,946,000 acres were harvested, but this was still about 29 per cent above the area of 3,050,000 acres in 1929. The dry season of 1930 apparently had not been as injurious as dry weather the preceding year for the average yield per acre was 6 bushels while in 1929 it was only 5.6 bushels. The average farm price on December 1 of the year was \$1.398 per bushel as compared with \$2.842 the year before, so that on this basis the large crop of 1930 had a total value of but \$33,097,000 as compared with \$48,459,000, the value of the preceding crop. Of 11 States reporting flaxseed production the yields of the four States producing the bulk of the crop were given as follows: North Dakota, 10,041,000 bushels; Minnesota, 7,320,000 bushels; South Dakota, 3,484,000 bushels; and Montana, 1,776,000 bushels. The average yields in these States were 5.2, 10, 5.2 and 3.7 bushels per acre, respectively. During the fiscal year ended June 30, 1930, the United States exported 269,000 tons of linseed oil cake, 10,000 tons of linseed oil cake meal and 2,129,000 pounds of linseed oil and imported 72,618,000 pounds of linseed oil cake and oil cake meal, 5,416,000 pounds of linseed oil and 19,652,000 bushels of flaxseed.

Estimates of flax fibre production in 1930 reported to the International Institute of Agriculture by eight European countries indicated a decrease in yield of 21 per cent as compared with 1929 and of 26 per cent below the five-year average yield of 1924-1928. The reduction in yield was due in part to a smaller acreage but to a greater

extent to a poor season. Of the countries reporting, Belgium produced 25,100,000 pounds, the Netherlands 19,180,000 pounds and Czechoslovakia 16,202,000 pounds. Lithuania reported a crop of 68,255,000 pounds and Latvia of 42,836,000 pounds of flax and hemp fibre. For the Soviet Republics a yield of 942,920,000 pounds was recorded for 1929. During the fiscal year ended June 30, 1930, the United States, which does not produce flax fibre on a commercial basis, imported 7000 tons of unmanufactured flax, including about 3000 tons of hacked material.

FLEMISH AUTONOMY MOVEMENT. See **BELGIUM** under *History*.

FLEXNER, ABRAHAM. See **UNIVERSITIES AND COLLEGES**.

FLOODS. The remarkable series of floods, which have been recorded in recent years in the United States, gave way, during 1930 to a most severe drought. Nevertheless the south of France was visited by a disastrous flood and flood protection continued to occupy an important place in the engineering field. Probably the most important development was the revision of the great Mississippi Flood Plan.

MISSISSIPPI RIVER. As noted in the 1929 **YEAR BOOK** the decision of Judge Dawkins late in 1929 granted an injunction restraining the Government officers from building the necessary levees, etc. for the proposed Beuf Floodway, an essential part of the Mississippi Flood Plan, until provision had been made for compensating owners of land in the floodway. As a result of this action and of the many criticisms of the so-called Jadwin Plan, the Secretary of War announced early in the year that the adopted project could not be carried out without additional legislation or without fundamental changes. As was predicted in the last **YEAR BOOK** the necessity of purchasing flowage rights had changed the economic aspects of the problem and studies were under way which would lead to a revised plan which was later to be submitted for approval. Gen. Lytle Brown, U. S. A., the new Chief of Engineers, who would be responsible for the Mississippi works, contributed a description of the problem and plans to the February 6 issue of the *Eng. News-Record* (New York).

FLOODS IN THE UNITED STATES. Severe floods took place in January in the Wabash-White system of Indiana, and the St. Francis River of Arkansas. Losses in the former reached nearly \$7,000,000. In both cases, considerable suffering was experienced by refugees because of the severe cold which prevailed.

Moderate losses resulted during March from rises in the Alabama and Tombigbee systems.

The Tallahatchie River was in flood during January, February, and March; it fell below flood stage at Swan Lake, Miss., on April 6 after having remained in flood there for 82 days. The crest stage prevailed from January 27 to January 29, and was the highest of record at Swan Lake. Little damage was caused; but a continuation of flood conditions in the Tallahatchie Basin into June resulted in considerable damage to prospective crops.

The most severe floods during May were those in the Slreveport, La., river district along the Red, Sulphur, and Cypress Rivers; the total losses exceeded \$2,500,000. The general rains which caused these floods, while most concentrated in northeast-

ern Texas, were fairly continuous and occasionally excessive between May 3 and May 17-18 from central Texas and Oklahoma eastward to Mississippi; as a result of these rains, other floods, accompanied by losses exceeding \$1,000,000, occurred to the southwestward in the rivers of east and central Texas, to the northward in the Arkansas and White Rivers, and to the eastward in the Ouachita and Pearl Rivers.

Excessively heavy rains in the Des Moines and Skunk Valleys in Iowa on June 14 and June 15 caused a severe flood in the Skunk River, and slight flood conditions in the lower Des Moines and in the Mississippi as far south as Louisiana, Mo. The Skunk River was the highest ever known at Augusta, and the damage to growing crops was large.

In Iowa, notably the southeastern quarter, and Marathon County, Wis., between two and three million dollars damage was done to highways and bridges by violently destructive rises in small streams as a result of heavy and concentrated summer showers. A series of sudden local showers during the evening of July 10 caused the streams in the steep gullies and ravines on the face of the Wasatch Mountains between Centerville and Famington, Utah, and in the side gullies of Spanish Fork Canyon, Parleys Canyon, and Weber Canyon, to do \$100,000 damage in a few minutes by flood and earth wash. Numerous rapid and heavy local downpours during the first two weeks in August produced an extraordinary number of similar washing floods in the mountain section of Utah, accompanied by heavy damage in many localities.

The year 1930 was considered a very dry one, yet flood losses were quite high. This is explained by the fact that over one-half of the reported losses occurred in the Ohio Valley, all of which took place during the months of January and February; that is, before the severe drought of the summer and autumn began. Nearly all of the Ohio Valley flood losses were confined to the Wabash-White River Systems.

LOSSES BY FLOOD IN THE UNITED STATES DURING THE CALENDAR YEAR 1930

| Drainage | Reported losses ^a | Lives |
|------------------------------------|------------------------------|-------|
| Atlantic | | .. |
| Gulf (except Mississippi River) .. | \$ 1,901,940 | 4 |
| Mississippi (except Ohio River) .. | 4,604,565 | 5 |
| Ohio | 7,064,805 | .. |
| Great Lakes | 36,165 | .. |
| Pacific | 250,000 | 3 |
| Total | \$13,857,475 | 12 |

^a Probably about 75 per cent of actual.

FLOODS IN OTHER COUNTRIES. As a result of heavy and long-continued rains during the latter part of February and the beginning of March, disastrous floods occurred in southern France, with enormous property damage and the loss of several hundred lives. These floods reached their greatest intensity in the valley of the Garonne and in its tributaries, especially the Tarn, which originate in the southern Auvergne Mountains. The heavy rain was associated with a persistent southeast wind from the Mediterranean; on the low ground of the coast, and in the Rhone Valley, rainfalls of 2 or 3 inches in a day were reported from several stations on February 28 and March 1. The rivers flowing west from the Auvergne Mountains occupy narrow valleys, and the waters appear to

have arisen with such rapidity that the valley towns were caught almost unaware.

The disastrous Whitby floods of July 22-23 in England were the result of prolonged moderate rainfall due to an almost stationary cyclonic depression off the east coast of England.

FLOOD FLOWS. The economic problem involved in flood protection works is basically one of insurance. Is it less expensive to submit to periodic flood damages than it is to purchase insurance against flood risks by constructing flood protection works? Obviously the exact solution of this insurance problem involves a detailed knowledge of the character and frequency of flood risks. In a new volume, *Flood Flows* (New York, 1930), Allen Hazen (q.v.), the well-known American hydraulic and sanitary engineer whose sudden death on July 26 was severely felt by the engineering profession, gave the results of twenty years of study of this problem. Mr. Hazen analyzed flood flows by the mathematics of probabilities and showed how closely the ratios of great flood intensities to the average follow the probability law. By means of diagnosis it is possible to predict the frequency of flood flows of various intensities and a much needed step thus has been taken in reducing the economic problem of flood protection to a mathematical basis.

FLORIDA. POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,468,211, having made an increase of 499,741 over the population of 1920. A State census taken in 1925 showed a total population of 1,263,549, compared with 968,470 by the Fourteenth United States Census of 1920, an increase of 295,079 in the five-year period. The capital is Tallahassee.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|---------|-------------------------|--------------|
| Oranges | 1930 | | 14,500,000 ^a | \$27,550,000 |
| | 1929 | | 8,800,000 ^a | 26,840,000 |
| Grapefruit | 1930 | | 12,000,000 ^a | 21,600,000 |
| | 1929 | | 8,200,000 ^a | 22,960,000 |
| Corn | 1930 | 625,000 | 7,500,000 | 6,750,000 |
| | 1929 | 625,000 | 8,438,000 | 7,172,000 |
| Potatoes | 1930 | 32,000 | 2,560,000 | 4,480,000 |
| | 1929 | 23,000 | 2,714,000 | 4,885,000 |
| Sweet potatoes | 1930 | 28,000 | 2,380,000 | 2,261,000 |
| | 1929 | 29,000 | 3,190,000 | 3,350,000 |

^a Boxes.

Farms in the State numbered 59,601 in 1930, as against 59,217 in 1925, and 54,005 in 1920.

MINERAL PRODUCTION. Producing much the greater part of the phosphate rock mined in the United States, Florida benefited in 1929 from an increase in the output of this industry, of which the year's production exceeded that for any earlier year subsequent to 1920, both as to quantity and as to value. Florida's production of phosphate rock in 1929 had not yet been reported, but that for 1928 was 2,883,446 long tons, and for 1927, 2,637,420; in value, \$9,424,022 for 1928 and \$8,646,162 for 1927. In these years it constituted fully three-fourths of the domestic totals. Stone, the second in importance of the mineral products of the State, was quarried in 1928 to the quantity of 3,381,470 short tons, a sharp reduction from the 7,437,580 tons of 1927; the value of the year's product fell conformably, to \$2,654,370 for 1928, from \$6,138,767 for 1927. The clay products aggregated \$392,048 for 1928

and \$462,190 for 1927. The quantity of raw clay dug greatly exceeded what was used in the manufacture of the State's own clay products. The production of raw clay thus totaled \$630,471 for 1928 and \$646,415 for 1927. The aggregate mineral production of the State was, for 1928, \$15,227,123; for 1927, \$18,095,961.

FINANCE. State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$15,915,783 (of which \$2,598,152 was for local education); for interest on debt, \$558,435; for permanent improvements, \$13,049,742; total, \$29,523,960 (of which \$13,436,195 was for highways, \$2,181,936 being for maintenance and \$11,254,259 for construction). Revenues were \$26,616,939. Of these, property and special taxes formed 22.1 per cent; departmental earnings and remuneration to the State for officers' services, 7.7; sales of licenses, 56.4 (including taxes of \$9,233,881 on sales of gasoline). The State's funded direct debt outstanding June 30, 1928, was nil; but the State had a contingent debt liability of \$10,250,000 directly covered by special assessments, for everglades drainage. On property bearing an assessed valuation of \$727,821,318 were levied in the year State taxes of \$5,500,483.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 5686.44. There were built, in 1930, 9.03 miles of additional first track.

EDUCATION. The financial condition of the public-school system of the State in 1930 called forth the efforts of the State Education Association, which worked through a special committee to give publicity to the facts and to promote corrective measures. There were enrolled in the public schools, in 1929, 345,571 pupils. Of these, 273,532 were in elementary and 72,039 in high-school grades. The year's expenditures for public-school education totaled \$18,766,441. Salaries of all teachers averaged \$118.20 a month.

CHARITIES AND CORRECTIONS. A group of State institutions for the care or custody of persons were administered in 1930 under the central control of the State Board of Commissioners of State Institutions. This board was an ex-officio body, of which the members were the Governor (serving as chairman), Attorney-General, Comptroller, Secretary of State, State Treasurer, State Superintendent of Public Instruction, and Commissioner of Agriculture. The institutions thus controlled were individually administered by superintendents. These institutions were: Florida State Hospital (for the insane), Chattahoochee; Florida Industrial School for Boys, Marianna; Florida Industrial School for Girls, Ocala; Florida State Farm (the State penitentiary), Raiford; Florida Farm Colony (for feeble-minded children), Gainesville.

POLITICAL AND OTHER EVENTS. While agricultural conditions made some gain during the year the State was severely handicapped by the credit difficulties of some of its municipalities. No less than 26 cities had gone into default of principal or interest on bonds before the middle of the year. The amounts due and unpaid aggregated, for principal, about \$3,500,000 and for interest, about \$1,700,000. The heaviest defaults were those of West Palm Beach, Sanford and Lake Worth. Miami, which had a minor issue of bonds maturing in August, confessed inability to redeem them and sought an extension from the bond-

holders. It heavily increased its tax rate, but reduced assessments of taxable property to \$167,519,892, from \$275,000,000 approximately. Several banks at Miami, including the Bank of Biscayne with deposits of more than \$15,000,000, closed on June 11.

The citrus fruit industry, on the other hand, made a good recovery from the inroads of the Mediterranean fruit fly, which had afflicted it in the year previous, and produced a harvest approximating \$60,000,000. The Florida Inland Navigation District transferred possession of the East Coast Canal, a waterway extending from near Jacksonville to Miami, to the Federal government. See **ENTOMOLOGY**, **ECONOMIC**.

Authorities at Miami unavailingly sought by legal means to exclude from their city an ex-convict, Al Capone, of Chicago, who on his release came to reside there in a house already in his possession. He was arrested but freed by writ of habeas corpus.

Save in a small part of the area that had been infected with the Mediterranean fruit fly in the year previous, the last of the restrictions maintained by the Federal government against the shipment of Florida fruits and vegetables were removed on October 15. It thus became possible to resume in most cases the free shipment of these products, in time to be of advantage for the heavy winter season. Writs were issued on October 14 by the State Supreme Court ordering the cities of West Palm Beach and Hastings to levy sufficient taxes to meet maturing bond obligations. Like action was taken by the same court on October 23 with regard to the obligations of Bay County.

ELECTION. The State did not hold elections for Senator or Governor on November 4, but elected a Democratic delegation of four United States Representatives and kept the Democratic party in power in the Legislature. Four constitutional amendments were ratified by popular vote. They provided for the levying of an inheritance tax in the State, thus rescinding the action taken by the constitutional amendment of some five years before; for exempting new industries from taxation for 15 years; for limiting the taxation of automobiles to license tags; and for requiring that freeholders approve proposed bond issues of subdivisions of the State.

OFFICERS. Governor, Doyle E. Carlton; Secretary of State, W. M. Igou (succeeded by R. A. Gray); Attorney-General, Fred. H. Davis; Comptroller, Ernest Amos; State Treasurer, W. V. Knott; State Superintendent of Public Instruction, W. S. Cawthon; Commissioner of Agriculture, Nathan Mayo.

JUDICIARY. Supreme Court: Chief Justice, Glenn Terrell; Associate Justices, W. H. Ellis, James B. Whitfield, Armstead Brown, Rivers Buford, L. W. Strum.

FLORIDA, UNIVERSITY OF. A State institution of higher education for men in Gainesville, Fla.; founded in 1905. In the autumn of 1930 the registration totaled 2252, distributed as follows: Arts and sciences, 511; commerce and journalism, 558; education, 281; engineering, 295; law, 194; agriculture, 215; pharmacy, 49; architecture and allied arts, 62; graduate, 104. The registration for the summer session of 1930 was 1483 men and women. The faculty numbered 160 (exclusive of student assistants and research workers). The cost of operating and maintenance was \$2,330,276; the annual endowment was \$315,488. The library

The 1930 business depression was largely responsible for the downward trend of food prices in the United States. As pointed out by L. H. Bean of the Bureau of Agricultural Economics, U. S. Department of Agriculture, in an address delivered before the Second International Conference of Agricultural Economists at Cornell University, Aug. 27, 1930, food prices reflect in large measure fluctuations in business activity and the buying power of consumers. The accompanying chart

(*The Agricultural Situation*, Vol. 14, No. 7, p. 3) gives a comparison between changes in annual factory payrolls and the average prices of such food products as meats, dairy products, and poultry from 1920 through July, 1930. The two curves follow each other quite closely. The apparent exception in 1922-23 is attributed to very heavy surpluses of food products and in 1928 to a shortage of beef cattle.

OTHER COUNTRIES. The general trend of retail food prices throughout the world may be seen from the accompanying table compiled from data reported by the Bureau of Labor Statistics (*Mo. Labor Rev.*, Vol. 31, No. 5, pp. 238, 239). The index numbers, which were constructed by the various national statistical offices, were based on the prices of a number of articles of food weighted according to different standards, but unless otherwise noted referable to the original pre-war basis of 100. Since few 1930 figures later than August were available, the comparison has been made of the

successful attempts to increase the vitamin D (antirachitic) content of cow's milk by feeding the cows cod-liver oil, found that the feeding of irradiated yeast increased the vitamin D content of milk in a very satisfactory manner without lowering the fat content of the milk as was the case with cod-liver oil. It is quite probable that this may also be the case with human milk and that nursing mothers may be able to protect their babies against rickets by eating irradiated yeast.

The iodine content of cow's milk can also be altered by feeding the cows some source of iodine. Krauss and Monroe at the Ohio Agricultural Experiment Station (*J. Biol. Chem.*, Vol. 89, p. 581) found that milk iodized by feeding cows small amounts of potassium iodide was of definite therapeutic value, since when fed to rats it produced smaller thyroid glands containing a greater percentage of iodine than normal milk. This suggested the feasibility of iodizing the general milk supply in localities where goitre was prevalent.

INDEX NUMBERS OF RETAIL FOOD PRICES IN THE UNITED STATES AND OTHER COUNTRIES
[1914 = 100]

| Year and month | United States | Canada | Belgium | Czechoslovakia | Finland | France* (Paris) |
|--------------------|---------------|--------|-------------|----------------|-------------------|--------------------|

^b July.

corresponding prices for August, 1929 and 1930. As will be noted, slight decreases are shown for all countries except France.

FOOD COMPOSITION. It is becoming more and more evident that the composition of natural foods, either of vegetable or animal origin, depends upon many factors and that wide variations may be expected in the composition of the same food under different circumstances. This is particularly true of those constituents which are present in very small amounts such as some of the minerals and the various vitamins. Apples have always been considered to be rather low in the antiscorbutic vitamin C, but Bracewell, Hoyle, and Zilva (*Biochem. J.*, Vol. 24, p. 82) discovered one variety, the English cooking apple known as Bramley's Seedling, to be very rich in vitamin C, containing far more than any other variety tested by them or by previous investigators.

Tomatoes ripened on the vine were found by Clow and Marlatt (*J. Agr. Research*, Vol. 40, p. 767) to contain more vitamin C than greenhouse tomatoes ripened on the vine and than field tomatoes picked green and ripened in the air or with ethylene. Jones and Nelson (*Am. J. Pub. Health*, Vol. 20, p. 387) likewise showed that the naturally ripened tomatoes were higher in vitamin C. While ethylene treatment of green tomatoes did not destroy any of the vitamins already developed, it did not take the place of ordinary ripening in air for their further development.

It used to be said that milk was an ideal food, but with the discovery of the importance of certain minerals and vitamins, it has to be admitted that milk does not contain every food constituent in favorable proportions. Some of the deficiencies can be made up by the cow herself under proper feeding. Steenbock, Hart, and Hanning at the Wisconsin Agricultural Experiment Station (*J. Biol. Chem.*, Vol. 28, p. 197), after rather unsuc-

cessful attempts to increase the vitamin D (antirachitic) content of cow's milk by feeding the cows cod-liver oil, found that the feeding of irradiated yeast increased the vitamin D content of milk in a very satisfactory manner without lowering the fat content of the milk as was the case with cod-liver oil. It is quite probable that this may also be the case with human milk and that nursing mothers may be able to protect their babies against rickets by eating irradiated yeast.

Cows do not seem able, however, to increase the iron (*J. Biol. Chem.*, Vol. 67, p. 43) or copper (*J. Biol. Chem.*, Vol. 83, p. 27) content of their milk no matter how rich their rations may be in these essential constituents. Evaporated, condensed, or dried milk may be considerably richer in copper than raw milk, if copper pans are used for condensing the milk. See also VITAMINS.

FOOD SELECTION AND EXPENDITURE. A dietary survey of 607 families in seven cities and towns in Scotland by Orr and Clark (*Lancet*, 1930, II, p. 594) led to the conclusion that the diets on the whole were adequate as regards energy value, but low in protein and still lower in essential minerals. This study was occasioned by an earlier school lunch demonstration in the same community in which as favorable results were obtained in the use of separated milk as whole milk as a supplementary school lunch. The findings in the dietary study are in harmony with these, since skim milk would increase the protein and mineral content of the children's diet quite as well as would whole milk.

A study by Mathews of the food habits of Georgia rural people (*Georgia Agr. Expt. Sta. Bul.* 159) showed that the diets were probably adequate in calories, protein, and calcium, slightly deficient in phosphorus, and seriously deficient in iron. In food groups, the principal deficiencies were in lean meat, eggs, dairy products, fruits and vegetables, suggesting the need for increased

production on the farms of foods for home consumption. A similar study, but with more emphasis on expenditures, was reported by Talbott at the Idaho Agricultural Experiment Station (*Idaho Agr. Expt. Sta. Bul.* 165). Here differences in food selection in the winter and summer months were more apparent. Averaged for the year, the consumption of fruits and vegetables compared favorably with accepted standards, but in the winter dietaries the consumption of leafy green vegetables was very low and of potatoes very high. The consumption of whole milk was very low and of skim milk comparatively high. The average cost of the food consumed per man per day was 50 cents, with no appreciable differences between summer and winter dietaries.

A valuable study of the cost of adequate diets for farm and village families in New York State was reported by Williams and Lockwood (*New York Cornell Agr. Expt. Sta. Bul.* 502). The method followed was the analysis of day-by-day accounts for a four-week period of all the food consumed by 100 or more families who were economically independent and in good health, but of widely varied economic status. The records were spread through a period of about 20 months, thus covering all seasons. After comparison of the diets with previously adopted standards of adequacy, the food costs of those diets meeting the standards of adequacy were calculated and from these figures tables were prepared of adequate low-cost food budgets for all ages from a child a year old to an adult doing active work. The investigation showed that for village families with no home-produced foods the cost of an adequate diet need not exceed 50 cents per man per day under conditions existing at the time the data were collected (1926-1927), and that with wise planning and the use of home-produced milk, meat, eggs, fruits, and vegetables it is possible for the farm family to reduce the money expenditures for food far below this figure.

THE NUTRITION OF WOMEN DURING REPRODUCTION AND LACTATION. Coons and Blunt (*J. Biol. Chem.*, Vol. 86, p. 1) studied the nitrogen, calcium and phosphorus metabolism of nine women at intervals from the 11th to the 39th week of pregnancy. The nitrogen retention tended to vary with the intake, but in general was higher in midpregnancy than later. The calcium retention was also irregular, but with a marked tendency to rise toward the end of pregnancy. The phosphorus retention rose during the early part of pregnancy and then remained at a fairly constant level. Success in lactation was associated with satisfactory nitrogen retention and partial failure with low retention. Röntgenograms of the wrists and ankles of most of the babies on the eighth day after birth showed differences which closely paralleled the mothers' good or bad retention of calcium.

The subjects in the study of Coons and Blunt were homemakers of varying social and economic status. Superior milk producers of the Mother's Milk Bureau, Detroit, served as subjects in an extensive investigation by Macy and associates of calcium and phosphorus utilization during two successive lactation periods and the intervening pregnancy (*J. Biol. Chem.*, Vol. 86, p. 17), and of the fluctuations and total volume of milk produced during the two lactation periods (*Am. J. Diseases Children*, Vol. 39, p. 1186). The excessive drain on the system for calcium during successive lactation periods was shown by the fact that although the calcium balances were positive during the

latter part of the first of the two lactation periods studied they became negative at one time or another during the subsequent pregnancy and in the early and late periods of the following lactation in spite of the fact that food consumption data showed a high intake of calcium. The phosphorus balances were positive during the latter part of the first lactation and the greater part of the pregnancy, but also became negative during part of the second lactation.

These women were on self-chosen diets furnishing between 3700 and 4700 calories, 27.8 and 29.4 gm. of nitrogen, 2.8 and 4.4 gm. of calcium, and 2.9 and 4.3 gm. of phosphorus daily. Their milk production, while varying from day to day, gradually increased as lactation progressed up to a certain level and then remained fairly constant for several weeks. While the milk production was at its height and calcium and phosphorus balances were negative, the diet of each of the subjects was supplemented by 15 gm. of cod-liver oil and 10 gm. of yeast for a period of two months. This not only had a very favorable effect upon the retention of both calcium and phosphorus, but improved the general condition of the women. The women were enormous milk producers, one of them averaging 2602 cc. (or about 2.8 quarts) daily in the latter part of the first and 3134 cc. (3.3 quarts) in the second of the two lactation periods studied. Complete removal of the milk from the breasts at regular intervals, as is the practice of milk producers at this bureau, increased the flow of milk. Hoobler (*J. Am. Dietet. Assoc.*, Vol. 6, p. 10) considers the method of stripping the breasts after each nursing the best means of maintaining a milk supply or increasing a failing one. In his opinion the protein content of the diet of nursing mothers should be relatively high and the calorie intake about 3000. Although all the vitamins are considered to play some part in milk production, vitamins A, B, and E are thought to have a greater influence than C and D.

THE NUTRITION AND GROWTH OF CHILDREN. On the basis of metabolism experiments, minimum requirements of various food essentials for children have been proposed. From calcium and phosphorus balance experiments conducted on 18 children, Wang, Kern, and Kaucher (*Am. J. Diseases Children*, Vol. 39, p. 768) concluded that "the minimum and not the optimum calcium and phosphorus requirements of an 8-year-old child weighing 20 kg. and living on a mixed diet would be 0.64 gm. of calcium oxide and 1.58 gm. of phosphorus pentoxide per day."

Parsons (*Am. J. Diseases Children*, Vol. 39, p. 1221) concluded from protein metabolism experiments on three normal children of preschool age and two diabetic children 12 and 4 years of age under insulin treatment that a healthy child from 4 to 8 years of age can maintain a positive nitrogen balance on 0.5 gm. per pound or 1.1 gm. per kilogram body weight, and that with insulin a diabetic child requires twice this amount for normal development. Rose and associates (*J. Nutrition*, Vol. 3, p. 229) on the basis of an iron metabolism experiment conducted on a child two years and seven months of age recommended that children from two to three years of age receive at least 0.75 mg. of iron per 100 calories.

The use of height and weight standards as the sole method of determining the nutritional status of children continued to receive considerable criticism. The custom of measuring children with only outer garments removed was criticized by Whit-

acre and Sumner (*J. Home Econ.*, Vol. 22, p. 869) who found in the course of a study of the growth in height and weight of white, Mexican, and Negro school children in Texas wide variations in clothing weights even after outer clothing, shoes, and accessories had been removed. In their opinion accuracy cannot be attained in following the weight of school children from month to month unless "the child is weighed (1) in a known weight of clothing, (2) at approximately the same hour of the day each month, and (3) with his urinary bladder empty."

Frayser and Moser (*So. Carolina Agr. Expt. Sta. Bul.* 268) in reporting a story of the dietary habits and health of about 300 South Carolina school children 8, 9, and 10 years of age noted that 41 per cent of the children were ranked by the examining physician as in poor, 36 in fair, and 32 in good nutritive condition, while according to the Baldwin-Wood height-weight-age tables nearly half of those judged to be in poor nutritive condition would have come within 10 per cent of the satisfactory weight standards. In a much more extensive investigation by Ahman, Abbott, and Westover (*Florida Agr. Expt. Sta. Bul.* 216) of the nutritional status of over 3000 school children in five representative counties in Florida, no relationship could be established between the dietary scores and height and weight records. Children suffering from hookworm infestation tended to be overweight and from defective tonsils underweight. The report of this investigation emphasizes the fact that until such defects as hookworm infestation and defective tonsils are corrected, weight should not be used as the standard for nutrition.

School lunches either supplemental to the regular three home meals or as the midday meal of children unable to go home for lunch continued to receive attention. Morgan and Barry (*Am. J. Diseases Children*, Vol. 39, p. 935) demonstrated the value of increasing the vitamin B content of the diet of underweight school children by supplemental feeding at the noonday school lunch of rolls containing 50 per cent wheat germ to furnish additional vitamin B.

An extensive survey by Davies (*Mass. Agr. Expt. Sta. Bul.* 263) of the food service in Massachusetts rural elementary schools revealed the fact that out of 57,600 pupils 16,000 remained in the school buildings for their midday meal. In 71 per cent of the buildings, however, there was no food service of any kind, in 23 per cent some hot drink or soup was served during the winter months, in 3 per cent milk alone was served either as a midmorning lunch or at noon, and in 3 per cent a regular meal was served throughout the entire year. That provision for some hot food for school lunches is not beyond the possibility of schools with very limited resources was shown in the report of this study by description of some of the existing services. In discussing supplemental milk feeding, Davies suggested that the frequent objection to such service on the ground that it spoils the pupil's appetite for lunch can be explained through the fact that the usual time for serving milk is at midsession or recess, which is too near the noonday meal. Midmorning, halfway between breakfast and the noon meal, is in general about 9.30, and this is the time at which supplemental feeding should take place.

Gillett, *Dietetics for High Schools* (rev., New York).

FOOTBALL. Notre Dame won recognized pre-eminence among American college football teams of 1930, meeting the strongest teams in the East, the Middle West, and the Pacific Coast and ending the season undefeated and untied. Northwestern and Michigan were the outstanding teams of the Big Ten Conference; Army, Colgate, Dartmouth, and Fordham, of the East; Alabama and Tulane, of the Southern Conference; Washington State, of the Pacific Coast Conference; the University of Texas, of the Southwest Conference; and the University of Utah, of the Rocky Mountain Conference. Alabama also went through a hard schedule undefeated. Army and Navy played for the first time in three years, the game in New York City, December 13, being arranged for the benefit of the Salvation Army's unemployment relief fund. A team of picked Western players defeated an Eastern mixed eleven at San Francisco, December 27, by a score of 3 to 0.

The number of college, preparatory, and high-school students participating in football was greater than ever before. The number of spectators, however, showed a decline from the peak of 1929, particularly in the Middle West. Night college football, inaugurated in the Middle West in 1929, proved somewhat more popular in 1930. A total of 13 players were killed during the football season, of whom eight were on high-school teams, four on college elevens, and one on an independent team. The increasing emphasis upon and the tendency toward commercialization of football and other leading amateur sports increased the chorus of condemnation and criticism voiced in 1929 in a report of the Carnegie Foundation. Dr. Nicholas Murray Butler, president of Columbia University, at the end of the 1930 season advocated an intercollegiate athletic league for the elimination of sports abuses. Dr. William Mather Lewis, president of Lafayette College, joined Dr. Butler in deploring the "lack of moderation in the field of athletics, particularly football" at the opening of the National Collegiate Athletic Association convention in New York City, December 29. The American Football Coaches Association, meeting at the same time, adopted resolutions intended to meet in part the criticisms directed at the game.

Among the outstanding players of the year were: Centres, Ben Tieknor of Harvard, Siano of Fordham, Hein of Washington State; guards, Linehan of Yale, Metzger of Notre Dame, Leathers of Georgia, Humber of Army; tackles, Price of Army, Edwards of Washington State, Van Bibber of Purdue, Sington of Alabama; ends, Conley of Notre Dame, Smith of Georgia, King of Army, Ebbing of St. Mary's, and Fesler of Ohio State. Of the large list of brilliant backs, those particularly noteworthy were Bruder of Northwestern, Carideo and Schwartz of Notre Dame, Macaluso of Colgate, Pinckert of Southern California, Hewitt of Columbia, Suther of Alabama, Roberts of Georgia, Newman of Michigan, Rentner of Northwestern, Booth of Yale, Stecker of Army, Bennett of Princeton, and Wood of Harvard.

Scores of some of the important games follow:

Army, 6—Navy, 0; Notre Dame, 7—Army, 6; Stanford, 14—Dartmouth, 7; Notre Dame, 14—Northwestern, 0; Harvard, 13—Yale, 0; Navy, 6—Maryland, 0; Yale, 10—Princeton, 7; St. Mary's, 20—Fordham, 12; New York University, 2—Georgetown, 0; Brown, 6—Columbia, 0; Dartmouth, 19—Cornell, 13; Williams, 16—Amherst, 13; Michigan, 7—Minnesota, 0; Pennsylvania, 34—Georgia Tech, 7; Alabama, 12—Vanderbilt, 7; Notre Dame, 27—Southern California, 0; Navy, 26—Pennsylvania (University), 0; Colgate, 7—New York University, 6; Washington State, 13—Villanova, 0; Holy Cross, 7—Boston College, 0; Georgia, 7—New York University, 6; Fordham, 13—Detroit, 7; Michigan, 6—Harvard, 8; Army, 13—Illinois, 0; Pittsburgh, 7—Carnegie Tech, 6; Ohio State, 27—Navy, 0; Columbia, 10—Cornell, 7; New York University, 20—Carnegie Tech, 7; Dartmouth, 0—Yale, 0; Princeton, 0—Chicago, 0; William and Mary, 13—Harvard, 13; Army, 7—Yale, 7; St. Mary's, 7—Oregon, 6; Washington State, 16—California, 0.

The Green Bay Packers won the championship of the National Professional Football League for the second successive year. Professional football enjoyed its most successful season from the viewpoint of attendance, 40,000 spectators attending the crucial game of the season in New York City.

FORAGE CROPS. See ALFALFA; HAY.

FORBES, STEPHEN ALFRED. An American entomologist and educator, died in Urbana, Ill., Mar. 13, 1930. He was born in Silver Creek, Ill., May 29, 1844. He served during the Civil War with the 7th Illinois Volunteer Cavalry and rapidly won promotion to the rank of captain. At the close of the war he studied medicine for some time at the Rush Medical College, then decided to become a naturalist. In 1872 he became curator of the museum of the Illinois State Natural History Society, and in 1875 was appointed instructor in zoölogy in the Illinois State Normal University, where he remained until 1878. The museum was converted by act of the State Legislature in 1877 into the Illinois State Laboratory of Natural History, and he was made director. Five years later he was appointed State entomologist. In 1884 he became professor of zoölogy and in 1909 professor of entomology at the University of Illinois, holding the latter chair until his retirement in 1921. He also served as dean of the college of science at this institution from 1888 to 1905. In 1927 the Illinois State Laboratory of Natural History and the State entomologist's office were converted, under his direction, into the Natural History Survey of Illinois.

In addition, Professor Forbes conducted expeditions and made special studies for the U. S. Fish Commission in Yellowstone Park, the Flathead region of Montana, Lakes Superior and Michigan, and certain lakes in Wisconsin, gaining recognition as the foremost American authority on aquatic biology. During the Chicago Exposition in 1893 he organized the International Congress of Zoölogists, and was president of the American Association of Economic Entomologists in 1893 and 1908, of the Entomological Society of America in 1912, and of the Ecological Society of America in 1921. The Ph.D. degree was conferred on him by Indiana University in 1884 and the LL.D. degree by the University of Illinois in 1905. The first-class medal of the Société d'Acclimatation de France was presented to him in 1886 for his scientific publications. His works include: *Biennial Reports as State Entomologist, 1883-1916*; *Studies of the Food of Birds, Fishes, and Insects*; *Contagious Diseases of Insects*; *Papers on the Ecological Distribution of Illinois Birds and Fishes, and on the Entomostraca of North America*; and *Final Report on the Fishes of Illinois and Studies on the Biology of the Ill-*

inois River (with R. E. Richardson). He also edited the bulletins of the Illinois State Laboratory of Natural History and of the Natural History Survey of Illinois.

FORBES COMMISSION. See HATTI under *History*.

FORD, GEORGE BURDETT. An American architect and city planning specialist, died in New York City, Aug. 13, 1930. He was born in Clinton, Mass., June 24, 1879, and was graduated from Harvard University in 1899 and from the Massachusetts Institute of Technology in 1900 (S.B.) and 1901 (M.S.). On completing the course at the École des Beaux-Arts in Paris in 1907, he became associated with George B. Post and Sons, architects, with whom he continued his practice for the next 10 years. In 1910 he was appointed delegate from the United States to the International Housing Congress in Vienna, and on his return became consulting engineer to the commission on city planning and the commission on building districts and restrictions of the Board of Estimate and Apportionment of New York City. In 1916 he was a member of the American Industrial Commission to France. On the entrance of the United States into the World War he organized the reconstruction bureau of the American Red Cross and served as a deputy commissioner of that organization in France from 1917 to 1919. He was also a member of the housing committee of the Council on National Defense and city planning consultant to the U. S. War Department. During 1919-20 he was consultant to the French government in the reconstruction of Rheims, Soissons, and other cities destroyed in the War, and was made a chevalier of the Legion of Honor in recognition of this service.

In 1923 Mr. Ford was consultant to the committee of the Russell Sage Foundation engaged in making a study of the Regional Plan of New York and Its Environs, and later served in the same capacity to the Regional Planning Federation of the Philadelphia Tri-State District. As vice president of the Technical Advisory Corporation, he acted as adviser to city planning commissions in more than 25 American cities and as zoning consultant to 94 cities. In 1929 he acted as consultant to the Philippine government in replanning the city of Manila and environs, and in 1930 was appointed director of the Regional Plan Association in New York City. He was town planning lecturer at Columbia University during 1914-16, to the U. S. Army Educational Corps in France in 1919, and at Harvard University in 1929. In addition, he was president of the Federated Societies on Planning and Parks, past president of the American City Planning Institute, and director of the Planning Foundation of America. His works include: *City Planning Progress* (1917); *Out of the Ruins* (1919); and *Urbanisme en pratique* (1919).

FORDHAM UNIVERSITY. A Roman Catholic institution for higher education, under the Society of Jesus, at Fordham, New York City; founded as St. John's College in 1841. It is the largest Roman Catholic educational institution in the United States. The enrollment for 1930-31 totaled 10,121 students, including 1392 in the teachers' college and 658 in the graduate school, and a distribution among the other colleges as follows: Law, 1208; St. John's College, 1364; downtown college, 787; business administration, 316; pharmacy, 511; social service, 852; Irish

studies, 141; extension, 808; preparatory school, 543. The registration for the summer session of 1930 was 1541. There were 384 faculty members. The endowment fund amounted to \$381,500. There were 110,000 volumes in the library. President, the Rev. Aloysius J. Hogan, S.J., Ph.D., who was formally inducted Nov. 21, 1930, succeeding the Rev. William J. Duane.

FOREIGN EXCHANGE. See FINANCIAL REVIEW.

FORESTRY. From a commercial viewpoint, forestry suffered along with other prominent industries during 1930 with decreased sales of lumber and lumber products at prices generally below those of the preceding year. Yet from the constructive standpoint of education, development of far-seeing policies, and improved public attitude there was considerable progress. There is no longer any question in the popular mind of the importance of forestry in the public welfare programme, especially in the agricultural programme where it is recognized that unprofitable farming lands should go back into well-kept forests. A writer in the November *Journal of Forestry* estimated that there remained in the United States 125 of the original 822 millions of acres of natural forests. Apparently too much of the cleared land was rushed into agriculture with the result that some of the so-called marginal lands must now revert into forests to the benefit of every one, the farmer, the forester, and the ultimate consumer.

THE LUMBER SITUATION. Tremendous increases in the imports of Russian lumber and pulpwood caused much worry to American lumber interests during the year. The Russian government in an effort to raise adequate funds for mechanizing and industrializing that nation embarked on a programme of converting some of Russia's vast natural resources into ready money. In the *Journal of Forestry*, December, 1930, the statement was made that seven prominent eastern United States pulp companies had contracted to import 280,000 cords of Russian pulpwood during 1930, in sharp contrast with imports totaling barely 3000 cords in 1929. From the viewpoint of forest conservation, the receipt of such vast quantities of foreign lumber might appear desirable as it meant that much less American timber need be cut, but from an economic standpoint such radical changes in a major industry such as lumber production was certain to cause disruption in normal procedure and bring widespread distress to thousands of workers and their families. An attempt to thwart Russian lumber importations on the grounds that such materials are produced by convict labor failed because of inadequate supporting evidence. See RUSSIA under *History*.

CANADIAN FORESTRY. According to the National Development Bureau of the Canadian Department of the Interior, over 32 per cent of the land area of Canada was in forests. The volume of standing timber was estimated at 224,304 million cubic feet, capable of yielding 424,637 million board feet of lumber, and 1,121,993,000 cords of pulpwood. The tremendous contribution of the Canadian forests to the Dominion's welfare is shown in a production of sawn lumber, pulpwood, shingles and other forest products in the year 1928 of over 139 million dollars in value. The United States was said in this report to be one of Canada's best customers for lumber products, especially newsprint material, the production of which in 1928 was estimated at 2,849,687 tons valued at over \$184,000,000. See CANADA under *Forests*.

THE UNITED STATES NATIONAL FORESTS. Adhering to a policy of gradually increasing the area of the nationally-owned forests, 340,297 acres were added to the net area during the fiscal year ended June 30, 1930, making a grand total of 160,090,817 acres in the National Forests. In order adequately to manage these vast holdings, the entire country was subdivided into nine forest regions, each in charge of a responsible executive. Cash receipts from sale of timber, grazing fees, lease of water-power sites, etc., reached a total of \$6,751,553. Expenditures, on the other hand, approximated \$27,000,000 but included many permanent improvements such as highways and trails to render the forests available to the people and also to assist in expediting fire control, handling of timber, etc. If it were possible to evaluate the recreational returns of the National Forests, to the American people, there is no question but that the books would balance more favorably. A total of 18,196 acres were replanted with nursery stock, making slow progress in the restoration of the some 2,000,000 acres included in the National Forests that need replanting.

FOREST PROTECTION. According to the report of the Forester to the Secretary of Agriculture, 1930, in spite of the drought, was on the whole a moderate season in respect to forest fires, standing out in sharp contrast to the preceding year in which vast forest areas were burned and 16 Forest Service and 6 other workers lost their lives. The severe drought in the eastern United States was indirectly responsible for an unusual number of fires. Lightning, rarely a factor in the East, started many fires in the Arkansas forest area. The construction of highways and trails is gradually breaking down the greatest obstacle in fire control, namely, inaccessibility. The effectiveness of control measure was shown by the Forest Service to be correlated very closely with the time elapsing between outbreak of the fire and start of control measures.

Bark beetles continued to ravage mature stands of timber in the Northwest States, epidemics which necessitated drastic control treatment, namely, the felling of and peeling of infested trees, occurring in Idaho, Wyoming, Montana, Oregon, and Colorado. An outbreak of spruce bud worm occurred in the Shoshone National Forest in Wyoming.

The White pine blister rust, deadly to all five needled pines, spread rapidly in Idaho and Oregon, endangering the valuable stands of western white pine in these and nearby States. This destructive disease spends part of its life cycle on the gooseberry and currant plants, a fact which makes its control possible but nevertheless difficult because of the number and wide distribution of these alternate hosts.

Chestnut blight, which in a very few years had practically eliminated this fine species from North American forests, occupied the attention of investigators. Department of Agriculture plant explorers searched the remote regions of China and Japan for resistant species of this tree, which has always had much importance as a source of tanning extract as well as lumber and nuts. Thousands of viable nuts and many living twigs were sent to the United States and were being grown in the hope of discovering a satisfactory substitute for the susceptible American species.

FORESTRY RESEARCH. Continuing the policy of organizing its research work on a systematic regional basis, the U. S. Forest Service established

two new experiment stations in 1930, the South-western Forest and Range Station at Tucson, Arizona, and the Intermountain Forest and Range Station at Ogden, Utah. In both cases several scattered and rather independent units were brought together under one head with the purpose of a more effective attack on problems. Certain outstanding research results were presented in the 1930 report of the Forester of the U. S. Department of Agriculture. At the Pacific Northwest Forest Experiment Station it was found that forest tree seed may be carried one-half mile in a high wind, but that in general 500 feet is a maximum distance for seed to travel from the parent tree, thus necessitating the leaving of rather frequent seed trees at time of cutting the forest.

At the Lake States Forest Experiment Station there were found wide differences in the vigor of young nursery trees in relation to the region from which the seed was obtained. Work in the pineries of the South indicated the unprofitableness of tapping pines less than 9 inches in diameter. Studies on the deep silt soils of Wisconsin showed that forests are highly effective in limiting loss of soil from erosion, even more so than grass. Studies of the structure and chemistry of various woods were carried on at the Forest Products Laboratory, Madison, Wisconsin, with a view to developing scientific methods of kiln drying, preservation, and pulping and the best methods of utilization. As a result of these studies, various species formerly considered of inferior value were found to have a distinct and useful place in the lumber and lumber products industry.

PERSONAL. Dr. C. F. Korstian, of the U. S. Forest Service, was appointed head of forestry activities at Duke University, Durham, N. C., where it was proposed to establish a school of forestry with experimental and demonstration forests. Dr. H. P. Baker was elected dean of the New York State College of Forestry at Syracuse University, Syracuse, N. Y., to succeed the late Franklin F. Moon who died in 1929. Will C. Barnes, well-known magazine writer on range and forest subjects retired from the Federal Forest Service to devote his entire time to writing. Stephen T. Mather (q.v.), constructive and far-visioned director of the National Parks Service died Jan. 22, 1930, leaving an everlasting monument to his memory in the wonderful system of parks built up during his administration.

BIBLIOGRAPHY. Forestry publications of the year were largely in the nature of short popular articles appearing as bulletins or in periodical form. Some of the books of the year follow: J. E. Kirkwood, *Northern Rocky Mountain Trees and Shrubs* (Stanford University Press, 1930); W. Fry, *Big Trees* (Stanford University Press, 1930); C. Wagner, *Lehrbuch des Forstschutzes* (Berlin, 1930); W. E. Hiley, *The Economics of Forestry* (Oxford, England, 1930); *The First Thirty Years of the Yale School of Forestry* (New Haven, Conn.); *The Forest Service*, Brookings Institution Monograph (Washington, D.C., 1930).

FORMOSA or TAIWAN. An island about 75 miles off the southern coast of China, ceded by China to Japan on June 2, 1895. The area is 13,155 square miles, excluding the adjacent Hokoto (Pescadores) islands, with an area of 48 square miles, and other small islands. The population in 1930 was 4,594,161, of whom (in 1927) about 202,990 were Japanese, 130,400 were aborigines, and 37,953 were foreigners. Taihoku, the capital, had 205,613 inhabitants in 1926. Other leading towns

were Tainan, 87,930; Keelung, 68,049; and Kagi, 47,894. In 1926-27, there were 132 primary schools for Japanese, with 27,433 pupils, and 550 schools for natives, with 219,182 pupils, in addition to various secondary schools and the University of Formosa, opened in 1928.

Rice, tea, sugar, and various fruits are the chief agricultural products, but the island produces in commercial quantities nearly every tropical and subtropical product. It supplies all of the world's Oolong tea and nearly all of the natural camphor. Indigo, hemp, sweet potatoes, cereals, and peanuts are other crops. Production of the chief crops was: Rice, 34,811,618 bushels (1928); tea, 9,098,000 pounds (1928); raw sugar, 811,312 tons (1928-29). An irrigation and drainage project for the reclamation of 562 square miles of land was completed in 1930 at a cost of \$26,919,000. Much of Formosa is heavily forested with camphor and other valuable trees. The total value of mineral production during 1928 was 16,513,301 yen (1 yen exchanged at \$0.464 in 1928). Gold, copper, silver, sulphur, petroleum, and coal are the principal minerals worked. The total catch of the fisheries (1928) was valued at 16,000,000 yen. Manufacturing is confined mainly to the making or refining of flour, sugar, tobacco products, oil, iron-work, glass, bricks, and soap. The manufacture and sale of opium, alcohol, salt, camphor, and tobacco products are Government monopolies.

Trade is mainly with Japan proper, exports to Japan in 1928 totaling 214,521,597 yen and imports 132,318,204 yen; in the same year exports to foreign countries totaled 33,895,688 yen and imports 58,335,729 yen. China, the United States, the Dutch East Indies, and Great Britain were the principal customers and also the leading sources of imports after Japan. The total trade increased from 332,168,355 yen in 1919 to 439,071,218 yen in 1928. For the fiscal year ended Mar. 31, 1929, actual revenues totaled 110,430,266 yen, excluding 37,093,545 yen representing the surplus carried over from the preceding year, and total expenditures were 109,109,280 yen. The working budget for 1929-30 balanced at 118,720,279 yen. Except for private lines serving the sugar plantations, the railways of the island are Government owned and operated. In 1928-29, there were 537 miles of Government lines, which carried 20,668,289 passengers, and 4,948,734 tons of freight, the revenues totaling 19,697,355 yen. Private lines totaled 1339 miles at the end of 1928, and tracks for hand-pushed cars, 758 miles. Of approximately 9394 miles of highways and roads in 1929, only about 2500 miles were fit for motor traffic.

The civil government of the island is administered by a Japanese governor-general, supported by a force of Japanese police. To guard the settled areas against inroads of the still unsubdued aborigines in the northern mountains, a frontier zone of over 360 miles has been established, of which about 230 miles are protected by charged barbed wire. One of the most serious native outbreaks in the history of the Japanese occupation occurred in October, 1930, when fierce Altaiyol tribesmen of Central Formosa attacked a Japanese colony at Musha, killing 86 and wounding 308. A strong Japanese punitive force later captured and burned several aborigine villages, but the topography of the country rendered the subjugation of the tribesmen virtually impossible. Governor-General in 1930, Eizo Ishizuka.

FOSSILS. See ANTHROPOLOGY; EXPLORATION; GEOLOGY; and ZOÖLOGY.

FOUCAULT, fōō'kō', Mgr. ALPHONSE GABRIEL. A French Roman Catholic prelate, died in Paris, May 27, 1930. He was born in Senonches, Mar. 24, 1843, and saw service during the Franco-German War as an ambulance driver. After taking orders in 1870 he was successively professor at the Institut Notre-Dame in Chartres and arch-priest of Nogent-le-Rotrou. In 1893 he was consecrated bishop of Saint-Dié, and at the close of the World War was cited for remaining in the city during the German bombardment. On the occasion of the fiftieth anniversary of his ordination in 1926, he consecrated a church to St. Jeanne d'Arc in Domremy, her birthplace, in the diocese of Saint-Dié.

FOUNDATIONS. The tendency in modern work to avoid pneumatic methods in foundation construction wherever possible was even more marked in 1930 than previously. As a matter of fact, there was not a single important pneumatic building foundation under construction in New York City as the year came to a close—a most unusual condition for this skyscraper centre. Among the newer methods which had come into prominence was the steel tube pile. Sectional steel pipe is driven by pile driver, usually to rock, the interior earth and silt is blown out by compressed air, and the tube is filled with concrete, thus providing essentially a nest of small piers to rock instead of the solid pier construction so widely used in former years.

In the bridge field there was to be noted not only the "sand-island" plan of the Suisun Bay construction, but also the novel method used in sinking piers 80 feet in depth through the New Jersey meadow muck for the Pennsylvania-Hackensack crossing by an ingenious scheme which reduced the air process to a minimum.

A modification of the cofferdam-caisson method was also developed in the construction of the huge City Service Building at Pine and Pearl Streets in New York. As originally planned, and as used so successfully in such great works as the Federal Reserve Bank in New York, the line of caissons, which form a cofferdam completely around the site to be excavated, have been supported, as excavation proceeded, by a perfect forest of heavy timber braces set in tiers or levels. At the Pine Street work it was found possible to support the double ring of sheet-pile caissons by inclined braces or shores, thus reducing greatly the amount of timber required and keeping the construction at all times remarkably free from obstruction due to timbering.

Legislation, due to the severe regulations applying to compressed air work and the consequent high cost of pneumatic methods, had thus forced the development of new and ingenious foundation methods.

HACKENSACK RIVER CROSSING. Eight piers of the approach structure leading to the new Pennsylvania Railroad passenger bridge over the Hackensack River, between Jersey City and Kearny, are supported on what may be described as huge pedestal piles. Some 80 feet of muck had to be penetrated to bring the bottoms of the 48- and 54-inch piles or columns to the hardpan below. A special boring machine, consisting of a three- or four-blade propeller-like auger mounted on a vertical shaft, was used, together with water jets, to churn up the muck down to the hardpan into a semi-liquid mass, about one inch larger in

diameter than the pile. In the vertical bore thus formed, filled with liquid mud and hence not requiring bracing, corrugated steel pipes were driven. These pipes were then dredged out with special well buckets and clamshells, and compressed air apparatus was installed. Working under air pressure two or three "sand-hogs" widened out the bottom of each tube so as to give a bearing area on the hardpan 11 or 12 feet in diameter. A frame of reinforcing steel was placed in each tube and the entire section was then filled with concrete. Six of the piers rest on eight of these supports, each 48 inches in diameter, and two of the piers required ten 54-inch supports.

DEADMAN ISLAND DAM. A unique form of cofferdam construction, somewhat similar to that used in 1910 in removing the wreck of the battleship *Maine* from Havana harbor, was used in constructing the foundations of this Ohio River dam. The work is located at Shields, Pa., 13½ miles below Pittsburgh, and is an important part of the 9-foot Ohio River canalization plan which President Hoover officially opened in 1929. The dam is of the ogee section, overflow type about 1600 feet long and 38 feet high. Seventy-eight cofferdam units, each consisting of a circle of steel sheet piling 40 feet high and 40 feet in diameter, driven to rock and filled with gravel and sand, were used to unwater the site and permit the foundation to be placed and the dam built.

REINFORCING MAUMEE RIVER BRIDGE PIERS. The original bridge of the Toledo Terminal Railway was a single-track structure designed for an E 40 loading, but built with piers of sufficient size to take a double-track bridge. When it was proposed to build a new double-track bridge for an E 70 loading, almost twice the original, it was clear that the foundations of the original piers would not suffice. This led to a unique foundation and underpinning problem. The original piers were on timber grillages 4 feet thick located 8 to 23 feet below river level and resting on timber piles. Steel sheet pile cofferdams were built around the piers, the silt under the grillages and around the piles was removed (about 8 feet in depth), new piles were driven, and the entire space filled solidly with concrete. Excavation at one pier showed that the pier had been moved, due to a steamer colliding with it, so that it overhung the piles by 10 feet and the piles also had all been tilted over 10 degrees.

BRAZOS RIVER, TEXAS. Two piers for the new highway bridge over the Brazos River near Chapel Hill, Tex., involved a novel form of caisson construction. Reinforced concrete caissons 17 by 44 feet in size were roofed over to form a working chamber as it was expected that air pressure would be needed to complete their sinking. Special holes were left in this roof to which large vertical steel tubes were welded. The caissons were brought to rest on a thin layer of sandstone overlying clay and were pinned down and reinforced in bearing by driving piles through the above-mentioned tubes.

BRISBANE RIVER BRIDGE, AUSTRALIA. Every year in recent years foundation work somewhere has required using pneumatic pressure of the limiting amount—about 50 pounds per square inch above atmosphere. In 1930 this distinction rested with the builders of the Brisbane Bridge in Australia. The piers of this bridge rest on circular caissons, 28 feet in diameter, carried 96 to 115 feet below water level to rock. Pressures of 35

to 50 pounds were required for this work, and, as is usual in well-ordered modern construction, no difficulty was experienced with caisson disease. See BRIDGES.

FOUNDATIONS, EDUCATIONAL. See EDUCATION IN UNITED STATES; UNIVERSITIES AND COLLEGES; BROOKINGS INSTITUTION; CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING; ROCKEFELLER FOUNDATION; RUSSELL SAGE FOUNDATION.

FOWLS, FOWL DISEASES, etc. See LIVE-STOCK; VETERINARY MEDICINE.

FRANCE. A republic of western Europe, whose land frontiers are bounded by Belgium, Luxembourg, Germany, Switzerland, and Italy on the north and east and by Spain on the south. Capital, Paris.

AREA AND POPULATION. The acquisition of Alsace-Lorraine as a result of the World War increased the area of France from 207,054 to 212,659 square miles (see ALSACE-LORRAINE). The population in 1929 was estimated at 41,130,000, as compared with 40,743,897 at the census of 1926 and 39,209,518 at the census of 1921. Slightly more than half of the population was rural in 1926. In the same year there were 2,505,047 foreigners in the country (1,550,459 in 1921). For the first time since the World War, the French death rate in 1929 exceeded the birth rate. Births totaled 728,540 and deaths 741,104, the excess of deaths over births being 12,564, as compared with 745,315 births, 675,110 deaths, and a surplus of 70,202 births in 1928. The number of marriages fell to 333,441 in 1929 from 339,014 in the preceding year, while the number of divorces increased by 531. Cities with a population of more than 200,000 in 1926 included: Paris, 2,871,429; Marseilles, 652,196; Lyons, 570,840; Bordeaux, 256,026; and Lille, 201,921. Between 1925 and 1929, contract workers entering numbered 385,808 more than those leaving France.

EDUCATION. Elementary education is free and compulsory between the ages of 6 and 13. The school system is centralized and divided into primary, secondary, and superior classes, all under the administrative direction of the Superior Council of 52 members, which acts in collaboration with a Consultative Committee and the Minister of Education. In 1927-28 there were 3677 infants' schools, with 361,690 pupils (of which 3094 schools, with 345,911 pupils, were public), and 80,146 primary schools, with 3,911,354 pupils (of which 68,257 schools, with 3,139,024 pupils, were public). Higher elementary schools (November, 1927) totaled 512, with 78,641 pupils. Enrollment in the 565 secondary schools in November, 1928, was 171,186, including 53,503 girls. The 17 universities had a total enrollment of 64,531 on July 31, 1928, of which 17,502 were registered in law, 13,853 in medicine, 14,203 in sciences, 13,912 in letters, 4793 in pharmacy, and 268 in theology. Professional and technical instruction is provided in various other institutions.

AGRICULTURE. Despite the development of industry, agriculture remains the bulwark of French prosperity and economic stability. At the census of 1928, 54,755,528 acres were devoted to crops, or about 41 per cent of the total rural area; there were 28,193,889 acres of permanent meadow and pasture, 2,328,450 acres of orchards and vineyards, 25,830,407 acres of woodland, and 11,281,033 acres of waste land. The farm land is more widely distributed among peasant proprietors than in any country in Europe, there being

about 5,500,000 farm owners, with an average farm area of 24 acres. Although 50 per cent of the population are engaged in agricultural pursuits, the normal farm output does not meet domestic consumption needs for cereals, colonial products, alcoholic beverages, and fresh fruit. A considerable surplus of wine, dairy products, preserved and fresh fruits, and vegetables, is exported.

As shown in the accompanying table from the *Commerce Year Book* for 1930, crops in 1929 were abnormally large, resulting in a drastic price decline which caused the intervention of the Government in an effort to protect French farming interests.

FRENCH CROPS: AREA AND PRODUCTION

| Crop | Area ^a | | Production ^b | |
|-------------------------------|-------------------|--------|-------------------------|------------------------|
| | 1928 | 1929 | 1928 | 1929 |
| Wheat | 12,957 | 12,750 | 281,283 | 319,861 |
| Rye | 1,900 | 1,936 | 34,080 | 39,484 |
| Barley | 1,756 | 1,853 | 50,858 | 59,025 |
| Oats | 8,657 | 8,665 | 340,254 | 395,755 |
| Corn | 834 | 852 | 12,115 | 19,646 |
| Potatoes | 3,639 | 3,644 | 413,872 | 610,601 |
| Sugar beets | 621 | 607 | 5,009 ^c | 5,361 ^c |
| Beet sugar ^d | | | 893 ^c | 892 ^c |
| Grapevines | 3,927 | 3,949 | 1,543,161 ^e | 1,661,672 ^e |
| Olives ^f | | | 114,590 ^f | 107,520 ^f |
| Olive oil ^g | | | 2,318 ^g | 2,897 ^g |
| Hay | 7,267 | 7,245 | 10,973 ^h | 10,032 ^h |
| Fodder beets | 1,903 | 1,932 | 19,776 ^h | 21,704 ^h |
| Green forage | 1,764 | 1,789 | 10,002 ^h | 9,818 ^h |

^a Thousands of acres.

^b Thousands of units—bushels except as indicated.

^c Unit, metric ton.

^d Seasons ended following year.

^e Unit, gallon of wine.

^f Unit, pound.

^g Unit, gallon.

In 1930, crop yields, with the exception of sugar beets, declined sharply due to adverse weather conditions. The wheat crop was one of the poorest on record in both quantity and quality, totaling 230,843,000 bushels, as against 319,270,000 bushels in 1929, according to preliminary figures of the Ministry of Agriculture. The apple crop was 40 per cent under the 1929 production of 1,259,490 metric quintals of table apples and 28,985,070 metric quintals of cider apples and pears. Estimates for refined sugar production in 1930-31 showed an increase to more than 1,000,000 metric tons.

Livestock in the country in 1929 included 15,005,080 cattle, 10,415,010 sheep, 6,016,940 swine, 2,936,020 horses, 1,372,200 goats, 249,700 asses, and 166,280 mules. The poultry and rabbit industry's annual production was estimated at 8,000,000,000 francs.

MINING. Coal and lignite production in 1929 increased about 5 per cent over 1928, coke, 8.5 per cent; briquets, about 14 per cent; steel ingots and castings, 3 per cent; pig-iron, 3.5 per cent. Mineral and metal production, in metric tons, in 1929 with comparative figures for 1928 in parentheses, was as follows: Coal and lignite, 54,922,000 (52,428,000); coke, 4,781,000 (4,404,000); briquets, 4,635,000 (4,068,000); iron ore, 51,028,000 (49,332,000); iron pyrites, 194,000 (202,000); potash, 493,000 (410,000) bauxite, 643,000 (599,000); pig iron, 10,445,000 (10,096,000); steel (ingots and castings), 9,664,000 (9,384,000); iron and steel (finished products), 6,762,000 (5,800,000). The greater output in virtually all lines of the industry was due to increased industrial activity during the year.

MANUFACTURES. Industrial activity was main-

tained at a high level in 1929, with most factories still fully occupied in replenishing stocks, which had been allowed to run low during the period of uncertainty previous to the stabilization of the franc in June, 1928. Capital issues for the year totaled 15,050,000,000 francs, as compared with 10,657,000,000 francs in 1928 and 7,425,000,000 francs in 1927. Larger capital issues in 1929 were necessitated by the stabilization of the franc in 1928 at one-fifth its former value.

During the months of March, April, May, and June, 1930, French industry reached the highest level of production and prosperity ever attained. Production in nine of the chief industries was 44 per cent higher than the average mean figure for production in 1913, the last normal pre-war year. The textile industry was the only one which did not share in the general industrial prosperity; its output was 18 per cent below that for 1913. The peak months of 1930 were marked by a serious labor shortage, there being 20,000 unfilled jobs available. In June, 1930, a slight recession became noticeable, which gathered momentum during the remainder of the year as the world-wide economic depression made itself felt in France. Foreign trade reached an abnormally low ebb in September and the national programme of industrial expansion was curtailed.

Statistics of manufacturing production in 1928 and 1929 are shown in the accompanying table.

FRENCH MANUFACTURING PRODUCTION

| Product | 1928 | 1929 |
|--|--------------|-----------------|
| Silk | 1,000 lbs. | 15,609 12,487 |
| Wool (conditioned at Roubaix- Turcoing) | do... | 236,271 220,425 |
| Wool (conditioned at Mazamet) | do... | 58,704 57,196 |
| Cotton consumption " | do... | 692,240 776,343 |
| Cotton cloth | million yds. | 1,387 1,423 |
| Artificial silk | metric-tons | 17,000 17,237 |
| Boots and shoes (estimated) | 1,000 pairs | 75,000 80,000 |
| Alcohol | 1,000 gals. | 56,869 66,615 |
| Vessels launched | gross tons | 81,416 81,607 |

COMMERCE. An unusually heavy adverse balance of 8,212,276,000 francs (\$321,921,000) was incurred as a result of foreign trade operations in 1929, the imports totaling 58,284,624,000 francs (\$2,284,757,000) and exports, 50,072,348,000 francs (\$1,962,836,000). In 1928 imports were valued at 53,435,552,000 francs (\$2,094,674,000) and exports at 51,374,729,000 francs (\$2,013,889,000). Imports showed a 9 per cent increase in 1929 over the preceding year, while exports fell off by more than 2.5 per cent.

Raw materials, manufactured articles, and foodstuffs, in the order named, showed the greatest increases among classes of imports. The export decline was principally in the category of manufactured goods, with raw materials, and foodstuffs following in order. Decreasing exports, however, were offset to a considerable extent by larger domestic sales resulting from the country's expanding purchasing power and the high level of domestic industrial activity.

France's trade with her colonies proved a saving factor, without which the adverse balance would have reached 10,642,094,000 francs; exports to the colonies totaled 9,440,385,000 francs and imports from the colonies, 7,010,567,000, the balance in favor of the mother country being 2,429,818,000 francs. French purchases from the United States—the principal source of supply—increased, on the other hand, to 7,177,840,000 francs, or 976,735,000 francs more than in 1928, while exports to the United States declined

slightly to 3,322,349,000 francs. The balance of trade in 1929 favored the United States by 3,855,491,000 francs, as compared with 2,863,643,000 francs in the previous year. Expenditures of American tourists in France in 1929 were estimated to have decreased by \$40,000,000, a further factor in the concern evidenced in France at the enactment of the Hawley-Smoot tariff in the United States in June, 1930 (see below under *History*). In 1929 the United States furnished 12.3 per cent of the total French imports (11.6 per cent in 1928), Germany, 11.4 per cent (9.3); United Kingdom, 10 per cent (10.3); Belgium-Luxemburg, 6.7 per cent (7.1); Argentina, 4.1 (3.8); Netherlands, 2.8 (3.1); Italy, 2.6 (2.9). Of the total exports, the United Kingdom took the largest share, 15.1 per cent (15.9 per cent in 1928); Belgium-Luxemburg, 14.4 (14.1); Germany, 9.5 (11.1); Switzerland, 6.7 (6.6); United States, 6.6 (6.5); Italy, 4.4 (4.2); Spain, 3.2 (3.4).

In 1930, French exports declined to 42,830,000,000 francs and imports to 52,344,000,000 francs, a total trade decrease of 13,185,000,000 francs. The adverse trade balance increased to 9,514,000,000 francs.

An important invisible item affecting the balance of trade was the tourist expenditures in France, officially estimated at \$400,000,000 in 1929 (\$360,000,000 in 1928), as compared with expenditures by French tourists in foreign countries of \$60,000,000 in 1929. Total American expenditures in France (1929) were estimated at \$130,000,000.

FINANCE. In a period when economic depression and governmental deficits were practically world wide, France in 1929 and 1930 presented the spectacle of an overflowing Treasury and rapidly increasing national wealth. The phenomenal increase of the gold reserve of the Bank of France, from 31,977,000,000 francs (about \$1,250,000,000) on Jan. 1, 1929, to more than 50,000,000,000 francs (about \$2,000,000,000) at the end of October, 1930, attracted wide attention and some alarm in other leading financial centres. With the commencement of the French industrial recession in July and August the gold influx gave evidences of slackening and a period of decreasing national revenues, and eventually of gold exports, was generally anticipated.

The Government's financial operations in 1929 resulted in an actual surplus of 13,195,000,000 francs. Total receipts were placed at 56,561,000,000 francs and total expenditures at 45,366,000,000 francs, according to preliminary figures.

Taking into consideration French financial and commercial transactions, both government and private, with other countries, the French economist, Pierre Meynial, estimated that France made a net profit of about 13,150,000,000 francs (approximately \$515,480,000) in 1929. Of this sum, he estimated that 8,500,000,000 francs were transferred into gold and that the remainder (4,650,000,000 francs) represented French investments in foreign securities during the year.

The budget for 1930, belatedly adopted by the two Houses on Apr. 16, 1930, provided for revenues estimated at 50,465,000,000 francs and expenditures of 50,398,088,000 francs, the estimated surplus being 66,912,000 francs. This compared with budget estimates for 1929 of 45,430,717,000 francs and 45,366,130,000 francs for revenues and expenditures, respectively. During the first six months of 1930, actual revenues exceeded

the estimates by about 1,020,000,000 francs (\$40,000,000). On Nov. 15, 1930, the Minister of Finance announced that there was a surplus equivalent to \$435,000,000 in the Treasury.

For the first time since the revaluation of the franc in 1928, the revised 1931 budget estimates submitted to the Chamber of Deputies Oct. 10, 1930, were lower than those for the preceding year. Revenues were calculated at 50,251,748,329 francs and expenditures at 50,145,286,389 francs, leaving an estimated surplus of 106,461,940 francs. Nearly one-half of the total estimated expenditures, or 23,850,647,917 francs, were allotted to the service of the debt and war pensions, and 22 per cent of the total, or 10,921,078,475 francs, were set aside for national defense. Other appropriations were: General administration, 6,478,667,475 francs (13 per cent); social expenditure and education, 5,329,002,139 francs (11 per cent); and national development schemes, 3,089,325,760 francs (6.2 per cent). To balance the budget without increase of taxation, the Government drew upon the sinking fund (Caisse d'Amortissement) for 1,800,000,000 francs to meet redeemable debts ordinarily cared for in the budget.

The national debt on Jan. 1, 1929, stood at 459,000,000,000 francs (about \$17,992,800,000), of which 288,665,676,389 francs represented the internal debt. By Oct. 31, 1929, the internal debt had decreased to 268,145,000,000 francs and in October, 1930, the total French debt had fallen to about \$15,461,000,000. About the same time the national debt of Great Britain was \$36,348,180,000; of the United States, \$15,921,000,000; of Germany, approximately \$12,131,873,000 (including reparation payments estimated at \$10,000,000,000); and of Italy, \$9,697,000,000.

SHIPPING. Vessels in the foreign trade entering French ports in 1929 numbered 32,071, of 58,091,343 tons, and vessels clearing, 25,961, of 49,192,613 tons. Both entrances and clearings showed gains over the figures for 1928. Including vessels in the coastwise trade, entrances in 1929 totaled 62,943, of 70,302,000 net tons, and clearances numbered 62,956, of 70,162,000 net tons. Ship passengers entering France numbered 1,952,000 and those leaving 2,016,000. Marseilles ranked first in the tonnage entering and clearing and Rouen first in the total merchandise handled. Port improvements to cost \$19,800,000 were started at Boulogne-sur-Mer in 1930, the work to be completed by 1939. Between 1925 and 1929, the annual net tonnage entering and clearing this port rose from 6,693,000 to 11,860,000 and the annual transatlantic passenger movement rose from 16,572, to 32,141. The French merchant fleet in 1930 stood at its pre-war size of 3,400,000 tons. In 1914 this fleet gave France second rank among the maritime nations, but in 1930 it gave her only fifth place.

INTERNAL COMMUNICATIONS. There were seven railway systems operating in France, with a total mileage in 1928 of 25,947 miles, of which 5629 miles were operated by the state. About 750 miles were electrified (Sept. 1, 1929). Total receipts of all railways in 1929 amounted to 15,463,267,000 francs (14,748,691,000 francs in 1928). The budgets of the various French railroads for improvements and new construction (exclusive of purchases of rolling stock) in 1929 aggregated 1,153,212,000 francs (about \$44,975,300). Highways open to traffic in 1928 included 24,426 miles of national roads, 7572 miles of departmental

roads, and 350,030 miles of local roads (total, 382,028 miles). There were about 6800 miles of navigable waterways. The civil aviation service in 1929 carried 25,256 passengers, 329,000 pounds of mail, and 3,534,000 pounds of express. The number of planes in use was 346.

ARMY. The French Army is divided into two forces, the metropolitan, comprising the active army, reserves, and territorial army, and the colonial forces; both are under the War Ministry. The active metropolitan army for 1929-30 numbered 317,076, including troops in occupation of German territory and colonial troops quartered in France, but excluding the air force of 36,800 men. Enlistment for the metropolitan army is on a compulsory basis, but liberal exemptions are allowed. The term of service was reduced from one and one-half years to one year, effective in 1930. The colonial army in 1929-30 totaled 150,910, making the total peace establishment of the French Army, 467,986, exclusive of the gendarmerie and air force. In 1928 the total peace force was 672,122, including an air-force establishment of 32,866. See **MILITARY PROGRESS**.

NAVY. For an account of naval conditions, see **NAVAL PROGRESS**; also see *Franco-Italian Rivalry* below.

GOVERNMENT. The French Constitution vests executive power in the President of the Republic and the Ministry, and legislative power in the Chamber of Deputies and the Senate. The legislative branch has steadily encroached upon the prerogatives of the executive, however, and the President wields little influence in executive matters, which are decided by members of the Ministry directly responsible to Parliament. The President is elected for seven years by an absolute majority of votes in the Senate and Chamber of Deputies, and selects his cabinet ordinarily from among the members of both bodies. The Senate is made up of 314 members not less than 40 years of age and elected by an electoral college for nine years, one-third retiring every three years; the Chamber of Deputies is made up of 612 members elected by direct popular manhood suffrage for four years. The composition of the Chamber elected Apr. 22-29, 1928, was as follows: Communists, 16; Democrats, 22; Independent Radicals, 64; Left Republican Democrats, 34; Socialists, 104; Radicals and Radical Socialists, 110; Republican Socialists and French Socialists, 46; Republicans of the Left, 94; Democratic Republican Union, 110; Conservatives, 12. President in 1930, Gaston Doumergue, elected June 13, 1924. For the composition of the Tardieu Ministry appointed Mar. 2, 1930, see below under *History*.

HISTORY

DOMESTIC POLITICS. Politically, the year 1930 witnessed a continuation of the governmental instability inaugurated in 1929 with the fall of the Poincaré National Union Ministry. Increasing bitterness between the parties of the Right and the Left over questions of national defense, clericalism, and secular education accentuated the difficulties arising from the almost even division between the two main groups in the House of Deputies. With the 10 Communist deputies always voting with the Opposition, no Cabinet could be formed that was not in continual danger of defeat.

The Tardieu Ministry, formed Nov. 2, 1929, principally from the Centre and Right parties, lived only until Feb. 17, 1930, when it was over-

thrown (286 against 281) through the defection of the Radical Socialists led by M. Camille Chautemps. The latter in turn formed a Ministry composed exclusively of Radical Socialists and Radicals, which was defeated (292 against 277) in its first appearance on February 24. Tardieu was again called upon and on March 2 formed a new Ministry in which the presence of M. Briand represented virtually the sole concession to the Left. On March 5 he emerged victorious (316 against 263) in his first test vote. In the meantime negotiations at the London Naval Conference (see NAVAL PROGRESS) and the discussion of the already belated budget bill in the French Parliament had been held up for two weeks by the Cabinet crisis.

Tardieu's precarious position was strengthened somewhat by the final adoption of the Young Plan in January at The Hague, with conditions satisfactory to the French delegation (see REPARATIONS), and by valuable concessions won during the early days of the London Naval Conference. Indeed, the Ministry's foreign policy was more acceptable to the Left than to the Premier's largely conservative majority. His sponsorship of the national insurance law, promulgated Apr. 5, 1928, but not enforced for two years because of certain defects, also evoked distinctly more enthusiasm among members of the Left than those of the Right.

But the paradoxical spectacle of a largely conservative Government carrying out a liberal programme, often in the face of partisan opposition from the Left, was not long to last. On the question of what disposition to make of the large Treasury surplus a dispute arose which swept the members of the Right and Left into their natural alignment, with the Cabinet leading the Right. The Government's policy, stubbornly maintained by Finance Minister Chéron, was one of speeding the amortization of the public debt and of refusing the Radical-Socialist demand for thorough tax reduction, while maintaining large Treasury cash balances in the central banks. On this main issue the Ministry was overthrown February 17 during the vote on a minor provision in the budget bill. Factors which contributed to its defeat were the rising cost of living, the absence of M. Tardieu, who was ill at the time, and the latter's incautious alienation of the Radical Socialists by failing to invite them to a special meeting at which he had presented a detailed report of his work to his supporters of the Right.

As the person primarily responsible for the fall of the Cabinet, M. Chautemps then undertook the formation of a ministry. To obtain a majority he offered M. Tardieu every inducement to enter his Cabinet. Tardieu refused, insuring the new Ministry's defeat at its first test vote.

Bitterness between Right and Left had been intensified during the Cabinet crisis and when M. Tardieu again was called upon to form a Ministry he met with the uncompromising refusal of the Radical Socialists to participate. J. L. Dumesnil, a Radical Socialist who accepted the Marine portfolio, was immediately expelled from his party. The new Tardieu Ministry, formed March 2, was largely one of the Right and Centre. Of the Tardieu Cabinet, the significant omissions in the second were Henri Chéron, the Finance Minister; M. Leygues, Minister of Marine; and M. Loucheur, Minister of Labor. Besides M. Tardieu as Prime Minister and Minister of Interior, the new Cabinet was composed as follows: Foreign Affairs, Aris-

tide Briand; Justice, Raoul Péret; War, André Maginot; Marine, J. L. Dumesnil; Finance, Paul Reynaud; Budget, M. Germain-Martin; Public Instruction, Pierre Marraud; Colonies, François Pietri; Commerce, Pierre-Etienne Flandin; Agriculture, Fernand David; Posts and Telegraphs, André Mallarmé; Air, M. Laurent-Eynac; Pensions, Champetier de Ribes; Public Works, Georges Pernot; Merchant Marine, Louis Rollin; Labor, Pierre Laval; Public Health, Desiré Ferry.

Principal points in the programme announced by M. Tardieu were the continuation of his naval policy, execution of the Young Plan, adoption of social insurance, political amnesty laws, and the early passage of the 1930 budget law. The course of the second Tardieu Ministry, however, proved no less stormy than that of the first. It was repeatedly defeated on minor issues in which the question of a vote of confidence was not involved. On March 13, the Left secured the passage, against the wishes of the Premier, of a measure providing free tuition for day pupils in all state secondary schools. Former Premier Herriot acclaimed the measure as the first step toward a single public-school system on the American plan.

The Cabinet was successful, however, in securing ratification of the Young Plan in the Chamber by 527 to 38 on March 29 and in the Senate by 284 to 8 on April 5. The budget law (see above under Finance) was passed April 16, months behind schedule, and with the adoption of the social insurance, farm relief, and tax reduction bills previous to the adjournment of Parliament April 26, the Ministry fulfilled the major items of its immediate programme.

The Parliamentary recess from April 26 to June 3 was marked by President Doumergue's visit to Algiers to commemorate the 100th anniversary of the establishment of French rule in Algeria (see ALGERIA), the issuance on May 17 of M. Briand's memorandum on his project for European federation (see UNITED STATES OF EUROPE) and the order for the evacuation of the third zone of the Rhineland by June 30. Early in the new session, in which former Premier Poincaré again took his seat in the Senate, Opposition attacks on the Government's fiscal policy and its programme for the pacification of Indo-China (see FRENCH INDO-CHINA) were easily repulsed, but the Government escaped defeat by only five votes on July 8 when the charge of favoring clericalism again arose to plague it. The Chamber on June 12 ratified by a vote of 561 to 13 the Government's adherence to the optional clause of the World Court statute (see WORLD COURT). Despite Opposition protests, Premier Tardieu adjourned Parliament by decree on July 11 for a three months' vacation, a move which in the opinion of some observers was necessary to save his Ministry from defeat.

The Fascist triumph in the German elections of September 14, the revisionist campaign launched by German conservatives, and the anti-French demonstrations accompanying the evacuation of the Rhineland revived the issue of national security and with it a vigorous movement for the elimination of Foreign Minister Briand from the Cabinet. The nationalists, who had all along attacked M. Briand's policy of peace as visionary and weak, found powerful support for their arguments in developments in Germany and Italy. M. Poincaré and the more responsible leaders

of the Radical party, such as Herriot and Painlevé, declared that the new situation created by the German elections called for increased firmness in French foreign policy. The nationalist agitation found expression in the creation on October 21 and 22 of a "committee of vigilance" and of a new political party for the purpose of throwing Briand's policies into the discard. Their leaders declared it their fixed intention not to permit revision of the Versailles peace treaties. When the Cabinet on October 3 reaffirmed its confidence in M. Briand, it was certain that French foreign policy and the 1931 budget would be the two outstanding issues to come before the Winter session of Parliament, which opened November 3.

FALL OF TARDIEU. The gradual disintegration of Tardieu's majority culminated in the fall of his Ministry on December 4, following an adverse vote of 147 to 139 in the Senate on the Cabinet's general policy. The Radical Socialist party convention in October had voted "emphatically to refuse any alliance with the clerical, nationalistic, and conservative parties of the Right" and the Radical Socialists had the largest group in the Senate. The Opposition attempt to link Cabinet members with the Oustric financial speculations forced the resignation of Minister of Justice Peret on November 14. On the same day the Chamber voted to appoint a commission to investigate the alleged "intermixture of politics and finance." Oustric's speculations had ended in a spectacular crash, which ruined half a dozen banks and swept away savings of small investors totaling about 1,500,000,000 francs. The Cabinet's position was further weakened by the resignation of two Under-Secretaries, Falcoz and Eugène Lautier, who had been customers of the bank. On November 28, the Ministry mustered a majority of only 14 in the Chamber on a vote of confidence. The subsequent adverse vote in the Senate was thus not unexpected.

President Doumergue turned successively to former Premier Poincaré, who refused to form a new Cabinet on the ground of ill health, and to Senators Louis Barthou and Pierre Laval, who were unable to secure the support of the Left Republicans and Radical Socialists. The eight-day cabinet crisis was ended December 13, when Senator Theodore Steeg, former Resident General of Morocco, was successful in forming a new Ministry of the Centre and Left, with the Radical Socialists as the most powerful factor. His success in drawing away sufficient moderate elements from M. Tardieu's majority of the Centre and Right to form a new majority Government enraged the Nationalists and insured a revival of bitter partisanship in Parliament. The new Cabinet announced December 13 included: Premier and Minister of Colonies, Theodore Steeg; Interior, Georges Leygues; Justice, Henry Chéron; Foreign Affairs, Aristide Briand; Finance, Louis Germain-Martin; Budget, Maurice Palmade; War, Louis Barthou; Marine, Albert Sarraut; Education, Camille Chautemps; Public Works, Edouard Daladier; Commerce, Louis Loucheur; Agriculture, Victor Boret; Labor, Dr. Edouard Grinda; Pensions, Robert Thoumyre; Air, Paul Painlevé; Merchant Marine, Charles Danielou; Posts and Telegraph, Georges Bonnet; Public Health, Correz Queuille.

In its first appearance before the Chamber on December 18, the Steeg Ministry survived a fierce attack by the followers of Tardieu by the narrow

margin of seven votes. On orders of Tardieu's Left Republican party, one Minister, Thoumyre, and four Under-Secretaries representing the party in the Ministry withdrew, but the expected defeat of the Cabinet did not follow. Its triumph was due to the undivided support of the Socialists. Since Socialist support could not long be expected, a short and extremely troublesome life was predicted for M. Steeg's Government. The Left parties, however, were elated at their victory, the first since they had entered Poincaré's Government of national union in 1926. The Steeg Ministry's platform, as announced in Parliament, called for a vigorous but impartial investigation of the Oustric scandals, adhesion to Briand's foreign policy, the maintenance of national defense and of internal peace, and improvement of the national economy. The color of the Cabinet forecast the termination of the trend toward closer relations with the Vatican apparent under Poincaré and Tardieu. It was believed that the inclusion of Camille Chautemps as Minister of Education would mean the enforcement of the laic laws, which imposed severe restrictions upon Roman Catholic educational institutions. On December 19, Premier Steeg closed the session of the Chamber until the middle of January, 1931. The vacant post of Minister of Pensions was filled on December 23 by Maurice Dormann.

FRANCO-ITALIAN RIVALRY. The serious differences between France and Italy were emphasized early in the year by their inability to agree upon a naval limitation programme at the London Naval Conference (see NAVAL PROGRESS). Although the conference, by healing the Anglo-American naval rivalry, gave new impetus to efforts toward a solution of Franco-Italian problems, it served also to embitter the already strained relations between the two Latin powers.

French and Italian interests had clashed in and near the Mediterranean for more than 50 years, particularly after the advent of the Fascist régime. The main points of friction were Italy's territorial ambitions in North Africa, the Fascist agitation for the annexation of Nice, Savoy, and Corsica, the struggle between the two governments for the loyalty of 2,000,000 Italian immigrants in France and 100,000 in Tunis, and the Italian resentment at the French system of alliances, designed to maintain the *status quo* in Europe, which Italy was determined to change. Other sore points were the refuge granted anti-Fascist expatriates in France and the clash between the French and the Fascist philosophies of government.

The specific points of open controversy in 1930, in addition to the naval rivalry, concerned the rights of Italian citizens in Tunis, the location of the Libyan frontier in the Tibesti and Borku regions of the Sahara, and the possession of Djibouti, the Red Sea port of French Somaliland, which Italy demanded under the Treaty of London (1915) as compensation for her war services to the Allies. In Tunis, where the Italian population outnumbered the French, the bitterness aroused by French efforts to denationalize the Italian community was furthered in 1930 by the bombing of the Italian consulate in the city of Tunis by anti-Fascists. The consul accused the French government of conniving at the escape of the bombers.

Negotiations for the settlement of these disputes, initiated in 1929, were interrupted by the London Naval Conference. While unable to agree

upon naval limitation, France and Italy in the five-power pact signed at London pledged themselves to attempt a settlement of the outstanding issues between them. Within a week after the naval conference, however, the Italian Cabinet on April 30 announced plans for the construction of 42,900 tons of new warships, in addition to 32,000 tons launched a few days earlier. Shortly afterward, Premier Mussolini, during a tour of northern Italy, delivered a series of unusually bellicose speeches in which he declared that Italy was ready for all comers. His remarks were deeply resented in France and called forth the indirect reply from Premier Tardieu on June 1 that France's international position was such as to free her from the necessity either to boast or to fear.

A fresh attempt at reconciliation, initiated by conversations among the Foreign Ministers of France, Italy, and Great Britain at Geneva May 13 and 14, proved fruitless, although France on July 10 and Italy on July 14 agreed to suspend naval construction for six months pending the outcome of the negotiations. Strengthening of French defenses and French army maneuvers along the Italian border, concentration of French naval forces at the Toulon base, and visits of inspection by military and naval chiefs to military posts in southern France and north Africa were accompanied by similar activities on the Italian side of the border. The additional defense credits approved by the French Chamber of Deputies in June were met by a 500,000,000 lire (\$26,200,000) increase in the Italian defense budget for 1930-31. The prospect of war was considered so grave that the intervention of the League of Nations to conciliate the dispute was seriously considered.

The Franco-Italian negotiations were continued during August and September with the coöperation of the British Foreign Office, but on September 22 it was announced that they had broken down again. With the approach of the international armament conference, opened at Geneva November 3, efforts to end the Franco-Italian naval impasse were resumed, this time by Hugh S. Gibson, the United States delegate to the conference, who acted with the apparent collaboration of London and Tokyo. These efforts were spurred by the new tension introduced into the European atmosphere by Premier Mussolini's speech on the eve of eighth anniversary of the Fascist march on Rome (October 28), in which he placed Italy formally at the head of the nations seeking revision of the treaties of Versailles and Trianon (see ITALY under *History*). No agreement on the naval problem was reached by the end of the year.

NATIONAL DEFENSE. French nervousness at the belligerency expressed in Italy and Germany was naturally reflected in the "security" budget for 1931, which totaled 12,200,000,000 francs (about \$488,000,000), or 725,000,000 francs (about \$29,000,000) above appropriations for the army, navy, and air services in 1930. See **MILITARY PROGRESS.**

SAAR NEGOTIATIONS. The negotiations for the return of the Saar to Germany, inaugurated in 1929 (see in 1929 YEAR BOOK, FRANCE under *History*), were suspended indefinitely by France early in July, apparently as a result of the anti-separatist demonstrations which marked the French evacuation of the third zone of the Rhineland on June 30. It was indicated also that the

concessions offered by Germany for the early evacuation of the Saar had been greatly reduced and that the new terms were unacceptable to France.

INDUSTRIAL UNREST. Despite the favorable economic situation in France, as compared to conditions in other industrial countries, strikes became almost epidemic throughout France in July and August. A major cause was the amended national insurance law, which became effective July 1, and which was opposed by the Communists and other labor elements, as well as by many manufacturers. The law covered sickness, incapacity, maternity, old age, and death, and was obligatory upon all wage earners of either sex with an annual income of less than 1500 francs (1800 francs for residents of cities of over 200,000 inhabitants). The assessment amounted to approximately 8 per cent of the wages of industrial workers and about 2 per cent for farm workers, half to be paid by the employer and half by the worker. In Lille and other industrial centres of the North, over 100,000 workers went on strike for wage increases to meet the insurance charges. A rise in the price of bread and wine further aggravated the situation. The difficulty was finally conciliated to the satisfaction of the majority of the strikers by the Minister of Labor.

OTHER EVENTS. Protests at alleged tariff discriminations against American goods sold in France and French exports to the United States were voiced by affected interests on both sides of the Atlantic. The French rates on foreign cars and parts were increased by the Tariff Commission of the Chamber on April 8, despite protests of American automobile manufacturers, but were not so high as to exclude American machines. The enactment of the Hawley-Smoot tariff by the United States Congress led the Chamber's Tariff Commission to recommend on June 19 the revocation of the most-favored-nation treatment accorded the United States, on the ground that reciprocal concessions were not obtainable. In a statement issued by the Minister of Commerce June 21, however, the Government rejected proposed tariff reprisals against the United States and announced that it would first seek to secure a reduction of rates through friendly representations to the American Tariff Commission.

Floods in the South and Southwest of France in March, 1930, cost 200 lives, destroyed about 2703 houses, and devastated about 350,000 acres. Unrest in Indo-China, attributed to Communist propaganda, and the alleged "dumping" of Russian products in France led to repeated demands for the severance of diplomatic relations with Soviet Russia. The French Colonial Council was called together in October, 1930, for the first time in three years to consider constitutional reforms for Indo-China. A landslide on November 13 carried away part of Fourviee hill at Lyons, killing some 40 residents, firemen, and policemen.

On September 1 the Government ordered the expulsion from France of William Randolph Hearst, American newspaper publisher, because of the part played by Hearst in the publication of the secret Anglo-French cruiser agreement in 1928. The pact was subsequently disavowed by both Governments. See ITALY, GREAT BRITAIN, GERMANY, and GREECE under *History*.

BIBLIOGRAPHY. Authoritative works on France published in 1929 and 1930 included: Carlton J. H. Hayes, *France: A Nation of Patriots*, New York (1930); André Siegfried, *France: A Study*

in *Nationality*, New Haven (1930); William F. Ogburn and William Jaffé, *The Economic Development of Post-War France*, New York (1929).

FRANCKE, FRÄNK'E, KUNO. A German-American scholar and author, died in Cambridge, Mass., June 25, 1930. He was born in Kiel, Germany, Sept. 27, 1855, and was graduated from the University of Munich with the Ph.D. degree in 1878. He was appointed instructor in German at Harvard University in 1884, assistant professor in 1887, assistant professor of German literature in 1892, and professor of the history of German culture in 1896. He also acted as curator of the Germanic Museum at Harvard from 1902 to 1917, developing it into one of the finest museums depicting a national culture in the United States. He resigned as professor emeritus and honorary curator of the museum in 1917. The University of Wisconsin conferred on him the LL.D. degree in 1904 and Harvard the Litt.D. degree in 1912. He was a Fellow of the American Academy of Arts and Sciences, the American Philosophical Society, and the Mediæval Academy of America, and served as president of the Modern Language Association of America in 1917. He was also a Chevalier of the Royal Prussian Order of the Red Eagle and of the Order of the Crown. His works include: *Zur Geschichte der Schulpoesie des zwölften Jahrhunderts* (1878); *De Hymno in Cererem Homericum* (1880); *Libelli de Lite Imperatorum et Pontificum* (1892); *Social Forces in German Literature* (1896); *Glimpses of Modern German Culture* (1898); *History of German Literature* (1901); *Handbook of the Germanic Museum* (1906); *German Ideals of To-day* (1907); *Die Kulturwerte der deutschen Literatur im Mittelalter* (1910); *A German-American's Confession of Faith* (1915); *The German Spirit* (1916); *Personality in German Literature before Luther* (1916); *Die Kulturwerte der deutschen Literatur von der Reformation bis zur Aufklärung* (1923); *Die Kulturwerke der deutschen Literatur in Ihrer Geschichtlichen Entwicklung* (1923); *Deutsches Schicksal* (1923); *Kant and Art* (1925); and *German After-War Problems* (1927).

FRANKLIN. See NORTHWEST TERRITORIES.

FRANKLIN, CHRISTINE LADD. See LADD-FRANKLIN, CHRISTINE.

FRANKLIN, WILLIAM SUDDARDS. An American physicist and educator, died in Wilmington, N. C., June 6, 1930. He was born in Geary City, Kan., Oct. 27, 1863. After his graduation from the University of Kansas in 1887, he was assistant professor of physics there until 1890. He then studied at the University of Berlin and at Harvard University, and in 1892 became professor of physics and electrical engineering at Iowa State College. In 1897 he was called to Lehigh University in a similar capacity, and in 1903 was appointed professor of physics. He resigned in 1915 to accept the chair of physics at the Massachusetts Institute of Technology. The M.S. degree was conferred on him by the University of Kansas in 1888 and the D.Sc. degree by Cornell University in 1901. His works include: *Electric Waves: An Advanced Treatise on Alternating-Current Theory* (1909); *Electric Lighting and Miscellaneous Applications of Electricity* (1912); *Bill's School and Mine: A Collection of Essays on Education* (1913); and *A Treatise on the Elements of Electrical Engineering* (1917). He was co-author of *The Elements of Alternating Currents* (1899); *Elements of Physics* (1904); *Elements of Elec-*

trical Engineering (1906); *Dynamo Laboratory Manual* (1906); *The Elements of Mechanics* (1907); *Dynamos and Motors* (1909); *Advanced Theory of Electricity and Magnetism* (1915); *General Physics* (1916); *Lessons in Heat* (1920); *Transmission Line Theory and Some Related Topics* (1926); *Engineering Mechanics* (1929); and *Fundamentals of Electrical Engineering* (1929).

FREE BAPTISTS. See BAPTISTS, FREE.

FREEMAN, MRS. MARY ELEANOR WILKINS. An American author, died in Metuchen, N. J., Mar. 13, 1930. Mary Eleanor Wilkins was born in Randolph, Mass., Jan. 7, 1862, and was educated at Mount Holyoke Seminary. For many years, she was secretary to Dr. Oliver Wendell Holmes. In 1902 she was married to Dr. Charles M. Freeman of Metuchen, N. J., where she lived the remainder of her life. A contributor of both verse and prose to magazines, Mrs. Freeman was best known for her short stories depicting life in rural New England. In that limited field, she had few equals in accuracy of observation and succinctness of expression. Her works include *A Humble Romance and Other Stories* (1887); *A New England Nun and Other Stories* (1891); *Young Lucretia and Other Stories* (1892); *Jane Field*, a novel (1892); *Giles Corey, Yeoman*, a play (1893); *Pembroke*, a novel (1894); *Madelon*, a novel (1896); *Jerome, a Poor Man* (1897); *Silence and Other Stories* (1898); *The Love of Parson Lord and Other Stories* (1900); *The Portion of Labor* (1901); *The Wind in the Rose Bush* (1903); *The Givers* (1904); *The Debtor* (1905); *The Fair Lavinia and Others* (1907); *Winning Lady and Others* (1909); *Butterfly House* (1912); *The Copy-Cat and Other Stories* (1914); *Edgewater People* (1918); *The Best Short Stories* (1914); *Edgewater People* (1918); *The Best Short Stories of Mary E. Wilkins*, selected and published with an introduction by Henry Wysham Lanier (1927).

FRENCH CONGO. See FRENCH EQUATORIAL AFRICA.

FRENCH EQUATORIAL AFRICA. A French possession in Africa on the Atlantic coast between the territories of the Belgian Congo and British Cameroon. Area, 912,049 square miles; population, according to the census of 1926, 3,127,707, of whom 1932 were Europeans. The possession comprises the four colonies of Gabon, Middle Congo, Ubangi-Shari, and Chad. Brazzaville, with 4000 inhabitants, is the capital. In 1929 there were 52 native schools, with 3490 pupils, and 74 private missionary schools, with a total of 7029 pupils.

Equatorial Africa is very rich in natural resources, for the most part undeveloped. Tropical forests extend 300,000 square miles to the Gabon coast and contain valuable timber. Palm oil and wild caoutchouc are the principal commercial products. Coffee, cacao, and cotton are raised to some extent. Copper, zinc, and lead are to be found and considerable quantities of ivory are exported. In 1928 imports were valued at 227,656,279 francs and exports at 151,318,963 francs (172,319,683 francs and 136,747,844 francs, respectively, in 1927). The general budget for the four colonies balanced at 54,500,000 francs in 1929 and 1930. A new railway connecting Brazzaville with the Atlantic at Pointe-Noire was nearing completion in 1930. A governor-general has general supervision, but each colony is locally governed by a lieutenant-governor, aided by

an administrative council. Governor-General in 1930, Rafael Antonetti, appointed in July, 1924.

FRENCH GUIANA, *gô-â-nâ*. A French colony and penal settlement on the northeast coast of South America. Area, about 34,740 square miles; population at the census of 1926, 47,341. Cayenne, a seaport, with 13,936 inhabitants in 1926, is the capital. The population figures do not include the number in the penal settlement of Maroni, in which there were 6000 prisoners on Jan. 1, 1928, the floating population of miners, French officials, or native tribes. The extensive forests are rich in timber of commercial importance. Only about 7900 acres are devoted to agriculture, the chief crops being sugar, rice, maize, coffee, and cacao. The chief occupation is placer mining for gold. Other minerals produced are silver, iron, and phosphates. The total imports in 1928 were valued at 55,528,300 francs and exports at 29,799,434 francs. The principal articles of export were gold, rosewood essence, various timbers, phosphates, cacao, balata, and hides. In the 1928 budget, receipts totaled 55,528,300 francs and expenditures 29,799,434 francs. The colony is under a governor who is aided by a privy council and by a council-general elected by French citizens in Guiana, and is represented in the French Parliament by one deputy. Governor in 1930, M. Maillet.

FRENCH GUINEA. A French colony on the west coast of Africa between Portuguese Guinea and the colony of Sierra Leone. Area, 92,640 square miles; population, estimated in 1928, 2,185,697, including 2093 Europeans, of whom 945 were French. Capital, Conakry. The chief products are palm oil, palm nuts, gum, rubber, millet, rice, tropical fruits, and coffee. Some gold is found. The imports in 1928 were valued at 106,115,000 francs and the exports at 72,174,000. The chief exports were rubber, cattle, groundnuts, hides, bananas, wax, wool, and palm kernels. The budget for 1928 amounted to 36,030,679 francs. A railway runs from Conakry on the coast to the Niger at Kourassa and thence to Kankan, a total of 412 miles. The colony is under the Governor-General of French West Africa. See **FRENCH WEST AFRICA**.

FRENCH INDIA. The name given to the group of five French dependencies in India, of which the chief is Pondichéry. Area, about 196 square miles; estimated population, Jan. 1, 1929, 290,460 (Pondichéry, 188,064; Karikal, 58,228; Chandernagor, 27,393; Mahé, 11,959; Yanaon, 4816). French residents totaled 1034. In 1928 the Government maintained 59 primary schools and 3 colleges, with 316 teachers and 10,465 pupils. The local revenue and expenditure budget for 1929 totaled 2,757,550 rupees. Paddy (rice), sugar, cotton, manioc, cacao, coffee, and groundnuts are the chief crops. Imports through the four leading ports in 1928 amounted to 10,186,909 rupees, and exports to 27,424,713 rupees (1 rupee equaled about \$0.3646 in 1928). In the same year vessels entering the four ports totaled 303. There were 43 miles of railway. The dependencies are under a governor whose headquarters are at Pondichéry, and an elective general council; they send one deputy and one Senator to the French Parliament. Governor in 1930, R. de Guise (appointed in 1928).

FRENCH INDO-CHINA. A French possession in southeastern Asia, comprising the colony of Cochín-China; the protectorates of Annam, Cambodia, Tongking (Tonkin), and Laos; and

Kwang-Chow-Wan, which was leased from China. Capital, Hanoi.

The area is about 285,000 square miles and the population in 1926 totaled 20,700,000, including 33,000 Europeans, divided as follows: Cochín-China, 4,120,000; Cambodia, 2,535,000; Annam, 5,580,000; Tongking, 7,405,000; Laos, 444,000; and Kwang-Chow-Wan, 205,000. The populations of the chief cities in 1926 were: Saigon, 143,000; Hanoi, 130,000; Pnom-Penh, 82,000; and Hué, 41,000. Agriculture, mining, and fisheries are the chief industries, the territory tributary to Saigon being one of the great rice growing regions of the world. The rice crop in 1930 was estimated at 1,600,000 tons. Cinnamon, sugar, and tea are other farm products, while the minerals exploited are coal, phosphates, zinc, antimony, tin, wolfram, graphite, and lead. For production of the individual colonies, see articles on each.

Exports in 1929 totaled 3,579,112,000 francs and imports 3,238,931,000 francs. Exports consisted chiefly of rice, rubber, fish, coal, pepper, cattle and hides, corn, zinc, and tin ore, while the leading imports were cotton and silk tissues, metal goods, kerosene, and motor cars. Due to the drop in the value of silver and excessive rice speculation in 1929, business in 1930 was badly depressed. Imports from the United States in 1929 totaled \$2,525,000; exports to that country were valued at only \$29,000.

There is a general budget for Indo-China and a separate budget for each of the colonies. The general budget for 1929 balanced at 91,500,000 piasters, including ordinary and extraordinary accounts (1 piaster was stabilized at \$0.3912 in March, 1930). The public debt in 1929 was about 425,969,000 francs. In 1928, a total of 2669 vessels of 4,607,000 tons entered the ports of Indo-China. Railways in operation in 1929 had 1485 miles of line, of which two-thirds were Government owned. Highways (1928) extended about 19,400 miles, of which 5694 miles were colonial, or main, roads. Indo-China is under a governor-general and a superior council which acts through a permanent commission. At the head of each colony is a resident superior, except in Cochín-China, which is governed directly from France. Governor-General in 1930, Pierre M. A. Pasquier, appointed in 1928.

HISTORY. The growth of the nationalist movement in French Indo-China and the activities of Communist agents were evidenced during the year by recurrent disorders, which in June led to an extended debate in the French Parliament upon the Government's colonial policies. The Minister of Colonies on June 13 placed the responsibility for the disorders on Bolshevik agitators and announced that the Government would punish all those who fell into its hands. A recruiting officer was murdered in Tongking early in the year and 85 natives were tried on charges of conspiracy before a specially constituted court. On February 10, about 200 mutinous native troops, accompanied by 60 civilians, attacked the fortified camp of Yen Bay in the Red River delta, killing 12 Europeans, including five French officers, and wounding 11. Units of the colonial infantry and of the Foreign Legion quelled the disaffection among native troops and bombed the villages of the civilians implicated. Other serious riots were reported at Caolahn August 24, and at Vinh Hatinh near Saigon September 11, during which troops fired on the crowd of demonstrators. See **FRANCE** under *History*; **COMMUNISM**.

MODERN.

FRENCH LITERATURE. While there was no outstanding feature to report for the year 1930, still, one might call attention perhaps to a disposition on the part of many to "discuss ideas" in literature—which, for a long time, had been tabooed. Of course dissatisfaction with prevailing standards dominated. Henri Poulaille, in *Nouvel âge littéraire* considers that "L'écriture d'un Proust, d'un Mauriac, d'un Maurois, d'un Dekobra ne suit plus le rythme de la vie," and he proposes a "littérature prolétarienne"; and Henry Champly, in *Mil neuf cent trente ou l'Antiromantisme* thought that 1930 announced a "cyclone qui roulera cinquante générations." Since this was the last of the three years of Romanticism centenary celebrations, Romanticism was almost all the time involved. Opposed to the last named writer, there was Louis Reynaud, who, in his last book, *La crise de notre littérature, Des romantiques à Proust*, was of the opinion that nothing is of any avail since Romanticism, a theory vigorously disposed of by Benj. Crémieux (*Nouvelles littéraires*, June 28). Jean Cassou in his *Les nuits de Musset*, endeavors to show in a broad criticism that Romanticism was expressive, not so much of one phase of human passion, as of everlasting aspirations.

Interest in Romanticism was shown, too, by the creation of the Société Chateaubriand (founder Dr. LeSavoureux, Vallée aux Loups, par Chate-nay-Valabry, Seine), and by the publication of a new review, *Occident*, with the sub-title *Cahiers Staëliens* (Paris, 30 Boul. St. Michel). A general tendency to lay more stress again on discussion of ideas was found in the little volume by Philippe van Tieghem, *Les tendances nouvelles de l'Histoire littéraire*. Finally A. Thibaudet offered a *Physiologie de la critique*.

The readiness to return to topics relating to the Great War gained momentum. This was shown by a collection, "Combattants européens," a series of books on the war by war witnesses from all countries, published under the direction of José Germain, president of the Association des Ecrivains anciens combattants; by another similar collection, but of French authors only (e.g. A. Thérive, L. Thomas, Constantin Meyer, M. Genevoix, H. Malherbe, etc.) under the general title *Témoignages des combattants français*; and by the great success of André Bridoux's *Souvenirs du temps des morts* which strikes a note not heard for a long time, viz.: that this had been a great age in which humanity had shown itself under a magnificent light.

The discussions brought about by numerous books by French writers discovering America have been echoed enough in the United States, so that we need not dwell on them; suffice it to recall for further reference that the most eagerly discussed were *New-York* by Paul Morand, and the novel *Champions du monde*, by the same, and Duhamel's regrettable *Scènes de la Vie future*. It ought to be said that the fact that Europe was roused to arms by the protective tariffs caused any criticism of America to be taken up with more than normal eagerness. René Puaux's *Découverte de l'Amérique* deserves mention also.

POETRY. Discussions on the essence of poetry persisted, and strange to say with an appearance of reconciliation between the opponents: Abbé Bremond himself seemed to extend the olive branch

in his last essay, *Racine et Valéry*, the very title of which suggests the blending of the mystical element of sound with keen intellectual content. The most remarkable attempt to study in a systematic manner the relations of sound and thought was found in Pius Servien's *Lyrique et structures sonores*, and *Rythmes comme introduction physique à l'esthétique*, pronounced by Valéry "la tentative la plus intéressante et la plus hardie que l'on ait faite pour capturer l'hydre poétique." (Servien looked for the fundamental element of rhythm in spontaneous prose and not at all in what he called the "arithmetical line" of a Boileau.) Illustrations of concrete attempts to produce the new poetry include Gabriel Boissy, *Stances du mortel sourire*, where the appearance of metrical lines is absent; Rose Malhamé, in a little volume dedicated *Au Dieu inconnu*, i.e. to music, and to "l'infini que les mots ne peuvent contenir," and this other Valerian product, *A la fontaine de Narcisse*, by Mad. Merens-Melmer.

On the borderland of poetry, but lacking both in form and content, were the collections of the former dadaists, Paul Eluard in *A toute épreuve*, and Ribemont-Dessaignes, *Frontières humaines*; and *Poèmes d'amour* by Claire et Ivan Goll with the note of masochism (strange association of savage cruelty and love sensations). Ultra modern again is Th. Briant in *Premier vers de poèmes*.

Jules Supervielle was steadily coming to the front as a poet; his *Le Forçat innocent* sings once more, but with original images, the sufferings, of thinking humanity: his dream is to be turned into "un peu de pierre ou de roche" as a refuge against the tortures of the mind. Somewhat the same note is found in René-Louis Piachaud, in *L'indifférent*; but this Swiss poet earned laurels specially by his poem *L'évocation du fleuve Rhône*, which was used for the great festivities given in Geneva—as, before, in other cities along the great river—in honor of the god Rhône.

Other poets of excellence and who published during the year, were Alfred Mortier, *Le souffleur de bulles*; Pierre Gueguen, *Jeux cosmiques* (nature, with an ironic note); Jean Lebeau, the poet of the Cevennes mountains, *Couleur de vigne et d'olivier*; Tristan Derème, *Poème des Colombes*, and *Caprice*; Aug. Garnier, *Chemin vers la mer*; P. Jalabert, *Coupe d'ambrosie*; G. Lavaud, *Poétique du ciel*, etc. Many poets experienced the fascination of the Middle Ages and of the Renaissance: André Berry, *Chantefable de Murielle et d'Alain*, and *Florilège des Troubadours*; Ch. de Saint-Cyr, *L'autre livre d'Iseult*; L. Vêrane, *Livre des passe-temps*—in the Ronsard vein.

Much praise was given to a new translation in French of Vergil's *Eglogues*, by Xavier de Magalio (to replace the old Delille translation).

The Prix Claire-Vireneque (for spiritual poetry) went to Camille Melloy (*Parfum des Buis*); the Grand Prix de poésie Fabien Artigue, to Mary Henry-Ronie (*Le monde est à toi*); the Prix Sully-Prudhomme to Louis Poullain (*La source claire*).

THEATRE. More interesting plays were presented than in 1929. Pagnol, however, kept the lead in popularity with *Topaze* still running, and with *Marius*, the Marseilles comedy, a continuation of which, *Fanny*, was announced for 1931. Early in the year Henri Clerc scored with *Le beau métier* (Odéon), an exaltation of the modest, conscientious magistrate refusing to be corrupted, or tempted by higher rank, or driven by an ambitious wife. A little later Stève Pasteur made a hit with *L'Acheteuse*, admirably played by Simone, a sub-

ject somewhat related to that of *Le sexe faible* by Bourdet: a woman, having lost her fiancé in the war, is determined to know love. Another success of the spring was Jacques Deval's *Etienne* (Th. St. Georges), a rather sombre family drama, with the son, who is harshly treated by his father, vindicating his mother as the adolescent hero. A great deal of interest was shown at Easter time in the late Haraucourt's *La Passion* given at the Théâtre Français. In the autumn, three successful plays were offered which deal with foreign history; namely Alfred Mortier's *Le divin Arétin* (in whom there is nothing divine in the usual sense of the word); Alfred Savoir, *La petite Catherine*, very much liked although considerably untrue to history, and putting on the stage the Great Catherine in her early years at court when she won her throne by womanly diplomacy; and Pierre Frondaie's *Le fils de Don Quichotte*, in which the son of the famous knight meets the daughter of Sancho Panza and they run the love adventure.

The year ended with several interesting plays: F. Nozières, *Cette vieille canaille* (Michel), a youngster beaten at the game of courtship by a man considerably older but with experience; *La brouille*, by Charles Vildrac (Th. Français), a family drama of the kind of *Etienne*, much admired for the powerful presentation of the first act; J. Romain's *Jean Musse ou L'Ecole de l'hypocrisie*, which is a protest against the underground motives of human actions which are terrible fetters to free men, such as political pull, religious cant, chains of public opinion of all kinds; a sort of Molière's *Misanthrope* aiming at present-day conditions; an adaptation by the most clever Maurice Donnay, of Aristophanes' comedy, *L'Assemblée des femmes*—in which women claim the right to love, and when they obtain it they find old wrecks, lame ducks, crooks claiming their rights . . . which renders them more thoughtful. Helsey et Botrot voiced a moving appeal for the cause of Zionism in *Terre d'Israël*.

Other plays are worth mentioning, of which for lack of space it is not possible to give anything but names; such as: Romain Coolus and the late André Rivoire, *Pardon Madame*; R. Ginoux, *Professeur d'anglais*; J. Deval, *Barricou*; H. Bibesco, *Mon héritier*; Acremant, *Le soir des noces*; H. Duvernois, *Cœur*; the historical play, *Les trois Henri* (H. de Guise, H. III, and H. IV), by André Lang (Th. Français); *Bobard*, by Jean Sarment (a mediocre, of the family of Duhamel's *Salavin*); *Langrevin père et fils*, by Tristan Bernard. Jacques Chabanne's *Voyage sentimental*—his past love history—was the chief play at a new playhouse "Théâtre 1931" (Place Denfert). There are some disagreeable sex plays, like *Le péché*, by Orna, and *La chair*, by Ch. Méré; some war plays, like M. Rostand's *L'Homme que j'ai tué*; with an aviation play, *L'as*, by Alise Poidloue.

A success of curiosity attached to Cocteau's *La voix humaine*, a telephone monologue which was splendidly rendered by Mme. Bovy of the Théâtre Français. Curiosity was also a very important element in *Donogoo*, the film version of Jules Romains arranged for the Théâtre Pigalle (mentioned in the article in the 1929 YEAR BOOK and which did not succeed so far in making a success of its remarkable scenic resources). The play is certainly ingenious, very satirical, but the opinions of critics vary much as regards the merit

of the play. This is true also of *Boen*, by the same author given in December at the Odéon. Perhaps this would be the place to mention a play by George Neveux, *Juliette ou la clef des songes* (Th. de l'Avenue) in which all the characters act in a state of dream. Another curiosity yet is a play written and acted by a blind man, Casier, called *Le Triomphe de la Voonté*.

Among the reprises of the year let us recall only *Hernani* of which a centennial performance was given on February 25, at the Théâtre Français. Villiers de L'Isle Adam's *Révolte*, two plays by Sacha Guitry, *Jalousie*, and *Pèlerin Ecossais*, etc. Shakespeare has been offered at several theatres, and Machiavelli's farce *La Mandragore* has been distinctly successful. Gogol's *Revisor*, a great Russian farce, received much applause as produced in Russian by Meyerhold of Moscow Theatre.

The two-volume play by Claudel, *Le soulier de Satin*, which is placed chiefly in Spain, and which is a very antimodern—and catholic drama—had not been represented up to the end of the year. Neither had the play awarded the Brieux prize (for a play of moralizing tendency), *Ariel et Caliban*, by a young student, Baudouin. Jacques Copeau, with his "compagnie des quinze" was going to occupy his old theatre, the "Vieux Colombier" offering his "commedia dell'arte." The "Compagnons de Notre Dame" produced two new plays, *Le mariage de St. Joseph*, by H. Brochet, and *Peau d'âne*, by H. Ghéon. Finally, the "Surréalistes" were planning a theatre of their own, utilizing the stage of the Tour Eiffel not used for years.

THE NOVEL. The peasant novel seemed to have suffered a setback, as besides Jean Giono's *Regains*, and his other little volume, *Présentation de Pan*, in which he tells us how he came to write his *Colline* and *Un de Beaumugnes*, there is only one name to mention: Fr. Lefevre, author of *Samson, fils de Samson* offers as much a novel about superstition, witchcraft, etc. as about peasants. René Behaine added a seventh volume, *Au prix du bonheur*, to his *Histoire d'une société* (see previous YEAR BOOKS), while a new serial novel was hailed by the press. It was to be called *La vie de Philippe Denis*; the author is Claude Aveline, and the two first volumes were published, *Mme. Maillart*, and *La fin de Mme. Maillart* (Philippe Denis is shown at the dawn of his amorous life). Pierre Frondaie in his *Béatrice devant le désir*, shows a girl loved by a man of mature years, but who herself loves a younger man; J. H. Rosmy, in *Le fauve et sa proie*, a girl whose life is rendered miserable by the attacks of a sadistic Chinaman; H. Bordeaux in *Tuilette*, a girl facing valiantly modern problems of life.

The posthumous novel of Paul Drouot, *Euridice deux fois perdue*, was highly praised by the best critics; the author was killed in the World War; he expresses in his book in a stirring way one of those deep passions that take hold of the whole human being and besides which nothing exists. A string of novels depicting passions in the underworld came from the pens of well known men of letters: P. Mac Orlan, *Nuits aux bouges*; F. Carco, *La rue* (one of the author's best); Jean Delteil, *Don Juan*; Gaston Chérau, *La volupté du mal*; Blaise Cendrars, *Confession de Dan Yack*; Marcel Aymé, *La rue sans nom*; Ph. Soupault, *Le grand homme*,—but they are greeted by a decidedly cool attitude on the part of various critics who think that this domain has been sufficiently drained, and that, after all, the lives of those beings of mere

instincts are far from showing the variety and interest of the more sophisticated humans.

The topic "à la mode," if one may so speak, was the study of the causes that divide lovers, as contrasted with the old-fashioned novel which studied the attraction towards the third corner of the triangle. Marc Chadourne, the successful author in 1929 of *Vasco* (an exotic novel) won the "Prix Femina" with *Cécile de la folie* in which one sees facing each other a man with little will of his own and a woman who associates much virility with much temperament. Jacques Chardonne (author of *L'Épithalame*) in *Eva ou le Journal interrompu* treats an almost similar theme, a man subdued entirely by a wife whom he thinks he loves. Jean Prévost, in *Les Frères Bouquiquant*, places a story of brotherly hate and jealousy in the working class milieu; this was one of the best sellers of the year. Marcel Achard (the Goncourt laureate of 1929 with *L'Ordre*) published *Où le cœur se partage*. Much applause greeted the first novel of the actress, Madame Simone, called *Désordre*; again we read about a "ménage mal assorti," an intellectual married to a sort of Mme. Bovary,—and again it is the woman who makes a martyr of the man. Since we mention Madame Simone, let us place here the work of four other distinguished women, Marie LeFranc, *Heller, fils des bois*, a novel of the Canadian backwoods remaining far behind the originality of *Grand Louis L'Innocent* (1927); Céline Lothe (author of the *La petite fille aux mains sales*, and one of the group of so-called "populist" writers), *Cœur triste chez les sans-repos*, who proves a talented disciple of Carco; Madame Galzy, whose moving story of a school teacher, *Initiatrice aux mains vides*, was awarded the "Prix Brentano" and very well translated by Leclercq under the title of *Burnt Offering* (Brentano, New York); and finally Germaine Beaumont whose tragic story *Piège* won for her the coveted "Prix Renaudot" for 1930. As to Marie Laparcerie, in her Freudian and Lesbian *Isabelle et Béatrix*, and Raymonde Achard in *Les deux baisers*, they both think it necessary to remind us that women are very much less modest than men when they want to be.

A special place must be made here for a new comer, Irène Nemirovsky, who achieved immediate fame with her harsh picture of the old Jewish miser *David Golder*; this success induced her to publish at once a shorter novel written before *David Golder*, called *Le Bal*, in which also is seen her fierce style in exposing the souls of desperate or cruel humans. Three other novels with Jews as leading characters are Blanche Jacob's *Un "Schadchen,"* i.e. matrimonial agent for the Jews; G. Laeretelle's *Le retour de Silberman*; and Albert Cohen's *Solal*, who is a sort of Fortunio in Jewish attire—written with the pen of a James Joyce.

In our days of cosmopolitanism, exotic novels are always timely. It was one of these that was honored in 1930 by the Goncourt Academy; they crowned Henri Fauconnier's *Malaisie* (which came out serially in the *Nouvelle Revue Française*). Another exotic product which many favored for the Prix Goncourt, was André Malraux's (author of last year's *Conquérants*) *Voie royale*, a second volume to his series *Puissances du désert*. It tells the experience of two French adventurers who wanted to get away from civilization and went to the desert of China merely to find not only the shocking hostility of nature to man trying to free himself, but the cruelty of the

inhabitants of this part of the world. Pierre Benoit, in his *Soleil de minuit*, again takes us to China, and tells of the fate of a French engineer, victim of a Russian princess who drags him down to the level of her own turpitude; the fatal woman has ever been Benoit's best card to find many readers. Shall we also call Paul Morand's *Champions du monde* an exotic novel? The "champions du monde" are represented by eight young Americans, all somewhat different; and it was something for an European now to realize that there are at least as many as eight varieties of Americans. An attempt at psychology of the German soul was made by Georges Iman; in his *Le tourmenteur* he pictures a German finding his delight in treating in the meanest manner a poor woman who fell in love with him; it is a very disagreeable picture indeed. Quite the contrary do we find in Francis de Miomandre's charming story *Baroque*, taking place in Germany too and which is written in his inimitable witty style. Maurice Bedel's *Philippe*, is in the form of a novel a severe indictment of Fascism.

Let us mention two novels of sport life, André Cazanave's *Le Stade aux cent portes*, and Henri Chabrol's *La Chair est forte* (the hero, R. Sovigny, is for a while fascinated away from his magnificent athletic career by the woman Ghiska, but regains his own when she drops out of his life), and one novel whose hero is a chimpanzee, Julot, called *Comédie animale*, by J. Demaison.

Finally some historical novels attracted attention: Louis Artus, *Au soir de Port Royal* (the theme of Marcelle Tinayre's *Maison du péché*—of a man Antoine Michaux whose Jansenist austerity is not a guarantee against worldly love); Armond Praviel, *Angélique et Sylvie* (story of the assassination of the young marquise d'Entrecasteaux by her husband, "président-à-mortier" in Provence, 18th century); Ch. Vautel and R. Escholier, *L'empereur aux yeux bleus* (Napoleon III); Claude Anet, *Meyerling* (translated in English); Em. Henriot, *Occasions perdues* (in which one finds a portrait of Barrès); Binet-Valmer, *Foire d'Empoigne* (which is said to be a satire on world politics in the hands of international bankers of to-day).

SHORT STORIES. Some of the best volumes are: P. Bourget, *Vengeance de la vie* and *Agnès Delas*; H. Duvernois, *Le journal d'un pauvre homme*; J. Kessel, *Rage au ventre* (Russian revolutionist, and 9 other stories); Jean-Louis Vaudoyer, *Nuits à l'Hôtel Beau-Monts*; H. Wurmser, *Le courrier de la solitude* (in the Estain style); J. J. Brousson, *Les Nuits "Sans culottes"* (four terrifying stories of the Revolution).

VARIOUS ITEMS. Paul Valéry published *Variétés II*, in the usual Valerian cryptic style; and Comtesse de Noailles gives the title *Exactitudes* to various essays in her own lyric style. One of the most striking and original philosophical essays in pure literary style is Montherlant's *Pour une vierge noire* (Le Cadran). Mme. Colette tells remembrances of her mother in *Sido*; while Léon Daudet offers his *Rive gauche* (souvenirs of Paris, *Rive droite* having been issued in 1929); but by far the most stirring book of Souvenirs is Clémenceau's *Grandes et misères d'une Vie*.

From the volumes of biographies of the year, we mention only H. Bordeaux, *L'abbé Fouque* (the friend of children); A. Maurois' *Byron*, and another *Byron*, by Boutet de Monvel; G. de Pourtalès, *Vie de Liszt*; R. Michaud, *Vie inspirée*

d'Emerson; Albéric Cahuet, *Moussia et ses amies* (Marie Baskirtscheff); Victor Margueritte, *Le général Margueritte*; then for former ages: Funk-Brentano *Lucrèce Borgia* (a rehabilitation); Aug. Bailley, *Néron, ou l'agonie d'un monde* (very fine); Camille Aymard, *Précurseurs* (meaning "précurseurs" of the Roman empire, Catilina, Pompée, Cicéron, etc.); and the most suggestive volumes by Victor Bérard, *La résurrection d'Homère, L'Épopée, Le Drama épique*. Travel literature is once more abundant and mostly excellent: Mabillet de Poncheville, *Le chemin de Sainte-Jacques*; L. Bertrand, *Les nuits d'Alger* (in which the famous Academician tells how well he understood, in his travels in Algeria, the great lovers of the great poets, Pyrrhus, Néron, Hermione, Roxane); Duhamel, *Chant du Nord*, meaning Finland (his *Scènes de la vie future* have been recalled before); Luc Durtain, *Dieu blanc, Hommes jaunes* (China and Indo-China); Fauconnier, *Malaisie* (Prix Goncourt); M. DeKobra, *Les tigres parfumés* (India); Miriam Harry, *Terre d'Adonis* (Syria); Barbusse, *Russie*; A. Bonnard (the author of *Chine* some years ago), *Océan et Brésil*. Here ought to be placed Albert Londres' remarkable descriptions of the Jewish people in *Le Juif errant*, a continuation of *Dante n'a rien vu* (1929).

WAR LITERATURE. A special paragraph ought to give the titles of the numerous books dealing with the war, which include: André Bridoux, *Souvenirs du temps des morts*; René Quinton, *Maximes sur la guerre*; Constantin Weyer, *P. C. de compagnie, dédié à Joseph Jolinon* (see YEAR BOOK 1929), *réponse de l'officier français à tous les livres de guerre français et étrangers* (Rieder); Paul de Rosaz, *Rien à signaler*; André Pouclaut, *Le héros* (in the Barbussian style); Louis Guilloux, *Dossier confidentiel*; Jacques Boulenger, *En escadrille*; Marcel Sauvage, *Le premier homme que j'ai tué*. Maurice Genevoix has a new volume *Les Éparges*; A. Erlande publishes with restitution of the passages cut by the censor during the war his tremendous book *La légion étrangère, or C'est nous la légion*. Besides the Remarque book other German books have been much read, e.g. E. Glaeser, *Classe 22*—a very unpalatable mixture of war experiences and pornographic-sexual details which seemed to be in fashion in some war books.

HISTORY OF LITERATURE AND CRITICISM. In medieval literature one of the works that was considered as renewing our ideas was A. Faral's *La légende arthurienne*, 3 volumes (Prix Saintour). The XVIth century has been much studied of late; but let us mention only: the excellent 3-volume edition of *Montaigne* by Villey; two volumes on J. du Bellay, John Vianey, *Les Regrets de Du Bellay* (Coll. Grands événements litt.); and F. Ambrière, *J. Du Bellay* (Didot). L. Sainéan has a volume *Problèmes litt. du XVI^e siècle* (Boccard). In the XVIIth century, René Bray, has *Fables de LaFontaine* (coll. Grands événements litt.). In the XVIIIth cent: P. Richard, *Vie de Vauvenargues*; Latzarus, *Beaumarchais*; A. Maurel, *La marquise du Châtelet, amie de Voltaire* (very "piquant"); J. G. Prodhome, *Voltaire raconté par ceux qui l'ont vu* (takes only to 1754; and could be much more complete); M. Moffat, *Rousseau et la querelle du Théâtre au XVIII^e siècle*; Mourat et Louvet, *Le Café Procope* (subject thin but book large). Passing to the XIXth century we must make a selection: A. Monglond, *Pre-romantisme français* (to be in 4 vols.); Dr. LeSavoureux, *Chateaubriand* (coll. Maîtres de la litt.); J. H.

Rosny, *Vie amoureuse de Balzac*; R. Bouvier, *Balzac, homme d'affaires*; L. Guimbaud, *La mère de V. Hugo* (much new in it); M. Rouget, *La vie grenobloise du père de Stendhal*; R. Jourda, *État présent des études stendhaliennes*; Th. Gautier *souvenirs romantiques, annotés par V. Boschot*; Georges Lote, *En Préface d'Hernani* (in connection with the Centenary of *Hernani*); Denis Saurat, *La religion de V. Hugo* (by far the most important contribution of Hugo literature during the year); Pierre Trahard, the last of the 4 vols. on *Mérimé*; R. Harmand, *Michelet*; Lucas-Lebreton, *La vie amoureuse de Lamartine*; Faure-Biguet, *Gobineau* (Roman des grandes existences); Marie-Louise Pailleron, descendant of Buloz, founder of the *Revue des Deux mondes* and who was awarded in June the "Grand Prix de littérature," by the Academy, reëdited her well known *François Buloz et ses amis, La vie littéraire sous Louis-Philippe*, and published a new work *François Buloz, et ses amis, La Revue des Deux Mondes et la Comédie Française*; and also a smaller book *Pauline de Beaumont, l'hirondelle de Chateaubriand*; Alice Borens, *Théâtre d'Octave Feuillet*; Léon Deffoux, *Chronique de l'Académie Goncourt*; M. Souriau, *Historie du Parnasse*; Alex. Arnoud, *Tristan Corbière*. For the XXth cent: Pierre Quint, *Le Comte de Lautréamont et Dieu* (Cahiers du sud); Léon Daudet, *Ch. Maurras et son temps*; and of special interest here Professor René Taupin's excellent *L'influence du Symbolisme français sur la poésie américaine de 1910-20*. Here should be quoted a volume of impressionistic criticism by A. Mauriac, *Molière, Rousseau, Flaubert, Jean-Richard Bloch* has a book *Destinées du Théâtre*, Edm. Sée, *Le mouvement dramatique*, and P. Giniesty, *Souvenirs de journalisme au théâtre*. André Breton publishes *Second manifeste de surréalisme* (Kra). Two volumes of *Mélanges Baldensperger* were published by friends and admirers of the learned scholar of the Sorbonne, and a number of Lanson's *Études littéraires* have been republished in book form by his friends.

Finally we draw attention to two new volumes of Brunot's *Histoire de la langue française* (XVIIIth cent); and to a compendium *Histoire de la langue française* (Bibl. scient.) by A. Dauzat. Abel Hermant, at a meeting of the Institute, October 25, announced that the *Grammaire de l'Académie* (see 1929 YEAR BOOK) had been completed.

Space does not permit a detailed report of the long lists of literary prizes given in France. The most important have been mentioned in the course of this article. Perhaps we ought to mention an exceptional prize of 15,000 francs to Georges Duhamel, awarded by the French Academy.

The year 1930 saw the end of the commemoration of the centenary of French Romanticism begun in 1827, special attention having been devoted to the date of February 25, when one hundred years before, the famous "Bataille d'Hernani" had taken place. Elaborate Mistral celebrations were held in Paris and in the South of France for the centenary of the great poet's birth. That year 1830 was also the year of Stendhal's *Rouge et noir*, of Balzac's *Gobseck*, of Sainte-Beuve's *Consolations*, of Musset's *Contes d'Espagne*, etc. There was attention paid to the three hundredth anniversary of the death of Agrippa d'Aubigné, to the fiftieth anniversary of the *Soirées de Médan*, etc.

NECROLOGY. Two scholars in the field of medieval literature, Léon Clédat, and Joseph Anglade;

the poet Auguste Dorchain; André Rivoire; the critic Pierre Lasserre (author of *Le Roman-tisme*); and most important of all Georges de Porto-Riche, member of the French Academy.

Newly elected to the Academy were Charles Le Goffic (taking the seat of François Curel) and André Chaumeix (replacing Clémenceau—who had always refused to take his seat, but had, himself, replaced Faguet). See ACADEMY, FRENCH. Two million francs were raised by admirers of Sarah Bernhardt for a monument to be erected in Paris. See also PHILOLOGY, MODERN, under *Romance*.

FRENCH SOMALI (sô-mâ'lê) COAST, or FRENCH SOMALILAND. A French colony in Africa on the Gulf of Aden between Italian Eritrea and British Somaliland. Estimated area, 5790 square miles; estimated population in 1928, 85,778, including about 550 Europeans. The port of Djibouti is the seat of government. Its population in 1928 was estimated at 9414, of whom 540 were European (317 French). The coast fisheries, salt mines, and inland trade are the chief sources of livelihood. The imports in 1927 amounted to 480,642,000 francs and the exports to 513,383,000 francs, of which 350,220,000 francs represented reexports. The chief exports are ivory, coffee, hides, and skins. A large share of the exports of Ethiopia pass through Djibouti, which is connected by a railway 485 miles long with Addis Ababa. The local budget for 1928 balanced at 13,002,000 francs. The colony is under a governor assisted by an administrative council. Governor in 1930, M. Chapon-Baissac (appointed in 1924).

FRENCH SUDAN. A French colony forming part of French West Africa (see FRENCH WEST AFRICA). Area, estimated at 360,331 square miles; population, estimated at 2,632,618 in 1927. The capital is Bamako, with 17,184 inhabitants. Other important towns and their populations are Kayes, 11,438; Sikasso, 12,286; Segou, 8220; and Timbuktu, 6118. The crops include groundnuts, millet, corn, cotton, rice, sesame, rubber, and kariti; also many cattle are raised. The total imports in 1928 amounted to 113,685,000 francs and the total exports to 5,217,000 francs. The budget for 1929 balanced at 64,564,300 francs. There is a railway connection with the coast over a line of 760 miles in length. The Government is under the Governor-General of French West Africa.

FRENCH WEST AFRICA. An African colonial possession of France, comprising the Atlantic coast colonies of Mauretania, Senegal, French Guinea, and the Ivory Coast, Dahomey on the Gulf of Guinea, and the interior colonies of French Sudan, Upper Volta, the Territory of the Niger, and Dakar and Dependencies. It includes the river basin of the Senegal, nearly all the upper and middle Niger Basin, the basin of a large number of rivers emptying into the Gulf of Guinea, and the southern part of the Sahara region. Area, 1,247,191 square miles; population in 1926, 13,541,611, as compared with a total area of all the French protectorates and mandated territories of 3,958,626 square miles and a total population of 55,631,184.

The colonies in 1926 had the following populations: Senegal, 1,318,287; Guinea, 2,095,988; Ivory Coast, 1,724,545; Dahomey, 979,609; French Sudan, 2,634,982; Upper Volta, 3,240,147; Mauretania, 289,184; Niger, 1,218,717; Dakar and Dependencies, 40,152. The total European population was 15,399, of whom 11,099 were French. The natives in general live by farming

and stock raising. In 1927-28 there were 281 preparatory schools, with 16,087 pupils and 147 elementary schools, with 13,704 pupils.

In 1928 the total imports of French West Africa were valued at 1,513,843,757 francs and the exports at 1,241,115,812 francs. The individual totals for imports and exports are given in separate articles for the respective colonies. Peanuts constituted about 50 per cent of the combined exports of Senegal, Ivory Coast, Dahomey, French Guinea, and French Sudan in 1928. Cacao beans were the chief item of export from the Ivory Coast. Other exports were hardwoods, palm kernels, palm oil, gum, hides, cotton lint, and crude rubber (from French Guinea). The imports included cotton piece goods, foodstuffs, automobiles, machinery, petroleum products, and some tobacco. Of the total trade in 1928, France supplied 770,414,173 francs of imports and took 702,484,917 francs of the exports. The combined general and local budgets for 1930 balanced at 828,807,210 francs.

Railways in operation in 1928 totaled 1957 miles and 296 miles were under construction; telegraph lines extended 14,386 miles. In the same year vessels entering and clearing the ports numbered 22,838 of 21,126,459 tons. A governor-general, assisted by a council, administers the whole of French West Africa from Dakar (population, 40,057). Each colony is under a lieutenant-governor subordinate to the governor-general. Governor-General in 1930, J. Carde, appointed Feb. 20, 1923.

FRIENDLY ISLANDS. See TONGA.

FRIENDS, RELIGIOUS SOCIETY OF. A mystical religious sect which originated in England in the middle of the seventeenth century. The founder of the society was George Fox, who visited America in 1672. The first Yearly Meeting in the United States was held in Newport, R. I., in 1661 and has been continued under the name of New England Yearly Meeting. Others established within the next 40 years were the Baltimore, Philadelphia, New York, and North Carolina Yearly Meetings; they are composed of quarterly and monthly meetings having one or more congregations. In the nineteenth century other meetings were formed as migration moved westward.

FIVE YEARS' MEETING. In 1902 the largest body of the Religious Society of Friends, known as the Orthodox Group, organized the Five Years' Meeting. This organization meets as a delegate body every five years and in 1930 consisted of 12 yearly meetings, with a membership of approximately 81,000. Its headquarters are in Richmond, Ind. The work of the various departments, such as missions, peace, prohibition and public morals, religious education, is under the direction of executive committees and secretaries of boards. The Five Years' Meeting also maintains seven colleges for higher education: Earlham in Richmond, Ind.; Pen in Oskaloosa, Iowa; Guilford in Guilford, N. C.; Wilmington in Wilmington, Ohio; Whittier in Whittier, Calif.; Nebraska Central in Central City, Nebr.; and Friends University in Wichita, Kans. Haverford College in Haverford, Pa., is maintained by the Philadelphia Yearly Meeting and Pacific College in Newberg, Ore., by the Oregon Yearly Meeting. The latter body, however, and the Ohio Yearly Meeting are not a part of the

Five Years' Meeting. In 1930 the membership of the Oregon Yearly Meeting was 3088 and of the Ohio Yearly Meeting, 5411. *The American Friend*, a weekly religious journal, is published at headquarters, as is also literature for the Bible schools of the Five Years' Meeting.

LIBERAL BRANCH. This branch was formed in 1827 as the result of a separation which centered around the doctrinal issues of the day and with which the name of Elias Hicks is associated. The Liberal Branch includes seven Yearly Meetings federated in the Friends' General Conference which meets in even numbered years and conducts work in religious education, social service, and advancement of Friends' principles. The society emphasizes the freedom of the individual to follow the voice of God in his own soul rather than any individual or church authority. The membership in 1930 was 16,580, and there were 134 meetings. Publications include the weekly periodical, *Friends' Intelligence*, and a monthly magazine for children, *Scattered Seeds*. The society conducts several secondary schools, and Swarthmore College in Swarthmore, Pa., was founded by it.

FUCHS, fuchs, ERNST. An Austrian ophthalmologist, died in Vienna Nov. 21, 1930, where he was born in 1851. On completing his education in Vienna he held a professorship at the University of Liège (1881-86) and was then appointed to the chair of ophthalmology at the University of Vienna. He received in 1929 the Leslie Dana gold medal awarded by the National Society for the Prevention of Blindness (American) for "the most outstanding achievement in the prevention of blindness and the conservation of vision." His principal publications, most of which were translated into English and French, include: *Das Sarcom des Uvealtractus* (1892); *Die Ursachen und die Verhütung der Blindheit* (1885); and *Lehrbuch der Augenheilkunde* (1889; 11th ed., 1907; English trans. by Alexander Duane under the title *Text-book of Ophthalmology*, 8th ed., 1924).

FURNESS, HORACE HOWARD, JR. An American Shakespearean editor, died Apr. 15, 1930, in Philadelphia, Pa., where he was born Jan. 24, 1865. Graduated from Harvard University in 1888, he was an instructor in physics at the Episcopal Academy in Philadelphia from 1891 to 1901. After 1901 he was associated with his father, Horace Howard Furness, in publishing the scholarly and highly esteemed Variorum edition of Shakespeare's plays and, on the latter's death in 1912, succeeded him as editor. The plays edited by Mr. Furness include *Macbeth* (revised edition of the Variorum edition, 1903); *Richard III* (1908); *Julius Caesar* (1913); *King John* (1919); *Coriolanus* (1928).

GAMBIA. A British protectorate and colony in West Africa at the mouth of the Gambia River. Area of Gambia proper, four square miles; population about 10,000. Area of protectorate, 4130 square miles; population in 1921, about 200,000. The capital is Bathurst, on the Island of St. Mary (population, 9227 in 1921). In 1928 there were eight elementary government-aided schools with 2000 pupils enrolled. The chief imports were wearing apparel and foodstuffs and the chief exports, groundnuts, hides, and palm kernels. Including specie, the 1928 imports amounted to £1,235,663 and exports to £1,178,409. In the same year revenues totaled £255,385 and expenditures, £250,596. On Jan. 1, 1929, the public debt stood at £62,541. Steamers and launches furnish the only internal transport. In 1928 the tonnage of vessels in the foreign trade entering and leaving the ports was 1,290,398. The colony is administered by a governor, an executive council, and a nominated legislative council containing an unofficial element. Governor in 1930, Herbert R. Palmer, appointed February, 1930.
